In Ibn Nubātah's poem, it is the child who is in heaven, and the poet who is in hell. Children, of course, have no difficulties in entering heaven, since there is no concept of an original sin in Islam. As far as parents are concerned, there are several hadiths according to which those who lost several (or even only one) of their children will enter paradise or will at least be granted considerable advantages on the Day of Judgment.[44] These traditions have to be seen in the light of the tendency to grant martyrdom for causes of death that were considered especially cruel (pestilence, disease of the belly, death in childbed, etc.). Parents who lost their child are still alive. Nevertheless their fate was considered sufficiently cruel

---

[44]These hadiths are the main content of treatises for the comfort of parents who have lost a child to premature death. A bibliographical list is given in Thomas Bauer, "Islamische Totenbücher: Entwicklung einer Textgattung im Schatten al-Ġazālīs," to appear in *Akten des 19. Kongresses der Union Européenne des Arabisants et Islamisants, Halle 1998.*

to grant them conditions that factually come rather close to martyrdom. This concept is alluded to in line 24, in which the son is asked to serve his father on the Day of Judgment as a recompense for the father´s ″entreasuring″ his son´s body in the earth. Since this prerequisite is purely metaphorical, the line acquires a taste of bitterness and cannot be regarded as a straightforward expression of religious feelings. Obviously still in Mamluk times, in which religious poetry became increasingly popular, religious and poetic discourse remained as clearly distinguishable as they were in previous periods,[45] and not necessarily the same answers to a problem were given in poetry as in hadith or law.

These are the main representations of childhood in Ibn Nubātah´s poem. Unlike al-Tihāmī´s *rā'īyah*s, there is no section devoted to childhood death, but the theme of childhood is present throughout the poem. Due to the ubiquity of the theme in this poem, even motifs that only accidentally have to do with childhood are given a new context in the mind of the audience. So it is conventional to compare the weeping of the bereaved with the cry of the pigeon, but in this poem one is again made aware of the fact that the pigeon weeps over its nestling (line 8). And in countless elegies the clouds are asked to pour rain on the grave of the deceased with a lot of different images. In this poem, however, it cannot be incidental that the image of breastfeeding is chosen in line 56, the penultimate line of the poem.

Taken together, the image of childhood and childhood death is present in this poem in more than forty per cent of its 57 lines, compared to about ten lines out of 90 in al-Tihāmī´s *kāmil rā'īyah.*[46] Since the subject of childhood death permeates the whole poem, the audience/reader will connect all other themes and images to this subject as well, and this is what gives this poem an unprecedented intensity, which is enforced by the constant repetition of a small stock of themes and images and the use of rhetorical devices, as we will see in the following.

Theme and Development

Just as is the case with the theme of childhood, other themes and images recur over and over again. Instead of building separate blocks dedicated to different subjects, the poem is a constant play with a limited stock of themes and images. One is reminded of the musical technique of exposition and development. In fact, most of the concepts are presented in the first six lines of the poem, and developed in the following sections. The main themes besides childhood are: (1) tears, (2)

---

[45]Bauer, ″Todesdiskurse,″ and idem, ″Raffinement und Frömmigkeit,″ *Asiatische Studien* 50 (1996): 275–95.

[46]His *ṭawīl rā'īyah* contains more lines on childhood death, but since the whole passage on heroism is formally constructed as a complaint on premature death (″he did not march under the banner . . .″), it is hardly comparable.

journey (and its counterpart: place of sojourn), (3) earth/grave, (4) light/stars (and its opposite: darkness), (5) water/garden. The following examples may show how these themes are developed.

(1) Tears, an indispensable subject of every elegy, are already mentioned in line 1. In line 2 they are equated with theme (5) ″river″ and contrasted with theme (3) ″dust.″ In line 7, ″rain″ (again theme 5) is provided by the eyes in the form of tears, but remains an unfulfilled promise of ″lightning″ (theme 4), to which the short life of the child is compared. Lines 8 and 9 provide explicit elaborations of the theme of ″weeping.″ In line 14, the child is compared to a pearl that is covered (theme 4: light and darkness) by the ″sea″ (theme 5) of tears (but the *biḥār* of poetry in line 18 have nothing to do with weeping), whereas the tears are pearls themselves in line 19. If the dead son in paradise (theme 5) could know about his father′s fate, he would himself weep (line 22). A perfect synthesis is given finally in line 34: the child in paradise will give his father a drink from the stream of paradise (theme 5) as a compensation for the father′s watering the son′s grave (theme 3) with his tears before. This line is not unproblematic from a religious point of view, since excessive weeping is interdicted in Islam and is by no means a reason for heavenly reward as it might seem from this line. But more important is the literary effect of bringing together the theme of weeping with the son′s stay in paradise, thereby concluding a thematic circle that began in lines 2 and 3. Consequently, there is no further mention of weeping in the poem.

(2) The theme of travel is initiated by the unmetaphorical mentioning of night journeys in line 4 and carried on with the image of the race course in line 5 and the comparison of life to a stop at a watering place in line 6. It therefore dominates the whole section from line 4 to 6. Subsequently, it is again modified and confronted with other themes such as ″stars″ (theme 4) in line 15, ″seas″ (theme 5) in line 18, and, as a final climax, with the theme of ″grave″ (theme 3) in line 38. In between, we find it in lines 12 and 21, direct echoes of al-Tihāmī, and in line 33, a direct echo of line 12. Its counterpart, the place of sojourn, is mentioned by words derived from the root *sakan* in lines 2 and 16 (cf. also *awṭān* in the very first line). In line 2, it is the grave where the child sojourns, whereas in the final line of this circle, line 38, the grave is only the mount that shows that the journey has not come to an end. Again we see that a cycle, which had started in line 2, is brought to an end more than thirty lines later. There is no further mention of travelling in the poem after line 38.

(3) In contrast to themes (1) and (2), the theme of earth and grave, which starts in line 2, is carried on right to the end of the poem. In very different contexts it appears in lines 2, 12, 13, 16, 20, 24, 36, 37, 42, 46, 49, 50, 51, and 57. Since elegies conventionally end with the wish for copious rain to moisten the grave, it is not surprising that Ibn Nubātah too ends his poem with this motif.

(4) Stars have already been a recurrent theme in al-Tihāmī′s poems. In Ibn Nubātah′s poem, the theme of stars/light and darkness starts in line 7 with the image of lightning, is continued in lines 14 and 15, but assumes major importance in the second half (lines 28–30, 36, 41, 44, 45, 51, 52, 56). Since we have already seen how Ibn Nubātah develops his themes by confronting them with different situations and with each other, we need not go into detail here. The same is true with theme (5) ″water, garden, plants,″ which occurs in lines 2, 3, 6, 7, 13, 14, 18, 22, 34, 53, and 57.

Even themes of lesser importance are dealt with in the same way. In line 26, the theme of grey hair is introduced in the form of an antithesis. In this place, it has little more to say than that the pleasures of life are gone. Only in the paragraph comprising lines 41 to 43 do we realize the potential of the theme, since here it is confronted with the theme of premature death, and it turns out that with the help of a *tawriyah* this confrontation results in a quite interesting image. This is Ibn Nubātah′s method for the greater part of his *rā'īyah*. He takes a limited stock of themes and tries out what happens if these themes are confronted with each other or with different situations. So the same themes and motifs appear under constantly changing perspectives. On the other hand, the persistence of the same themes reflects a mind whose thoughts constantly dwell on the same matters, thus reflecting despair and hopelessness.

This method is pursued until the beginning of the last passage in about line 40. Until then we have heard about the death of the boy and the father′s despair. But an elegy has to address the subject of comfort and self-control. After all, *ṣabr* is one of the main virtues and one of the most important subjects of the Arabic elegy in general, and it is also the main subject of the final part of Ibn Nubātah′s *rā'īyah.* It starts with the statement that everybody must die (line 40), which is elaborated in the ″grey hair″ passage already mentioned (lines 41–43). The fact that everybody must die was obviously considered the most convincing argument for consolation, much more so than the prospect of paradise, which is only rarely mentioned in poetry.[47] In a group of again three lines, Ibn Nubātah continues the elaboration of this theme in lines 44 to 46, leading from the celestial sphere to earthly tombstones. Two lines (47–48) admonish the hearer—and probably the father himself—to think about this fact and consequently to show *ṣabr*. The most common motif to express the fact of the inevitability of death is the *ubi sunt qui ante nos* motif, to which the following six lines are devoted. In an amazing climax, the poet adduces three groups of people, each of them presented in two lines. First, the former kings, the most commonly mentioned group in the *ubi sunt* passages, are all dead (lines 49–50). The second group are the war heroes, and

[47] Bauer, ″Todesdiskurse,″ 12.

these lines are of course Ibn Nubātah´s explicit answer to the heroic passages in al-Tihāmī´s poems. Even the sparks they let fly in the heat of battle are a reflection of a formulation of al-Tihāmī (cf. line 43 of his *ṭawīl rā'īyah,* quoted above). All that is left from al-Tihāmī´s heroism are two lines that state that even heroes are doomed to death. But the most surprising passage is constituted by the following lines, in which a third group joins the princes and heroes: children. ˝Where have all the babies gone?˝ is a most extraordinary turn of the *ubi sunt* motif, and it is most remarkable that childhood death could be seen in one and the same line with the death of society´s most prominent members.

In the concluding passage of the last three lines, Ibn Nubātah reverts to the notion of *ṣabr* from line 48. But something must have happened in between. Whereas the mood of line 48 is still rather optimistic as far as the achievement of *ṣabr* is concerned, this confidence must have been lost in the course of the following lines. Though it was exactly their aim to strengthen *ṣabr,* something must have gone wrong. Obviously the reference to the children has shattered the hopes of attaining equanimity. If *ṣabr* is shown, it is only pretence or constraint. The poem ends in hopelessness.

Unorganized as the poem might seem at first glance, it turns out to match its emotional development perfectly. Two thirds of the poem are devoted to the father´s grief about the loss of his beloved son. Its enormous density is achieved by a technique that may remind the audience of a composition technique utilized often by such composers as Brahms or Reger, who used to base long movements on short and at first inconspicuous motifs, which only gained their significance by the way they were treated and developed in the further course of the movement. In the same way, Ibn Nubātah introduces five themes, which are neither especially conspicuous nor original, in the first six lines of his poem. But in the following thirty-three lines, this material is varied, modified, adapted, arranged in ever-new combinations, brought to reveal unexpected relations and shown to permeate every conceivable aspect. Presenting always new constellations of these themes, but hardly transgressing them, the poet may at the same time convey the impression of the inexhaustibility of paternal pain as well as that of its inescapability. The final part, the poem´s last third, should display the harmonization of the conflicts, should present equanimity *(ṣabr)* regained, should bring comfort through the realization that everybody and everything is doomed to end. In order to achieve this, the tightly knotted, condensed structure of the first two thirds gives way to a more linear structure. But *ṣabr* cannot be gained. The sonata has no recapitulation but an open end. This is, to stick to the musical image, the melody. The harmony, which, as we will see, corresponds exactly to this structure and reinforces its emotional effectiveness, is provided by the rhetorical devices, which we will examine in the following.

RHETORIC AND EMOTION

Poetry is communication, and a poem is only meaningful if its communicative function is taken into regard. This has already been stated, but it must inevitably be repeated in a chapter dealing with emotions. Many contemporary Arabic scholars assume that it is the main function of a poem to ″express feelings,″ and that the quality of a poem can be determined more or less according to the degree of directness by which a poet ″expresses his true feelings.″ If a poet uses more than only a very limited number of rhetorical devices in his poem, it is considered an indication that the poet´s feelings are not sincere and the poem is ″a mere play on words″ and of no further poetic relevance.[48] This attitude is sometimes considered to be a reflection of European romanticism, but I suppose that two other roots are more important. The importance given to the ″sincerity″ of emotions, the fact that emotions themselves are the focus of interest rather than their poetic transformation, and the postulate that these emotions should be spoken out in a direct and immediate way point to a Protestant origin of this attitude.[49] One of the entrance gates of such ideas may have been the Protestant mission of the Americans in Beirut, which during the *nahḍah* period played a major role in forming modern Arab attitudes towards literature.

The other root of the enmity towards rhetorics in the modern Arab world is the European, especially French, enlightenment. One of the ideals of this movement was purity of language and clarity of expression, which resulted in a general devaluation of the literature of previous periods, especially of the era of the baroque, but proved rather disadvantageous for the production of poetry (romanticism was a major attempt to overcome the sterility and dullness of enlightenment poetry). When the French set out to colonialize the Arab world, they were faced with the problem that, contrary to sub-Saharan Africa, the Arab world already possessed what was considered civilization by European standards of that time. In this situation, the French made literature and language one of their main weapons. It was acknowledged that the Arab world had developed a great civilization in the ″Middle Ages,″[50] but afterwards this civilization was subject to a

---

[48]Bauer, Review of al-Afandī.

[49]On the Protestant origin of this attitude see Hans-Georg Soeffner, ″ Luther: Der Weg von der Kollektivität des Glaubens zu einem lutherisch-protestantischen Individualitätstyp,″ in *Vom Ende des Individuums zur Individualität ohne Ende,* ed. Hanns-Georg Brose and Bruno Hildebrand (Opladen, 1988), 107–49.

[50]The still current application of the term ″Middle Ages″ and ″medieval″ to Islamic history is a remnant of the colonialist degradation of Arabic and Islamic culture in that its whole premodern history is limited to the role of a transition period between the two really ″valuable″ periods, antiquity and modernity. At least, this was the reason for the coinage of this term in Europe. To use this designation for great parts of Arab history means to deprive the Arab world of the right of

process of steady decline and decadence, and this decadence was considered to be especially visible in the case of literature with its ″baroque″ and over-ornate style.[51] In fact, it was literature which gave the French one of the arguments for the justification of a *mission civilisatrice* in the Arab world. This went hand-in-hand with the propagation of the French language, which was considered an unsurpassable model on account of its *clarté*,[52] and it is small wonder that it set the norm for literary style in Arabic as well. And just as former (and, as we see it now, formidable) periods of European literature had been disparaged for the benefit of the bourgeois taste of enlightenment, now with the same arguments the overwhelming portion of Arabic literature was disparaged for the benefit of colonialism.

Still, more than a century afterwards, a colonialized mind is clearly visible in contemporary Arab attitudes towards premodern Arabic poetry. But it is high time now to stop applying criteria to this literature that it can never match. In fact, no premodern Arab poet ever tried to ″express true feelings″; he would not even have understood the words ʻ*abbara ʻan shuʻūr ṣādiqah,* let alone applied them to judge literary texts. Instead, he might have used a formulation like that used by Ibn Rashīq, who, after having stated that it is particularly difficult to compose elegies on women and children, continues: ″One of the best and most saddening *(ashjá)* elegies on women, one of those that have the deepest effect on the heart *(ashaddihī ta'thīran fī al-qalb)* and in arousing grief *(wa-ithāratan li-al-ḥuzni)* is the poem by Ibn ʻAbd al-Malik on his *umm walad. . . .*″[53] Here, as in countless other statements, the poet is not judged according to the feelings he *expresses,* but according to the feelings he *arouses* in the audience/reader.

This result should motivate us to ask what is meant by the formulation ″to express one′s feelings.″ To ″express a thought″ means to put it into words that match it as exactly as possible and therefore allow it to be communicated to others without causing misunderstanding. To ″express a feeling,″ however, can hardly mean in a poetic context to put a feeling into words in order to inform the hearer as precisely as possible about the physical and psychic effects of it. This would be appropriate in a confession, an examination of one′s conscience (I already mentioned the Protestant roots of this concept), or in a psychoanalysis, but not in a poem. Ibn Nubātah very obviously did not want to inform his contemporaries of the fact that

---

having a history of its own that is meaningful even if it is not constantly related to European history. Remarkably enough, historians do not speak of medieval Japan or China.

[51]Thomas Bauer, ″Die *badīʻiyya* des Nāṣīf al-Yāziği und das Problem der spätosmanischen arabischen Literatur,″ in preparation.

[52]Ulrike Freitag, *Geschichtsschreibung in Syrien 1920–1990: Zwischen Wissenschaft und Ideologie* (Hamburg, 1991), 83–89.

[53]Ibn Rashīq, ʻ*Umdah,* 2:846.

he suffers insomnia and is forced to weep on account of the death of his son. Had he aspired to do so, he could have set out his emotional state of mind in plain prose and written a letter to the few people who might have been interested in his personal concerns. Instead, he composed a poem that was meant to be published and to be of relevance to many other people who were not the least interested in the ″sincere feelings″ of a certain Ibn Nubātah. They were, however, interested in their own feelings (and the reflection of their own feelings in somebody else), and therefore it again seems that the old critics who regarded the effect of a poem rather than the sincerity of the poet′s feelings were nearer to the reality of the literary communication system than the proponents of the notion of emotional expression.

Nevertheless, the feelings of the poet himself are not completely irrelevant. Even Arabic literary theorists established that to be really in love or really filled with wrath does help a lot in composing good *ghazal* or *hijā'* poetry.[54] But they never use the notion of ″expressing″ these emotions, and therefore we may well ask where exactly the feelings and emotions are in a poem. The only possible answer is to state that, again, the emotions are nowhere else than in the audience/reader of the poem, and that the poem′s function is to evoke these emotions in the recipient. Inevitably, the poet himself is not only the poem′s producer, but also its first audience, and his emotional reaction to the poem is at least similar to that of the intended public. Therefore, the poet will test—consciously or not—whether the poem has more or less the same emotional effect on himself which it is supposed to have on its later hearers and readers. The notion of ″expressing″ a feeling is therefore hardly anything other than a metaphorical expression for arousing a feeling in the hearer that is similar to the feeling in the mind (or wherever feelings may be) of the poet himself. The emotions, therefore, are not somewhere in the poem, which is supposed to express them, but they are induced more or less successfully by the poem in the audience (the poet himself included). This is corroborated by the fact that the means to induce feelings by literary texts can be analyzed fairly well, whereas the question of whether a poem expresses the sincere feelings of its author must always remain pure speculation. In the case of Ibn Nubātah′s *Kindertotenlieder*, we have, of course, no reason to doubt the depth and sincerity of their author′s feelings. It is beyond any doubt that these feelings helped a lot to create the masterly poem that we have before us. However, this does not help much to understand the poem, but rather leads in a wrong direction, as we have already seen. The poem is not a spontaneous outburst of uncontrolled emotion, but a carefully planned and executed text, as is shown by its structure, which may seem chaotic at first glance but turns out on closer

---

[54]Ibid., 1:194, 198, but compare ibid., 1:329–45.

analysis to be structured in exactly such a way as to be able to induce an effect of helpless emotional tangle.

If Ibn Nubātah′s elegy were a spontaneous creation, as M. Muḥammad thinks (but which it is not), and if it is a reflection of sincere feelings, as all previous interpreters think (and which it certainly is),[55] and if spontaneity and veracity are opposed to the use of rhetorical devices, as the adherents of the aforementioned school of ″expression-of-sincere-feelings″ believe, this poem should contain few rhetorical devices. However, the contrary is true. For those who think that rhetorical sophistication and deep feelings are irreconcilable and like Ibn Nubātah′s text, the chart on the following page may come as a surprise. It lists the more conspicuous figures of speech and rhetorical devices of the poem for every line:[56]

[55]Therefore, Ibn Nubātah′s *rā'īyah* is said to ″abound with images full of passion and poetic presentations full of heat,″ as is stated by Yāsīn al-Ayyūbī, *Āfāq al-Shi'r al-'Arabī fī al-'Aṣr al-Mamlūkī* (Tripoli, Lebanon, 1995), 174. An accurate review of this book is given by Th. Emil Homerin in *MSR* 3 (1999): 237–40.

[56]With the exception of anaphora I limited myself to the traditionally established rhetorical figures, which are at the same time clearly recognizable. Stylistic features like *insijām* (cf. the contribution of G. J. van Gelder in this volume), which would not be considered as foregrounding devices, are not represented in the chart. As a convenient reference and for an English translation of the names of rhetorical figures I use Pierre Cachia, *The Arch Rhetorician or The Schemer′s Skimmer: A Handbook of Late Arabic badī' drawn from 'Abd al-Ghanī an-Nābulusī′s* Nafaḥāt al-Azhār 'alā Nasamāt al-Asḥār (Wiesbaden, 1998) and Wolfhart P. Heinrichs, ″Rhetorical Figures,″ *EAL* 2:656–62. In the last column of the chart I noted the number of the line of al-Tihāmīs *kāmil* poem (in italics) and of his *ṭawīl* poem (in parentheses) which was the model for the respective line of Ibn Nubātah. I completely disregarded hyperbole, which plays only a minor role in the poem. One may add the rhetorical figure of *qasam* ″oath″ (Cachia, *Rhetorician*, no. 139) for line 39; *iqtibās* (ibid., no. 169) for line 40 (it may be considered a vague allusion to Quran 38:3, but is rather a common formula); and *al-madhhab al-kalāmī* ″logical argumentation″ (Cachia, *Rhetorician*, no. 127; W.P. Heinrichs, ″*al-madhhab al-kalāmī*,″ *EAL* 2:482) for line 47.

If we include the four lines marked with a question mark in column ″*jinās*,″ but regardless of whether we regard the column ″anaphora″ or not (since anaphora was not a well established figure in indigenous Arabic rhetorical theory), we can conclude that every line with the sole exception of the very last contains one or more rhetorical figures. These figures are not distributed evenly in the text; rather their distribution reflects the structure explained above. While the first part is dominated by simile and metaphor, which are often used to form a *murāʻāt al-naẓīr,* and the emotional intensity of this part is reinforced by several anaphoras, the final part is dominated by *ṭibāq*. Let us briefly consider the most important figures of speech and rhetorical devices:

(a) Anaphora (like alliteration or the epigram) is one of those devices that were well known and consciously used by Arabic poets, but had no specific technical term and were not considered by literary theory.[57] To start several consecutive lines with the same word(s) is indeed one of the oldest and most characteristic devices of the elegy and can be traced back to the primitive forms of the pre-Islamic *niyāḥah*.[58] This kind of anaphora, reflecting perhaps the repeated desperate cry of the wailer, is the most atavistic device of the *marthiyah* and maybe the most immediate expression of despair. In a highly sophisticated poem like that of Ibn Nubātah it is, of course, no longer immediate to that degree, but in all probability the hearer will still associate it with overwhelming emotionality. This is most probably also its main function in Ibn Nubātah′s poem, where it seems to have been used very consciously. Starting with two relatively inconspicuous anaphoras in lines 5–6 and 8–9, which do not have any structuring function, there follows a *lahfī* passage (lines 13–15) featuring three images of premature death, and, interrupted by a line mentioning the grave and the place of the deceased boy in the father′s memory, an *aʻziz ʻalayya* passage, again mainly about premature death. The more complicated anaphoric words correspond to the more complicated images of premature death in this passage. The other lines marked as anaphoric are those beginning with *a-bunayya*.[59] They are scattered over the first part of the poem to remind the hearer constantly of the fact that the object of the poem is a child. One should mention that Ibn Nubātah makes less use of the anaphora in his other elegies on his son, and in al-Tihāmī′s *kāmil rāʼīyah* it is completely absent.

---

[57]One may subsume it under the rubric *takrār* (cf. Cachia, *Rhetorician*, no. 53), but rhetoricians do not specify the unit within which the repetition has to take place. In most examples of *takrār,* a word or phrase is repeated within a single line.

[58]See already Ignaz Goldziher, ″Bemerkungen zur arabischen Trauerpoesie,″ *Wiener Zeitschrift für die Kunde des Morgenlands* 16 (1902): 307–39.

[59]I did not mark the isolated lines starting with *a-bunayya* (lines 20 and 33) in the above chart. I am not sure if the anaphora was felt as such in these cases.

(b) Simile *(tashbīh)* and metaphor *(isti'ārah)* are the all-prevailing means of foregrounding in this poem. The first half especially is dominated by them. Three quarters of lines 1–39 contain one or more of these figures, whereas less than a third of the remaining lines do so. The following chart gives a list of the *prima* and *secunda comparationis,* arranged alphabetically according to the *primum comparationis*:[60]

babies	blossoms	53

[60]I omitted the *isti'ārah* "feet of intelligence" of line 18.

The main function of comparison in this poem is obviously to create and connect the five themes that form the basis of the major part of the poem. The experience of the boy's death is transformed into a world consisting of the elements tears, journeys, earth, stars, and gardens, which permanently interact. Many items occur more than once in one of the columns or in both of them. This world is based largely on comparison, but to attract the audience's attention to the act of comparing would have disturbed the impression. Therefore, the similes and metaphors are less interesting in themselves than in what is achieved by them. It is not surprising thus that the most original simile, the comparison of babies in their cradles with blossoms (line 53), is not found in the five-themes part of the poem but in its final section, in which there are only a few similes and metaphors anyway. Finally, one may note that apparently Ibn Nubātah was keen to avoid monotony and to further conceal the extensive use of comparison by varying the formal means of comparison. Several types and constructions of metaphors and similes alternate, and there are never two consecutive lines that contain a particle of comparison (lines that contain such an *ālat al-tashbīh* are marked with *sh* in the chart above).

(c) The same tendency is reflected in the remarkably high number of lines that form what is called *murā'āt al-naẓīr*, that is, consist of images and/or ideas that pertain to the same semantic sphere.[61] In most cases, the figure is brought about by two (or more) comparisons that lead into the same semantic realm. In this way Ibn Nubātah produces lines that are entirely devoted to images like garden, thunderstorm, twigs, doves, pearls, night and stars (this image is even carried on over the three lines 28–30), etc. All these topics are part of the five themes that form the skeleton of the poem's first part. In these lines, the respective theme appears alone and undisturbed. But it is fascinating to see how Ibn Nubātah repeatedly interrupted the sequences of *murā'āt al-naẓīr* by lines featuring a *ṭibāq* "antithesis." Neither the lines containing *ṭibāq* nor those containing *murā'āt al-naẓīr* exceed thematically the frame of the five themes mentioned previously. The poet thus dwells on the same subjects, but treats them with different stylistic devices. This conveys an image of density and insistence. Consequently, in the latter third of the poem no single instance of *murā'āt al-naẓīr* occurs.

(d) *Ṭibāq (or muṭābaqah)* "antithesis,"[62] is another extremely important figure in this poem. Of course, the contrast between life and death lends itself easily to

---

[61]Heinrichs, "Rhetorical Figures," 658–59; Cachia, *Rhetorician*, no. 73 (to include cases of phonetic resemblance seems to be a purely theoretical phenomenon in latter *badī'* treatises and can be ignored here).

[62]Heinrichs, "Rhetorical Figures," 659; Cachia, *Rhetorician*, no. 79. Though Cachia is right to note that *ṭibāq* is wider in reach than antithesis, I cannot persuade myself to translate it as "parallelism." I wonder if "contrast" would be an adequate translation.

the construction of antithetic contrasts, but Ibn Nubātah′s *ṭibāqāt* go far beyond that scope. Ambivalence and contrast dominate the father, the son, their destiny (on earth as well as in heaven), their mutual relation, and finally the whole of life and the whole of mankind, as the following chart (in the compilation of which the term *ṭibāq* was used in its most restricted way) shows:

paradise	hell	3	white	black	41
light	heavy	4	shoot	be hit	45
warada	*ṣadara*	6	rejection	confirmation	46
small	big	10	revelation	secret	47
far	near	12	mountain	dust	50
distant	close	12	darkness	sparks	51
clothed	naked	20	intactness	destruction	52
sleep	sleeplessness	27	bones	flesh	54
highland	lowland	35	pearls	stones	54
souls	bodies	37	patience	grief	55

And again, the rhetorical figure not only corresponds with the structure of the poem but is, in fact, one of the main devices to structure it. While in the first part a few instances of *ṭibāq* are used to contrast a far greater number of *murāʻāt al-naẓīr,* the second part of the poem with its more general reflections about life and death is largely dominated by *ṭibāq*. Starting with line 35, we can observe an antithetic *accelerando* culminating in the *ubi sunt* passage (lines 49–54) with its surprising climax kings/heroes/babies. The last *ṭibāq* in the poem is the contrast between *ṣabr* ″patience″ and *jazaʻ* ″grief,″ a contrast that is shown in the end as insuperable.

(e) The extensive use of *jinās,* the phonetic or graphic resemblance (or even identity) of two semantically different elements (words or word pairs), is not specific to any special period of Arabic literature. Even the pre- and early-Islamic poet al-Aʻshá was extremely fond of it (not to speak of al-Ṭirimmāḥ and the Umayyad *rajaz* poets), and Abū Tammām was notorious for his *jinās* excesses. Enthusiasm for *jinās* is neither a sign of decadence nor something particularly characteristic of the Mamluk period. In this time, however, it became the subject of a somewhat tragic dispute. I call it tragic because it seems as if this controversy destroyed the friendship of the two most important *hommes de lettres* of the eighth/fourteenth century, Ibn Nubātah and al-Ṣafadī. The latter had composed a collection of poetry of his own, in which he carried the potential of *jinās* to its

extreme.[63] ʻUmar Mūsá Bāshā may be right to assume that the reason he composed the book was his determination to counter Ibn Nubātah′s sophisticated and innovative treatment of the *tawriyah* with the propagation of another rhetorical figure. Al-Ṣafadī was enormously proud of his achievement, sent his booklet to many fellow ulama, and proudly collected the accolades *(taqrīẓāt)* he received.[64] Ibn Nubātah, however, proved himself not to be amused by al-Ṣafadī′s amassing of *jināsāt,* and ″things too long to explain occurred between both on this account.″[65] In the end, it seems as if al-Ṣafadī fell in with Ibn Nubātah′s stylistic trend in favor of the *tawriyah* and composed a treatise on this subject[66]—only to be accused by Ibn Nubātah of plagiarism (an accusation that was only too justified, if we accept Ibn Ḥijjah′s judgement).[67] What a time, in which friendships broke apart not out of avarice, but out of a quarrel about rhetorical figures!

Ibn Ḥijjah′s position in this respect is quite clear, and it seems by and large to reflect Ibn Nubātah′s attitude.[68] *Jinās* is, he concludes, one of the more primitive rhetorical figures, and too much of it can spoil any poem. In right measure, however, it can add to a poem′s value. According to Ibn Ḥijjah, it is especially effective in the first line of a poem, if the poet fails to produce a *tawriyah*, which would be the more elegant (and more modern) way to start.[69] Needless to say, in our poem Ibn Nubātah succeeds in combining a *jinās* with a *tawriyah,* and at the same time alludes to his model, al-Tihāmī, in his first line. Aside from the introductory line, *jinās* in fact plays a minor role. It marks the climax of the *lahfī* series in line 15, where it is again combined with a *tawriyah,* thus again lending enormous prominence to the verse. Then we find it in a very marked way in line 37, the emotional climax before the concluding part, and again combined with a *tawriyah* in the rather complicated line 43. As a result, we may note, in this poem Ibn Nubātah uses *jinās* only very sparingly and consciously to emphasize lines of special importance for the content and/or the structure of the poem.

[67] Ibn Ḥijjah, *Khizānah*, 2:121–29. This is only one of several possible reconstructions of the story between Ibn Nubātah and al-Ṣafadī. Further research is required. It should include a study of the relation between Ibn Nubātah′s *Al-Sajʻ al-Mutawwaq* and al-Ṣafadī′s *Alḥān al-Sawājiʻ* (both still unedited).
[68] Ibn Ḥijjah, *Khizānah*, 1:54–55.
[69] Ibid., 55.

This is the case as far as real *jinās* is concerned. It is appropriate, however, to address here the problem of the four lines labelled with a question mark in the column *jinās* in the chart. In fact, when I drew up this chart, in the end five lines remained without entry. Apart from the final line, these were lines 31, 39, 40, and 49. But when I compared these lines, I realized that all of them contained the same sort of paronomasia in a very similar way: *ḥudhirtu . . . ḥidhārī* (line 31), *khaṭarin min al-akhṭāri* (line 39), *ayna al-firāru . . . ḥīna al-firāri* (line 40), and *ʻatharū . . . ayya al-ʻithāri* (line 49). Each of them contains a *jinās al-ishtiqāq* with the second word being the rhyme word. But a *jinās al-ishtiqāq* was not considered a *jinās* proper by the rhetoricians, since there is no semantic difference between its two elements. A poem, however, is not a work of theory, and one can hardly doubt that there is some sort of foregrounding in the four *jināsāt al-ishtiqāq* in Ibn Nubātah´s poem as well. Therefore, it seems appropriate to label these lines as indeed containing a rhetorical figure with, however, a rather low degree of rhetorical markedness. It seems as if the poet shunned the contrast between rhetorically marked and completely unmarked lines, and as if he wanted to reserve the effect of this contrast to the very last line. Therefore he provided the lines mentioned with at least an etymological *jinās* rather than letting them stick out by having no rhetorical prominence at all.

(f) The *tawriyah* ˝double entendre˝ was the rhetorical figure *par excellence* for the Mamluk period, and Ibn Nubātah was indisputably its greatest master.[70] It is hardly accidental that the career of the *tawriyah* coincided with the increasing participation of ulama in the system of literature, because in the *tawriyah* the ulama could create consciously the ambiguity they were used to detecting in the sacred texts during their exegetical activities. Therefore the *tawriyah* is far more than word play. It is—at its best—the reflection of the ambiguity of man´s perception of the divine world order and a playful plumbing of the borders of human language—epistemology in the form of a poetical device. Unfortunately, the well-known prejudices have prevented scholars so far from studying the usage of *tawriyāt* in the texts of the Mamluk period. Many such studies would be necessary, however, to ascertain the proper place of this rhetorical figure, its achievements, and the specific usage made of it by different poets in different poems. So far, I can only judge impressionistically that in our sample poem Ibn Nubātah uses the *tawriyah* in a comparatively modest way. In lines 1, 15, and 43 it is used together with a *jinās* to highlight three particularly important lines of the poem. Several times a *tawriyah* is used to connect themes. So in line 15, it connects the themes of travel and star, in line 56 clouds and stars. In line 33 it enables an antithesis.

[70]Ibid., 2:39–251; Seeger A. Bonebakker, *Some Early Definitions of the Tawriya and Ṣafadī´s Faḍḍ al-Xitām ʻan at-Tawriya wa-´l-Istixdām* (The Hague-Paris, 1966); Bāshā, *Ibn Nubātah,* 448–64; Thomas Bauer, review of *Ibn Nubātah,* by M. Muḥammad, *MSR* 6 (2002): 219–24.

The theme of grey hair is treated in lines 41–43, where the term *ashhab* is used in several meanings, connecting this subject with the notion of horses in line 41 (alluding to the notion of life as a ″race course″ of line 5) and connecting it again with the theme of stars in line 43. More independent is the use of the *tawriyah* in lines 32 and 45. A dinar and a moon are ordinary, harmless things, but the *tawriyah*s make the reader suddenly aware that transitoriness lurks behind them. In general, one may say that the great master of the *tawriyah* restrained himself considerably in this poem and assigned a purely subordinate function to this rhetorical figure.[71]

(g) To mention briefly the other more conspicuous rhetorical figures: in line 1 both hemistichs rhyme *(taṣrīʿ)*. This is not surprising, but nevertheless adds to the rhetorical fireworks of this introductory line. The small paragraph stretching from line 10 to 12 shows a beautiful variety of rhetorical figures. It starts with an antithesis that is cast in the form of a question and answer, a figure that is called *murājaʿah*.[72] The next line enumerates in logical order all organs with which men are wont to do evil. This is called *tartīb*.[73] Further, I wonder if *lam yusi*ʾ in this line suggests a non-actualized meaning of ″sword″ for *māḍin,* in which case we would have another *tawriyah* before us. Finally, the passage concludes with a double *ṭibāq* in line 12. With two rather uncommon figures (together with *ṭibāq*), Ibn Nubātah interrupts two blocks of verses featuring anaphora and *murāʿāt al-naẓīr* and thus saves the poem from monotony. A similar case is lines 22–23, in which a *radd al-ʿajuz ʿalá al-ṣadr* (repeating the rhyme word in the first hemistich)[74] and a *mumāthalah* (metrical isocolon without rhyme)[75] conclude a paragraph of four lines in which the father complains to his son about his miserable life. In line 26, a ″fanciful cause″ *(ḥusn al-taʿlīl)*[76] is given for the white hair of the father, which is introduced in this line. ″Feigned ignorance″ *(tajāhul al-ʿārif)*[77] is the way to present the subject of sleeplessness in lines 29–30. Rather prominent is the figure of *istikhdām*[78] in line 44, in which the terms ″scorpion″ and ″lion″ must be interpreted as signs of the zodiac, if the genitives *al-falak* and *al-burūj* are considered, but as animals, if the adjectives *lasūb* and *ḍārin* are considered. Finally, the subject of

---

[71]One may perhaps add line 17, where *qārin* ″host″ may also be interpreted as *qāri*ʾ ″reader,″ and line 11, where *māḍin* may be conceived as ″sword.″

ṣabr, with which the poem shall conclude, is introduced in line 48 by means of another *radd al-ʻajuz ʻalá al-ṣadr*, in which way it can be expressed very directly and clearly without abstaining entirely from rhetorical figures.

Altogether, a great variety of rhetorical figures is applied in this poem, but none of them gains prominence. Nevertheless, the high number of rhetorical figures, the uninterrupted foregrounding, plays an important role in the communicative potential of the poem. At the end of the first section we asked why and how the composition of elegies could be of use for the poet himself. Part of the answer was that poetry enables communication. But this communication only works if there is a recipient. Therefore we have to ask what the use of hearing or reading an elegy on the death of somebody else′s child may be.

Of course, a natural group of potential readers of such poems are other people who have lost their children. This is corroborated by the fact that part of Ibn Nubātah′s *rā'īyah* is included in Ibn Abī Ḥajalah′s manual for the consolation of parents bereft of a child. In times of the Black Death, this group must not have been inconsequential. For them, the consoling effect of the poem is quite obvious; a trouble shared is a trouble halved. But this is only part of the story. After all, Ibn Nubātah′s dirges were included in his *dīwān*, and this *dīwān* was also read by people who had not lost a child. Further, the *dīwān* contains other elegies, especially a famous elegy on the death of Ibn Nubātah′s patron al-Malik al-Mu'ayyad, and the number of people who grieved the loss of a prince was probably not too great. Nevertheless, they were moved by the poem. This is not difficult to understand if we consider the popularity of modern forms of art with which we are more familiar, for example, the opera. Though most people have never had problems and experiences like those of Rigoletto or Tosca, many are moved to tears by being confronted with them. Film enthusiasts will not have problems adducing similar examples from this medium. In general, it is again one of the prejudices of the school of ″immediate expression of true feelings″ that the experience of the artist is the most central point of a work of art, which requires that the ideal recipient must have undergone a rather similar experience in order to understand him and to judge the veracity of his expression.

But it is not primarily interest in the experiences of the poet that makes the normal recipient turn to his works. A more important reason for confronting oneself with works about death and suffering is the aspiration of a therapeutic effect through catharsis, as Aristotle has noted. Nowadays a neuropsychological approach can help us understand this effect better. It can be shown that the effect of catharsis does not so much aim to make negative emotions disappear, but rather to put them into a new context, allowing one′s emotions to be seen in the context of other emotions and experiences and thereby gaining more consciousness of them. For ″the reader of a literary text is able to engage in abstraction, comparison,

and analogy: in particular, the reader can be prompted by the internal logic of the text to place the literal meaning of a given negative feeling within a wider context provided both by other feelings encountered in the text as well as by her sense of prior and anticipated meanings. In this way, negative feelings, and the concerns of the self that may be implicated with them, can be relocated in a wider perspective. . . . In the literary response, negative feelings are contextualized or transformed rather than avoided: in comparison with the usual notions of purging or balance, this is perhaps a more appropriate way of understanding how a cathartic process might operate while reading."[79]

In order to make a text work in this way, i.e., in order to enable communication with an audience interested in the emotional potential of a text and desire a cathartic effect, the text has to arouse emotions. Its capacity to arouse emotions is therefore much more important than the question of whether or not the author himself experienced the emotions he talks about, helpful (and biographically interesting) as his own experience may be. It is consequently irrelevant and useless and even contradicts the nature of the literary communication process to ask if the usage of rhetorical devices in a poem corroborates or contradicts the veracity of the poet's utterances. Rather, one should ask if the rhetorical devices are effective in intensifying in the audience emotions that enable them to recontextualize their own experiences.

As a matter of fact, foregrounding, i.e., the usage of parameters like meter and rhyme, poetic language, figures of speech, and rhetorical devices, does arouse emotions in itself.[80] The way this is achieved and the exact effect of the different factors is dependent on the past experiences and the expectations of the respective public. Since we can no longer conduct neuropsychological experiments on the literary public of the Mamluk period, we can only try to reconstruct their expectations and anticipations by carefully analyzing as many texts as possible and by scrutinizing the abundant theoretical and critical utterance of this time. Such studies have not yet been done. However, it is certainly no daring speculation to assume that the permanency of foregrounding by means of manifold rhetorical devices in Ibn Nubātah's poem had the power to intensify energetically its emotional effect in the audience. This effect seems to be strengthened further by the fact that, despite its closely-woven carpet of foregrounding, no single device stands out to attract special attention. This permanent but rather subdued fuelling of emotions, together with the emotive structure discussed above, may have yielded an extremely emotional text. Its production will not have failed to produce a cathartic effect on

the poet himself. To indulge in it may have contributed to emotional relief for many of its audience, whatever their personal sufferings may have been, and the whole group of participants in the Mamluk literary system may have experienced a feeling of solidarity resulting from shared emotions.

Concluding Remarks

Ibn Nubātah al-Miṣrī´s *rā'īyah* is one of at least seven poems he composed on the death of his son(s). We can discern several functions of the poem on multiple levels: (1) It contributes to the process of mourning of the poet himself. (2) It may serve as consolation for other people who have experienced a similar loss. (3) It allows the poet to overcome his absorption in grief and to resume his public role as *homme de lettres*. (4) As a work of art with its interpretative openness, it is the basis of communication between the poet and his audience in a more general sense. (5) As a highly emotional text it allows its recipients to experience a cathartic process of recontextualization of their own emotions. (6) For the participants in the Mamluk literary system (more or less identical with the ulama) it is considered a text of emotional and artistic relevance to them and in this way helps to stabilize the social group that is defined, in addition to other ways, by participation in the literary discourse. (7) For the members of this social group, who ascribe personal relevance to the text, it helps shape and communicate their attitudes and emotions about childhood death and gives them a language with which to speak about it. (8) All these functions are provided with an additional historical dimension by Ibn Nubātah´s transformation of a famous dirge by al-Tihāmī, who had lived three and a half centuries earlier.

We know that two of Ibn Nubātah´s three long dirges were written on the death of his son ʻAbd al-Raḥīm. His name is mentioned in line 3 of the *qāfīyah* and in the headline of the *dālīyah* (rhyming in *-dak*). I have hardly any doubt that the *rā'īyah* was composed on the same occasion. In all probability, Ibn Nubātah, who greatly admired the poems of al-Tihāmī, wanted to respond to al-Tihāmī´s series of three long poems (two *rā'īyah*s and a *qāfīyah*) with a series of his own, comprising three long poems as well. One may try to order Ibn Nubātah´s three odes chronologically according to their position in the mourning process of the poet (in which case probably the poem rhyming in *–dak* would come first), but must at the same time avoid overlooking the literary enterprise these poems represent. As a matter of fact, Ibn Nubātah presented three long and ambitious poems, each of them of very different character, to give his time a new corpus of poems on childhood death as an answer to the, by then, classical poems of al-Tihāmī. Thereby, Ibn Nubātah gave a new voice to the experience of childhood death for his own contemporaries, thus confirming the value of the old classics and at the same time remodelling and supplementing (if not superseding) them. Of course, a

further assessment of Ibn Nubātah′s *Kindertotenlieder* would have to take into account the whole set of poems.

Literary ambition was probably also a reason why Ibn Nubātah surrounded his three long dirges with several smaller ones. Again, only one of them mentions the name of ʻAbd al-Raḥīm in the text, but others may also have been by-products of his composition of the long odes. By means of these small poems, Ibn Nubātah could further transform the tradition to Mamluk conventions, since the epigram was extremely popular in his time. Again, he proved that he could adapt a multitude of literary forms and techniques to his theme, even the *tawriyah*-pointed epigram.

In the preceding, we could ascertain several characteristics of the poem that can be considered typical for the Mamluk period. The fact that the rather homogenous group of the ulama became the bearer of the literary system contributed to a more private nature of literature; the exegetical preoccupations of the ulama favored the use of rhetorical devices of ambiguity such as the *tawriyah;* and their encyclopedic training might have fostered a tendency to combine many aspects in a small space, as a polydisciplinary, kaleidoscopic text like Ibn Muqri'′s *ʻUnwān al-Sharaf al-Wāfī,* the multifold art of the *badīʻīyah,* or the richness of allusions in many Mamluk poems may show. In our example, the extreme density of the poem in several respects may be a reflection of this tendency. However, our knowledge of Mamluk literature is extremely poor, and we are still far from comprehending its peculiarities or even the special characteristics of even its most important poets.[81] Even the way a rhetorical device like the *tawriyah* functions in its poetic context and the kind of intellectual and emotional reactions it provoked are still difficult to state. I may simply conclude therefore by quoting another *tawriyah*-pointed epigram of Ibn Nubātah. What for the modern reader might appear to be humorous, and therefore irreconcilable with mourning, is applied by Ibn Nubātah to speak about his grief. The *tawriyah,* which forms the point of the epigram, is based on the double meaning of the word *kānūn,* which is the name of two months of winter, in one of which ʻAbd al-Raḥīm had died, but also a word designating an oven, a brazier, or a coal pan:[82]

> Yā lahfa qalbī ʻalá ʻAbdi al-Raḥīmī wa-yā / shawqī ilayhi wa-yā shajwī wa-yā dā'ī
> Fī shahri kānūna wāfāhu al-ḥimāmu la-qad / aḥraqta bi-al-nāri yā kānūnu aḥshā'ī
> [Oh sorrow in my heart for ʻAbd al-Raḥīm, oh yearning for him, oh

[81]Homerin, ″Reflections on Arabic Poetry.″

[82]Ibn Nubātah, *Dīwān*, 18 (meter *basīṭ*); I translate *kānūn* as December, but it could also be January (*kānūn al-thānī*).

my grief and malady!
Death overtook him in December, but you, December / *oven,* burnt my intestines with fire!]

TEXT AND TRANSLATION

١ اللّه جارك إنّ دمعيَ جاري   يا موحشَ الأوطان والأوطار
٢ لما سكنتَ من التراب حديقة   فاضت عليك العينُ بالأنهار
٣ شتّان ما حالي وحالك أنت في   غرفِ الجنان ومهجتي في النار
٤ خفّ النجا بك يا بنيّ الى السُرى   فسبقتني و ثقلتُ بالأوزار
٥ ليت الردى إذ لم يدعْك أهاب بي   حتى ندوم معاً على مضمار
٦ ليت القضا الجاري تمهَّل وِرده   حتى حسبت عواقب الإصدار
٧ ما كنت إلاّ مثل لحمة بارقٍ   ولَّى وأغرَى الجفن بالإمطار
٨ أبكيك ما بكت الحمامُ هديلها   وأحنّ ما حنَّت إلى الأوكار
٩ أبكي بمحمرّ الدموع وإنما   تبكي العيون نظيرها بنُضار
١٠ قالوا صغيراً قلتُ إنّ وربما   كانت به الحسرات غير صغار
١١ وأحقّ بالأحزان ماضٍ لم يسئْ   بيدٍ ولا لسنٍ ولا إضمار
١٢ نائي اللقا وحِماه أقرب مطرحاً   يا بعد مجتمع وقرب مزار
١٣ لهفي لغصن راقني بنباته   لو أمهلته التربُ للإثمار
١٤ لهفي لجوهرةٍ خفتْ فكأنني   حجّبتها من أدمعي ببحار
١٥ لهفي لسارٍ حارَ فيه تجلّدي   وا حيرتي بالكوكب السيّار
١٦ سَكَنَ الثرى فكأنه سكن الحشا   من فرط ما شغلتْ به أفكاري
١٧ أعززْ عليّ بأنّ ضيف مسامعي   لم يحظَ من ذاك اللسان بقاري
١٨ أعزز عليّ بأنْ رحلتَ ولم تخض   أقدام فكرك أبحر الأشعار
١٩ أعزز عليّ بأن رفقت على الردى   وعليك من دمعي كدرّ نثار
٢٠ أبنيّ إن تكسَ التراب فإنه   غايات أجمعنا وليس بعار
٢١ ما في زمانك ما يسرّ مؤمّلاً   فاذهبْ كما ذهب الخيال الساري
٢٢ لو أن أخباري إليك توصّلت   لبكيتَ في الجنّات من أخباري
٢٣ أحزان مدّكرٍ ووحشةُ مفردٍ   ومقام مَضْيَعة و ذلّ جوار
٢٤ أبنيّ إنّي قد كنَزتُك في الثرى   فانفع أباك بساعة الإقتار
٢٥ أبنيّ قد وقفتْ عليّ حوادثُ   فوقفنَ من طلل على آثار

٢٦ و مضى البياض من الحياة و طيبها   لكنها أبقته فوق عذاري
٢٧ نمْ وادعاً فلقد تقرَّح ناظري   سهراً ونامت أعينُ السُمَّار
٢٨ أرعى الدّجى و كأنّ ذيل ظلامه   متشبّثُ بالنجم في مسمار
٢٩ خلع الصباح على المجرّة سجفه   أم قسّمت شمس النهار دراري
٣٠ أم غاب معْ طفل أخيرُ دجنّتي   لا كوكبي فيها ولا أسحاري
٣١ تبًا لعاديةِ الزمان على الفتى   فلقد حذرت وما أفاد حذاري
٣٢ وحويت ديناراً لوجهك فانتحى   صرف الزمان فراح بالدينار
٣٣ أبنيّ إن تبعدْ فإنّ مدى اللقا   بيني وبينك مسرعُ التيّار
٣٤ إن تسقني في الحشر شربة كوثرٍ   فلقد سقتك مدامعي بغزار
٣٥ كيف الحياة وقد دفنت جوانحي   ما بين أنجادٍ إلى أغوار
٣٦ وحوى بنيّ تراب مصر وجلّق   كالغيم مرتكناً على أقمار
٣٧ طرقتْ على تلك النفوس طوارق   وطرت على تلك الجسوم طواري
٣٨ وبدت لدى البيدا مطيّ قبورهم   علماً بأنّهمُ على أسفار
٣٩ قسماً بمن جعل الفناء مسافة   إنّا على خطرٍ من الأخطار
٤٠ قل للذين تقدّمت أمثالهم   أين الفرار ولات حين فرار
٤١ ما بين أشهبَ للظلام معاود   ركضاً وأدهم للدُجى كرّار
٤٢ يطأ الصغير ومن يعمر يلتحقْ   وعليه من شيبٍ كنقع غبار
٤٣ مالي وعتب الشهب في تقديرها   ولقد تصاب الشهب بالاقدار
٤٤ لا عقرب الفلك اللسوب من الردى   ينجو ولا أسد البروج الضاري
٤٥ يرمي الهلال بقوسه أرواحنا   ولقد يصاب القوس بالاوتار
٤٦ كتب الفَناء على الشواهد حجّة   غَنيَتْ عن الإقرار والإنكار
٤٧ فلتظهر الفطن الثواقب عجزها   فظهوره سرّ من الأسرار
٤٨ وليصطبر متفجّع فلربّما   فقد المنى ومثوبة الصبّار
٤٩ أين الملوك الرافلون إلى العلى   عثروا إلى الأجداث أيّ عثار
٥٠ كانوا جبالاً لا تُرام فأصبحوا   بيد الردى حفنات تربٍ هار
٥١ أين الكماة إذ العجاجة أظلمت   قدَحوا القسيّ وناضلوا بشرار
٥٢ سلموا على عطب الوغى ودجى بِهم   داجي المنون إلى محلّ بَوار
٥٣ أين الأصاغر في المهود كأنما   ضمّت كمائمها على أزهار
٥٤ خلط الحِمام عظامهم ولحومهم   حتى تساوى الدرّ بالاحجار

٥٥ فلئن صبرتُ ففي الأولى متصبّرٌ   ولئن بدا جزعي فعن أعذار
٥٦ درّت عليك من الغمام مراضعٌ   وتكنّفتك من النجوم جوار
٥٧ تسقي ثراك و ليس ذاك بنافعي   لكن أغالط مهجتي وأداري

1. God be your helper as my tears are flowing / *my helpers,*
   oh you who have forsaken both my home and hope!
2. When you settled in a garden of dust,
   my eyes poured forth rivers over thee.
3. Amazingly different is your condition and mine: While you dwell
   in the lofty chambers of paradise, my heart is in the fire of hell.
4. When we set off on a night journey, you were a light burden, my little son,
   but you outstripped me, and I was burdened with a heavy load!
5. Would that destruction had summoned me as well, when it did not refrain from you,
   so that we could have pursued the same race course!
6. Would that destiny had delayed in its permanent course
   till you could have imagined the end of the route!
7. You were only a flash of lightning from a cloud
   that rainless turned away but made the eyelids shed a copious rain.
8. I´ll weep over you as long as the doves weep over their nestling,
   and I´ll yearn for you as long as they yearn for their nests.
9. No wonder that with reddened tears I weep,
   for eyes only weep with gold over their own kind.
10. ´Twas but a child so small, they said. True, I replied,
    but many times my grief for him was anything but small.
11. And is not he who did no wrong with hand or tongue
    nor hid an evil in his heart the worthiest of grief?
12. A long way ´tis to meet him, though his shelter is the nearest spot.
    How far is union, yet how close the place to visit him!
13. O sorrow for a twig the growth of which delighted me—
    if only earth had given it the time to bring forth fruit!

14. O sorrow for a pearl once shining.
    It seems as if I´d veiled it now with seas of tears.
15. O sorrow for a nightly traveller whose departure had caused my endurance to wane!
    How lost am I with the departed star / *planet!*
16. He settled in the earth but occupies my thoughts so in excess
    as if he´d settled in my heart.
17. How it distresses me that my ears´ guest
    never enjoyed the hospitality of that tongue!
18. How it distresses me that you departed ere the feet of your intelligence
    did wade into the seas / *meters* of poetry!
19. How it distresses me that you behaved so gently with destruction
    while my tears are poured on you like scattered pearls.
20. My little son, that you were clad in earth,
    well, ´tis the end of all of us and tis no shame / *no one will remain naked.*
21. In times like these not much remains to make a man of great expectations happy,
    thence vanish like a fleeting apparition!
22. If news about my state would reach you there, you´d weep in paradise
    over the news you hear:
23. Sadness of memories, gloom of loneliness,
    an abode of perdition, contemptible protection.
24. My little son, I buried you, my treasure, in the soil.
    Help then your father in the hour of indigence!
25. My little son, misfortune after misfortune has afflicted me,
    and donated a fortune of rubble to ruins,
26. And gone is the whiteness of life and its sweetness,
    though life left its whiteness on my beard.
27. Sleep in peace, while my eyes are wounded by sleeplessness
    when the eyes of the night companions have long been closed in sleep,
28. Staring at a night that seems as if the train of its darkness
    was nailed down by the stars.[83]

---

[83]Probably by *najm* the Pleiades are meant. Cf. a line by Ṣurr Durr quoted in Paul Kunitzsch and Manfred Ullmann, *Die Plejaden in den Vergleichen der arabischen Dichtung* (Munich, 1992), 83, in which the Pleiades are compared to the nails of a coat of mail. These nails are compared in al-Tihāmī´s *kāmil rā'īyah* with water bubbles. This line (49), rhyming in *al-mismārī*, is certainly

29. Has morning yet veiled the Milky Way,
    or the light of day put the stars to flight?[84]
30. Or has an endless darkness, without stars or dawn for me,
    yet left me along with the child?
31. May then perish the vicissitudes of time that befall noble men!
    Indeed, I made provisions, but all provisions are in vain,
32. And I embraced in your face a dinar,
    but time′s misfortune / *money changing* approached and took the dinar away.
33. My dear son, though you are far from me / *may you not perish*, the time of our meeting
    draws quickly near.[85]
34. You will give me a draught of Kawthar′s water on the Day of Judgment,
    for my tears will have given you to drink abundantly before.
35. How can life be
    after I have buried my intestines between highland and lowland,
36. And the dust of Cairo and Damascus encloses my sons
    like clouds heaped up around moons?
37. Calamities have come upon these souls,
    unexpected misfortunes have befallen these bodies.
38. The mounts of their graves appear in the wilderness
    as a sign that they are on a journey.
39. I swear by him who postponed our end:
    We are always at some brink of destruction!
40. Say to those the like of whom approached us asking ″ Where is escape?″ :
    ″Time is none to escape!″
41. What is the difference between a white horse / *grey-haired* galloping with determination
    into darkness, and a black horse / *black-haired* jumping into gloom?
42. The small child is trod under foot, whereas he who is granted long life will catch up

---

alluded to by Ibn Nubātah. His magnificent image was completely misunderstood by M. Muḥammad, *Ibn Nubātah,* 225, who wrongly assumes a connection with a line by Imru' al-Qays.

[84]Thus, if one reads *qussimat;* otherwise: ″or had the sun of day distributed glistening stars.″

[85]On the original meaning of the formula *lā tab'ad* see Gert Borg, ″*Ammā ba'du:* The Meaning of *′lā tab'ad,′″ Zeitschrift für Arabische Linguistik* 37 (1999): 13–24.

with grey hair as if he had whirled up a cloud of dust in his race.

43. Why do I blame the stars / *grey-haired* and their assignments?
The stars / *grey-haired* are struck by fate themselves!
44. Neither the stinging celestial scorpion will escape destruction
nor the rapacious zodiac lion.
45. With his bow the crescent moon shoots at our souls,
but the bow is struck by revenge / *the strings* in turn.
46. Perdition inscribed a document on tombstones that is valid
regardless whether it be rejected or confirmed.
47. Let penetrating minds reveal their ignorance—
its revelation is a secret great indeed!
48. Let the afflicted bear the pain with calm—
how often were a dearly loved and endurance´s reward all lost at once!
49. Where are the kings that strutted towards loftiness?
They stumbled over their trails right into their graves!
50. Mountains they were, unthinkable to ascend.
Destruction´s hand has turned them into a handful of wavering dust.
51. Where are the well-armed heroes who, when the clouds of dusk darkened the battle field,
ignited fire with their bows and shot with flashing sparks?
52. Unharmed they survived disasters of battle
until dark fate led them to a place of destruction to darken their light.
53. Where are the babies who in the cradles lied
like blossoms enclosed by their calyces?
54. Death has permeated their bones and flesh until the pearls they were
became transformed into mere stones.
55. If I be patient, it is because I force myself to patience in all this;
and if I show my grief, how manifold are my excuses!
56. May nursing clouds bestow their copious stream upon you!
May servant / *moving* stars from all sides be around you!
57. They all will moisten the earth of your grave, but be of no avail for me.
Instead, I´ll try to cheat my heart and to deceive it.

An Alexandrian Age in Fourteenth-Century Damascus: Twin Commentaries on Two Celebrated Arabic Epistles

Superficially, at least, the traditional Western view of Arabic literature in the Mamluk period conforms rather closely to the hoary cliches about the Alexandrian Age of Greek literature, a millennium and a half earlier. Authors worked under the burden of a rich canon of classical texts, which they revered, and which they diligently collected, classified, commented, criticized, and epitomized. By comparison, their own literary efforts, while certainly copious, have been seen as derivative, lifeless, and smelling altogether too much of the lamp.

Evidence for the first half of this picture—if not the second—is easy to come by, as can be seen from even a cursory look at some of the literary production of two of the more celebrated figures of the age, Ibn Nubātah al-Miṣrī (d. 768/1366) and his younger colleague Khalīl ibn Aybak al-Ṣafadī (d. 764/1363). Ibn Nubātah, known principally as a poet, published selections of the verse of a number of his predecessors, including Ibn al-Rūmī (d. 283/896) and the notorious Ibn al-Ḥajjāj (d. 391/1001), as well as a collection of the epistles of the famous Ayyubid minister and stylist al-Qāḍī al-Fāḍil (d. 596/1200).[1] Al-Ṣafadī, mainly a prose writer, composed commentaries on the famous poem *Lāmīyat al-'Ajam* by al-Ṭughrā'ī (d. 515/1121) and the work of literary criticism entitled *Al-Mathal al-Sā'ir* by Ḍiyā' al-Dīn Ibn al-Athīr (d. 637/1239), a series of monographs on individual literary tropes, and a number of biographical dictionaries, including one on the blind and one on the one-eyed.[2]

Particularly interesting as a manifestation of these two writers' "Alexandrian" qualities—as well as a curious link between them—is the fact that each wrote an elaborate work of commentary on a prose epistle (a different epistle in each case) by the fifth/eleventh-century Andalusian poet and littérateur Ibn Zaydūn (d. 463/1070). These commentaries are far more than philological glosses; in each

[1]On Ibn Nubātah al-Miṣrī, see *The Encyclopaedia of Islam*, 2nd ed., s.v.; Carl Brockelmann, *Geschichte der arabischen Litteratur* (Leiden, 1949), 2:10–12, S2:149–50; 'Umar Mūsá Bāshā, *Ibn Nubātah al-Miṣrī* (Cairo, 1963); Maḥmūd Sālim Muḥammad, *Ibn Nubātah: Shā'ir al-'Aṣr al-Mamlūkī* (Damascus and Beirut, 1999). The most useful list of Ibn Nubātah's works is in Muḥammad Abū al-Faḍl Ibrāhīm's edition of his *Sarḥ al-'Uyūn fī Sharḥ Risālat Ibn Zaydūn* (Cairo, 1964), 18–24.

[2]On al-Ṣafadī, see *EI*^{2}, s.v.; *GAL*, 2:31–33, S2:27–29; Josef van Ess, "Ṣafadī-Splitter," *Der Islam* 53 (1976): 242–66, and 54 (1977): 77–108.

case the original epistle takes up less than ten pages, while the commentary extends to more than four hundred. Both works are thus highly digressive, and they manage to incorporate in their compass vast swathes of traditional Arabic literary culture and thereby offer the reader a far richer plate than the occasion of a single epistle would seem to promise.

A first question to pose about these two texts, then, concerns their status as commentaries. If they are not just offering a simple *explication du texte,* what are they doing, and why? Where do they fit in the larger context of commentary writing in the Mamluk age? In particular, what was the impetus for commenting literary works in prose, as opposed to the long-established tradition of commenting poetry? Another obvious question, given the wealth of information these works contain on the Arabic literary heritage as a whole, is what they can tell us about the canon in their own day. What was ″classical,″ and what was not? Are they working to define that canon, to reinforce it, or perhaps to expand it? And who was their intended audience? Were they intended for students, for a general educated (or semi-educated) public, or perhaps for other scholars, who would be dazzled by their erudition? More generally, what do they tell us about the role of intertextuality in Mamluk literature, the supposed attendant ″anxiety of influence,″ and its general ″Alexandrian″ qualities altogether?

The author of the two epistles around whom Ibn Nubātah and al-Ṣafadī chose to build their works is, of course, very well known. Ibn Zaydūn was a Cordoban aristocrat whose life reflects the turbulence of eleventh-century Andalusia under the ″Party Kings.″ In his youth he served as vizier to the governor of Cordoba, Ibn Jahwar, but then fell foul of him and was thrown into prison, where he languished for some time before escaping, returning to the city only after Ibn Jahwar′s death. Later he again fell from favor and left Cordoba for Seville, where he spent many years at the Abbadid court of al-Muʻtaḍid and his son al-Muʻtamid, returning to Cordoba only with the Abbadid conquest of the city. Probably the most famous poet of his time, he composed verses in many genres; among the most famous are his love poems on Wallādah, daughter of the erstwhile caliph al-Mustakfī, with whom he had a stormy affair in his youth, as well as his poetic pleas *(istiʻṭāf)* to Ibn Jahwar to release him from prison during his first confinement in Cordoba.[3]

But Ibn Zaydūn was also known as a prose stylist, and his two most famous epistles are concerned with these same wrenching youthful experiences. The first, later christened the ″humorous epistle″ *(al-risālah al-hazlīyah),* was occasioned by an attempt by his enemy and rival Ibn ʻAbdūs to supplant him in the affections of

---

[3]On Ibn Zaydūn, see *EI*[2], s.v.; Devin Stewart, ″Ibn Zaydūn,″ in *The Cambridge History of Arabic Literature: The Literature of Al-Andalus*, ed. María Rosa Menocal, Raymond P. Scheindlin and Michael Sells (Cambridge, 2000), 306–17.

Wallādah (an attempt which, by the way, later proved successful); speaking in Wallādah's voice *('an lisānihā),* he has her peremptorily reject Ibn 'Abdūs's advances and pour scorn on him for his presumption. The second, the "serious epistle" *(al-risālah al-jiddīyah),* is a prose companion to his *isti'ṭāf* poems, attempting to move Ibn Jahwar to pity and persuade him to let him out of jail.

These are the two epistles commented by, respectively, Ibn Nubātah and al-Ṣafadī, and their choice of them is perhaps a bit surprising. Commentary as a general enterprise was, of course, a growth industry in this period, especially in religious scholarship; indeed, in jurisprudence *(fiqh)* it had become perhaps the most dominant form of writing altogether. Commentaries on works of grammar, lexicography, and literary criticism also abounded. Within the realm of pure literature, the commenting of poetry—both *dīwān*s of individual poets and anthologies such as Abū Tammām's *Ḥamāsah*—was a long-established and still thriving tradition. But for commentators to apply their skills to works of *prose* literature was far less common.

Three prominent examples of such commentaries may, however, be cited from the pens of our authors' predecessors. The *Sharḥ Nahj al-Balāghah* by Ibn Abī al-Ḥadīd (d. 656/1258), commenting the collection of the purported sermons, speeches, and other dicta of 'Alī ibn Abī Ṭālib put together by al-Sharīf al-Raḍī (d. 406/1015), parallels their works not only in being a commentary on prose, but also in its outsize dimensions and highly digressive character; on the other hand, Ibn Abī al-Ḥadīd's base text is essentially a religious one, and his objectives correspondingly diverge significantly from those of Ibn Nubātah and al-Ṣafadī.[4] Perhaps more apposite, and certainly more obvious, is the tradition of commenting the *Maqāmāt* of al-Ḥarīrī; at least nine such commentaries were produced in the sixth/twelfth and seventh/thirteenth centuries, including those of Ibn Ẓafar (d. 565/1169), Ṣadr al-Afāḍil (d. 617/1220), al-Sharīshī (d. 619/1222), and al-Bayḍāwī (d. 680/1281), and of these the one best known today, that of al-Sharīshī, again displays the qualities of disproportionate length and intentional digressiveness evinced by the two later authors.[5] It is striking to what degree al-Ḥarīrī's fame eclipsed that of Badī' al-Zamān al-Hamadhānī (d. 398/1008), the inventor of the *maqāmah* genre, whose own *Maqāmāt* were, so far as is known, never commented at all. On the other hand, al-Hamadhānī's contemporary, al-'Utbī (d. ca. 412/1022), who applied the euphuistic prose style developed in the chanceries *(inshā')* to the writing of history rather than fiction, produced in his laudatory biography of Maḥmūd of Ghaznah, the *Kitāb al-Yamīnī,* a work that seems to have cried out for

[4]Ibn Abī al-Ḥadīd, *Sharḥ Nahj al-Balāghah,* ed. Muḥammad Abū al-Faḍl Ibrāhīm, 2nd ed., 21 vols. (Cairo, 1965–67); on Ibn Abī al-Ḥadīd, see *EI²*, s.v.

[5]For the commentaries on al-Ḥarīrī, see *GAL,* 1:276 f., S1:486–88. On al-Sharīshī, see *EI²*, s.v., and his *Sharḥ Maqāmāt al-Ḥarīrī,* ed. Muḥammad Abū al-Faḍl Ibrāhīm, 5 vols. (Cairo, 1970).

commentaries, of which at least four are known from the following three centuries, including one by Ṣadr al-Afāḍil, who also commented al-Ḥarīrī's *Maqāmāt*. All of these are, however, soberly philological, sticking quite close to al-'Utbī's original text rather than using it as a pretext for striking out in unexpected (and entertaining) directions.[6]

None of these earlier commentaries were directed at epistles *(rasā'il)* in the narrow sense of a relatively brief letter addressed from one individual to another, despite the fact that such letter-writing had been recognized as an art form since the third/ninth century, when the "collected letters" of recognized prose stylists began to be published. The earliest such collections are now lost to us, but preserved collections from the second half of the fourth/tenth century enable us to track a real efflorescence in the art of correspondence *(tarassul),* as part of, and a major contributor to, a general enhancement of the status of prose vis-à-vis its rival, poetry, at that time. Writers of both official letters, such as Abū Isḥāq al-Ṣābi' (d. 384/994) and the Ṣāḥib Ibn 'Abbād (d. 385/995), and private individuals, such as Abū Bakr al-Khwārazmī (d. 384/994) and al-Hamadhānī himself, cultivated a new, intricate style, characterized by the constant employment of rhetorical tropes, careful attention to phrasal rhythm, and above all patterns of prose rhyme *(saj'),* which was to determine the direction of fine letter-writing for centuries to come, as well as to spawn such new genres as the *maqāmāt.* While this trend was at first particularly associated with the eastern Islamic world, it rapidly spread west, as can be seen in the correspondence of Abū al-'Alā' al-Ma'arrī (d. 449/1058) in Syria and—albeit to a less extravagant extent—of Ibn Zaydūn in Andalusia.[7]

This now-established euphuistic *tarassul* style enjoyed further development at the hands of two outstanding representatives in the Ayyubid and then Mamluk realms. The first was Saladin's right-hand man, al-Qāḍī al-Fāḍil (d. 596/1200), whose voluminous correspondence is preserved in collections made by a number of later authors. Two of these have been published, one of them compiled by the second major epistolographer of the age, the Mamluk chancery head Ibn 'Abd al-Ẓāhir (d. 692/1292), who is best known today for his biographies of the sultans Baybars, Qalāwūn, and al-Ashraf Khalīl, and whose own correspondence is available only through (extensive) quotations in later authors.[8] Both men were certainly

[6]On al-'Utbī, see *EI*², s.v., and *GAL,* 1:314, S1:547f. The one published commentary on the *Kitāb al-Yamīnī* is the eleventh/seventeeth-century one by al-Manīnī (d. 1172/1759), *Al-Fatḥ al-Wahbī 'alá Tārīkh Abī Naṣr al-'Utbī,* 2 vols. (Cairo, 1869). On the rather neglected Ṣadr al-Afāḍil (al-Qāsim ibn al-Ḥusayn al-Khwārazmī), see Yāqūt, *Mu'jam al-Udabā'*, ed. Aḥmad Farīd Rifā'ī (Beirut, 1979), 16:238–53.

[7]For basic orientation on these developments, see Zaki Mubarak, *La prose arabe au IVe siècle de l-Hégire (Xe siècle)* (Paris, 1931).

[8]On al-Qāḍī al-Fāḍil, see *EI*², s.v., and *GAL,* 1:316, S1:549. The published collections are Ibn

models for Ibn Nubātah and al-Ṣafadī; while the latter appended a letter by Ibn ʻAbd al-Ẓāhir to his own commentary, Ibn Nubātah manifested his admiration for al-Qāḍī al-Fāḍil by preparing his own collection of his letters, entitled *Al-Fāḍil min Inshā' al-Fāḍil.*[9]

Ibn Nubātah was born in Cairo in 686/1287, five years before the death of Ibn ʻAbd al-Ẓāhir. As a young man he emigrated to Syria, where he spent most of his life, returning to Egypt only when in his seventies and dying in Cairo in 768/1366. In Syria, he was especially patronized by the Ayyubid ruler of Ḥamāh, Abū al-Fidā', and his son; later, resident in Damascus, he was appointed supervisor *(nāẓir)* of the Church of the Holy Sepulchre in Jerusalem, making an annual trip there at Easter. While he was known primarily as a poet, his prose was also much appreciated, and he served for a time as head of the chancery in Damascus. In a sense, he had a birthright to his eloquence, priding himself on, and taking his name from, his ancestor Ibn Nubātah al-Fāriqī (d. 374/984), a famous preacher at the court of Sayf al-Dawlah in Aleppo, whose sermons—yet another exemplar of the efflorescence of euphuistic prose in the late fourth/tenth century—had been not only collected but also commented on, at least twice, in the seventh/thirteenth century.[10]

Many of Ibn Nubātah′s works survive in manuscript, but only a few of them have been published, including, besides his poetic *Dīwān,*[11] his collection of al-Qāḍī al-Fāḍil′s epistles, an *adab* collection entitled *Maṭlaʻ al-Fawā'id wa-Majmaʻ al-Farā'id,*[12] and his commentary on Ibn Zaydūn′s ″humorous″ epistle, all three composed at the behest of his patron Abū al-Fidā'. Certainly it is the latter, entitled *Sarḥ al-ʻUyūn fī Sharḥ Risālat Ibn Zaydūn* (The Pasture for eyes in explanation of the epistle of Ibn Zaydūn), that has always been his most popular prose work, first printed as early as 1861 in Beirut and many times since.[13]

In his preface to the *Sarḥ al-ʻUyūn* Ibn Nubātah indicates that the work was commissioned by Abū al-Fidā', but supplies no details elucidating the reason for the amir′s choice of the text to be commented. He does recount, somewhat

ʻAbd al-Ẓāhir, *Al-Durr al-Naẓīm min Tarassul ʻAbd al-Raḥīm,* ed. Aḥmad Aḥmad Badawī (Cairo, 1959); and Muwaffaq al-Dīn Ibn al-Dībājī, *Rasā'il al-Ḥarb wa-al-Salām,* ed. Muḥammad Naghash (Cairo, 1978). On Ibn ʻAbd al-Ẓāhir, see *EI²,* s.v., and *GAL,* 1:318f., S1:551. The biography of Baybars has been edited by ʻAbd al-ʻAzīz al-Khuwayṭir, *Al-Rawḍ al-Ẓāhir fī Sīrat al-Malik al-Ẓāhir* (Riyadh, 1976); most recently, Ibn ʻAbd al-Ẓāhir′s topographic work on Cairo has been edited by Ayman Fu'ād Sayyid, *Al-Rawḍah al-Bahīyah al-Zāhirīyah fī Khiṭaṭ al-Muʻizzīyah al-Qāhirah* (Cairo, 1996).

9 Extant in manuscript but unpublished.

10 On the earlier Ibn Nubātah, see *EI²,* s.v.; *GAL,* 1:92f., S1:149f.

11 Most recently edited by ʻAbd al-Amīr Mahdī Ḥabīb al-Ṭā'ī (Baghdad, 1977).

12 Ed. ʻUmar Mūsá Bāshā (Damascus, 1972).

13 I have relied on the 1964 edition by Muḥammad Abū al-Faḍl Ibrāhīm; see note 1 above.

disingenuously, how he protested that he was ″only″ a poet, unqualified to deal with the rich material presented by Ibn Zaydūn′s epistle, but was overruled by the amir, who remarked that ″stories″ *(qiṣaṣ)* are not far removed, in any case, from the poet′s bailiwick. He goes on to say that there were copious resources for this undertaking available in a *waqf* library in Damascus—which, alas, proved inaccessible to him, so he was forced to rely on materials at hand. He also insists on how short he has kept his commentary (although it runs to 476 pages in the most recent printed edition).

After his prefatory remarks, and before launching into his *sharḥ* proper, Ibn Nubātah supplies a brief biography of Ibn Zaydūn and a short selection of his verses. Such capsule biographies-cum-verses were of course standard in his day in a variety of contexts, most notably in biographical dictionaries, and they loom large in the body of this commentary itself. Ibn Nubātah then explains who Wallādah was, adding some of her verses as well, and delineates the precise curcumstances that occasioned the letter, namely, Ibn ʻAbdūs′s attempt to horn in on Ibn Zaydūn by sending a slave girl to Wallādah to sing his praises and sound out his chances. Ibn Nubātah is fairly explicit about his sources, saying that he has taken his information from Ibn Bassām, Ibn Ḥayyān, and other standard Andalusian writers.

The commentary itself constitutes the rest of the work. The original epistle is not presented integrally, but taken phrase by phrase. Odd words are glossed, less than obvious syntactical constructions elucidated, and other expected philological work performed. That is, however, only a minor part of the commentary. What Ibn Nubātah is really interested in doing is using the epistle—which happens to be exceptionally replete with historical and literary allusions—to open a window on the entire literary-historical tradition.

The tone is set from the beginning. The ″*ammā baʻd*″—the traditional phrase of transition from the invocation to the body of the message—is discussed in terms of who first employed it in Arabic epistolography, and the following phrase, ″O you whose intellect is impaired [because you think you can win me over],″ leads to a full discussion of the intellect *(ʻaql)* in Islamic theology and other contexts, including its etymology, al-Jāḥiẓ′s thoughts on it, verses by ʻAlī ibn Abī Ṭālib, two prophetic hadith, considerations of foods that strengthen it, and a conventional sideswipe at schoolmasters, who are thought to lack intellect altogether because they spend all their time with children.

The real backbone of the work, however, is its more extended excursus, most of them biographical and introduced with the rubric ″*tarjamah*.″ The first of these concerns the famous pre-Islamic sage Aktham ibn Sayfī, whom Ibn Nubātah identifies as the source of a proverb cited in Ibn Zaydūn′s letter; two pages follow, providing general information on Aktham and reviewing the long past controversies

about his possible adoption of Islam. The second such *tarjamah* is much longer: a verse quoted anonymously by Ibn Zaydūn is identified as being by al-Mutanabbī, and Ibn Nubātah adds, ″Since the discussion has led to our mentioning al-Mutanabbī, it cannot hurt *(lā ba's)* to mention some basic information about him *(nubadh min akhbārihi).*″ Seven pages follow, offering a brief biographical sketch as well as extensive selections, with running commentary, from the *qaṣīdah* from which comes the line quoted by Ibn Zaydūn.

But Ibn Nubātah′s real opportunity for this kind of lore- and verse-mongering in the guise of ″biography″ comes a few lines later in the letter, where Ibn Zaydūn has Wallādah say to Ibn ʻAbdūs that his slave girl messenger had praised him to the skies, ″to the point that she would have me imagine that Joseph (peace be upon him) vied with you in beauty and you put him in his place[14]; that the wife of al-ʻAzīz[15] saw you and forgot about Joseph; that Qārūn[16] amassed only a fraction of the fortune you have stored away, and that al-Naṭif[17] only stumbled on the stray bits of the money you have buried; that Chosroes carried your train, Caesar shepherded your flocks, and Alexander killed Darius only on your orders. . . .″ and so forth, mentioning altogether fifty-two different historical figures, for each of whom Ibn Nubātah supplies a *tarjamah* or sketch.

These biographies fall into distinct groups. Pre-Islamic personages, both Arab and non-Arab, are followed by a group specifically of pre-Islamic and early Islamic poets, with some variation offered by accounts of famous pre-Islamic Arab battles. Then come Umayyad governors and generals (al-Ḥajjāj gets a full eleven pages); then ancient Greek thinkers (including Plato, Aristotle, Ptolemy, Hippocrates, and Galen); a few Islamic scientists, philosophers, and theologians (al-Kindī, al-Naẓẓām); literary figures such as ʻAbd al-Ḥamīd and Jāḥiẓ; and finally the legal scholar Mālik ibn Anas. The choice of names is of course determined by Ibn Zaydūn, not Ibn Nubātah; but Ibn Nubātah exercises considerable ingenuity in keeping up the pace of *tarjamah*s in the second half of the epistle as well, partly by identifying the authors of quoted lines of verse (including, for example, Abū Nuwās and Abū Tammām), partly by paralleling proverbs with other lines of verse by other poets—and partly on the basis of sheer thematics, as when Ibn Zaydūn makes a passing reference to shorthand *(muʻammá),* which Ibn Nubātah tells us was invented by al-Khalīl ibn Aḥmad, adding, ″It cannot hurt *(lā ba's)* to mention some basic information about him . . . and I will maintain this procedure throughout the rest of this commentary.″ In fact this results in another thirty-six

*tarjamah*s altogether, somewhat more randomly assorted, including more poets, notorious heretics, and persons famous for their stupidity and inarticulateness, interspersed with discussions of proverbs, technical terms in hadith, grammar, and theology, disquisitions on the world's religions and the seven seas, and various other miscellaneous material.

In many ways—except for its length—this commentary would make an ideal text for a contemporary graduate seminar in Arabic literature, or Islamic studies, since so much basic ground regarding Islamic political, cultural, and literary history gets covered; in short, this text can serve as an introduction to the basic lore, and poetry, with which an *adīb* or littérateur—*not* a disciplinary specialist—was expected to be equipped. Not that it is by any means comprehensive (for one thing, there is little offered later than the third/ninth century), but Ibn Nubātah certainly does cover a lot of basic ground. Such thoughts lead to some obvious questions: what is Ibn Nubātah doing here, and what kind of audience is he positing (beyond the royal addressee who "commissioned" the work)? Clearly, he is not just making the text comprehensible to the average educated reader. Ibn Zaydūn had assumed an audience that would catch his allusions without need for an interpreter; and while Ibn Nubātah may well in some cases be intending to clue in the clueless where Ibn Zaydūn is particularly allusive, he is certainly also using the epistle simply as an occasion for presenting vast quantities of information that can simultaneously teach the neophyte, entertain the more sophisticated reader, and manifest his own wide reading and erudition. In all these ways, presumably, he is offering what he calls *fawā'id,* literally, "benefits," that justify the incorporation of what it "can't hurt" to add to the exposition. But before posing more questions (or answers) of this general nature, it will help to look at this commentary's "twin," al-Ṣafadī's *Tamām al-Mutūn fī Sharḥ Risālat Ibn Zaydūn* (The Complete texts in explanation of the epistle of Ibn Zaydūn), commenting the poet's "serious" epistle, in which he pleads with his erstwhile patron, now jailer, Ibn Jahwar, to set him free.[18]

Al-Ṣafadī was ten years younger than Ibn Nubātah. The son of a Mamluk, he was born in Ṣafad in 696/1296, but spent most of his life shuttling back and forth between Cairo and Damascus. He was a prolific writer on a broad variety of topics, but most fundamentally an *adīb,* although he is undoubtedly best known today for his massive and wide-ranging biographical dictionary, *Al-Wāfī bi-al-Wafayāt.* Rather surprisingly, the latter includes a fairly extensive entry on Ibn Nubātah,[19] despite the fact that the work's very title indicates that it was restricted to personages no longer living and we know in fact that Ibn Nubātah (d. 768/1366)

[18]I rely on the edition by Muḥammad Abū al-Faḍl Ibrāhīm (Cairo, 1969).
[19]Khalīl ibn Aybak al-Ṣafadī, *Al-Wāfī bi-al-Wafayāt,* vol. 1, ed. Helmut Ritter (Wiesbaden, 1962), 311–31.

outlived al-Ṣafadī (d. 764/1363) by three years. One can only assume that this biography (which mentions no specific dates later than 743/1343) was inserted at a time when one of the two was in Cairo and the other in Damascus and al-Ṣafadī was assuming that the older man was either dead or soon to be so; but the situation is unclear. In any case, aside from basic biographical facts (about the first half of Ibn Nubātah's life) and general praise (including the statement that in his prose he followed the model of al-Qāḍī al-Fāḍil and "snuffed out the light" of Ibn ʻAbd al-Ẓāhir), al-Ṣafadī's entry on him is primarily devoted to sketching out the relations between the two men.

From what he has to say, these seem to have been very cordial indeed. Pride of place is given to an epistle al-Ṣafadī, then thirty-two and living in Cairo, addressed to Ibn Nubātah in Damascus, requesting from him permission (in formal terms, an *ijāzah*) to transmit his works—both past and future; this request is preceded by a long passage of fulsome praise, explaining how Ibn Nubātah has outdone, or put to shame, the classical masters in various fields, such as al-ʻAbbās ibn al-Aḥnaf in love poetry, al-Mutanabbī in panegyric, and al-Qāḍī al-Fāḍil himself in epistolography, and followed by a further request for a brief curriculum vitae *(dhikr nasabihi wa-mawlidihi wa-makānihi)*. Ibn Nubātah begins his equally fulsome, and lengthier, reply with praise for his correspondent, dropping even more famous names along the way than had al-Ṣafadī, rather archly describes what he calls his quandary (he is unworthy of this honor, but does not want to be impolite), but then proceeds to offer his young admirer a general *ijāzah,* to which he appends an autobiographical sketch, naming his early teachers (and models, including both al-Qāḍī al-Fāḍil and Ibn ʻAbd al-Ẓāhir), citing his precocious exchanges of verse with some of them, and giving us a valuable list of his works to date (including both the *Sarḥ al-ʻUyūn* and *al-Fāḍil min Inshāʼ al-Fāḍil*).

The two men must have met personally very shortly thereafter, since we know that al-Ṣafadī travelled to Damascus later the same year, and he mentions two of Ibn Nubātah's works that he "heard" directly from him. The rest of his biography is then devoted to his later correspondence with Ibn Nubātah, in both prose and verse, the latter including a series of riddle-poems posed by each to the other (with the solutions also offered in verse) as well as Ibn Nubātah's request to borrow a book from al-Ṣafadī with a promise to return it within three days and al-Ṣafadī's (mild) poetic reproach when he failed to do so. Al-Ṣafadī gives no indication of any serious difficulties in this relationship, but one must wonder whether he is being entirely straightforward, since our only information from the other side looks quite different. According to the littérateur Ibn Ḥijjah al-Ḥamawī (d. 837/1434), Ibn Nubātah complained that every time he came up with an original image or idea *(maʻná)* in his poetry al-Ṣafadī would "emulate" or "imitate" it *(muʻāraḍah)* in a verse of his own, with the same meter and rhyme, in effect

stealing it *(sariqah)*. (Both *mu'āraḍah,* generally evaluated positively as an act of hommage, if also rivalry, and *sariqah,* generally evaluated negatively as an act of larceny, were well-established and much-discussed phenomena in the literary tradition by this time.[20]) Finally Ibn Nubātah became so exasperated with this situation that he compiled an anthology specifically of those poems of his which al-Ṣafadī had stolen and entitled it "Barley-Bread" (*Khubz al-Sha'īr*), referring to the well-known proverb "Barley is eaten and despised," applied to someone from whom one profits and then does an ill turn. Ibn Ḥijjah was so taken with this little work that he incorporated in its entirety into his *Khizānat al-Adab*.[21]

Although we have no explicit testimony to confirm it, there would seem to be every reason to believe that al-Ṣafadī's commentary on Ibn Zaydūn's "serious" epistle, the *Tamām al-Mutūn*, was itself an "emulation" of Ibn Nubātah's *Sarḥ al-'Uyūn*, carried out on a rather larger scale. Rather suspiciously, Ibn Nubātah's name does not appear anywhere in al-Ṣafadī's work; on the other hand—and one can only assume a fairly heavy dose of deliberate irony here—"emulation" in general is virtually a leitmotif throughout its introductory sections. Al-Ṣafadī begins by describing the splendor of Ibn Zaydūn's letter to Ibn Jahwar, noting in one phrase that its beauties are an inexhaustible resource for potential emulators *(wa-al-faḍā'il allatī lā tazāl maḥāsinuhā 'alá man ḥāwala mu'āraḍatahā mannāna),* and declares his humble intention to ride on its coattails with a modest commentary. This is followed, as in Ibn Nubātah's work, by a brief biography of Ibn Zaydūn and a selection from his verses; the two biographies are very similar, including some verbatim parallels, but that is probably due to the authors' use of the same sources. Al-Ṣafadī mentions the "humorous" letter, but only in passing, adding that "All his epistles are stuffed full of all sorts of *adab,* scintillating historical anecdotes, and striking proverbs, in both prose and poetry." He offers rather more information on Wallādah than does Ibn Nubātah, and more of both her verses and Ibn Zaydūn's to and about her.

Regarding the most famous of the latter, Ibn Zaydūn's celebrated *Nūnīyah,* al-Ṣafadī has some supplementary remarks to add, reverting to the topic of emulation: "People emulated it *('āraḍahā)* both in his lifetime and after his death, but could not come close to it (in quality). I believe that Ibn Zaydūn in this poem was himself emulating verses by al-Buḥturī. . . . The shaykh Ṣafī al-Dīn al-Ḥillī [d. ca. 750/1349] composed a *takhmīs*[22] on this *qaṣīdah* of Ibn Zaydūn's, making it an elegy *(marthiyah)* for al-Malik al-Mu'ayyad 'Imād al-Dīn [Abū al-Fidā'], the

[20]See *EI*², s.vv. "mu'āraḍa" and "sariḳa."
[21]Ibn Ḥijjah al-Ḥamawī, *Khizānat al-Adab wa-Ghāyat al-Arab* (Būlāq, 1291 [1874]), 285–89.
[22]That is, an expansion of the original poem made by adding three half-verses to each original two for each line, thereby totalling five; see *EI*², s.v. "takhmīs."

ruler of Ḥamāh, and succeeded admirably. . . . And I myself, in my youth, composed an elegy on one of my dear friends in Ṣafad, using the meter and rhyme of this *qaṣīdah* by Ibn Zaydūn. . . ." Al-Ṣafadī proceeds to quote his own poem in its entirety (twenty-seven lines); clearly the process of shifting in a *muʿāraḍah* from one genre to another (here, in the cases of both al-Ḥillī and al-Ṣafadī, from love to death) was intended as an additional indication of the poet's dexterity. He then concludes his introduction by offering a rather large selection of Ibn Zaydūn's other verses, in several different genres—altogether more than twice as many as those provided by Ibn Nubātah. He also, unlike Ibn Nubātah but conveniently, presents the integral text of the epistle to be commented on before launching into his phrase-by-phrase treatment of it.

Whether or not al-Ṣafadī was being deliberately coy by referring so extensively to *muʿāraḍah* in what was in fact an unacknowledged *muʿāraḍah* of Ibn Nubātah's book (and given Ibn Nubātah's fame it seems likely the intended audience would have got the point), the idea of commenting Ibn Zaydūn's *other* famous epistle was certainly a happy one. Despite its very different (serious) tone, this letter offered al-Ṣafadī much the same scope for displaying his wit and erudition as did the "humorous" epistle to Ibn Nubātah. More specifically, it even included a *stretto* passage, with a string of famous names and historical incidents, not dissimilar to "Wallādah's" litany in the "humorous" epistle referring to Joseph, the wife of al-ʿAzīz, and so forth. Here, protesting his innocence to Ibn Jahwar, Ibn Zaydūn says, "Have mercy! The floodwaters have reached their crest, and I have suffered all I can endure! All I can say about my situation is that if I had been commanded to bow down to Adam, but pridefully refused,[23] or if Noah had said to me 'Board (the ark) with us!' and I had said 'I will take refuge on a mountain that will protect me from the water'[24] . . . there might be justification for calling what has happened to me an exemplary punishment *(nakāl)* and dubbing it, if only figuratively, an (appropriate) requital (*ʿiqāb)*." The hypothetical situations envisaged by Ibn Zaydūn in the prodosis of this sentence (beginning with Adam and Noah) total altogether twenty-three, and march in a fairly organized fashion through episodes in prophetic, then pre-Islamic Arab, then Islamic history, concluding with al-Ḥajjāj's bombardment of the Kaʿbah in 73/692, and thus providing al-Ṣafadī with an ideal opportunity for extensive digression.

And digress he does, not only on this passage but throughout the *risālah*, to an extent that significantly outdoes Ibn Nubātah. As opposed to the latter's reliance on "*tarjamah*s," al-Ṣafadī casts his nets much wider, devoting sections not only to famous people, and events, but also to (for instance) various rhetorical tropes

[23]As did Iblīs (Satan), according to Quran 2:34; cf. 7:12.
[24]Quoting Quran 11:42–43.

(such as *taḥsīn al-qabīḥ,* ″making the bad seem good″), character and behavioral traits (including loyalty, slander, and Schadenfreude *[shamātah]*), points of theological and legal controversy (for example, Mutazilite views on the superiority of angels to prophets, and an excursus on judicial conservatism *[taqlīd]*), and such unclassifiable topics as the behavior of hungry cats and the perception that ″It′s a wide world!″. He also has a much broader field of vision chronologically than Ibn Nubātah: while the latter included in his book virtually nothing later than the fourth/tenth century, al-Ṣafadī seems to be making an effort to give early and recent writers ″equal time″—he very frequently cites al-Qāḍī al-Fāḍil, for example, and also a whole range of Fatimid, Ayyubid, and Mamluk poets, while by no means neglecting the older heritage, from pre-Islamic through Abbasid times. Also unlike Ibn Nubātah, al-Ṣafadī is generally inclined to name his direct sources, which range very widely over the tradition and testify to his extraordinary learning.

This is not the only time al-Ṣafadī engaged in such an exercise in wholesale ″browsing″ through the entire Arabic literary tradition from the beginning to his own times. Perhaps even more striking an example is his massive commentary on al-Ṭughrā'ī′s *Lāmīyat al-'Ajam* entitled *Al-Ghayth al-Musajjam*.[25] In that work, which uses each line of the commented poem to launch into a ten- to thirty-page digression on the most varied topics imaginable, al-Ṣafadī actually felt compelled in his introduction to include a long defense of his use of such digression *(istiṭrād),* appealing to al-Jāḥiẓ (one must never bore the reader) and al-Buḥturī (as espousing the generalist ideal of the *adīb,* as opposed to the specialist ideal of the scholar), among others. He does not drift quite as far from his primary topic in his commentary on Ibn Zaydūn′s letter as he does in that work; but it is still abundantly clear that the letter commented is serving primarily as a vehicle, to a degree that one would hesitate to attribute to Ibn Nubātah.

Not that al-Ṣafadī neglects the requisite philological, and to some extent thematic and aesthetic, analysis of Ibn Zaydūn′s words themselves. This task is performed conscientiously throughout the commentary, and at its conclusion al-Ṣafadī actually goes so far as to add an appendix listing fifteen weak points in the *risālah*′s language and style—together with suggestions for improvement. A second appendix, seemingly more gratuitous and introduced by the phrase ″*lā ba's*″ (″it cannot hurt [to add it]″), which al-Ṣafadī otherwise avoids, reproduces a rather long epistle by Ibn 'Abd al-Ẓāhir to the poet Ibn al-Naqīb (d. 687/1288), defending himself against criticism from an unnamed Shi'ite for having shown himself excessively humble in a scholarly gathering. Playing extensively with Shi'i themes, Ibn 'Abd al-Ẓāhir includes in this letter a number of ″*stretto*″ passages that bring it into

[25]Al-Ṣafadī, *Al-Ghayth al-Musajjam fī Sharḥ Lāmīyat al-'Ajam*, 2nd ed., 2 vols. (Beirut, 1990). On al-Ṭughrā'ī, see *EI*[2]*,* s.v.

parallel with Ibn Zaydūn's efforts, including a name-dropping section to the effect of "Do you think I agreed with Ibn Muljam (when he assassinated 'Alī) . . .?" and so forth. The more general effect of al-Ṣafadī's adding this text to the end of his commentary is to stress the continuity of the tradition of rhetorical epistolography, from Ibn Zaydūn and his likes, through al-Qāḍī al-Fāḍil and Ibn 'Abd al-Ẓāhir, and perhaps by implication on to (the unmentioned) Ibn Nubātah and al-Ṣafadī himself.

The heightened status of epistolography and of artistic prose generally in the Mamluk era, and its suitability for commentary, is the first of four points on which this quick survey of these two texts may offer food for thought, if not more specific conclusions. The relative merit of prose and poetry had been itself a standard topos in *adab* literature since the fourth/tenth century, when the former first attained a level of rhetorical development that made real competition with the latter plausible. Yet the level of complexity, and ambiguity, involved in artistic prose rarely attained that of poetry, and that most specific form of homage, the commentary, was relatively rarely applied to prose—the primary exception being the *maqāmāt*. On the other hand, commenting prose offered a unique way of presenting miscellaneous information, true to the Jāḥiẓian formula for entertaining digression, that began to be exploited in the seventh/thirteenth centuries, as represented by Ibn Abī al-Ḥadīd's *Sharḥ Nahj al-Balāghah* and al-Sharīsī's *Sharḥ Maqāmāt al-Ḥarīrī*. Ibn Nubātah saw such an opportunity in Ibn Zaydūn's *risālah hazlīyah,* and grabbed it; and the young, brash, and competitive al-Ṣafadī proceeded to outdo him with his commentary on the *risālah jiddīyah.* Ultimately, nevertheless, al-Ṣafadī's own commentary on the *Lāmīyat al-'Ajam* demonstrated that the same technique could be applied at least as effectively to poetry, and the commenting of artistic prose never developed into a full-fledged major genre of Arabic *adab*.

Second, both Ibn Nubātah and al-Ṣafadī are clearly concerned with the canon of Arabic literature. Ibn Zaydūn, in both his epistles, had relied on, rehearsed, and indeed to some extent pinned down, the canon in his own day (a canon that was for him, significantly, entirely Eastern—there is nothing specifically Andalusian in either *risālah*). Ibn Nubātah emphatically reinforced this canon with his *tarjamah*s, inducting students into, and reminding peers of, a significant cross-section of what every respectable littérateur should know. Al-Ṣafadī went further, giving full credit to "modern classics" alongside their hoary predecessors, and demonstrating the continuing vitality of the literary tradition by citing recent and indeed contemporary poets and *udabā'* in the context of a three hundred year old epistle.

Third, it seems safe to say that both Ibn Nubātah and al-Ṣafadī were addressing several audiences, and accomplishing several intentions, at once. Their commentaries offered students a panorama of the world of literary learning, and a potted lesson in the basics of their heritage. At the same time, peers had this

lesson reinforced, or, perhaps more plausibly, were expected to congratulate themselves on recognizing, and even anticipating, the information and allusions as they were presented, while being impressed by the elegance with which this was done. A broader audience was offered a smorgasbord of "*fawā'id*," "useful bits," which they could savor and incorporate into their dinner conversation. And of course—perhaps particularly in al-Ṣafadī's case—the authors were establishing their own impressive credentials as experts for everyone to admire.

Fourth and finally, to come back to the "Alexandrian" character of the literary culture reflected in these works, there can be no question of the centrality of *erudition* to these authors and their audiences. All were conscious of a weighty tradition behind contemporary literary efforts, which acknowledged it at every turn. There is, however, little or no evidence for this fact being perceived as any kind of burden—the "anxiety of influence" becomes acute only when originality is prized in a way that would be completely foreign to our authors. What we seem to find instead is a real *delight* in influence. For Mamluk writers, one is tempted to say, intertextuality was what literature is all about; and the more of a past one has to deal with, the more one can glory in reproducing, ringing changes on, and playing with that past, to the ongoing enrichment of the Arabic literary tradition. That, I think, is how we should understand the achievements of Arabic literature in the Mamluk period, and perhaps if we assess it on that basis it will look less jejune and "derivative" (in an assumed negative sense) than the consensus of past scholarship would insist was the case.

Vindicating a Profession or a Personal Career? Al-Qalqashandī's *Maqāmah* in Context

Al-Qalqashandī's *maqāmah* in praise of his patron Badr al-Dīn ibn Faḍl Allāh al-'Umarī and the epistolary art was written as a manual on secretaryship.[1] The *maqāmah* is a summation of the art that predated the voluminous compendium *Ṣubḥ* and draws attention to its author as an epistolographer of great literary caliber.[2] While introducing his *Ṣubḥ* with a specific mention of this *maqāmah,*[3] al-Qalqashandī is unequivocal in glorifying this piece, terming it an art of "allusion and suggestion," attuned to "brevity" that renders it beyond the reach of the common reader and the less erudite in the art of literary composition. He specifically intimates that it was due to the precision and conciseness of this *maqāmah* that many missed its focused argument, and hence a certain person of sound judgment and indisputable advice, perhaps his patron, "directs me to follow it up with a thorough compilation covering essentials and rules."[4] The *maqāmah*, therefore, complements the compilation of the *Ṣubḥ* as it drew attention to al-Qalqashandī and his mastery of literary composition. It was the achievement and proof of his proficiency in the art, and the marker of his merits as prose writer.

This introductory note in *Ṣubḥ* is of great significance, not only because it sets the date of composition for the *maqāmah*, in 791/1389, "when I settled at the chancery . . . ,"[5] but also because it was written with a focused purpose to bring the *maqāmah* genre once and for all within the orbit of literary composition in which the author aimed to demonstrate his mastery. His *maqāmah,* then, may be read as an autobiographical piece as the self-made epistolographer is keen on drawing a

[1]On this *maqāmah,* see C. E. Bosworth, "A *Maqāma* on Secretaryship: Al-Qalqashandī's Al-Kawākib al-Durrīyah fi'l-Manāqib Al-Badriyya," *Bulletin of the School of Oriental and African Studies* 27 (1964): 291–98, reprinted in the author's *Medieval Arabic Culture and Administration* (London, 1982), 292–98.

[2]See *Ṣubḥ al-A'shá fī Ṣinā'at al-Inshā',* ed. Muḥammad Ḥusayn Shams al-Dīn (Beirut, 1988), 1:34–35.

[3]Ibid.

[4]Ibid., 34.

[5]Ibid. Bosworth notes that the author "entered the *dīwān* in 791/1389, the date when he composed his *maqāma* in praise of *inshā'* and of his master Badr al-Dīn." See *Medieval Arabic Culture,* 293.

sustained parallel between the *'isāmī* (the self-made person or survivalist) and *'izāmī* (″of honorable ancestry″).[6] But the comparison, between nepotism and merited chancery emplacements and appointments, is carried out within a *maqāmah* convention, which is also intentionally underlined to highlight the speaker′s position as *al-Nāthir ibn al-Naẓẓām*, ″the prose writer son of the versifier,″[7] according to a systematic prioritization of genres.

In the following pages, I will argue for the significance of al-Qalqashandī′s *maqāmah* in relation to both epistolography and *maqāmāt* conventions and professional and cultural engagements.

In his *maqāmah,* al-Qalqashandī′s protagonist-narrator establishes his identity as a prose writer with poetic grounding, whose credentials and talent secure him a chancery position despite rampant nepotism and mediocre competitors. While striving for recognition through his panegyrics, his growth as a learned prose writer entitles him to debate forebears in an ″anxiety of influence″ pattern. This recognition is justified by the voluminous *Ṣubḥ,* completed in 814/1412, and his earlier *maqāmah* of 791/1389, which secured him a textual lineage among learned prose writers and epistolographers. Although his *maqāmah,Al-Kawākib al-Durrīyah fī al-Manāqib al-Badrīyah*, was the prototype for the larger compendium, its place in the last volume among other *maqāmāt* may have been assigned by design to hold the *Ṣubḥ* together. The *maqāmah* acts like an autobiographical postscript, which concludes a voluminous work in order to draw attention to the author after a long and laborious journey among impersonal accounts, epistles, biographies, and achievements of others. Although Bosworth thinks that the author sounds boastful[8] in saying that *maqāmah* ″includes an exposition of all the material points which the *kātib al-inshā'* needs to know and all the well-trodden paths which he must follow,″[9] al-Qalqashandī offers more than one reason to justify this position, as will be shown.

Al-Qāḍī Shihāb al-Dīn Aḥmad ibn 'Abd Allāh al-Qalqashandī (756–821/1355–1420) served as *kātib darj,* ″scribe of the scroll,″[10] in the chancery or *dīwān al-inshā'* during the reign of the first Circassian sultan, al-Ẓāhir Barqūq (784–90/1382–88). At that time, al-Qāḍī Badr al-Dīn Muḥammad ibn Muḥyī al-Dīn ibn Faḍl Allāh and his brother al-Qāḍī 'Alā' al-Dīn, from Banū Faḍl Allāh

[8]Bosworth, *Medieval Arabic Culture,* 295.

[9]*Ṣubḥ,* 14:147.

[10]The ″scribes of the scroll or the roll″ refers to the pieces of paper or parchment joined together to become a *darj* or scroll for writing. See J. H. Escovitz, ″Vocational Patterns of the Scribes of the Mamluk Chancery,″ *Arabica* 23 (1976): 55. Also, *Ṣubḥ*,1:138.

al-ʻUmarī, were in charge of the *dīwān.* Al-Qalqashandī′s *maqāmah, Al-Kawākib al-Durrīyah,* dates his formal entry into the chancery in 791/1389. Badr al-Dīn was in charge of the *dīwān al-inshā*ʼ on three occasions: 784/1382, 786–92/1385–90, and 796–801/1394–99.[11] It was during his patron′s life that al-Qalqashandī also compiled his voluminous *Ṣubḥ al-Aʻshá fī Ṣināʻat al-Inshā*ʼ*,* though it was finalized in 814/1412.

Al-Qalqashandī was very proud of the *Kawākib,* as he noted in a number of places.[12] It has an autobiographical aspect, which is quite valuable in view of socio-political mobility. On the other hand, it is structured in a specific way to cater to the *maqāmah* convention while engaging issues of topical interest. It is perhaps worthwhile to discuss its form and textual engagements, so as to assess the author′s claims to both thoroughness and precision. It is structured as follows: (1) the concept and meaning of *maqāmah*; (2) history of composition; (3) the prologue; (4) the *hātif,* or voice; (5) the dialogue between the speaker and his companion; (6) the discussion of prioritization between scribes in the finance department and the literary division in the *dīwān*; (7) elaboration on the priority of literary composition and epistolography at large; (8) the qualifications of the epistolographer; (9) the *dīwān* and its present secretary; (10) panegyrics; (11) self-glorification.

It is worth mentioning that the author devotes a paragraph to explain the meaning of the genre. The explanation is significantly drawn in spatial and cultural terms to relate the *maqāmah* as assembly to the *dīwān* as place for literary and educational activity. *Maqāmāt,* he notes, ″is the plural for *maqāmah,* which etymologically denotes the name for an assembly or a group of people. A narrative unit is called as such, if it occurs in one assembly where a group gathers to listen to it. This is different from *muqāmah*, which means sojourn or settlement.″[13] This explanation leads to the history of the genre with a laudatory mention of al-Hamadhānī, followed by al-Ḥarīrī, whose *maqāmāt* ″were so well-received and met with so much luck, that they relegated to oblivion those of al-Badīʻ [al-Hamadhānī] as if they were obsolete.″[14] The subsequent argument on al-Ḥarīrī relates to prioritization of genres and will be discussed in order. But the *Kawākib* is intentionally and vigorously launched as a *maqāmah*, and it deserves to be considered as such, especially for its attention to language and rhetorical embellishments. Other reasons are as follows:

---

[11] Bosworth, *Medieval Arabic Culture,* 292.
[12] *Ṣubḥ,* 14:124–27.
[13] Ibid., 124.
[14] Ibid., 125.

1. The protagonist is a *maqāmah* figure, who is keen on using his skill, talent, and knowledge against uncongenial circumstances of nepotism, political opportunism, and competitiveness. Even after being appointed as *kātib darj,* it took him time to adjust and receive due recognition.[15]
2. There is a narrator and a narratee (a double) or a *hātif* (″voice″) whose role complements the narrator′s own. On the other hand, there is an addressee, too, in this case the Qāḍī Badr al-Dīn, who is meant to hear and enjoy the eloquence of his scribe. This narrative grows in a *maqāmah* fashion with great emphasis on dialogue. Speech is the means and the reward here, as in every other *maqāmah.*
3. The narrator, as protagonist, uses the encounter with the narratee mainly to offer justifications for his endeavor to be at the chancery. The narratee, the voice, is a *deus ex machina,*[16] for he shares with the narrator an agenda and a register to describe the Mamluk chancery and its glory and requirements. But the narratee is more than a double, however, as he grows in textual space as a competing protagonist, the one who mediates for the narrator, arranges his entry, and provides him with enough intelligence and information to enable him to secure a position.
4. The narrator-protagonist, *al-Nāthir ibn al-Naẓẓām*, ″the prose writer son of the versifier,″ is designated so by design, not only to echo al-Ḥarīrī′s al-Ḥārith ibn al-Hammām, but also to offer another genetic trajectory whereby the article ″*al*″ adds influence and prestige to the name, the prose writer, in comparison to the versifier who suffers in this prioritization. The act is closely related to the ongoing controversy regarding the significance of each genre, as we shall see.

In another sense, the structure of al-Qalqashandī′s *Maqāmah* is also similar to the *Bildungsroman* as a novel of education, especially as its history of composition culminates a life of apprenticeship and challenge, viewed and assessed retrospectively. The aspiring young protagonist, with divided aims and great anxieties, must pass through some test and prove efficiency. In a moment of hesitation and great perplexity, he must choose between the search for knowledge for its own sake and the profession that enables him to make a living, and he

[15]Ibid., 145.

[16]Bosworth, *Medieval Arabic Culture,* 296, n. 16.

intimates in a manner fashionable in confessional autobiographies: ″I was so distressed and stunned as to act aimlessly. Perplexity kept me suspended between the two courses. If I pursue knowledge for its material benefits, then I commit a reprehensible act, and if I commit myself to study regardless of livelihood, then I should perish in destitution and die of hunger.″[17] Yet, his education in a hierarchical society should be geared towards a post which pays well while preserving his integrity as a writer. Devoid of family connections and in need of money, there must be a patron, or godfather, to offer support and guidance. The hero must search and make connections before coming upon the ideal patron. Also, the internal conflict should conclude in a way that suits the hero′s aspirations in order to offer us a narrative of some edification and educational value.

Yet the *Kawākib* is not wholly fictional, as we gather from the introductory note in the first volume,[18] for it is al-Qalqashandī′s life story, presented to the patron and the reader, to be read and enjoyed. The author is so proud of his career that he wrote it down together with shows of allegiance that act as rites of passage to the chancery proper. Glorifying the vocation and highlighting his own career against mediocrity and conflictual attitudes, he feels empowered enough to submit his *maqāmah* to the public. Although the author′s transition stage of perplexity and hesitation in this *Bildungsroman* has a ″romanticized autobiographical element″ that Bosworth notes,[19] the account in general fits into narratives of education that communicate a moral and educational message to the reader. Such details may prove helpful in reading the *Kawākib* as autobiographical in the first place.

Knowing full well the role of power relations, especially among close-knit relatives with *simāt irthīyah* (″hereditary attributes″),[20] al-Qalqashandī recognizes the need to demonstrate efficiency and competence in performance, along with self-possession and restraint, in order to gain his patron′s support:

> And as I became assured that I am established in his *dīwān,* and listed as one of his pages, I refrained from further search for gain; and neither need nor affluence became of consequence to me, for to catch sight of him suffices to substitute for food and drink, and I am assured that a look from him could promote me to the clouds. . . .[21]

With an eye on his patron, al-Qalqashandī divides his narrative between the narrator and the narratee, engaging the latter in a dialogue concerning the patron. This

[17] *Ṣubḥ,* 14:128.
[18] Ibid., 1:34–35.
[19] Bosworth, *Medieval Arabic Culture,* 295.
[20] *Ṣubḥ,* 14:141.
[21] Ibid., 145.

division of labor enables the author to collect and cite information about the ruling caste, while providing him with enough space to justify allegiance and map out a career. The narratee´s answers amount to a full account of chancery dealings and responsibilities, as the patron assumes his importance in chancery context. But drawn to the patron´s character, the speaker is overwhelmed by the awe-inspiring presence of Qāḍī Badr al-Dīn, which is hereditary, for the patron descends from the caliph ʿUmar ibn al-Khaṭṭāb (d. 23/644), the great ″grandfather.″[22] These ″hereditary attributes,″ along with his patron´s munificence, emphasize nepotism as positively rewarding, as it ensures cultural continuity and professional expertise. Indeed, Badr al-Dīn is of ″great lineage, and unsurpassed family,″ inheriting the position with merit, ″though it is his by lineage.″[23] The emphasis on nepotism and merit makes up the last part of the *maqāmah*. It corresponds to the panegyric of the ode, to be sure,[24] but it is also a culmination of a long narrative journey of discontent, training, and search. Working out his way in poetry and prose, the author attempts to show his resourcefulness in launching this panegyric while glorifying himself to be worthy of the patron´s station. In the panegyric section and its rite of passage, there is more autobiography than a cursory reading may indicate, for every glorification of the patron and patronage is imbued with self-glorification.[25]

The panegyric as a rite of passage comes in response to the narratee´s explanations of chancery dealings. In his discourse on Banū Faḍl Allāh al-ʿUmarī, the narrator, as al-Qalqashandī´s alter ego, thus avoids clear-cut discussions of nepotism. But there is an underlying belief that familial connections and nepotism kept chancery posts within the family, in a *de facto* manner, which is summed up in the phrase ″*bi-al-aṣālah*,″ or familial succession.[26] Filiatory ties are a defensive strategy, however, a preemptive procedure to evade penetration, rivalry, and competition. But, on the positive side, this nepotism ensured some continuity in chancellery correspondence, which, paradoxically, led to its subsequent imitativeness, verbosity, and artificiality. The Banū Wahb, Banū ʿAbd al-Ẓāhir (especially Muḥyī al-Dīn, 620–92/1223–92) and Banū Faḍl Allāh (especially Shihāb al-Dīn Aḥmad, d. 749/1349) were among the most prominent dynastic epistolographers. But al-Qalqashandī also refers to chanceries as schools for apprenticeship, for to have epistolographers like Badr al-Dīn manifests ″God´s favors.″[27]

[26]*Ṣubḥ,* 14:141.

[27]Ibid., 142.

It is at this point that al-Qalqashandī's narrator asserts homage and allegiance to his patron and to the family at large. The panegyric ensues as an answer to the narrator's rhetorical question whether there is "a necklace" or a string to hold this prestigious office together.[28] His companion is ready with an elaborate answer to glorify the patron and his family. He goes so far as placing the patron ahead of all chancery writers, including the ones he is known for emulating in his literary composition, such as al-Qāḍī al-Fāḍil ʻAbd al-Raḥīm al-Bīsānī ("the honorable magistrate," 529–96/1135–1200).[29] In response, the narrator "recited in public with sincerity" a verse from the Quran: "Say it is because of God's favor *[faḍl Allāh]* and His mercy, let them rejoice for this, for he is better than whomever they choose." Set against al-Qalqashandī's discursive corpus, this piety sounds too contrived to be taken seriously. It is calculated, however, to impress Badr al-Dīn himself, and to draw his attention to al-Qalqashandī's readiness of mind, his wit, insight, and mastery of Quranic verse. Thus, al-Qalqashandī helps to consolidate the position of the learned who enlisted religious discourse to give legitimacy and authority to their present occupations.[30]

The *maqāmah* sections on the patron are carefully placed within a chancery context to show the merits of both the patron and the scribe. In terms of discussion and analysis of the chancery occupation, al-Qalqashandī subtly penetrates into the fabric of the familiar to represent it anew, drawing attention to his resourcefulness. In a number of places, for example, al-Qalqashandī proves epistolary competence in coming upon the exact Quranic verse, which fits the very name of Badr al-Dīn ibn Faḍl Allāh. Both the recurrence of Faḍl Allāh (God's favors) in the specific Quranic verse and its prosification in discourse are meant to demonstrate eloquence and mastery of epistolography usually associated with al-Qāḍī al-Fāḍil and his Fatimid master Ibn al-Khallāl. While embedded within meticulous prosifications that are bound to impress Badr al-Dīn, the overall design of the panegyric is to establish a career, which may be secured by the less merited by mere allegiance or nepotism. Indeed, al-Qāḍī al-Ṣayrafī, who wrote in praise of Badr al-Dīn ibn Faḍl Allāh, said of him "he was biased towards some and they gained; and he was against others who made no headway."[31]

Petry (Cambridge, 1998), 1:412–44. On the role of the elite, Jonathan P. Berkey, "Tradition, Innovation and the Social Construction of Knowledge in the Medieval Islamic Near East," *Past and Present* 146 (February 1995); and Carl Petry, *The Civilian Elite of Cairo in the Later Middle Ages* (Princeton, 1981), esp. 17–18.

[31]See the editor's note, *Ṣubḥ*, 14:126, n. 1.

Especially when considered in this context, al-Qalqashandī´s panegyric makes use of a poetic tradition in a changing milieu of great mobility and precariousness. His tools should be as good as a great poet´s to complete his rites of passage. The rites of passage to the chancery include many things, to be sure, as the *maqāmah* itself explains, beginning with training in the art and the acquisition of knowledge. But the aspirant must prove that his talent exceeds average requirements. Along with wit and mastery of prosification, he must be a poet too. Thus, upon being appointed, he plays on his patron´s name and its meaning again, implying throughout that both name, designation, and meaning fit each other in natural, irrevocable order.[32] After the ceremonial ˝honor of kissing his [the patron´s] hand,˝ the narrator specifies that he ˝devoted˝ his utmost praise and benedictions to him.[33] A survivalist, a self-made professional scribe, he must demonstrate talent in the absence of lineage. ˝I was self-made in this profession *(ʻiṣāmīyan)* not born to it *(ʻiẓāmīyan),*˝ he says.[34] Thus his first encounter with the *dīwān* professionals was not easy or smooth, for ˝I took my seat as a stranger, with a desolate demeanor.˝[35] Yet, he nevertheless strove hard to hold onto the position, for ˝I clung to it by every means, and I ignited its fire from the least spark,˝ so as to be welcomed accordingly with ˝charity and fairness.˝[36]

But patronage is still required in the first place to establish oneself and tackle the work at hand, if the marginalized intellectual is to show competence and talent in a chancery of professionals and functionaries. Hence, the narrator´s question to his companion: ˝Has he [Badr al-Dīn] followers, retinue, from among the scribes whom one should ask for aid and moral support in speech and action, so as to be marked as a scribe and among Badr al-Dīn´s pages?˝[37] The question is rhetorical, for ˝Badr al-Dīn´s brother is the head of the *dast.*˝ The chancery is a close-knit foundation then, and nepotism runs deeply into its making, performance, and achievement. The chancery is divided between the ˝*kuttāb al-dast,* [who] are of a higher station, and the *kuttāb al-darj,* [who] are the more suitable for writing and eloquence.˝[38] The prioritization here is political and bureaucratic, which, in the narrator´s oblique reading, carries no intellectual or cultural weight.

We are told the ˝second division˝ is the right place for the narrator despite its subordination to the first. The prose writer, *al-Nāthir,* who narrates and interrogates

[38]Ibid.

the whole scene, needs not only to justify a choice, but also to place it in context. Now, he is allied with *kuttāb* of literary writing—as his account of them demonstrates,[39] a post that had a prestigious, though hazardous, history. Moreover, it has contemporary luster whenever related to the learned as different from functionaries, a point which he discusses in detail when analyzing and describing the typology of chancery writers.[40]

To lead the reader into the profession of the *kātib* within the Mamluk chancery of state, al-Qalqashandī surveys writers and scribes[41] who are meant to substantiate the panegyric, but this also highlights the speaker's affiliation with such prestigious names. Badr al-Dīn is the *kātib sirr,* the confidential secretary in charge of the *dīwān,* including the *kuttāb al-darj.* There is reason to compare him to predecessors dating back to the Umayyads (40–132/661–750), for the latter used to have a *kātib* as secretary of state, instead of the vizier, a designation which the Abbasids (132–333/750–945) favored. In the Fatimid period in Egypt (358–566/969–1171), this was the *kātib al-dast* (secretary of the bench). In the Mamluk period, there was the *dīwān al- inshā',* with its two divisions: the *dast* (bench) and *darj* (scroll). It was only in the times of al-Manṣūr Qalāwūn (678–91/1279–92) that the magistrate Fatḥ al-Dīn ibn 'Abd al-Ẓāhir was appointed as confidential secretary, *kātib al-sirr,* or "recorder of the sultan's secrets," a word which people corrupted into *kātim* or "keeper" of secrets.[42] The office of vizier was then abolished by al-Nāṣir ibn Qalāwūn (r. 693–741/1294–1340), who divided the office in 710/1310 among four officers, including the "recorder of the secrets."

In respect to the specific mention of the post he desires, the narrator says: "The second division is the more suitable to my status, and the closer to my inclinations."[43] Reaching the targeted post, he can dispense with his companion. The double is no longer needed, and "I bade him farewell, thanking him for his help and appreciating his courtesy, and I left him and embarked on my way. That was the last I heard of him."[44] To dispense with the *deus ex machina* is to assert identity and independence. The speaker or narrator is on his own now, and must proceed in a formal manner to attain this post. Having learned the nature of the chancery and its network, "I returned to him [Badr al-Dīn], and raised my petition,

---

[40]Ibid., 1:31. See Petry, *Civilian Elite,* 204–5, but also *Ṣubḥ*, 1:80–81, on the confusion between the learned and the functionary and the ignorant. In relation to the learned, see Jonathan P. Berkey, "Culture and Society during the Late Middle Ages," in *Cambridge History of Egypt*, 1:375–411.

[41]*Ṣubḥ,* 14:141.

[42]Ibid., 1:138.

[43]Ibid., 14:144.

[44]Ibid.

and requested his approval of my application, which he accepted. What a munificent master he is, and he assigned me to the honorable *kitābat al-darj*."[45] Although al-Qalqashandī speaks of credentials and suitability, insofar as his choice is concerned, the chancery builds on *hierarchy*. His very language regarding his patron betrays as much, for he "delves into his domains, and swerves to his abode to have a glimpse of him, who appears glowing and glittering as light, and his moons shine with glory, brimming with dignity, submerged in quietude, imbued with authority, and endowed with happiness."[46] Even the design of place and seats was meant to assert this gradation. *Kuttāb al-dast,* or scribes of the bench, sat on a raised platform or bench so as to present or respond to petitions offered to the sovereign in the House of Justice. Sometimes they were called *muwaqqi'*s, for they used to append or inscribe the royal signature on petitions. By contrast, *kuttāb al-darj* were primarily concerned with letters of fief grants, appointments, explanations, salutations, and their likes, which might not demand the immediate involvement of the chief scribe.

Hierarchy, gradation, and hegemony manifest themselves in the nature of discourse, then, whenever the narrator is on his own. He accepts subordination, but, ostensibly, because he thinks of the *kātib al-darj* post as the most fitting for his credentials. But while the *darj* post is not the highest in the *dīwān,* al-Qalqashandī attempts cleverly to add to it its lost prestige.[47] Indeed, the narrator's effort in this direction strives to combine a personal sense of importance and the patron's reputation as *kātib* with the aspiration to regain the glorious past of the profession. It is part of the biographical design, after all, to glorify oneself within loyalty to the profession in its epistolary dimension and historical context.

When 'Abd al-Ḥamīd al-Kātib (d. 132/750) is mentioned,[48] for instance, there is along with him some allusion to the Umayyads. The same applies to eleven scribes whom al-Qalqashandī mentions in this respect. The office and practice of *al-kātib* gained power and prestige in the Umayyad period not only due to interaction with the culture of other civilizations, but also for the needs of legitimacy in the context of the rivalry with the Prophet's descendents, known as among the most eloquent Arabs. Their discourse posed serious problems to the Umayyads, who spent enormous amounts of money and energy to compete with them. Falsification of records and pretensions to wit were widespread in order to impose legitimacy in a period of great political dissent. In the footsteps of their ostensible precursors, the descendents of the Prophet, the Fatimids elevated their *kātib* to a vizierate, a

---

[46]Ibid.

[47]See ibid., 1:63–81.

[48]Ibid., 14:141.

position belonging ″to the men of sword and sometimes to the men of the pen,″ with ″full delegated powers.″[49] Some of their scribes, like al-Qāḍī al-Fāḍil (529–96/1135–1200), were to rise to the highest positions. So was their vizier Ṣalāḥ al-Dīn. The Ayyubid period (589–658/1193–1260) brought along with it, through this combination of the sword and the pen, a great deal of the Fatimid preoccupation with culture and faith. Although a Kurdish warrior-chief, with little concern for the Fatimid protocol and hierarchical structures, Ṣalāh al-Dīn inherited their keen interest in culture. But instead of looking for a chief missionary to propagate a faith, he came upon al-Qāḍī al-Fāḍil (″The Excellent Magistrate″) ʻAbd al-Raḥīm al-Bīsānī, to join him in his endeavor to regain conquered lands from the Crusaders. The testimony to the power of the word was more eloquent coming from a warrior. Sibṭ ibn al-Jawzī reports that Ṣalāḥ al-Dīn cautioned his ruling elite not to assume that he conquered his enemies by their swords but by the pen of al-Qāḍī al-Fāḍil.[50] This reference is not out of place here, especially as al-Qalqashandī specifically chooses al-Qāḍī al-Fāḍil to head the list of writers and scribes cited for comparison with his patron: ″Had the Excellent ʻAbd al-Raḥīm seen him, he would never have claimed for himself excellent traits and would never have had recourse to writing.″[51] Every other scribe or writer is of secondary significance in comparison, and every other glory fades in the presence of the overwhelming magnitude of Badr al-Dīn.

Such comparisons and discursive attempts at balanced discussions are part of the autobiographical structure of the *maqāmah,* and should be seen in their subtle ramifications. Every *muwāzanah* (″balanced assessment and debate″) is a strategy of evasion or assertion, for al-Qalqashandī lauds the art of writing in each of these to glorify the patron and himself. The comparison of the patron to his precursors, for example,[52] is functional in more than one sense. It is attuned to the panegyric, and to the personal need to demonstrate allegiance and affiliation to be sure. By implication, it sets the patron and the writer in a genealogy of writers which derives its power from expertise, value, and connection to the sovereign.[53] But it is also an attempt to set the record straight in terms of a response to challenges, professional and political. Aside from the encroaching presence of the *dīwān al-jaysh,* i.e., the military department, there is also the challenge of *kuttāb al-māl,* i.e., of the financial or treasury department.[54] Therefore, enumerating the merits of

---

the art of literary composition, the narrator recapitulates: ″These are the traits of kings, and kingly traits, of the best merits, and the highly merited, for I never thought that writing as art had such a magnificent role and station.″[55]

Al-Qalqashandī´s deliberate discourse on the art of prose writing clearly intends to underscore the role of epistolographers among the learned, for there was a tendency to look upon the functionary side of the profession as less qualified for refined knowledge and elitist presence.[56] Thus, he argues that the chancery *kātib* is a learned person, ʻ*ālim*.[57] He cites the philologist al-Mubārak ibn Muḥammad ibn al-Athīr (d. 606/1209) to explain the Prophet´s use of the term ″scribe″ as a learned person, a point which al-Qalqashandī has already made in the *maqāmah,* when citing Quranic verses and the Prophet´s sayings, in order to place epistolography and literary writing ahead of every other vocation.[58] The amount of emphasis laid on the significance of this writing as profession makes it not only the most prestigious, but also the most needed for statecraft and culture. Indeed, his vindication of *kitābah* as a vocation is so carefully and meticulously argued that it almost convinces the reader that the speaker is not that desperate for the post, and that the post is offered to him because of a dire chancery need for his services.[59] Yet the *maqāmah* is careful in pointing out that this craft is adequate to preserve one´s integrity. As Bosworth notices, the thesis lies in the contention that there must be a profession or a vocation for a living.[60] As for ″the student of science,″ i.e., learning, this vocation is ″writing,″ or epistolography, and the scribe should never veer away from it.[61]

As the phrase *kitābah* includes chancellery correspondence in general, al-Qalqashandī unequivocally sides with ″*kitābat al-inshā*ʼ,″ or literary prose.[62] The art itself, *kitābah,* is a ″conceptual″ or ″spiritual″ craft, meaning in al-Qalqashandī´s terms ″utterances imagined by the writer whereby he images through combinations an inner picture that exists deep in the recesses of the mind.″[63] This *rūḥānīyah* (″conceptualization″) materializes into *juthmānīyah,* or bodily form, via inscription. He adds, ″the pen turns it from a conceptualized notion into a concrete [i.e.,

substantial] one.″ To al-Qalqashandī and other authorities, inscription is *inshā'*, inclusive of every artistic composition.[64]

As a result, al-Qalqashandī takes great care to draw a line between *kitābat al-inshā'* and *kitābat al-daywanah,* or the department of finance. In the *Ṣubḥ*, he pointedly argues that ″in Egypt the word scribe came to refer solely to the scribes of the treasury. When it is used, nothing else is meant. As for the craft of composition, it began to have two meanings, a private one used by the people of the *dīwān,* denoting *kitābat al-inshā',* and a public one for the people, which is *tawqī'*. As for naming it *kitābat al-inshā',* it is . . . *inshā,'* or literary composition, [which] is at the root of its subject.″[65]

Aside from the known arguments in support of literary or artistic prose, al-Qalqashandī′s references to the patron and his family, as well as the whole inventory of support for prose as such are deliberately couched in a register of royalty and war to cover and account for nepotism, affiliation, and rivalry among professions in times of mercurial politics. Badr al-Dīn is ″the close advisor of the king and his companion.″ He is ″his keeper of secrets″ and the one in charge. ″He is the closest to him when others are away, and the one endowed with the highest post when others are thrown out.″ He is the king′s secretary who speaks for him. ″He is the one who comes forth with the decisive saying when others are mute, and he is the warrior who fights gallantly with the sword of his tongue and the spear of his pen.″ Hence, he ″is the defender of kingdoms with the battalions and armies of the line of his inscription and the soldiers of his language. He is the one who scatters the enemy with the originality of his utterance and delicacy of maxims. . . . ″[66]

This panegyric derives its effectiveness from *al-ḥamāsah* poetry, with its emphasis on glorious wars, and battles where the human element derives significance and volume from both courage and weapons. It is not surprising that al-Qalqashandī enlists a verse from Abū Tammām (d. 231/846), renowned for his chivalric poetics:

> A stroke from a writer′s hand is deeper and more cutting than a smooth sword. They are a tribe who, when provoked by the hostility of the jealous, shed blood with the blades of pens.

The text as a whole sets this *kitābah* as the ″canon for politics.″ In Bosworth′s version of this passage, this ″encomium of secretaries″ runs as follows: ″they are the far-seeing eyes of kings, their all-hearing ears, their eloquent tongues, and their all-embracing intelligences . . . indeed, kings have more need of secretaries

---

[64]Ibid., 82.

[65]Ibid., 83.

[66]Ibid., 14:142.

than secretaries have need of kings."[67] Al-Qalqashandī's *maqāmah*, then, aims at making a case for the learned among writers. Its urgency of tone and immediacy of purpose could have something to do with the Circassian period, and its failure to recognize the critical role of the learned since the times of al-Ẓāhir Barqūq (783–801/1382–99).[68] The emphasis on reciprocal benefits is not hard to follow, for, as W. W. Clifford notices, "Through such patronage networks the Mamluk political elite functionally exchanged economic benefits for social validation from the cultural elite."[69]

But emphasis on the use of epistolographers and the learned at large is only one side of the coin. In more than one sense, they were the intermediaries between Mamluk oligarchies and the people. "Seeking legitimacy through the support of intellectuals," argues Donald P. Little, the Mamluk sultans "spent enormous sums on their salaries and patronage, sometimes in return for their specific services to the court but often for their function as devotional and educational intermediaries with the public."[70] Quoting 'Alī ibn Khalaf (d. 455/1063) in *Mawādd al-Bayān,* al-Qalqashandī asserted such a role. Writers are "the medium between kings and subjects," as they are "the only class which shares with kings grandeur and great significance while they are like the rest of the people in modesty and restrained expenditure."[71] For this reason, they are indispensable "to protect the interests of people while securing the rights of sultans and maintaining the adequate connection between the two."[72] Al-Qalqashandī never tires of quoting authorities that endorse the view that epistolographers are "the ornament of the kingdom and its beauty." It is the epistolographer's discourse which "uplifts its [the kingdom's] value and raises its reputation, magnifies its power, and indicates its merits." He contends further that, "On the sultan's behalf, he warns and persuades, praises or chastises. He articulates words to ensure the subordination and obedience of supporters, and drives away the intentions of foes to disobey or to continue hostility."[73] While relying on Ibn Khalaf in theory, al-Qalqashandī also enlists the views of kings and sultans on his side, as these are more acceptable among their equals. Abū al-Fidā', al-Malik al-Mu'ayyad of Ḥamāh (d. 732/1331) describes the role of epistolographers and writers as "the most noble profession after the caliphate, as it is the best of

favors and the most ultimate desire."[74] As for the Abbasid caliph al-Mustarshid Abū Ja'far (caliph in 512/1118), he was reported to have described writing as the "root" and the "pillar" of the kingdom, "separate branches of one tree."[75] These and similar opinions are also found in the *maqāmah*.[76]

But there is a third side in this delicate intersection between epistolographers, prose writers, and intellectuals in general. In gratuitous comments, writers are never short of anecdotes and reports which address sultans and kings as liking to "own something of eloquence and good writing," as the Fatimid 'Alī Ibn Khalaf stipulates. Al-Qalqashandī uses this notion to forward his contention that epistolography is the "best of crafts,"[77] or, as he puts in the *maqāmah,* it is "the canon of politics."[78] Obviously, statesmen and sultans needed a powerful bureaucracy in the early pre-modern periods, and this materialized in the growth of a "class of secretaries," which Bosworth is right in describing as "numerous and powerful."[79] But, as J. H. Escovitz notes, this class was rather professional, with no absolute loyalty to the chancery.[80] Loyalty is ambiguous as a term, however, and we need to set the whole issue in terms of competitiveness, interests, and patterns of independence and subordination. In the *maqāmah,* then, al-Qalqashandī has an eye, too, on his present times, their precariousness and confusion. In assessing the situation, there is a need to maintain a divide between functionaries as part of bureaucratic and financial apparatus, usually inherited and developed by the Ayyubids and Mamluks, and the learned who were simultaneously needed, feared, and challenged by circumstance and division.[81] The period itself had a mixture of authoritarianism, eclecticism, and sentimentalism towards knowledge. Sultans like Baybars could well intervene, for instance, in the judicial system, altering the judiciary by appointing four qadis for every Sunni school. The intervention was not whimsical, for the very structural change in centers of power in the Islamic world impelled him to meet this diversity in predilections, loyalties, and outlooks. The attitude itself should be seen as signifying a centralizing tendency, which involved a drive towards homogeneity and sameness through a wider accommodation of schools and sects in a Cairo which was growing as the center for Dār al-Islām. What Berkey signaled in architectural monuments as "statements

of integration into an urban society which valued knowledge and piety, and which relied upon the private exercise of power and wealth to generate its cultural tradition and to protect its social order″[82] should be seen as a manifestation of a centralizing outlook. Nelly Hanna is surely right in suggesting that ″the [Mamluk] sultans and their ruling amirs for over two centuries created the models and set the fashions, in the arts and in architecture.[83]

Similarly, rulers′ interest in writing, epistolography, and eloquence should not be seen as the whim of dilettantes, but as a drive for power and control through appropriation. Upon noticing his chancery potential as manifested in the *maqāmah,* al-Qalqashandī´s patron, or some other authority, directed him to write a manual, more elaborate and extensive than the existing ones, including those by Shihāb al-Dīn Aḥmad and Ibn Nāẓir al-Jaysh, which, for all their merits, ″could not compensate for others,″ nor could they be comprehensive enough to ″go beyond the science of rhetoric″ which is the staple of other manuals.[84] The increasing production of compendiums, manuals, and teaching material in the art of epistolography was meant to meet a demand, which was also impelled and perpetuated by the sovereign whose power was to be sustained through a sophisticated bureaucracy and financial apparatus.

″Al-kitābah qānūn al-siyāsah″ (literary composition is the canon of politics), says the *maqāmah,* and we need to assess the interrelatedness of the two in contextual terms. While alienating other departments of the army and treasury, for instance, al-Qalqashandī valorized the art of chancellery correspondence in its literary dimension. Although we have no information regarding specific royal orders for manuals or compendiums, these could be seen as ultimate markers of professional grounding and knowledge, which could have secured their authors a good, and, perhaps, lasting position in the chancery. In these manuals on procedural matters, formats, varieties of address, samples of polished correspondence, and stylistic needs and applications, the emphasis is laid on conformity, not deviation. Although knowledge admittedly varies between one person and another, the whole idea of a guide and a manual is to ensure symmetry and uniformity. Patronage by Mamluk sultans and ruling groups involved elite culture in some sameness, for, as Bakhtin argues, ″The ruling class strives to impart a supraclass, eternal character to the ideological sign,″ in order to render it ″unaccentual″.[85]

Using these manuals and theoretic readings of the profession, al-Qalqashandī certainly catered to this centralizing drive while participating intellectually in defining culture and its magnanimous interest in and use of prose. Linking himself to such illustrious names and authorities as Qudāmah ibn Jaʻfar (d. 326/938), Ibn Qutaybah (d. 275/889), ʻAbd al-Ḥamīd al-Kātib, Lisān al-Dīn ibn al-Khaṭīb (d. 775/1374), al-Qāḍī al-Fāḍil, al-Ṣābī (d. 383/994), Ibn Nubātah, Ibn al-Athīr, along with Ibn Khalaf, Ibn Mamātī, and the dynasties of Banū Faḍl Allāh, Banū ʻAbd al-Ẓāhir, and many others,[86] al-Qalqashandī as a self-made scholar established for himself a professional lineage in the absence of reputed familial and blood connections. On the other hand, this subtext of belonging also highlights his patron's achievement, for he surpassed all in competence and grandeur. But by so doing, al-Qalqashandī also glorifies his own role and achievement for he, after all, claims to have improved even on al-Qāḍī Shihāb al-Dīn ibn Faḍl Allāh al-ʻUmarī.[87] Saying as much, al-Qalqashandī proves that, based on his hard work and skill, he deserves great acknowledgment and merit.

Yet to emphasize value and use for the state is not enough, especially among the literati. Poetic leanings and achievements were still in vogue, and the *maqāmah* never loses sight of this. The *kātib* is addressed as a flowering and ultimate maturation from poetry, and al-Qalqashandī could find no better lineage to allegorize his career than *al-Nāthir ibn al-Naẓẓām* (The Prose Writer Son of the Versifier). Sealing a tradition, he pointedly elevated prose to the highest position, and he is at pains to enlist every authoritative view on this subject, particularly ʻAlī ibn Khalaf (d. 455/1063) and his *Mawādd al-Bayān*. ʻAlī ibn Khalaf is one of the illustrious figures in *Ṣubḥ* for the simple reason that he divides the "art of composition" in three: *kitābah,* oratory, and poetry, emphasizing superiority in sequence, a point which al-Qalqashandī endorses, especially in his *maqāmah*.[88] Moreover, in his third chapter, al-Qalqashandī entitles his discussion unwaveringly "Prioritization of Prose to Poetry." This prioritization takes for granted that powerful prose should make intensive use of other styles and genres so as to reach large audiences, while keeping to the Quranic tradition of restrained and balanced use of assonance and figurative language.

It is within this prioritization of genres and the valorization of epistolary art that al-Qalqashandī targeted poetic license as an invitation to laxity, and openness to all including the "rabble" and the "reprobates."[89] But he is for the positive sides of poetry, too, especially its poetics of style. Indeed, *"ḥall,"* poetic prosification,

[89]Ibid., 1:92.

was repeatedly emphasized as a prerequisite to epistolography. Abū 'Uthmān ibn Ibrāhīm al-Nābulusī (d. 685/1286) was strongly drawn to the practice in his *Luma*'. The scribe or clerk in *dīwān al-inshā*' should be "well acquainted with sciences, especially literature, to reach the highest station in verse and prose, even to reach that stage of rhetoric to be able to put poetry into prose, or vice versa. . . ."[90]

'Abd al-Malik ibn Muḥammad al-Tha'ālibī (d. 429/1038) explains in detail his practice of *nathr al-naẓm,* or the turning of poetry into prose. But Ḍiyā' al-Dīn ibn al-Athīr (d. 636/1239) goes even further, for his book *Al-Washy al-Marqūm fī Ḥall al-Manẓūm* is meant as a manual for prosification. This tendency was never incidental, for even the application of the method itself to the Quranic verse was meant to manipulate classical poetics into epistolography. Further in *Al-Mathal al-Sā'ir fī Adab al-Kātib wa-al-Shā'ir,* Ibn al-Athīr is unequivocal in prioritizing prose in keeping with the spirit of the age. Insofar as Arabic poetics is concerned, the attempt falls within a larger drive to account for change and intercultural inroads which also imply leaving Abbasid poetics behind, alienating classical poetry, its centripetal power and unifying tradition. Al-Qalqashandī's focused appropriation of Ibn al-Athīr, along with other authorities in epistolography, is carefully done in order to underscore the notion of change in state machinery and the corresponding priority of prose.

In his *maqāmah* as well as in his elaborate discussion of the qualifications of the epistolographer,[91] al-Qalqashandī again enlists authoritative writers on the prerequisites and attributes of the *kātib*.[92] He must be a male, a free person, who is just and decent, knowledgeable in the Quran and hadith. He must be a rhetor, for he is the "sultan's tongue and hand, and an effective scribe may well replace battalions, and his pen could substitute for the most sharp and cutting swords."[93] He is to be sensible, mindful, insightful, and reasonable. He should be well acquainted with the Islamic judiciary and law in general. His knowledge of the sciences is to be wide and extensive, including relevant branches and disciplines. He is to be of solid caliber, respectable and daring to be effective in address. Efficiency and resolution are required, too, to ensure high morale among Muslims. But these are among the basic requirements which he terms '*ulūm,* or the requisites that cover the following: the Quran and its sciences; principles of statecraft; the heritage of

[92]Along with Abū al-Faḍl al-Sūrī, al-Madanī (d. 849), al-'Askarī (d. 1009), Ibn Mamātī (d. 1209), Ibn Khalaf and Ibn al-Athīr, documentation is drawn from the Quran and the Prophet's tradition, and the sayings of his companions and other notables.

[93]*Ṣubḥ,* 1:98.

the Arabs; their orations and epistles; history of their dynasties and chivalry; their rhetoric and grammar and chancery skills.[94] As for the *rusūm*, as delineated in the *Kawākib,*[95] they are no less varied and diversified, covering calligraphy, knowledge of chancellery correspondence, geography and cultures of other nations. The list is ambitious and demanding, and, perhaps, smacks of self-glorification.

Al-Qalqashandī further implies in the listing of the qualifications and their complementary procedures and acquisitions that he is not only endowed with these, but also qualified enough to assess and set guidelines for others in the field. In a word, he shines as one of the most illustrious epistolographers in this *maqāmah.* But this should not be surprising. Since the middle of the twelfth century many epistolographers had been called upon to write down ″the official histories of the dynasties in whose chanceries they held important positions″ as Makdisi argues,[96] and on many occasions they were unable to remain as ghostwriters. In keeping up with their sovereigns and their feats and conquests, they found themselves too closely involved and intimately entangled to sustain a low profile. Those epistolographers who began an early career as *kātib*s in the chancery of state were, as al-Nābulusī argues, asked to be ″of distinctive merits to be ahead of the rest, of wonderful *naẓm* [poetry] and wonderful prose that shines in the vast domain of writing, bringing about a light of unfamiliar literature whose secret is somewhere like the heart of a wise, reasonable and intelligent person.″ As for the rest, they are ″copyists or embellishers, job holders of some talent in literary or colloquial utterance.″[97]

In such a context, the *Kawākib* speaks then for epistolographers of some renown against reputed poets and *maqāmah* writers, and a post at the chancery was the desire of no less talented poets than Ibn Sanā' al-Mulk (d. 607/1211) and Ibn Nubātah (d. 766/1365). Prose writers were to vie with poets. Thus, in the manner of exemplary *maqāmah,* the *Kawākib* engages issues of immediate interest to the literati, and particularly scribes, epistolographers, and poets. The naming of the protagonist "the prose-writer son of versifier" is meant to carry on the argument that prose grows out of poetry and outgrows it. His contention is that prose maturates out of verse in order to cope with expanding undertakings, issues, domains of interest, and extensive knowledge. Indeed, the *'ulūm* and the *rusūm* which al-Qalqashandī enumerates make epistolography comprehend every other genre and field of knowledge and technique. Further, drawing on antecedent authority, including Ibn Qutaybah, Shihāb al-Dīn Maḥmūd, and al-'Askarī, al-

Qalqashandī is keen on establishing a genealogy of ancestors, among whom the narrator aspires for a distinguished presence despite his post as *kātib darj*. We should remember that he resolves to put aside personal inhibitions and expectations and settle for a place where Badr al-Dīn and his brother were in charge.[98] But the outcome, in terms of literary writing, demonstrates also that he is so well-qualified that he can uplift the whole *darj* profession to the station of the ulama and the learned.[99]

On the other hand, this *maqāmah*'s literary value also lies in its subtle attempt to undermine ancestry. Indeed, if we accept the earlier contention that the effort to prioritize prose implies a decentralization of a classical tradition of poetic supremacy, it is even more tenable to see al-Qalqashandī fighting back against his literary father, al-Ḥarīrī. Indeed, no matter how eloquent al-Qalqashandī is in relying on antecedent authority, he is no exception in betraying a great anxiety of influence. But he sets a theory for that, for, like poetry, epistolography is a negotiatory textual space. Writing as craft is a ″growth,″ and ″construction should have a base, and branch should have a root,″ he says[100] upon improving on his immediate epistolary precursors, al-Qāḍī Shihāb al-Dīn and Ibn Nāẓir al-Jaysh. As a growth, the craft of writing is bound to outgrow the precursor, namely the former epistolographers. By the same token, he, in the present *maqāmah,* has to outgrow al-Ḥarīrī. Since the literati had been very receptive to al-Ḥarīrī and his art, al-Qalqashandī should have experienced some anxiety of influence. His argument for prose is applied also against the *maqāmah* of al-Ḥarīrī. Relying on Ibn al-Athīr´s derogatory remarks against al-Ḥarīrī,[101] al-Qalqashandī sided with the former´s conclusion that al-Ḥarīrī was not an adept in epistolography, a conclusion that is rife with implications, for Ibn al-Athīr was no less anxious to prove his literary prestige at a time when al-Ḥarīrī´s reputation was so overwhelmingly present as to allow little space for the rest. Ibn al-Athīr used the disputed anecdote of Ibn al-Khashshāb (d. 567/1172) to imply that al-Ḥarīrī was good only as a *maqāmah* writer, but not as epistolographer.[102]

Al-Qalqashandī argues that Ibn al-Athīr ″had not given him [al-Ḥarīrī] his due and had not treated him fairly.″[103] Yet al-Qalqashandī mentions, nevertheless, the whole story of al-Ḥarīrī´s failure to write epistles, along with the vindictive poetry against him. He goes so far as to quote Ibn al-Athīr´s suggestion that to write a

[98] *Ṣubḥ,* 14:145.
[99] Ibid., 147.

[101] Ibid., 86, 14:125.
[102] Ibid., 14:125.
[103] Ibid.

maqāmah does not entail good style and acumen, for ″all *maqāmāt* have only one orbit revolving around a tale with a conclusion, unlike epistolography which is a sea with no borders, for its themes are endless and are renewed in pace with time and events.″[104] Still, in his attempt to outgrow his ancestor, al-Qalqashandī comes to internalize him, and on occasion, to recollect his style and highlight al-Ḥarīrī′s stylized diction. In such a game there is, in Bakhtin′s words, ″intensification of others′ intonations in a certain discourse or a certain section,″ delivered in such a manner ″so that his own present writer′s direct or refracted word might ring out all the more energetically.″ The tendency throughout is to keep al-Ḥarīrī in subordination, ″a passive tool in the hands of the author wielding it,″ to use Bakhtin on parody again.[105]

Yet, while al-Ḥarīrī′s own profession and career drew sharp criticism from professional *kuttāb* of literary prose, his elegant prose put many of them to shame. Ibn al-Athīr repeats the story that his own output in writing equals thousands of *maqāmāt.* Yet al-Ḥarīrī (445–515/1054–1122) and his *maqāmah* signify a turning point in the history of *belles lettres.* His contemporaries and immediate followers were so impressed by his stylistic virtuosity and use of narrative that they, like Ibn Ḥamdūn (d. 495/1102), collapsed *maqāmah* and *risālah,* using them interchangeably. More importantly, al-Ḥarīrī leaves al-Hamadhānī′s ingenious and eloquent beggars behind to be replaced by scholars and marginalized intellectuals with extensive knowledge in mystical, geographical, medical, and other professional engagements. Thus, his protagonists speak for epistolographers of the self-made kind. The shrewd forebear anticipates his grandsons who will try to keep his ghost in the background. No wonder he is so much present in al-Qalqashandī′s *maqāmah,* despite the counter presence of Ibn al-Athīr and Ibn al-Khashshāb.

In particular, al-Qalqashandī calls upon al-Ḥarīrī′s *Al-Furātīyah,* which recalls a mission up the Euphrates when scribes were engaged in debates identical with those of al-Qalqashandī. As al-Ḥarīrī′s *maqāmah* goes, Abu Zayd al-Sarūjī is in the boat in the company of secretaries who are busy arguing for or against chancery vocations. His intervention is not welcome at first. But, upon listening to him, they find it worth attention. Insofar as the chancellery correspondence is concerned, he argues: ″The *munshi*' is the confidant of the mighty and an important figure amongst the boon-companions. His pen is the tongue of sovereignty and the knight of the skirmish, the Luqmān of wisdom and the interpreter of resolution. It bears good tidings and warnings alike, it intercedes and acts as an envoy. By it impregnable fortresses are won and key-points conquered.″ On the other hand, he

---

[104]Ibid., 126.

[105]″Dialogic Discourse,″ 109.

defends the treasury scribe with equal force, for the financial secretary has a pen which is ″always firm.″ He adds, ″accountants are the guardians of wealth, the bearers of burdens, the reporters of attested statements, the trustworthy envoys, the ones prominent in meting out justice and securing it for others, the legal witnesses whose testimony is adequate in disputes.″[106] Although seemingly attracted to this balanced argument, al-Qalqashandī follows a stylization process which is subtly placed in a context of other competing views and reviews. In the process, al-Ḥarīrī´s views on the benefit of each profession enjoy some activation in order to prepare for the postmaturation of al-Qalqashandī´s ultimate triumphal note in respect to epistolography, which Ibn al-Athīr thought of as too wide-ranging for al-Ḥarīrī. The concluding note of triumph only supports Bakhtin´s discussion of parody at large: ″Every struggle between two voices within a single discourse for possession or dominance in that discourse is decided in advance.″[107]

While there is self-glorification, al-Qalqashandī´s *maqāmah* ultimately is a testimonial epistle whose comprehensive overview and literariness stand for an outgrowth, a maturation that surpasses and supersedes earlier practices. Indeed, by citing Badr al-Dīn as unprecedented, whose *merits* supersede al-Qāḍī´s *faḍā'il* (merits),[108] al-Qalqashandī the epistolographer glorifies his own achievement, too. Playing on the meaning of *faḍl* (favor and merit) in Badr al-Dīn´s *nisbah* or lineage, and the somehow identical connotation in al-Qāḍī al-Faḍil´s attribute (the excellent or the erudite magistrate), al-Qalqashandī asserts both his own stylistic skill in coining the right comparison, his mastery of puns and metaphors, and his faith in the growth of chancellery correspondence, whose theory and practice is attested to by the summation and the compendium at hand.

Yet the mere use of the *maqāmah* genre betrays resignation to al-Ḥarīrī´s powerful presence. Further, al-Qalqashandī concludes that what his *maqāmah* ″includes in respect to the tributes of *kitābah* and the honor of writers [scribes] excludes the need for any other.″[109] But the conclusive remark is belied by his text full of citations to *maqāmāt* and epistles, and so alludes to a cultural climate rife with controversy and difference. His *maqāmah* is meant to sum up a profession and map out a career, which it aptly does. However, success on a personal level is set within other accounts and significations of achievement and failure, like the epistles and *maqāmāt,* which he cites and includes before and after his own *maqāmah*.

[106]Cited in Bosworth, *Medieval Arabic Culture,* 293–94, from T. Chenery´s translation of the *Assemblies.*

[107]″Dialogic Discourse,″ 112.

[108]*Ṣubḥ,* 14:141.

[109]Ibid., 145.

While al-Qalqashandī´s compendium is the largest and most extensive encyclopedic effort in epistolography, his *maqāmāt* are of great cultural relevance, too. Further, al-Qalqashandī´s highly spirited account of chancery posts and scribal vocations should not blind us to his intentional design to set his own *maqāmah* among others that reveal a great deal about the history of epistolography, its achievements and failures. Against his seemingly balanced argument to promote the profession, there stands Yaḥyá ibn Salāmah al-Ḥaṣkafī´s (d. 551/1156) epistle.[110] This ″supreme orator″ and ″crown of the learned″ wrote an epistle, in a *maqāmah* fashion, entitled *ʻItāb al-Kuttāb wa-ʻIqāb al-Alqāb,* to chastise those who ″settled for lowliness instead of striving for requisite knowledge.″[111] Al-Ḥaṣkafī holds the chief chancery clerk and his staff responsible for the deterioration of prose, and he castigates the vizier and secretaries of the bench and their deputies, along with secretaries of finance and keepers of secrets, for unwarranted arrogance and failure in performance. By so doing, al-Ḥaṣkafī provides a counter treatise and devastating account that reveals a chancellery of reprobates headed by ″our master the minister who is lapsing into vice.″[112]

Of no less significance is Abū al-Qāsim al-Khawārizmī´s (d. 387/997) *maqāmah,* which al-Qalqashandī contrasts with his own panegyric *maqāmah.*[113] Al-Khawārzmī´s *maqāmah,* which is originally cited in full by Ibn Ḥamdūn, is written in lofty prose with an ornate style and elevated rhetoric to attack the pretensions of a certain pedant named al-Hītī, who undeservedly gained the reputation as one of the learned and the ulama among his community. The argumentation is carried out smoothly, with great serenity and vigor, to explode the myth which al-Hītī had perpetrated about himself. Incorporating it in full, al-Qalqashandī balances his own positive appraisals of the profession.

Moreover, al-Qalqashandī´s citations of such criticism make up a body of texts with a historical and political referentiality that endow his *maqāmah* with some discursive strategies of oblique criticism, indirection, parody, and stylization. Indeed, al-Khawārizmī´s *maqāmah* is not alone in its biting sarcastic tone and pointed exposure, for Ibn Nubātah held similar views of his critics among chancery clerks who, ″except for the turban, had nothing in their heads.″ They ″were ignorant of *tarassul* (epistolography) and unqualified in rhetoric.″[114] These remarks came in a letter of gratitude addressed to Ibn Fahd, Shihāb al-Dīn Maḥmūd al-Ḥalabī, who was in charge of the *dīwān* in Damascus, after he made an eloquent defense of Ibn

---

[110]Ibid., 230–36.

[112]Ibid., 233.
[113]Ibid., 146–56.
[114]Ibid., 279.

Nubātah against his critics. Al-Qalqashandī himself was critical of the style and language of a number of letters[115] which he criticizes for ″coarse utterance″ and structural lapses despite the fact that they were drawn up in the reign of both al-Ẓāhir Baybars and al-Manṣūr Qalāwūn who ″were among the most magnificent of kings.″[116]

These epistles and *maqāmāt* cited by al-Qalqashandī act as paratexts for his *Kawākib al-Durrīyah.* They recapitulate the common view of the degeneration of epistolary practice, for which al-Qalqashandī offers two explanations. First, following Ibn Ḥājib al-Nuʿmān (d. 951/1031), al-Qalqashandī argues that ″scribes used to compete in earning the right merit, aloof from any vice of ignorance, striving to gain whatever improves utterance, and beautifies their performance, in order to reach the highest station and to win the best of favors.″[117] Presently, things took the opposite direction, for the ignorant and the greedy received advancement. Thus, ″arts were shunned as taboos and sciences were discarded as if the greatest sins.″[118] Second, while leveling blame on generations of scribes with little grounding in arts and sciences,[119] al-Qalqashandī believes that the domination of non-Arabs *(aʿjam)* led to this confusion between the ″dumb″ and ″unversed″ in Arabic and the learned. Nevertheless, the *maqāmah* is keen on forwarding epistolography as the best of arts, that subsumes every genre without loss of its own richness. It befits a growing empire in its official discourse, for Egypt ″still grows in stature and reputation until it has become the abode of the Abbasid caliphate, and the base for the Islamic kingdom. Its kingdom takes pride in serving the two holy shrines, and the rest of kings and nations served it for this reason.″[120]

Finally, then, al-Qalqashandī′s defense of the profession and the craft should not be taken at face value. Employment in the chancery had its many ups and downs, and competition among other secretarial occupations was intense at times. If earlier records testified to gain and loss, the later periods were no less rife with competitiveness, malice, and cruelty.[121] A pertinent illustration is the allegorical

[121]Zamrak′s (d. 1393) hatred led to Ibn al-Khaṭīb′s death. Indeed, many writers of prose, like Ibn Abī al-Ḥadīd (d. 656/1257) and ʿImād al-Dīn al-Iṣfahānī al-Kātib (d. 597/1201) blamed, for instance, Ḍiyāʾ al-Dīn ibn al-Athīr (d. 637/1239) for his negative influence on Ṣalāh al-Dīn′s son, Al-Afḍal. In his book on the latter, Ibn Abī al-Ḥadīd traced in Ḍiyāʾ al-Dīn′s *Al-Mathal* negative and positive sides. On the negative side, he found Ibn Al-Athīr ″highly proud of himself,″ to the extent of ″raising objections against the honorable.″ See *Al-Falak al-Dāʾir ʿalá al-Mathal al-Sāʾir*,

tale reported by ʿUthmān ibn Ibrāhīm al-Nābulusī.[122] There was a merchant who was so learned that a certain sultan was advised to choose him as vizier, for the kingdom had lost so many. According to tradition, each minister was deported to an empty and deserted island upon terminating a year in that position. The merchant asked to see the island, and in a very discreet manner moved his family and servants there along with manufacturers and laborers so as to make it habitable in preparation for such an end.[123] The anecdote speaks of the other side in the life of *kātib*s and viziers.

In all, al-Qalqashandī's vindication of the profession, his autobiographical review of his own career, and his expressions of homage and allegiance set his *maqāmah* in a ramified engagement of great socio-political, cultural, and textual richness. Brief like any other *maqāmah,* its referentiality extends in time and space, while its textual registers go beyond the compendium, at times, to involve the whole controversy on genres and their prioritizations. It offers a literary history in a nutshell and draws attention to chancery rivalry in its professional dimension, too. Its markers of argumentation, debate, and engagement, and its register of figures and issues testify to its complexity and richness beyond the mere shows of homage or expressions of need and choice. On the other hand, this very extensive referentiality grants al-Qalqashandī another cultural lineage, an intertext of wide-ranging contributions, "embellished" inscriptions with figures who still argue and debate issues and attitudes. The self-made scribe who ironically bewails his lack of lineage survives the ordeal and emerges with another ancestry which is still alive among readers and scholars of Mamluk history and culture.

The First Layer of the *Sīrat Baybars:* Popular Romance and Political Propaganda

We know quite a lot about the setting of the *Sīrat Baybars* and of other popular *siyar,*[1] the Arabic popular romances. European travellers and scholars of the eighteenth and nineteenth centuries, among others Carsten Niebuhr,[2] Edward William Lane,[3] and the authors of the *Description de l'Egypte,*[4] reported that storytellers recited in the coffeehouses of the big cities. In Damascus and Cairo, for a "trifling sum of money,"[5] they related different sorts of entertaining stories, especially the popular *siyar, Sīrat ʻAntarah ibn Shaddād, Sīrat Banī Hilāl, Sīrat Sayf ibn Dhī Yazan,* and the *Sīrat al-Malik al-Ẓāhir Baybars*. This last text is the subject of this essay.

We know next to nothing about the genesis and the development of these texts. Most of the complete *sīrah* manuscripts at our disposal are relatively late versions of these texts. Of the older layers of the *siyar shaʻbīyah* only fragmentary remnants have survived. The nature of the *siyar* texts poses further problems: the *siyar shaʻbīyah* are clearly anonymous stories, created by several authors who regularly revised and recreated their texts, thus adapting them to the expectations and taste of their audience. In this sense, the popular romances are the structural opposites of texts representing classical Arabic literature, which were created by single authors and which show the influence of their socio-political milieu.

---

[1]Plural of *sīrah*, meaning in this context account of life history, biography. The most famous example of a learned *sīrah* is the *Sīrat al-Nabī,* the biography of the Prophet Muḥammad. See Marco Schoeller, *Exegetisches Denken und Prophetenbiographie* (Wiesbaden, 1998), 37–49. The term *siyar shaʻbīyah* (popular *siyar*) was "coined by Arab folklorists in the 1950s for a genre of lengthy Arabic heroic narratives that in Western languages are called either 'popular epics' or 'popular romances.'" See Peter Heath, "Sīra Sh͟aʻbiyya," *The Encyclopaedia of Islam,* 2nd ed., 9:664.

[5]Lane, *Modern Egyptians,* 2:103.

In order to establish the time, place and social context of the genesis of a text such as the *Sīrat Baybars,* we have to rely on the indirect evidence provided by the text itself, such as specific references to the social or political points of view of its creators. Such an analysis gives us insight into the different functions that the *sīrah* acquired in the course of its development.

Evidence shows that the *Sīrat Baybars* is a composite text in which three layers of text development can be distinguished; those layers originated in three different eras and social environments that merged in a process we can no longer reconstruct. For this article, we will not concentrate on the ″adventure-romance″ from the fifteenth century, which forms most of the *sīrah.* Nor will we talk about Baybars′ youth and ascent in the *sīrah,* a part of the text in which Baybars is built up as a counter-image to the despotic sultans of the fourteenth and fifteenth centuries and in which the *ummah′*s anger found its expression regarding corruption and abuse of power at the time of the great crisis of the Mamluk Empire (at the end of the fourteenth and the beginning of the fifteenth century).[6] Instead, we shall concentrate on the oldest layer of the legendary biography of the great Mamluk sultan Baybars I. Although initially assumed to be a product of the second half of the fourteenth and of the fifteenth century, we established in the course of our investigation that—judging by the representation of Sultan Baybars and of several other historical figures—the *sīrah* seems to have been inspired by the spirit of the second half of the thirteenth century, thus the early period of the Mamluk Empire. Our line of argument is based essentially on two elements: first on the representation of Sultan Baybars as the virtuous guardian of Ayyubid legitimacy, and second on the representation of a series of historical rivals to Baybars and the Ẓāhirīyah Mamluks.

One of the greatest problems facing the Mamluks at the beginning of their rule was that of legitimacy. If the Ayyubid house, which had ruled before them, had been legitimized by its descent and by investiture by the caliph of Baghdad, the military slaves that finally came to power with Baybars could not legitimize themselves either by descent—having been born in non-Islamic lands—or, for a transitional period after the Mongol seizure of Baghdad, by the religious authority of the caliph. In this context, if we examine the representation of Baybars in the *sīrah,* his origins, his rise, and how he finally took over power, details that at first seem merely to glorify the hero of an adventure story suddenly form a coherent unity.

Indeed, from his introduction in the romance, the representation of Baybars seems entirely motivated by the idea of the legitimation of Mamluk rule. Although

[6]For this, see my Ph.D. thesis to be published in 2002 (″Genese, Überlieferung und Bedeutung der Sīrat Baibars in ihrem sozio-politischen Kontext″).

he is shown as a military slave—it would have been unconvincing to try to disguise it—Baybars is in the *sīrah* Muslim by birth, bears the name of Maḥmūd, and is the son of the king of Khurasan, who became a slave after he had been betrayed by his brothers.[7] Baybars does not stay a slave for long: in Damascus, where he is first brought after having been enslaved and where he is serving as a house slave, a rich widow ″adopts″[8] him because he resembles her deceased son. She names him after her son Baybars and makes him the master of her fortune.[9] It is in Damascus that the four *aqṭāb,* in Sufi belief the mystical poles of the universe[10] (in the *sīrah* Aḥmad al-Badawī, al-Dasūqī, al-Jīlānī, and the *ṣāḥib al-waqt*[11]), appear to Baybars and pray for him. It is also in Damascus that during the *Laylat al-Qadr,* the Night of Destiny in which people believe that God determines the fate of men for the following year, the gates of heaven open to Baybars. He is told that he will become sultan of Egypt and Syria.[12] Having come to Cairo, Baybars quickly rises in rank, becomes commander of a Mamluk regiment, *wālī, muḥtasib,* and governor of several provinces. Finally, Baybars is ″adopted″ by the Ayyubid sultan al-Ṣāliḥ and his spouse in the *sīrah,* Shajarat al-Durr,[13] thus recovering a

[7]*Sīrat al-Malik al-Ẓāhir Baybars,* ed. Jamāl al-Ghīṭānī (Cairo, 1996), 469. This is a re-edition in five volumes with new pagination of the first edition by al-Ḥājj Muḥammad Amīn Dirbāl (Cairo, 1326–27/1908–9) and the second edition by Muḥammad ʻAbd al-Laṭīf al-Ḥijāzī (Cairo, 1341–44/1923–26). Whereas the betrayal of Baybars′ brothers shows obvious borrowings from the story of Joseph in the Bible and the Quran (Genesis 37:4 and Quran 12:5), Baybars′ fictitious origins go back to the origins of his predecessor Quṭuz al-Muẓaffar as related by some Arab historians. Ibn Iyās reports, citing Ibn al-Jawzī, that Quṭuz had once been beaten by his master Ibn al-Zaʻīm, over which he bitterly wept. Being asked why he wept so bitterly because of a single blow he answered: ″′I only weep because he cursed my father and my grandfather, whilst they are more deserving than he is.′ He was asked: ′But who are your father and grandfather, aren′t they Christians?′ He said: ′No, on the contrary, I am a Muslim son of a Muslim and my name is Maḥmūd, son of Mamdūd, nephew of the Khwarizm Shah, from the progeniture of the kings of the east. The Mongols took me as a boy, after they had defeated them.′ This is why Quṭuz was not a slave.″ (Ibn Iyās, *Badāʼiʻ al-Zuhūr fī Waqāʼiʻ al-Duhūr,* ed. Muḥammad Muṣṭafá as *Die Chronik des Ibn Ijās* [Cairo/Wiesbaden, 1960–84], 1:1:303). See also: Donald P. Little, ″Ḳuṭuz,″ *Encyclopaedia of Islam,* 2nd ed., 5:571.

[8]We put the word ″adopts″ in quotation marks, because in Islamic law full adoption does not exist.

[9]Fāṭimah al-Aqwasīyah was a widow and without a male descendant following the death of her son. There is a certain resemblance to the *sīrah* of the Prophet, although it differs from it in that Baybars does not marry Fāṭimah, which would not have suited the *sīrah*′s story.

[10]See F. de Jong, ″Al-Ḳuṭb: 2. In Mysticism,″ *EI* [2] 5:543.

[11]″*Ṣāḥib al-waqt*″ or ″*Ṣāḥib al-zamān,*″ the temporary *qutb* (pole, axis; the head in the hierarchy of the ″saints″). See de Jong, ″Al-Ḳuṭb,″ 543. It is also one of the names of the *mahdī*. See Heinz Halm, *Shiism* (Edinburgh, 1991), 77.

[13]Ibid., 462.

double royal descent, that of his father, king of Khurasan, and that of al-Ṣāliḥ Ayyūb, the last great Ayyubid on the throne of Egypt.

It is interesting to observe how the *sīrah*'s authors relate the upheaval during the transition from Ayyubid rule to that of the first great Mamluk sultan, al-Ẓāhir Baybars: as al-Ṣāliḥ dies, it is Baybars to whom he limits his succession, asking God to have all those who were due to become sultan before Baybars die by an unnatural death.[14] By this strategy, the *sīrah* takes into account the historical succession of rulers and simultaneously confirms Baybars as the true heir and undoubted guardian of the Ayyubid dynasty's legitimacy. In fact, Baybars refuses the sultanate each time a successor to al-Ṣāliḥ is nominated—ʿĪsá al-Muʿaẓẓam Tūrānshāh, al-Ashraf, al-Ṣāliḥ al-Ṣaghīr ibn al-Ashraf (a fictive sultan), Aybak al-Turkumānī, and al-Muẓaffar Quṭuz, who are all shown as Ayyubids in the *sīrah*—with the vehement words: "God forbid that I take the dignity of a sultan under the eyes of the Ayyubid princes! Who am I to divest them of their right to the throne, I who once used to be their slave?"[15]

It is equally interesting to observe how the *sīrah* diverts historical responsibility from Baybars for the murder of two of al-Ṣāliḥ's successors, ʿĪsá al-Muʿaẓẓam Tūrānshāh and Quṭuz. The case of the first of al-Ṣāliḥ's successors is that of ʿĪsá al-Muʿaẓẓam Tūrānshāh, al-Ṣāliḥ's son and immediate successor. He was apparently more interested in the fine arts and wine than in government or the army, and he was murdered by the Baḥrīyah Mamluks under the leadership of Baybars following the battle of al-Manṣūrah against the Crusader army of Louis IX. According to a number of historians it was a group probably headed by Baybars himself which carried out the assassination of the young sultan.[16] The authors of the *sīrah,*

---

[14]Ibid., 965–66, and the manuscript versions: Forschungs- und Landesbibliothek Gotha MS 2628, fol. 18a (catalogue listing: Wilhelm Pertsch, *Die orientalischen Handschriften der Herzoglichen Bibliothek zu Gotha,* pt. 3, *Die arabischen Handschriften,* vol. 4 [Gotha, 1883], no. 2628); British Library London MS Or 4649, fol. 13a (catalogue listing: Charles Rieu, *Supplement to the Catalogue of the Arabic Manuscripts of the British Museum* [London, 1894], no. 1191); Staatsbibliothek Berlin MS We 572, fol. 76b (catalogue listing: Wilhelm Ahlwardt, *Die Handschriften-Verzeichnisse der Königlichen Bibliothek zu Berlin,* vol. 20, *Verzeichniss der arabischen Handschriften,* vol. 8 [Berlin, 1896], no. 9155 [We 561–586]); Forschungs- und Landesbibliothek Gotha MS 2600, fol. 79a (catalogue listing: Pertsch, *Die orientalischen Handschriften,* no. 2600); *Le roman de Baïbars*, translated by Georges Bohas and Jean-Patrick Guillaume from a nineteenth-century Aleppo manuscript (Paris, 1985–), 6:76 f.

[15]Bohas/Guillaume, *Roman,* 6:83 f.

[16]The following historians state that Baybars was the leader of the group that murdered Tūrānshāh or, alternatively, that he assassinated him personally: Muḥammad ibn Sālim Ibn Wāṣil, "Mufarrij al-Kurūb fī Akhbār Banī Ayyūb," Paris Bibliothèque Nationale MS Ar 1702, fol. 371a–b; Muḥyī al-Dīn Ibn ʿAbd al-Ẓāhir, *Al-Rawḍ al-Zāhir fī Sīrat al-Malik al-Ẓāhir,* ed. ʿAbd al-Azīz Khuwayṭir (Riyadh, 1396/1976), 50; Ismāʿīl ibn ʿAlī Abū al-Fidāʾ, *Al-Mukhtaṣar fī Akhbār al-Bashar*

however, do not make ʿĪsá al-Muʿaẓẓam Tūrānshāh die directly by Baybars′ hand but rather show his death as God′s punishment for a sinful way of life. In the *sīrah,* ʿĪsá becomes completely drunk while sitting on an elevated seat he had built in order to be able to watch the battle of al-Manṣūrah against the Frankish troops and falls, breaking his neck.[17]

The case of the second successor of al-Ṣāliḥ for whose death Baybars is responsible is that of al-Muẓaffar Quṭuz, the hero of the battle of ʿAyn Jālūt against the Mongols, a Mamluk just like Baybars. While the historical Quṭuz was trapped by Baybars in an ambush and killed in cold blood,[18] the *sīrah*′s Quṭuz is murdered by Frankish spies.

Obviously the *sīrah* had to convince its audience of Baybars′ innocence; it could not entirely suppress his historical role in these events, but it skilfully integrated the allegations against Baybars and invalidated them. So ʿĪsá does not die at the hands of the future sultan, but gets caught in the ladder of his elevated seat, stumbles and falls while fearing the anger of Baybars, who furiously approaches him in the middle of the battle, having seen him drinking while watching the battle. In the case of Quṭuz, Baybars′ historical responsibility for the murder finds expression in the account that the Frankish spies who murder Quṭuz leave by the side of the corpse a slip of paper on which Baybars declares his responsibility for the crime.[19]

Further, the account of al-Ṣāliḥ′s different Ayyubid successors in the *sīrah* not only depicts Baybars as the altruistic guardian of Ayyubid legitimacy, it also shows that after al-Ṣāliḥ Ayyūb the Ayyubids could no longer provide a sovereign able to rule the empire and thus rightly lost their power to the Mamluks. All the

[18]Ibn Wāṣil, ″Mufarrij al-Kurūb fī Akhbār Banī Ayyūb,″ Paris Bibliothèque Nationale MS Ar 1703, fol. 163b; Mūsá ibn Muḥammad al-Yūnīnī, *Dhayl Mirʾāt al-Zamān fī Tārīkh al-Aʿyān* (Hyderabad, 1374–80/1954–61), 1:370–371; al-Maqrīzī, *Sulūk,* 1:2:435. Ibn ʿAbd al-Ẓāhir stresses the point that Baybars murdered Quṭuz himself without any help: *Rawḍ*, 68: ″The sultan al-Malik al-Ẓāhir did what he did on his own and reached his aim alone, in the midst of a powerful army and massive protection. And nobody was able to speak and nobody could resist him.″

[19]*Sīrat al-Malik al-Ẓāhir,* 1079: ″It was no one else but the amir Baybars who accomplished these deeds and attained this destiny, [my] writing and seal testify to this.″ Nota bene the proximity to the account of Ibn ʿAbd al-Ẓāhir, *Rawḍ*, 68, cited above.

successors of al-Ṣāliḥ that the *sīrah* calls Ayyubids are shown to be either unworthy of the sultanate (ʻĪsá Tūrānshāh, Aybak), or unsuitable for it due to their youth (al-Ṣāliḥ al-Ṣaghīr), gender (Shajarat al-Durr[20]), or finally to be entranced saints *(awliyā')* (al-Ashraf Khalīl, Quṭuz) who were equally unsuited for the office of sultan of the Ayyubid Empire. So the *sīrah* depicts the transition from the Ayyubids to the Mamluks not only as legitimate, but also as consistent.

In my opinion, the important place that Ayyubid legitimacy occupies in those parts of the *sīrah* dealing with the transition to the Mamluks points to the beginning of the Mamluk period. Whereas the *vita* of Baybars composed by the court biographer Ibn ʻAbd al-Ẓāhir shows him as the spiritual heir of al-Malik al-Ṣāliḥ Najm al-Dīn Ayyūb,[21] the picture of the great sultan that Ibn ʻAbd al-Ẓāhir′s nephew Shāfiʻ ibn ʻAlī draws some thirty years after his uncle[22] already shows the consolidation of Mamluk power. As P. M. Holt put it, ″The Baybars of *Ḥusn al-manāqib* is still an impressive, even an heroic figure, whose military achievements secured the future of Islam in Syria against the threats from the Mongols and the Franks. He appears, further, as an autocratic but just ruler, who was (to use a cliché) the true founder of the Mamluk sultanate. What he has lost is the aura of legitimacy as the true heir of al-Ṣāliḥ Ayyūb, by which Ibn ʻAbd al-Ẓāhir sought to disguise his twofold usurpation. But when Shāfiʻ wrote, Ayyubid legitimacy had long ceased to be a political issue, and Baybars could stand justified by his deeds.″[23]

It is not only the picture of Baybars drawn by the *sīrah* that makes us presume that a first layer of the *Sīrat Baybars* dates from early Mamluk times. If we look at the representation of several historical characters of the *sīrah,* we note that they are shown in a certain number of purely fictitious episodes of the romance in an extremely negative light. This evidence gains further importance since these characters were all historical rivals or opponents of Baybars and his Ẓāhirīyah Mamluks. Their negative representation thus faithfully reflects the conflicts of interest and power of the time of Baybars′ rule or of those of his immediate successors and that from a ″Baybarsian″ point of view.

The most prominent examples of this representation are those of al-Muʻizz Aybak and of al-Manṣūr Qalāwūn. Al-Muʻizz Aybak, who was, like Baybars, a Mamluk and before him—from 648/1250 to 655/1257—sultan, is shown in the

[23]P. M. Holt, ″The Sultan as Ideal Ruler: Ayyubid and Mamluk Prototypes,″ in *Süleyman the Magnificent and His Age: the Ottoman Empire in the Early Modern World,* ed. Metin Kunt and Christine Woodhead (London and New York, 1995), 136–37.

sīrah as a crypto-Christian and ally of the Franks, who nourishes in his heart hatred towards Muslims. He is introduced into the romance as king of Mosul, who wants to attack al-Ṣāliḥ Ayyūb's empire, but finally enters into the sultan's service and conspires against the Muslims from the heart of their state.[24] After the death of al-Ṣāliḥ he wants to seize power and pretends that Baybars had murdered his master, but his words turn out to be lies.[25] Nevertheless, Aybak threatens to "make the blood cool in floods" if Baybars should become sultan.[26] After the death of ʻĪsá Tūrānshāh, Khalīl ibn ʻĪsá as al-Ashraf and al-Ṣāliḥ al-Ṣaghīr ibn al-Ashraf successively become sultan, and Aybak poisons both of them and seizes power.[27] He finally tries to assassinate Baybars as well.[28] Baybars leaves for Syria where he installs a counter rule.[29] It quickly comes to a conflict between Baybars and Aybak as the coins minted by Baybars in Damascus have a higher value and render those minted by Aybak worthless in the market.[30] People mock Aybak, who falls in love with a Bedouin girl and no longer shows any interest either in state affairs or in his spouse Shajarat al-Durr, who finally murders him out of jealousy.[31]

This extremely negative and, except for his death, totally unhistorical representation[32] of Aybak in the *Sīrat Baybars* goes back, in my mind, to the historical struggle for power, to the time between the death of the last great Ayyubid sultan al-Malik al-Ṣāliḥ and the first great Mamluk sultan Baybars. Al-Malik al-Muʻizz Aybak, the first Mamluk on the throne of Egypt, recognized the Baḥrīyah Mamluks, one of whose leaders was Baybars, correctly as a permanent threat. It is true that the Baḥrīyah did not dare to seize power immediately after the assassination of ʻĪsá Tūrānshāh and preferred to accept temporary and unstable

---

[24]*Sīrat al-Malik al-Ẓāhir,* 71–75, 87–92. During Baybars' rise to power in Cairo, Aybak acts regularly on the side of the qadi Jawān, a crypto-Christian and the main evil character of the romance, trying to get Baybars executed (e.g., ibid., 270ff., 744 ff.). The corrupt *wālī* Ḥasan Āghā and his nephew the *muḥtasib* (market-superintendent) Qarājūdah are also crypto-Christians from Aybak's entourage (ibid., 506 ff., 586 ff.) who try to harm Baybars. According to his status as crypto-Christian, Aybak deserts the Muslims during the battle against the Mongols and tries to collaborate with the latter (ibid., 773 ff.).

[25]As Aybak pretends after al-Ṣāliḥ's death to become the future sultan, the vizier Shāhīn reprimands him, saying that someone like him could never merit the sultanate: "And the vizier said: 'Please preserve a sense of decency in this matter. Somebody like you will never deserve the sultanate.'" (ibid., 966ff.).

[29]Ibid., 1034 ff.

[30]Ibid., 1061 ff.

[31]Ibid., 1069–74.

[32]Aybak's rule over Egypt, his marriage with Shajarat al-Durr, and his neglect of her for another woman are the only historical elements in the *sīrah*'s account of Aybak.

solutions such as the rule of the female Shajarat al-Durr with Aybak as *atabeg*.[33] But this circumstance did not hinder them enough to cause them to deny soon afterwards the legitimacy of Aybak's sultanate and to act more and more in a self-assured and arrogant way.[34] Fāris Aqṭay, the leader of the Baḥrīyah-Jamdārīyah Mamluks, began to act as the true ruler of Egypt and finally asked Aybak and his spouse to leave the citadel, in order to permit him to accommodate his own spouse, the daughter of the ruler of Ḥamāh, in keeping with her station.[35] Aybak then decided to eliminate Fāris and his Mamluks. On 1 January 1254 (10 Dhū al-Qa'dah 651), he ordered Fāris Aqṭay to visit him at the citadel. As soon as Fāris entered, he was captured and murdered by a troop of Aybak's personal Mamluks. In spite of Aybak's immediate attempt to capture the remaining Baḥrīyah-Jamdārīyah Mamluks, the majority managed to flee.[36]

Al-Manṣūr Qalāwūn is the second historical figure whose extremely negative representation in the *sīrah* makes me believe that parts of the *Sīrat Baybars* go back to the struggle for power in the early Mamluk period. Qalāwūn, who historically was one of Baybars' comrades, is depicted in a number of manuscript and printed versions of the *sīrah* as a Mamluk who hates Baybars from their first encounter.[37] On their way with a slave caravan from Bursa to Damascus, Baybars and Qalāwūn share the same mount. Baybars, who is severely ill, suffers from diarrhea[38] and asks Qalāwūn to help him to dismount. Qalāwūn is disgusted by Baybars and pushes him at dawn from the animal and so Baybars nearly dies in the desert.[39] Later, when Baybars has already become sultan, Qalāwūn becomes one of his

---

[33]A Turkish term used from Saljuq to Mamluk times designating a military leader mostly of slave origin who was acting as a tutor for a young prince. He typically married the mother of the minor prince and thereby acquired great power. The tutorate of Aybak for Shajarat al-Durr as regent-spouse of the heir and widow of al-Ṣāliḥ Ayyūb is a special case. See Cahen, "Atabak," *EI²* 1:731.

[34]Peter Thorau, *The Lion of Egypt,* trans. P. M. Holt (London, 1992), 47.

[35]Amalia Levanoni ("The Mamluks' Ascent to Power in Egypt," *Studia Islamica* 72 (1990): 143–44) writes: "Being the accepted candidate of the Baḥriyya-Jamdāriyya Emirs, Aqṭay began behaving like a pretender to the throne. Riding through Cairo, he acted like a sovereign. His Mamluk comrades already called him al-Malik al-Jawād among themselves and addressed their requests of Iqtā' to him. The climax of this process came when Aqṭay asked Aybak al-Turkmānī, Atābak al-'Asākir, and his wife Shajar al-Durr to leave the palace of Qal'at al-Jabal in order to house his bride, daughter of the ruler of Hamah, in a residence befitting a princess."

permanent opponents. He tries to seize power by any means, even murder. So he poisons Baybars[40] and then his two sons al-Saʿīd[41] and Aḥmad Salāmish.[42] When, after the murder of al-Salāmish, the people of Cairo hear that Qalāwūn has become the new sultan, they decide to kill him on his triumphant entry into the city.[43] They throw stones at Qalāwūn even before he enters Cairo, so the vizier Shāhīn advises him to enter the city by night from behind the citadel. After having entered the city secretly, Qalāwūn sends the army, which slaughters one third of Cairo′s population. The vizier advises Qalāwūn to declare peace, but the latter does not listen to him. The vizier responds: ″This man is a traitor. He cannot hope for anything else than the sword from us. [Indeed] he must be put to death!″[44] Following the printed version of the *sīrah,* the people of Cairo make fun of Qalāwūn at his entry into the city: ″Who for heaven′s sake has put this one on the throne?″ Furious, Qalāwūn orders the ulama to draw up a *fatwá* declaring that such behavior is to be punished by the sword, and he lets his soldiers loose on the people of Cairo for three days. Qalāwūn himself tries to rape Tāj Bakht, Baybars′ spouse, but she flees to a poor woman who gives shelter to her and her children.[45] The famous hospital Qalāwūn constructed in Cairo is also shown as a diabolic invention: having realized his sinful way of living,[46] Qalāwūn builds a hospital. In spite of healing sick people, Qalāwūn forces the doctors to concoct a poison, which he gives to a man who tries to approach one of his concubines. The man dies in a spectacular way and the sultan′s concubine is driven crazy. There is little doubt that this story excited the erotic imagination of the storytellers′ audiences. Qalāwūn then builds a hospital for lunatics where the patients are healed by music.[47]

According to the *sīrah*, the son of al-Manṣūr Qalāwūn, al-Ashraf Khalīl, who reigned after his father′s death from 689/1290 to 693/1293, did not inherit his

[47]Ibid.

father′s wickedness, but was inclined to the *dawlat al-Ẓāhir*[48] and is therefore placed by his father in the relatively remote post of governor of Damascus.

In searching for the reasons for this extremely negative representation of Qalāwūn in the *sīrah,* we can first ascertain that it neither corresponds to the historical record nor does it go back to an actual enmity between Baybars and Qalāwūn. On the contrary, Qalāwūn enjoyed Baybars′ full confidence.[49] According to Shāfi‘ ibn ‘Alī, Baybars made a great effort to consolidate Qalāwūn′s position. Therefore, he had raised the number of soldiers under his command, given a better *iqṭā‘* to him, and increased his salary. Baybars had made Qalāwūn his chief counsellor *(ra's al-mashūrah)* and had ″depended on him as no king had ever depended on an amir and as no sultan had ever depended on a counselor.″[50]

Matters become clearer only if one establishes a link between Qalāwūn′s relations to al-Malik al-Ẓāhir Baybars′ Mamluks. Qalāwūn had indeed deposed the young sultan al-Sa‘īd with the backing of the Ṣāliḥīyah Mamluks and had therefore kept the younger Ẓāhirīyah Mamluks away from state power.[51] During the next sultanate of Baybars′ underaged son al-Salāmish, Qalāwūn *de facto* already ruled the empire[52] and made use of the time to place his men from among the Ṣāliḥīyah Mamluks—his comrades in having served al-Malik al-Ṣāliḥ Najm al-Dīn Ayyūb—in a series of key positions.[53] Having thus consolidated his power, Qalāwūn finally put himself on the throne through the Ṣāliḥīyah amirs, who definitely invited the enmity of the Ẓāhirīyah Mamluks. Indeed, he suffered during most of

---

[48]Ibid., 3115: Khalīl asks the Ismailian Ibrāhīm al-Ḥawrānī what he should do against his father′s behavior: ″O my commander, my father used violence and did wrong against the dynasty of al-Ẓāhir; he is anxious to turn me away from the dynasty of al-Ẓāhir. [So] he banished me to Damascus and made me [his] governor there. Indeed I hate injustice and immoderateness! Al-Malik al-Ẓāhir did not harm us in any way; he even let my father kill his sons.″ See also *Sīrat al-Malik al-Ẓāhir,* 3118: ″The deeds of King Khalīl after his father [′s death] and how he was inclined to the dynasty of al-Malik al-Ẓāhir.″

[49]Several anecdotes from the year 661/1262–63 prove this. Ibn ‘Abd al-Ẓāhir, *Rawḍ*, 148, 166–69, 181; al-Maqrīzī, *Sulūk,* 1:2:480–81, 501. (Cited from Linda S. Northrup, *From Slave to Sultan* [Stuttgart, 1998], 72).

[50]Shāfi‘ ibn ‘Alī, ″Al-Faḍl al-Ma'thūr min Sīrat al-Sulṭān al-Malik al-Manṣūr,″ Oxford Bodleian MS Marsh HS 424, fol. 4a; Ibn ‘Abd al-Ẓāhir, *Rawḍ*, 166–69, 181; David Ayalon, ″Studies on the Structure of the Mamlūk Army, part III,″ *Bulletin of the School of Oriental and African Studies* 16 (1954), 69. (Cited from Northrup, *From Slave*, 73).

[51]See Northrup, *From Slave,* 78–80.

[52]Ibid, 78–83.

[53]As *atabeg*, Qalāwūn had many of the rights of a sultan. His name was included along with Salāmish in the *khuṭbah* and was minted on one side of the coins. See: al-Yūnīnī, *Dhayl,* 4:5; Ibn Kathīr, *Bidāyah,* 13:322; Muḥammad ibn Shākir al-Kutubī, ″‘Uyūn al-Tawārīkh,″ Dār al-Kutub MS 949 *tārīkh,* vol. 21, pt. 1, fol. 191; Muḥammad ibn ‘Abd al-Raḥīm Ibn al-Furāt, *Tārīkh Ibn al-Furāt,* ed. Qusṭanṭīn Zurayq (Beirut, 1936–42), 8:148. (Cited from Northrup, *From Slave*, 81).

his regency from their opposition.[54] It is for this reason that Ibn Taghrī Birdī reports that the Mamluks despised Qalāwūn, for they believed that Qalāwūn had poisoned al-Sa'īd.[55] In fact, Qalāwūn did not assassinate al-Sa'īd after his deposition, but banished him to al-Karak, where the latter died in March of the following year (1280) under unclear circumstances. The following year Qalāwūn authorized al-Sa'īd's mother to bury her son in Baybars' mausoleum in Damascus, a ceremony that took place during Qalāwūn's stay in the city. It is highly probable that this public *mise en scène* of his attachment to the deceased and his family was supposed to stop rumors of Qalāwūn's responsibility for al-Sa'īd's death.[56]

Not only the Ẓāhirīyah Mamluks, but also a certain number of elderly Ṣāliḥīyah amirs had reason to feel themselves ignored. It is true that they had been rewarded by Qalāwūn for their backing, but in principal they had the same rights to the throne as he had. It is not astonishing then that al-Maqrīzī reports that Qalāwūn, having become sultan, did not dare to ride out in public because of his fear of the Ṣāliḥīyah and the Ẓāhirīyah Mamluks' jealousy. According to al-Maqrīzī, the people heard about it and began insulting him at night, shouting in the dark under the citadel. They defiled his coat-of-arms and insulted his amirs, so that he finally avoided contact with the people.[57]

As we can see, the authors of the episodes focussing on al-Manṣūr Qalāwūn have adopted quite faithfully the critique of the Ẓāhirīyah Mamluks, who felt betrayed by Baybars' successors. It seems as if these authors belonged to the milieu of the Ẓāhirīyah or the Ṣāliḥīyah Mamluks who were mourning their old sultan.

It is of course possible that the negative image of Qalāwūn did not focus on Qalāwūn as the rival of the Ẓāhirīyah Mamluks but was rather created only at the end of the thirteenth century and aimed at Qalāwūn as the ancestor of the Qalawunid "dynasty." This view is expressed by Ibn Iyās at the beginning of the sixteenth century in his commentary on the seizure of power by the first Circassian sultan, al-Ẓāhir Barqūq, in 1382. He notes that the last sultan of the Qalawunids, al-Malik al-Ṣāliḥ al-Ḥajjī, took the regnal name of al-Manṣūr as did his ancestor Qalāwūn and that Barqūq had snatched power from the descendents of Qalāwūn just as Qalāwūn had snatched it from Baybars' sons with the words: "Just as one takes, it is taken from him."[58]

The thesis that parts of the *Sīrat Baybars* initially go back to a propaganda text of early Mamluk times, and the view that they aimed at legitimizing Barqūq´s seizure of power by shedding a negative light on Qalāwūn, are not mutually exclusive. Texts like the *Sīrat Baybars* are complex structures in constant development. They integrate new elements, conserve or eliminate old evidence, and interpret such elements in new contexts and in a new manner.

In my view, the evidence indicates that the first layer of the *Sīrat Baybars* was created in the last decades of the thirteenth century by persons or their descendants whose accounts obviously still testify to the conflicts of the time of Baybars and his immediate successors, and who therefore clearly take a political stand in them.

1311/1893/94), 1:290, lines 5–8. I thank Jean-Claude Garcin for identifying this passage.

The Shadow Play in Mamluk Egypt: The Genre and Its Cultural Implications

The growing, albeit still meager, scholarship on Ibn Dāniyāl brings him into focus as one of the wittiest men of letters in medieval Arabo-Islamic culture, and hails his work as a pioneering expression of Arabic drama. Such complimentary proclamations of Ibn Dāniyāl's artistic stature counteract a long-standing textual and contextual marginalization of Ibn Dāniyāl: "textual," due to a habitual scholarly neglect of non-canonical genres, including the shadow play; and "contextual," thanks to an enduring notion that the Mamluks had a rather unimpressive cultural and literary record that does not merit comprehensive analysis.[1] As both areas are now being reassessed and Ibn Dāniyāl has started to attract interest, he emerges as one of the most challenging and exotic authors of medieval times. Even so, the conceptual ambiguity related to the development of dramatic art in medieval Arabo-Islamic culture, the semantic difficulties of his idiom, and a critical apparatus inadequate to tackle the peculiarities of the genre have resulted in the ongoing neglect of Ibn Dāniyāl as a playwright. Instead, when studied, his work is usually compared or related to the mainstream literary heritage of the medieval Arabs at the expense of a more complex assessment of his dramaturgy. Although the merits of such an approach need not be belittled, the main feature of Ibn Dāniyāl's work—namely, its dramaturgy—has been seriously overshadowed by concerns about its textuality.

To be fair, such scholarly tendencies are not surprising. Ibn Dāniyāl's plays come to us as texts, not as performances, and as such, they raise a series of textual questions. For example, the syntactical and lexical intricacies resulting from Ibn Dāniyāl's hopscotch between colloquial and standard Arabic, numerous orthographic and phonetic alterations for the sake of rhythm and rhyme, his parodic references to great men of letters, and his masterful leaps between prose and

[1]For example, Ibn Dāniyāl is only briefly referred to in studies such as Aḥmad ʻAbd al-Rāziq, *La femme au temps des Mamlouks en Égypte* (Cairo, 1973); Boaz Shoshan, "High Culture and Popular Culture in Medieval Islam," *Studia Islamica* 73 (1991): 67–107; Ulrich Haarmann, "Regional Sentiment in Medieval Islamic Egypt," *Bulletin of the School of Oriental and African Studies* 43 (1980): 55–66; idem, "Arabic in Speech, Turkish in Lineage: Mamluks and Their Sons in the Intellectual Life of Fourteenth Century Egypt and Syria," *Journal of Semitic Studies* 33 (1988): 81–114; Barbara Flemming, "Literary Activities in Mamlūk Halls and Barracks," in *Studies in Memory of Gaston Wiet,* ed. M. R. Ayalon (Jerusalem, 1977), 16; whereas in Reynold A. Nicholson's *Literary History of the Arabs* (London, 1907) there is no mention of Ibn Dāniyāl at all.

poetry, all make textual analysis a quite formidable task. Moreover, the manuscripts themselves—the Istanbul, the Madrid, and the two Cairo ones—reveal an array of incongruities arising from the copyists′ errors in transcribing Ibn Dāniyāl′s colloquialisms, puns, and occasional gibberish. In this sense, the literary challenge is profound and the overall findings still incomplete. In short, nobody has managed so far either to edit or translate the texts of Ibn Dāniyāl′s plays with full confidence and total satisfaction.

This article, however, aims to transcend strict textual concerns in order to highlight the performative quality of Ibn Dāniyāl′s *khayāl al-ẓill,* the shadow play. The article proposes a joint assessment of content and form while both acknowledging the difficulty, and highlighting the necessity, of understanding the shadow play′s triangular mode of dramaturgic communication that involves the puppets, the puppeteer, and the audience. Moreover, since Ibn Dāniyāl′s trilogy *Ṭayf al-Khayāl* is discussed first and foremost as performance art, its relational qualities are enhanced. This enables us to look at the shadow play as an interactive genre and to shift its analysis from textual to a performative production of meaning. It is my contention, therefore, that a more appropriate understanding of Ibn Dāniyāl′s shadow plays must lie in the discussion of the *khayāl al-ẓill* as performance art situated in the larger context of Mamluk society and culture. This, in fact, is the will of the author Ibn Dāniyāl himself. In the prologue to his trilogy, he makes a plea to the commissioner of the plays to suspend any critical judgment of his work until the performance is carried out in full:

> You wrote to me, ingenious master, wanton buffoon, may your position still be lofty and your veil inaccessible, mentioning that *khayāl al-ẓill* lost its popularity as its quality slackened due to repetitiveness. You therefore asked me to produce something in this genre with fine and original characters. Modesty overcame me because of the subject of your request—which you would later introduce as mine—but then I realized that my refusal would lead you to assume that either I was not interested or that I lacked ideas and talent, regardless of my ample inspiration and natural gift. So I indulged in the domain of their unruly dominion and decided to comply with your request. I thus composed witty *bābāt* of high, not low, literary quality. *When you sketch the characters, cut out their parts, put them together, and then project them before the audience through a candle-lit screen, you will see that they are an innovative example, surpassing other such plays in truth.*[2]

KHAYĀL AL-ẒILL AS PERFORMANCE ART: THE ANALYTICAL FRAMEWORK

Standing above the analysis of Ibn Dāniyāl's *khayāl al-ẓill* is the question of whether the Arabs ever knew drama. Traditionally answered in the negative, this question is probably as old as the criticism of the Arab intellectual heritage itself.[3] Based on Aristotelian models, scholarly negations are quick in pointing out the medieval Arab lack of both cultural and analytical frameworks to understand Aristotle's terminology associated with this mimetic genre. But sticking to the Aristotelian definition of drama as a representation of life excludes rather sweepingly a whole range of performative genres of the non-Hellenic kind in which form and content are more fluidly, or just differently, engaged than they are in the Greek drama. In fact, a variety of such fluid possibilities exists in the Arab heritage, from the *maqāmah* to the *ḥikāyah,* and even, as Michael Sells suggests, to the *qaṣīdah* improvisations that can be likened to jazz performances where individual renderings dictate the tenor of any given tune.[4] More than these, however, the *khayāl* and its derivatives are the most widespread performative phenomena that speak to the presence and relative ubiquity of dramatic art. To that end, in his study on medieval Arab live theater, Moreh argues that

> The term *khayāl*/*khiyāl* is well established in the sense of "live play" from at least the ninth century; in the tenth century it is employed as a synonym for *ḥikāya*, which it eventually supersedes. The shadow play, on the other hand, receives its first mention only in the eleventh century, in Ibn al-Haytham, and then, specifically as *khayāl al-ẓill,* in Ibn Ḥazm. The qualification of *khayāl* by *al-ẓill, al-izār, al-sitāra,* etc., is reasonably clear evidence for the reference of the simple term to a type of performance from which it was necessary to differentiate this new import from the Far East.[5]

Moreh draws attention to several issues of immediate relevance: first, there is a historical continuity within the dramatic heritage in medieval Islam, in which the shadow theater plays a prominent role; second, Ibn Dāniyāl greatly benefited from

[4]Michael Sells, *Desert Tracings: Six Classic Arabian Odes* (Middletown, CT, 1989); also, for example, Régis Blachère and Pierre Masnou, *Maqāmāt (séances)/al-Hamadāni (Hamadhâni): choisies et traduites de l'arabe avec une étude sur le genre* (Paris, 1957).

[5]Shmuel Moreh, "Live Theatre in Medieval Islam," in *Studies in Islamic History and Civilization: in Honour of Professor David Ayalon,* ed. M. Sharon (Jerusalem, 1986), 60–61.

the continuity of performative genres by deploying the term *khayāl* ″in all its shades of meaning for puns and paronomasia″[6]; third, medieval Muslim writers distinguished well among different types of performance arts, which exposes the misconception that their usage of the terms was random because of a general lack of popularity of these genres; and fourth, that there exists a whole series of literary sources indicating the diversity of themes employed by performative artists.

Arguing that *khayāl al-ẓill* is best understood as a performative genre, this article takes the approach that shadow theater can be assessed from the perspective of theatrical semiotics, which defines dramatic art through the specification of four indispensable elements: (1) the presentation of human relationships (2) organized into a story (3) to an audience (4) by conscious and present agents.[7] The presence of all these necessary elements in the shadow play, though not always in an obvious and linear way, points to its integrity as dramatic art and highlights relational modes in the enactment of text and the assignment of meaning.

This proposition lends itself to the question about the ways in which theatrical interaction takes place, especially in the shadow play. Here, the theory of Possible Worlds may give a useful insight. As Darko Suvin explains, ″in theatre, dramaturgic story and spacetime induce, by the interaction between the existents, events, and relationships being ostended and the audience for which they are ostended, a specific Possible World.″[8] In other words, the audience, positioning itself within the existing system of values, interacts with the dramatized state of affairs by inducing a world in which such relations are possible, not actual. The emphasis on the interaction between the stage and the audience is therefore significant not only to make sense of the text but of its visual representations through the prism of a shared cultural repertoire. While differences among individual spectators will generate a certain level of divergence in this interpretive process, the attempt is to highlight the aspects of the performance that could possibly relate to the actual world. To that end, common cultural denominators are required for the recognition, de-semantization, and re-semantization of all theatrical signs. Here a cue can be taken from Umberto Eco′s argument that ″in the *mise-en-scène* an object, first recognized as a real object, is then assumed as a sign in order to refer back to another object (or to a class of objects) whose constitutive stuff is the same as that of the representing object.″[9]

By analogy, the shadow plays of Ibn Dāniyāl also offer an alternative vision of the actual world through the creation of an imaginary state of affairs represented by shadow figures. Of course, the specificity of the shadow theater calls for further elucidation of the nature of theatrical signification. The most recognizable feature of this genre, from which the name itself derives, is the casting of shadows of flat, leather figures (usually *ashkhāṣ* in Arabic) onto a white screen (usually *sitārah, sitr,* or *izārah* in Arabic) by means of a lamp *(fānūs),* candle *(sham‘)* or other source of light. The settings used for this purpose are usually of two kinds: portable and permanent. The portable consists of a box into which the puppeteer (usually *khayālī, muqaddim,* or *muḥarrik* in Arabic) enters and maneuvers the source of light and the figures so as to create a shadow-play effect without being seen himself. In contrast, the permanent (and the more complex) setting involves a large screen as the stage that divides the audience and the puppeteer. A curious deviation from these common methods of casting shadows is a technique described by Ibn Ḥazm (d. 456/1064), involving a rapidly revolving wheel onto which the figures are fastened in the order of appearance in the play.[10] As the wheel, interposed between the source of light and the screen, spins, the figures consecutively cast their shadows and thus carry out the performance. Although the human factor cannot be excluded in the realization of the action, it is plausible that such a show was silent and the role of the puppeteer confined to a mere *taḥrīk* function. This mode of performance, however, seems to have been rather uncommon.

The absence of human beings as visible dramaturgic agents and their replacement with one-dimensional shadows certainly carries some drawbacks that have to be compensated for at another level of theatrical communication. Here, action happens as the puppeteer animates the figures through a range of audio-visual effects. Because the function of the stage is assumed by a white screen onto which the shadows are projected, the screen determines the boundaries of ″a spatio-temporal *elsewhere* represented as though actually present for the audience.″[11] The set of relations on that stage is threefold: the puppeteer, the figures, and the shadows. Their synchronization is not only semiotic but mimetic, since it is the puppeteer′s conscious ″acting,″ along with the figures′ signification, that ultimately achieves an ″elsewhere″ which resembles as well as points to the actual world. The usage of props is considerably reduced, and their presence only vaguely marks the space of action (e.g., indoors/outdoors; sea/land; city/countryside, etc.). A more complex communication, because of such limited usage of props, is therefore achieved through the deployment of additional narrative markers.

Furthermore, as I have argued elsewhere,[12] the verisimilitude of stage signs, or what semioticians refer to as ″iconic identity,″[13] can hardly be achieved in the shadow play, whereas theater proper allows it often in a rather convincing fashion. Similarly, the subtlety of human relations or psychological processes that can evolve on the stage in theater proper are hardly possible in the shadow play where only clumsy and rudimentary representations of human interaction can take place. Furthermore, the figures representing human beings in the shadow theater often assume grotesque representations or stereotypes based on culturally assumed attributes. The Turkish *Karagöz* is an excellent example of ethnic, gender, or social typifications of various Ottoman subjects. The shortcomings of the shadow play are thus manipulated as modes of strengthening, if problematically, the embedded societal relations. It is therefore very difficult, even impossible, to be experimental or innovative in the shadow theater. The innovation cannot come through spontaneity but through careful rearrangement of the long-term and familiar modes of representation. Thus, the deployment of leather figures as dramaturgic agents evokes playful yet often immediate associations between the shadows and the objects they iconically designate. In the majority of shadow plays, then, it is collectivities or types of people that are represented, not individual characters. The collectivity is given a primordial quality singled out and objectified in the shadow figure′s physical trait, the accent, or the costume. The audience is thus placed in servitude to its own beliefs and experiences. This degree of condensation of collective traits into shadow representations takes to an exceptional degree one of the basic principles of theatrical interaction, which Umberto Eco defines as the transposition of stage signs from the rhetorical to the ideological level.[14]

As the one-dimensionality of its bearers of action limits the figures′ mobility, gestural communication is often successfully compensated by the puppeteer′s persuasive rhetorical and acting skills. In his study of the medieval Arabic shadow play, Ibrāhīm Ḥamādah observed that ″the puppeteer has to have good narrative skills; must know the basic principles of verse composition and be able to sing; must feel a special affection towards popular story-telling, riddles, and *zajal*s. All in all, he must know what the audience enjoys and loves.″[15] With the puppeteer′s help, the spectators are reminded that they are already familiar with the possible world of the play, be it through its system of values (as in the *wayang kulit,* or

Indonesian shadow play, for example) or through recognizable contours of animate and inanimate objects. Thus, it is mainly the puppeteer who activates the modes of recognition as he animates the figures, allowing the audience to look at the stage not as an unknown reality but something possibly familiar. For all its limitations and one-dimensionality, then, the shadow theater possesses the capacity of intimating, if not recreating, any number of possible relations. In that process, the puppeteer′s role is pivotal.

While at one level, the theatrical frame is meant to be easily recognized, the two worlds—the actual and the possible—are sharply delineated. The audience is thus pulled into the production of meaning first by virtue of visual recognition of the contents in the theatrical frame and, secondarily, by drawing analogies and commentaries between the theatrical frame and the outside world. A full awareness of the theatrical frame and the action that happens within it ascertains the flow of the stage-audience dialogue, even in the case of the portable type where the stage would come to the audience rather than in the fixed theater setting. In fact, other props and markers that inaugurate and assist the production of the play—the lantern, the rhetorical interventions, or the music—help to confirm that ″the frame of an activity″ is established and the audience′s engagement is initiated. As Erving Goffman argues in his study on framing devices in social life, ″Given their understanding of what it is that is going on, individuals fit their actions to this understanding and ordinarily find that the ongoing world supports this fitting.″[16]

Therefore, despite the seeming drawbacks and a limited scope of performance of action, ″we are,″ as Suvin puts it in reference to theater at large, ″in final analysis always dealing with human relationships.″[17] In fact, the condensation of human qualities in shadow representations often accelerates rather than hampers this process. Eco′s argument that every sign, ″after being a mere presence, a figure of speech, becomes an ideological abstraction,″[18] can be demonstrated quite well in the shadow play where only the contours of the figures are visually functional whereby their completeness calls for instantaneous group identifications, or evocation of ″types.″ In the case of Ibn Dāniyāl′s types, the process of association is most readily conducted on ethnic, professional, and gender lines. The assumed power relations in Mamluk society—about which a word will be said shortly—when transferred onto the white screen demand the bracketing off of those group traits that the

society treats as stereotypical and therefore constant. This gives a more sociological orientation to an argument made already by the Prague School of semiotics, which says that stage semiotization occurs the moment any object is put on the stage, and from then on the audience′s assumption is a signifying function of all that they see therein.[19] The significance of such ″bracketing″ of human form and action within the dramaturgic space, when perceived through the context of the Mamluk audience for which Ibn Dāniyāl wrote, raises an important concern: since we cannot determine the character of the audience for lack of historiographical sources, the best we can do is project the target audience on the basis of the plays and the milieu.

In that sense, while the semiotic definition discloses an internal integrity of the shadow theater, a broader-based, sociocultural perspective demands that the shadow play be treated as a dynamic and rich social phenomenon that creates a sense of collectivity by engaging the audience in decoding the dramaturgic message. As the formal structure of the art demands, any successful shadow performance must evoke a set of associations that are both accessible and shared by the target audience. Unlike our current efforts to address the textual challenges of Ibn Dāniyāl′s plays, the actual audience was faced with a task of quite different proportions, namely, of engaging actively and collectively in the production of the three plays. A cue here can be taken from Ward Keeler who in his study on the *wayang kulit*—the Indonesian shadow play—argues the following:

> To understand a performance as a relationship does not simply permit investigation to challenge commentary with observed reactions, however. It permits them, much more significantly, to integrate the art form with other kinds of relationships that obtain among the members of that culture. It is here that aesthetics, sociology, and ideology meet: in recurrent patterns in the mediation of self and other.[20]

Keeler′s integrative approach suggests that we should not look for a cause-and-effect paradigm in the development of the shadow play as art performance in any given culture; rather, our task is primarily to discern the mechanisms that sustain the relationship between this art form and social life. In a similar vein, the aim here is not to create a causal link between Mamluk culture and the shadow-play tradition but to probe the relations through which Ibn Dāniyāl′s text comes to life. To be sure, the challenge of this task is rather daunting: after all, unlike the Indonesian

[19]For elaborate discussion on the theatrical principles set up by this school see Ladislav Matejka and Irwin R. Titunik, *Semiotics of Art: Prague School Contributions* (Cambridge, MA, 1976).

shadow play, which continues to thrive as performance art—thus remaining accessible to researchers—the Mamluk shadow play is a dead form, surviving only descriptively, through scant historical and literary references, and prescriptively, through the text by Ibn Dāniyāl. Although in the absence of sufficient data about the staging and attending of such performances we can never imagine these events with full confidence, we can nevertheless take up the challenge of ″dramatizing″ the possible modes of interaction and interpretations of the text. Ultimately, then, the intention is to analytically envision the larger picture of societal relations that are animated as the leather figures communicate, through the agency of the puppeteer, the text of Ibn Dāniyāl′s plays to the Arabic-speaking audience of Mamluk Egypt.

Khayāl al-Ẓill in History: the Mamluks and Beyond

A historical question comes to mind: is the medieval Arabic shadow play necessarily tied to any particular aesthetic, ideological, or cultural framework? What is its historical function? What are its themes? Unlike the Chinese shadow play, which has a liturgical place in popular Chinese religion,[21] the Indonesian *wayang kulit,* which enacts the stories of the *Ramayana* and the *Mahabarata,* or the Ottoman *Karagöz,* which focuses on themes from everyday life through slapstick humor, the medieval Arabic shadow play had a more diverse, yet probably less ubiquitous presence in cultural history. On the one hand, it appears quite difficult to trace chronological and textual connections among different styles of shadow-play performances—and we know that there were several—in the medieval Islamic world. On the other hand, the extant historical evidence demonstrates the flexibility of this genre and its ability to adjust to the specificity of its different sociohistorical contexts.

While not indigenous to Islamic cultures, the shadow play found in *Dār al-Islām* a rather receptive ground. That the Fatimids already knew this theater is inadvertently documented by the ophthalmologist Ibn al-Haytham.[22] It was also known in another corner of the Arab world, as is attested by the Andalusian Ibn Ḥazm (d. 456/1064), who also alludes to a type of shadow play that appears to be unknown in the Mashriq. Commonly, the argument is made that the shadow play was a low and popular form of entertainment. For example, Jacob Landau states:

> For generations the ″Shadow-Play″ was nearly the only amusement which even the humblest could enjoy. The Shadow-Theatre, the artistic level of which is not high, could flourish even in a country

> torn by internecine wars and strifes, which delayed its cultural development and impoverished its inhabitants. Hence the popular character of the Shadow Theatre in the Arab countries, especially in Egypt and Syria.[23]

However, the themes of the shadow play, as well as extant historical evidence, point to a different situation. The historian Ibrāhīm Ḥamādah is inclined to believe that, at least in Fatimid times, this theater penetrated into both popular and courtly milieux because it explored themes that appealed to both types of audience.[24] This view can certainly find theoretical justification: as Stuart Hall remarks, ″popular forms become enhanced in cultural value, go up the cultural escalator—and find themselves on the opposite side. Other things cease to have high cultural value, and are appropriated into the popular, becoming transformed in the process.″[25] Indeed, labeling the medieval shadow play as either popular or courtly, rather than both, obscures a whole range of historical evidence that points to the criss-crossings of its social and cultural frameworks. Thus, we know that in Ayyubid Egypt court functionaries had access to the shadow play just as common people did, as is attested by the ambivalence shown towards the shadow play by Saladin and al-Qāḍī al-Fāḍil in 567/1171.[26]

In Egypt under the Mamluks, local historiographers treat the shadow play as one of the common forms of entertainment. Ibn al-Dawādārī speaks of Ibn Dāniyāl as one of his friends from literary circles,[27] while Ibn Taghrībirdī speaks offhandedly of the staging of various shadow plays before and in his lifetime.[28] In his chronicle

[26]Ibn Ḥijjah al-Ḥamawī, *Thamarāt al-Awrāq* (Beirut,1983), 1:47, writes: ″This resembles what al-Qāḍī al-Fāḍil said when the sultan al-Malik al-Nāṣir Ṣalāḥ al-Dīn brought to his castle a performer of *khayāl,* I mean, *khayāl al-ẓill,* for the qadi to be entertained. But al-Fāḍil stood up to leave when the performer began. Al-Nāṣir said to him: ′If it was forbidden, we would not attend it.′ Since he had been in al-Nāṣir′s service even before the latter took over the sultanate, the qadi did not want to create trouble so he sat until the end. Al-Malik al-Nāṣir asked him what he thought of the performance and the qadi answered: ′I thought it was a great lesson. I saw dynasties come and go. And when the curtain went up there was but one mover.′ And so, with the help of his eloquence, he produced something serious out of something so trivial.″

[27]Ibn al-Dawādārī, *Durar al-Tījān wa-Ghurar Tawārīkh al-Zamān,* ed. and trans. Gunhild Graf (Berlin, 1990), 57–58.

[28]Ibn Taghrībirdī, *Ḥawādith al-Zamān,* as quoted by Moreh, *Live Theatre,* 139.

Badā'i' al-Zuhūr, Ibn Iyās writes that in the year 779/1375 Sultan Sha'bān took a shadow-play performer as an entertainer during his pilgrimage to Mecca.[29] As we learn from the composition of the pilgrimage caravans, various functionaries used to accompany the Mamluk sultans on their way to Mecca. Among them were judges, but also entertainers *(ṭubūlkhānah)* and professional poets.[30] Manifestly, nothing in the themes of these shadow performances was offensive to the sultan and the religious elite as they made their way to Mecca.

We also learn that the shadow play at least once fell out of grace with the authorities. In the year 855/1451, Sultan Jaqmaq had all figures collected in a pile and incinerated. Per his decree, no performer was to stage either live or shadow-play performances any longer.[31] Although the extent of the damage to the props and possibly written texts is impossible to estimate, it is evident from later accounts that the shadow play outlived Jaqmaq's assault. As we are informed by Ibn Iyās, its popularity continued even on the courtly level: in the year 904/1489, Sultan al-Malik al-Nāṣir "sent someone to fetch Abū al-Khayr with his props for a shadow play, the group of Arab singers, and the chief buffoon, Burraywah."[32] Even as the Mamluks were about to fall, the shadow play emerges as a form of cultural activism. In 923/1517, as Sultan Selim was taking over Egypt, his victory was marked by a shadow-play performance. According to Ibn Iyās:

> On several evenings [the sultan Selim] attended the shadow performances. When he sat for the entertainment he was told that the performer was going to produce for him the figure of Bāb Zuwaylah and the figure of Ṭūmān Bāy as he was hanged and as the rope was cut twice in this process. This delighted Ibn 'Uthmān. That evening he rewarded the performer with 200 dinars, presented him with a velvet robe embroidered in gold, and said to him: "Travel with us to Istanbul and stay with us to entertain my son with this."[33]

Reflecting on this account, is it possible to argue that the Mamluk shadow play ceased in Egypt in its existing form and became reincarnated as, or at least absorbed into, the Ottoman *Karagöz?* While it is hard to speculate on the historical

journey of the performance art, the above references make it important to acknowledge the shadow play´s integration into the cultural fabric of Mamluk Egypt at both popular and courtly levels. Ibn Dāniyāl´s plays may be the only surviving testimony to the relative popularity of this genre, but its historical association with different spheres of Mamluk public life requires us to acknowledge its accessibility to both illiterate masses and educated elite both before and during Mamluk times. While the contents of Ibn Dāniyāl´s play certainly reveal a rich referential value for reconstructing popular life in Cairo, the awareness of the shadow play by dignitaries and intellectuals—including, somewhat earlier, the great Sufi poet Ibn al-Fāriḍ who mentions in some detail different shadow plays[34]—testifies to its thematic and social diversity.

Many Stories, One Space-Time: Ibn Dāniyāl´s Trilogy *Ṭayf al-Khayāl*

Kitāb Ṭayf al-Khayāl is composed of three plays reconstructing the exuberant popular culture of Mamluk Cairo. In all available manuscripts, the plays appear in the following order: (1) *Ṭayf al-Khayāl;* (2) *'Ajīb wa-Gharīb;* and (3) *Al-Mutayyam wa-al-Dā'ī al-Yutayyim.* The three plays share several common features; one is the spatial and temporal coordinates of the plays´ possible world: Cairo under the rule of Baybars (1260–77). As this space-time coincides with Ibn Dāniyāl´s empirical world, it is the plays´ theatrical frame that transforms the historical here-and-now into a fictional one. Another common feature relates to the plays´ themes: all three revolve around the everyday life of Baybars´ Cairo, depicting people and relations that constitute the social and cultural reality of the Mamluk polity. Finally, the three plays are textually linked through the same prologue and executed by the same presenter *(rayyis),* the puppeteer 'Alī, which suggests that they must have been jointly staged. In that respect, it is important to establish a sense of continuity not just in the inner composition of the plays but in their production as well, since they prove to complement each other in matters of agential relations, dramaturgic style, and the target audience.

At the same time, however, the plays are configured independently in that they are marked by their own beginning and end and focused on unrelated stories and situations. The first play, *Ṭayf al-Khayāl,* bears the name of the entire trilogy. It is the most complex and mature piece with a well-conceived plot, action, and dialogue. It takes its name from a character, a narrator of sorts, Ṭayf al-Khayāl. The character blurs the otherwise clear line between the plays. In fact, he introduces them all by virtue of epitomizing, or embodying, in his shadowy presence, the potency of the genre in framing the reality that surrounds the audience. The

[34]See Ibn al-Fāriḍ´s *Nazm al-Sulūk,* vv. 679–714, translated by Th. Emil Homerin in *'Umar ibn al-Fāriḍ: Sufi Verse, Saintly Life* (New York, 2001), 269–79.

paronomastic associations are unmistakable: on the one hand, the world of *khayāl al-ẓill* is animated as the character of Ṭayf al-Khayāl appears on the scene, showing and telling the framework of the play. On the other, different associations of ″*khayāl*″ as an immaterial and deceptive motif in Arab poetic and philosophical tradition are evoked, teasing the imagination of the audience. Yet, although presented as an elusive shadow image—like all other characters in the play—Ṭayf al-Khayāl tells a story of a very visible world: Baybars′ Cairo. All around the audience, the reality of Baybars′ Cairo is made daunting. The ambiguity and tangibility of everyday life are thus both foregrounded as Ṭayf al-Khayāl, the shadow figure, exclaims: ″Inna hādhihi dawlah qāhirah wa āthāruhā ẓāhirah.″ Make no mistake, in other words: what you see may or may not be what it is, for it is both concrete and elusive, both visible and invisible. The contrasts established by the framing of the palpable and immediate reality of Mamluk Cairo through the white cloth of the shadow theater are not just an optical challenge but a test in epistemology. As it turns out, the actual and the possible are not oppositional in any ideological or political sense. Rather, they are complementary, coexisting through clear visual boundaries yet blurred through the mimetic depictions of potentially real people as shadow figures. This allows the audience to participate in the critique and commentary about the actual through the mediation of the plays′ possible worlds. In that sense, the appearance of Ṭayf al-Khayāl at the beginning of the first play inaugurates the tone of the relationships that Ibn Dāniyāl wishes to establish with his audience: in all three plays, the audience is asked to draw analogies, make comparisons, and create contrasts. In fact, in all three plays this is achieved by positing main characters as pairs that can either evolve into irreconcilable polarities or supplements. I will return to this pairing after a brief story line of each play has been laid out.

In the first play, as the setting is established and connections to the outside world drawn, a humorous story evolves around a friend of Ṭayf al-Khayāl, a *jundī* by the name of Amīr Wiṣāl. It is through his story that the first play develops as an independent and well-rounded unit. Threatened by Baybars′ moral standards that clash deeply with his own, Wiṣāl informs the dismayed Ṭayf al-Khayāl that he has decided to abandon his wanton lifestyle—something the two friends have always shared—and settle down. Umm Rashīd, a go-between, is summoned to find Wiṣāl a bride. After much slapstick humor and comic speeches by the clerk in charge of Wiṣāl′s finances,[35] Tāj Bābūj, and a court poet Ṣurrah Baʿr, a bride is brought in with her entourage, including a boy—her grandson. Wiṣāl lifts the veil and discovers the ugliest woman staring at him, a nemesis contrived by Umm

---

[35]The mention of poor finances, according to Muṣṭafá Badawī, must have been the moment in the performance that signaled to the audience to reward the performers with money. See his ″Medieval Arabic Drama: Ibn Dāniyāl,″ *Journal of Arabic Literature* 13 (1982): 97.

Rashīd for her long grudge against male behavior of which Wiṣāl is the worst example. Wiṣāl is furious and, appealing to his military power and authority, demands the punishment of Umm Rashīd and her husband ʿAflaq. Only the aging and pitiful ʿAflaq appears, oblivious to the reality around him and suffused in the memories of his youth and sexual vitality. He remarks, rather casually, that Umm Rashīd had just passed away at the inept hands of the local doctor Yaqṭīnūs. Yaqṭīnūs is summoned to confirm the news, which he does by adding a sexually suggestive remark that Umm Rashīd has just been buried with full honors, ″in the drain of the bath, behind the exit and near the entrance.″ Umm Rashīd′s demise inspires Wiṣāl and Ṭayf al-Khayāl to repent and to make the pilgrimage to Mecca.

In contrast, the second play, *ʿAjīb wa-Gharīb,* has no discernible story line. Rather, it is structured as a funfair comprising an episodic succession of different *personae* representing various trades and professions in Mamluk Egypt. Within such a scheme of representation, the audience acts as a crowd gathered to observe the skillful demonstrations of the fair exhibitors.

The title of the play derives from the names of two dramaturgic personalities—one Gharīb and the other one ʿAjīb—who stand for two disparate societal groups and thus define the play′s social boundaries. A brief authorial note introduces the play as ″giving an account of the ways of quaint and fraudulent people . . . who use the language of Banū Sāsān.″[36] A character appears on the stage, identifying himself as Gharīb. His name is a pun, foregrounding thus not only his belonging to the underground classes, but also the stereotypical visions of his kinfolk.[37] In many respects, Gharīb is the mainstay of the actual structure of the play, central to any analysis.

After a brief self-introduction, Gharīb withdraws and his partner, the preacher ʿAjīb al-Dīn, appears. Opening his sermon with the *basmalah,* he compliments the show by praising God for creating humor, and choosing the Prophet ″who knew how to joke yet spoke only the truth.″[38] Though ʿAjīb stands as the ideological antipode of Gharīb, the two are not in an antagonistic but complementary relationship. In fact, their juxtaposition reconciles social polarities in a way that makes it possible for the audience to see the necessity for social and cultural diversity that is so vibrantly captured in the play.

Following the introduction, the parade of figures starts as a parade of different professions. The name of each *persona* is a salient pun on her/his trade, referring thus to a whole system of values culturally associated with any given profession.

---

[36]MS[1], fol. 86a; MS[2], fol. 30; MS[3], fol. 67.

[37]For a thorough discussion on the Banū Sāsān, see Clifford Edmund Bosworth, *The Medieval Islamic Underworld* (Leiden, 1976).

[38]MS[1], fol. 95; MS[2], fol. 32a; MS[3], fol. 74.

From the dramaturgic perspective, we are here clearly dealing not with characters, but types. We are thus introduced to a snake charmer, a quack doctor, an herbalist, a surgeon, an artist, a magician, an astrologer, a fortuneteller, an animal tamer, and many other entertainers and professionals who disclose secrets of their skill and trade and tell us about their successes and failures. The atmosphere is fully carnivalesque, bringing to the fore what Mikhail Bakhtin describes as ″an ancient connection between the forms of medicine and folk art which explains the combination in one person of actor and druggist, [whereby] medicine and theater are displayed side by side in the marketplace.″[39] Given the lack of narrative progression, the ending of the play is neither a resolution nor otherwise. The play simply ceases as the last exhibitor withdraws and Gharīb reappears, announcing in verses composed in *mutaqārib* that ″Gharīb is strange and ʻAjīb is odd.″[40]

Finally, the third play of the trilogy, *″Al-Mutayyam wa-al-Dāʻī al-Yutayyim,″* like the first one, has an organized story-line. The third play, in fact, is a burlesque portrayal of amorous conventions in Arabic literary discourse, yet with overwhelming sociological value related to popular practices in Mamluk Egypt. In the words of Ibn Dāniyāl himself: ″This is a play entitled ′The Enthralled One and the Enthralling Wretch.′ It speaks partly of the condition of lovers, partly of dalliance that is a certain kind of bewitchment, partly of playing games, and partly of wondrous and odd buffoonery that is not disgraceful.″[41]

The play begins with the appearance of ″a *shakhṣ* visibly distressed by ardent love,″ whose name—Mutayyam—betrays his pathos. Similar to the names of many other characters in Ibn Dāniyāl′s plays, the name Mutayyam is associated with a whole set of values that both belong to and transcend the immediate context. As in earlier plays where binaries are created as a framing device, Mutayyam′s role is related to Yutayyim, who, as his name implies, is the reason of Mutayyam′s distress.

Mutayyam opens his speech with a poem lamenting the condition of *ahl al-gharām*—love-stricken people—which mocks the amatory themes in classical Arabic poetry. He then turns to the audience and, having introduced himself, reveals the sorrowful story of his unrequited love towards a beautiful young man—Yutayyim—whom he had seen in a public bath in all his seductive nakedness.

Mutayyam then composes a *muwashshaḥah* exalting the young man′s beautiful features that supersede any woman′s and cause all men to fall in love with him.

[40]MS[1], fol. 138; MS[3], fol. 109. Here, the word *gharīb* is repeated 4 times, while in MS[2], fol. 47a, the first two are *gharīb* and the last two, *ʻajīb*.

[41]MS[1], fol. 138a; MS[2], fol. 48; MS[3], fol. 110.

As he completes his eulogy, a deformed person comes in, introducing himself as Mutayyam's former lover. He is devastated that Mutayyam has dumped him for a younger and taller man, having thus "replaced with jasmine the thorns of tragacanth." From their conversation, we learn that Mutayyam had spotted Yutayyim in a public bath, where he managed to steal a kiss. He also confesses that he is now busy trying to seduce Yutayyim through the latter's servant Bayram, who seems to exercise a great control over his master. Indeed, Bayram appears, explaining that he has taken matters into his own hands. A typical story of unrequited love and quest for the beloved unfolds, with Bayram assuming the role of the go-between, in a way similar to Umm Rashīd in the first play. Here too, "little people" are given prominence as agents of action and change.

Bayram organizes a fight between Yutayyim and Mutayyam's pet animals. Three matches follow, arbitrated by one and the same judge, Zayhūn, and attended by many. The build-up of tension carries strong comic and erotic effects: as the tension increases, so does the size of the animals in the fight: first roosters, then rams, and, finally, bulls. Mutayyam's ascension to victory is toned down by a desire to appease his lover whose animals do not perform well. The game is about class as much as it is about erotic gain.

Each match is preceded by a formulaic speech by the judge Zayhūn, starting with a pious eulogy and ending with an explanation of the importance of such noble sports.[42] Finally, Yutayyim's bull wins, which temporarily throws Mutayyam into despair but gives him a chance to sacrifice the bull and throw a feast. As the feast goes on, unknown people pour in, introducing themselves to the host Mutayyam through peculiar stories of their lives, satisfying their hunger—both physiological and erotic—and eventually falling asleep. As in the second play, the succession of people is the succession of particular trends, and in this case, these trends relate to clandestine erotic interests and sexual practices. At the end of the play, amidst the pile of drunken and unconscious bodies, Mutayyam is visited by another, the Angel of Death. In a tragicomic confrontation with his departure from this world, Mutayyam rushes to repent, uttering all necessary formulaic expressions of piety and submission to God and the Prophet.

INDUCING A POSSIBLE WORLD: RECOGNITION AND CRITIQUE

As indicated by the contents of the plays, it is the heterogeneity of the Mamluk milieu that comes to life in Ibn Dāniyāl's work. Individual plays, then, are not cast as singular events that stand apart from the real world. Rather, teasing out the audience's common perception and attitudes, Ibn Dāniyāl expropriates common

---

[42]Curious is his remark before their beginnings that the fights are carried out "as the custom of the play requires" *(ʻalá ʻādat al-khayāl).*

knowledge to explore some of the possible relations in the surrounding world. In that sense, Ibn Dāniyāl appeals to issues and relations that already belong to the audience but assigns to them unconventional values and humorous overtones.

Among the most prominent and recurrent issues in all three plays of *Ṭayf al-Khayāl,* for example, are the ambiguous relationship between the military and religious elite, the ethnic composition of Mamluk Cairo, and the criss-crossings between high and low cultures. As suggested earlier, these issues are problematized rather humorously through repetitive pairings of characters that belong to different walks of life. Political rivalries are presented as correlative rivalries. In real life, the Arabs and the Turkic-speaking Mamluks kept a distance and each nurtured a sense of superiority over the other. The local ulama looked down on Mamluks as soldiers with no skill in matters of culture and often blamed them for the decline of Arabic literature and arts.[43] In turn, Mamluks resented the ulama's sense of superiority for it seemed unrealistic in the face of their lack of political power. The Mamluks thus nurtured their own sense of cultural authenticity by insisting on using Turkish in oral communication and often requiring it from all state employees.[44] In the early period of their rule in particular, the local religious elite was biased against the pagan origins of the Mamluks, which almost automatically dismissed them as unsuitable for the traditional Arabo-Islamic cultural circles: "'*Ulamā*' continued to write about '*ulamā*' and for '*ulamā*' paying little or no attention in their works to all those who stood outside their own circles."[45] Despite this attitude of entrenched cultural stereotyping, the ties of the religious elite with the Mamluk aristocracy increased. Gradually, a partial integration of the ulama into the political apparatus occurred through the appointments of the chief qadi, army judges, market inspectors, official preachers, administrators of schools and hospitals, and so on.[46] In the domain of culture, however, the Mamluks' interest and contributions were perceived as motivated purely by political gain.[47]

[46]Ira Lapidus, *Muslim Cities in the Later Middle Ages* (Cambridge, 1984), 130–41.

[47]Ibid., 191; Haarmann, "Arabic in Speech, Turkish in Lineage," 83. This prejudice, however, seems to have been a two-way street. Ibn al-Dawādārī, for example, who cultivated both Turkish and Islamic sentiments, contemptuously speaks about how superstitious the Arabs were. See Ulrich Haarmann, "Turkish Legends in the Popular Historiography of Medieval Egypt," in *Proceedings of the VIth Congress of Arabic and Islamic Studies,* ed. Frithiof Rundgren (Leiden, 1975), 105. Also, the Mamluks were often criticized for not caring about the names of the Prophet

The ongoing tension between the Mamluk military aristocracy and the Arab religious notables was complicated by the presence of other minorities that were disadvantaged by such precarious internal relations, so it is generally argued that this period witnessed a significant decrease in the Coptic population.[48] While on the one hand the Mamluks established important political and economic relations with a number of non-Muslim countries extending from the Kingdoms of Aragon and Castile in the west to South India in the east, they carefully monitored potential ties between their own non-Muslim communities and external ones.[49] However, both Jews and Christians frequently occupied important positions in the Mamluk bureaucratic apparatus, mainly as scribes and tax collectors. In spite of that practice, the *dhimmī*s were obliged to observe certain rules of conduct that clearly defined them as second-class citizens. Thus, they had to bow their heads when passing Muslims, were not allowed to crowd Muslims in public places, were allowed to use their temples for quiet religious services only, had to display emblems on their turbans in a clear manner, and had to preserve the color of their garments by regular dyeing.[50] We also know of occasional public outbursts: during the reign of al-Ashraf al-Khalīl, for example, Muslim dissatisfaction with Coptic influence on public affairs resulted in a series of assaults on Coptic houses and churches. When the sultan eventually yielded to public demand and ordered the hanging of a number of Christian scribes, he was cautioned by an amir that these scribes were indispensable, as they ran all financial affairs.[51]

This strained yet functional state of affairs was contingent on the sense of political stability, though many rules and habits were often bent in the name of that stability. Principles often gave in under the pressures of practical concerns. For example, common folk negotiated such tensions with much more fluidity and openness to compromise. As Haarmann points out: ″The people in the street did not share this feeling of suffocation and threat of selfishness and dishonesty. They declared, ′Rather the injustice (or tyranny) of the Turks than the righteousness (or

self-righteousness) of the Arabs *(ẓulm al-turk wa-lā ʻadl al-ʻarab).*″[52] For Ibn Dāniyāl, Arab but not Egyptian born, black-and-white choices and unbending allegiances were never a serious option, and his biographical data reveal an unfettered freedom of action and movement through different circles.[53] Accordingly, in the possible worlds of his plays, the social and cultural boundaries are not fixed but porous, despite the squad of distinct and seemingly incompatible shadow figures that perpetually mock and trick each other, undermine each other′s authority, and explicitly care only for their own self-interest. The representation of their mutual dissociation is tackled in a dramaturgic process which in carnivalesque festivities correspond to travesty, defined by Michael Bristol, in a different context, as ″code switching″ and ″grotesque exaggerations″ whereby ″identity is made questionable by mixing attributes.″[54] For Ibn Dāniyāl, visual stereotypes remain as the figures cast their shadows with recognizable traits—attire, physical features, demeanor, and so on. The world of seemingly polar oppositions is turned into a world of complementary attributes—the mutable is at once immutable, the sacred is profane, the moral is immoral. Code switching happens in the matters of language as well, as the characters move randomly and with ease from prose to poetry, from eschatology to scatology, from grammatical sophistication to colloquial simplification, even gibberish. The overall effect becomes intentionally humorous, and it is through laughter that the audience participates in a critique of its own perceptions and representations of group identities.

To enhance this process, dramaturgic agents are constructed around paronomasia. It has been pointed out that in the second play almost all agential names appear as metaphoric constructs built directly around the types of represented trades: Ḥunaysh al-Ḥuwāh (Little Snake Charmer), Maymūn al-Qarrād (Monkey the Ape Trainer), Hilāl al-Munajjim (Astrologer′s Crescent), and so on. Similarly, when removed from the dramatic frame and placed back into the frame of actual historic circumstances, most of the names of other of Ibn Dāniyāl′s *personae* reveal a number of cultural allusions: in the first play, these are, for example, the names of Amīr Wiṣāl (The Prince of Sexual Union), Ṭayf al-Khayāl (the Spirit of Imagination—the leitmotif of early Arabic poetry), Ḍabbah bint Miftāḥ (Latch Daughter of Key), Tāj Bābūj (Crown of Slippers), Ṣurrah Baʻr (Pile of Dung, also an allusion to the poet Sarrah Ḍurrah). In the third play, the names of the

[54]Michael Bristol, *Carnival and Theater: Plebeian Culture and the Structure of Authority in Renaissance England* (New York, 1985), 65.

protagonists—Mutayyam and al-Dāʻī Yutayyim—stand in opposition vis-à-vis each other. The other appearing *personae,* such as Abū Sahl (Father of the Easy One), Baddāl (Substitute), Dāʼūd al-Qabbāḍ (Dāʼūd the Gripper), and Jallād ʻUmayrah (lit., the one who skins his member, i.e., Masturbator), are all associated with specific sexual practices and lifestyles.

Groupings of characters are also done on ethno-professional lines: Amīr Wiṣāl is a Mamluk prince; Nātū is a Sudanese slave boy; al-Tāj Bābūj is a Coptic secretary; Ṣurrah Baʻr is an Arab court poet; Yaqṭīnūs is a Greek doctor; Ṣāniʻah is a Gypsy tattooing woman; Bayram is a Turkish servant. There are also vocational groupings, such as the trade exhibitors in the second play, ʻAjīb the preacher, or Umm Rashīd as a go-between; the lines of social lifestyle, such as Gharīb, ʻAjīb, ʻAflaq, and different *personae* appearing as sybaritic guests at Mutayyam′s party; or gender lines, such as Umm Rashīd as a cunning marriage broker, Ḍabbah bint Miftāḥ as a victim of imbalance in sexual politics, ʻAflaq as a bamboozled husband, Yutayyim as an accessible aesthetic ideal. These groupings are not rigidly separated and their complicated interaction reinforces the overall effect of such puns. Given that all three plays explicitly share the historical frame with Ibn Dāniyāl′s own life, it appears worthwhile to reflect on Ibn Dāniyāl′s articulation of that frame through such paronomastic appellation.

As proposed above, the main carriers of action in all three plays come in pairs, complementing each other in a dialectic interplay.[55] Although the function of other agents should by no means be underestimated, it seems that the skeletal function of the leading pair supports Ibn Dāniyāl′s interpretive axis. These pairs do not necessarily function in the protagonist/antagonist constructs, but they do tend to articulate their concerns through conceptually different frames, allowing the viewers to observe polarities through the grey area of mutual dependence rather than as fixed and isolated entities. In the first play, the pair is Amīr Wiṣāl and Umm Rashīd; in the second, as the title itself indicates, Gharīb and ʻAjīb; and in the third, again as the title suggests, Mutayyam and Yutayyim. Let us consider them all on their own terms.

Amīr Wiṣāl and Umm Rashīd reflect the most visible polarities: Wiṣāl is a Mamluk soldier, that is, a man of the sword. He wears a *sharbūsh,* the headgear reflecting his status with Mamluk chivalry; here he displays an impressive knowledge of different breeds of horses.[56] He carries a mace *(dabbūs)* and wears a bristling mustache. The physical features of a Mamluk soldier are condensed on a leather

---

[55]This is also the case with the Ottoman *gölge oyunu,* which is built around the characters of Karagöz and Hacivat.

[56]MS[1], fols. 48a–51; MS[2], fols. 18–21; MS[3], fols. 38–41.

figure, bringing Wiṣāl to the forefront of social stereotyping. As a personality, he embodies power and has no pardon for anything or anyone:

> I am a boxer and a slanderer, a thug and a caviler, a rebuker and a sneaker, a quarreler and a menacer, a believer and a murderer. I've been rubbed and stroked. I am a pimp and a shoveler.[57] I dress well and socialize, I turn into a gentleman, I juggle, I dye my hair, I limp, I dance, I report, and I tell stories. So don't disregard my value, now that I've disclosed my secrets to you.[58]

His mainstream Mamluk upbringing is reflected in the social circles of his childhood: he has grown up "among Dākūsh and Diqlāsh, and Qāmūz and Zamlaksh."[59] The juxtaposition of the opposites—power on the one hand and its total mismanagement on the other—creates a fierce yet comic character in Wiṣāl. His secretary ridicules his courtly and financial affairs.[60] The courtly poet praises Wiṣāl for turning "waste land into an earthly paradise governed by justice."[61] Wiṣāl takes his power for granted, expecting it to help him reach a quick marriage settlement in order to avoid political repercussions and demonstrate his common sense. Taking a shortcut to morality is his privilege as a fearsome *jundī.* Although mocked by his servants and inferiors, Wiṣāl is never challenged by them: after all, they are part of the same system, and they do not step out of their designated roles. The challenge can only come from outside that sociological space, and who better to offer it than Umm Rashīd?

Umm Rashīd belongs to a world that Wiṣāl tries to infiltrate without any respect for its internal workings. The trade that Umm Rashīd personifies —that of go-betweens—is an anathema to Wiṣāl's lifestyle. Her description in the play is in fact a subtle description of that underground world that functions through strict codes of behavior that are inaccessible to and spurned by Wiṣāl:

> Summon Umm Rashīd, the marriage agent, even though she is one who goes out by night into the bush. But she knows every honorable woman and every adulteress and every beauty in Miṣr and al-Qāhirah. For she lets them go out from the baths, disguised in servant's clothes, and guarantees the prostitutes for whom the police are looking in secret places, providing them with clothes and jewelry

> without fee. . . . She also knows how to deal in a friendly way with the hearts of lovers, and she sells the enjoyment of love only on the condition of trial. She does not break her promise, she does not haggle over a price. She does not visit a drinking bout in order to appropriate what drips down from the candles, nor does she ransack the clothes of the guests for money. And she does not take the fragrant flowers around the bottles, pretending it is to decorate the clothes of the sinning women. And she does not filch the pieces of meat from the plates, nor does she pour together what has cleared from the dregs of the wine. She does not exchange old slippers for new ones, and she does not criticize the clothes of customers, as a housewife would do. Mostly she goes round to the houses of the women of rank and sells balls of material, raw and unbleached, and all kinds of spices and incense. She sells on credit and makes appointments for Thursdays and Mondays. And she does not haggle over price. And she keeps her appointments even if it is the Night of Fate *(laylat al-qadr)*. So it is, and her pocket is never empty of chewing-gum and mirrors and rouge and powder and Maghribine nutmeg and powder for coloring the eyebrows and a lime preparation for the armpits and perfumed wool, and skin cream and ″Beauty of Joseph″ and pomade and Barmakide scent and hair-dyes and violet scent. The devil kisses the ground before her daily, and he alone wakes from her slumbers.[62]

Gradually, we learn that the two have a long history: Umm Rashīd remembers little Wiṣāl as a stubborn and dirty boy, and bitterly adds that he managed to get seduced even by her own husband. In fact, Wiṣāl seems to be a true menace, intruding into her affairs for a long time. She takes revenge by offering him in marriage a very ugly and aged bride. Outraged, he tries to gain the upper hand by responding with force—the only weapon he truly knows. However, she dies before he sets his *dabbūs* on her and her husband. Her death, ironically, is not her punishment but his. Her trade is reborn—and so is she—as her mantle is passed on to her disciple just before Umm Rashīd passes away. Finally, her death is a cause for repentance—Amīr Wiṣāl submits his powers to God by virtue of having lost his military vanity to Umm Rashīd. But neither Umm Rashīd′s triumph and

---

[62]Based on the translation by Paul Kahle in ″The Arabic Shadow Play in Egypt,″ *Journal of the Royal Asiatic Society,* n.s., 4 (1940): 32–33. For an interesting study on the character of Umm Rashīd, see Maria Kotzamanidou, ″The Spanish and Arabic Characterization of the Go-Between in the Light of Popular Performance,″ *Hispanic Review* 48 (1980): 91–109.

death nor Wiṣāl′s repentance belong to them as individuals. On the contrary, both roles are developed as part of the same death and rebirth cycle through which two collective bodies are reconciled after mutual endangerment: the underworld that Umm Rashīd jealously guards, and the political authority of Amīr Wiṣāl.

A similar binary structure exists in the second play as well, here even more explicitly: Gharīb, who personifies the underworld, and ʻAjīb al-Dīn, who represents the religious discourse. The common people′s allegiances stay in between, revolving around both layers, much in the same way as the common people congregate around the stalls of exhibitors throughout the play. Though linear, the arrangement of the play is such that its beginning and end eventually join, enclosing the folk spirit in a jovial, if tension-filled, way.

Gharīb′s name reveals his social alienation. Literally meaning ″strange, quaint, foreign, etc.,″ this name draws attention to the undefined social status of its bearer and his kinfolk. Gharīb is one of the Banū Sāsān, which is a collective reference to the various groups of people who made up the medieval Islamic underworld:

> The underworld classes of which we have information include the fully criminal ones, like skilful thieves and burglars, footpads and brigands, and also those in the no-man′s land between criminality and conventional behaviour, like entertainers and mountebanks of diverse types, beggars of differing degrees of ingenuity, quack doctors, dentists and herbalists, and so forth.[63]

Gharīb′s alienation is rooted in a somewhat accommodating yet hostile political milieu which created out of the Banū Sāsān perpetual wanderers who claim all lands, disregarding the political and social boundaries: ″The whole world is ours, and whatever is in it, the lands of Islam and unbelief alike.″[64] Gharīb reveals the secrets of a conniving and trouble-making lifestyle on his numerous journeys through Egypt, Syria, and Iraq. We learn what it means to be one of the Banū Sāsān: sleeping outdoors by the fire with one′s head laid on the *kashkūl* instead of a pillow; visiting prostitutes; indulging in various sexual practices; making a living by faking knowledge of religion, philosophy, chemistry, medicine, and herbalism; training animals for fights; and undertaking many other cryptic practices ″during numerous travels around the revolving heavens so as to find a homeland and fulfill wishes.″[65] Ideologically, as Gharīb himself confesses, his attitude has been prompted by loss of faith in people:

---

[63]Bosworth, *The Medieval Islamic Underworld,* ix.

[64]Abū Dulāf, as quoted in ibid.

[65]MS[1], fol. 90; MS[2], fol. 31; MS[3], fols. 69–70.

> When there was nobody left whose generosity could be desired and no one whose gain would be hoped for, we started to trick you having no need for you, we surrendered ourselves to leisure and idleness, became unique in manipulation and dispersed in many bands. No danger and no institution could divert us. . . .[66]

Gharīb thus openly declares war on political and religious institutions and seeks refuge in trickery, admitting that his success in effect depends on these institutions. The Banū Sāsān are thus part of the cycle in which political power and moral values meet in the institutions that both impose rules and accentuate social problems. The articulation of this standpoint comes not from Gharīb but as a roundabout communique in the speech of his partner, ʻAjīb al-Dīn the preacher, and is then exemplified through episodic models. Gharīb thus posits himself as both the vehicle and the tenor of the narrative.

In contrast to Gharīb, the preacher ʻAjīb al-Dīn—the wonder of religion—represents the very same institutions Gharīb rejects. Though a popular preacher, ʻAjīb is a sociopolitical antipode to Gharīb. Yet, like Gharīb who admits the necessity for religious institutions for the Banū Sāsān to exist, ʻAjīb too reveals tolerance for the values he tries to uproot through his preaching. As a bearer of official religious values, he explores venues for the accommodation of the Banū Sāsān's underworld without endangering the dignity of the authorities in whose service he is employed. A theological justification of the Banū Sāsān's practices follows, and so does the need to bring closer together the official and unofficial systems of values:

> May God have mercy on the one who seeks to heal his sorrows with the beauty of the character that embellishes him, and transforms his grief with something that amuses him. Wherever there is amusement, melancholy is driven away. . . . Gaiety is beautiful if it is not excessive, so give yourselves to hope and be engaged in this matter. You are the troops of strangers and others among the Banū Sāsān. Be kind in asking and beg for generosity. Take advantage of union because separation will happen, and get united with humankind before what must happen happens. . . . Travel through the countryside and con people, for strangers evoke pity, and man moves about while his livelihood is determined for him. You should know, may God be with you, that small coins attract gold coins. . . . Pretend to

---

[66]MS[1], fols. 90a–91; MS[2], fols. 31–31a; MS[3], fol. 71.

> be blind while seeing, and deaf while hearing. Pretend to be lame because a lame person wins favors. Wear your worn-out leather gowns and drink some fig juice so that your faces may turn yellow and your stomachs inflate. Find your rows in the mosques and harass the dumb by begging in the streets. Let rags be your most precious garment and the collection of goods your greatest worry. Go around with both of them and feel safe from bankruptcy and debt. The health of the eye is in the human being, and the health of the human being is in the eye.[67]

A full awareness of their trickery yet a surprising justification, even outright encouragement, of it makes ʿAjīb al-Dīn an odd preacher—yet nevertheless a preacher. In many respects, the complementary functions of the two members of society are projected in their being *ʿajīb* and *gharīb*. In blending the metaphoric themes of societal outcasts and religious guardians, the happy ending is imminent, allowing all exhibitors to rally around the mutual approval of the two seeming antagonists.

In the third set of binary relations, the thematic focus revolves around the concept of profane love. Al-Mutayyam, the enthralled one, and his counterpart Yutayyim, the enthralling one, personify the common poetic amatory trends and translate them into sociological concerns of Baybars′ Egypt. The play evolves against two discourses: one poetic and the other religious. Each of Ibn Dāniyāl′s heroes carefully reflects both of these trends. Mutayyam, the enthralled party, introduces himself through typical *ʿudhrī* imagery, occasionally infusing it with pre-Islamic *ghazal* style:

> O people of passion, gather, beseech, and implore.
> Knock at the door for response with prayers, and listen,
> Die and live in longing, burst open, get torn apart,
> Consider Mutayyam′s story about his captor, or discard it.
> Lover is the one whose sky of tears never dries up.
> Nothing is left of him but bones clattering from affliction.
> From a gorge under his eyelids tears gush forth.
> O you who blame me, there is no place in my heart for blame.
> I have no consolation, and no expectation to unite with my love.
> Mutayyam is the one who, even if he appeases his thirst, will not sleep peacefully.[68]

---

[67]MS[1], fols. 95a–97; MS[2], fols. 32a–33a; MS[3], fols. 74–76.
[68]MS[1], fols. 110–111; MS[2], fol. 48; MS[3], fols. 139–139a.

The progression of the play, however, brings about change. As Mutayyam grows impatient with his ″poetic″ self, he plots a breakaway from it. The emotional surrender to unrequited passion that makes him feel as if he were ″slain with no knife″ gradually gravitates towards a carefully choreographed sensual fulfillment. The movement from *agape* to *eros* is comically developed through an erotic dance with Yutayyim.

Yutayyim, the object of Mutayyam′s passion, stands at the opposite pole. His formidable physical beauty, exposed in all its distinctiveness during ″the bathroom scene,″ evokes an emotional reaction, bringing Mutayyam into existence. In other words, Mutayyam is a consequence. If there were no Yutayyim, Mutayyam would not be. This causal relationship becomes significantly polarized as their meanings begin to expand. Mutayyam appears as a metaphor for excessive sentimentality. He is governed by desire. Yutayyim, on the other hand, signifies cool reason. His presence in the first part of the play is more distant than palpable. We know of him indirectly, after Mutayyam′s appearance on the stage. Gradually, the knowledge of him, though still second-hand (mainly via Mutayyam but also via Bayram), becomes vaguely personalized, as his looks, his style, his tastes and his strengths and weaknesses are told. As the knowledge of Yutayyim becomes more particular, Mutayyam′s passion grows more carnal. It solicits recognition and reciprocation, breaking away from the debilitating causal dependence on Yutayyim. Mutayyam takes his life into his own hands, develops independence, rejects submission that keeps him apart and unable to act. This shift in the relation between the two men is masterfully achieved in a poetic dialogue which, on the one hand, questions the polarity between love and passion, ideals and reality, sacred and profane, and reason and emotion.

With each party articulating quite opposite views of love, we are left to think that they are not engaged in dialogue but unrelated sermons that reflect abstract concepts rather than thoughts, principles rather than feelings. The burlesque reflection on poetic amatory trends is replied to in a detailed yet dispassionate pontification on sexual mores. The final stanza, however, brings comic relief. The whole imagery is uncrowned through a literal and metaphoric demystification when Mutayyam, in a suggestive description, gives an account of the pathetic condition of his pet cock. In a grotesque inversion, formulaic speech and concepts give in to the object of shared passion: cock fights. On the one hand, this inversion spirals the abstraction of love into its carnal fulfillment; on the other, it returns emotions to human kind in all its manifestations and practices. When, upon the celebration of the union between the two protagonists a feast is thrown and many lecherous guests welcomed, a new space is opened to integrate many different understandings and practices of love. As in the previous plays, the meaningfulness

of the play lies primarily in allowing the different relations to be established, rather than in the verity of the relations themselves.

Conclusion

Because of a lack of relevant historical evidence, questions have been raised as to whether the trilogy was in fact ever staged, or whether indeed it was intended for performance.[69] It seems, however, that nothing in the dramaturgic organization of the trilogy Ṭayf al-Khayāl suggests the contrary, namely, that the plays were only intended to be read as texts. Besides, as Ibn Dāniyāl′s own statement makes clear, the plays′ value was to be assessed first and foremost in relation to their performance. Their eclectic style and linguistic vitality, as well as some pointers to the interaction between the stage and audience, all suggest that the plays′ meaning was to evolve *in the course* of their performance. Part of that process, as this article has tried to argue, has to do with the fact that Ibn Dāniyāl′s protagonists embody some of the common stereotypes about different collectives—ethnic, religious, professional—that are readily recognized by the audience. As such, they are often paronomastically defined, emphasizing collective social expectations rather than individualistic traits. While their representation as leather figures betrays both the shortcomings and advantages of the genre, Ibn Dāniyāl skillfully singles out the physical traits associated with certain types of people, then shuffles them through grotesque representations of cultural and social interactions at large. The goal of such dramaturgic strategy is a narrative and visual immediacy that allows different relations and situations to be realized through the audience′s interactive response: laughter, tipping, and/or cheering in approval or disapproval. This leads to the collectivization of the aesthetic experience of the plays. The assignment of meaning is unmediated in that it is constructed as a stage-audience dialogue, rather than as an individual endeavor.[70] Individual reflection is relevant insofar as the shadow performances strike a chord regarding one′s own attitudes toward the relations in the actual world.

To that end, it is important to acknowledge that the depth of any representation resides not in its inner but its outer value. Psychological dramas are not Ibn Dāniyāl′s cup of tea: on the contrary, all experiences are exteriorized and all situations presented as belonging to a collective domain. This is a typical carnivalesque mode, which, as Bakhtin suggests, centers around the body and its

[69]See Everett K. Rowson, ″Two Homoerotic Narratives from Mamlūk Literature: al-Ṣafadī′s Lawāt al-Shākī and Ibn Dāniyāl′s al-Mutayyam,″ in *Homoeroticism in Classical Arabic Literature,* ed. J. W. Wright and Everett K. Rowson (New York, 1997), 173–74.

[70]In a similar vein, Keeler argues that meaning in the *wayang kulit* performances need not develop out of or after the event, because a performance of *wayang* need not be mulled over in exegetical rumination to yield up its significance, *Javanese Shadow Plays, Javanese Selves,* 266.

liberation ″from the oppression of such gloomy categories as ′eternal,′ ′immovable,′ ′absolute,′ ′unchangeable,′″ emphasizing instead ″the gay and free laughing aspect of the world, with its unfinished and open character, with the joy of change and renewal.″[71] Laughter, as Bakhtin further explains, creates an atmosphere in which nothing is taboo or static but everything is fluid and changeable. Laughter ″purifies from dogmatism, from the intolerant and the petrified; it liberates from fanaticism and pedantry, from fear and intimidation, from didacticism, naivete and illusion, from the single meaning, the single level, from sentimentality. . . . It restores this ambivalent wholeness.″[72]

The body in the shadow plays, of course, is reduced to shadow silhouettes that reflect a whole array of common attitudes, and laughter is embedded in the very process of audio-visual associations. As people and places are represented by one-dimensional leather figures, the puppeteer translates the written text into a live performance with incomplete clues, forcing the audience to make its own associations between the projected shadows and real life. Since all three plays by Ibn Dāniyāl are set in Baybars′ Cairo, the challenge of relating the shadow images to actual people and events has satirical implications. Within such a scheme of relations, the aesthetic and interpretive contribution of the plays′ possible worlds is an attempt to ″play with″ the contradictions and polarities generated by political culture yet without attempting to offer either explanations or resolutions. The line between individual authority and collective participation is again erased, both in form and in content. Ibn Dāniyāl thus subversively displaces the authorial ″I″ in the production of meaning in favor of a more interactive and clamorous link between the stage and the audience.

The Devil´s Advocate: Ibn Dāniyāl´s Art of Parody in His *Qaṣīdah* No. 71

Mujūn, or ″licentious verse,″ as a genre of Arabic poetry has always gotten a bad rap and thus tended to be overlooked. Not only have the *mujūn* verses been ″cleaned up″ from major anthologies, but scholars seem to have shied away as well. This self-imposed ban on the part of the literati elite poses serious obstacles when it comes to dealing with poets like Ibn Dāniyāl (1248–1311), for whom ″getting dirty″ is an integral, and inseparable, part of their artistry as a whole. As a matter of fact, Ibn Dāniyāl, the flamboyant Cairene eye doctor-turned-entertainer, made a name for himself as a larger-than-life ″libertine poet,″ famous, or infamous, for his profuse output of *mujūn* verses. Paradoxically, it is perhaps for the same reason that he should remain an enigma of sorts; while anecdotal tales about this Marquis de Sade of Mamluk Cairo abound, his works have remained virtually unknown outside a small circle of admirers. Recent research, however, has taken a significant and encouraging turn in examining and reassessing his legacy: not only have his shadow plays been given extensive treatments,[1] but his poetry has begun to receive attention as well.[2] But when it comes to his *mujūn* verse, the

Special thanks go to Th. Emil Homerin and to Everett Rowson for their insightful comments on an earlier version of this article. I also wish to acknowledge the financial support of the National Endowment for the Humanities and the American Research Center in Egypt.

Wright and Everett K. Rowson (New York, 1997); Jacqueline Sublet, ″Nom écrit, nom dit: Les Personnages du théâtre d´ombres d´Ibn Dāniyāl,″ *Arabica* 44 (1997): 545–52.

[2]Ibn Dāniyāl´s *dīwān* is apparently lost. Nearly three hundred poems, or parts of them, have

taboo is still very much intact. Many questions remain: Just how ″dirty″ can the poet get? What is the relation of the *mujūnīyāt* to his overall lyricism, and on a larger scale, what can one say about *mujūn* as a literary genre and its place in the medieval Arabic poetic tradition? It goes without saying that an examination of his *mujūn* verses will help to pave the way for a better understanding, and appreciation, of the legacy of Ibn Dāniyāl, arguably one of the finest, and most exciting, poets in the history of medieval Arabic literature.

In this article I take one step in this direction, in an attempt to sample and examine Ibn Dāniyāl′s *mujūn* verse. The poem to be analyzed was composed by the poet in response to the Mamluk sultan Lājīn′s (r. 1296–99) campaign against vice in Cairo.[3] Several factors underscore the choice of this particular poem. First, among a number of poems by the poet on the Mamluk prohibition in Cairo,[4] the poem in question, listed as *Qaṣīdah* No. 71 in the *Mukhtār* anthology,[5] is perhaps the ″dirtiest″ and thus provides an ideal case study for the present purpose. Secondly, in an earlier study I have studied his mock *madīḥ*-panegyric,[6] while the poem in question, with its unique structure, offers a different angle from which to view the poet′s mock *nasīb*, or the elegiac section in a *qaṣīdah*. Finally, the choice is also highlighted by the fate of this poem that illustrates the kind of dilemma that any serious attempt at studying Ibn Dāniyāl′s work is to face: replete with bawdy language and overt sexual references, scatological to the point of pornography, the poem is so troublesome that it is doomed to be left outside the bounds of serious scholarship. Preserved in a single manuscript,[7] the full text was published

survived in his shadow plays and in al-Ṣafadī*′s Al-Tadhkirah al-Ṣafadīyah,* vol. 14, Cairo, Dār al-Kutub microfilm 1762. *Al-Mukhtār min Shi'r Ibn Dāniyāl,* ed. Muḥammad Nā'if al-Dulaymī (Mosul, 1979), contains two hundred eighteen poems from *Al-Tadhkirah al-Ṣafadīyah,* and sixty-four more supplemented from other sources. His *Qaṣīdah* No. 69 is the subject of Li Guo, ″Paradise Lost: Ibn Dāniyāl′s Response to Baybars′ Campaign against Vice in Cairo,″ *Journal of the American Oriental Society* 121 (2001): 219–35.

[3]Ibn Ḥajar al-'Asqalānī, in his *Al-Durar al-Kāminah fī A'yān al-Mi'ah al-Thāminah* (Cairo, 1966), 4:55, cites the opening line of the poem. This is the only mention of the poem, to my knowledge, in a major Mamluk chronicle/anthology. For modern studies of the poem, see Shmuel Moreh, ″The Shadow Play *(Khayāl al-ẓill)* in the Light of Arabic Literature,″ *Journal of Arabic Literature* 18 (1987): 56; al-Dulaymī, Introduction to the *Mukhtār,* 13–14.

[4]Muḥammad Zaghlūl Sallām, for example, discusses ″the two lengthy *qaṣīdah*-odes on two important events,″ namely *Qaṣīdah* No. 69, on Baybars′ prohibition, and *Qaṣīdah* No. 72, on that of Lājīn. Sallām also mentions in passing *Qaṣīdah* No. 71, with a citation from Ibn Ḥajar al-'Asqalānī; see Sallām, *Al-Adab fī al-'Aṣr al-Mamlūkī* (Cairo, 1971), 2:168–70.

[5]*Mukhtār,* 119–21.

[6]Guo, ″Paradise Lost.″

[7]See Appendix below.

once, but only after one fifth, that is, thirteen lines out of a total of fifty, was omitted on the grounds that the verses were too ″obscene and lecherous″ *(alfāẓuhā badhī'ah).*[8]

Despite such controversy, the poem nevertheless merits serious treatment. Social and historical significance aside, it represents, in my opinion, a high point in the art of satire and parody in the post-classical, or post-Abū Nuwāsian, era. Based on a preliminary reading of the text, which is translated here in its entirety, I will discuss two related issues. First is the overall theme, or ″purpose″ *(gharaḍ),* of the poem, which I consider to be more parody than social satire. I argue that the outburst of ″trash talk″ as witnessed in the poem has less to do with the poet′s conscientious effort to criticize the Mamluk regime than with his compulsive desire to relive suppressed memories. In literary terms, it represents a mock version of the elegiac *nasīb,* with the eternal theme of the departed beloved and happiness lost. But this time the ″beloved″ is none other than Iblīs, the Devil, while the yearning is for the forbidden fruits left in the lost garden. The second issue has to do with artistic features, or textual aspects, of the *mujūn* elements in the poem. Through an analysis of selected samples and a comparison with parallels from the poet′s predecessors, especially Abū Nuwās (d. ca. 814), the dean of the genre, I propose that Ibn Dāniyāl′s, and for that matter Abū Nuwās′, *mujūn* verses are perhaps better understood, and appreciated, as parodies of the antecedent idioms and topoi of the *ghazal* genre in the *nasīb* convention. I further suggest that these parodies are operating around a jesting interplay between the language of purification and its antithesis, that of deliberate pollution.

THE POEM

1. Suddenly, in a dream, I saw Iblīs
   sad and broken hearted,
2. Blind in one eye, the other red and sore,
   tears falling, drop by drop,
3. Screaming, ″Woe is me, what a pity,
   such pain, like no other!″
4. Around him is a gang of his cronies;
   though few, they are plenty.
5. Among them is every queer lad, priceless,
   like the full moon in darkest night.
6. He makes his glance victorious over those who love him,
   but behind his eyes is sorrow.

[8] *Mukhtār,* 119, note *.

7. The noon-day sun, a pliant branch, his stature;
its shadow, the pubic hair at its base.
8. Caressing him is sweet fruit to those who embrace him
and screw the fig with the date.
9. What's money to union with him
whose lucky horoscopes are Libra and Venus?
10. Among them is every seductress, with enchanting eyes,
a soft girl, prettier than the sun.
11. She tells her lovers, "Stroll
amidst streams and green meadows!"
12. If a lover saw her cunt,
he would love to suck her pussy.
13. Every pimp is farting at the mouth,
and following up with a snort.
14. He [i.e., the pimp] would break into the lover's house by force
in his search for the snatch,
15. Saying—farting from his rear,
his breath filled with fennel—:
16. "Weigh out a thousand dinars, if you want her,
though you won't want her shit!
17. "Praise be to the One who created in her pure cheeks,
white with red on top.
18. "Come on, enjoy, take your fill,
let no reveler stay hard!"
19. Every bugger craves
the beefcake in the tablecloth/anus.
20. When a fart is wafted his way,
he would say, "O, fragrant incense!"
21. Every adulterer sees in whore's piss
a charm guaranteeing his health.
22.Every virgin has no excuse for (keeping) her virginity,
though her passion might be of the ʻUdhrī type.
23. She is a dyke with a calloused clit
and little pubic hair, thanks to rubbing,
24. While every tavern-keeper holds a cup in hand,
and a jar on his shoulder,
25. Every stoned hashish eater is high,
green sprouts had grown on his mustache.
26. Some Sudanese is having a barley beer,
poured with care by his friend.

27. Every ″bottom boy″ has a stud,
who could also screw like a needle,
28. Everyone who jerks off alone
was aroused by a headscarf.
29. And many shadow play performers, singers,
and flutists have come in droves.
30. So I said, ″O Iblīs,
what has caused your tears?
31. ″What has upset your dim disciples,
those wicked ones full of mischief?″
32. And Iblīs replied, ″Idiot! You are trapped
in your sister′s cunt – how awful!
33. ″My troops have diminished, my position sapped.
I am no longer in command!
34. ″The tavern-keeper no longer finds
cups and jars in his place.
35. ″The beer maker′s house is leveled,
upon its roof the yellow sign of disgrace.
36. ″The boot-legger is depressed,
his heart a blazing coal.
37. ″The hashish addict is near crazy,
ready to assault with dagger and knife.
38. ″And all the girls working for us
would rather stay home today.
39. ″They would rather have husbands,
not a whore among them, as if they were free!
40. ″And every gambler, who had her often,
now pays the dowry!
41. ″How hard I′ve worked to seduce and mislead.
How many times I′ve combed somebody′s hair.
42. ″How many times I′ve seen eyes colored with kohl,
for those who cast bewitching glances.
43. ″How many, O how many times have I stayed up at night,
to serve lovers from dusk to dawn.
44. ″But the market of rebellion is stagnant:
no wine, no revelry, no sex.
45. ″Yet I′m inclined to keep pimping,
and free of charge, no less!″
46. Then I said, ″O Iblīs, take us away
on a long journey, far, far from here.

47. ″But do take care, don′t live in Egypt!
Don′t even come near, though you know it well,
48. ″For there in that country is a just grand vizier,
blessed with good looks and a blaze on his forehead.
49. ″His advice helped the sultan
in his ruling, now famous far and wide,
50. ″And he who breaks this decree
is disgraced in public and beaten with a whip!″

Remembrance of Things Prohibited: Poetry as Memory

The poem is built around a narrative of the poet′s dream encounter with Iblīs, the Devil. At first glimpse, the overall structure is a little odd, in that the typical tripartite *qaṣīdah* is proportionally out of balance: the *nasīb,* wherein Iblīs and his ″gang″ *(ʿiṣbah)* are described as a departing ″beloved,″ occupies most of the space (lines 1–45), while the *raḥīl* (line 46) and *madīḥ* (lines 47–50) make up a few meager verses. On the other hand, one may break the poem down to three thematic units: first is a description, through the poet′s and Iblīs′ voices, of the state of affairs before the prohibition (lines 1–29). Then it is Iblīs doing more talking, in a conversation with the poet, about the situation after the prohibition (lines 30–45). After a hurried *raḥīl* transition, the narrative voice switches back to the poet, who, in a quasi-*madīḥ,* lashes out at the ill-advised sultan and his unnamed prime minister (lines 46–50).

The *nasīb* begins with an unconventional tone. Instead of the usual recitative prelude, it cuts to the narrative from line 1. The dramatic tension is immediately felt as the phrase *fī marrah,* ″all of a sudden,″ serves not only as the rhetorical device of partial *jinās* between *marrah* and *murrah,* in *abū murrah,* ″Father of Bitterness,″ the epithet of Iblīs,[9] but also underscores the unexpected cruelty of the event. This sense of sudden catastrophe is also found in Ibn Dāniyāl′s *Qaṣīdah* No. 69, on Sultan Baybars′ campaign, which opens with a famous line, ″O people! suddenly *(fujʾatan)* Iblīs is dead, / his familiar abode now empty.″[10]

The dramatic moment is further captured by the repetitions, with a typical *nasīb* flavor, in line 2, of tears dropping from the eyes of the departing ″beloved″ *(qaṭratan qaṭrah),* and, in line 3, of Iblīs′ self-inflicted pain and despair (a *jinās* between *ḥasratī* and *ḥasrah*). The odd image of Iblīs being ″blind in one eye″ is not only a vivid depiction of his pitiful appearance, but also, and more important,

---

[9]It may have its origin in a hadith wherein the Prophet proclaims that *Murrah* is among ″the most hateful″ names to God *(abghaḍuhā ilayhi);* see Ibn Ḥanbal, *Al-Musnad* (Cairo, n.d.), 4:178, 345; *Ṣaḥīḥ al-Bukhārī,* ed. and trans. Muḥammad Ḥasan Khān (Beirut, n.d.), 8:134, 144.
[10]Guo, ″Paradise Lost,″ 220.

a warning for his followers of the grim future that lies ahead. Bodily mutilation as a result of catastrophe and divine punishment is a recurrent motif in medieval Arabic literature. One famous example is the three "one-eyed" dervishes and the forty "one-eyed" ghostly wandering figures who paid an uninvited night visit in the tale of "The Porter and the Three Ladies of Baghdad" in the *Arabian Nights,* a corpus of tales that took its final shape during Ibn Dāniyāl's own time.[11] The eerie appearances not only underline the unpredictable vicissitudes in the fate of those who lost their sight but also evoke fear and uneasiness on the part of those who observe them.[12] As for Ibn Dāniyāl's night visitor, Iblīs, and his followers, the punishment cannot be crueler and the horror cannot be more grave: the ability to see is essential to Iblīs' enterprise; it is his "enchanting gaze" that provides the ultimate protection for his followers.[13] The fact that Iblīs is "blind in one eye," while the other eye is covered with tears and unable to see well, suggests that all the good things under his "gaze/protection" must pass away.

In the medieval Arabo-Islamic tradition, dreams are "signs" to the dreamer, and dreams depicted in literary texts can be, therefore, the focal point for the interaction of various codes and different meanings, in our case of punishment and redemption. The poet's dream rendezvous with Iblīs also works on yet another level of the *adab* tradition, and that is the night visit by the phantom of the beloved *(ṭayf al-khayāl)* to the poet. In the classical *nasīb*, the phantom usually appears in the guise of a she-demon *(ghūl),* and the poet is often wide awake, suffering acute anxiety.[14] His evoked memory is more of a conscious effort under

---

[11]*The Arabian Nights,* trans. Husain Haddawy (New York, 1990), 66–150. The motif of body mutilation, especially the loss of one eye, and metamorphoses as punishment in the *Arabian Nights* is discussed in Andras Hamori, *On the Art of Medieval Arabic Literature* (Princeton, 1974), 164–80, esp. 174–79.

[12]On the motif of losing sight, in dreams, as punishment in Arabo-Islamic literature, see Fadwa Malti-Douglas, "Dreams, the Blind, and the Semiotics of the Biographical Notice," *Studia Islamica* 51 (1980): 137–62, esp. 154–61. Malti-Douglas has also noted the interaction between losing sight, as punishment, and its recovery, as a mercy, "surrounding an apparent purification with water," in what she calls "the "blindness dreams." For the theme of "water of purification," see below.

[13]For "the gaze of Iblīs," see Guo, "Paradise Lost," 220f, 230–31.

[14]Michael Sells, "Guises of the *Ghūl:* Dissembling Simile and Semantic Overflow in the Classical Arabic *Nasīb,*" in *Reorientations/Arabic and Persian Poetry,* ed. Suzanne P. Stetkevych (Bloomington, 1994), 130–64; John Seybold, "The Earliest Demon Lover: The *Ṭayf al-Khayāl* in *al-Mufaḍḍalīyāt,*" in ibid., 180–89, esp. 184. Seybold's claim that "the *ṭayf al-khayāl* is no dream-image or dream-vision" and that "the poet is not sleeping" is perhaps too broad a generalization, for there is an abundance of textual evidence indicating that the *ṭayf al-khayāl* indeed appears in the poet's sleep, or dream; see, for example, Renate Jacobi, "*Al-Khayālānī:* A Variation of the *Khayāl* Motif," *Journal of Arabic Literature* 27 (1996): 2–12, esp. 5–7, 10–11.

control. In our poem, however, the poet is not only in a real dream, as is clearly indicated by the stock phrase *ra'aytu fī al-nawm* (line 1),[15] but also in a ″wet″ dream, one that is erotically charged. The dream provides a venue for the poet´s self-indulgence: it is the dream that triggers his elegy of Iblīs and the latter´s outburst of grievance in blatant trash talk. Only in a dream is the poet able to meet the ″dead,″ and more importantly, able to relive the experience passé, and retrieve the memory suppressed. It is this memory, or perhaps fantasies of memory, that stands out as the poem´s real theme, or ″purpose″ *(gharaḍ)*.

From a narrative viewpoint, it is also a double dream, and thus double memory: one for the poet, and one for Iblīs, whose dream is within the poet´s dream, and whose memory is intertwined with the poet´s own. Iblīs´ raucous dream-vision memory constitutes the building blocks of the entire poem whereas the role of the poet, the ″lyric I,″ is reduced to that of a side-kick, whose main job is to give some feedback, stimulating more from his ″lord.″ From line 5 to line 29, the poet, through Iblīs´ ″memories,″ sets out a wild roller-coaster ride, with an outburst of descriptions of the hedonistic underworld in Cairo prior to and during the campaign against vice. Compared with *Qaṣīdah* No. 69, where the lamentations of the victims of the prohibition are limited to a select few,[16] the juxtaposition of the various groups in *Qaṣīdah* No. 71 does not seem to follow any particular order. Here Iblīs´ first ″list of vices″ is on display at random: delectable young buyable boy (lines 5–9); female seductress (lines 10–12); pimp (lines 13–15); female prostitutes (lines 16–18); gay men (lines 19–20); adulterer (line 21); lesbian (lines 22–23); tavern-keeper (line 24); hashish eater (line 25); Sudanese wine-bibber (line 26); male ″active″ and ″passive″ prostitutes (line 27); masturbation addict (line 28). Topping the list are, curiously, entertainers (line 29), among them shadow play performers, singers, and flutists (the ″flute″ seems to have some sexual connotation as well).[17] The mosaic-like collage is effective in depicting the chaotic atmosphere, and conveying a sense of lax morality, which were perhaps the order of the day.

To incorporate bawdy material in a ″high″ *adab* context is one of Ibn Dāniyāl´s trademarks. This is seen in the use of the *muqābalah,* or opposition, between the contrasting images of Iblīs´ followers who are ″few″ in number but ″plenty″ in spirit and enthusiasm (*qillah*/*kathrah*, line 4); between ″white″ (makeup powder?

---

[15]The use of these phrases is discussed in Malti-Douglas, ″Dreams,″ 144; also Jacobi,″*Al-Khayālānī,*″ 5–7, 11.

[16]In *Qaṣīdah* No. 69, the lamentations are confined to four subjects: wine, beer, hashish, and prostitution; see Guo, ″Paradise Lost,″ 220–24.

[17]Cf. Abū Nuwās, ″Wanna have some fun? / I´ll bring you my ´flute´″ [Fa-in aḥbabtum lahwan / ataynākum bi-mizmār], *Al-Fukāhah wa-al-I'tinās fī Mujūn Abī Nuwās* (Cairo, 1316/1898), 8. The poet is boasting that he has the ″tool″ to entertain, be it musical instrument or penis.

sperm? pure cheeks?) and ″red″ (lipstick? makeup? blood? tongue?) on the lover′s cheeks (*bayāḍ/ḥumrah*, line 17). It can also be seen in the intricacy of the *jinās,* or paronomasia, such as the sexually-accessible boy being portrayed as a ″full moon″ and a ″priceless treasure″ (*badr/badrah*, line 5); in his company, money has lost ″weight″ (i.e., value), while his zodiac sign Libra is rising (*wazn/al-mīzān*, line 9). At times, the *jinās* is no more than a recycled cliché, such as the contrast of the *'udhrī* and *'udhrah,* in line 22. But more often one is struck by Ibn Dāniyāl′s brilliant imaginative innovation and rhetorical prowess. This is best illustrated in verses 26–29, which mark the end of the poet′s nostalgic laments. Herein every line is endowed with one pair of the *jinās*. The mouthful, tongue-twister kind of juxtaposition of the cognate words with different, sometimes contrasting, meanings helps bring about an intensity that pushes the tempo to a climax. To be sure, there is a lot of word play here, where deliberate ambiguity and intentional sabotage of balance seem to be the rule. In line 26, the joy of beer *(mizrah)* is now reduced to very undesirable soaked millet *(mizrah)*. In line 27, the contrast is between *baghghā',* a male prostitute who plays the ″passive″ role in sex, and the cognate superlative/comparative *abghá,* whose exact meaning, derived either from *baghī* (″whore″) or from *bāghin* (″desiring, striving, oppressive, tyrant″), remains ambiguous until it is compared with ″needle″ *(al-ibrah),* perhaps a reference to the penis and its size, a universal butt for locker room jokes, or perhaps alluding to the penetrating power of a needle. This interplay is a recycled idiom that was used by al-Jurjānī (d. 1089) in his famous ″vice list.″[18] An even more outlandish word play is seen in the ensuing line 28, where the contrast is between one′s daily habit of masturbation *('umayrah)* and the annual ″lesser pilgrimage″ *('umrah),* during which any sexual act is strictly forbidden. The word *'umrah* also means, according to Edward Lane, ″a visit in which is the cultivation *('imārah)* of love or affection.″ Moreover, this may well be a triple pun in that the reading of the word can also be *'amrah,* ″turban.″ So in the final analysis, the fellow would be aroused and seek to relieve himself, be it during the pilgrimage, or at the thought of a rendezvous with a lover, or simply seeing somebody′s headwear.

The poet then proceeds to a conversation with Iblīs. His presumptuous ″moral″ point of view would surely further infuriate the bitter Old Man: ″What has upset your dim disciples, / those wicked ones full of mischief?″ To this Iblīs angrily replies: ″Idiot! You are trapped / in your sister′s cunt—how awful!″ The rhetorical

---

[18]Al-Qāḍī Abū al-'Abbās Aḥmad ibn Muḥammad al-Jurjānī, *Al-Muntakhab min Kināyāt al-Udabā' wa-Ishārāt al-Bulaghā'* (Hyderabad, 1983). A detailed discussion of the vice list in al-Jurjānī′s book is found in Everett Rowson, ″The Categorization of Gender and Sexual Irregularity in Medieval Arabic Vice Lists,″ in *Body Guards: The Cultural Politics of Gender Ambiguity,* eds. Julia Epstein and Kristina Straub (New York, 1991), 64. Rowson rendered the phrase *abghá min al-ibrah* as ″He is more devoted to *bighā'* than a needle,″ i.e., which is threaded (64, 78, n. 41).

question raised by the fictionalized ″lyric I,″ the poet, is designed for multiple purposes. With regard to the poem′s overall structure, it serves as a transit point to sum up the first round of lamentation and move on to the next, which is more or less a revisiting of the same theme, with more twists, thus giving the supposedly polythematic *qaṣīdah* a tangible rhythm. This transition is also aimed at the changing of mood and tone, from one of lamenting to one of provoking, from one of pity to one of confrontation, from one of narrative to one of recitation. Further, from a narrative viewpoint, by posing seemingly ″stupid″ questions, the poet is providing ammunition for Iblīs.

And shoot he does. The reference to ″Manichaean,″ as Iblīs so labels the poet in line 32, denotes a ridiculed sense of ″heresy,″ ″pagan,″ or ″Satanic cult,″ and it was used by earlier poets such as Abū Nuwās.[19] In both Ibn Dāniyāl′s and Abū Nuwās′ uses, the expression occurs in the *qultu-wa-qāla,* or question-and-response, discourse as a rebuttal to someone who is obviously pathetic or simply stupid as is often seen in the *hijā*ʼ-invective verses. Obviously, it is Abū Nuwās′ and Ibn Dāniyāl′s way of saying ″O you moron!″ or ″O you idiot!″

For Iblīs, it is not an option to admit to self-loathing or express a desire for purification and deliverance, a topic to be discussed below. The poet′s question simply gives him another opportunity to cry and whine. The strategy here is the old tried-and-true one: a random display of the suffering endured by Iblīs′ ″troops″ (line 33), the victims of the prohibition. The reader and audience watch spectral figures jerk into place, expose themselves one more time, and disappear. The cumulative picture of idleness, frustration, and nostalgia is etched in acid. Thus the reader is invited, again, to peruse the painful experiences of Iblīs′ ″vice list″: tavern-keeper (line 34), beer maker (line 35), bootlegger (line 36), hashish addict (line 37), call girls (lines 38–39), and gambler (line 40). The reader is well aware that the list here is more than a mechanical juxtaposition: the ″categories″ actually interact, and, occasionally, overlap with each other. The gambler, for example, was also a John, and his effort to ″free″ one call girl, by paying her ″dowry,″ is itself a re-working of the existing topos,[20] which adds more cynicism: that a gambler should be relied upon for, of all things, money!

---

[19]See, for example: ″I said: ′Praise be to my Lord!′ / And he replied: ′Praise be to my Manes!′ I said: ′Jesus is a prophet!′ / And he replied: ′[But] sent by Satan!′″ [Fa-qultu subḥāna rabbī / fa-qāla subḥāna mānī; fa-qultu ʻīsá rasūlun / fa-qāla min shayṭāni], *Dīwān des Abū Nuwās,* ed. Ewald Wagner (Stuttgart, 1958–), 2:79; ″If the joke is to be reversed, then you would be [considered] the moral one, / a secret believer in the religion of Manes, the last drop of cream″ [Idhā quliba al-hijāʼu fa-anta khulqī / wa-muḍmiru dīna mānī zubdu baqqi], ibid., 2:145.

[20]Al-Bādhānī al-Iṣbahānī: ″My bride is a slave girl set free; / I got her without paying a penny for dowry″ [Lī ʻirsun ḥurrah mamlūkah / ḥuztuhā min ghayri mahrin wa-thaman], *Al-Fukāhah,* 17.

In addition, the two ″vice lists″ provide vivid descriptions of various people and their outrageous acts and scurrilous behavior, and so amount to mimics of the conventional practice in medieval Arabic literature of composing verses for the purpose of conveying specific information or knowledge. In a wicked sense, these ″lists″ could thus be read as a how-to manual of sorts, another attempt on the poet′s part to poke fun at traditions.

The second round of lamentation, and the second ″vice list,″ end with a string of *ubi sunt,* from line 41 to line 43, each led by a rhetorical question (How hard I′ve worked . . . ! How many times I′ve . . . !), through which Iblīs cries out forcefully, reflecting on his ″hard work″ at the service of the revelers. Iblīs′ praise to himself ends on a high note, more self-congratulatory than self-pitying. The reality is painful, and the Old Man is cranky, but he is not ready to give up and he never will. Indeed, his sense of dark humor is intact and his defiance more evident than ever: ″But the market of rebellion is stagnant; / no wine, no revelry, no sex. / Yet I′m inclined to keep pimping, / and free of charge, no less!″ (lines 44–45). The blunt declaration of being ″rebellious and reckless″ *(al-ma'āṣī)* may be a commonplace Abū Nuwāsian cliché,[21] but the brilliant imagery of ″the market of rebellion is stagnant″ is definitely Ibn Dāniyāl′s own.

Iblīs′ bitter and wry outcry prompts a visceral response from the poet: ″Then I said, ′O Iblīs, take us away / on a long journey, far, far from here′″ (line 46). Here one may note the attempt at a *raḥīl* transition toward the *madīḥ* panegyric proper in the classic *qaṣīdah* tradition,[22] but it is too little, too late. The sense of exhaustion and frustration is clearly felt here as far as the overall structure of the poem is concerned: the poet seems to have lost interest and energy to go on. Instead of a full-blown *madīḥ,* a mere four lines (lines 47–50) were rushed into place, bringing the poem to an end. The panegyric itself employs the same strategy utilized repeatedly by the poet, namely, the rhetorical game of *ta'kīd al-dhamm bi-mā yushbihu al-madḥ* (blame through what looks like praise).[23] Nevertheless, it is not without its own values and novelty. From a historical perspective, the quasi-panegyric contains references, some vague and some explicit, that may shed light on the historicity of the poem and other related issues.[24] One also learns some

---

[21]For example, ibid., 106; *Dīwān Abī Nuwās* (Cairo, 1322/1904–5), 324.

[22]Compare *Qaṣīdah* No. 69, where the ″going-away″ call is raised much earlier, in line 22, and then reiterated in line 30; see Guo, ″Paradise Lost,″ 223.

[23]Ibid., 230.

[24]A curious discrepancy is observed in that the poem, which is on Lājīn′s (r. 1296–98) prohibition, also appears in a slightly different version in the shadow play *Ṭayf al-Khayāl,* which is believed to describe street life under Baybars′ reign (1260–77), thus raising the issue of who was the exact target of the *madīḥ.* I plan to address this issue in a separate study, with special references to historical reality vs. poetic truth in Ibn Dāniyāl′s writings, his relationship with the Mamluk

details concerning the events that led to the prohibition, as well as what may have actually happened during the prohibition. The sultan, we are told, listened to the vizier′s ″advice″ and issued a ″decree″ *(marsūm)* to launch the prohibition. Any offender caught would be paraded on the back of a horse, wine jars hanging from his neck, and would be beaten by ″huge sticks.″ A sad finale to a dark, chaotic, and scabrous episode in Cairo′s never-ending saga. But the poet would not let the audience leave without a last laugh. For the general audience, the fact that the revered vizier in fact resembled a horse, ″that is blessed with good looks and a blaze on his forehead″ (line 48), is funny enough, but for Ibn Dāniyāl′s pals, there is more: riding on horseback has long been, in Arabic poetry, associated with sexual, especially homosexual, intercourse. The punch line is, therefore, in the final analysis, a ″fuck you″ note to the authoritarian establishment, Ibn Dāniyāl-style. And the vizier is the sultan′s queer!

Satire or Parody? The Art of *Mujūn*

Although some problems still remain regarding the interpretation of certain rare words and vague expressions, the above reading still allows a general appreciation of the poem. It is obvious that the quasi-*madīḥ* panegyric targeting the sultan, or the vizier, or whoever was responsible for the prohibition, is reduced to a minimum of four lines and is never fully developed; the focus is exclusively on the quasi-*nasīb*, that is, on Iblīs′, and the poet′s, memory. In other words, it is less a political allegory, or social satire, than a parody where the game is wordplay and rhetoric.

Some recent studies of pre-modern Arabic literature and popular culture have challenged, and moved away from, the traditional approach of treating certain texts of the so-called ″*adab* of transgression″[25] as mainly social satire. These texts range from al-Ḥarīrī′s (d. 1122) and al-Ḥamadhānī′s (d. 1008) *Maqāmāt,* Ibn Dāniyāl′s shadow plays and poetry, and al-Nafzāwī′s (d. 1422) erotica, to Ibn Sūdūn′s (d. 1464) and al-Shirbīnī′s (fl. seventeenth century) colloquial poetry and prose. Armed with the Freudian notion of ″repetition compulsion″ and Mikhail Bakhtin′s conception of parody, these studies propose new readings of the aforementioned texts as psychic drama in the form of parody, ″whose purpose,″ in Daniel Beaumont′s definition, ″is the consumption and reshaping of antecedent texts,″ and whose ″key concepts will be repetition and rhetoric.″[26] In providing a theoretical conceptual focal point for this new approach, Mohamed-Salah Omri

---

patrons, and his working method in recycling existing texts.

[25]The term was coined by Mohamed-Salah Omri, defined as ″literature that goes beyond the normal conventions and codes by representing them in a parodic manner″; see ″*Adab* in the Seventeenth Century: Narrative and Parody in al-Shirbīnī′s *Hazz al-Quḥūf*,″ *Edebiyāt* 11 (2000): 182, 193 (note 27).

[26]Daniel Beaumont, ″The Trickster and Rhetoric in the *Maqāmāt,*″ *Edebiyāt* 5 (1994): 1–14.

begins by making the distinction between satire and parody, in that, according to *The Princeton Encyclopaedia of Poetry and Poetics*, ″[W]hile satire has as a purpose to make the object of the attack abhorrent or ridiculous,″ parody ″usually makes its point by employing a serious style to express an incongruous subject thus disturbing the balance between form and matter.″[27]

Inspired by this theoretical framework and dealing with one of the banner-carriers of this ″*adab* of aggression,″ I intend to look at Ibn Dāniyāl′s socially-conscious poetry from *both* sides, that is, from historical *and* literary readings of the text. My premise is that these poems, unlike the more fictional shadow plays, undeniably bear specific historical elements, as they were prompted by certain actual events and were therefore meant to comment on certain issues, or send certain messages in the first place. At that level, to treat them as expressions of public sentiment in the form of social satire is indeed a helpful concept to work with. However, close reading of these poems has revealed that besides the poet′s social consciousness, there is something more pressing and more urgent for him to react to and speak out against. Instead of being obsessed with a sultan, or a vizier, or the Mamluk regime, the poet is more concerned about *himself,* about his memories of the now-prohibited sensual pleasures in his lost paradise, his lost garden. If the universal theme of ″sensual pleasure vs. repression″–-and in the Islamic context, the mantra of ″commanding right and forbidding wrong *(al-amr bi-al-ma'rūf wa-al-nahy 'an al-munkar)*—is at play here, then the poem in question is more about celebrating the forbidden pleasures, the *munkar*s, than condemning the ″righteous″ repression, the *ma'rūf*s. True to Ibn Dāniyāl′s poetic persona, it is more about joy than about anger, about having a good time than about staging a protest. In literary terms, this hardly fits in a conventional *hijā',* where the target is always the enemy. Here in the *mujūn*, the joke is on everybody.

The fact that the poet was, as the above reading of the poem has amply demonstrated, indeed working within the high *adab* domain further allows us to compare him with his predecessors in the same domain. An attempt will be made to show how by means of reprocessing and reshaping the antecedent themes, idioms, and topoi in the Abū Nuwāsian *mujūn* tradition,[28] Ibn Dāniyāl was able to

---

[27]Omri, ″*Adab*,″ 193, n. 28.

[28]Editions of Abū Nuwās′ *dīwān* usually omit the *mujūnīyāt* altogether. The few exceptions I have come across are (1) *Dīwān Abī Nuwās bi-Riwāyat al-Ṣūlī,* ed. Bahjat 'Abd al-Ghafūr al-Ḥudaythī (Baghdad, 1980). It contains a sanitized *mujūnīyāt* section (899–937) wherein all the ″dirty″ words were omitted; (2) *Al-Fukāhah,* a slim volume printed privately by one Manṣūr 'Abd al-Muta'āl and one Ḥusayn Afendi Sharaf; (3) *Dīwān Abī Nuwās* (Cairo, 1322/1904–5), published by Muṣṭafá al-Bābī al-Ḥalabī; less than ten pages (339–47) contain a section entitled ″verses blending *[jā'a bayna] khamrīyāt* and *mujūn,*″ which turns out to be largely of the *khamrīyāt* genre. As for the editorial efforts in the West, the long-awaited fifth volume, the *mujūnīyāt,* of *Der Diwān des Abū*

stay ahead in this rhetorical game. It is further argued that many of the *mujūn* elements had their roots in *ghazal* conventions.

Abū Nuwās′[29] influence, and, more accurately, the tradition he represents, is unmistakably traceable in Ibn Dāniyāl′s poetry. In addition to the examples cited above, such as the curse of ″Manichaean″ (line 32), the analogy of ″dowry/fee″ paid to ″bride/whore″ (line 40), and the simile of ″flute/penis″ (line 29), there are many more. Some items on his ″vice lists,″ for example, such as tribadism (lesbian sex act), were attributed to Abū Nuwās as well.[30] Ibn Dāniyāl′s parodies of the Quranic verses were directly inspired by, or simply borrowed from, Abū Nuwās. One example is his *Qaṣīdah* No. 69, line 7: ″Many a rake declares: ′This is a day that is, / as they say, ′Dismal and calamitous!′″ *(yawm qamṭarīr ʿabūs).*[31] A paraphrase of Quran, 76:10, it is found, verbatim, in Abū Nuwās′ *dīwān.*[32] In the present poem, a mimicking of the Quranic phraseology is seen in line 17, ″Praise be to the One who created . . . ″ *(subḥāna man wallada . . .),* the like of which occurs frequently in Abū Nuwās′ vocabulary.[33] The parody of the Quranic verses is particularly significant for the present discussion in that the intrinsic link between it and the *mujūn* is underlined by the fact that such attempts by Abū Nuwās are considered as of the *mujūn* type and are therefore classified, by medieval Arab anthologists, in the category of the *mujūnīyāt*.[34]

In what follows, samples of Ibn Dāniyāl′s *mujūn* verses will be compared with the parallels from Abū Nuwās. After the thematic and linguistic linkage between the two is established, the discussion will proceed on two levels: first, the *ghazal* conventions, such as ″the enchanting/enchanted gaze″ and ″the amorous union,″ used by Abū Nuwās and Ibn Dāniyāl as they are *supposed to be,* that is, as descriptions of the beloved,[35] although, as we are already aware, in this anything-goes

---

Nuwās, edited by Ewald Wagner, is to this day still in manuscript form. For further information, see Amidu Sanni, *The Arabic Theory of Prosification and Versification: On* Ḥall *and* Naẓm *in Arabic Theoretical Discourse* (Beirut, 1998), 167; Gregor Schoeler, ″Iblīs in the Poems of Abū Nuwās,″ *Zeitschrift der Deutschen Morgenländischen Gesellschaft* 151 (2001): 43–44, n. 1.

[29]Here Abū Nuwās is treated as a name under which a reservoir of texts was formed; thus the issue of the authenticity of some poems attributed to him is not important. For more on this issue, see Schoeler, ″Iblīs,″ 43, n. 1.

[30]Some medieval critics believed that Abū Nuwās was the first Arab poet to deal with the topic; see *Al-Fukāhah,* 17.

[31]Guo, ″Paradise Lost,″ 221.

[32]″Wa-law fī yawmi hurmuza zurta mūsá / la-ṣayyarahū ʿabūsan qamṭarīran,″ *Diwān des Abū Nuwās,* 2:89.

[33]See, for example, text cited in note 22 above.

[34]Amidu Sanni, *Arabic Theory,* 163–67.

[35]Some scholars, especially those of the ″Chicago school of Arabic literature,″ have long challenged

territory, the ″beloved″ may be a girl or a boy for Abū Nuwās, a phantom or a devil in Ibn Dāniyāl′s case. But overall the parody remains metaphorical, that is, it does not go beyond the language boundary, in that a kiss really is a kiss, and a gaze a gaze. Second, Abū Nuwās′ and Ibn Dāniyāl′s re-working of the *ghazal* elements, in that farting, urinating, and excrement replace the typical *ghazal* topoi such as the lover′s ″fragrant smell″ and ″sweet saliva,″ and so forth. Here everything is turned upside down, and the parody is operating on both metaphoric and linguistic levels.

Mocking the *Ghazal* Convention: The ″Enchanting/Enchanted Gaze″

In a quasi-*nasīb* style, with the conventions of the *ghazal*, the ″departing beloved″ is first introduced to the audience as, among other things, a ″full moon,″ a ″noon-day sun,″ and a ″pliant branch,″ whose ″enchanting gaze″ is all over the place, to be witnessed through the lovers′ ″enchanted gaze.″ Not only do the motifs remain the same, but the wordings are in accordance with the stock repertoire as well: the *badr al-dujá* (line 5), the *shams ḍuḥá* (line 7), the *ghuṣn naqan* (line 7), the *laḥẓ* (line 6), the *suḥūr al-ʿayn fattānah* (line 10), the *ʿayn wa-al-naẓr* (line 42), and the list goes on and on.

Abū Nuwās uses the same stock similes of ″full moon,″ ″shining sun,″ ″enchanting gaze,″ and so forth, in describing his beloved:

His figure is like the full moon, his joyful face a shining sun;
  he has a gazelle′s eyes and chest.
Charm is his gaze, fine wine his saliva;
  his forelock is dark night and his skin is gold.
[Al-badru ṣūratuhū wa-al-shamsu bahjatuhū
  wa-lil-ghazālati minhu al-ʿaynu wa-al-lubab
Wa-al-siḥru laḥẓatuhū wa-al-khamru rīqatuhū
  wa-al-laylu ṭurratuhū wa-lawnuhū dhahab[36]]

How come? O you with enchanting
  gaze and charming bright eyes!

---

the traditional interpretation of the descriptive function of the *nasīb;* see, for example, Jaroslav Stetkevych, ″Toward an Arabic Elegiac Lexicon: The seven words of the *nasīb,*″ in *Reorientations,* 58–129; Sells, ″Guises of the *Ghūl.*″ But this is beyond the scope of this study, for Ibn Dāniyāl′s *nasīb* here is already in the form of parody; it nevertheless does reaffirm the point in that what is presented in these *ghazal* similes ″is not in fact the beloved as an object of description,″ but rather ″the mythopoetic world of the lost garden or meadow,″ to quote from Sells (″Guises of the *Ghūl,*″ 130).

[36]*Al-Fukāhah,* 85.

[Wa-kayfa yā fātira al-laḥẓi sāḥira al-ʻayni aḥwar[37]]

O [you] the heart-throb whose charm
  radiates from his enchanting gaze!
. . . .
Don′t let me suffer

Mocking the *Ghazal* Convention: The ″Amorous Union″

The influence of Abū Nuwās on Ibn Dāniyāl′s poetic imagination and lyric expression can also be observed in descriptions of the acts of love-making. In the classical *ghazal* tradition, the notion of *al-waṣl* (or *al-wiṣāl*), ″amorous union,″ is usually associated with the lover′s tender touch, in the formulaic contrast with the painful experience of *al-hijrān,* ″departure.″ Although the term does imply sexual intercourse, this function is not overtly emphasized (we will come back to this point later). However, in Abū Nuwās′ vocabulary, not only is the term *al-waṣl* used explicitly for sexual intercourse, but it is also frequently paired with *al-tajmīsh,* a vague term that denotes a wide range of sex acts, from flirtation to rough foreplay and violent fondling. The juxtaposition of *al-tajmīsh* with *al-waṣl* and, occasionally, *naql* (″sweet″ [kiss, hug, etc.]), became a fixation in Abū Nuwās′ love-theme verses; and this is seen in Ibn Dāniyāl′s poem as well.

8. Caressing him *(tajmīshuhu)* is sweet fruit *(naql)* to those who embrace him
  and screw the fig with the date.
9. What′s money to union with him *(fī waṣlihi)*
  whose lucky horoscopes are Libra and Venus?

Abū Nuwās:

For ordinary folks ever since the Creation, it′s foreplay before fuck.
  But in Moses′ household, they fuck first, then fondle!

Waiting for watering,
inviting a fuck!
[Wa-al-naqlu min taqbīli mā
yaqṭifu min wajnatihī
Saqyan lahā min daʿwati
tudʿá ilá naykihī[42]]

From the seemingly compulsory way of paring and juxtaposing a fixed set of terms, it is evident that the classical notion of *al-waṣl,* the Platonic ″amorous union,″ is transformed, in Abū Nuwās′ use, to a synonymy for *al-nayk* (fuck). It is about sex, plain and simple. The same usage is also seen in Ibn Dāniyāl′s work; in the shadow play version of the present poem, the two words *waṣl* and *nayk* are used in a virtually interchangeable manner (see Appendix below, line 18).

To make erotic suggestions within the classical *nasīb*/*ghazal* tradition, the poet often appeals to the senses, and this becomes paramount in the overall texture of the poem.[43] For Abū Nuwās, for example, the joy of love, or love-making,

---

[39]*Diwān des Abū Nuwās,* 2:90.

[40]*Al-Fukāhah,* 57.

[41]Ibid., 58.

[42]Ibid., 28.

[43]For recent studies of the depictions of the five senses in the *qaṣīdah* tradition, see Michael Sells,

is summed up in a formula that one may call the "smell, taste, and gaze" combination:

> In love one enjoys the lover's affection and tenderness,
> As well as that [pleasant] smell, [sweet] taste, and [enchanting] gaze.
> [Fa-fīhi mu'ātātu al-ḥabībi wa-'aṭfuhū
> 'alayka wa-fīhi al-shammu wa-al-dhawqu wa-al-naẓar[44]]

Abū Nuwās makes it clear that these are the fundamental elements for a love affair, and a love poem. Among these, "sight" (seeing the lover's beautiful physique, "enchanting gaze") and "touch" (tender or otherwise) are discussed above. As for "smell," the lover's pleasant smell is usually associated with various fragrant perfumes he/she is wearing, but also the intoxicating smell of alcohol on his/her breath. "Taste" alludes to the sweet taste of the lover's rosy cheek, lips, and saliva, which the poet enjoys through deep kisses. Add "sound," that is, listening to love songs as well as the lover's sweet talk, and the poetic atmosphere is saturated with all five senses, and all aspects of human sensuality. A love affair, in the *ghazal* tradition, even within the Abū Nuwāsian deviation, is such a whole package through which one is sure to get an eyeful, earful, noseful, mouthful, and handful. And in the *mujūn*, this is even more the case, as the glorification of flesh and sensual pleasure in a coarse manner is the *raison d'être* of the genre. Bearing this context in mind, we now turn to the poem in question, which showcases the way Ibn Dāniyāl mimicked and subverted the *ghazal* topoi, turning them into *mujūn* scatological farces.

Parody of the *Ghazal* Topos: Farting vs. Fragrant Smell

This seems to be a favorite trick of Ibn Dāniyāl. Two verses in the poem depict breaking wind while having sex, a far cry from the lover's "pleasant smell" in the *ghazal*.

> 13. Every pimp is farting at the mouth *(lahū ḍarṭatun / min shidqihī),*
> and following up with a snort.
> . . . .
> 20. When a fart *(faswah)* is wafted his way,
> he would say, "O, fragrant incense!"

Equally coarse and amusing is Abū Nuwās:

"Guises of the *Ghūl*," 139–44, 156–57; Akiko Motoyoshi, "Sensibility and Synaesthesia: Ibn al-Rūmī's Singing Slave-Girl," *Journal of Arabic Literature* 32 (2001): 1–29, esp. 15.

[44] *Dīwān des Abū Nuwās,* ed. Gregor Schoeler (Stuttgart, 1958–), 4:390.

Her breath stinks like farting,
    or rather as a bundle of garlic.
. . . .
Out of my love for her, I broke wind,
    scaring away even the Byzantine king!
[Ka-annamā nak′hatuhā faswatun
    aw ḥuzmatun min ḥuzami al-thūmi
. . . .
Ḍaraṭtu min ḥubbī lahā ḍarṭatan
    afza'tu minhā malika al-rūmi[45]]

I surely am getting the smell of that fuck.
    Screw that thing before you! It′s the aroma of stew.
[Innī ashummu li-hādhā al-nayki rā'iḥatan
    fa-irhiz qudāmaka hādhā rīḥa sakbāji[46]]

It [i.e., his penis] cuts through the wind of asshole like the edge of a razor,
    screwing the balls, like the head of a spear.
[Ashaqqa li-rīḥi al-ust min ḥaddi shafratin
    wa-anfadha fī al-khaṣyayni min ra'si mizrāqi[47]]

The imageries are quite similar: to liken breaking wind to having bad breath, farting while having sex, etc. Also similar is the use of words such as *faswah, ḍarṭah, rīḥ,* etc. Ibn Dāniyāl, however, adds some new, perhaps more outrageous, twists: the farting described in line 20, for example, involves oral and anal sex performed on men, which is not seen in Abū Nuwās′ quotes. Further, in this regard, one may admit that while Ibn Dāniyāl′s ″farting″ scenes are plainly coarse and scabrous, Abū Nuwās′ descriptions are more subtle, with a nice touch of dry humor and literary elaboration; the smell of ″garlic,″ the ″Byzantine king,″ and ″stew,″ are just a few examples.

Parody of the *Ghazal* Topos: Excrement vs. Sweet Saliva

The combination of excremental and the sexual themes has a long, if not quite respectable, tradition in medieval Arabic literature. Examples of the use of the oral-anal-phallus analogy abound in both the *hijā'* and *mujūn* genres. In the mock

---

[45]Ibid., 2:87.

[46]*Al-Fukāhah,* 23.

[47]Ibid., 39.

ghazal context, it ought to be viewed as an antithesis of the lover′s ″sweet taste.″ Furthermore, the excremental elements, urine and dung, were also closely associated with food consumption in literature.[48] More often, they, and urine in particular (for its ″water″ imagery), have to do with sexual intercourse as well. When Ibn Dāniyāl veers into this verbal orgy, he surely would not miss the chance to give it a shot:

15. Saying—farting *(al-kīfākh)* from his rear,
    his breath filled with fennel—:
16. ″Weigh out a thousand dinars, if you want her,
    though you won′t want her shit *(ba'rah)*!″

. . . .

21. Every adulterer sees in whore′s piss *(bawlat / al-quḥbah)*
    a charm guaranteeing his health.

Abū Nuwās:

If [your] pussy stretches wider, so will the territory of [my] sovereignty.
    In it, my piss should certainly go a long way!
[Fa-in yaku ṭūlu al-baẓr su'dud
    fa-bawlī 'alayhī annahū sa-yaṭūlu[49]]

They end up witnessing wind coming out their assholes,
    whose hair is braided with dried dung beetles.
[Natajū yarawna al-rīḥah min astāhihim
    wa-bi-hā min al-ji'ri al-yabīsi 'iqāṣ[50]]

The originality lies in the two poets′ respective attempts to link excremental movements with many other things. In Abū Nuwās′ case, the oral-anal-phallus analogy is translated into one of piss-sperm-shit. The last couplet cited above also sets out a combination of the two topoi, that is, farting and excrement, that involves both ″smell″ and ″taste.″ Ibn Dāniyāl, on the other hand, has his own idea for pushing the envelope: in line 15, the description of excrement goes beyond the usual sex association, in that he reverses the function of oral and anal in his portrait of a pimp: this time the ″shit″ is coming from the man′s mouth, as he talks

---

[48]The most recent discussion of the topic of food and sex in Arabic literature is found in Geert Jan van Gelder, *God′s Banquet*: *Food in Classical Arabic Literature* (New York, 2000), 3–4, 78–79, 110–11.
[49]*Al-Fukāhah,* 22.
[50]Ibid., 21.

trash, while ″bubbles *(? al-kīfākh),″* supposedly foaming saliva, come from his ass. In a reversed kind of excremental movement, things come from wrong places. The idea of the wrong kind of stuff coming from the wrong place is also entertained in line 21, where a mother′s milk is replaced by a prostitute′s urine.

On account of their direct link to physical acts and bodily discharges, these two topoi have a broader implication for the general cultural concern with ritual purity and purification. In his elegant study of the art of simile in the classical *nasīb,* Michael Sells has noted what he calls ″a dynamic polarity of sexual union and ablution or purification,″[51] and ″the interplay between nature and culture, sense fulfillment and purification,″[52] in the poet′s memory of the beloved gone and happiness lost:

> Not only do the description-of-the-beloved passages present elements that depict, through metonymic association, the lost garden, but they present a series of sense experiences as well. Not all *five senses* are actualized within each depiction of the beloved, but several of them usually are. Mention of the beloved generates a movement from sense to sense of excited rapidity. When this sense of excitement is taken into account, many of the same elements that make up the lost garden can be viewed as part of a performative reenactment of sexual union. Sexual union with the beloved is seldom mentioned and *never described directly;* rather it is intimated by the rapid movement through the sensorium that occurs with mention of her. Key to this series of associations and sensual evocations is the depiction of water that appears at the center of so many of the more erotically charged passages, especially the *dynamic polarity of water as sexual and ablutionary* [italics mine].[53]

What occurs in the description passages of the *nasīb,* as Sells sees it, is a ″four-part movement, from the sense image, through images of purification, of atmospheric ablutions, to a garden scene, to the *ṣaḥw* or awakening from the *dhikr.″*[54] The ″water″ metaphor is thus central in this interaction: it is water that runs from the mouth of the beloved (saliva), and the eyes of the lover (tears), to the lost garden (dew, rains), to purification (water for ablution). The sexual suggestions in the *ghazal*/*nasīb* are, according to Sells, therefore always balanced by the ″language of purification.″ Coming back to the present poem, the imagery

---

[51]″Guises of the *Ghūl,″* 131.
[52]Ibid., 144.
[53]Ibid., 156–57.
[54]Ibid., 140.

of water, too, is central in that *mā'* ″water,″ and lush greenery, in the lost garden, first occur in line 11 (and twice in the shadow play version, lines 10, 11; see Appendix), together with Iblīs′ tears (line 2). The ″water,″ nevertheless, turns bad rapidly as the poem progresses.

The interplay between purity and pollution is also working at another, and more serious, level, for the idea of purity and purification has its deeply-rooted ramifications in the Islamic context: the notion of *ṭahārah,* or ritual purity, is of paramount significance for one′s physical and spiritual well being. ″Purity is half the faith,″ as the Prophet Muḥammad declared. *Ḥadath,* that is, ritual impurity caused by, among other things, sexual intercourse, breaking wind, evacuating urine or feces, or intoxication, is thus to be avoided and cursed.[55] As far as the notion of *ṭahārah* vs. *ḥadath* is concerned, it can be argued that the *ghazal* as a system of lyric expression manages to stay ″clean.″ Activities that frequent the *ghazal* poetry, such as kissing, tender touch, and embracing are not considered of the *ḥadath* type, and bodily discharges, some of which are part of the stock vocabulary, such as the lover′s tears, sweat, saliva, mother′s milk, etc. should be seen as clean as well.

Needless to say, the boundary is violently, and deliberately, crossed in Ibn Dāniyāl′s and Abū Nuwās′ verses cited above. Whereas sexual union (*waṣl, wiṣāl)* is merely alluded to, but never described directly, in the classical *ghazal*, as Sells has convincingly pointed out, an abundance of violations is to be found in its antithesis, the *mujūn*. Here the *ḥadath* acts, such as fornication, intoxication, farting, urinating, etc., are being accompanied by the *najāsāt,* the unclean wet discharges such as urine, sperm, pus, feces, and blood. Iblīs, and the poet, never met a dirty thing they did not like. With these bad behaviors, bad smells, and bad leaks, all hell breaks loose. It is the domain of Iblīs, the lost garden of the Devil. Here sexual suggestions are not balanced by the language of purification, as in the *ghazal* convention, but are further materialized and enhanced by the language of abuse and pollution. Furthermore, ″the water of purification″ is a leitmotif in Arabo-Islamic culture; it also carries an apocalyptic message of redemption, with the miraculous power of curing wounded sinners, including those who lost their sight as punishment.[56] However, this last chance of redemption, by means of ″water of purification,″ is flatly rejected by the wounded sinner, Iblīs, whose escalated swing towards the opposite constitutes a declaration of independence in the face of the religious establishment and authoritarian power. This point was

---

[55]There is a substantial literature on the subject. For more details and bibliography, see ″Ḥadath,″ ″Nadjāsa,″ and ″Ṭahārah,″ in *The Encyclopaedia of Islam*, 2nd edition. My summary here is based on Frederick M. Denny′s synthesis in *An Introduction to Islam* (New York, 1994), 113–18.

[56]See the discussion above, esp. note 12.

surely not lost on Ibn Dāniyāl. This religious context is significant because the motivation of Baybars and Lājīn, and for that matter all other Mamluk sultans, to prohibit vice was largely a political one, in the guise of religion. Their efforts, at least the appearance of them, in enforcing the sharīʻah law would help to establish their puritanical image as warriors for the holy cause and thus the legitimate leaders of the Muslim community.

In general literary terms, if scatology is, by nature, meant to break the rules and codes of ritual purity and purification, then Abū Nuwās′ and Ibn Dāniyāl′s *mujūn*-topoi of farting and excrement have their share in this universal human farce. All together, here the reader runs into a fantasy land ruled by Iblīs, the Devil, where all the sensual extremes are being tested, moving from one sense to another, but in parodic twist: sight (blindness vs. enchanting gaze), smell (farting vs. fragrance), taste (excrement vs. sweetness), touch (rough sex vs. tenderness), and sound (″shriek″ and crying vs. love song and sweet talk). By relentlessly challenging the sense and sensibility of the audiences as they navigate the treacherous path of interplay between *ghazal* and *mujūn,* beauty and ugliness, purity and pollution, the poets′ comic assault on tradition and existing norms is completed.

The assault is also seen on a socio-linguistic level, in that the frequent occurrence of dung, urine, and excrement in poetry is arguably an indication of the poets′ testing of a new poetic vocabulary that would blend the ″high″ and ″low.″ ″These gross vulgarities,″ Jacques Berque writes, ″constitute a poor excuse for an approach to what a ′people′s′ language might be. That they are resorted to indicates *much less a lusty realism than a systematic search for incongruity,* and still more a reaction against the *language′s increasing banality* [italics mine].″[57] Although Berque′s main concern here is the trend of ″new language″ in modern Arabic poetry, it does resonate to echoes in the past, in Abū Nuwās′ and Ibn Dāniyāl′s search for the ″new″ poetic language. But that, of course, is the subject of another study.

CONCLUSION

Ibn Dāniyāl′s *Qaṣīdah* No. 71 combines the force of a manifesto, that deals with the universal theme of sensual freedom versus repression, with the comic relief of a farce, that glorifies all things prohibited through memory. By creating a series of excessively repellent poetic images that amount to parodies of classical and post-classical codes and idioms, the poet triumphed in elevating the art of *mujūn* to a new level. Following his predecessors, especially Abū Nuwās, his central strategy is a constant interplay between the language of purification after erotic suggestions,

[57] *Cultural Expression in Arab Society Today (Langages arabes du présent),* trans. Robert W. Stookey (Austin, 1978), 299.

in the Platonic *ghazal* tradition, and between that of deliberate impurity and pollution, in scatological *mujūn* parodies. The result is a tour de force that is alternately disturbing and entertaining. The present study is by no means a comprehensive treatment of the development of the *mujūn* genre as a whole, but rather sets out to provide some textual evidence, and observations, for further investigation. In this regard, the poem in question shows not only a continuous development of the *mujūn* genre in the post-classical era, but also the new ways to do it. In that sense, to say that Ibn Dāniyāl was working within the Abū Nuwāsian tradition is perhaps an understatement. He is the one to relentlessly extend the limits, and take the genre to extremes. In many ways, Ibn Dāniyāl might lack Abū Nuwās′ elegance and subtlety, and many of his ideas—such as the ″wet dream,″ the night visit by the phantom (a. k. a. Iblīs), the ″vice lists,″ and parodies of the Quranic idioms and the *ghazal* topoi—were obviously inherited from the earlier tradition, including that of Abū Nuwās. Yet his unique style, characterized not only by its excessive aggression and intensity but also its adding new elements—such as Iblīs as ″the one-eyed beloved″—to the formula, sets him apart from many others writing in the genre. In this regard, and as is true in the general history of literature, the ideas might not always be original, but it is the presentation that matters.

APPENDIX: EDITION AND TEXTUAL NOTES

The edition is based on the sole manuscript of al-Ṣafadī´s (d. 1362) *Al-Tadhkirah al-Ṣafadīyah,* vol. 14 (Cairo, Dār al-Kutub, microfilm 1762, ff. 64 recto–65 verso). A slightly different version is to be found in the shadow play *Ṭayf al-Khayāl*.[58] The Arabic letter *dāl,* in the lower apparatus, stands for the *Mukhtār* edited by al-Dulaymī; and *mīm* for the manuscript.

The abbreviations used in the textual notes are:

Dozy = Reinhart Dozy, *Supplément aux dictionnaires arabes* (Leiden, 1927).

Hans Wehr = Hans Wehr, *Arabic-English Dictionary* (Ithaca, 1976).

Hava = J. G. Hava, *Al-Farā'id al-Durrīyah fī al-Lughtayn al-'Arabīyah wa-al-Injlīzīyah* (Beirut, 1915).

K = *Three Shadow Plays by Muḥammad Ibn Dāniyāl,* ed. Paul Kahle (Cambridge, 1992).

Kazimirski = Biberstein Kazimirski, *Dictionnaire arabe-français* (Beirut, 197-).

TEXTUAL NOTES

2. *Maqrūḥah,* lit., ″covered with ulcers″; one MS in K has *maftūḥah*, ″open.″
3. *Yaṣīḥu*, one MS in K has *yaqūlu*, ″he said.″
4. This line perhaps implies that although Iblīs′ followers are few, they represent a large section of the Cairene underworld. Or perhaps it implies that they are so bad that a few are enough.
5. *ʻIlq:* a slang word for ″a sexually accessible boy″; the term is still used in Egypt. See Clifford Bosworth, *The Medieval Islamic Underworld: The Banū Sāsān in Arabic Society and Literature* (Leiden, 1976), 138, 361. I thank Everett Rowson for the reference.

6–7. The order of the two lines is reversed in K.

6. *Kasrah,* lit., ″his eyelid is contracted,″ i.e., ″languid.″ See Lane, *kasara*.
7. For *al-shiʻrah* as ″the hair of the pubes,″ or ″the pubes″ itself, see Lane.
8. *Al-tajmīsh: jammasha* is given in the *Lisān al-ʻArab* as a synonym of *ghāzala,* ″flirt, dally with some one″ (A. F. L. Beeston, *The Epistle on Singing-Girls by Jāḥiẓ,* [Warminster, England, 1980], 59, 65), whereas Hans Wehr has ″to make love, caress, pet.″ From Abū Nuwās′ use it is obvious that *al-tajmīsh* denotes some sex acts but not necessarily intercourse. Beeston thus translates Jāḥiẓ′s phrase *wa-jammashat′hu bi-ʻuḍūḍ tuffāḥihā* as ″[she] teases him with bites of her apples″; see *Epistle*, 33 (translation), 19 (Arabic text). *Naql:* ″sweet fruit,″ specifically the ″munchies″ that were a standard part of a drinking party. I thank Everett Rowson for the reference. *Ḍammahu*: K has *dhāqahu,* ″tasted it,″ with variant of *ḥāzahu,* ″got hold of him.″ *Jawwana,* a standardized version of the Egyptian *gawwin,* ″to cause to go deep or far″ (El-Said Badawi and M. Hinds, *Dictionary of Egyptian Arabic* [Beirut, 1986]), derived from the basic meaning of the word *gaww,* ″inside.″ K has *jawwaza,* that is, sodomy. The metaphor of ″fig″ for ″anus″ is quite common in medieval Arabic literature; see Rowson: ″Two Homoerotic Narratives,″ 176, 189 (note 60).
9. In K, one MS has *ḥubbihi,* ″his love,″ ″his compassion,″ while all the three other have the same *waṣlihi*. This line is perhaps saying that one′s association with Iblīs is priceless for the fun and pleasures that money cannot buy. The significance of the two zodiac signs, Libra *(al-mīzān)* and Venus *(al-zuhrah),* is not clear; for *al-mīzān*, see Paul Kunitzsch, *Untersuchungen zur Sternnomenklatur der araber* (Wiesbaden, 1961), 81; for *al-zuhrah*, see Paul Kunitzsch and Manfred Ullmann, *Die Plejaden in den Vergleichen der arabischen Dichtung* (München, 1992), 109–10. The verse perhaps

means it is appropriate to have Venus (love) and the Balance (weighing out money) in the ascendant with this delectable buyable boy.

10. *Khawd la-hā;* K has *li-ḥusnihā,* "for its beauty," that is, the beauty of the seductress, who, lit., is "a soft girl who has the noonday sun as a co-wife *(ḍarrah),*" that is, she is the principal wife, while the sun has a lower rank in beauty, as merely a co-wife.

10–11. One line is inserted between the two lines in K; it reads: Yaḥmilu (variant: taḥmilu) dhāka al-naqsha min jismihā / mā'u na'īmin qāma bi-al-qudrah. [Cleaning up that tattoo (?) off her body is water of pleasure, overflowing with vigor.]

11. *Mi'ṣamī,* lit., "my wrist," that is, the lovers were released from the seductress, wandering in the fantasy garden of "water and green"; for the implications of "water" and "green" see the discussion in the article. "Green" also hints at hashish; see Guo, "Paradise Lost," 221 (note 9).

12. *Turḍi'uhu baẓrah,* lit., "so [her] clitoris would give him suck."

13. *Shidqihi,* lit., "[through] the corner of his mouth"; K has *famihi,* "his mouth."

14. I read the phrase *mughāliban* as a *ḥāl* clause, modifying the main verb *yasṭū.* The phrase *li-mā* is to be understood here as related to the verbal noun *sawm,* "the going away for or after a thing" (Lane; compare the usage cited by Lane: *khallāhu wa-sawmahu li-mā yurīdu*, "he left him to do as he pleased"). *Jadhr,* the "snatch"; the word also can be understood as "what is to be uprooted," that is, hashish. This line is not in K. This is a difficult line, the reading of which is undertain.

15–16. The two lines are condensed into one in K: Yaqūlu lil-kīfākhi min khalfihi / an (in?) kāna mā yarḍá bi-hā ba'rah [He speaks to the tall woman (?), dragging behind him, although he doesn't care about her dung].

15. All the manuscripts used in *Mukhtār* and K have *al-kīfākh,* except one, which has *al-afqāḥ,* an alternate for the uncertain *kīfākh*. *Afqāḥ* appears to be a plural form for perhaps *fuqqāḥ,* "blossom of plants, tall, handsome woman" (Hava), or *fiqāḥ,* "a wide anus" (Lane, Kazimirski). As for *kīfākh,* according to the *Lisān al-'Arab* the root *k-f-kh* has the basic meaning of *ḍaraba,* "to strike, to squeeze (?)"; thus *kafkhah* means *al-zubdah al-mujatama'ah al-bayḍā',* "the foam, or cream, on top of the butter," which is considered its best part *(Lisān al-'Arab),* or "Écume abondante" (Kazimirski). There is also the possibility of a corrupt spelling of *q-f-ḥ,* thus *qafīḥah,* "cream upon which milk is added" (Hava), or *q-f-kh,* thus *qufākh,* which is similar to *k-f-kh*. I read the rest of the line, after *wa-al-kīfākh* . . . , as a *ḥāl* clause, describing the circumstances under which the pimp was speaking. *Shamrah,* "fennel," perhaps alludes to hashish.

16. *Zin*, lit., "weigh out!"

17. *Fawqahu*: one MS in K has *dabba fī,* ″(worms) crawl in,″ perhaps as in ″*white* sperms, like worms, crawling around the *red* makeup (or blood?) on her cheeks,″ or the other way around, as in ″red tongue, like a worm, crawling around white cheeks.″
18. K has a totally different line: Yā ayyuhā al-nāsu (variant: yā ma'shara al-nās) ighnamū waṣlahā / lā tatrukū al-nayka 'alá fashrah [O men, seize the opportunity to screw her! Don′t trade a real fuck for cheap talk!] *Dhī saḥq al-wafā'*, lit., ″those who wear the old garments of chivalrous loyalty (?)″; for *saḥq,* ″an old and worn-out garment,″ see Lane. Note the similar imagery of worn-out cloth *(nashrah)* in the next hemistich. *Al-qaṣf:* the fuller version of the expression is *dhū al-qaṣf,* ″folks of carousal, revelry,″ which also appears in Ibn Dāniyāl′s *Qaṣīdah* No. 69 (line 6); see Guo, ″Paradise Lost,″ 221, 232. The rendering of this verse is uncertain.
19. *Samīṭ al-laḥm,* lit., ″a meat dish.″ *Sufrah,* ″tablecloth,″ also means ″anus″ in modern Egyptian (Badawi and Hinds). I thank Everett Rowson for the reference.
20. *In washwashat fī wajhihi faswatun*; K has *in nasamat fī wajhihi ḍarṭatun.*
21. The first letter of the last word is erased in the manuscript, I read the word as *'ishrah;* K has *nushrah,* which does not make sense to me.
22. *'Udhrah*; an ancient Arabian tribe famous for its folks′ platonic love.
23. *Saḥḥāqah*: K has *saḥḥātah,* the meaning of which is unclear.
24. K has slightly different wording: Wa-kullu khammārin 'alá 'unqihi / ziqqun wa-fī 'ātiqihi zukrah.
26. K has slightly different wording: Wa-min banī ḥāmin akhū mizrah / qad 'akkarahu al-waqtu lahū mizrah (variant: ṣafā lahū *s-n-d [sh-d-d]* wa-lahū mizrah). *Al-mizrah,* according to al-Dulaymī, means *manqū' al-dhurah* (*Mukhtār,* 120 [note 356]); since *naqī'* is a kind of ″juice obtained from dried fruits soaked in water″ (Hans Wehr), *manqū' al-dhurah* could probably be some kind of juice obtained from millet soaked in water.
27. *Baghghā'*, an energetic form of *bighā'*, ″passive prostitution,″ that is, a male prostitute who is penetrated; see Rowson, ″Medieval Arabic Vice Lists,″ 54, 64–65. Both *bighā'* and *ubnah* are listed by al-Jurjānī in the category of ″passive male homosexuality.″ *Mubādil*, derived from *bidāl,* namely, ″taking turns at the active role in homosexual intercourse″; see Rowson, ″Medieval Arabic Vice Lists,″ 66–67. *Abghá* is a superlative perhaps punning on *bāghin,* ″striving, oppressive,″ and *baghī*, ″whore.″
28. *Mukhtār* has *'umrah*, but the word may be read *'amrah*, ″turban,″ as well.

28–29. In K, two more lines are inserted between these two:
Wa-kullu shālūṣi qimārin wa-qad / ajāda bi-al-'ufqi la-hū qamrah
Wa-kullu liṣṣin wa-'ayyārin / wa-baṭṭāṭin wa-fī tubbānihi ṣurrah

[Every gambler who is good at breaking wind (while having sex) has his target to shoot at (?).
Every thief, bum, and (wine?) bottle maker, a money bag hangs in his pants.]
The first line is somewhat similar to line 40 in the *Mukhtār* version. The meaning of *qamrah,* so vocalized in K, is unclear; Dozy has "coup de flèche qui atteint presque le but." *Al-'ufq*, vocalized so in K, is also unclear; for *al-'afq*, see note to line 40 below.

31. *Mā*, K has *man,* "who caused . . . "; and *man turá*, "who do you think . . ." *Dhawī shirrah,* K has *dhawī khibrah,* "savvy, seasoned."
32. *Mānī,* "a Manichaean" (the common spelling is *mānawī*); this reading is given in *Mukhtār;* the word appears in the manuscript, without dots, as either *bānī* (?), or *bābī* (?), likely *bi-abī,* that is, "O you for whom I would ransom my father . . ."; one MS in K has *ṣāḥibī,* "my friend," while the other three have *bābī*. *Kuss* (*u*)*kht*, lit., "sister's cunt," as in, "fuck your sister!"
33. *Qallat*: K has *fullat* (variant: *qallat*). The second hemistich, lit., "I no longer have commanding power *(amr)* nor authority *(imrah)*."
34. *Yaltaqī* in the manuscript; but the *Mukhtār* gives *yaktafī,* "is satisfied with . . ."; K has *yaltaqī* as well.
35. *Ṣufr,* "yellow": under Mamluk ruling, Jews were forced to wear yellow turbans in public, and their shops were supposed to hang a yellow sign to distinguish themselves from the businesses run by Muslims. It could also be a pun on *ṣifr* (empty, has been stripped bare) and *ṣufr* (he is so humiliated that his face has turned yellow).
36. *Qalī* (K has *qallā,* a verb) *al-fār*, lit., " he who fries rat," or "fried rat"; for the possible meaning of *al-fār* as the name of some hard liquor, see Guo, "Paradise Lost," 234 (line 14, *ṭājinat al-fār,* "Hot Pot of Rat"). *Fī ḥasrah*: K has *fī fāqatin,* "in poverty."
37. *Yujriḥa* in the manuscript; *Mukhtār* and K have *yakhruja,* "is about to go out . . ."
38. K has a different first hemistich: Fa-lā tasalnī 'an banāti al-khaṭā [Don't even bother to ask me about the misguided girls . . .].
40. This line is likely misplaced. The K version is closer to the right context; it has a different line: Wa-kullu qiṣṣīfin yará sakrata / al-mawti wa-lā talqāhu fī sakrah [Every reveler would see the agony of death, which you may not find in drunkenness]. *Sākūs qimār*: al-Dulaymī suggests the meaning of the word *sākūs* to be *al-mudmin,* "addict" (*Mukhtār,* 120 [note 359]). I suspect it was perhaps a misspelling of *sālūs;* for *sālūs,* see Bosworth, *The Medieval Islamic Underworld,* 311 *(sālūs, shālūsah)*. K has *shālūṣ. Al-'afq*

bi-hā: the reading is uncertain; the basic meaning of the verb root *ʻ-f-q* is ″to come and go often,″ hence the current translation; however, according to the *Lisān al-ʻArab*, the verb *ʻafaqa* means *ḍaraṭa*, ″fart,″ or *al-ḍarṭah al-khafīyah*, ″breaking soundless wind″; cf. the use cited in the *Lisān: ʻafaqa bi-hā wa-khabaja bi-hā idhā ḍaraṭa*, ″sodomize her while breaking wind.″ If that is the case, then we have one more example of the ″farting vs. fragrant smell″ topos.

41. Both *Mukhtār* and K have *aghwī wa-aʻwī* (″howl,″ but it can also mean something like ″lead into *fitnah*.″) ″To comb love-lock and forelock″ perhaps strikes an image of Iblīs constantly grabbing his hair, or his followers theirs, in desperation and despair, somehow an equivalent of ″lending a shoulder for someone to cry on.″ It may also simply mean that Iblīs helps his ″clients″ to get well-groomed and ready to go.

45. *Lā ajrah,* lit., ″without fee, or charge.″

47. *Taskuna:* K has *tadhkura,* ″[don′t] even mention . . . .″ ″*Miṣr,* ″a country,″ a pun on ″Egypt″ or ″Cairo″ *(miṣr)* and a ″country″ *(miṣr)*.

48–50. K has a different ending:

Iyyāka an tadhkura miṣra wa-an / taqrubahā in kunta dhā khibrah
Fa-inna fīhā malika qāsiṭin / lā bariḥat ayyāmuhū naṣrah
Bāta al-qarīru al-ṭarfi fī baladatin / amnuhū aʻlá min al-nashrah
[Don′t you dare mention a place called Egypt, let alone come close to it, even if you know it well.
In that country, there is a just ruler, whose reign continues to gain support.
A gratified man will rest assured that in such a place, his safety is loftier (in status) than a royal decree!]

48. *Mubārak al-ṭalʻah*, that is, a handsome horse.

50. For the torture of *al-tajrīs,* see Guo, ″Paradise Lost,″ 221. *Al-durrah*, ″big-headed whip,″ *Mukhtār*, 121 (note 360).

Living Love: The Mystical Writings of ʿĀʾishah al-Bāʿūnīyah (d. 922/1516)

The summer of 922/1516 was a difficult time for Qānṣūh al-Ghawrī. The Mamluk sultan was in tense negotiations with Sultan Selim, his Ottoman rival, and fearing war, al-Ghawrī mustered an army at Aleppo. There, in the months of Jumādá II and Rajab/July and August, al-Ghawrī prepared his troops and ordered prayers recited on their behalf day and night. The sultan was reclusive and rarely appeared in public save for urgent military matters.[1] Yet, Qānṣūh al-Ghawrī took time to meet with an elderly woman. Accompanied by al-Badr al-Suyūfī (ca. 850–925/1446–1519), an accomplished religious scholar, his student al-Shams al-Safīrī (877–956/1472–1549), and several others, ʿĀʾishah al-Bāʿūnīyah was granted an audience with the sultan. Shortly thereafter, ʿĀʾishah returned home to Damascus, while al-Ghawrī left Aleppo for his fateful day at Marj Dābiq.[2]

I

ʿĀʾishah's meeting with the Mamluk sultan was an extraordinary event befitting her exceptional life. She was born in Damascus near the middle of the ninth/fifteenth century into a family of respected religious scholars and litterateurs. Originating in the village of al-Bāʿūn in southern Syria, the Bāʿūnī family served the Mamluks for several generations, holding a number of important religious and legal positions throughout the empire.[3] ʿĀʾishah's grandfather, Aḥmad ibn Nāṣir (751–816/1350–1413), was at various times the Friday preacher at the al-Aqṣá Mosque in Jerusalem, the Friday preacher at the Umayyad Mosque in Damascus, the Shafiʿi judge of Damascus and, for two months, of Egypt, as well. During the reign of Sultan Barqūq (r. 784–801/1382–99), Aḥmad was granted the eminent rank of *shaykh al-shuyūkh,* but he fell from royal grace for refusing to lend the sultan funds from religious endowments. Aḥmad wrote a commentary on the Quran and a poem on proper religious belief, and was considered an excellent preacher. Likewise, his son Ibrāhīm (ca. 777–870/1375–1464) served as the Friday

[3]Concerning al-Bāʿūn, see Ḥasan Rabābiʿah, *ʿĀʾishah al-Bāʿūnīyah: Shāʿirah* (Irbid, 1997), 13–31.

preacher at the Umayyad Mosque, the Friday preacher of the al-Aqṣá Mosque, and supervisor of the Muslim holy places of Jerusalem and Hebron *(nāẓir al-ḥaramayn).* His fine literary abilities won him the title "Master of Literature in the Land of Syria." Aḥmad's second son, Muḥammad (780–871/1378–1466), was also the Friday preacher at the Umayyad Mosque, as well as a minor poet and historian.[4]

Aḥmad's third son Yūsuf (805–80/1402–75) was ʿĀʾishah's father. He received a religious and legal education similar to that of his brothers, and was appointed Shafiʿi judge in Ṣafad, Tripoli, Aleppo, and, finally, in Damascus, where he also oversaw the reorganization and expansion of the hospital of Nūr al-Dīn. Yūsuf wrote both prose and poetry, and was regarded as an honest and pious man, and among the best judges to have served in Damascus. Shortly before his death in 880/1475, he completed the pilgrimage to Mecca with his children and other family members, ʿĀʾishah presumably among them.[5] In addition to his daughter ʿĀʾishah, Yūsuf had at least five sons, the most prominent of whom was probably Muḥammad (857–916/1453–1510), a poet, historian, and legal scholar who served for a time as the Shafiʿi judge of Aleppo.[6]

Nevertheless, surpassing them all in talent, erudition, and fame was their sister ʿĀʾishah. Several contemporaries left accounts of her, including the Damascene historian Muḥammad Ibn Ṭūlūn (884–935/1479–1529), and the necrologist of Aleppo, Muḥammad ibn Ibrāhīm Ibn al-Ḥanbalī al-Ḥalabī (908–71/1502–63). Drawing extensively from both sources are later notices by Muḥammad al-Ghazzī (977–1061/1570–1651), and ʿAbd al-Ḥayy Ibn al-ʿImād (1032–89/1623–79).[7]

Unfortunately, none of them mentions when ʻĀʼishah was born, though Ibn Ṭūlūn, who knew her, quoted verses that ʻĀʼishah recited to her uncle Ibrāhīm, who died in 870/1464. Perhaps ʻĀʼishah was ten at that time, and so born around 860/1455.[8] For she was a precocious child, and in one of her writings, ʻĀʼishah stated that she had memorized the entire Quran by the age of eight.[9] ʻĀʼishah went on to study poetry, hadith, and jurisprudence, probably with her father and her uncle Ibrāhīm, among others.[10]

ʻĀʼishah also specialized in the study and practice of Islamic mysticism, which was important to the entire family. Her great uncle Ismāʻīl had been a Sufi ascetic; her uncle Muḥammad composed a devotional poem of over a thousand verses on the prophet Muḥammad, while her uncle Ibrāhīm had been the first director of the al-Bāsiṭīyah *khānqāh* in Damascus. Moreover, many members of the Bāʻūnī family, including ʻĀʼishah′s father, were buried in a family plot adjacent to the *zāwiyah* of the Sufi master Abū Bakr ibn Dāwūd (d. 806/1403). This strongly suggests their attachment to this Sufi and his descendents, who were affiliated with the Urmawī branch of the Qādirīyah order.[11]

ʻĀʼishah′s own affection for the Qādirīyah is evident in many of her writings, which include praise for the order′s progenitor ʻAbd al-Qādir al-Jīlānī (470–561/1078–1166).[12] She was also influenced by ʻAbd Allāh al-Anṣārī (396–481/1005–89), composing a verse rendition of his popular Sufi guide, the *Manāzil al-Sāʼirīn.*[13] In addition, ʻĀʼishah read and made copies of Muḥyī al-Dīn al-Nawawī′s (631–76/1233–77) book on prayer, the *Kitāb al-Adhkār,*[14] and ʻAlī ibn Muḥammad al-Jurjānī′s (740–816/1339–1413) Sufi lexicon, the *Kitāb al-Taʻrīfāt*.[15] Further, she frequently praised her two spiritual masters, Jamāl al-Dīn Ismāʻīl al-Ḥawwārī (fl. late ninth/fifteenth century), and his *khalīfah,* or successor,

Muḥyī al-Dīn Yaḥyá al-Urmawī (fl. ninth-tenth/fifteenth-sixteenth centuries). ʻĀʼishah states:

> My education and development, my spiritual effacement and purification, occurred by the helping hand of the sultan of the saints of his time, the crown of the pure friends of his age, the beauty of truth and religion, the venerable master, father of the spiritual axes, the axis of existence, Ismāʻīl al-Ḥawwārī—may God sanctify his heart's secret and be satisfied with him—and, then, by the helping hand of his successor in spiritual states and stations, and in spiritual proximity and union, Muḥyī al-Dīn Yaḥyá al-Urmawī—may God continue to spread his ever-growing spiritual blessings throughout his lifetime, and join us every moment to his blessings and succor.[16]

The relationship between ʻĀʼishah and Ismāʻīl al-Ḥawwārī appears to have been particularly close, for in several of her works ʻĀʼishah described herself as "related to Yūsuf ibn Aḥmad al-Bāʻūnī on earth, and in truth to the axis, the unique and universal helper, Jamāl al-Dīn Ismāʻīl al-Ḥawwārī."[17]

As a Qādirī Sufi and a woman, ʻĀʼishah was expected to marry and have children. The Bāʻūnīs were a prominent family of the al-Ṣāliḥīyah district of Damascus, and several Bāʻūnī daughters, including ʻĀʼishah, married members of another distinguished family from the area. Known as Ibn Naqīb al-Ashrāf, they were descendents of the prophet Muḥammad through his grandson al-Ḥusayn. ʻĀʼishah married Aḥmad ibn Muḥammad Ibn Naqīb al-Ashrāf (d. 909/1503), about whom we know little, while his more famous brother, the religious scholar and teacher ʻAlāʼ al-Dīn ʻAlī (852–910/1448–1504), married one of ʻĀʼishah's

[16]Ibn al-Ḥanbalī al-Ḥalabī, *Durr al-Ḥabab,* 1:2:1063–64; also see Ibn al-Mullā al-Ḥaṣkafī, *Mutʻat al-Adhhān,* 2:878; al-Ghazzī, *Al-Kawākib,* 1:287–92; al-ʻAlāwī, *ʻĀʼishah al-Bāʻūnīyah,* 18–19, 124–25; and Rabābiʻah, *ʻĀʼishah al-Bāʻūnīyah: Shāʻirah,* 162–67.

[17]ʻĀʼishah al-Bāʻūnīyah, "Dīwān ʻĀʼishah al-Bāʻūnīyah (=Fayḍ al-Faḍl)," Dār al-Kutub al-Miṣrīyah, Cairo, microfilm 29322 of MS 431 (Shiʻr Taymūr), 4; her "Durar al-Ghāʼiṣ fī Baḥr al-Muʻjizāt wa-al-Khaṣāʼiṣ," Dār al-Kutub al-Miṣrīyah, Cairo, microfilm 34329 of MS 558 (ḥadīth), fol. 2a; and her "Al-Mawrid al-Ahná," ed. al-ʻAlāwī, *ʻĀʼishah al-Bāʻūnīyah,* 124–25. Sources differ over Jamāl al-Dīn Ismāʻīl's place of origin. Ibn Ṭūlūn called him "al-Ḥawrānī" from a village in the districts of Damascus, while Ibn al-Ḥanbalī al-Ḥalabī, al-Ghazzī, and Ibn al-ʻImād called him "al-Khwārazmī;" Ibn al-Mullā al-Ḥaṣkafī, *Mutʻat al-Adhhān,* 2:878; Ibn al-Ḥanbalī al-Ḥalabī, *Durr al-Ḥabab,* 1:2:1063; al-Ghazzī, *Al-Kawākib,* 1:288, and Ibn al-ʻImād, *Shadharāt,* 8:111. However, surviving manuscripts of ʻĀʼishah's works clearly state that Jamāl al-Dīn Ismāʻīl was "from Ḥawwār," a village near Aleppo. Also see Mājid al-Dhahabī and Ṣalāḥ al-Khiyamī, "Dīwān ʻĀʼishah al-Bāʻūnīyah," *Turāth al-ʻArabī* (Damascus) 4 (1981): 110–21, esp. 112, and Yāqūt ibn ʻAbd Allāh al-Ḥamawī, *Muʻjam al-Buldān* (Beirut, 1979), 2:315, 317.

older nieces.[18] ʻĀ'ishah had at least two children, including a daughter, Barakah (b. 899/1491), and a son, ʻAbd al-Wahhāb (b. 897/1489).[19]

Together with ʻAbd al-Wahhāb, ʻĀ'ishah set out for Cairo in 919/1513. By this time ʻĀ'ishah's husband and brothers were dead, and so she apparently took it upon herself to travel to Cairo in order to secure a job for her son in the Mamluk administration.[20] Unfortunately, during their journey they were robbed near the Egyptian city of Bilbīs, and ʻĀ'ishah lost all of her writings. When they finally arrived in Cairo, ʻĀ'ishah requested the assistance of Maḥmūd ibn Muḥammad ibn Ajā (854–925/1450–1519), the confidential secretary and foreign minister of the sultan al-Ghawrī. Ibn Ajā treated ʻĀ'ishah like an old friend to the extent of lodging her in his own harem and eventually employing her son in the chancery.[21] Why Ibn Ajā was so generous to ʻĀ'ishah and her son is open to speculation, though Ibn Ajā had previous close relations with at least one member of the Ibn Naqīb al-Ashrāf family. In addition, Ibn Ajā, who was originally from Aleppo, may have known ʻĀ'ishah's brother Muḥammad, who had been a Shafiʻi judge there, or her Sufi shaykh, Jamāl al-Dīn Ismāʻīl, who was also from the region. It may be, too, that ʻĀ'ishah's poetic reputation had preceded her to Cairo, attracting the attention of Ibn Ajā, to whom she would dedicate several glowing panegyrics.[22]

Whatever the case, Ibn Ajā gave ʻĀ'ishah an apartment next to his wife, Sitt al-Ḥalab (d. 933/1526). Sitt al-Ḥalab was the daughter of an important Mamluk amir and official of Aleppo, and after her father's death, she became the overseer of the substantial religious endowments that he had created during his lifetime.[23] Sitt al-Ḥalab then appears to have conspired with Ibn Ajā to divorce her first

[18]Ibn al-Mullā al-Ḥaṣkafī, *Mutʻat al-Adhhān,* 1:157, 483–84, 518; 2:716–17, 878.

[19]In comments at the end of one of her works, ʻĀ'ishah names her husband, her two children, the dates of her children's births, and makes a few comments on the difficulty of receiving the stipend owed to her son as a descendent of the Prophet Muḥammad; see her "Al-Mawrid al-Ahná fī al-Mawlid al-Asná," Dār al-Kutub al-Miṣrīyah, Cairo, MS 639 (Shiʻr Taymūr), 355–56, quoted in Rabābiʻah, *ʻĀ'ishah al-Bāʻūnīyah: Shāʻirah,* 46–47; and also see ʻAbd Allāh Mukhliṣ, "ʻĀ'ishah al-Bāʻūnīyah," *Majallat al-Majmaʻ al-ʻIlmī* (Damascus) 16 no. 2 (1941): 66–72, esp. 69. Ibn al-ʻImād (*Shadharāt,* 8:132) following al-Ghazzī (*Al-Kawākib,* 1:257) referred to ʻAbd al-Wahhāb's mother as "Zaynab bint al-Bāʻūnī." But I believe, as does Rabābiʻah, that ʻĀ'ishah is meant, due to the time and circumstances of ʻAbd al-Wahhāb's stay in Cairo as discussed below.

[20]ʻĀ'ishah may also have been attempting to secure her son's stipend; see n. 19; Rabābiʻah, *ʻĀ'ishah al-Bāʻūnīyah: Shāʻirah,* 47–52, and ʻUmar Farrūkh, *Tārīkh al-Adab al-ʻArabī* , 5th ed. (Beirut, 1984), 3:926–27.

[22]Ibn al-Ḥanbalī al-Ḥalabī, *Durr al-Ḥabab,* 1:1:1064; 2:2:456–60; also see Muḥammad Ibn Ṭūlūn, *Mufākahat al-Khillān fī Ḥawādith al-Zamān,* ed. Muḥammad Muṣṭafá (Cairo, 1962), 1:315; al-Ghazzī, *Al-Kawākib,* 1:101; and Rabābiʻah, *ʻĀ'ishah al-Bāʻūnīyah: Shāʻirah,* 50–52, 250–51.

[23]Ibn al-Ḥanbalī al-Ḥalabī, *Durr al-Ḥabab,* 1:2:575–78, 884–85, and al-Sakhāwī, *Al-Ḍaw',* 5:125.

husband, after which she married Ibn Ajā. No doubt aided by Sitt al-Ḥalab's vast wealth, Ibn Ajā became the Hanafi judge of Aleppo in 890/1485 and continued his rise to power until Qānṣūh al-Ghawrī appointed him confidential secretary and foreign minister in 906/1500.[24] Though frequently in poor health, Ibn Ajā held these important positions until the end of the Mamluk dynasty, as he enjoyed the high esteem and friendship of al-Ghawrī. Ibn Ajā threw lavish banquets for his sultan, who reciprocated with expensive gifts, and Sitt al-Ḥalab, too, had elaborate meals prepared for al-Ghawrī and his entourage when the sultan came to Ibn Ajā's residence to visit his ailing minister. Not surprisingly, Sitt al-Ḥalab was on friendly terms with al-Ghawrī's wife, the Circassian princess Jān-i Sukkar, whom she met at monthly soirees.[25]

Perhaps ‘Ā’ishah attended some of these sessions and met the princess, for she certainly circulated among Cairo's elite. ‘Ā’ishah studied and shared views with a number of the finest scholars of the time, who authorized her to teach, and give legal opinions of her own. Ibn Ajā also introduced her to the noted litterateur and religious scholar ‘Abd al-Raḥmān al-‘Abbāsī (867–963/1463–1557), with whom she exchanged a number of friendly and witty poems.[26] ‘Ā’ishah stayed in Cairo for several years enjoying Ibn Ajā's patronage, and she may not have left Cairo until 922/1516, when her son ‘Abd al-Wahhāb, then an assistant secretary, accompanied Ibn Ajā to Aleppo, where ‘Ā’ishah met the sultan.[27] Perhaps Ibn Ajā suggested the royal audience to al-Ghawrī, whose love of poetry is well known.[28] But the sultan may have met with ‘Ā’ishah to seek her blessings, as well. For in this time of crisis, al-Ghawrī was also gathering his spiritual forces for the days and battle ahead, and it is quite apparent from biographies of ‘Ā’ishah and from her own comments in her writings that she was highly regarded as a pious woman and Sufi master.[29]

[28]Ibn Iyās, *Badā'ī‘,* 5:89, and see Petry, *Twilight,* 119–22.

[29]‘Ā'ishah's biographers refer to her variously as "the intelligent, knowledgeable, and pious shaykhah, poet, litterateur and Sufi, one of the unique people of all time, and a rarity of the ages." Also see Rabābi‘ah, *‘Ā'ishah al-Bā‘ūnīyah: Shā‘irah,* 220–22; Th. Emil Homerin, "Saving Muslim Souls: The *Khānqāh* and the Sufi Duty in Mamluk Lands," *Mamlūk Studies Review* 3 (1999): 59–83, esp. 62–63; and Petry, *Twilight,* 224–25, who describes al-Ghawrī's invocations for divine aid on the battlefield of Marj Dābiq.

II

Indeed, by any standard, ʻĀʼishah′s religious writings were extensive, but for a premodern woman, they were simply extraordinary. While a number of women were respected scholars and teachers in Mamluk domains, they rarely composed works of their own.[30] ʻĀʼishah, however, was a prolific author of both religious prose and poetry, and she probably wrote more Arabic works than any other woman prior to the twentieth century. In addition to copying earlier religious works, including al-Nawawī′s *Kitāb al-Adhkār,* and al-Jurjānī′s *Kitāb al-Taʻrīfāt,* ʻĀʼishah composed verse abridgements of Muḥammad al-Sakhāwī′s (d. 902/1497) *Al-Qawl al-Badīʻ fī Ṣalāt ʻalá al-Ḥabīb al-Shafīʻ,*[31] and *Al-Muʻjizāt wa-al-Khaṣāʼiṣ al-Nabawīyah* by Jalāl al-Dīn al-Suyūṭī (d. 911/1505).[32] Both were devotional works in praise of the prophet Muḥammad, and she also composed a panegyric on Muḥammad entitled *Fayḍ al-Wafāʼ fī Asmāʼ al-Muṣṭafá,* and several similar works combining prose and poetry, including the *Madad al-Wudūd fī Mawlid al-Maḥmūd, Al-Fatḥ al-Qarīb fī Miʻrāj al-Ḥabīb,* and *Al-Mawrid al-Ahná fī al-Mawlid al-Asná*.[33] ʻĀʼishah also wrote a number of works on Sufism, including her verse abridgement of al-Anṣārī′s *Manāzil al-Sāʼirīn,*[34] a spiritual guide entitled *Al-Muntakhab fī Uṣūl al-Rutab,*[35] a work entitled *Malāmiḥ al-Sharīfah min Āthār al-Laṭīfah,* an ode on mystical recitation and prayer called *Tashrīf al-Fikr fī Naẓm Fawāʼid al-Dhikr,* and two volumes of mystical and devotional poetry, *Al-Fatḥ al-Ḥaqqī min Fayḥ al-Talaqqī,* and her *Fayḍ al-Faḍl wa-Jamʻ al-Shaml*.[36]

Among ʻĀʼishah′s favorite poets was Muḥammad al-Buṣīrī (d. 694/1295), and she incorporated his famous panegyric to Muḥammad, *Al-Burdah,* into a *takhmīs,* which was among the dozen works stolen from her in 919/1513 on the road to

[36]ʻĀʼishah al-Bāʻūnīyah, ″Fayḍ al-Faḍl,″ 219, 297, and Kātib Çelebi, *Kashf al-Ẓunūn,* 2:1232, 1813.

Cairo. Though devastated by this loss, ‘Ā’ishah set to work composing a second *takhmīs* on *Al-Burdah,* and she collected it in a volume together with five additional odes in praise of the Prophet which she completed during her stay in Cairo.[37] This collection includes her most famous poem, the *Fatḥ al-Mubīn fī Madḥ al-Amīn* (The clear inspiration in praise of the trusted prophet), which consists of 130 verses, each containing an elegant example of a rhetorical device (*badī‘;* e.g., paronomasia, antithesis, etc.), while lauding an attribute or action of Muḥammad. This work and ‘Ā’ishah′s commentary on it reveal her refined poetic skills and extensive knowledge of Arabic language and literature, and she referred to many of her literary predecessors including al-Buḥtarī (d. 284/897), al-Mutanabbī (d. 354/965), al-Ma‘arrī (d. 449/1057), and Ibn Abī Iṣba‘ (d. 654/1256). Further, ‘Ā’ishah consciously patterned her *Fatḥ al-Mubīn* on earlier *badī‘īyah* poems praising the Prophet by Ṣafī al-Dīn al-Ḥillī (d. 749/1349) and Abū Bakr Ibn Ḥijjah al-Ḥamawī (d. 838/1434); the poetic influences of al-Buṣīrī and his literary forefather, ‘Umar Ibn al-Fāriḍ (d. 632/1235), are evident as well.[38]

But ‘Ā’ishah′s praise of the prophet Muḥammad was more than a rhetorical undertaking, as she noted in her introduction to her second *takhmīs* on *Al-Burdah,* entitled *Al-Qawl al-Ṣaḥīḥ fī Takhmīs Burdat al-Madīḥ:*

> Praising the noble Prophet is a distinguishing feature of the pious and a sign of those who are successful. Those who desire the best, desire to praise him, while the pure of heart praise him without end, for this is among the best ways to achieve success and a means for doubling rewards![39]

Further, in many poems, ‘Ā’ishah extolled the spiritual and physical benefits of such pious praise:

> Praise of God′s Prophet moves the soul;
> it drives away doubt, worries, and grief.

---

[37]‘Ā’ishah al-Bā‘ūnīyah, ″Fayḍ al-Faḍl,″ 219, and al-Dhahabī and al-Khiyamī, ″Dīwān ‘Ā’ishah al-Bā‘ūnīyah,″ 112–13, which also contains a description of this collection. A *takhmīs* is the expansion of an earlier poem by adding three stanzas in elaboration and/or commentary to each verse (two stanzas) of the original poem (= 5 stanzas = *takhmīs*); see W. P. Heinrichs, ″Allusion and Intertextuality,″ in Julie Scott Meisami and Paul Starkey, *Encyclopedia of Arabic Literature* (London, 1998), 1:82–83, and Rabābi‘ah, *‘Ā’ishah al-Bā‘ūnīyah: Shā‘irah,* 123–38.

[38]Al-Dhahabī and al-Khiyamī, ″Dīwān ‘Ā’ishah al-Bā‘ūnīyah,″ 113–15; al-‘Alāwī, *‘Ā’ishah al-Bā‘ūnīyah,* 44–47, 185–91; and Rabābi‘ah, *‘Ā’ishah al-Bā‘ūnīyah: Shā‘irah,* 56, who notes that ‘Ā’ishah cites at least fifty authors and poets in her commentary. Also see in this issue, G. van Gelder, ″Poetry for Easy Listening: *Insijām* and Related Concepts in Ibn Ḥijjah′s *Khizānat al-Adab*.

[39]Al-Dhahabī and al-Khiyamī, ″Dīwān ‘Ā’ishah al-Bā‘ūnīyah,″ 112, and al-‘Alāwī, *‘Ā’ishah al-Bā‘ūnīyah,* 44–47.

Spirits find rest, eyes cry in delight,
and bodies dance—you can′t hold them back![40]

In fact, ʻĀ'ishah′s own devotion to the Prophet was probably strengthened by her vision of him during her stay in Mecca. Though she does not relate the date of the event, it probably occurred around 880/1475 when ʻĀ'ishah went on pilgrimage with her father.

> God, may He be praised, granted me a vision of the Messenger when I was residing in holy Mecca. An anxiety had overcome me by the will of God most high, and so I wanted to go to the holy sanctuary. It was Friday night, and I reclined on a couch on an enclosed veranda overlooking the holy Kaʻbah and the sacred precinct. It so happened that one of the men there was reading a *mawlid* of God′s Messenger, and voices arose with blessings upon the Prophet. Then, I could not believe my eyes, for it was as if I was standing among a group of women. Someone said: ″Kiss the Prophet!″ and a dread came over me that made me swoon until the Prophet passed before me. Then I sought his intercession and, with a stammering tongue, I said to God′s Messenger, ″O my master, I ask you for intercession!″ Then I heard him say calmly and deliberately, ″I am the intercessor on the Judgment Day!″[41]

For ʻĀ'ishah, then, praising the Prophet was akin to a religious vocation, and her devotion to this task is seen clearly in her popular prose work *Al-Mawrid al-Ahná fī al-Mawlid al-Asná* (The most wholesome source on the birth of the most brilliant prophet). In this reverential account of Muḥammad′s birth and call to prophecy, ʻĀ'ishah′s mystical tendencies are clear from the outset as she begins with a discussion of *al-Nūr al-Muḥammadī,* or Muhammadan Light, a type of Muslim logos principle. God was a hidden treasure who loved to be known, and so the Light came forth from His knowledge as the first emanation. With the Light, God produced the Pen and Tablet as instruments to bring about creation, and He then made the Light shine in Adam and the other prophets, culminating in Muḥammad, the most beloved of God and humanity′s intercessor on the Judgment Day.[42] After

[40]ʻĀ'ishah al-Bāʻūnīyah, ″Fayḍ al-Faḍl,″ 26.
[41]ʻĀ'ishah al-Bāʻūnīyah, ″Al-Mawrid al-Ahná,″ 104–5, and quoted in Rabābiʻah, *ʻĀ'ishah al-Bāʻūnīyah: Shāʻirah,* 53.
[42]ʻĀ'ishah al-Bāʻūnīyah, ″Al-Mawrid al-Ahná,″ ed. al-ʻAlāwī, *ʻĀ'ishah al-Bāʻūnīyah,* 117–37; also see Rabābiʻah, *ʻĀ'ishah al-Bāʻūnīyah: Shāʻirah,* 141–57. Concerning *al-Nūr al-Muḥammadī,* or the Muḥammadan Light, see Annemarie Schimmel, *And Muhammad is His Messenger* (Chapel Hill, NC, 1985), 123–43.

this introduction, ʻĀʼishah recounts the noble lineage of the earthly Muḥammad from his ancestor Muḍar, the miracles surrounding his birth and early childhood, his travels and extraordinary encounters in Syria, and his marriage to the faithful Khadījah. ʻĀʼishah then celebrates more of the Prophet's miracles, praises his fine moral and physical attributes, and concludes with a brief account of his death.[43] *Al-Mawrid al-Ahná* closely follows the Arabic *mawlid* genre in that ʻĀʼishah selected and summarized events detailed in the *sīrah,* or hagiographical literature on Muḥammad. Further, her condensed references to many events, hadith, and Quranic verses suggest that her audience was quite familiar with the material. Obviously, ʻĀʼishah did not intend her *al-Mawrid al-Ahná* to be a study of Muḥammad's life. Rather, it is a joyous hymn of praise for God's greatest Prophet to be recited publicly on the anniversary of his birth, and this performative aspect is underscored by ʻĀʼishah's many poems placed within the rhymed prose of the text:[44]

Pray for him,
  blessed and saved by God,
    his creator in pre-eternity!
Bless this cosmic splendor,
  more praised than heaven,
    named before Tablet and Pen.
Pray for him,
  and God will bless you ten times more
    and hold you in favor and grace!
Pray, for God's blessings
  are His mercy from which
    all benefits flow.
Bless him, for one who prays for him
  wins a share of favor
    and safety from misfortune.
Pray for my master, bless my support,
  pray for my intercessor
    who grants my desire!
Pray for the lord from Muḍar's line,
  bless the chosen one,

[43]ʻĀʼishah al-Bāʻūnīyah, "Al-Mawrid al-Ahná," 137–79; also see al-ʻAlāwī, *ʻĀʼishah al-Bāʻūnīyah,* 103–11.

[44]In terms of Christian literature, this and similar works are comparable to Christmas hymns, more akin to Handel's *Messiah* than to the Gospels. For more of ʻĀʼishah's poetry on Muḥammad see Rabābiʻah, *ʻĀʼishah al-Bāʻūnīyah: Shāʻirah,* 141–62; for the Prophet's *mawlid* in general see Schimmel, *Muhammad,* 144–58.

messenger to nations!
Pray for him
praising and praised from eternity;
bless the best to walk the earth!
God bless him always and forever,
and his family and companions,
knowing and wise,
As long as the hawk′s call at noon
moves the riders with joy
toward the House and Sacred Precinct,
As long as the breeze blows at night
from Kāẓimah, lightning flashing
on the slopes of Dhū Salam.[45]

In the final verse, ‘Ā’ishah recalls Kāẓimah and Dhū Salam, two sites on the pilgrim routes to Mecca. Here, she pays homage to *Al-Burdah,* which begins by invoking both places, and, perhaps, to a poem by Ibn al-Fāriḍ that served as the model for al-Buṣīrī′s famous ode.[46] The strong influence of both poets is evident throughout ‘Ā’ishah′s verse, whether in poems praising the prophet Muḥammad, or in her many poems on mystical themes. Though much of ‘Ā’ishah′s Sufi verse is lost, several manuscripts of her *Fayḍ al-Faḍl wa-Jam‘ al-Shaml* (The emanation of grace and the gathering of union) have survived.[47] This collection contains over three hundred ″inspired poems on divine, intimate conversations, mystical meanings and states of grace, spiritual efforts, matters of desire, and passionate ways.″[48] The poems in the volume appear to span much of ‘Ā’ishah′s life, from her ″days as a novice and student to her mastery of the branches of mystical annihilation and the arts of effacement.″[49]

---

[45]‘Ā’ishah al-Bā‘ūnīyah, ″Al-Mawrid al-Ahná,″ 176.
[46]See Stefan Sperl′s recent translation and insightful comments on *Al-Burdah,* ″Qasida 50,″ in *Qasida Poetry in Islamic Asia and Africa,* 2 vols., ed. S. Sperl and C. Shackle (Leiden, 1996), 2:388–411, 470–76. For Ibn al-Fāriḍ′s poem see my translation and analysis in Th. Emil Homerin, *From Arab Poet to Muslim Saint: Ibn al-Fāriḍ, His Verse and His Shrine,* 2nd rev. ed. (Cairo, 2001), 4–9. Also see Farrūkh, *Tārīkh,* 3:927.
[47]Three manuscripts of her ″Fayḍ al-Faḍl″ may be found in Cairo′s Dār al-Kutub al-Miṣrīyah, and are listed as ″Dīwān ‘Ā’ishah al-Bā‘ūnīyah,″ MS 431 (Shi‘r Taymūr), dated 1031/1622; MS 581 (Shi‘r Taymūr), dated 1031/1622; and MS 4384 (Adab), dated 1341/1922. All references in this article are to MS 431, unless otherwise noted. Rabābi‘ah (*‘Ā’ishah al-Bā‘ūnīyah: Shā‘irah,* 60) found a fourth manuscript in Cairo′s Dār al-Kutub al-Miṣrīyah, presumably under its correct title. This is MS 112 (Shi‘r Taymūr), also dated 1031/1622 and by the same scribe as MS 431.
[48]‘Ā’ishah al-Bā‘ūnīyah, ″Fayḍ al-Faḍl,″ 4.
[49]Ibid., 218–19.

An odd feature of the *Fayḍ al-Faḍl* is that the collection seems to end at several places:

> ‘Ā’ishah—related to Yūsuf ibn Aḥmad al-Bā‘ūnī on earth, and in truth to the axis, the unique and universal helper, Jamāl al-Dīn Ismā‘īl al-Ḥawwārī, known as the axis of existence, may God bless his heart secret—when she finished with this conclusion—and she never concludes without a new beginning—the Real inspired her with an awesome book which she received from Him, may He be praised, the Real. He entitled it *Al-Fatḥ al-Ḥaqqī min Fayḥ al-Talaqqī,* and it has sublime, inspired verse not contained in this present volume, so be aware of that. God is the protector and my success, and He is the most wonderful companion![50]

Yet, after this apparent ending, the *Fayḍ al-Faḍl* begins anew with a number of additional poems. One of them names, for the first time, ‘Ā’ishah′s second spiritual master and Ismā‘īl al-Ḥawwārī′s successor, Muḥyī al-Dīn Yaḥyá al-Urmawī, further suggesting that the *Fayḍ al-Faḍl* was an on-going compilation.[51] This may also explain why none of the manuscripts cite a completion date for the original work. Nevertheless, ‘Ā’ishah may not have added poems to this collection after her arrival in Egypt in 919/1513, since the poems that she composed in Cairo are not cited in the *Fayḍ al-Faḍl,* as are her other works.[52]

Whatever the case, the *Fayḍ al-Faḍl* begins with a series of *munājāt* or intimate monologues with God. This particular literary form had been popularized by the Persian Sufi ‘Abd Allāh al-Anṣārī, whose work ‘Ā’ishah knew well. Each of ‘Ā’ishah′s *munājāt* usually consists of two or three verses, in which she assumes the position of the submissive believer before God. In one such poem from ″her days as a novitiate,″ ‘Ā’ishah says:[53]

> Whenever the fates make your servant recall
> someone besides you, by God, it does no good.
> For memory of you is hidden deep in the heart,
> and you know what I reveal and conceal.

---

[50]Ibid., 296–97, and 218–20.
[51]Ibid., 314.
[52]Ibid., 218–20, 296–97.
[53]Ibid., 5. For the *munājāt* of ‘Abd Allāh al-Anṣārī see *Khwaja Abdullah Ansari: Intimate Conversations,* translated by Wheeler M. Thackston (New York, 1978), 163–233.

In a similar spirit of pious resignation, ʻĀ'ishah wrote:[54]

I am content with what God wants for me;
    I commit my whole affair to Him.
I turn to Him, seek refuge in Him, cling to Him
    for I can trust no one save Him!

Preceding these verses and most of the other poems in the *Fayḍ al-Faḍl* is the phrase *wa min fatḥi Allāh ʻalayhā* or, more often, *wa min fatḥihi ʻalayhā*: ″From God′s/His inspiration upon her,″ declaring the deeply spiritual source and character of ʻĀ'ishah′s poetry. Further, in a number of instances, poems are introduced by a few additional words citing their occasion, theme, or ʻĀ'ishah′s mystical state when composing them, as in the following poem inspired when ″rapture was intense:″[55]

With noble invocation of the One, Creator,
    refresh a heart melted by longing.
Singer, lift up His praise and repeat it;
    Saqi, pass round His love′s ancient wine.
For life has passed in desire to drink it,
    though I never won a taste, no, not a taste.
See how it revived impassioned souls
    brought to ruin and destruction.
See how it made them disappear
    from all the world since they fell for it.
See how it drove them love-mad and crazy,
    shattered by rapture and craving.
See how it melted hearts now flowing down
    from tear ducts of large round eyes.
See how it brought a dead lover back to life;
    O, how many strong lovers have died!
It is a wine ever appearing
    to man as the rising sun,
And when its bouquet spreads forth,
    it covers all the world and existence.
When will I win its quenching draught
    passing me away in that abiding beauty?

[54] ʻĀ'ishah al-Bāʻūnīyah, ″Fayḍ al-Faḍl,″ 5.
[55] Ibid., 5–6

Similar to Ibn al-Fāriḍ and his famous wine ode, *Al-Khamrīyah,* ‘Ā’ishah here links the memory and recollection *(dhikr)* of God to His love, which is likened to an ancient, intoxicating wine (vv. 1–3). The quest for it has destroyed many true lovers, yet a taste of this wine could resurrect the dead. Again like Ibn al-Fāriḍ, ‘Ā’ishah draws attention syntactically to the wine's miraculous effects, in this case by beginning five consecutive verses with the phrase *wa-lakum bi-hā* ("Consider how it . . ." vv. 4–8). She further suggests the spiritual properties of this splendid, fragrant vintage in her final verses (vv. 9–11). There, in verse 11, ‘Ā’ishah plays on the well-known Sufi terms for mystical union, *fanā'* ("annihilation," "passing away") and *baqā'* ("abiding"), while, at the same time, alluding to the Quranic declaration (55:26–27): "All things on the earth are passing away, while the majestic and beneficent countenance of your Lord abides."[56]

This poem is representative of many others in the *Fayḍ al-Faḍl* with their devotional tone and uncomplicated diction and style. In these poems, ‘Ā’ishah explored a full range of Arabic rhymes, meters, and poetic forms, whether to praise the Prophet and seek God's forgiveness, to instruct the Sufi novice, or to speak of longing and mystical union.[57] Further, inspired by earlier Sufi poets, ‘Ā’ishah composed a *takhmīs* on an ode ascribed to ‘Abd al-Qādir al-Jīlānī proclaiming his high saintly status,[58] and, in one of her longest poems, she dedicated over 250 verses to a variety of mystical themes, using as her model Ibn al-Fāriḍ's Sufi classic the *Naẓm al-Sulūk* (The poem of the Sufi way), also known as *Al-Tā'īyah al-Kubrá* (Ode in T - major).[59] Toward the end of her own *tā'īyah,* c‘Ā’ishah begins forty-three verses with the phrase *a-lā yā rasūla Allāh* ("O messenger of God"), establishing a reverent rhythm and mood as she prays to and praises the Prophet. Such syntactical and phonemic patterning is common in many of her poems, suggesting that she may have intended them to be recited or chanted in Sufi gatherings and *samā‘* sessions. This is particularly the case with ‘Ā’ishah's many *muwashshaḥah,* or strophic poems, which often feature refrains:[60]

---

[56]For Ibn al-Fāriḍ's wine ode, see my translation and analysis in Th. Emil Homerin, *Ibn al-Fāriḍ: Sufi Verse, Saintly Life* (New York, 2001), 41–51. For other examples of wine and its motifs in ‘Ā’ishah's poetry see Rabābi‘ah, *‘Ā'ishah al-Bā‘ūnīyah: Shā‘irah,* 207–20, 287, 306–14; unfortunately Rabābi‘ah nearly always misses her many references to Ibn al-Fāriḍ's verse here and elsewhere.

[57]E.g. ‘Ā’ishah al-Bā‘ūnīyah, "Fayḍ al-Faḍl," 29–30, 34–35, 84–85, 126–27, 205–8. For a good introduction to ‘Ā’ishah's poetry, with examples drawn largely from the "Fayḍ al-Faḍl," see Rabābi‘ah, *‘Ā'ishah al-Bā‘ūnīyah: Shā‘irah.*

[58]‘Ā’ishah al-Bā‘ūnīyah, "Fayḍ al-Faḍl," 290–92, and see Braune, "‘Abd al-Qādir al-Djīlānī," 70.

[59]‘Ā’ishah al-Bā‘ūnīyah, "Fayḍ al-Faḍl," 139–51; also see Homerin, *Ibn al-Fāriḍ: Sufi Verse, Saintly Life,* 67–291, and Rabābi‘ah, *‘Ā'ishah al-Bā‘ūnīyah: Shā‘irah,* 287–88.

[60]‘Ā’ishah al-Bā‘ūnīyah, "Fayḍ al-Faḍl," 253–54; also see 172–78, 208–10, 294–96, 306–8, 327–28. For a survey and stylistic analysis of ‘Ā’ishah's *muwashshaḥah* and musical elements in her verse,

I see no one but my love
when I′m here or when I′m gone.
I see him always with me,
for he′s my destiny.
O my joy and happiness
faithful love has graced me
With passing away in abiding
and abiding in passing away,
For I have met my fate,
and fate is my reunion.
So my heart savor
union with my love.
I see him always with me,
for he′s my destiny.
He′s my attributes, my essence;
I see him and nothing else;
He′s my effacement, my endurance
when I pass and then return.
He′s my union and dissolution
in my aim and way of life;
He′s my substance and my meaning
far away or near.
I see him always with me,
for he′s my destiny.
Here, by God, and in my heart
God made my bliss complete.
I loved my lover and my lord,
spring of my soul and being.
So life was good, I was always near,
and God made my vision last.
So his brilliant flash, no other,
appeared to me unbroken.
I see him always with me,
for he′s my destiny.
My life was all delight, my separation sweet
in love with beauty′s lord.
My union came, division left,
my wide expansion stayed.

---

see Rabābi'ah, *'Ā'ishah al-Bā'ūnīyah: Shā'irah,* 71–104, 335–400.

My illusions gone, my truth proved true
and unadorned appeared.
A handsome moon beguiled me;
he held all wondrous things.
I see him always with me,
for he′s my destiny.
By my life,
he is my highest goal!
My art is passing away in him,
passion, my food and drink.
He′s my reason, my religion,
my doctrine and devotion.
Wherever I turn my face,
I see him alone with no one watching.
I see him always with me,
for he′s my destiny!

Ostensibly, this poem tells of a lover′s consuming passion for her beloved. Destiny has fated that she love him, and so, faithfully, she gives up all thought or care for herself. Yet this does not cause her ruin but, rather, her happiness and joy, as she finds blissful union with her handsome love. Enhancing this love theme are the underlying devotional and mystical elements of the poem, which contains several possible allusions to the prophet Muḥammad. ʻĀʼishah refers to her beloved as *ḥabīb* (v. 1), a lover who is like the full moon (*badr*, v. 41), and both terms are standard poetic references to Muḥammad, the ″beloved of God.″ Strengthening this reading is the first portion of ʻĀʼishah′s refrain: *kayfa lā ashhaduhu* (″How can I not see him,″ v. 3ff.), which may also be translated as ″How can I not bear witness to him,″ echoing the Muslim profession of faith: *ashhadu an lā ilāha illā Allāha wa ashhadu anna Muḥammada rasūlu Allāh,* ″I bear witness that there is no deity but God and that Muḥammad is the messenger of God.″[61] However, this could equally imply that God is ʻĀʼishah′s love, a reading supported by her use of the term *rabb* for her beloved, and her direct references to God (vv. 25–30).

In addition, the poem contains over a dozen well-known Sufi technical terms regarding mystical states and stations. Central to this poem is union, and ʻĀʼishah frequently underscores the dialectic relation between passing away and abiding in union (*fanāʼ-baqāʼ*, vv. 7–8, 18, 47; *maḥw-thibāt,* v. 17; *jamʻ-shitāt,* v. 19; *jamʻ-farq,*

[61]Concerning the *shahādah,* or Muslim profession of faith, see Cyril Glasse, *The Concise Encyclopedia of Islam* (San Francisco: HarperCollins, 1989), 359–60; also see Homerin, *Ibn al-Fāriḍ: Sufi Verse, Saintly Life,* 57–58, and Schimmel, *Muhammad,* 124, 176–215.

vv. 35, 37). Likewise, she makes distinctions between substance and meaning, and illusion and truth (*ma'ná-'ayn,* v. 21; *wahm-ḥaqq,* vv. 39–40) as spiritual contemplation and vision (*shuhūd,* v. 30) produce an expansive state of exhilaration (*basṭ,* v. 38).[62] Graced with illumination, the lover rests at ease with her beloved, whom she encounters within herself and everywhere she turns:

Wherever I turn my face,
I see him alone with no one watching.
I see him always with me,
for he's my destiny!

'Ā'ishah drew from both Arabic love poetry and the Quran for this final, climactic verse. In the classical poetic tradition, the *raqīb,* or "spy," stands guard to protect the beloved against the lover's advances. However, the spy may be avoided in a secret rendezvous or, of course, in the bridal chamber, where lovers meet alone. The sacred all-embracing nature of this union, as well as the divine identity of the beloved, is further suggested by 'Ā'ishah's phrase *kayfa mā wajahtu wajhī arāhu* ("Wherever I turn my face, I see him"), a clear reference to the Quranic declaration, often quoted by Sufis (2:115): "Wherever you turn, there is the face *(wajh)* of God."[63] Here again, 'Ā'ishah, unlike Ibn al-Fāriḍ, is explicit regarding the divine status of the beloved. This may be the result of her overtly devotional aims. Yet, as one of a very few medieval women publicly composing Arabic love poetry, 'Ā'ishah may have wanted to avoid any ambiguity regarding the spiritual character of her love, so as to avoid controversy or scandal.

III

This poem and many others by 'Ā'ishah al-Bā'ūnīyah show clearly that her mystical quest revolved around love for God and his prophet Muḥammad. Her verses are replete with Sufi technical terms, and she often expresses her veneration for 'Abd al-Qādir al-Jīlānī and her Sufi masters.[64] Following their Qādirīyah way, 'Ā'ishah strove to keep God's commandments and accept His decrees, while seeking God's forgiveness and the Prophet's intercession on the Day of Judgment. Moreover, her spiritual discipline and mystical practice appear to have illumined her faith with moments of mystical union, ecstasy, and joy. Significantly, she alludes to these

---

[62]Regarding many of these Sufi terms see 'Alī ibn Muḥammad al-Jurjānī, *Kitāb al-Ta'rīfāt* (Beirut, 1983), 77, 89, 129, 169, 171, 255. For further examples of their frequent use in other poems by 'Ā'ishah, see Rabābi'ah, *'Ā'ishah al-Bā'ūnīyah: Shā'irah,* 284–86.
[63]See Homerin, *Ibn al-Fāriḍ: Sufi Verse, Saintly Life,* 19; for Ibn al-Fāriḍ's use of the "spy," 74–75, v. 6.
[64]For further examples, see Rabābi'ah, *'Ā'ishah al-Bā'ūnīyah: Shā'irah,* 187–202.

powerful experiences in her comments preceding individual poems, and these autobiographical remarks, together with those found elsewhere in her writings, suggest ʿĀʾishah′s sense of confidence and accomplishment in both her life and work.

ʿĀʾishah is also exceptional in that she attempted to articulate and clarify some of her mystical beliefs and practices in a separate Sufi compendium, *Al-Muntakhab fī Uṣūl al-Rutab* (Selections on the fundamentals of stations). ʿĀʾishah notes at the outset that the stages of the mystical folk are innumerable, yet all of them are based on four fundamental principles: *tawbah* (repentance), *ikhlāṣ* (sincerity), *dhikr* (recollection), and *muḥabbah* (love). She then addresses these principles in four separate sections.[65] ʿĀʾishah begins each section with relevant quotations from the Quran, and she usually cites Arabic synonyms for each term, along with their extrinsic *(ẓāhir)* and intrinsic *(bāṭin)* meanings. ʿĀʾishah quotes relevant traditions of Muḥammad and sayings from the early Muslim forefathers *(ṣalaf),* followed by extensive quotations from Sufi masters. To conclude, she sometimes adds an illustrative story or two, together with a few of her own observations and inspired verses on the subject.

Thus, *tawbah,* or ″repentance,″ explicitly means turning away from sinful acts toward praiseworthy ones, and away from evil speech toward good words. Inwardly for the Sufis, repentance also signifies turning away from all things save God.[66] Repentance is effective on three conditions: (1) remorse for past misdeeds, (2) desisting immediately from current offenses, and (3) never returning to sin. ʿĀʾishah further notes that each member of the body has a share in repentance. The heart must resolve to leave sin and be remorseful, while the eyes should be down cast; the hands should cease to grasp; the feet should stop hurrying, and the ears should stop trying to listen in. This is repentance for the common people. The repentance of the elect goes further by opposing the lust of concupiscence *(nafs),* and by averting the gaze of the heart away from pleasure and prosperity, while abstaining from all transient things. Such repentance is required for the love for God, who said (2:222): ″Verily, God loves those who turn in repentance. . . .″ Higher still is

[65]ʿĀʾishah al-Bāʿūnīyah, ″Al-Muntakhab fī Uṣūl al-Rutab,″ Dār al-Kutub al-Miṣrīyah, Cairo, microfilm 13123 of MS 318 (Taṣawwuf Taymūr), 1074/1663, 1–5. Rabābiʿah did not consult this work, believing it to be lost, though he had access to a short work entitled ″Majmūʿ fī Kalām ʿĀʾishah al-Bāʿūnīyah fī Taṣawwuf,″ Dār al-Kutub al-Miṣrīyah, Cairo, microfilm 4059 of MS 319 (Taṣawwuf Taymūr); *ʿĀʾishah al-Bāʿūnīyah: Shāʿirah*, 62, 64. Based on Rabābiʿah′s citations of this work, I believe this ″Majmūʿ″ consists of selections from ʿĀʾishah′s ″Al-Muntakhab.″ Unfortunately, because he did not know this, Rabābiʿah ascribes to ʿĀʾishah statements made by earlier Sufis; see Rabābiʿah, *ʿĀʾishah al-Bāʿūnīyah: Shāʿirah*, 211, 257; ʿĀʾishah al-Bāʿūnīyah, ″Al-Muntakhab,″ 151–57; and Ibn ʿAṭā Allāh al-Iskandarī, *Laṭāʾif al-Minan* (Cairo, 1979), 52–55.

[66]ʿĀʾishah al-Bāʿūnīyah, ″Al-Muntakhab,″ 5–7.

the repentance of the elect of the elect. They turn away from considering anything but God, including spiritual states and blessings, until God reveals His beauty to them, eradicating everything but Himself.[67]

In her discussion of repentance, ʻĀ'ishah relies heavily on the opinions of the respected Sufi master and scholar Abū al-Qāsim al-Qushayrī (465/1072), and this is also the case regarding her second fundamental principle, *ikhlāṣ,* or ″sincerity″ in word and deed. ʻĀ'ishah quotes al-Qushayrī to the effect that sincere obedience to God should be motivated only by the desire to draw closer to Him. The believer should have no thought of attaining praise or glory among people, for sincerity requires the utmost humility. Therefore, concupiscence *(nafs)* is to be disciplined, while the heart must be blind to the opinions of others, as the spirit guards against pride.[68] To underscore the importance of sincerity, ʻĀ'ishah cites numerous prophetic traditions, and stories regarding proper intentions and the grievous sin of hypocrisy. Sincerity, she says, is like water helping the tiny seeds of good works to grow, while hypocrisy is a cyclone that will sweep away the fields of one′s labor.[69]

Essential to both repentance and sincerity is the third principle, *dhikr,* or ″recollection″ of God. ʻĀ'ishah begins her section on this pivotal topic with God′s promise in the Quran (2:152): ″Remember Me, and I will remember you,″ and al-Qushayrī′s commentary on it. He notes that, for those who understand the Quran literally, this verse means: ″Remember Me at the appropriate times, and I will remember you with acts of grace.″ However, those with insight also grasp the mystical import of this divine message: ″Remember Me by leaving behind all thought of reward or punishment, and I will remember you by establishing you in My truth after your passing away from yourselves.″[70] Following al-Qushayrī, ʻĀ'ishah elaborates on this reciprocal relationship of recollection between God and His faithful worshippers in a series of mystical interpretations: ″Remember Me with sincerity, and I will remember you among the spiritual elect; remember Me in your striving, and I will remember You with witnessing; . . . remember Me in your passing away, and I will remember you in your abiding; . . . remember Me in your hearts, and I will remember you in nearness to Me; remember Me in your spirits, and I will remember you in moments of enlightenment; remember Me in your heart secrets, and I will remember you in illuminations!″[71]

[69]ʻĀ'ishah al-Bāʻūnīyah, ″Al-Muntakhab,″ 89–90.
[70]Ibid., 96–97. Also see Abū al-Qāsim al-Qushayrī, *Laṭā'if al-Ishārāt fī Tafsīr al-Qur'ān,* ed. Ibrāhīm Basyūnī (Cairo, 1981), 1:137–38.
[71]ʻĀ'ishah al-Bāʻūnīyah, ″Al-Muntakhab,″ 98–99.

In context of the classical Sufi tradition, ʻĀʼishah regards *dhikr* as both a process and a mystical state. As a process, recollection of God is the means to purify oneself of selfishness and hypocrisy, and to ward off Satan. Though one will never be able to remember God constantly with one′s lips, the sincere believer should strive always to recall God within the heart. As with repentance, recollection may differ in its effects depending on the believer′s spiritual level; common people are soothed and receive blessings by praising God; religious scholars gain insight into God′s names and attributes, while the spiritual elect who recollect God are purified and rest in Him. The ultimate goal of recollection, then, is a paradoxical state of forgetting everything while remembering God.[72] This results in absorption in Him, and ʻĀʼishah states that the most effective means to achieve this mystical state is to recollect the phrase: ″There is no deity but God.″ Finally, Muḥammad is reported to have said: ″One who loves something, remembers it often,″ and, so, ʻĀʼishah includes recollection among the signs of love.[73]

This leads naturally to *maḥabbah,* or ″love,″ the subject of the final and longest section of *Al-Muntakhab.* As in the preceding section on *dhikr,* ʻĀʼishah opens with verses from the Quran followed by al-Qushayrī′s commentary. God commands Muḥammad (3:31): ″Say: ′If you love God, then follow me and God will love you.′″ True love of God, al-Qushayrī observes, requires lovers to efface themselves completely as their beloved wears them out. This love relationship is possible because God created human beings in the best of forms and, so, He has a special affection for them. Further, God has said (5:54): ″O you who believe, any of you who turns away from his religion, God will replace with a people whom He will love as they love Him.″ For al-Qushayrī and ʻĀʼishah, this verse declares to believers the wonderful news that if they keep the faith and love God, He most certainly will love them.[74] ʻĀʼishah then reinforces this point with several divine sayings *(al-ḥadīth al-qudsī)* on love, particularly the famous ″Tradition of Willing Devotions,″ a standard Sufi text in support of mystical union: ″God said: ′Whoever treats a friend of mine as an enemy, on him I declare war! My servant draws near to Me by nothing more loved by Me than the religious obligations that I have imposed upon him, and My servant continues to draw near to Me by acts of willing devotion such that I love him. Then, when I love him, I become his ear, his eye, and his tongue, his heart and reason, his hand and support.′″[75]

ʻĀʼishah next cites a number of statements on love by Sufi masters, including: ″love is the hearts′ delight in the beloved′s being,″ and ″love is intoxication without

[72]Ibid., 102–29.
[73]Ibid., 130–40.
[74]Ibid., 141–44. Also see al-Qushayrī, *Laṭāʼif,* 1:235–36, and his *Al-Risālah,* 2:610–25.
[75]ʻĀʼishah al-Bāʻūnīyah,, ″Al-Muntakhab,″ 148.

sobriety, an indescribable astonishment in meeting the beloved." Like a spell, God's love overwhelms the hearts of His loving worshippers, and reveals to them the light of His beauty and the sacred power of His majesty. Love's effects, however, will vary depending on the believers' spiritual capacities, and ʿĀʾishah quotes the North African Sufi Ibn al-ʿArīf (d. 536/1141) on the levels of love. For the common believer, the seeds of love are planted by reading the Quran and following the custom of Muḥammad, and then nourished by complying with divine law. This love will thwart the temptations of Satan, provide solace in times of adversity, and make service to God delightful. By contrast, love among the spiritual elite strikes like a bolt of lightning, leaving the lovers dumbfounded and confused. This overwhelming love causes the spiritual elite to pass away in God's love for them, which is beyond any description or allusion.[76]

ʿĀʾishah then turns to the signs of love, which include intimacy with God and estrangement from the world, awe before God and contentment with His will, performing pious deeds, loving others who love God, and passing away in the beloved from all things.[77] ʿĀʾishah adds that these are only a few of the many signs, as she moves on to traditions and stories about love. She observes that many people and religious communities have been touched by the irresistible love of God in the past, but that Muslims can bear more of it thanks to the enduring legacy of the most perfect and noble prophet Muḥammad. Still, God's love is all-consuming, as even Hell discovered. The great Sufi al-Junayd (d. 298/911) once said: "Hell fire asked, 'O Lord, if I don't obey You, will You punish me with something stronger than me?' God said, 'Yes, I will inflict on you My greater fire.' Hell asked, 'What fire is more intense and awesome than me?' God answered, 'The fire of My love that I have placed in the hearts of My friends *(awliyāʾ)*!'"[78]

Perhaps on a more personal note, ʿĀʾishah ends her section on love with two stories of pious women whose unwavering devotion and love for God are rewarded by His blessings.[79] She then concludes *Al-Muntakhab* with her own mystical truths *(ḥaqāʾiq ladunīyah)* on love inspired by God. Love is the greatest secret of God; it is an endless sea. Those blessed with God's love are His saintly friends *(awliyāʾ)* whose existence is eradicated in a state beyond description. They pass away and abide in Him, so that their hearts become a place of vision where the truth of the divine essence *(dhāt)* is revealed. God then assumes His worshippers' senses as attested in the "Tradition of Willing Devotions." Though the worshippers' love draws them ever closer to the divine beloved, God bestows His love as an act of unearned grace. Ultimately, the lovers lose all sense of self *(anānīyah)* when the

truth of oneness *(al-ḥaqīqah al-aḥadīyah)* appears, but their mystical death leads them to eternal life, as ʻĀʼishah declares in verses from her closing poem:[80]

God looked with favor on a folk,
and they stayed away
from worldly fortunes.
In love and devotion, they worshipped Him;
they surrendered themselves,
their aim was true.
In love with Him, they gave themselves up
and passed away from existence,
nothing left behind.
So He took pity
and revealed to them
His He-ness,
And they lived again
gazing at that living face
when His eternal life appeared.
They saw Him alone
in the garden of union
and drank from contemplation's cups,
Filled lovingly with pure wine
from the vision
of true oneness.

Throughout *Al-Muntakhab,* ʻĀʼishah consistently cites the Quran and carefully notes the sources of her hadith. Further, she relies on several major Sufi works, which she cites and accurately quotes. These works include Muḥammad al-Kalābādhī's (d. 385/995) *Al-Taʻarruf li-Madhhab Ahl al-Taṣawwuf,*[81] al-Qushayrī's *Al-Risālah* and his Quranic commentary *Laṭāʼif al-Ishārāt fī Tafsīr al-Qurʼān,* and writings by Muḥammad al-Sulamī (d. 412/1021), author of the *Ṭabaqāt al-Ṣūfīyah.*[82] In addition to these classical sources, ʻĀʼishah occasionally draws selections from a few later works, in particular the *ʻAwārif al-Maʻārif* by ʻUmar

[80]Ibid., 190–211.
[81]E.g. ʻĀʼishah al-Bāʻūnīyah, "Al-Muntakhab," 16–18, 124–25, and Muḥammad al-Kalābādhī, *Al-Taʻarruf li-Madhhab Ahl al-Taṣawwuf* (Beirut, 1980), 92–93, 103–104. Also see P. Nwiya, "Al-Kalābādhī," *EI²*, 4:467.
[82]E.g., ʻĀʼishah al-Bāʻūnīyah, "Al-Muntakhab," 89, 100, 145, and G. Bowering, "Al-Sulamī," *EI²*, 9:811.

al-Suhrawardī (d. 632/1234),[83] and the *Laṭā'if al-Minan* by Ibn ʻAṭā Allāh al-Iskandarī (d. 709/1309),[84] and she quotes a poem by Ibn al-ʻArīf, and one by Muḥammad Ibn Abī al-Wafā' (d. 891/1486).[85] Among these Sufi authorities, however, al-Qushayrī is clearly the most cited and easily the most influential.

As indicated in its title, *Al-Muntakhab fī Uṣūl al-Rutab* is a ″selection″ ʻĀ'ishah made from earlier works on Sufism. As such, it testifies to ʻĀ'ishah′s extensive reading on the subject, and records some of the mystical writings circulating in Sufi circles of her day. Notable by its absence is any reference to the popular works of Ibn al-ʻArabī (d. 637/1240) or those of his students.[86] Perhaps ʻĀ'ishah consciously avoided these controversial authors, as well as difficult matters of mystical theology, which are rarely discussed in *Al-Muntakhab*. Further, ʻĀ'ishah does not refer explicitly to her own teachers, nor does she mention the Light of Muḥammad, which figures prominently in her other works. These omissions, however, may reflect her particular focus in *Al-Muntakhab* on classical sources that are not primarily concerned with mystical prophetology. While ʻĀ'ishah intended her *Al-Muntakhab* to be useful for fellow travelers on the mystic path,[87] this work appears to be less of a formal guide-book than a collection of insightful and inspirational passages organized around the four basic principles of repentance, sincerity, recollection, and love.[88] As in her poetry, ʻĀ'ishah′s tone throughout the work is consistently positive and often up-lifting. She stresses repeatedly that divine mercy and grace are limited only by human heedlessness and recalcitrance, but that God will love and help all believers who sincerely try to reach Him:

I see love,
    an ocean without a shore.
If you are love′s chosen ones,
    plunge in![89]

IV

During the difficult summer of 922/1516, Qānṣūh al-Ghawrī met with ʻĀʼishah al-Bāʻūnīyah. Later, the Mamluk sultan rode out with his army to meet the Ottoman sultan Selim at Marj Dābiq. There, surrounded by his religious officials and spiritual advisors, al-Ghawrī suffered a stroke and died in the heat of battle.[90] His decimated forces fled the field, and some survivors eventually returned to Cairo, Ibn Ajā among them. Ibn Ajā was then retained as confidential secretary and foreign minister by the new Mamluk sultan Tūmānbāy, who was defeated and killed a few months later when Selim took Cairo. Selim, however, treated the elderly Ibn Ajā with respect and permitted him and his family to return to their native Aleppo, where Ibn Ajā died in 925/1519.[91] Ibn Ajā′s widow, Sitt al-Ḥalab (d. 933/1525), mourned her husband for a year and then remarried, taking delight in a considerably younger man.[92]

After Marj Dābiq, ʻĀʼishah′s son, ʻAbd al-Wahhāb, did not follow his employer Ibn Ajā to Cairo. Instead, ʻAbd al-Wahhāb returned to the al-Ṣāliḥīyah district of Damascus, where he studied jurisprudence and Sufism until his death, around the age of thirty, in 925/1519.[93] As for ʻĀʼishah, she too died in Damascus, on the sixteenth of Dhū al-Qaʻdah, 923/December, 1517, the same year that the Mamluk dynasty passed away.[94] However, her prose and poetry lived on to be admired and copied for centuries, thereby preserving her extraordinary legacy. ʻĀʼishah al-Bāʻūnīyah remains of one of the greatest woman poets and writers in Islamic history, and she serves as a fitting testimony to the vibrant literary and religious culture of the Mamluk period.

Laila 'Ali Ibrahim, 1917–2002

Laila 'Ali Ibrahim passed away July 14. She was 85. Many students of Mamluk art and architecture have come to identify Laila with Cairo: she was the "Godmother" of the city and the guardian of its monuments.

Laila learned her metier informally through exposure to the best minds concerned with the fate of historic Cairo in the 1940s and 1950s. These included her father, Dr. 'Ali Ibrahim, a major Islamic art collector whom she adored, and K. A. C. Creswell, the eccentric Briton who spent most of his working life studying the Islamic architecture of Cairo. But she had one thing that most scholars of Cairo of her time did not have: total devotion to her subject. This showed not only in her publications, public lectures, and participation in countless organizations promoting the safeguarding of the monuments of Cairo, but also in her tireless efforts to gain new converts to the study and appreciation of Cairo. To that end, she taught the history of Cairo at the American University of Cairo (AUC) and made herself available to any researcher, Egyptian or foreign, interested in studying Mamluk Cairo.

Laila's articles and one published book are solid, carefully researched, and clearly written pieces. She seemed to have focused mostly on little-studied aspects of Cairene architecture that lesser scholars avoided. She took special interest, for instance, in Mamluk residential architecture, about which she published a number of erudite articles. She also delved into writing on little-known or ruined monuments, such as the *khānqāh*s of Amir Qawsūn and of Zayn al-Dīn Yūsuf or the madrasah of Badr al-Dīn al-'Aynī. Her book on Mamluk building terminology, published in 1990 and coauthored with the late Muḥammad Muḥammad Amīn, is an indispensable source for all students of Cairo. It is the distillation of the expertise of these two irreplaceable scholars: Laila with her intimate and extensive knowledge of the historic buildings and Amīn with his profound familiarity with the legal documents related to them.

Laila spent more than half a century studying, teaching, and speaking for and on behalf of the architecture of Cairo. But she shunned all ceremonial social events and was interested only in constructive ones. Her admirers, however, managed to put together a collection of essays in her honor, *The Cairo Heritage,* which was edited by Dr. Doris Behrens-Abouseif and published by AUC Press in

2001, although Laila unfortunately was unable to read it. Laila left a small but extremely valuable library that I hope will find an institutional home where it could be open to all researchers from all over the world. This is how Laila herself would have liked it to be.

Ḥasan Rabābi‘ah, *‘Ā’ishah al-Bā‘ūnīyah: Shā‘irah* (Irbid: Dār al-Hilāl lil-Tarjamah, 1997). Pp. 441.

Reviewed by Th. Emil Homerin, University of Rochester.

‘Ā’ishah al-Bā‘ūnīyah (d. 922/1517) left behind a rich legacy as one of the greatest woman authors in Islamic history. ‘Ā’ishah's writings were extensive even by men's standards, and they are unparalleled for a pre-modern Muslim woman. Though women were respected scholars and teachers in medieval Islam, they generally did not compile their own independent works. However, ‘Ā’ishah was very prolific. She dedicated a number of panegyrics to the prophet Muḥammad and composed several *mawlid*s combining prose and poetry. ‘Ā’ishah also wrote works on Islamic mysticism, including a spiritual guide and several volumes of mystical and devotional poetry.

Despite ‘Ā’ishah's extensive body of work and celebrated career among her peers and later generations, she has attracted only sporadic attention over the last century. More recently, Fāris Aḥmad al-‘Alāwī issued a new edition of her *Al-Mawrid al-Ahná* (1994; see my review in *MSR* 6), while I have published a study of her life and work (*MSR* 7). It was while completing this latter article that I came across Ḥasan Rabābi‘ah's very useful book, *‘Ā’ishah al-Bā‘ūnīyah: Shā‘irah,* published in Jordan in 1997. As an introduction, he begins with a chapter on ‘Ā’ishah's family origins in the town of al-Bā‘ūn in the Mamluk province of ‘Ajlūn in what is now southern Syria and the Jordanian province of Irbid (pp. 13–31). Then, in chapter two, Rabābi‘ah gives a brief biography of ‘Ā’ishah, who was born in Damascus, around 864/1459. Using ‘Ā’ishah's own comments on her life found in several manuscripts, Rabābi‘ah notes her pilgrimage to Mecca, where she had a vision of the Prophet, her study of Sufism, her marriage to Aḥmad ibn Muḥammad Ibn Naqīb al-Ashrāf (d. 909/1503) and the names of their children. He also touches on her trip to Cairo in 919/1513, her meeting with the Mamluk sultan Qānṣūh al-Ghawrī in 922/1516, and her death the next year (pp. 33–59). Unfortunately, this biographical section is, at times, disorganized and incomplete, and Rabābi‘ah could have added significant information had he utilized his sources more thoroughly. Rabābi‘ah does a much better job when compiling a list of ‘Ā’ishah's writings and the location of her surviving works (pp. 59–65), with the exception of her *Al-Muntakhab fī Uṣūl al-Rutab,* which he believes to be lost, though a copy may be found in Cairo's Dār al-Kutub.

Rabābi‘ah's main concern, however, is not ‘Ā’ishah's life or religious beliefs, but her refined poetic skills and extensive knowledge of Arabic language and literature. This is evident in his third chapter, on ‘Ā’ishah's versification in the popular forms of *muwashshahah, zajal, dū bayt,* and *mawālīyā* (pp. 67–121). Here

as elsewhere, Rabābi'ah quotes from a number of 'Ā'ishah's works, though he usually draws his examples from her *Fayḍ al-Faḍl wa-Jam' al-Shaml* (The Emanation of grace and the gathering of union), which contains over three hundred poems in various styles and forms. Rabābi'ah pays particular attention to formal matters of rhyme and meter, compiling a series of tables summarizing these and other stylistic and structural elements as found in 'Ā'ishah's poems. In passing, he notes that the content of these poems revolves around the prophet Muḥammad, and the mystical themes of love and wine. Rabābi'ah makes several brief but useful comparisons between 'Ā'ishah's *muwashshahah* and those of her Sufi predecessors Ibn al-'Arabī (d. 637/1240) and al-Shustarī (d. 668/1268)(pp. 99–103). Rabābi'ah follows this same pattern in chapter four on 'Ā'ishah's poems involving *tasmīṭ* and *takhmīs* (pp. 125–37).

In chapter five, Rabābi'ah provides an overview of 'Ā'ishah's main poetic themes, including: praise of the prophet Muḥammad and accounts of his life and miracles, praise of his companions and Sufi masters, verse exchanged with some of her learned contemporaries *(ikhwanīyāt),* Sufi themes and states, love, longing, and beauty (pp. 139–224). Rabābi'ah cites a few verses to illustrate each theme, which help to convey the range and depth of 'Ā'ishah's religious and poetic concerns, though Rabābi'ah's commentary is very general. Further, he repeatedly fails to note the obvious influence on 'Ā'ishah of the great Sufi poet Ibn al-Fāriḍ (d. 632/1235), while mistakenly ascribing to her statements by the Sufi master Ibn 'Aṭā Allāh al-Iskandarī (d. 709/1309) (p. 212, again on 252).

In chapters six, seven, and eight, Rabābi'ah turns to 'Ā'ishah's *qaṣīdah*s, again, following a structuralist approach. Central to chapter six is Rabābi'ah's analysis of an ode by 'Ā'ishah (pp. 262–68). Rabābi'ah notes that the encampments of this poem and others by 'Ā'ishah are not ruined or abandoned, as is the case in earlier classical odes, since she longs for the holy cities of Mecca and Medina and her beloved prophet. Strangely, Rabābi'ah cites only 37 of the poem's 50 verses. Chapters seven and eight touch on 'Ā'ishah's use of Sufi technical terminology (pp. 269–300), the mystical themes of love and wine, and her devotion to the prophet Muḥammad (pp. 301–34). Rabābi'ah underscores the thematic unity and harmony of 'Ā'ishah's poems and some of her sophisticated rhetorical strategies. Here, too, at last, he finally mentions her debt to Ibn al-Fāriḍ though, unfortunately, Rabābi'ah does not pursue this important aspect of 'Ā'ishah's thought and work. In his final chapter, Rabābi'ah speculates on the musical qualities of 'Ā'ishah's verse. Taking several poems as examples, he examines in some detail their poetic structures and various formal elements including rhyme and meter, sound and rhythm, and 'Ā'ishah's creative use of antithesis, repetition, and phonemic patterning (pp. 335–400).

ʿĀʾishah al-Bāʿūnīyah: Shāʿirah is a good general introduction to the verse of a fine poet. A major strength of the book is Rabābiʿah's knowledge and extensive use of relevant manuscript resources, despite a few lapses, as noted above. Further, unlike many scholars of Arabic literature, Rabābiʿah does not stereotype or denigrate Arabic poetry of the Mamluk period as pallid or unoriginal. On the contrary, Ḥasan Rabābiʿah is to be commended for his enthusiasm for and appreciation of the poetry of ʿĀʾishah al-Bāʿūnīyah, and I hope he continues to pursue this line of research in the future.

MOSHE HARTAL, *The al-Ṣubayba (Nimrod) Fortress: Towers 11 and 9: With Contributions by Reuven Amitai and Adrian Boas* (Jerusalem: Israel Antiquities Authority, 2001). Pp. 130.

REVIEWED BY LORENZ KORN, University of Tübingen

Mamluk fortifications have attracted the interest of Near Eastern architectural historians only after a certain delay. Crusader castles and city walls had become objects of scholarly research and detailed documentation already before World War I. Exploration of their Saljuq/Zengid and Ayyubid counterparts started a few decades ago, and thanks to studies like the one by Paul Chevedden on the citadel of Damascus, we are able to assess the implications of the revolution in siege technique and military architecture which took place in the late sixth/twelfth century. Against this background, Mamluk military architecture received only perfunctory attention. The important fortresses of Gaziantep and Birecik, to cite only two major examples, are practically unexplored, and the same is true for most fortifications built between 1250 and 1517 in the Near East. Again, it has been the citadel of Damascus that exemplifies the possibilities of a detailed architectural study in the minute analysis of its Mamluk constructions by Hanspeter Hanisch.

The fortress of Qalʿat al-Ṣubaybah (today often called Nimrod Castle), on the western margin of the Golan Heights, is one of those Mamluk military constructions that were built as a reinforcement to older Crusader or Ayyubid structures, and is similar in size and importance to the castles of al-Karak and al-Shawbak (of which the post-Crusader parts remain to be studied as well, despite valuable archeological soundings undertaken by Robin M. Brown). After the Mamluk takeover, al-Ṣubaybah was substantially rebuilt under Baybars, as earlier studies of the building inscriptions and architectural remains have already shown.

The present study is the result of work carried out on behalf of the Israel Antiquities Authority and the Israel National Parks Authority. It covers two large towers and some other sections of the western front of the fortress. Since the spur on which the castle is built continues westward, this side was heavily fortified. The two towers are built on rectangular plans. Each of them consists of an Ayyubid core, which was encased by the Mamluk constructions. Heavy destruction, probably by an earthquake in the eighteenth century, left only the lower parts of the towers standing while the top storeys have almost totally disappeared.

The remaining substance of the towers, the adjacent galleries, and the water reservoir in the southwest corner of the lower bailey of the fortress, is presented in great detail. Every room is described, detailing the masonry of its floors, walls, and ceilings, and including all openings, stairs, and installations, and is richly documented in photographs as well as architectural drawings. Highly interesting are the water installations, such as the latrines and the water lifting shaft in tower 11, or the fountain in the outer wall of the reservoir. The presentation allows a comprehensive insight into the evidence, enabling the reader to test the conclusions of the author. These are mostly reasonable, but in a few points debatable.

In general, Mamluk fortification technique appears as a direct continuation of Ayyubid military architecture. The layout of rectangular towers with vaulted halls and passages, firing chambers, and arrow-slits follows the same principles as in the fortresses of Tabor, ʿAjlūn, Bosra, and Baalbek, to quote the nearest important examples; these elements were changed and improved in details.

Tower 11 used an Ayyubid gate tower as a core around which a vaulted passage with firing chambers was laid. The gate function was given up. In the basement, a postern gate with a narrow passage was built into the new walls. The upper parts of the tower are difficult to reconstruct, but it is clear that a large building inscription was part of its eastern façade. For all these constructions, huge ashlars were used for which parallels in Mamluk fortifications are rare. This is all the more remarkable since the contemporary enlargement of tower 9 shows much smaller blocks. Hartal explains this feature partly with technical reasons, partly with a special function of tower 11. Considering the size of the tower and its position on the slope, he terms the Mamluk constructions ″retaining walls″ and suggests that they were necessary to ″hold back quantities of earth″ (p. 63). This might have been true, had there not been the earlier, Ayyubid tower. Its outer walls must actually have prevented any substantial horizontal pressure on the adjacent Mamluk constructions, and made a particular reinforcement less urgent. Similarly, it seems far-fetched to assume that the Mamluk builders of al-Ṣubaybah turned to the Temple Mount in Jerusalem as an example for the handling of huge blocks. The Ayyubid fortresses mentioned above, or perhaps the Herodian remnants in the citadel of Jerusalem, were probably more important in this respect.

Hartal′s assumption that the top floor of tower 11 served as a residence for the lord of the castle is convincing and gives a better explanation for the use of the large-scale masonry as a means to enhance the imposing appearance of the building. For the uppermost parts of the tower, one might discuss whether there might have been two-storeyed fighting galleries, with a row of vaulted fighting chambers surrounding the open platform, and a walk behind the crenellated parapet on top. Also, the question of machicouli galleries arises, since these appear prominently in Baybars′ rebuilding of the Krak des Chevaliers. Under these circumstances, the reconstruction drawing Fig. 35 seems a little too assertive.

The article by Reuven Amitai deals with the large building inscription from tower 11 and (fragments of) some other inscriptions which were found in the course of the work. Amitai not only gives a detailed examination of the protocol of the inscriptions, with appropriate comparisons, but also a historical commentary which is important for the understanding of the structural history of al-Ṣubaybah, with Bīlīk al-Khāzindār as the actual owner of Bāniyās and the northern Golan. The enlargement of the two towers was certainly due to his patronage.

The reading of the one-line inscription band found near tower 16 (pp. 118 ff.) has to be corrected in one place (Fig. 194): Amitai′s reading ″nāṣir (?) amīr al-mu'[minīn]″ must be rejected. The letter in the center of the block cannot be a *ṣād,* and the adjacent letters do not match either. Instead, I would suggest ″al-muthāghir,″ which is sometimes found in combination with the more common epithets ″al-mujāhid al-murābiṭ,″ missing in the present fragment. In this case, the following ″al-mu'-″ would then belong to the likewise more frequent ″al-mu'ayyad.″ This sequence of titles is well attested for Ayyubid building inscriptions (cf. *Répertoire chronologique d′épigraphie arabe,* Publications de l′Institut français d′archéologie orientale du Caire [Cairo, 1931–], vol. 10, no. 3664, vol. 11, nos. 4057, 4246, 4417); an example in one of Baybars′ inscriptions comes from Ramlah (cf. Max van Berchem, *Inscriptions arabes de Syrie,* Mémoires présentés à l′Institut égyptien 3 [Cairo, 1897], 473f.).

A contribution by Adrian Boas deals with the ceramics found during the removal of the fallen debris. Brief descriptions of the wares are supplemented by comparative material and thus add to a more complete picture of Mamluk ceramics in southern Bilād al-Shām. At the same time, it becomes clear that the rough excavation technique used has limited the evidence in this case, since no stringent stratigraphy could be achieved.

On the whole, this book is a highly valuable contribution to the recording and discussion of Mamluk military architecture. Difficulties in readability which might arise from the lengthy descriptions will not deter the reader to whom the book is addressed. They are far outweighed by the merits of the accurate documentation. This implies the wish that work on al-Ṣubaybah (also and especially the inner

castle) be continued in the same manner. In this context, it should be remarked that the excavations of the western front were undertaken in the course of preparing a new visitor's exit out of the castle. In this way, the work presented here might constitute a precedence for future investigations into Mamluk fortifications, or the combination of site management with archaeological research. At least, the touristic appeal of Mamluk fortresses should not be underrated.

SHAMS AL-DĪN MUḤAMMAD IBN ṬŪLŪN, *Mufākahat al-Khillān fī Ḥawādith al-Zamān,* edited by Ṣalāḥ al-Dīn Khalīl al-Shaybānī al-Mawṣilī (Beirut: Dār al-Kutub al-ʿIlmīyah, 1998). Pp. 421.

AḤMAD IBN MUNLĀ/IBN ṬŪLŪN, *Muṭʿat al-Adhhān min al-Tamattuʿ bi-al-Iqrān bayna Tarājim al-Shuyūkh wa-al-Aqrān,* 2 vols., edited by Ṣalāḥ al-Dīn Khalīl al-Shaybānī al-Mawṣilī (Beirut: Dār Ṣādir, 1999). Pp. 1116.

REVIEWED BY STEPHAN CONERMANN, University of Kiel

I was pleased to learn that two new works by Shams al-Dīn Muḥammad Ibn Ṭūlūn (d. 955/1548), the scholar and prolific writer from Damascus, are now available in print for the first time. But appearances are deceptive, because in the case of *Mufākahat al-Khillān fī Ḥawādith al-Zamān* this surely is a bogus claim, at least from my point of view. All that the editor, Ṣalāḥ al-Dīn Khalīl al-Shaybānī al-Mawṣilī, did was simply to reproduce the exemplary two-volume edition of the unique Tübingen copy (MS MA VI,7) published by Muḥammed Muṣṭafá (Cairo, 1962–64). The less than meager annotations are the only items actually penned by the editor himself.

The other publication that I will review here deserves more attention. Even though it does not represent an original piece of writing by Ibn Ṭūlūn, the edition does contain extracts from *Al-Tamattuʿ bi-al-Iqrān bayna Tarājim al-Shuyūkh wa-al-Aqrān,* a collection of biographies that has not been preserved in its entirety. This part of the work survived because Ibn Ṭūlūn's student Aḥmad ibn Munlā al-Ḥaskafī al-Ḥalabī (937–1003/1530–94) intended to write such a collection of short biographies himself and therefore made ample use of his teacher's works.

Compiling these unique Who's Who handbooks was very much *en vogue* in the Mamluk period.[1] Scholars wished to portray the merits of famous men in order

[1]Franz Rosenthal, *A History of Muslim Historiography*, 2nd revised ed. (Leiden, 1968), 100–6. See also H. A. R. Gibb, "Islamic Biographical Literature," in *Historians of the Middle East,* ed.

to present them as shining examples to their contemporaries. Moreover, general consensus among Muslims had always been that history and thus the renewal of religion was primarily shaped by individuals. The power elite—both rulers and religious scholars—for their part used these biographical accounts to assure themselves that their actions were legitimate. The genre thus satisfied the needs of the authors and the readership for which it was intended at one and the same time. It is therefore hardly surprising that biographical collections became one of the main forms of contemporary historical writing.

Even though all of the biographical abstracts usually contain information about the date of the person's death, his ancestry, his teachers, his writings, and other important events in his life, the works differ regarding the particular common denominator shared by the people included in the anthology. Law schools were one such common denominator, as were the vizierate**,** blindness, poetry, Sufi congregations, cities, or cemeteries. During the last third of the eighth/fourteenth century, for example, a certain al-Faqīh ʻUthmān wrote a biographical guide entitled *Murshid al-Zūwār ilá Qubūr al-Abrār* in which he described all the people interred at Mount al-Muqaṭṭam in Cairo,[2] while al-Dāwūdī (d. 945/1538) focused on every known exegete of the Quran.[3] But the century in which the famous people had died constituted the most popular selection criterion for these biographical collections.

When compiling a dictionary, the biographical writer made full use of the work done by his predecessors. Of course, one needs to be aware of the fact that plagiarism[4] in those days did not have the negative implications it does today, but rather was regarded as a completely legitimate narrative method at which nobody took umbrage. Previous historians were considered incontestable authorities,

[3]Cf. ibid., 2:373 and S2:401.

[4]The early attempts of Muslim writers at describing the concept of plagiarism were summed up by the Egyptian chief judge al-Qazwīnī (d. 739/1338) in his work *Talkhīṣ al-Miftāḥ* (ed. ʻAbd al-Raḥmān al-Barqūqī as *Al-Talkhīs fī ʻUlūm al-Balāghah* [Beirut, 1982]). Cf. Gustav von Grunebaum, "Der Begriff des Plagiats in der arabischen Kritik," in *Kritik und Dichtkunst: Studien zur arabischen Literaturgeschichte* (Wiesbaden, 1955), 101–29; A. F. Mehren, *Die Rhetorik der Araber* (Copenhagen and Vienna, 1853); and Aḥmad Maṭlūb, *Al-Qazwīnī wa-Shurūḥ al-Talkhīṣ* (Baghdad, 1967).

especially regarding historical events that one had not witnessed personally. This was particularly so since one did not want to correct one´s predecessors by presenting new insights or new interpretations of past events. It was not customary to mention the names of the true authors of the reports and hence this practice was not considered negligent. Some authors occasionally did cite the sources they had used in the preface to their work, but it was not considered absolutely necessary.

The source material for Aḥmad ibn Munlā´s life provides some indication of the extent to which different biographical accounts depended on each other. Most of the information about our author can be found in the works of his teacher Ibn al-Ḥanbalī (d. 971/1563),[5] yet al-Būrīnī (d. 1024/1615)[6] is the first one to present a complete biographical sketch in his *Tarājim al-A'yān min Abnā' al-Zamān.*[7] These two short biographies then served as the prototypes for all the following accounts, with the portrayals by Najm al-Dīn al-Ghazzī (d. 1061/1651),[8] Ibn al-'Imād (d. 1089/1679),[9] and Muḥammad al-Amīn al-Muḥibbī (d. 1111/1699)[10] differing only in style.

All in all, the biographical descriptions give the following picture: Aḥmad ibn Munlā, whose ancestors came from Diyār Bakr, was born in Aleppo. Some of his family were notable members of the community: his grandfathers, Aḥmad ibn Yūsuf ibn Mūsá al-Sindī (d. 894/1488–89), who was known by the name of Munlā Ḥājj,[11] and Yaḥyá ibn 'Abd al-Wahhāb (d. 935/1528–29),[12] both belonged

[5]Muḥammad ibn Ibrāhīm Ibn al-Ḥanbalī, *Durr al-Ḥabab fī Tārīkh A'yān Ḥalab,* ed. Maḥmūd Aḥmad al-Fākhūrī (Damascus, 1972–74), 1:239–68. Ibn al-Ḥanbalī wrote his *Durr* on famous individuals who had some kind of relationship with Aleppo, as a continuation of Muwaffaq al-Dīn Abū Dārī Aḥmad ibn Ibrāhīm al-Ḥalabī´s (d. 844/1479) *Kunūz al-Dhahab fī Tārīkh al-Ḥalab.* Incidentally, it was Ibn al-Ḥanbalī´s pupil Aḥmad ibn al-Munlā who collected his *dīwān* after his death. On Ibn al-Ḥanbalī, see *GAL,* 2:368 and S2:495, and 'Abd al-Ḥayy ibn Aḥmad Ibn al-'Imād, *Shadharāt al-Dhahab fī Akhbār Man Dhahab* (Cairo, 1930–31), 8:364–65.

to the intellectual circles of Aleppo, as did his father, Muḥammad ibn ʿAlī al-Munlā al-Ḥaṣkafī (d. 935/1528–29).[13]

His father evidently took care of Aḥmad ibn Munlā's education in its early stages. Later on he was sent to study with the local ulama. They instructed him in the subjects that were customary in those days—hadith, grammar, exegesis of the Quran, theology, jurisprudence.[14] Aḥmad ibn Munlā took two extensive study trips to Damascus during his youth; he was accompanied by his father on one of them. In 958/1551, he went to the Ottoman court in Istanbul to take lessons with a number of well-known scholars. Aḥmad ibn Munlā described his experiences in a book *(Al-Rawḍah al-Wardīyah fī al-Riḥlah al-Rūmīyah)* that unfortunately has not survived. The scholar from Aleppo returned to his hometown later on and held various teaching positions. Aḥmad ibn Munlā was particularly interested in linguistics. He wrote a number of treatises over the years. In addition to a number of studies on Arabic syntax and a historical narrative *(Tārīkh al-Islām wa-Ṭabaqāt al-Mashāhīr min al-Aʿlām),* one should also mention his commentary on Ibn Hishām's (d. 761/1360) famous *Mughnī al-Labīb ʿan Kutub al-Aʿārīb* and a comprehensive commentary on al-Bayḍāwī's (d. after 685/1216) *Anwār al-Tanzīl wa-Asrār al-Taʾwīl* in this context. Neither of the books has apparently been preserved.

In his day, Aḥmad ibn Munlā was evidently recognized not only as a scholar but also as a poet. Ibn al-Ḥanbalī offers us a selection of his poetry. His life ended in a manner hardly befitting his social standing: farmers beat him to death near Aleppo. Aḥmad ibn Munlā was buried in his grandfather's *turbah* at al-Jubayl Cemetery in Aleppo. He was survived by two sons, Ibrāhīm (d. 1032/1622–23) and Muḥammad (d. 1010/1601–2).[15]

At the beginning of his *Mutʿat al-Adhhān,* Aḥmad ibn Munlā tells us that he took extensive excerpts from Ibn Ṭūlūn's *Al-Tamattuʿ bi-al-Iqrān bayna Tarājim al-Shuyūkh wa-al-Aqrān* when preparing his manuscript. In doing so, he had selected every item that helped him compose his own handbook.[16] The book prepared by the alim from Aleppo contains 1,030 biographical sketches, with the month of Dhū al-Qaʿdah 993/1585 being the last date mentioned. It is very difficult to tell from the content which parts were actually written by Ibn Ṭūlūn and which

[13]Ibid., no. 529.

[14]Ibn al-Ḥanbalī provides a long list of his teachers.

[15]On Aḥmad ibn Munlā's sons, see al-Muḥibbī, *Khulāṣah,* 1:11–12 (Ibrāhīm) and 3:348–50 (Muḥammad); and Aḥmad ibn Muḥammad al-Khafājī (d. 1068/1659), *Rayḥānat al-Alibbā wa-Zahrat al-Ḥayāh al-Dunyā,* ed. ʿAbd al-Fattāḥ Muḥammad al-Ḥulw (Cairo, 1967), 1:97–98. Al-Khafājī's *Rayḥānat al-Alibbā* is an expansion of his own work *Khabāyā al-Zawāyā fīmā fī al-Rijāl min al-Baqāyā;* see *GAL,* 2:286 and S2:396.

[16]Aḥmad ibn Munlā, *Mutʿat al-Adhhān,* 39.

parts were added by Aḥmad ibn Munlā. To answer this question it would be helpful to do a detailed study comparing the styles of his *Mut'at al-Adhhān* with Ibn Ṭūlūn's "Dhakhā'ir al-Qaṣr fī Tarājim Nubalā' al-'Aṣr" (Gotha MS 1779), which is an appendix to his *Al-Tamattu'* written in his own hand and containing 136 biographies of well-known Damascene citizens in alphabetical order. The original models upon which the two authors based their work also merit close analysis. Ibn Ṭūlūn primarily used Yūsuf ibn 'Abd al-Hādī's (d. 909/1503)[17] *Al-Riyāḍ al-Yāni'ah fī A'yān al-Mi'ah al-Tāsi'ah*[18] and al-Buṣrawī's (d. 905/1500)[19] *Tārīkh*[20] as his models, while Aḥmad ibn Munlā apparently referred not only to Ibn Ṭūlūn's writings but also to the biographies compiled by al-Sakhāwī and al-Būrīnī.

The Berlin manuscript (Berlin MS 9888) is the only available copy of Aḥmad ibn Munlā's *Mut'at al-Adhhān min al-Tamattu' bi-al-Iqrān bayna Tarājim al-Shuyūkh wa-al-Aqrān.* The manuscript is quite difficult to read, yet my cursory comparison of the original text and the present edition revealed hardly any mistakes. Ṣalāḥ al-Dīn Khalīl al-Shaybānī al-Mawṣilī has evidently done a very good job. The detailed annotations and the comprehensive indexes are extremely useful, while the introduction could be a bit more detailed.

JONATHAN P. BERKEY, *Popular Preaching and Religious Authority in the Medieval Islamic Near East* (Seattle: University of Washington Press, 2001). Pp. 143.

REVIEWED BY TH. EMIL HOMERIN, University of Rochester.

In his *The Transmission of Knowledge in Medieval Cairo* (Princeton, 1994), Jonathan Berkey offered a detailed study of religious education in Mamluk Cairo. His main concerns were higher education, primarily Islamic jurisprudence, the scholarly elite (ulama) and their students, though he also discussed the place of women and the ruling Mamluk military elite in this educational system. Among his insightful conclusions, Berkey found that the transmission of religious knowledge in Mamluk Egypt was vital to easing certain social boundaries as it brought together individuals from groups that otherwise might not have mingled so easily. Now in his most

[17]On this scholar see *GAL,* 2:107–8 and S2:130–31; Stefan Leder, "Yūsuf b. 'Abd al-Hādī," *EI*[2], 9:354; and Aḥmad ibn Munlā, *Mut'at al-Adhhān,* 838–40 (no. 968).

recent book, *Popular Preaching and Religious Authority in the Medieval Islamic Near East,* Berkey again addresses the transmission of religious knowledge, but by those who were generally outside the small circle of religious professionals. In particular, he studies the many popular preachers and storytellers, and how their activities raised issues of the interrelationship between high and popular cultures, on one hand, and questions of religious authority, on the other.

To start, Berkey discusses some of the key players involved. The *khaṭīb* was generally a state-appointed religious scholar who delivered the official Friday sermon, while the *wāʿiẓ* (″preacher,″ ″admonisher″) and the *qāṣṣ* (″storyteller″) were often independent and less educated though they, too, called the common people to lead a pious life. As such, this latter group, like the ulama, actively transmitted religious knowledge, but this became a major source of tension. For as Berkey notes, ″the controversy that their activities engendered was in the final analysis about how the common people were to understand Islam.″ (p. 21) That much was at stake is clear from the many critiques of the popular preachers written throughout the medieval period by members of the religious establishment, including those by Ibn al-Jawzī (d. 597/1200), Ibn al-Ḥājj (d. 737/1336), Zayn al-Dīn al-ʿIrāqī (d. 806/1404), al-Suyūṭī (d. 911/1505), and ʿAlī ibn Maymūn al-Idrīsī (d. 917/1511). Though these and other members of the ulama held a variety of theological and legal views, they were united in their stand against unlawful innovation in religion, which they sought to define and articulate in a system of proper Sunni belief and ritual.

Yet this was a daunting task, for the popular preachers and religious storytellers were pervasive in medieval Muslim society, and they were often adored by the common people as sources of religious edification as well as entertainment. Their critics, however, warned of charlatans and fools, who might cheat the people out of their money, while leading them astray. Such imposters and ignoramuses lacked proper education and certification, and so they spread lies, weak hadith, and heresies, while their preaching sessions were thought to encourage the mixing of the sexes and other illicit activities. This was a crucial issue, for popular preaching and storytelling were acceptable, even honorable, activities provided that their practitioners were trained and regulated by the ulama. Indeed, many critics of the popular preachers and storytellers were, themselves, preachers as well as religious scholars. Their sermons were punctuated by quotations and allusions, traditions of the prophet Muḥammad, and stories of the earlier prophets *(Isrāʾīlīyāt)*.

Further, two themes central to all preaching were the renunciation of worldly goods and preparation for the Day of Judgment. Berkey reviews these and other themes found in the sermons of popular preachers, and their emotional impact on their audiences. He further observes that underlying much of this preaching was Sufism, which was a prominent feature of Islam in the Mamluk period. Poverty

and death were major topics of medieval mysticism, which sought to foster the love between God and His servants. But some critics feared that public expressions of pious love would be misconstrued by common folk as blatant eroticism, while the public presentation of mystical teachings, such as those by Ibn al-ʻArabī (d. 637/1240) could be even more dangerous.

In response to such criticism, others defended popular preachers and storytellers as serving an essential religious service to the Muslim community. Here, Berkey focuses on an anonymous manuscript entitled *Al-Bāʻith ʻalá al-Khalāṣ fī Aḥwāl al-Khawāṣṣ* ("The Enticer to Liberation from the Concerns of the Elites"). Through a good piece of scholarly detective work, Berkey discovered that the author of this work is almost certainly ʻAlī Ibn Wafā' (d. 807/1404), an important member of the Wafā'īyah Shādhalīyah Sufi order, and a popular preacher. He wrote this treatise in response to Zayn al-Dīn al-ʻIrāqī's polemic against popular preachers and their Sufi values. The two men squared off over "the fundamental issue surrounding the preachers and storytellers . . . control: who was to control their activities, their words, and their messages, and how was such control to be exercised" (p. 55). Al-ʻIrāqī, fearing sedition and heresy, wanted to control and regulate what he believed to be illegal activity on the part of ignorant and unrestrained preachers. Ibn Wafā' agreed that preachers who preached against the law would surely face divine retribution. But he noted that many preachers and storytellers had, in fact, been authorized to transmit legitimate religious knowledge. Further, for Ibn Wafā', what truly mattered was the quality and sincerity of a sermon's *ʻibrah*, or spiritual message. As Berkey points out on this and similar matters, Ibn Wafā' and al-ʻIrāqī held differing views regarding what constituted proper religious knowledge. While the conservative al-ʻIrāqī attempted to circumscribe this knowledge and its transmission, Ibn Wafā' pressed for openness, "for the possibility that humanity's understanding of the will of God was incomplete and susceptible to further refinement, even in the hands of individuals such as those preaching and telling stories to the Muslim masses" (p. 85). Berkey concludes that this debate over popular preachers and storytellers underscores the fact that while the ulama had emerged as the religious authorities of medieval Islam, precisely who qualified for membership in this elite group and on what basis remained somewhat ambiguous.

Popular Preaching and Religious Authority in the Medieval Islamic Near East is a concise, well-argued, and well-written book. My only real criticism is that in a book about preaching, we never read an actual sermon. Either as part of his second chapter "Storytelling and Preaching in the Late Middle Period," or as a separate succeeding chapter, Berkey might have translated and analyzed several representative sermons. For example, reading a sermon by the conservative *khaṭīb* Ibn al-Jawzī, together with one by the respected Sufi preacher Ibn ʻAṭā Allāh al-Iskandarī (d. 709/1309), and another by one of the popular preachers, such as

Shaykh Shuʿayb al-Ḥurayfīsh (d. 801/1389–99), would have made for an interesting contrast, and provided a fuller picture of the types of material involved. Finally, to Berkey's extensive bibliography should be added Īliyā Ḥāwī's anthology *Fann al-Khaṭābah* (Beirut, n.d.). These minor points aside, with *Popular Preaching and Religious Authority in the Medieval Islamic Near East*, Jonathan Berkey has presented a detailed and insightful discussion of the vibrant and dynamic activity of Muslim preaching and storytelling and so has made another important contribution to the study of medieval Islam.

Grandes villes méditerranéennes du monde musulman médieval. Edited by Jean-Claude Garcin (Rome: Collection de l'École française de Rome, 2000). Pp. 323.

REVIEWED BY PAULINA B. LEWICKA, University of Warsaw

This ambitious volume brings together a number of papers prepared by fourteen distinguished scholars who acted upon the request of Claude Nicolet, then the director of the École française de Rome and the organizer of a conference on the "megapoles" of the Mediterranean (Rome, May 1996). The contributors decided to examine nine cities—not all of them of the Mediterranean basin, despite the book's title. The list, which includes Damascus, Qayrawan, Cordoba, al-Fusṭāṭ, Aleppo, Cairo, Fez, and Tunis, is complemented by Baghdad, a center separated from the Mediterranean's eastern shore by over 800 km of desert routes. Baghdad, however, a great early medieval megapolis of the Arab-Muslim world, "could not be ignored," to use the editor's own words. Therefore it was included—on an equal basis—"for scholarly comparison." The magnitude of tenth-century Baghdad cannot be denied. To include it, however, among Mediterranean urban centers is somewhat confusing. Similarly, the need to compare the characteristics of Oriental cities with those of Mediterranean urban centers is indisputable. However, to claim regularity based on the comparison of those centers with the single model of Baghdad is somewhat misleading.

The book presents nine Islamic cities. Thierry Bianquis examines post-Umayyad Damascus, while Mondher Sakly looks at Qayrawan, the capital of the province of Ifrīqīyā until the mid-eleventh century. The flourishing Abbasid Baghdad is discussed by Françoise Micheau; this presentation, the only one in this volume that contains comprehensive footnotes, is followed by a plan of the city, prepared by Abdallah Cheikh-Moussa. The plan includes the toponyms recorded in the

period between the foundation of Baghdad and the beginning of the tenth century. M. Acién Almansa and A. Vallejo Triano deal with tenth-century caliphal Cordoba. Ayman Fu'ad Sayyid and Roland-Pierre Gayraud, director of the archeological mission in al-Fusṭāṭ, examine the characteristics of this city in the Fatimid period. Anne-Marie Eddé′s study presents Aleppo of the twelfth–thirteenth centuries. Two of the contributions deal specifically with the capital of the Mamluk state: the presentation by Doris Behrens-Abouseif, Sylvie Denoix, and Jean-Claude Garcin is followed by Garcin′s evaluation of possible Cairo population figures in 1517. Halima Ferhat looks at fourteenth-century Merinid Fez. Finally, Mounira Chapoutot-Remadi examines fifteenth-century Tunis of the Hafsides.

To make sure that the results of their work remain (to quote the editors′ expression) at least in ″minimum harmony,″ the contributors agreed that a set of twelve topics be addressed for each of the cities under study. The topics, inspired by those drawn up by scholars working in Claude Nicolet′s project on the metropolitan areas of the northern Mediterranean, are: documentation and studies; quantitative evaluations; the forming of the population; distribution of the population; urban morphology; infrastructure and services; city authorities and administration; the city in its territory; the city and its long-distance links; religious and cultural topography; identity of the city.

The presentations are preceded by Thierry Bianquis′ and Jean-Claude Garcin′s thoughts on the notion of ″megapolis″ and its meaning. In fact this interesting chapter, while shedding much light on the question of the proper understanding of the ancient Greek term, is also somewhat confusing to the reader, who expects that being a ″megapolis″ is an element connecting the cities under study and probably constituting one of the main threads of the whole volume. In reality the essay offers an otherwise absorbing presentation in which Jean-Claude Garcin argues that Cairo of the thirteenth–fifteenth centuries can be considered a ″megapolis″ (which in his view is also the case for Baghdad of the ninth–tenth centuries), but that cities like al-Fusṭāṭ, Aleppo, Qayrawan, and Cordoba should not be included in this category. Garcin′s reasoning, apparently inspired by Claude Nicolet′s project, is very convincing, if not too closely in line with the chapters that follow.

Twelve topics, nine cities, an enormous abundance of secondary literature to study and sources to rediscover—and just one volume to contain it all. The title, the impressive format, and the preface appear promising, as do the table of contents and the names of the contributors, many of whom are internationally recognized experts on medieval Muslim cities. However, as soon as one reaches the bibliography (which precedes the presentations), confusion returns. In her bibliography for the essay on Baghdad, Françoise Micheau states that the list contains the most important works only and as for the sources, one should refer to the article itself (its footnotes

are indeed detailed and exhaustive) or to the appropriate entry in the *Encyclopaedia of Islam [sic!]*. To compensate for this deficiency, the author includes in the list of secondary literature that follows one- or two-sentence descriptions of each work. A number of works also seem to be missing from the list of sources for the chapter on al-Fusṭāṭ (compare it with the bibliographies included by Ayman Fu'ad Sayyid in any of his numerous editions of Arabic sources for the history of Cairo).

For anybody acquainted with the enormous richness of sources for the history and topography of Mamluk Cairo (including the European travellers′ accounts that are frequently quoted in Jean-Claude Garcin′s presentation), the five items that constitute the list of sources seem at least odd; defining them as ″sources essentielles″ to some degree explains the brevity, but does not quite help to understand the number of works selected. The list of modern literature that follows omits a number of important works, a deficiency that becomes particularly manifest in the presentation itself, as the reader is rarely given a chance to see more details on literature or additional explanations that are usually placed in footnotes. The case of Mamluk Cairo, however, is not an extraordinary example: chapters on Cordoba, al-Fusṭāṭ, Qayrawan, Damascus, and Fez are hardly annotated at all.

As for the articles themselves, their content is formed according to the pattern mentioned above and presented in an almost encyclopedically concise manner. For example, the chapter on Mamluk Cairo contains a very brief description of basic sources for topography of the city and mention of a few names of scholars who have studied its urban history (section ″documentation and studies″), followed by ″quantitative evaluations″ by Jean-Claude Garcin in which the author discusses all known estimations concerning the population of Cairo and suggests 270,000 as the most probable number (this fails to correspond with what André Raymond and others have calculated, which Garcin explains in a separate chapter). In the same section the author, using the works by al-Maqrīzī, Leo Africanus, and the map of Cairo by Matheo Pagano, provides some more figures concerning the city′s area and the density of population in certain parts of it.

Doris Behrens-Abouseif presents the composition of the population and, pointing out the cosmopolitan character of Mamluk Cairo, explains that the emergence of the multinational mosaics that the city dwellers formed was a result of many factors, such as the original multi-religious character of the city, frequent immigration of conquering troops, and waves of refugees that followed various conquests and wars. The Mamluk system of recruitment, the widespread use of slaves, and the international character of shrines and religious academies of Cairo added new nationalities and new groups to the already differentiated society.

In the following section the same author examines the distribution of the city population and notes that in Mamluk Cairo the separation of the Muslim and non-Muslim quarters was not very strict; a certain flexibility was permitted here.

She also points out that despite the professional specialization of Copts and Jews, there did not exist a strict religious segregation as far as the workplaces or crafts were concerned. She also stresses that because of the lack of sources similar to the Geniza archives for the time of the Fatimids or to court registers for the Ottoman epoch, we know relatively little on the distribution by profession of the population of Mamluk Cairo.

In the section dealing with infrastructures and services, Doris Behrens-Abouseif and Jean-Claude Garcin very briefly present the system of water provision and transportation of merchandise; they devote more space to Cairo bazaars. They examine the nature of commercial installations in the center of al-Qāhirah, explain the changing topography of the Cairene commerce that evolved according to the sultans′ and amirs′ orders, to economic crises, or to changing fashion. They also discuss the history of the founding of the bazaars along al-Qaṣabah, or the main axis of the Fatimid city, and explain the reasons for this development.

In her presentation on the authorities and administration of the city, Sylvie Denoix first points to the fact that, contrary to its European counterpart, the medieval Islamic city did not have municipal institutions of any kind and that the absence of urban administration is one of the characteristic features of the ″Islamic city.″ The author does not examine this interesting phenomenon further (which, considering the form of the volume, is quite understandable), but she also fails to mention fundamental studies on the subject, such as S. M. Stern′s ″The Constitution of the Islamic City″ (in A. H. Hourani and S. M. Stern, eds., *The Islamic City: A Colloquium* [Oxford, 1970]) or I. M. Lapidus′s ″Muslim Cities and Islamic Societes″ (in I. M. Lapidus, ed., *Middle Eastern Cities* [Berkeley and Los Angeles, 1969]).

Sylvie Denoix goes on to say that the Islamic cities were governed by other institutions instead: by *ḥisbah,* by judicature of the qadis, by various types of police and by *waqf*—the system of ″social solidarity,″ and she briefly presents each of them. Again, the omission of basic sources (the works of al-Maqrīzī and Ibn Duqmāq do not constitute the fullest compendium on the Cairene *ḥisbah* system) and of at least a few important items from the long list of secondary literature on the subject (the literature on the institution of *waqf* in Egypt is fairly rich) is an element that can hardly be applauded.

The author concludes the essay by stating that what in fact made Mamluk Cairo different from other Islamic cities was the duality of forces in power: there were local civilian elites responsible for religious and certain administrative issues on the one hand, and the army with the military and political power on the other; but as this duality was apparently the case with all Egyptian and Syrian cities where Mamluk troops were posted, this is not a distinguishing feature of the Cairo urban administration. This city was unique in being the seat of the Mamluk sultan, an officer who was not only the ruler of the kingdom, but also the one who often

took a personal interest in, and gave dispositions as to, the order in the city, the safety of its gates and streets, control over its various legal and illegal businesses, as well as its urban development. It was he, finally, who presided over the *maẓālim* court sessions, so that the four Sunni judges were not the only institution that dispensed justice in the city.

Perhaps the most thought-provoking part of the chapter on Mamluk Cairo, if not of the entire book, is Jean-Claude Garcin's "Note sur la population du Caire en 1517." In his article the author, referring to various sources that indicate the number of dwellers in late medieval Cairo, comments on the results of contemporary studies on the subject (particularly those by André Raymond), draws his own conclusions, and attempts to establish his own figures. Garcin apparently does not agree with the methods of calculation applied by Raymond nor with his application of these methods to the pre-Ottoman epoch.

Thus, trying to avoid the methodological confusion that an "Ottomanist" approach to medieval Cairo may cause, the author decides in the first place to redefine the term "Cairo" by incorporating al-Fusṭāṭ within Cairo's medieval limits at the end of the fifteenth century—contrary to the "Ottomanists," for whom al-Fusṭāṭ is just a ruined suburb. However logical this move may appear, the soundness of it is open to discussion, and not just on whether al-Fusṭāṭ was already ruined or not. In the late fifteenth century, as before, the chief of police of al-Qāhirah was not responsible for order in al-Fusṭāṭ, and *vice versa;* the two officers did not have any common beat or share a common commander, which suggests that from the administrative point of view (whatever this may mean in the case of a city with no municipal authorities) the two urban entities were separate. Al-Qalqashandī, who in his encyclopedia devotes a section to describe *madīnat* al-Fusṭāṭ, and another to describe *madīnat* al-Qāhirah, apparently confirms the late medieval situation.

At the same time, another proposition by the author, to include Būlāq and other *extra-muros* quarters within the city limits, seems to be rational. This said, one remark should be added, viz., that the poor of Cairo (if we consider them its inhabitants) seem not to fit the methods of counting valid for other inhabitants. Some of them lived in exceedingly overcrowded houses, where a "feu fiscal" could by no means be limited to five persons; some of them—usually homeless immigrant scholars and personnel of various and numerous religious institutions of Cairo—dwelled in the institutions' buildings or slept in front of them. Still others lived outside the walled city, on the ground or in some kind of temporary housing. How large a part of Cairo's population did they form? An absorbing study by Adam Sabra, *Poverty and Charity in Medieval Islam* (Cambridge, 2000), does not provide the answer either, but leaves this question tantalizingly open.

The glossary of Arabic urban terms and a set of carefully prepared colored maps of the nine cities complete the book. There is no index.

The approach the contributors have adopted in their study resulted in creating a reference volume, a kind of encyclopedia-style handbook consisting of nine large entries on nine medieval Mediterranean cities, including Baghdad. Indeed, much of this material covers—to use Carl F. Petry′s words—ground thoroughly trodden by specialists in the field, especially in the case of Cairo, Damascus, and Aleppo, which over the preceding thirty years have been ″worked over to a degree verging on excess.″ This, however, does not negate the value of the volume. As the editor states, the aim was to contribute to the work on the general history of Islamic urbanism. And the book, no doubt, satisfies all conditions to serve this purpose. It indeed paves the way for further work in this direction; what we need now is to rediscover, reread, reanalyze the sources, and interpret the data on Islamic urban and social history that the medieval works and documents contain. One can only praise the efforts of this group of distinguished scholars for placing their research on medieval Muslim cities in a framework that enables further comparative studies on a scale even larger than Mediterranean Muslim urbanism.

ʻImād Badr al-Dīn Abū Ghāzī, *Taṭawwur al-Ḥiyāzah al-Zirāʻīyah fī Miṣr Zaman al-Mamālīk al-Jarākisah* (Cairo: ʻAyn lil-Dirāsāt wa-al-Buḥūth al-Insānīyah wa-al-Ijtimā'īyah, 2000). Pp. 155.

Reviewed by Igarashi Daisuke, Chuo University

It is generally agreed that the *iqṭāʻ* system was a fundamental military and economic system of the Mamluk state providing the basic framework for the Mamluk regime and its society. However, even though this is a most important matter directly linked to the social and political power structures, only a few attempts have so far been made to understand the actual transformation process of the *iqṭāʻ* system—that is, the land tenure system under the Circassian Mamluks that has been regarded as being in ″a period of decline″—with the exception of C. F. Petry′s recent studies using Mamluk *waqf* documents concerning the expansion of the sultans′ *waqf* lands.

The present book is a remarkable study that considers the land tenure system in Circassian Mamluk Egypt based on Mamluk documents in the Ministry of *Waqf*s and National Archives in Cairo, which have heretofore been used almost exclusively for *waqf* studies, and Ottoman land registers of *rizaq (dafātir al-rizaq al-jayshīyah, dafātir al-rizaq al-aḥbāsīyah)* that have never been used as historical sources for Mamluk studies. The author notices that there were many cases of

state land sales from the state treasury *(bayt al-māl)* to individuals during the Circassian Mamluk period. The data he examines is based on 570 cases of state land sales appearing in the documentation. The aim of the book, as the author describes it in the Introduction, is to consider the process of development, causes, and effects of the sale of state lands, which he regards as an important phenomenon influencing the traditional land tenure system in medieval Egypt. It argues against the common opinion that most agricultural land belonged to the state, and that private ownership had not developed in medieval Egypt, as attested by al-Qalqashandī and al-Maqrīzī, historians of the Circassian Mamluk period. They state in their works that there was neither much privately owned nor *waqf* land in Egypt in the early fifteenth century, the beginning of the Circassian period.

Chapter 1 deals with the development of state land sales during the Circassian Mamluk period, in which most of the cases were found, although the practice had existed since the Fatimid period. Some 570 cases are arranged chronologically and according to sultanic reigns. In a table, the author shows that most state land sales were carried out during specific reigns, like those of Qānṣūh al-Ghawrī and al-Ashraf Īnāl, but, in contrast, only few cases can be found under others, like al-Ẓāhir Barqūq and al-Mu'ayyad Shaykh, despite their long terms. Similarly, land sales are concentrated in particular periods, that is, the mid-fifteenth century and the last twenty years of Mamluk rule. Judging from this data, it is obvious that the state land sales did not occur equally throughout the Circassian Mamluk period.

Chapter 2 focuses on the reasons for state land sales. In Mamluk documents, they were ordinarily legitimated ″for expenditures on military expeditions and payments to soldiers,″ attempting to overcome the fact that the *fuqahā'* had not agreed on the legality of selling land originally belonging to the state treasury. Therefore, the following three questions are considered by the author: did state land sales coincide with military expeditions or with other military activities? Were there fiscal circumstances that actually required selling land? Did land payments actually enter the state treasury′s coffers? As a result of this investigation, no apparent relationships can be found between fiscal or military circumstances and the frequency of state land sales. Moreover, the documents frequently tell us that land payments from the state treasury were ″awarded″ to buyers. Consequently, the author concludes that the reasons for selling state land described in the documentation were not legitimate.

In Chapter 3, entitled ″Effects of state land sales under the Circassian Mamluks,″ the author assumes that state land sales influenced various aspects of society in medieval Egypt for the reason that agricultural land was the basis of state revenues as well as the *iqṭā'* system, and therefore he examines the buyers of state lands and the subsequent transfer of that land after purchase. From this analysis, he

reveals that a vast amount of agricultural land was turned into *waqf* through the sale of state lands, thus in effect transferring land ownership from the state to private hands. He points out that three important changes in the land tenure system and Egyptian society resulted from this. First, it may have caused a decline in the *iqṭā‘* system owing to a reduction of state land that could be awarded to mamluks and amirs as *iqṭā‘*. He expects that the traditional loyalty between sultans and mamluks and amirs depended on the *iqṭā‘* system and may have collapsed as a result of the change in their land tenure status from *muqṭa‘*s to private land owners, making them independent of the state to some extent. Secondly, a new landlord group consisting of *awlād al-nās* and Egyptians who had been excluded from the ruling class appeared, now that the state was no longer the exclusive source of land due to the free transfer of land as a result of the spread of sales from the state treasury. However, their social influence on their own land was reduced because it was necessary to turn it into *waqf* to avoid confiscation, in addition to the fact that they had been absentee landlords. Thirdly, nevertheless, the documentation makes clear that most of the land sold from the state treasury eventually fell into the hands of the sultans. That is, they became the greatest beneficiaries of state land sales. Consequently, the author concludes that the real reason for the state land sales was to benefit the sultans themselves, who used it to reward their followers and to conciliate their enemies, all of this due to the political corruption of the period.

The most valuable features of this book are its numerous tables and graphs, which organize the data in archival sources statistically and quantitatively. In addition, the author compares these tools with narrative sources, examining the phenomenon of state-land sale from various aspects. His opinion that this unfortunately overlooked phenomenon was significant in causing great social transformation at the time is very interesting. However, his hypothesis in Chapter 3 about the transformation of the land tenure system remains uncertain because it mostly depends on statistical analysis of the documents, and cannot be proven by the narrative sources. Furthermore, the sultans′ intentions regarding state land sales and the contemporary political situation caused by it, or requiring it, are not examined satisfactorily, but only summed up as political corruption, despite possible effects on the political and power structure of the traditional Mamluk regime. We may recall that many state land sales occurred under particular sultanic reigns, despite the absence of pressing military and economic circumstances, as seen in Chapter 2. Therefore, we must look more carefully into the political circumstances of those reigns, including reconsideration of whether state land sales were transacted under similar situations and for the same purposes throughout the Circassian period, or were merely a part of some intentional policy by particular sultans for some special purpose.

Even though the author's opinion leaves room for further investigation, especially from the aspect of political history, the importance of this book cannot be overemphasized. Most of all, it shows that Ottoman documents are applicable to Mamluk studies, which have usually been based on narrative sources due to an assumed lack of administrative documents, thus enabling scholars to explore further the land tenure system during the Mamluk period. Land systems are crucial elements of society, having close relationships to political, economic, and social conditions. The conclusions reached in this book will have an impact on other fields of Mamluk history, and will change the previously held historical image of the Circassian Mamluks.

REVIEWED BY THOMAS BAUER, Universität Münster

Historiographical works are not only important for the facts they contain. Each of these works is also a document for the world view of the time of its composition and can tell a lot about the interests and predilections of its readers, about the scholarly life of that time, and the perception of history in it. Therefore, one should not be disappointed if the recently published works under review do not add many historical facts previously unknown. They are interesting nevertheless, each one in its own way.

Ibn Ḥajar (773–852/1372–1449) hardly needs to be introduced in these pages. His *Durar al-Kāminah,* a collection of biographies of the important persons who died during the eighth century (701–800), is a basic tool for everyone interested in the Mamluk period. It is the first of a long series of works containing the biographies of important people who died within a certain century. But if we consider the date of Ibn Ḥajar's birth and death, he seems not to have been particularly predisposed

to writing the biographies of the prominent people of the eighth century, because a book like this did not allow him to treat the biographies of all those who died after the author was only twenty-seven years old. It is therefore only too understandable that he planned a continuation to this book, a *Dhayl al-Durar al-Kāminah.* In the year 832 he noticed, as he writes himself, that already a third of the ninth century had elapsed. This inspired him to put together a volume containing short presentations of those who had died during the years 801 to 832 in chronological order (different from the *Durar*). The volume contains the obituaries of 639 persons, ranging between a single line and two pages. Ibn Ḥajar finished a draft *(musawwadah)* only, which circulated among several ulama, among them Ibn al-Labūdī, in whose possession al-Sakhāwī had seen the book,[1] and Ibn Qāḍī Shuhbah, who left notes in the manuscript. This *musawwadah* in Ibn Ḥajar′s own hand has survived and is probably the only manuscript of the text that ever existed. Ibn Ḥajar himself obviously never cared for the preparation of a fair copy *(mubayyaḍah).* Probably he felt that his *Inbā' al-Ghumr,* a history of the *ḥawādith*/*wafayāt* type, which he carried on until his death, made a further continuation of the *Dhayl* superfluous.[2] In any case, the whole material of the *Dhayl* can also be found in the *Inbā'* (and, additionally, in al-Sakhāwī′s *Ḍaw'*), so that the edition of the *Dhayl* yields only a very small number of hitherto unknown facts. However, the texts are not identical, and it is never devoid of interest to have the *ipsissima verba* of as great a scholar as Ibn Ḥajar in front of oneself. The edition is, therefore, to be welcomed.

But which edition? The edition by Aḥmad Farīd al-Mazīdī is meant to complete the two-volume set (four volumes in two) of Ibn Ḥajar′s *Al-Durar al-Kāminah* issued by the Dār al-Kutub al-'Ilmīyah (henceforth: DKI). The DKI does not mention an editor of the *Durar,* but presents the book as being ″corrected″ by a certain 'Abd al-Wārith Muḥammad 'Alī (Beirut, 1418/1997). It has become common practice with the DKI to publish ″remakes″ of books published previously by other publishing houses. In these cases, the original edition (which is hardly ever specified) is simply retyped without consulting any manuscript. The new text (which is usually presented in a clumsy layout with small margins standing in marked contrast to a pompous cover) can, of course, never be better than the text from which it is copied, because it copies its mistakes and inevitably adds new ones. To give but one example, in the biography of al-Ṣafadī in the new DKI edition of the *Durar* the reader comes across al-Ṣafadī′s statement that he wrote ″two hundred *(mi'atayn)* volumes″ and may find it inconsistent with a later notice

[1]Muḥammad ibn 'Abd al-Raḥmān al-Sakhāwī, *Al-Jawāhir wa-al-Durar fī Tarjamat Shaykh al-Islām Ibn Ḥajar,* ed. Ibrāhīm Bājis 'Abd al-Majīd (Beirut, 1419/1999), 3:688.

[2]Ibn Ḥajar al-'Asqalānī, *Inbā' al-Ghumr bi-Abnā' al-'Umr,* ed. Muḥammad 'Abd al-Ḥamīd Khān et al., 9 vols. (Hyderabad, 1387–96/1967–76).

that he wrote more than five hundred. Even more surprising is the enigmatic information that al-Ṣafadī suffered from "a hardness of hearing in the hereafter *(fī al-ākhirah)*". If this text is compared with the much superior Hyderabad edition, the reader will find out that al-Ṣafadī claimed to have written "hundreds *(mi'īn)* of volumes," and that the problems with his hearing occurred "towards the end of his life *(fī al-ākhar)*." This example proves the practice of the DKI not only to be ethically dubious but also detrimental to scholarly standards. It is only to be hoped that the easily available print of the DKI will not supersede the excellent Hyderabad edition.

This practice arouses suspicion also for the edition of the *Dhayl,* a suspicion that turns out to be only too justified. Though al-Mazīdī certainly had a copy of Ibn Ḥajar's autograph in hand (as the plates on pp. 23–24 prove), everything points to the conclusion that this was not the main source for his edition. Six years before, another edition of the *Dhayl* had appeared in Cairo. Its editor, ʻAdnān Darwīsh, had done an impressive job. By comparing Ibn Ḥajar's *musawwadah,* which is written almost without diacritical dots, with the text of the *Inbā',* the *Ḍaw',* and other sources, he manages to decipher Ibn Ḥajar's text nearly completely. He even succeeds in reading most of the marginal notes by Ibn Qāḍī Shuhbah. Further, he gives a comprehensive commentary in the footnotes identifying nearly every person and book title mentioned in the text. It may well be the case that Darwīsh's commentary proves to be more helpful than Ibn Ḥajar's own words. All these notes are lacking in al-Mazīdī's edition, a fact that alone lends superiority to Darwīsh's edition. But really striking is the fact that al-Mazīdī's version of Ibn Ḥajar's text is completely identical with Darwīsh's. By not mentioning Darwīsh's edition, al-Mazīdī implies that he did not know it. But it is hard to imagine that his reading of Ibn Ḥajar's sketchy text, which is extremely difficult to decipher (as the sample plates show), is always the same as that of Darwīsh and that he always had the same idea as to how to divide the text into paragraphs. Whenever Darwīsh could not read a word and therefore omits it, al-Mazīdī also could not read it. In many cases Darwīsh notes that a passage was extremely difficult to read, that he could only guess the right word, or that he had to put forward a conjecture. In all these cases, al-Mazīdī's text is absolutely identical, but without admitting any textual problems. Even where there is a lacuna in the text of the *Dhayl* that Darwīsh tried to fill by adding the corresponding passage of the *Inbā'* in square brackets, al-Mazīdī's text is identical —with the exception of the brackets. He thus presents passages which are definitely missing in Ibn Ḥajar's autograph as part of the original text. Therefore we can conclude with almost complete certainty that al-Mazīdī did plagiarize the edition of Darwīsh. It is a matter of course that only Darwīsh's erudite edition should be bought, used, and quoted.

The author of the next book under review is Ṣārim al-Dīn Ibrāhīm, known as Ibn Duqmāq, an elder contemporary of Ibn Ḥajar. He was born between 740 and 750, and died in 809/1496. He was an important source for the historical works of Ibn Ḥajar and is the subject of an entry in Ibn Ḥajar's *Dhayl* (no. 274) and in his *Inbā'* (6:16–17). As his name shows, he belonged to the *awlād al-nās,* and as such had the usual problems of being accepted by the great ulama, because he could not comply with their linguistic standards, which required a flawless mastery of Classical Arabic. Though Ibn Ḥajar had a liking for him and drew heavily on his writings, he cannot help stating that Ibn Duqmāq, "despite his passion for literature *(adabīyāt)* and history, was bare of the clothes of the Arabic language, and his speech was vulgar *('āmmī al-'ibārah)*" (*Dhayl,* p. 182). Several works of Ibn Duqmāq have been preserved at least partially, among them a collection of the biographies of Hanafi scholars, which caused him a lot of trouble, since he was accused of slandering al-Shāfi'ī in it, and a description of Cairo and Alexandria edited by Vollers in 1893 *(Kitāb al-Intiṣār li-Wāsiṭat 'Iqd al-Amṣār).* A fine edition of a précis of Mamluk history up to the year 805 has appeared recently.[3] In this work, he refers to his *Al-Tārīkh al-Kabīr* (p. 26), by which he certainly meant his history entitled *Nuzhat al-Anām fī Tārīkh al-Islām,* a history in annalistic form following the *ḥawādith*/*wafayāt* pattern. It seems as if at least more than half of it has been preserved.[4] Ibn Ḥajar states that this work was the most important source for Badr al-Dīn al-'Aynī for the period not covered by Ibn Kathīr. Al-'Aynī, he says, copied Ibn Duqmāq, including his linguistic mistakes and without mentioning his source in passages in which Ibn Duqmāq presents himself as an eyewitness, thus pretending falsely to have been an eyewitness himself (*Inbā,'* 1:2–3).

Samīr Ṭabbārah now has undertaken the task of editing the portion covering the years 628–59/1230–61, the end of the Ayyubid and the beginning of the Mamluk period. Obviously Ibn Duqmāq used a great variety of sources, and though many of them are well known, his text provides different formulations, unknown details, and even some biographical entries which the erudite editor could not trace in any other source. But of course only a careful source-critical study will determine the *Nuzhah*'s importance as a historical source for this period. Whatever the results will be, the part edited by Ṭabbārah is interesting in any case, because it is based on Ibn Duqmāq's autograph. Fortunately the editor did not obliterate the grammatical peculiarities of the manuscript, but only corrected

[3]Ibn Duqmāq, *Al-Nafḥah al-Miskīyah fī al-Dawlah al-Turkīyah,* ed. 'Umar 'Abd al-Salām Tadmurī (Beirut, 1420/1999).

[4]The most comprehensive survey of the surviving manuscripts is given in ibid., p. 26, where Tadmurī however fails to mention the Gotha manuscripts. Taken together and provided that all given dates are correct, we posses the parts dealing with the years 176–422, 436–552, 628–59, 701–42, and 768–804.

obvious errors, in which case he gives the original wording in the notes. In cases of grammatical and syntactic influences of the spoken language, he preserves Ibn Duqmāq's text and gives the form complying with the rules of Standard Arabic in the notes. In some cases, for no obvious reason, he proceeds the other way around. However, the reader is always able to reconstruct the features of the autograph and is at the same time provided with a readable text. If only the editor had been more attentive and the considerable number of misprints been smaller, this edition could serve as a model for similar cases.

Ṭabbārah's edition allows us to assess Ibn Ḥajar's criticism, and we must admit that he was not entirely wrong when he questioned Ibn Duqmāq's grammatical competence. Ibn Duqmāq's mistakes, however, were by and large predictable. He starts sentences having a plural subject with a verb in the plural form, disregards accusative endings and mixes up the endings –*ūn* and –*īn*. These completely unspectacular peculiarities are the main features of dialectal influence in Ibn Duqmāq's text. Instead of mentioning these features, the editor in his introduction discusses the problem of *hamzah* orthography at some length (pp. 17–18). I would prefer that the subject of *hamzah* orthography disappear entirely from discussions of dialect influence in classical manuscripts or of the features of so-called Middle Arabic. Of course these people did not pronounce the *hamz,* but this fact cannot be derived from the manuscripts, because *hamzah* was also unnoted in manuscripts of purely classical texts written by educated writers. The standard orthography was always to write *mas'ūl* with one *wāw* and no *hamzah* sign, and to write *sā'ir* with dotted *yā'* and no *hamzah* sign either. This being so, nothing speaks against replacing this tradition with the modern standard orthography for *hamzah* in editions. This was also Ṭabbārah's idea. Therefore his haphazard (and often simply wrong) way of writing *hamzah* comes as somewhat of a surprise.

It is remarkable further, as Ibn Ḥajar had already noted, that Ibn Duqmāq's unaccomplished grammatical training was no obstacle to his predilection for literature. It becomes very clear that Ibn Duqmāq is occupied mainly with two fields, history and *adab,* to which one may add a certain interest in Sufism. For this reason, Ibn Duqmāq treats the eventful year 648 in eleven pages and a half, but devotes nineteen pages to the year 632, in which nothing especially interesting seems to have happened, since the *ḥawādith* of it are treated in only three lines. But 632 was the year in which the poets al-Ḥājirī and—above all—Ibn al-Fāriḍ died. Ibn Duqmāq gives a long biography of Ibn al-Fāriḍ and quotes extensively from his and al-Ḥājirī's poetic productions. Ibn Duqmāq's history clearly is no instance of *siyāsah*-oriented historiography, but rather a combination of political and cultural history with a conspicuous focus on *adab*. Ibn Duqmāq obviously liked poetry. Repeatedly he gives his own judgments about the lines he quotes, thereby presenting himself as an *adab* expert. The poetry quoted pertains exclusively

to high literature. There are no vernacular verses, and *mirabilia* play hardly any role. Therefore I think that the extraordinary role of poetry cannot be explained sufficiently by considering it part of a process of popularization, as Ulrich Haarmann suggested.[5] Taking into account the high prestige of *adab* in the Mamluk period and the overall process, which I call the "*'ulamā'*ization of *adab*" and the "*adab*ization of the *'ulamā'*,"[6] one of the motives for adducing such a great amount of poetry may also be the desire of the author to prove his professionality and, in the special case of Ibn Duqmāq, to make up for his incomplete linguistic training. In any case, Ibn Duqmāq's book provides rich material for a new assessment of this and many other questions about the nature of Mamluk historiography. Therefore, though the edition is far from being faultless, one can only give the advice to buy it as long as the DKI has not plagiarized it and added even more mistakes.

'AZĪZ AL-'AẒMAH, *Ibn Taymīyah* (Beirut: Riyād al-Rayyis lil-Kutub wa-al-Nashr, 2000). Pp.499.

REVIEWED BY JON HOOVER, Dar Comboni Arabic Study Centre, Cairo

'Azīz al-Aẓmah has published extensively in both English and Arabic, including the recent *Muslim Kingship: Power and the Sacred in Muslim, Christian, and Pagan Politics* (London: I. B. Tauris, 1997). In the Arabic book under review al-Aẓmah offers an anthology of texts drawn from Ibn Taymīyah's (d. 728/1328) vast corpus of writings. Many domains of the Hanbali jurist's thought are represented, although there is little from his spiritual writings. The first and shortest of three major parts is allotted to passages on "the true religion." The second part presents *fatwá*s and other texts dealing broadly with legal matters, including the caliphate and popular religious innovations. Among these are excerpts from the jurist's rulings on the obligation to fight the Islam-confessing Mongols. These have been picked up by modern day radicals to justify violent opposition to governments in the Islamic world. The third part of the anthology includes discussions of religious epistemology and doctrine, as well as Ibn Taymīyah's *Wāsiṭīyah* creed, which

[5]Ulrich Haarmann, "Auflösung und Bewahrung der klassischen Formen arabischer Geschichtsschreibung in der Zeit der Mamluken," *Zeitschrift der Deutschen Morgenländischen Gesellschaft* 121 (1971): 46–60.

[6]Thomas Bauer, "Literarische Anthologien der Mamlukenzeit," in *Die Mamluken: Studien zu ihrer Geschichte und Kultur im Gedenken an Ulrich Haarmann (1942–1999)*, ed. S. Conermann and A. Pistor-Hatam (Hamburg, 2002), in press.

remains in use to the present. While the texts chosen are interesting, they are not always taken from the best available printed editions, and they do not necessarily grant perspicuous access to the jurist´s ideas. Moreover, al-Aẓmah provides no explanatory notation because, as he informs us in the introduction, this would have made the volume too unwieldy. Al-Aẓmah closes the book with an appendix containing six historical extracts dealing with Ibn Taymīyah´s life and works and an index of names.

In the appendix al-Aẓmah performs a sleight of hand that is inexcusable for a modern scholar of any repute. The first and only full account of Ibn Taymīyah´s life presented is the late biography of Ibn Ḥajar al-ʻAsqalānī (d. 852/1449), in which, contrary to several earlier sources, Ibn Taymīyah confesses Ashʻarism under duress and thereby admits that his view of God´s attributes is heterodox. After this comes an abridgement of Ibn Rajab´s (d. 795/1392) biography that has been divested of nearly everything that counters Ibn Ḥajar´s account and a great deal more of substantial historical interest. The third selection, the biography of Kutubī (d. 764/1362), provides an extensive list of Ibn Taymīyah´s works but little else, and the fourth is the late biography of Ibn ʻImād (d. 1089/1678), which also does not deal with Ibn Taymīyah´s trials concerning God´s attributes. The fifth excerpt in the appendix is a condemnation of Ibn Taymīyah´s views on God´s attributes by the Ashʻari apologist Tāj al-Dīn al-Subkī (d. 771/1370), and the final piece is Ibn Kathīr´s account of the jurist´s funeral. In short, al-Aẓmah has selected and edited texts so as to portray Ibn Taymīyah as heterodox on God´s attributes while ostensibly providing important and informative historical sources.

Despite its sophistication and occasional insight, the introduction confirms that one of al-Aẓmah´s purposes in presenting this volume is polemical distortion. He does make the valid point that it is important to read what Ibn Taymīyah says in historical context instead of selectively quoting him for tendentious purposes, and he accuses radical Islamists who use the jurist´s anti-Mongol *fatwá*s to justify armed resistance of historical anachronism. However, al-Aẓmah demonstrates to excess that Ibn Taymīyah was out of step with the Sunni legal and doctrinal consensus of the day. He also makes no attempt to help the reader understand that Ibn Taymīyah´s view of God´s attributes is more sophisticated than Ashʻari polemists have wished to acknowledge, a point that has been made by Henri Laoust and that an extended reading of Ibn Taymīyah´s texts bears out.

Al-Aẓmah closes his introduction by explaining that research on Ibn Taymīyah is still in its infancy. True as that may be, al-Aẓmah has taken little effort to avail himself of what research there is, and this and the book´s polemical agenda render it misleading and nearly useless for those interested in Mamluk studies or the

history of medieval Islamic thought. This anthology is regrettably little more than testimony to modern intra-confessional controversy, and the excerpted passages are better read in context in the original printed editions.

SULAYMĀN AL-MADANĪ, *Tīmūrlank fī Dimashq* (Damascus and Beirut: Al-Manārah, 2000). Pp. 192.

REVIEWED BY ZAYDE G. ANTRIM, Harvard University

It is surprising that Tamerlane′s invasion of Syria at the turn of the ninth/fifteenth century and its devastating social, cultural, economic, and political repercussions have received so little attention from historians of the Mamluk period or of Bilād al-Shām more generally. Indeed, I have not found a single monograph-length study in a European language dealing with the topic of Tamerlane′s campaign in Mamluk Syria. Although in the broad context of Timurid history the Syrian invasion may be interpreted as a strategic side-note, an unresolved interlude, or a denouement, it undoubtedly plays a key role in the context of the history of Syria under Mamluk rule. A lone published monograph in Arabic, Akram Ḥasan al-ʻUlabī′s *Taymūrlank wa-Ḥikāyatuhu maʻa Dimashq* (Damascus and Beirut, 1987), has filled this historiographical gap in the Arabic-speaking world until quite recently. A thorough survey of the contemporary Arabic source material, including a helpful annotated bibliography, al-ʻUlabī′s book offers, if not original analytical insight, then at least a solidly documented narrative account of the protagonists and major events that dominate this historical episode. The publication of Sulaymān al-Madanī′s *Tīmūrlank fī Dimashq* raises hopes that a new contribution to this neglected area of study might update, complement, or expand upon al-ʻUlabī′s synthetic work. Unfortunately, it falls short of these expectations.

The greatest weakness of al-Madanī′s work is its sloppy scholarly apparatus. Initially, a glance at the bibliography left me concerned. A brief list of ten works consisting of no more than author and title, this ″bibliography″ does not even cover all the major Arabic chronicles describing the historical events, much less include Persian chronicles or significant secondary works on the Mongols, Tamerlane, or Mamluk Syria published in the last few decades. The only secondary work listed is al-Sayyid al-Bāz al-ʻArīnī′s 1967 monograph on the Mongols, and the only work originally published in a language other than Arabic that appears in the bibliography is Walter Fischel′s *Ibn Khaldūn and Tamerlane* (1952). Although al-Madanī includes accurate, albeit abbreviated, entries for the important chronicles

by al-Maqrīzī, Ibn Taghrībirdī, and Ibn Iyās, he erroneously records the title of Ibn al-Athīr's earlier chronicle as *Al-Bidāyah wa-al-Nihāyah* and identifies the author of *ʻAjā'ib al-Maqdūr fī Nawā'ib Ibn Tīmūr* by the obscure sobriquet Ibn Dimashqī, rather than by the well-known appellation Ibn ʻArabshāh (and his inconsistent use of both names throughout the rest of the text contributes to this point of confusion). The other three works al-Madanī chooses to list are Muḥammad Kurd ʻAlī's *Khiṭaṭ al-Shām,* to which I found only one reference in the book as a whole, Ibn Ṭūlūn's *Mufākahat al-Khillān,* to which I found no reference at all, and the mysterious *Al-Mawsūʻah al-ʻAskarīyah,* which I could neither identify nor find mentioned elsewhere in the book.

As I began to read the text of *Tīmūrlank fī Dimashq*, however, it quickly became clear that al-Madanī employs many sources not listed in the bibliography, including those by some of the more conspicuously absent chroniclers, such as Ibn Qāḍī Shuhbah and others. Although this is good news on one level, al-Madanī's idiosyncratic annotation style makes it frustratingly difficult to establish which source corresponds to which passage, where a quotation begins and ends, whether a marked passage represents a direct quotation or a paraphrase, to which edition the volume and page numbers in the notes refer, and, in the case of obscure secondary sources, what work is being referenced in the first place. For instance, he relies heavily on a source listed in the footnotes simply as "Shihāb," sometimes followed by a number. Only by referring back to al-ʻUlabī's annotated bibliography did I discover that al-Madanī is most likely citing an (apparently) unpublished thesis entitled *Tīmūrlank* submitted by Maẓhar Shihāb for a doctorate from the Université Libanaise in 1981. Finally, *Tīmūrlank fī Dimashq* is peppered with passages clearly quoted or paraphrased without citation as well as passages introduced by a phrase within the body of the text, such as "according to al-Maqrīzī," without further annotation.

The content of the book does not manage to redeem the weaknesses in its form. The first half of the work is characterized by a disjointed sequence of synthetic overviews of the life of Ghengis Khān, the Mongol expansion, the Crusades, and the rise of Tamerlane. After a completely unannotated ten-page chapter on Tamerlane's early career and before a long discursion on Ayyubid history, al-Madanī inserts a brief chapter entitled "Tamerlane's Warning to the Sultan of the Mamluks" (pp. 37–40). This chapter consists almost entirely of a reproduction of the text of a communication between Tamerlane and "the Sultan of the Mamluks" without further identification, interpretation, or analysis. Although the full text of this missive may be found in al-Maqrīzī's *Kitāb al-Sulūk* and Ibn Taghrībirdī's *Al-Nujūm al-Zāhirah,* as well as in several of the other major chronicles, the only annotation al-Madanī provides for the extended quotation is the location of verses from the Quran appearing therein. Furthermore, he indicates

that the ″Sultan of the Mamluks″ received this correspondence after Tamerlane′s ravaging of Aleppo, which occurred during the reign of Sultan Faraj in 803/1400, despite the fact that it was Sultan Barqūq who received the message in 796/1394, years before Tamerlane invaded northern Syria. Al-Madanī returns to this letter in the proper historical context in a short statement fifty pages later (p. 89), without reference to or explanation of its earlier misleading, if not completely mistaken, presentation.

The rest of the book proceeds more or less chronologically after this interruption, starting with an indictment of Ayyubid disunity, dissolution, and disregard for the Arab subject population. Next to be condemned are the barbarous and foreign military slaves whose coup in Cairo in 648/1250 led to the formation of the Mamluk Sultanate. Mongol and Crusader villains also play parts in this sweeping historical narrative of the victimization of the Arab inhabitants of Bilād al-Shām at the hands of tyrants and armies leading up to their climactic manipulation, betrayal, and near annihilation at the hands of Tamerlane and his minions. The final half of the book, dedicated to a detailed account of Tamerlane′s campaign in Syria, unfolds as a string of excerpts from the major contemporary chronicles without rigorous documentation or original analysis. The extent to which al-Madanī engages in source criticism may be illustrated by the handful of statements contrasting subject matter covered by Tamerlane′s Persian court biographer, Sharaf al-Dīn ʻAlī al-Yazdī, with that covered in the Arabic histories of Ibn ʻArabshāh, al-Maqrīzī, Ibn Taghrībirdī, Ibn Qāḍī Shuhbah, Ibn Iyās, and others. The book ends abruptly with Tamerlane′s departure from Bilād al-Shām, Syrian captives in tow, leaving behind a devastated human and infrastructural landscape. Al-Madanī does not provide his readers with a glimpse of the efforts at social, political, and economic reconstruction over the next decade or any insight into the repercussions of Tamerlane′s invasion for the last century of Mamluk rule.

One of the more provocative aspects of *Tīmūrlank fī Dimashq* is the short preface in which al-Madanī sets out his ideological agenda (pp. 5–9). He blames Tamerlane′s successful victimization of Syria on Arab disunity and Islamic sectarianism within the Arab population. He portrays the Ayyubids, Mamluks, Crusaders, and Mongols as ethnic strangers whose natural inclination was to prioritize their own aggrandizement at the cost of the well-being of the indigenous Arab inhabitants of Bilād al-Shām. If the Arabs could only have united against these foreign rulers and armies, he implies, they would not have suffered as much during this period. Al-Madanī argues that this is a lesson that modern Arabs need to learn as they are still successfully manipulated, betrayed, divided, and conquered by outsiders, most notably Israel, today. Although al-Madanī does not apply this parallelism explicitly in the rest of the book, overtones of the ethnic determinism suggested by this preface resonate throughout. Politics aside, such a presentist

attitude towards historiography combined with an uncritical approach to the sources and a sloppy scholarly apparatus make Sulaymān al-Madanī's *Tīmūrlank fī Dimashq* a disappointing contribution to the field of Mamluk studies.

ARNOUD VROLIJK, *Bringing a Laugh to a Scowling Face. A Study and Critical Edition of the "Nuzhat al-Nufūs wa-Muḍḥik al-ʿAbūs" by ʿAlī Ibn Sūdūn al-Bašbuġāwī (Cairo 801/1407–Damascus 868/1464)* (Leiden: Research School CNWS, 1998). Pp. xiv, 203 (Engl.) + iv, 178 (Arab.).

ʿALĪ IBN SŪDŪN AL-YASHBAGHĀWĪ, *Nuzhat al-Nufūs wa-Muḍḥik al-ʿAbūs,* edited by Maḥmūd Sālim (Damascus: Dār Saʿd al-Dīn, 1421/2001). Pp. 352.

REVIEWED BY THOMAS BAUER, Universität Münster

The edition of Ibn Sūdūn's *Nuzhah* will change our understanding of Mamluk literature more deeply than would the edition of many other literary texts of this period. This work provides insight into a type of literature that was until now only peripherally known, but must have been rather omnipresent in the salons, gatherings, and streets of Mamluk and Ottoman Egypt and Syria. Besides representing a poorly-known current of Arabic literature, Ibn Sūdūn's poetry and prose display a very distinct personal character and prove again that in the Mamluk empire men of letters produced a lot of original and innovative works.

Due to its relevance to many fields, Ibn Sūdūn's work has already attracted the interest of Arabists more than once,[1] though they had to rely on manuscripts or a Cairo lithograph from 1280/1863. Now within just three years, two editions of Ibn Sūdūn's *Nuzhah* have appeared. The Beirut edition is a serious attempt by an obviously able and diligent editor. But, unfortunately, he neither knew of Vrolijk's enterprise, nor did he use any manuscript that was not available in Syrian libraries, limiting himself to three manuscripts in Damascus and the lithograph. Whereas three manuscripts may be a reasonable basis for some other texts, this is not the case with Ibn Sūdūn's *Nuzhah,* which was obviously an extremely popular text right up to the eighteenth century. Vrolijk has traced 38 manuscripts, 33 of which he was able to study either on the spot or in a microfilm copy. The most important

[1] Vrolijk's edition provides a good bibliography. Not included is van Gelder's chapter on Ibn Sūdūn and food, cf. Geert Jan van Gelder, *Of Dishes and Discourse: Classical Arabic Literary Representations of Food* (Richmond, 2000), 90–96. A detailed review of Vrolijk's edition by Everett K. Rowson was published in *Edebiyât* 12 (2001): 128–38.

result was that he detected two autograph copies written by Ibn Sūdūn himself, which he made, of course, the basis of his edition. In addition he used two other manuscripts close to the autograph tradition to help in cases in which the autographs proved defective. Since many of Ibn Sūdūn's texts are in colloquial Arabic for which no standard orthography existed, the author's own orthography (including his usage of vowel signs) is of primary importance, especially since the text provides interesting material for dialectologists. Therefore, the autograph tradition is even more important in the case of Ibn Sūdūn than in the case of texts in pure classical Arabic. Due to this textual basis of Vrolijk's edition, Maḥmūd Sālim's edition is deprived of much practical significance. At least, it presents a textual tradition slightly different from the autograph tradition which is not completely devoid of interest, and Sālim also adds several notes which may help in understanding Ibn Sūdūn's often rather difficult text. Its main value, however, lies in the fact that a text like the *Nuzhah* has been published in the Arab world at all. For too long modern Arab intellectuals have been rather embarrassed by the existence of a humorous literary tradition instead of appreciating it. Now Maḥmūd Sālim's edition will certainly help make Ibn Sūdūn's texts more widely known in the Arab world. It is predictable that Vrolijk's edition will not fulfill this task, because it will probably not appear in bookshops in Arab countries, and because Vrolijk uses Latin abbreviations in his apparatus which might deter Arabic readers. I can see no reason for sticking to this antiquated tradition and would favor a purely Arabic apparatus. In any case, Vrolijk's diligent and impeccable edition remains the authoritative one. His edition is also accompanied by a thorough, profound, and well-written study of Ibn Sūdūn, which provides a solid starting point for further studies.

As far as the content of the *Nuzhah* is concerned, I will limit myself here to a few words and refer to Vrolijk's introduction, Rowson's review, and van Gelder's study mentioned in note 1. Ibn Sūdūn's book is divided into two sections, a smaller one on "serious topics" *(jidd),* comprising mainly poems in praise of the prophet and *ghazal,* and a second one, more than three times as long, on "humorous topics" *(hazl).* This second section is subdivided into five subsections, mainly on formal criteria. It contains texts both in the classical language as well as in colloquial. Both speech forms are utilized in *qaṣīd* poetry, in strophic poetry *(muwashshaḥ* and *zajal),* and in rhymed and unrhymed prose (*maqāmāt* and other prose texts). Vrolijk is certainly right to consider some of the prose texts as dramatic sketches (pp. 36–38). Food and hashish are recurrent themes, but a wide range of other topics is also covered and makes Ibn Sūdūn's text an extraordinarily important source for the study of material culture in late Mamluk Egypt. Ibn Sūdūn's usage of the Egyptian dialect (studied by Vrolijk, pp. 137–59) and his interest in foreign languages (some poems contain Turkish and Persian elements)

and strange dialects (a man from Baghdad makes his appearance, who speaks a dialect that can be clearly identified as *qeltu* Arabic of an Anatolian type) are also not devoid of interest. For comparative literature it will be especially interesting to analyze the specific kind of humor displayed by Ibn Sūdūn. Maḥmūd Sālim feels himself reminded of surrealism (p. 5), while I, myself, rather think of the absurd theatre of Ionesco, and Vrolijk draws a parallel to Monty Python (p. 37).

The author of this fascinating text is ʻAlī ibn Sūdūn al-Bashbughāwī (this, not al-Yashbaghāwī as is stated in al-Sakhāwī's *Ḍaw'*, seems to be the right *nisbah;* it is discussed in Vrolijk, p. 3). He was born in Cairo (810/1407) and died in Damascus (868/1464). It is probable that his father, Sūdūn, was a mamluk of Circassian origin. ʻAlī therefore belonged to the group of the *awlād al-nās* which played an important role in the intellectual life of the Mamluk empire, though few of them completed the requisite scholarly training that would have allowed them to become fully accepted members of the established ulama. The same seems to hold true for Ibn Sūdūn. Vrolijk, who painstakingly traces Ibn Sūdūn's biography, overestimates Ibn Sūdūn's scholarly training. The memorizing of a Hanafi textbook and of a bit of hadith,[2] mathematics, and metrics is not really a "first class education," and if Vrolijk's assumption is right that Ibn Sūdūn took part in military campaigns as a member of the *halqah,* one may doubt even more that a "promising career" (p. 9) as a scholar lay ahead of him, which was only thwarted by the economic conditions of the time. Instead, I would suggest that Ibn Sūdūn was one of the hundreds or even thousands of urban people who had acquired some sort of academic training without ever achieving a scholarly proficiency sufficient to enter the ranks of the great ulama.[3] If these people did not earn their livings as craftsmen or traders, they could only hope for unprestigious and poorly paid *mansib*s such as the post of muezzin or of imam in one of the smaller madrasahs. And this is exactly the position to which Ibn Sūdūn did rise. That he could ever have aspired to a more brilliant scholarly career remains very doubtful.

Altogether, it seems that Ibn Sūdūn belonged to a layer of Mamluk society which was of enormous importance for its culture. It is the partially educated, urban middle class, consisting of people such as craftsmen, traders, and minor

[2]The phrase "samiʻa ʻalá al-Wāsiṭī al-musalsal wa-baqīyat masmūʻih" (al-Sakhāwī, *Al-Ḍaw' al-Lāmiʻ* [Cairo, n.d.], 5:229) does not refer to a philological textbook, as Vrolijk assumes (p. 8), but means that al-Wāsiṭī passed on to Ibn Sūdūn the traditions that were transmitted to him in the *musalsal* way as well as his other orally transmitted traditions. Aḥmad ibn Muḥammad ibn Abī Bakr al-Wāsiṭī (745–836) was "discovered" in the year 826 as a mine for hadith traditions from people long dead, thus providing hadiths with comparatively short *isnād*s (al-Sakhāwī, *Ḍaw',* 2:106–7).

[3]Jonathan Berkey, *The Transmission of Knowledge in Medieval Cairo: A Social History of Islamic Education* (Princeton, 1992), 193–216. Berkey mentions "minor scholars" explicitly on pp. 198 and 204.

ulama. The last group especially seems to have had a considerable proportion of *awlād al-nās* among its ranks. This group left behind more documents than is generally recognized, and these documents are of particular interest, since they allow us to see more deeply into the experiences, values, and attitudes of the people underneath the ″turbaned elite,″ though we must always be aware of the fact that even through them we have not arrived at the ″ordinary people,″ the urban lower classes and the peasants. Quite a lot of poetry from members of this social group has come down to us. Among scattered poems by craftsmen like ʻAyn Baṣal al-Ḥā'ik and al-Ḥammāmī (who was the manager of a bath), the entire *dīwān* of the architect Ibrāhīm al-Miʻmār is preserved in several manuscripts.[4] As far as I can see, al-Miʻmār is the figure most closely resembling Ibn Sūdūn, though he lacks the ″dramatic″ side of Ibn Sūdūn, his love of the absurd, and his keenness for honey, sugar, and *kunāfah*. Instead, he is more satirical, more critical of social conditions, less pious, and more interested in erotica than in bananas. Al-Miʻmār is far more traditional in form, but less proficient in *fuṣḥá*. With Ibn Sūdūn he shares a skill in dialect poetry, an addiction to the topic of hashish (not necessarily to hashish itself, since al-Miʻmār seems to have preferred wine), and the fact that both look at the world from a middle- or lower-class perspective. A comparison of these authors would be of great interest.

Anthologies are another important source for the middle class, its interests and intellectual horizons. The Mamluk period was, in fact, the golden age of the anthology. More than a hundred of them are preserved in the libraries, but this source for Mamluk culture and society still remains untapped. An anthology such as the *Kanz al-Madfūn,* by a certain Yūnus al-Mālikī, collects material destined for the education, edification, and entertainment of this group of people.[5] As Vrolijk shows (pp. 49–57), Ibn Sūdūn was also the author of such an anthology (besides the fact that the *Nuzhah* is an anthology itself, comprising a selection of Ibn Sūdūn′s own works), in which—small wonder—Ibrāhīm al-Miʻmār figures prominently (p. 52). Further studies are needed to determine to which type of anthology this book belongs. I would like, however, to note that it is absolutely

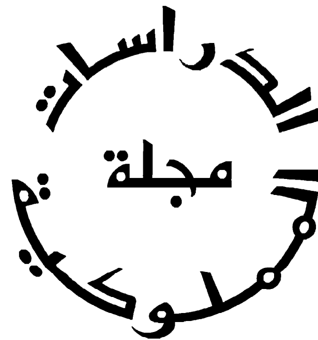
[4]Thomas Bauer, ″Ibrāhīm al-Miʻmār: Ein dichtender Handwerker aus Ägyptens Mamlukenzeit,″ *Zeitschrift der Deutschen Morgenländischen Gesellschaft* 152 (2002): 63–93 (cf. p. 67, note 14, on ʻAyn Baṣal al-Ḥā'ik); idem, ″Die Leiden eines ägyptischen Müllers: Die Mühlen-Maqāme des Ibrāhīm al-Miʻmār (st. 749/1348),″ in A. Blöbaum et al., eds., *Ägypten Münster: Kulturwissenschaftliche Studien zu Ägypten, den Vorderen Orient und verwandten Gebieten (Festschrift Erhart Graefe)* (Wiesbaden, 2003), 1–16. A poem on his bath by al-Ḥammāmī and a *zajal* on the Nile festival by al-Miʻmār will be presented by Otfried Weintritt and myself in the Festschrift Heinz Grotzfeld (to appear 2003).

[5]Thomas Bauer, ″Literarische Anthologien der Mamlukenzeit,″ in S. Conermann and A. Pistor-Hatam, eds., *Die Mamluken: Studien zu ihrer Geschichte und Kultur im Gedenken an Ulrich Haarmann (1942–1999)* (Hamburg, 2002). The *Kanz* was composed probably around 770–90.

unremarkable that, as Vrolijk states (p. 52), ″classical″ authors are not represented in it. In fact, the vast majority of Mamluk anthologies focus on material from Ayyubid and Mamluk times. The reason for this is not that they reflect a ″secondary tradition″ (p. 54). Ibn Nubātah, the author most often quoted in Ibn Sūdūn′s anthology, must have been a ″classical″ author already for Ibn Sūdūn, and he remained a ″classical″ author until the end of pre-modern Arabic literature in the middle of the nineteenth century. Instead, literary anthologies in the Mamluk period are less monuments that preserve the heritage of the past than the reflection of an intense and vivid literary culture. In the Mamluk period, literature was not the domain of a small section of society, but an omnipresent means of communication. Poetry was an everyday commodity for the ulama as well as for the common people (perhaps with the sole exception of the Mamluks themselves). This fostered a great need for poetry that was up to date and *en vogue* and could be imitated or at least quoted whenever necessary. This need was met by the many anthologies of this period. Even the great ulama-poets like Ibn Nubātah and al-Ṣafadī published their work rather in the form of anthologies than in the form of a *dīwān*. Therefore it is not surprising that so many anthologies of this period focus on material that was new and directed at contemporary taste rather than regurgitating a sanctified tradition.[6]

A second characteristic of Mamluk literature is of importance in this context. In the Mamluk era there existed a broad layer of people who were neither fully-fledged ulama nor illiterate yokels but something in between. In other words, social layers were not neatly separated, but there was a continuum ranging between the totally uneducated (who nevertheless may have been acquainted with rather sophisticated oral folk poetry) on the one end and the Ṣafadīs and Ibn Ḥajars on the other end. This in turn led to the fact that what we call ″popular literature″ and ″high literature″ ceased to be two completely different phenomena separated by a broad gap. Instead, there was again a continuum stretching between the *zajal*s sung by the peasants, which never transcended their purely oral existence, and the sophisticated odes by poets like Ibn Nubātah with their many intertextual references to the poetic tradition of past centuries. Ibn Nubātah was popular, as Ibn Sūdūn′s anthology and the *Kanz al-Madfūn* show, also among the urban middle classes, and vernacular poetry by al-Miʿmār (and certainly also that by Ibn Sūdūn) was highly esteemed among the great ulama. They only seemingly were embarrassed by its ungrammatical features and considered its contents in conflict with their scholarly dignity—but they liked it and read it.[7] Ibn Sūdūn′s work must be seen in this context. It is not popular literature in the sense that it is the pure voice of the

[6]Anthologies of this kind existed nevertheless. I mention only Ibn Nubātah′s *Maṭlāʿ al-Fawāʾid* and Ibn Ḥijjah′s *Thamarāt al-Awrāq,* cf. ibid.



[7]Bauer, ″Ibrāhīm al-Miʿmār,″ 69–72.

common people, nor is it ″high″ literature. Instead, it reflects the literary taste of the urban (especially Cairene), semi-educated middle classes among which Ibn Sūdūn might have found his main public. There is little doubt, however, that his poems and *maqāmāh*s were esteemed by the high-brow ulama as well as by members of the lower classes. This explains the fact that at least 38 manuscripts of the *Nuzhah* have survived until the present day.

Regardless of the work that has been done in the fields of history and economics, I suggest that the study of literature, especially of texts produced by and/or addressed to members of its middle classes, will help considerably in enhancing our knowledge of the Mamluk period. The edition of Ibn Sūdūn´s *Nuzhah* is a great step in this direction. And, by the way, did I already mention that Ibn Sūdūn´s book provides for extremely entertaining and amusing reading?

MAMLŪK STUDIES
REVIEW

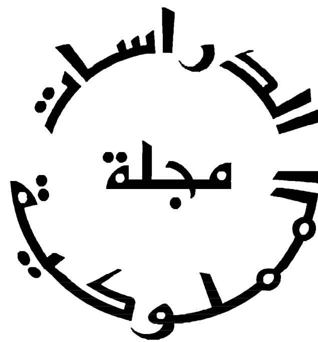
Published by the Middle East Documentation Center (MEDOC)
The University of Chicago

Mamlūk Studies Review is a biannual refereed journal devoted to the study of the Mamluk Sultanate of Egypt and Syria (648–922/1250–1517). It appears in January and July. The goals of *Mamlūk Studies Review* are to take stock of scholarship devoted to the Mamluk era, nurture communication within the field, and promote further research by encouraging the critical discussion of all aspects of this important medieval Islamic polity. The journal includes both articles and reviews of recent books. Submissions of original work on any aspect of the field are welcome, although the editorial board will periodically issue volumes devoted to specific topics and themes. *Mamlūk Studies Review* also solicits edited texts and translations of shorter Arabic source materials (*waqf* deeds, letters, *fatāwá* and the like), and encourages discussions of Mamluk era artifacts (pottery, coins, etc.) that place these resources in wider contexts. Transliterated Middle Eastern languages should conform to the system utilized by the Library of Congress. All questions regarding style should be resolved through reference to *The Chicago Manual of Style*, 14th edition. All submissions should be typed double-spaced. Submissions must be made on labeled computer disk together with a printed copy. The print copy should have full and proper diacritics, but the disk copy should have no diacritics of any kind.



Note: Readers of *Mamlūk Studies Review* who have access to the World Wide Web are referred to the MEDOC home page: http://www.lib.uchicago.edu/e/su/mideast. This site provides links to the searchable primary and secondary Mamluk bibliographies maintained by MEDOC. Authors may download editorial and style guidelines from the Mamluk Studies Review page. The site also has information about subscribing to the Mamluk listserv. The Mamluk listserv is an open forum for discussions of all aspects of the history and culture of the Mamluk Sultanate. The Editors of *Mamlūk Studies Review* encourage readers to use the listserv to comment upon and discuss issues raised in the *Review*.

ISSN 1086-170X.

BOOK REVIEWS

Acknowledgments

The papers collected in this issue of the *Mamlūk Studies Review* were originally presented at the symposium ″Medieval Arabic Historiography: The Legacy of al-Maqrīzī (1364–1442),″ which was held at the University of Notre Dame, September 28–29, 2001, under the auspices of the Program of Arabic Studies, University of Notre Dame. I would like to thank the Henkels Lecture Series Grant, the Institute for Scholarship in the Liberal Arts, the Medieval Institute, the Graduate School, and the Department of Classics, all at the University of Notre Dame, for their financial support. For their encouragement and support in the difficult and unsettling time shortly after the tragic events of September 11, 2001, I would like to thank all the friends and colleagues who participated in the symposium. All those present were keenly aware of the regretful absence of prospective participants whose travel, from the Middle East or elsewhere, was canceled due to the circumstances. My thanks also to Bruce Craig and Marlis Saleh for their diligent work in the preparation of this volume.

Who Was al-Maqrīzī? A Biographical Sketch

Today, it is all too common to view any text in light of its author's psychological, emotional, and intellectual proclivities. Background, character, upbringing, education, successes and failures, and all other experiences are seen as fundamental factors in shaping the scope and orientation of one's literary and artistic output. So established has this mode of inquiry become that it has spread from its original application in creative writing to permeate the study of all literary forms, even those that have traditionally claimed to be governed by rules of objectivity, methodology, and scholarly detachment. This development is a direct outcome of modern culture's mania for memory and the memorial, which translates into society's effort to preserve every shred of memory of those deemed worthy of remembrance, if not of everybody.[1]

Medieval culture had different and less pronounced attitudes toward individuality, authorship, and remembrance, all concerns that underwent a phenomenal shift in significance in modern times.[2] This observation pertains both

[1]The outburst of biographies in our times is proof enough of our culture's belief in the individual and the individual psyche as historical agents. A recent development, obituaries collections from newspapers, shows how far this fascination has gone; see Marvin Siegel, ed., *The Last Word: The New York Times Book of Obituaries and Farewells: A Celebration of Unusual Lives* (New York, 1997, reprt. 1999), or the ongoing series of *The Daily Telegraph* obituaries books, collected and edited by Hugh Massingberd: *A Celebration of Eccentric Lives* (London, 1995); *Heroes and Adventurers* (London, 1996); *Entertainers* (London, 1997). In the same vein, genealogical research is fast becoming a major pursuit in the US with specialized magazines, companies, websites, and web search engines all serving the large number of Americans engaged in family history research (see the genealogytoday site, http://www.genealogytoday.com/topics/obits.htm). An editorial in *Ancestry* magazine (July–August 2001) cites a recent poll that put their number at 60 percent of the population. This mostly web-based occupation gained the scholarly cachet of approval in 2001 through the National Endowment for the Humanities (NEH)'s production of "My History Is America's History" guidebook and its sponsorship of many related scholarly conferences and meetings. For references to NEH activities in this domain, see NEH's family history website (http://www.myhistory.org).

[2]On the slow process of change from a muffled to a clear voice of the individual in Western literature, cf. Danielle Régnier-Bohler, "Imagining the Self: Exploring Literature," and Philippe Braunstein, "Toward Intimacy: The Fourteenth and Fifteenth Centuries," in *A History of Private Life: Revelations of the Medieval World*, ed. Philippe Ariés and Georges Duby, tr. Arthur Goldhammer (Cambridge, Mass, 1988), 373–82, 536–56, respectively.

to the Western and the Islamic worlds. Medieval Muslim scholars, like their Western peers, maintained a relatively inconspicuous presence in their writings. They followed established scholarly and literary conventions that tended to conceal personal touches behind ready-made narrative structures and elaborate prose techniques. Their authorial persona, however, came with distinct sensibilities since they functioned in an environment different from their Western counterparts and had their own textual strategies and restrictive religious and sociocultural values.[3]

This is not to say that medieval Muslim scholars did not see any relationship between an author′s intellectual and emotional disposition and his oeuvre. Quite the opposite: but they saw that relationship less in terms of the author′s character, feelings, and choices, and more in terms of his family background, religious and scholarly affiliations, teachers, and professional positions and patrons. In other words, the work of an author was believed to be influenced more by his social and intellectual circle than by his personality, preferences, or eccentricities. His good reputation, and therefore subsequent commemoration in *kutub al-tarājim* (biographical dictionaries)—the most extensive source we have on distinguished individuals in pre-modern Islamic societies—depended fundamentally on how closely he adhered to, and rose within, the established norms of his social class or professional group.

A typical biographical entry presents a more or less consistent set of facts depending on the category of the biographee—his (or, very rarely, her) full name, titles, and lineage, dates of death and birth (if known), family connections, education and teachers/masters *(shuyūkh)* from whom he acquired *ijāzah*s (licenses to transmit their texts), books read and memorized, employment history, quotations from poetry if he had composed any, reputation among peers, and, in conclusion, a doxology. With few exceptions, medieval biographers tended to leave out personal or anecdotal details about the biographee, not because they were uninteresting, but because they did not help define the individual within his scholarly, military, or social milieu, which is what the biographical genre was intended to do in the first place.[4] The few biographers who routinely included anecdotes, both real and

[4]Michael Chamberlain, *Knowledge and Social Practice in Medieval Damascus, 1190–1350* (New York, 1994), argues that prosopographies should be seen more as registers of the practices by which the influential social classes manipulated power. Fedwa Malti-Douglas, ″*Mentalités* and Marginality: Blindness and Mamluk Civilization,″ in C. E. Bosworth et al., *Essays in Honor of Bernard Lewis: The Islamic World from Classical to Modern Times* (Princeton, 1989), 211–37, makes an interesting and innovative use of a subset of the medieval biographical dictionaries, but stresses nonetheless their usefulness to understanding the mentality of an entire category rather

invented, seem to have used them as encoded messages about the moral standards of their subject—another defining aspect of the individual scholar in medieval Islamic etiquette.[5] Anecdotes, it appears, provided a free space within the codified structure of the genre for praise and criticism, which allow us to know more not only about the subject but also about the biographer himself.

THE BACKGROUND OF A SINGULAR HISTORIAN

Taqī al-Dīn al-Maqrīzī lived at a time when history writing flourished in an unprecedented way in Egypt.[6] More annals, biographical compendia, manuals for the chancery, geographical treatises *(masālik),* and topographical tracts *(khiṭaṭ)* were written in Cairo in the first half of the fifteenth century than in any other half-century period until the onset of modernity in the late nineteenth century. But, unlike an earlier Mamluk generation of universal historians—such as al-ʻUmarī and al-Nuwayrī in Cairo and Ibn Kathīr and al-Dhahabī in Damascus—who covered the entire Islamic world, al-Maqrīzī and his contemporaries tended to focus on local events in the present or recent past. Most of them composed cosmocentric and regional histories and prosopographies. They busied themselves with minutely chronicling the events of Mamluk Egypt during the fifteenth century, and to a lesser extent Syria, sometimes beginning with a cursory run-down of Islamic history from the Prophet to their own time, and sometimes adding the biographies of their contemporaries or immediate predecessors. This resulted in the formation of an endogenous and insular school of historiography, in which every member was linked in more than one way to the others, and every member′s work was inevitably and immediately measured against the works of others, who essentially covered the same terrain.[7] This situation encouraged intense scholarly and social

than individuals.

[5]See Nimrud Hurvitz, ″Biographies and Mild Asceticism: A Study of Islamic Moral Imagination,″ *Studia Islamica* 85 (Feb 1997): 41–65, for a discussion of these issues in the context of an analysis of the biography of Aḥmad ibn Ḥanbal.

[6]On Mamluk historiography, see Franz Rosenthal, *A History of Muslim Historiography* (Leiden, 2nd ed., 1968), passim; Shākir Muṣṭafá, *Al-Tārīkh al-ʻArabī wa-al-Muʼarrikhūn: Dirāsah fī Taṭawwur ʻIlm al-Tārīkh wa-Rijāluhu fī al-Islām* (Beirut, 1978–93), 2:139–304, all of vol. 3, 4:7–227; Ulrich Haarmann, *Quellenstudien zur frühen Mamlukenzeit* (Freiburg, 1969); Tarif Khalidi, *Arabic Historical Thought in the Classical Period* (New York, 1994), 182–231; Li Guo, ″Mamluk Historiographic Studies: The State of the Art,″ *Mamlūk Studies Review* 1 (1997): 15–43.

[7]Donald Little, *An Introduction to Mamlūk Historiography: an Analysis of Arabic Annalistic and Biographical Sources for the Reign of al-Malik an-Nāṣir Muḥammad ibn Qalāʼūn* (Wiesbaden, 1970), is a pioneering comparative examination of the annals of six of these historians which shows their complicated patterns of interdependence. See also the two detailed studies of the sources of two lesser-known Mamluk historians, al-Yūnīnī and Ibn Qāḍī Shuhbah: Li Guo, *Early Mamluk Syrian Historiography: Al-Yūnīnī′s Dhayl Mirʼāt al-Zamān* (Leiden, 1998); David Reisman,

competition, especially among the most prominent such as al-ʿAynī and al-Maqrīzī or al-Sakhāwī and al-Suyūṭī. These rivalries at times escalated into bitter factionalism among supporters and disciples which found its way into the biographies they penned of each other and each others′ masters.[8]

Thus, many of al-Maqrīzī′s biographers not only knew him personally, but held an opinion about him that depended on which side they belonged to in the historians′ ″club.″[9] Some, like Ibn Ḥajar al-ʿAsqalānī, regarded themselves as his friends and colleagues. Others, like Ibn Taghrībirdī, al-Sakhāwī, al-Jawharī al-Ṣayrafī, and Ibn Qāḍī Shuhbah, were his students or disciples of his students, but

″A Holograph MS of Ibn Qāḍī Shuhbah′s Dhayl,″ *Mamlūk Studies Review* 2 (1998): 19–49. As for al-Maqrīzī himself, see the article by Frederic Baudin in this issue of *MSR*.

[8]Anne F. Broadbridge, ″Academic Rivalry and the Patronage System in Fifteenth-Century Egypt: al-ʿAynī, al-Maqrīzī, and Ibn Ḥajar al-ʿAsqalānī,″ *Mamlūk Studies Review* 3 (1999): 85–107, analyzes the triangular relationship between these three paragons of history writing.

[9]A partial list of his Mamluk biographers includes Ibn Taghrībirdī, *Al-Nujūm al-Zāhirah fī Mulūk Miṣr wa-al-Qāhirah* (Cairo, 1930–56), 15:490–91; idem, *Al-Manhal al-Ṣāfī wa-al-Mustawfá baʿda al-Wāfī,* ed. Muḥammad Muḥammad Amīn et al. (Cairo, 1956), 1:394–99; idem, *Ḥawādith al-Duhūr fī Madá al-Ayyām wa-al-Shuhūr,* ed. Muḥammad Kamāl ʿIzz al-Dīn (Beirut, 1990), 1:63–68; Ibn Ḥajar al-ʿAsqalānī, *Al-Majmaʿ al-Muʾassis lil-Muʿjam al-Mufahris,* ed. Yūsuf ʿAbd al-Raḥmān al-Marʿashlī (Beirut, 1994), 3:58–60; idem, *Inbāʾ al-Ghumr bi-Abnāʾ al-ʿUmr* (Hyderabad, 1967), 9:170–72, which al-Maqrīzī seems to have read before his death; Badr al-Dīn al-ʿAynī, ʿ*Iqd al-Jumān fī Tārīkh Ahl al-Zamān: Ḥawādith wa-Tarājim,* selections by ʿAbd al-Rāziq al-Ṭanṭāwī Qarmūṭ (Cairo, 1989), 574; al-Sakhāwī, *Al-Ḍawʾ al-Lāmiʿ li-Ahl al-Qarn al-Tāsiʿ* (Cairo, 1935), 2:21–25; idem, *Kitāb al-Tibr al-Masbūk fī Dhayl al-Sulūk* (Būlāq, Cairo, 1896), 21–24, same as *Ḍawʾ;* Najm al-Dīn ʿUmar ibn Muḥammad Ibn Fahd, *Muʿjam al-Shuyūkh,* ed. Muḥammad al-Zāhī and Ḥamad al-Jāsir (Riyadh, 1982), 63; al-Jawharī al-Ṣayrafī, *Nuzhat al-Nufūs wa-al-Abdān fī-Tawārīkh al-Zamān,* ed. Ḥasan Ḥabashī (Cairo, 1970–89), 4:242–44; Ibn Iyās, *Badāʾiʿ al-Zuhūr fī Waqāʾiʿ al-Duhūr,* ed. Muḥammad Muṣṭafá (Wiesbaden, 1960–75), 2: 231–32; Muḥammad ibn ʿAlī al-Shawkānī, *Al-Badr al-Ṭāliʿ bi-Maḥāsin Man baʿda al-Qarn al-Sābiʿ* (Cairo, 1930), 1:79–81, adapts most of his information from al-Sakhāwī and Ibn Ḥajar, but questions the motivation of the former to attack al-Maqrīzī. See also article ″al-Maḳrīzī,″ by Franz Rosenthal, *Encyclopaedia of Islam,* 2nd ed., 3:177–78; Fuat Sezgin et al., *Studies on Taqiyaddin al-Maqrīzī (d. 1442): Collected and Reprinted* (Frankfurt am Main, 1992). Modern Arabic biographical studies include: Muṣṭafá Ziyādah, ″Tārīkh Ḥayāt al-Maqrīzī,″ in Muḥammad Ziyādah, ed., *Dirāsāt ʿan al-Maqrīzī* (Cairo, 1971), 13–22; Saʿīd ʿAbd al-Fattāḥ ʿĀshūr, ″Aḍwāʾ Jadīdah ʿalá al-Muʾarrikh Aḥmad ibn ʿAlī al-Maqrīzī wa-Kitābātihi,″ *ʿAlam al-Fikr* 14 (1983): 453–98; Shākir Muṣṭafá, *Tārīkh,* 2:140–51; Zuhayr Ḥumaydān, ″Introduction,″ *Min Kitāb al-Mawāʿiẓ wa-al-Iʿtibār bi-Dhikr al-Khiṭaṭ wa-al-Āthār lil-Maqrīzī* (Damascus, 1987), 1:5–47; Ḥusayn ʿĀṣī, *Al-Maqrīzī, Taqī al-Dīn Aḥmad ibn ʿAlī ibn ʿAbd al-Qādir al-ʿUbaydī, 766–845 H/1366–1441 M: Muʾarrikh al-Duwal al-Islāmīyah fī Miṣr* (Beirut, 1992); Muḥammad Kamāl al-Dīn ʿIzz al-Dīn, *Al-Maqrīzī: Muʾarrikhan* (Beirut, 1990); idem, *Al-Maqrīzī wa-Kitābuhu ″Durar al-ʿUqūd al-Farīdah fī Tarājim al-Aʿyan al-Mufīdah″* (Beirut, 1992); Ayman Fuʾād Sayyid, ″Introduction,″ in *Musawwadat Kitāb al-Mawāʿiẓ wa-al-Iʿtibār fī Dhikr al-Khiṭaṭ wa-al-Āthār* (London, 1995), 6–22.

they were also the students of his competitors and opponents. Still others were his rivals and even enemies, because al-Maqrīzī—besides being a solitary, proud, and competitive man—was arguably the most famous historian of them all.[10] These qualities induced deference, envy, disdain, and perhaps misunderstanding.

Al-Maqrīzī's admirers particularly emphasized his scholarly qualities. They differed, however, when it came to judging his prominence as a historian, with Ibn Taghrībirdī repeatedly asserting that he was "hands down the dean of all historians."[11] They also stressed his religious virtues and *zuhd* (mild asceticism),[12] which formed the solid moral and intellectual framework that defined the conception and orientation of his whole historical oeuvre.

Hostile biographers, notably the formidable al-Sakhāwī and al-ʻAynī, questioned his accuracy and rigor as a historian, with al-ʻAynī derogatorily claiming that he was a man given to divination and numerology.[13] Al-Sakhāwī, furthermore, raised a number of skeptical questions about al-Maqrīzī's lineage, education, clientage, and authorial integrity.[14] The gravest of his allegations is that al-Maqrīzī stole a draft of a book on *khiṭaṭ* after the death of its author, Shihāb al-Dīn al-Awḥadī, who was his neighbor and friend, and incorporated it into his own *Khiṭaṭ* without mentioning Awḥadī. Less fanatical biographers kept their criticism at the level of insinuation.[15] These accusations and innuendoes, inconclusive in themselves for lack of evidence, still allow us to add nuance to the otherwise drab portrait of the

---

[10]This is demonstrated, for example, by the envoy of the Timurid Shāh Rūkh who asked for a copy of al-Maqrīzī's *Sulūk* in 833/1430. Al-Maqrīzī, *Al-Sulūk li-Maʻrifat Duwal al-Mulūk,* ed. Muḥammad Muṣṭafá Ziyādah et al. (Cairo, 1934–72), 4:2:818, shows commendable restraint in reporting that request in three words with no comment. See also Ibn Taghrībirdī, *Nujūm,* 14:336; al-Jawharī al-Ṣayrafī, *Nuzhat,* 3:178.

[11]Ibn Taghrībirdī, *Nujūm,* 14:150, 15:189; idem, *Ḥawādith al-Duhūr,* 1:25–26, where the author tells us that he intended to continue al-Maqrīzī's *Sulūk* in his book because it was the best chronicle of its time.

[12]For a discussion of the meaning and implications of mild asceticism, see Hurvitz, "Biographies and Mild Asceticism," *passim.* For an intimation of al-Maqrīzī's spirited views on *zuhd,* cf. al-Maqrīzī, *Sulūk,* 4:2:757–58, for the obituary for *zāhid al-waqt* Aḥmad ibn Ibrāhīm, known as Ibn ʻArab, which contains all the elements of *zuhd* enumerated by Hurvitz.

[13]Examples abound in his reports on his relations with many of his biographees. He reveals his deep belief in divination in *Al-Mawāʻiẓ wa-al-Iʻtibār bi-Dhikr al-Khiṭaṭ wa-al-Āthār* (Būlāq, Cairo, 1853), 1:49, where he offers an environmental explanation for its prevalence in Egypt, and in a riddle he wrote in 823/1420, entitled "Al-Ishārah wa-al-Imā' ilá Ḥall Lughz al-Mā'," which is still in manuscript; see ʻIzz al-Dīn, *Al-Maqrīzī: Mu'arrikhan,* 52–54.

[14]Al-Sakhāwī, *Ḍaw',* 2:22–24.

[15]This is especially true of Ibn Taghrībirdī, who was al-Maqrīzī's pupil and who displays mixed feelings towards his teacher. Besides the remarks in his biographies see *Nujūm,* 13:151–53; 14:109–10, 200–1, 236–37, 310–11; 15:189.

common biography with the information they divulge about some of the more ambiguous aspects of al-Maqrīzī's character, scholarship, and career.

Al-Maqrīzī himself—whether inadvertently or deliberately—provides some tantalizing hints about himself every now and then in his historical narrative by giving his reaction to the event he is reporting or his whereabouts when it occurred. He adopts a more revelatory tone in the concise biographical dictionary *Durar al-'Uqūd al-Farīdah fī Tarājim al-A'yān al-Mufīdah,* in which he collected the biographies of people who died after his own birth, most of whom were family members, teachers, colleagues, competitors, or simply friends and acquaintances. In these entries, he reports on his interactions with them, including casual conversations he had with them, didactic anecdotes and poetry they recited to him, and meditations about the misfortunes that befell some of them.[16] Through these recollections, al-Maqrīzī displays the quintessential autobiographical qualities of first-person narrative—intimacy, immediacy, and the inevitable hint of vanity—without having to incur the reputation for vainglory that sometimes attached to serious scholars who wrote autobiographies.[17] For us, he actually provides glimpses of his experiences, feelings, and reflections which are invaluable for assessing who he was and how his life affected his scholarly output.

In this article, I will confine my discussion to four aspects of al-Maqrīzī's biography: his lineage, education, *madhhab,* and *zuhd,* for I believe them to be crucial in understanding al-Maqrīzī's choice of topics, the development of his method of inquiry, and the unusually strong critical voice that transpires in all of his historical writing, especially the *Khiṭaṭ, Itti'āẓ,* and the *Sulūk*. A fuller biography will appear in my forthcoming book on al-Maqrīzī and his *Khiṭaṭ.*

LINEAGE: Taqī al-Dīn Aḥmad ibn 'Alī ibn 'Abd al-Qādir al-Maqrīzī was born around 766/1364 in his family home in the Ḥārat al-Barjawān at the heart of Fatimid Cairo. His lineage is a bit obscure, ostensibly at his own hand. In the preface of most of his books, he in fact stops short at the tenth forefather when he introduces himself as was the custom at the time,[18] although he could have extended

[16]A single, incomplete manuscript of the book (Gotha MS 270 Arab) was inexplicably published twice within five years. It contains around 330 entries of the reported 556. See 'Izz al-Dīn, *Al-Maqrīzī wa-Kitābuhu "Durar al-'Uqūd al-Farīdah";* al-Maqrīzī, *Durar al-'Uqūd al-Farīdah fī Tarājim al-A'yān al-Mufīdah,* ed. Aḥmad Darwīsh and Muḥammad al-Maṣrī (Damascus, 1995).

[17]For a discussion of medieval autobiographers' uneasiness in speaking of themselves, cf. my "My Life with Ṣalāḥ al-Dīn: The Memoirs of 'Imād al-Dīn al-Kātib al-Iṣfahānī," *Edebiyât* 7 (Fall 1996): 61–81.

[18]For al-Maqrīzī's own presentation of his genealogy in the preface of his books see *Khiṭaṭ,* 1:4, where he stops at his great grandfather; *Sulūk,* 1:1:22; and *Durar,* 1:47, with the ten names stopping at the name of Tamīm, the father of 'Abd al-Ṣamad, who is in fact the grandson of the Caliph al-Mu'izz according to al-Sakhāwī's longer chain. The same line appears in al-Maqrīzī's

it to a very glorious ancestor, al-Muʿizz li-Dīn Allāh (r. 953–75), the first Fatimid caliph in Egypt and the founder of al-Qāhirah, or to an even more illustrious forebear, ʿAlī ibn Abī Ṭālib.[19]

Yet al-Maqrīzī seems to have admitted his Fatimid ancestry to at least some of his close friends.[20] He was apparently very proud of his caliphal Fatimid pedigree. He even approvingly volunteers a number of panegyric stanzas written by his neighbor, colleague, and posthumously-turned competitor, Shihāb al-Dīn al-Awḥadī, in which Awḥadī candidly and unapologetically calls al-Maqrīzī *"ibn al-khalāʾif"* [scion of the caliphs] and a descendant of al-Muʿizz and al-Ḥākim.[21] In one stanza, Awḥadī bluntly proclaims, "Be proud, Taqī al-Dīn, among the people of your noble Fatimid lineage. And if you cited a report on their generosity and you encountered a contestant, then trace your ancestry back to the Ḥākimī [al-Ḥākim]." These laudatory lines appear nowhere else in either Awḥadī's or al-Maqrīzī's various biographies.[22] In fact, al-Maqrīzī is the only one who speaks of a *dīwān* of poetry by Awḥadī that he claims to have read and critiqued, and he lists many examples from it in his *Durar,* including those laudatory verses. Their citing can only be explained as an implicit admission of al-Maqrīzī's purported Fatimid pedigree, even though it is couched in someone else's words.

A public assertion of his Fatimid, i. e., Ismaʿili ancestry, could have ruined his carefully constructed career as a Shafiʿi *ʿālim,* and even as a private citizen. Even without any solid confirmation of al-Maqrīzī's Fatimid pedigree, al-Sakhāwī, in his maliciously and underhandedly disparaging biography, uses the derogatory patronymic al-ʿUbaydī, i.e., descendant of ʿUbayd Allāh, the first in the Fatimid line to claim descent from the Prophet's daughter Fāṭimah in 906.[23] Al-ʿUbaydīyūn was indeed the spiteful title adopted by all Sunni commentators in Mamluk Egypt

---

obituary of his grandfather ʿAbd al-Qādir in *Sulūk,* 2:2:365, and of his father ʿAlī in ibid., 3:1:326.

[19]Ibn Taghrībirdī, *Nujūm,* 15:490 and Ibn Ḥajar, *Al-Majmaʿ al-Muʾassis,* 3:59, enumerate the forefathers of al-Maqrīzī back to the eighth ancestor, ʿAbd al-Ṣamad, and say that they have copied it from al-Maqrīzī himself. Ibn Taghrībirdī then adds that al-Maqrīzī's nephew, Nāṣir al-Dīn Muḥammad, dictated his uncle's genealogy after his death and brought it up to ʿAlī ibn Abī Ṭālib through the Fatimid caliphs. The same report appears in al-Jawharī al-Ṣayrafī, *Nuzhat,* 4:244.

[20]Ibn Ḥajar, *Inbāʾ,* 9:172, idem, *Al-Durar al-Kāminah fī-Aʿyān al-Miʾah al-Thāminah* (Hyderabad, 1929–32), 3:5; copied with an indignant remark in al-Sakhāwī, *Ḍawʾ,* 2:23.

[21]Al-Maqrīzī, *Durar,* 1:249–50; ʿIzz al-Dīn, *Al-Maqrīzī wa-Kitābuhu "Durar al-ʿUqūd al-Farīdah,"* 1:234.

[22]See Awḥadī's biographies in Ibn Ḥajar, *Inbāʾ,* 6:112–13; idem, *Al-Majmaʿ al-Muʾassis,* 3:38–39; al-Sakhāwī, *Ḍawʾ,* 1:358–59; Ibn al-ʿImād al-Ḥanbalī, *Shadharāt al-Dhahab fī Akhbār Man Dhahab,* (Cairo, 1931–33), 7:89–90

[23]Al-Sakhāwī, *Ḍawʾ,* 2:21, idem, *Dhayl al-Sulūk,* 21, where he lists all the ancestors up to Caliph al-Muʿizz li-Dīn Allāh.

who rejected the Fatimids′ claim of Prophetic lineage, and ascribed them instead to Maymūn al-Qaddāḥ ibn Daysān, the Manichean.″[24]

It is thus very plausible that al-Maqrīzī′s flattering portrayal of the Fatimids and their achievements in his *Khiṭaṭ* and his *Itti‘āẓ al-Ḥunafā’* was partly animated by his belief of being their scion.[25] He even mounts a fervent defense of the authenticity of their lineage back to Fāṭimah in the introduction of his *Itti‘āẓ al-Ḥunafā’*.[26] He approvingly records Ibn Khaldūn′s long discussion defending the authenticity of the Fatimids′ genealogy, an opinion that has earned Ibn Khaldūn many curses from his contemporary biographers.[27] Finally, al-Maqrīzī asks his readers to ″examine the facts fairly and not be deceived by the fabrications of the Fatimids′ detractors,″ at a time when the learned consensus in Sunni Egypt was that the Fatimids were impostors with a suspect lineage.

Al-Maqrīzī′s plea to his reader to accept the Fatimids′ genealogy did not go unnoticed. On the margin of the page in which he reports Imami traditions on the rise of the Fatimids, a remark states that ″al-Maqrīzī—God′s forgiveness be upon him—is not to blame for mounting this defense of the Fatimids because his lineage goes back to them.″[28] This comment must have been added by either the copyist or the owner of the manuscript, both of whom were fifteenth-century scholars who might have known al-Maqrīzī personally.[29] Ibn Ḥajar too almost confirms al-Maqrīzī′s Fatimid ancestry, by calling him al-Tamīmī (the descendant

[24]Al-Maqrīzī, *Itti‘āẓ al-Ḥunafā’ bi-Akhbār al-A’immah al-Fāṭimīyīn al-Khulafā’*, ed. Jamāl al-Dīn Shayyāl (Cairo, 1967), 1:52–54. The Maymunid genealogy is discussed in the same section.

[25]Shākir Muṣṭafá, *Tārīkh,* 2:148, raises this possibility as well, but Sayyid, *Musawwadat,* ″Introduction,″ 45, does not seem to think that it was the case.

[26]Al-Maqrīzī, *Itti‘āẓ,* 1:15–54, where he logically argues the truth of their lineage and lists prominent scholars, such as Ibn Khaldūn, who accepted it. Idem, *Khiṭaṭ*, 1:348–49, is a summary of the *Itti‘āẓ*′s discussion. Another Mamluk historian who accepts their claim is Ibn ‘Abd al-Ẓāhir, *Al-Rawḍah al-Bahīyah fī Khiṭaṭ al-Qāhirah al-Mu‘izzīyah,* ed. Ayman Fu’ād Sayyid (Cairo, 1996), 6–7. Other Mamluk historians who deny their lineage: Ibn Taghrībirdī, *Nujūm,* 4:69–112; Abū Ḥāmid al-Qudsī, *Kitāb Duwal al-Islām al-Sharīfah al-Bahīyah: wa-Dhikr Mā Ẓaḥara lī min Ḥikam Allāh al-Khafīyah fī Jalb Ṭā’ifat al-Atrāk ilá al-Diyār al-Miṣrīyah,* ed. Ulrich Haarmann and Ṣubḥī Labīb (Beirut, 1997), 12–15.

[27]Al-Maqrīzī, *Itti‘āẓ,* 1:44–52. On the cursing of Ibn Khaldūn, see Ibn Ḥajar, *Inbā’,* 5:331, though not in his entry in *Al-Majma‘ al-Mu’assis,* 3:157–60; similar reports in al-Sakhāwī, *Ḍaw’,* 4:147–48.

[28]Al-Maqrīzī, *Itti‘āẓ,* 1:54, no. 2.

[29]Ibid., 1:31. The copyist, who copied his text from an autograph version in 884/1479, is an Azharite, as his *nisbah* indicates: Muḥammad ibn Aḥmad al-Gīzī al-Shāfi‘ī al-Azharī. The owner seems to have been Yūsuf ibn ‘Abd al-Hādī, a famous Damascene scholar of the fifteenth century (840/1437–909/1504); on his bio, see al-Sakhāwī, *Ḍaw’,* 10:308; Najm al-Dīn al-Ghazzī, *Al-Kawākib al-Sā’irah fī A‘yān al-Mi’ah al-‘Āshirah,* ed. Khalīl Manṣūr (Beirut, 1997), 1:317; Ibn ‘Abd al-Hādī, *Rasā’il Dimashqīyah,* ed. Ṣalāḥ Muḥammad al-Khiyamī (Damascus, 1988), 13–17.

of Tamīm, either the son of al-Mu'izz, i.e., al-'Azīz, or his great grandson), perhaps another way to ascribe him to the Fatimids without having to state it openly.[30] Najm al-Dīn Muḥammad Ibn Fahd, the Meccan scholar who accompanied al-Maqrīzī during his *mujāwarāt* in Mecca, traces his teacher's ancestry to 'Alī ibn Abī Ṭālib via al-Ḥusayn, through the Fatimid line.[31]

Moreover, al-Maqrīzī's choice of wording for the title of his *Itti'āẓ al-Ḥunafā' bi-Akhbār al-A'immah al-Fāṭimīyīn al-Khulafā'* itself amounts to another bold public declaration of his belief in their genuineness. He invites his readers, whom he calls *ḥunafā'* (sing. *ḥanīf)*, to draw lessons *(mawā'iẓ,* same as the title of the *Khiṭaṭ)* from the history of the Fatimids. His use of the term *ḥunafā'* is due to more than the necessity of rhyme. A *ḥanīf* in the sense accepted in the medieval period is the true Muslim, the believer in the original and true religion, i.e., someone who transcends the sectarian division that prompted the Sunnis to vehemently denigrate both the Isma'ili doctrine and the genealogical claim of the Fatimids.[32] In the second clause, al-Maqrīzī strongly emphasizes the Fatimids' privilege as both *khulafā'* (caliphs) and *a'immah* (imams) of the Islamic community, that is, the supreme leaders of the community in both the theological/judicial and institutional senses.[33]

This is not the same as saying that al-Maqrīzī believed in the Isma'ili doctrine of the Fatimids, for he most certainly did not. He was by all accounts a solid Sunni Shafi'i. The remark that he tacks onto his exposé of the Fatimids' dogma in his *Musawaddah* of the *Khiṭaṭ* is critical in understanding the difference between believing in the Fatimids' glorious pedigree and accepting their dogma. In it, al-Maqrīzī distances himself *(yatabarra',* takes *barā'ah)* from the Isma'ili doctrine he is about to explain, as he did in reporting the accounts denigrating the Fatimids' genealogy in the *Itti'āẓ*.[34] It is curious that the same remark does not appear in the published copy of the *Khiṭaṭ,* although the *da'wah* section is copied in its entirety from the text of the *Musawaddah*.[35] This is probably due to the transformation that al-Maqrīzī underwent in the period between the draft and the final redaction of the *Khiṭaṭ*. By the latter date, which was toward the end of his life, al-Maqrīzī did

not feel the need to assert the solidity of his Shafi'i Sunni creed since he no longer was interested in competing for public positions or patronage. The defense of the Fatimid genealogy, however, appears in both *Musawaddah* and *Khiṭaṭ* as well as in the *Itti'āẓ,* underscoring al-Maqrīzī's strong conviction in its truthfulness throughout his life.

EDUCATION: Al-Maqrīzī grew up in the house of his maternal grandfather Shams al-Dīn Muḥammad ibn 'Abd al-Raḥmān, Ibn al-Ṣā'igh al-Ḥanafī (ca. 710/1310–11 Sha'bān 776/15 January 1375), who was one of the most famous Hanafi *faqīh*s in Cairo, having held a series of prestigious judicial posts and composed a number of philological, grammatical, and exegetical books.[36] Almost everybody in his family was involved in some form of *'ilm,* despite the difference in *madhhab* between his paternal and maternal sides. His father 'Alī was a Hanbali *kātib* who worked and lived in Damascus before moving to Cairo, where he occupied a few minor positions in the judiciary and the viceregency. He died on 25 Ramaḍān 779/25 January 1378 when he was fifty-years old and al-Maqrīzī was less than fourteen years old.[37] His paternal grandfather 'Abd al-Qādir, who died before his birth (732/1331), was born in Ba'labek, in today's Lebanon. He settled down in Damascus, where he became a rather well-known Hanbali scholar and *muḥaddith,* heading a premier Damascene institution, Dār al-Ḥadīth al-Bahā'īyah (of al-Bahā' Ibn 'Asākir).[38]

But the most influential figure in al-Maqrīzī's early education, and his first tutor, was his maternal grandfather. Under his tutelage, al-Maqrīzī received the traditional education available to boys of his background with its focus on Quranic studies, hadith, Arabic grammar, literature, and *fiqh.*

Al-Maqrīzī claimed to have studied with or received *ijāzah*s (licenses) from more than six hundred shaykhs (tutors) in Cairo, Damascus, and Mecca, a number that evidently includes all those he had heard lecturing, even if only once, or those from whom he received an *ijāzah* without ever meeting them.[39] The extant roll of

[36]Ibn Ḥajar, *Inbā',* 1:95–96; idem, *Al-Durar al-Kāminah,* 3:499–500; al-Maqrīzī, *Sulūk,* 3:1:92, 198, 245, and 4:1107, chronicles the last stages of the career of his grandfather; 'Izz al-Dīn, *Al-Maqrīzī: Mu'arrikhan,* 27–32.

[37]On the father, see al-Maqrīzī, *Sulūk,* 3:1:326; Ibn Ḥajar, *Inbā',* 1:166; 'Izz al-Dīn, *Al-Maqrīzī wa-Kitābuhu "Durar al-'Uqūd al-Farīdah,"* 1:18. Al-Maqrīzī's brothers are Nāṣir al-Dīn Muḥammad (772/1371–822/1419) (see al-Maqrīzī, *Sulūk,* 4:1:514) and Ḥasan. Broadbridge, "Academic Rivalry and the Patronage System in Fifteenth-Century Egypt," 86, mistakenly puts the father's death in 1384 and makes him a Shafi'i.

[38]On the grandfather, see Khalīl ibn Aybak al-Ṣafadī, *Kitāb al-Wāfī bi-al-Wafayāt,* ed. Riḍwān al-Sayyid (Leipzig, 1993), 19:42–43; Ibn Ḥajar, *Al-Durar al-Kāminah,* 2:391; al-Maqrīzī, *Sulūk,* 2:1:365; 'Izz al-Dīn, *Al-Maqrīzī: Mu'arrikhan,* 25–27; Ibn Taghrībirdī, *Manhal,* 7:324.

[39]Al-Sakhāwī, *Ḍaw',* 2:23, questions some of al-Maqrīzī's teachers.

his shaykhs is an impressive collection of thirty-nine names of scholars, some of whom, like the ascetic and *muḥaddith* al-ʻImād al-Ḥanbalī, or al-Sirāj ibn al-Mulaqqin, or the chief judges al-Sirāj al-Balqīnī and al-Burhān ibn Jamāʻah, or the towering Ibn Khaldūn, were the leading figures of their profession.[40] Al-Maqrīzī became a regular at the circle of Ibn Khaldūn, who taught in Cairo after 1382. The passages directly copied from the master's dictation and the discussions he had with him or with others in his circle, dispersed throughout his oeuvre and bearing dates spanning more than ten years, show that he accompanied him for a long time and benefited from his knowledge on many topics.[41] His high esteem for his teacher and admiration for his ideas, especially those expounded in the *Muqaddimah,* come across very clearly in the extensive biography he wrote of Ibn Khaldūn in the still-unpublished section of his biographical dictionary *Durar*.[42]

The influence of Ibn Khaldūn's interpretive framework is evident in a number of short thematic books by al-Maqrīzī, such as his treatise on the calamity of the early fifteenth century, *Ighāthat al-Ummah bi-Kashf al-Ghummah,* and his analysis of the rivalry between the Umayyads and the Abbasids, *Al-Nizāʻ wa-al-Takhāṣum fimā bayna Banī Umayyah wa-Banī Hāshim.* But it is most clearly apparent in the structure and aim of the *Khiṭaṭ*. The overarching cycle of the rise and fall of dynasties that formed the basis of Ibn Khaldūn's hermeneutical framework in explaining historical process seems to have informed al-Maqrīzī's thinking and structuring of his *Khiṭaṭ,* albeit in a roundabout way.[43] He seems to have subsumed the Khaldunian structure as a way of classifying and understanding the vast amount of historical, topographic, and architectural material he collected over the years.[44]

A QUESTION OF MADHHAB? Several years after his father's death, al-Maqrīzī decided in 786/1384 to switch to the Shafiʻi *madhhab* and to abandon the Hanbali *madhhab* of his forefathers or the Hanafi one of his maternal grandfather in which

[40]For the full roster see ʻIzz al-Dīn, *Al-Maqrīzī wa-Kitābuhu "Durar al-ʻUqūd al-Farīdah,"* 1:20–28; idem, *Al-Maqrīzī: Mu'arrikhan,* 34–42.

[41]Al-Maqrīzī, *Durar,* 1:143, 152, 2:63, 193; idem, *Khiṭaṭ,* 1:50, 2:76.

[42]The biography, which is not included in the recently published portion of the book, was published by Maḥmūd al-Jalīlī, "Tarjamat Ibn Khaldūn lil-Maqrīzī," *Majallat al-Majmaʻ al-ʻIlmī al-ʻIrāqī* 13 (1965): 215–42.

[43]See Ziyādah, "Tārīkh Ḥayāt al-Maqrīzī," 13–22. See also Adel Allouche, *Mamluk Economics: A Study and Translation of al-Maqrīzī's Ighāthat al-Ummah bi-Kashf al-Ghummah* (Salt Lake City, 1994), 4–7.

[44]I have found only one explicit reference to Ibn Khaldūn's historical theory in al-Maqrīzī's *Khiṭaṭ* (2:190), which actually suggests that he was thoroughly familiar with the *Muqaddimah.* Another mention in al-Maqrīzī's biography of Ibn Khaldūn straightforwardly states that the *Muqaddimah* "unveils the cause of events and informs on the essence of things," al-Jalīlī, "Tarjamat Ibn Khaldūn," 235.

he had been instructed. This decision, though not unusual in itself, could not have been casual either. It may be interpreted in two ways, which are not necessarily mutually exclusive. It may be a sign of a self-righteous and individualistic personality in the making, perhaps even a bit rebellious against authority figures (father and/or grandfather), albeit meekly and after their passing. Changing his *madhhab* may have represented to al-Maqrīzī a rejection of his forebears′ teaching and authority, and therefore a liberating act on the way to self-fulfillment as an independently minded scholar. This is indeed the meaning that one can read from Ibn Ḥajar′s comment on al-Maqrīzī′s change of *madhhab*, that ″when he became aware and competent *(tayaqqaẓa wa-nabuha),* he switched to Shafi'ism.″[45] But the change could also be seen as a calculated move of a young and pragmatic scholar in his early twenties trying to establish a career in the Shafi'i-dominated scholarly milieu of Cairo.[46]

An intriguing detail mentioned by many of his biographers, however, favors the former interpretation: al-Maqrīzī was known later in life for his bias against, even antipathy toward, the Hanafis, ostensibly because of his unconfirmed leaning toward the by-then uncommon Zahiri *madhhab*.[47] The Zahiri *madhhab,* named after its founder′s insistence on admitting only the apparent *(ẓāhir)* meaning of the Quran and hadith, upheld a strict, literalist approach to interpretation and to legal speculation and opposed all other *madhāhib,* but especially the Malikis and Hanafis, on basic interpretive issues.[48] The *madhhab,* codified by the Andalusian polymath Ibn Ḥazm (994–1064), never attained the same kind of theological synthesis achieved by other Sunni *madhāhib.* Furthermore, it never took root in Egypt and Syria, although the enmity displayed by Mamluk ulama toward its adherents shows that the fundamentalist challenges it posed were still felt by the established theological and jurisprudential *madhāhib.*

Al-Maqrīzī himself does not mention his knowledge of or adherence to the Zahiri *madhhab,* although he seems to have been close to many Zahiris, or at least individuals who are identified in the Mamluk sources as Zahiris because of their bias toward the writing of Ibn Ḥazm.[49] Moreover, he is full of praise for them as

---

[45]Ibn Ḥajar, *Al-Majma' al-Mu'assis,* 59.

[46]Sayyid, *Musawwadat,* ″Introduction,″ 39, favors this interpretation.

[47]Ibn Taghrībirdī, *Manhal,* 1:396, where he says that there is nothing wrong in admiring the writing of Ibn Ḥazm; also ibid., 2:88, where he accuses his revered teacher al-Maqrīzī of favoring al-Burhān simply because he was a Zahiri.

[48]On Zahirism see ″al-Ẓāhiriyya,″ by R. Strothmann in *EI*[1], 8:1192–93; ″Dāwūd b. 'Alī b. Khālaf,″ by P. Voorhoeve in *EI*[2], 2:182–83; and ″Ibn Ḥazm,″ by R. Arnaldez in *EI*[2], 3:790–99.

[49]Ibn Taghrībirdī, *Manhal,* 2:113, reports that al-Maqrīzī said of a Shihāb al-Dīn al-Ashmūnī al-Naḥawī (749/1348–809/1407), ″that he was a Zahiri then turned against them,″ and then al-Maqrīzī said ″I accompanied him for some years,″ implying that that was when al-Ashmūnī was still a

righteous individuals. He admires their fervent struggle for justice and truth, equanimity, self-restraint, and chastity, as is apparent from their biographical entries in his *Durar* and *Sulūk*.[50] These same qualities will be attached to al-Maqrīzī later in life after his withdrawal from the competition for public posts.

But what seems to have truly attracted him to Zahirism was not only the moral rectitude of its founders and followers, nor was it its theological puritanism, an intellectual stance that had lost most of its potency by the end of the fourteenth century.[51] It was probably what can nowadays be termed the "militant" spirit that some of its last organized groups deployed in the face of the religiously corrupt Mamluk regime. This spirit rose to the surface in the so-called "Zahiri Revolt" of 788/1386, an event that greatly impressed al-Maqrīzī, at least if we judge from the glowing image he paints in his *Durar* of its leader, the rather obscure Zahiri shaykh al-Burhān Aḥmad ibn Muḥammad ibn Ismāʻīl (754/1353–808/1406).[52] Al-Burhān foolishly and tenaciously organized this doomed uprising against Sultan Barqūq and the Mamluks because they did not satisfy the strict Islamic prerequisites to rule: they were not descendants of Quraysh, the tribe of the Prophet, and they instituted some un-Islamic practices, chief among them the levying of tariffs *(mukūs)*. Al-Burhān seems to have had supporters among the Mamluk ruling class and the Arab Bedouins of Syria as well. But the uprising failed nonetheless; many of its organizers were caught, tortured, imprisoned, and their lives ruined as a consequence. Al-Burhān, impoverished and emotionally broken in al-Maqrīzī's words, maintained his integrity throughout his imprisonment and questioning by the sultan and after his release to a life of obscurity until his death.

Zahiri; see al-Maqrīzī, *Durar*, 2:174; ʻIzz al-Dīn, *Al-Maqrīzī wa-Kitābuhu "Durar al-ʻUqūd al-Farīdah,"* 2:431.

[50]Cf. al-Maqrīzī, *Durar*, 1:191, 203; ʻIzz al-Dīn, *Al-Maqrīzī wa-Kitābuhu "Durar al-ʻUqūd al-Farīdah,"* 1:204–205 for the biographies of his teacher al-ʻImād al-Ḥanbalī, and the *sharīf* and *muḥaddith* Abū Bakr al-Hāshimī; idem, *Sulūk,* 4:2:761, in the biographical notice on Badr al-Dīn Muḥammad al-Bashtākī (d. 830/1427), who was a follower of Ibn Ḥazm's *madhhab,* al-Maqrīzī says, "I have been chagrined by his loss, he has left no one like him." Al-Maqrīzī admired moral rectitude wherever he encountered it; see for instance his report in *Khiṭaṭ,* 2:279–80, where he praises the steadfastness of the Shafiʻi judge al-Mināwwī, who betrays Zahiri leanings in his discourse, in upholding what he considers right.

[51]See the discussion on the confusion about Zahirism in Mamluk sources in Lutz Wiederhold, "Legal-Religious Elite, Temporal Authority, and the Caliphate in Mamluk Society: Conclusions Drawn from the Examination of a Zahiri Revolt in Damascus," *International Journal of Middle East Studies* 31 (May 1999): 203–35, esp. 204–6.

[52]Al-Maqrīzī, *Durar,* 2:44–55; ʻIzz al-Dīn, *Al-Maqrīzī wa-Kitābuhu "Durar al-ʻUqūd al-Farīdah,"* 2:342–47. Al-Maqrīzī, *Sulūk,* 3:2:554, offers a compact report on the revolt and in *Sulūk,* 4:1:23, produces a brief obituary of al-Burhān which carries the same positive assessment.

Al-Maqrīzī′s impassioned and detailed description of the ″Zahiri″ revolt substantially differs from other Mamluk historians′ reports.[53] His is the only one that goes deep into the theological roots of the revolt to justify it rather than just passing them over to speak of the intrigues that led to its failure as does Ibn Qāḍī Shuhbah, the other main source for the revolt. Al-Maqrīzī seems to have heard the full story from al-Burhān himself, for he speaks of a very intimate relationship with the man and his family and of many sessions spent studying with him. In a cryptic sentence at the end of his entry, al-Maqrīzī calls al-Burhān one of three men by whom God has benefited him, and states that he hoped to gain *barakah (*grace) from that benefit. This sentence may be pointing toward a disciple/master relationship in a sufi sense, that is, al-Burhān leading al-Maqrīzī on the way of true knowledge. But it is probably more an admission that al-Burhān, along with two unnamed individuals, offered al-Maqrīzī a model which he consciously was trying to follow in his own life. His reported leaning towards the Zahiris, and al-Burhān in particular, may thus have been motivated by his respect for their fortitude as committed individuals and his approval of their firm opposition to the Mamluks on religious ground rather than his adherence to their religious interpretations.

Another possible explanation for al-Maqrīzī′s passionate support of the ″Zahiri″ revolt may be found in his complex set of religious beliefs, which, though not uncommon at the time, may appear a bit paradoxical to our modern eyes accustomed to a visible Sunni-Shiʻi sectarian division. As illustrated by his acceptance of the imamate of the Fatimids because they were the progeny of the Prophet, al-Maqrīzī, the pious and strict Sunni alim, seems nonetheless to have harbored ʻAlid sympathies throughout his life. What his defense of the Fatimids hints at comes across more clearly in other tractates focusing on the *Āl al-Bayt* (the family of the Prophet), especially his *Al-Nizāʻ wa-al-Takhāṣum fīmā bayna Banī Umayyah wa-Banī Hāshim* (Book of contention and strife concerning the relations between the Umayyads and the Hashimites).[54] In this undated short work, which seems to belong to his

---

[53]For other historians′ reports see Ibn Taghrībirdī, *Manhal, 2*:87–89, who says that al-Maqrīzī exaggerated in his praise of al-Burhān because he was a Zahiri; Ibn Ḥajar, *Inbā'*, 2:232–34; idem, *Al-Majmaʻ al-Mu'assis,* 3:73–75; al-Sakhāwī, *Ḍaw'*, 2:96–98; a reconstruction of the revolt based mostly on Ibn Qāḍī Shuhbah, *Tārīkh Ibn Qāḍī Shuhbah,* ed. ʻAdnān Darwīsh (Damascus, 1977), 1:89–91, 186–89, 269, is Wiederhold, ″Zahiri Revolt,″ 209–16. It is revealing that al-Maqrīzī, unlike Ibn Qāḍī Shuhbah, never uses the word *fitnah* (sedition) in his description.

[54]First edited and translated in 1888 as al-Maqrīzī, *Kitāb al-Nizā' wa-al-Takhāṣum fīmā bayna Banī Umayyah wa-Banī Hāshim: Kampfe und Streitigkeiten zwischen den Banu Umajja und den Banu Hasim; eine Abhandlung von Takijj ad-Din al-Makrizijj,* ed. Geerhardus Vos (Vienna and Strasbourg, 1888). Several Arabic re-editions followed but they did not add much. For an English translation and commentary, see *Al-Maqrīzī′s ′Book of Contention and Strife Concerning the*

early career, al-Maqrīzī was trying to make metahistorical sense of the apparent failure of the ʿAlids, the Banī Ḥāshim of his title, to keep what was their divinely-ordained birthright, namely the caliphate. After analyzing the circumstances of the conflict between the Umayyads and the Hashimites (both Abbasids and ʿAlids), he comes down squarely on the side of the ʿAlids. He assumes the same stance in other similar treatises where the ʿAlids are unambiguously identified as the God-appointed rulers and guides of the Islamic community.[55]

But it is quite revealing that neither his explicit ʿAlid leanings nor his excited verbal empathy with the Zahiri revolt prevented al-Maqrīzī from pursuing his career in the religious and administrative branches of the Mamluk regime. This has never been picked up on by his biographers, simply because his collaboration with and seeking patronage within the Mamluk system, though only up to his middle age, were very ordinary at the time. Almost every other scholar eagerly pursued Mamluk patronage, despite the collectively-held intellectual and religious resentment of the mamluks themselves.[56] What distinguishes al-Maqrīzī from the average Sunni alim of his ilk is his anxious and manifest sympathy for militant movements, such as the ʿAlid cause and the Zahiri revolt, aimed at redressing the wrong they perceived at the top of the ruling system in the Islamic world. Never mind that both causes were ultimately doomed to failure. What matters is that al-Maqrīzī, in his reporting and his analysis, displayed an honest sense of justice and objection to deviation from the proper Islamic way as he saw it.

WITHDRAWAL: Al-Maqrīzī did not withdraw from the treacherous milieu of sultans and courtiers until midway in the reign of al-Muʾayyad Shaykh (1412–21), although he manifested the first signs of weariness during the reign of Faraj ibn

Relations between the Banū Umayya and the Banū Hāshim," ed. and trans. Clifford Edmund Bosworth (Manchester, 1983).

[55]On al-Maqrīzī's pro-ʿAlid sympathy, see C. E. Bosworth, "Al-Maqrīzī's Epistle 'Concerning What Has Come Down to Us About the Banu Umayya and the Banu l-ʿAbbas,'" in *Studia Arabica and Islamica: Festschrift for Ihsan ʿAbbas*, ed. Wadad Kadi (Beirut, 1981), 39–45; idem, "Al-Maqrīzī's Exposition of the Formative Period in Islamic History and its Cosmic Significance: The *Kitāb al-Nizāʿ wa-al-Takhāṣum*," in *Islam: Past Influence and Present Challenge: In Honour of William Montgomery Watt,* ed. A. T. Welsh and P. Cachia (Edinburgh, 1979), 93–104. Reprinted in idem, *Medieval Arabic Culture and Administration* (London, 1982) as no. IX and XI respectively.

[56]On the subject of the ulama's relationship with the mamluks see the two pioneering articles by Ulrich Haarmann, "Arabic in Speech, Turkish in Lineage: Mamluks and their Sons in the Intellectual Life of Fourteenth-Century Egypt and Syria," *Journal of Semitic Studies* 33 (1988): 81–114; idem, "Rather the Injustice of the Turks than the Righteousness of the Arabs—Changing 'Ulama' Attitudes Towards Mamluk Rule in the Late Fifteenth Century," *Studia Islamica* 68 (1989): 61–79. Chamberlain, *Knowledge and Social Practice in Medieval Damascus*, 37–54, 57–113, discusses the development of these practices among the ulama as a class in thirteenth to fourteenth-century Damascus.

Barqūq when he turned down the coveted *manṣib* of the Shafiʿi chief judge of Damascus which was offered to him more than once around the year 1410.[57] His refusal must be ascribed to the traditional pious alim′s fear of inadvertently committing injustice while holding the position of judge, a fear that al-Maqrīzī explicitly exhibits when he singles out accepting the judgeship of the Hanbalis as the only sin of his friend and patron al-Muḥibb ibn Naṣr Allāh.[58] But this was not the only sign of the shift in his thinking. A passage in his *Durar* reveals his leaning toward *zuhd,* the ″mild asceticism″ professed by a number of ulama in the medieval period.[59] Al-Maqrīzī says that he tried to convince a judge and colleague in Damascus to ″quit seeking favors of the amirs if he is really sincere about his renunciation of worldly gains.″[60] The passage carries a tone of self-reflection that may indicate that al-Maqrīzī himself was going through that transformation at the time.

Al-Maqrīzī was gradually withdrawing from public life when he was suddenly jolted by the dismissal and then brutal killing of his last confirmed patron, Fatḥ Allāh the *kātib al-sirr,* which took place after a painful six-month imprisonment (Shawwāl 815–Rabīʿ al-Awwal 816/January–June 1413), in the first year of al-Muʿayyad Shaykh′s reign. This cold-blooded crime was not so unusual for the time, but it must have been especially painful for al-Maqrīzī because Fatḥ Allāh was both a dependable and resourceful patron and a faithful friend for more than twenty years.[61] It also deepened his disgust and despair.

This feeling of despondency is amply displayed in the introduction to the history of the Ayyubids and Mamluks, *Al-Sulūk li-Maʿrifat Duwal al-Mulūk,* which suggests that al-Maqrīzī started this book around that desperate moment in his life when he was still wavering between self-imposed isolation and another attempt at court life. On the first page of the autograph manuscript of the *Sulūk*, al-Maqrīzī unambiguously in two inscriptions poured out his heart to his reader. The first passage, which is written below the title, seems to be directed to himself as an incantation. It says:

---

[57] Ibn Taghrībirdī, *Manhal,* 1:396; al-Sakhāwī, *Ḍaw'*, 2:22.

[58] Al-Maqrīzī, *Sulūk,* 4:3:1232.

[59] Hurvitz, ″Biographies and Mild Asceticism,″ 48–52; L. Kinberg, ″What is Meant by Zuhd?″ *Studia Islamica* 61 (1985): 27.

[60] Al-Maqrīzī, *Durar,* 2:60. This may be contrasted with what Ibn Taghrībirdī, *Nujūm,* 15:189, says about his master′s forced withdrawal from court. The truth is probably a combination of both impulses.

[61] Al-Maqrīzī, *Sulūk,* 4:1:242, 248, 252, 256, 259, records in detail the ordeal of his patron, and 4:2:1012, recalls his great achievements thirty years after his killing. Ibn Ḥajar, *Inbā'*, 7:104, 137–39.

> May God save you from requesting the reimbursement for a good deed you have rendered and a payment for a favor you have offered, and may He not abase your hand below that for whom it was above, and may He protect you from a passing glory and an exigent living. May God keep you alive as long as life is beautiful by your presence and may He take you if death was better for you, after a long life and high eminence. May he close your deeds with kindness and allow you to reach in this life your hopes and guide your unsteady way, and may He rectify your predicament in the hereafter. He is the All-hearing, the Magnanimous, and the Granter [of wishes].[62]

This invocation is key to deciphering al-Maqrīzī´s psychological state at that late, and probably low, point in his life. It conveys contradictory feelings: hope and despair, pride and dejection, love of life and an admission of the inevitability of death. These feelings reflect the situation in which al-Maqrīzī found himself during and immediately after the reign of al-Mu'ayyad Shaykh: banished from court, lonely after the death of Sūl, his beloved concubine, in 1421 and Fāṭimah, the last of his children, in 1423, yet still full of self-esteem and the will to contribute to public life.

At the bottom of the same cover page, there is another passage in al-Maqrīzī´s hand written longitudinally in the middle of the page between two other unrelated informational passages. This short passage must have been added at a later date, not only because of its odd position on the page, but also because of the strong feeling of resignation it bespeaks. In it, al-Maqrīzī declares

> I have been afflicted with such bad fortune, that whenever it goes up, it immediately comes down, and whenever it stands up, it inevitably falls down, and whenever it goes straight, it surely bows down again, and whenever it runs smoothly, it at once encounters obstacles, and whenever it becomes alert, it soon sleeps again. . . .
> [Then follows two verses]
> By your life, I do not lack a banner of glory
> Nor did the horse tire of competing
> Instead, I am afflicted with bad fortune
> Just like a beautiful woman is inflicted with divorce

---

[62]Al-Maqrīzī, *Sulūk,* 1:1:3 and facing page for a photographic reproduction of the autograph manuscript´s cover page (Istanbul, Yeni Cami, # 887).

Here we find the extreme expression of melancholy that must have overtaken al-Maqrīzī after he realized the futility of his repeated attempts to gain the sultan′s favor. He thus reverts to his belief in the supernatural to explain his failure. The insertion of the *dūbayt* at the end, however, attests that the man did not lose his self-esteem: he still thinks of himself as able and worthy. He only resigns himself to his fate to concentrate fully on his scholarly and ascetic pursuits. To that point in time should be dated his final retreat to his family home in Ḥārat al-Barjawān. He was to spend the rest of his life studying, writing, and teaching in almost total seclusion, except for rare visits with his fellow ulama and students and for an unknown number of pilgrimages and *mujāwarāt* in Mecca between 1430 and 1435.[63] He wrote his *Khiṭaṭ* book and completed most of his long historical treatises during these thirty-plus years, but we have no fixed dates for any of them. The *Khiṭaṭ,* however, was the first book he tackled. As such, it was closely connected with this defining period in his life with its intense and painful soul-searching and reckoning. It marked his transformation from a client to one or the other among the Mamluk grandees, to an independent, even aloof, scholar and historian and a pessimistic observer recognizing the corrupt structure of power and chiding its perpetrators. These strong yet ultimately desperate feelings of disillusionment inevitably seeped into the structure and tone of the *Khiṭaṭ* and the *Sulūk*.

Death: Al-Maqrīzī died in Ramaḍān 845/January–February 1442 after a protracted but unnamed illness. His biographers dispute the exact date of his death, and none of them managed to record the correct day of the week on which he died.[64] This is further evidence of his relative isolation from his scholarly milieu at the end of his life. His biographers might not have learned of his death until some time after it occurred, or they might not have bothered to check the correct date, as Ibn Taghrībirdī pungently suggests al-ʻAynī did not. Al-Maqrīzī was buried without any elaborate funeral in the Sufi Baybarsīyah cemetery outside the Bāb al-Naṣr north of Cairo, which was the final resting place of many ulama

---

[63]Ibn Taghrībirdī, *Manhal,* 1:397, al-Sakhāwī, *Ḍaw',* 2:24, mention only a *mujāwarah;* al-Jawharī al-Ṣayrafī, *Nuzhat,* 3:219, 367, quotes al-Maqrīzī in the years 834/1431 and 840/1437 respectively as having been in the hajj; Ibn Taghrībirdī, *Nujūm,* 14:355, quotes him in 835/1432, which may mean that he stayed in Mecca for a whole year.

[64]Ibn Ḥajar, *Inbā',* 9:172, places it on Thursday 26 of Ramaḍān (correct day is Wednesday); Ibn Taghrībirdī, *Nujūm,* 15:490, and *Manhal,* 1:399; al-Sakhāwī, *Ḍaw',* 2:25, put it on Thursday 16 Ramaḍān (correct day is Sunday), whereas al-ʻAynī, *ʻIqd,* 547, carelessly—as noted by Ibn Taghrībirdī—put it on Thursday 29 Shaʻbān, although he was at least correct in the day of the week. Al-Jawharī al-Ṣayrafī, *Nuzhat,* 4:343–44, reports Ibn Ḥajar′s and al-Aynī′s dates, but favors Ibn Ḥajar′s in accordance with his master, Ibn Taghrībirdī, whom he later on will denigrate, although Ibn Taghrībirdī′s date is different from Ibn Ḥajar′s.

of the period, including Ibn Khaldūn.[65] The anonymity of al-Maqrīzī´s burial place is an indication of his *zuhd* (asceticism), since he does not seem to have provided a specific place for his interment as was the habit of distinguished ulama in medieval Egypt. The simplicity of his entombment becomes even more poignant when it is contrasted with the pomp of that of his old competitor al-ʻAynī, who had built himself a sumptuous funerary *qubbah* in his madrasah adjacent to al-Azhar. The *qubbah* was embellished by a gilded dome ordered specially by Sultan al-Mu'ayyad Shaykh as a sign of favoritism, when the same sultan seems to have shunned al-Maqrīzī throughout his reign.[66]

Maqriziana I: Discovery of an Autograph Manuscript of al-Maqrīzī: Towards a Better Understanding of His Working Method Description: Section 1

INTRODUCTION

This article aims at presenting an important manuscript discovered recently in the holdings of the library at the University of Liège, in Belgium. It has been authenticated as a holograph manuscript of Taqī al-Dīn Aḥmad ibn ʻAlī al-Maqrīzī, and identified as a specimen of his notebooks. As I will try to demonstrate, the notebook was conceived by al-Maqrīzī as a working tool to which he returned, utilizing the greatest part of it in his later writings. Its study, together with al-Maqrīzī's other preserved autograph manuscripts and drafts, clearly provides answers to numerous questions about the working methods of medieval Muslim scholars, making possible reflection on an archaeology of scholarship. The preliminary results are revealed here for the first time, and are based on the current stage of my research. It is possible some weakness of these arguments may emerge later, although I hope that future research will corroborate most of them.

In this study, to be published in two sections, I decided first to scrutinize the manuscript itself, in codicological terms, i.e., to describe it and reconstruct its history, and finally to give a detailed overview of its contents.[1] The second part

---

This article is a revised version of a paper presented on the 13th of May 1998 at the 7th Colloquium on Egypt and Syria in the Fatimid, Ayyubid and Mamluk Eras (Katholieke Universiteit Leuven), under the title: ″À propos du MS 2232 de l'Université de Liège: découverte d'un nouvel autographe de Maqrīzī?″ It was read once more, with major modifications, during a seminar on al-Maqrīzī organized by the Institut Français d'Archéologie Orientale in Cairo in May 2000, under the title: ″Le carnet de notes d'al-Maqrīzī et son importance pour l'historiographie musulmane.″ That version will appear in two sections for reasons of space. Another text was read at the Notre Dame colloquium; that will be published as the second part of this article in a forthcoming issue of this journal, under the title: ″Maqriziana II: Discovery of an Autograph Manuscript of al-Maqrīzī: Towards a Better Understanding of his Working Method: Analysis.″ I have decided to publish this first part prior to the second as the demonstrations elaborated in the latter are too complex to follow without a clear exposition of the nature and contents of the manuscript.

[1]A full critical edition of the notebook is in preparation. It will be published by the Institut Français d'Archéologie Orientale in Cairo, in two volumes together with a facsimile of the entire manuscript on CD-ROM.

will be devoted to an analysis of al-Maqrīzī′s working method.

HISTORY OF THE DISCOVERY

In an article published in 1962, Claude Cahen wondered rhetorically whether unearthing a fundamental text was cheering or discouraging, as his discovery diverted him from his other scholarly commitments. He was speaking of a manuscript which has revealed, since its discovery, new data on the economic history of Egypt in the Fatimid and Ayyubid periods, i.e., al-Makhzūmī's treatise ″Al-Minhāj fī ʻIlm al-Kharāj.″[2] Reading his words, I asked myself if he really thought that this was ill-fortune, but I soon realized, when I myself came across an important manuscript, what he meant. Indeed, I also had to leave aside all my current research to dedicate my entire attention to the text I had found, almost accidentally. But this did not happen all at once. In 1989, I was asked by the University of Liège to catalog the Islamic manuscripts held there. It had received in 1986 a gift of about 450 Arabic manuscripts and wished to know exactly what it contained. I carried out this task, beginning with these manuscripts most recently bequeathed. The other Islamic manuscripts already among the holdings of the library had previously been described in a handlist, so I put them aside until I finished my catalogue.[3] After having perused hundreds of manuscripts, I decided to look at the older collection. When my eyes fell on MS 2232, I had seen so many *majmūʻāt* from the Maghrib that I at first imagined that this was nothing more than another example of this particular kind of manuscript, although eastern in origin as indicated by the script. It appeared that it was not a composite *majmūʻah,* composed of various texts by several hands at different dates, collected at a specific moment and bound together, but rather a uniform text in which entries were written by the same hand. No author was named anywhere in the manuscript, although the greatest part consisted of epitomes of books. To me, it appeared to be nothing more than an ordinary manuscript. At the time I was able to date it to the fifteenth century, thanks to its codicological characteristics, a fact which was confirmed afterwards.[4]

The manuscript was then returned to a dusty shelf for several years until one day in 1997, when I received a copy of a recent edition of one of al-Maqrīzī's

[2]See Claude Cahen, ″Un traité financier inédit d'époque fatimide-ayyubide,″ *Journal of the Economic and Social History of the Orient* 5 (1962): 140; reprinted in his *Makhzūmiyyāt: Études sur l'histoire économique et financière de l'Égypte médiévale* (Leiden, 1977), 1.

[3]The first volume of the catalogue is finished and will appear under the title *Inventaire des manuscrits arabes, persans et turcs des bibliothèques publiques de Belgique* (Liège, forthcoming).

[4]The manuscript had already been described in 1970 as ″manuscrit arabe, XVIIIe siècle?″ See J. Hoyoux, *Inventaire des manuscrits de la Bibliothèque de l′Université de Liège: Manuscrits acquis de 1886 à 1960*, vol. 1 (Liège, 1970), no. 1070.

minor works, the *Mukhtaṣar Kitāb al-Kāmil fī al-Ḍu'afā'* of Ibn 'Adī.[5] This book consists of a resumé made by al-Maqrīzī of a work dealing with "weak" transmitters of tradition. It has been preserved in a unicum which is, moreover, an autograph copy (Istanbul, MS Murād Mollā 569), dated 795/1393. The editor had the excellent idea of including some plates of the manuscript. At first glance, the script looked familiar, and I soon remembered MS 2232. I was able to compare it with the facsimile and was overjoyed to discover that the *codex leodiensis* was an autograph copy in the hand of one of the most important historians of the Islamic world, known as the *shaykh al-mu'arrikhīn* of Egypt.

I proceeded further in my investigation and found that numerous autograph manuscripts of al-Maqrīzī are still extant in various libraries all over the world.[6] I soon discovered that the attention of scholars had already been drawn to this matter as early as 1847–51, when the Dutch Orientalist R. P. A. Dozy published a notice of his identification of three volumes of al-Maqrīzī's *Al-Muqaffá*.[7] Facing page 28, a plate containing a facsimile of al-Maqrīzī's handwriting was printed so as to facilitate the identification of other autograph manuscripts, of which, Dozy believed, there must have been other specimens in European and Arab libraries. Indeed, al-Maqrīzī's handwriting is distinctive, not easily forgotten, and this has been my experience. Later, I learned of an additional publication including another autograph manuscript of the historian: a draft of a volume of *Al-Mawā'iẓ wa-al-I'tibār fī Dhikr al-Khiṭaṭ wa-al-Āthār,*[8] which made me realize that both manuscripts were written on the same kind of paper, a discovery which indicated to me another possibility for the study of al-Maqrīzī's autograph manuscripts.[9]

At this point, there remained no doubt that the Liège codex was to be identified as an unpublished holograph in al-Maqrīzī's handwriting, but I still had to establish what kind of work this was. I turned back to my description of it, made some years earlier, and improved it by adding every useful detail contained in the manuscript. I carried out a thorough scrutiny of the contents and soon realized that it was a notebook, and that these sheets of paper had been used by al-Maqrīzī to record historical details, facts, and events that he was interested in for the composition of his works. It is full of resumés, epitomes, extracts, excerpts, notes, cards, etc., the subjects of which vary as much as their number (history, numismatics, metrology,

[9]On this point, see below, under the description of the manuscript.

genealogy, medicine, exegesis, etc.). As far as I know, this is the first time that such a notebook has been discovered,[10] a unique document that opens myriad research prospects in many fields. Of course, the most salient aspect is the working method of al-Maqrīzī, since we can now study precisely how he conceived his works, not only by looking at the various drafts he left us, but more precisely by examining the way he summarized the works of his predecessors and how he inserted the data later in his own writings. But it should also be considered a manuscript of incomparable importance because it contains resumés of works which were previously considered lost. The resumés prove that al-Maqrīzī had access to such works as Ismaili texts, and in some cases the parts preserved in the notebook are the sole remaining evidence of their existence. Moreover, comparison of the material in al-Maqrīzī's published writings, where passages have been borrowed, with those in the notebook, will permit us to improve the readings in the editions where they are found, even in the most recent ones. The present study is thus only the first of a series in which the various aspects of the notebook will be scrutinized.

HISTORY OF THE MANUSCRIPT

Prior to his death in 1913, Victor Chauvin, one of the leading Orientalists of the nineteenth century[11] and holder of the chair of Arabic studies at the University of Liège, had decided to bequeath his entire library to his alma mater. This collection contained several thousands of books dealing with Islamic studies in general, with a particular interest in literature, printed between the seventeenth and the beginning of the twentieth centuries, together with some Arabic manuscripts. The whole library was received shortly after his death and it took years before the cataloging was completed. As for the manuscripts, they were only inventoried in 1928, and it was not until 1968 that they were brought to the knowledge of scholars.[12] The manuscript under discussion (2232) was catalogued at that time as ″Arabic MS″ and dated approximately to the eighteenth century. This laconic description was in fact based on the information provided by a small piece of paper which had been glued by Chauvin himself on fol. A, where one can read: ″450 Manuscrit arabe

[10]Manuscripts containing notes *(ta'līqāt)* have, of course, been discovered, but they are not comparable to this kind of book.

[11]His masterwork remains the famous, but now unfortunately not often used, *Bibliographie des ouvrages arabes ou relatifs aux Arabes publiés dans l'Europe chrétienne de 1810 à 1888,* 12 vols. (Liège, 1892–1919).

[12]They were published in the general catalogue, mixed with the Occidental manuscripts. See J. Hoyoux, *Inventaire des manuscrits de la Bibliothèque de l′Université de Liège. Manuscrits acquis de 1886 à 1960,* 3 vols. (Liège, 1968–70).

(ancien) du XVIIIe siècle, cart. (curieux), 5–,″ which means ″450 Arabic manuscript (old) from the eighteenth century, hardbound (odd), 5–.″ Undoubtedly this is the kind of description often found in sale catalogues, where here 450 represents the serial number and 5 the proposed price, the currency being probably the franc. Upon receipt of his acquisition, Chauvin wrote on the same folio the following note: ″Victor Chauvin le 13 9bre 1904, 5ff 45;″ in other words, the book was bought on the 13th of November 1904 for the price of 5.45 francs (the sale price plus the taxes, which amounted to 9%). Apparently, Chauvin did not attach any importance to the manuscript.

It is not possible to trace back the whole history of the manuscript from the death of al-Maqrīzī up to its acquisition by Chauvin. Nevertheless, some clues permit us to imagine broadly how it travelled and through what hands. It has been recently established that in the preserved autograph manuscripts of *al-Muqaffá*[13] full biographies have been added by another, anonymous, hand on folios left blank by al-Maqrīzī, this hand being attributed to Ibn Ḥajar al-ʻAsqalānī.[14] Ibn Ḥajar is one of the few historians whose holograph manuscripts have been preserved, and thus a comparison with them can easily be made, which confirms the attribution. On the other hand, the greatest part of one of the Leiden copies (MS or. 14533) served as the original for a copy made in the seventeenth century which is found in Istanbul (Süleymaniye MS Pertev 496), but the copyist was not deceived and identified Ibn Ḥajar's hand, indicating in his copy that this particular biography was Ibn Ḥajar′s work.[15] Coming back to the *codex leodiensis,* I observed a note on fol. 155r in a hand difficult to read, which shows great similarity to that found in the manuscripts of *al-Muqaffá.* Since it has been corroborated that these had been in Ibn Ḥajar′s possession, it would not therefore be surprising that most of al-Maqrīzī's books, his *tarikah,* passed to his contemporary after his death. I may accordingly conclude that until 852/1449, the date of Ibn Ḥajar's death, the manuscript was still in Egypt. There is then a huge gap during which we do not know who owned the manuscript.

On fol. 4r, in the upper margin, two notations of ownership are visible. The first reads as follows:

ملك الفقير إلى الله تعالى محمد مرتضى الحسيني غفر عنه في سنة ١١٧٧

This owner can be identified as Muḥammad ibn Muḥammad ibn Muḥammad ibn

---

[15] See ibid., 96.

'Abd al-Razzāq Murtaḍá al-Ḥusaynī al-Zabīdī (d. 1205/1790), the famous author of the *Tāj al-'Arūs,*[16] which means that at that date (1177/1763–64) the manuscript was still in Egypt. I had already noticed, when I was consulting catalogues for my own cataloguing work, that his name appeared several times as an owner, a fact indicating that he was a collector of rare books in his time.[17] The notebook was surely not the only autograph manuscript of al-Maqrīzī in his library, since, in a reference to the Ṭabarī family of Mecca in his *Tāj al-'Arūs* (Benghazi, n. d., 3:355), he cited al-Maqrīzī as follows: ″kadhā dhakarahu al-Maqrīzī fī ba'ḍ mu'allafātihi.″ But the data supplied by al-Zabīdī about this important family of the Holy City[18] do not appear in any of al-Maqrīzī's extant works. This raises a problem: where did al-Zabīdī find these details? Two answers may be given: either in an unknown work of al-Maqrīzī, a fact highly improbable as we are well informed, by himself and by his biographers, of all the books he composed, or maybe in another of his notebooks? Whatever the case, al-Zabīdī owned, or at least had access to, this manuscript.

Al-Zabīdī died in 1790 and the second notation of ownership provides us with a possible subsequent owner, either after his death or during his lifetime, which would mean that al-Zabīdī must have sold or donated the manuscript. This uncertainty is increased by the fact that no date has been appended to the name of the new owner. The inscription, almost illegible today, reads:

الحمد لله صار هذا الكتاب في نوبة الفقير إلى الله محمد بن عبد الكريم الفكون غفر له

The *nisbah* of this person (al-Fakkūn, read al-Faggūn) is mentioned in biographical dictionaries as belonging to an important family of *a'yān* from Constantine, currently situated in Algeria: the Banū Lafgūn.[19] One of its most important representatives

---

[16]On him see Carl Brockelmann, *Geschichte der arabischen Litteratur* (Leiden, 1949), S2:620 and 696 (Brockelmann mistakenly mentioned him under two entries); 'Umar Riḍá Kaḥḥālah, *Mu'jam al-Mu'allifīn* (Beirut, n. d.), 12:12 (where the same confusion is evident).

[17]Here are some of the manuscripts where a possession notation in al-Zabīdī's handwriting can be found: al-Fāsī, ″Dhayl al-Taqyīd (Cairo, Dār al-Kutub MS 198 *muṣṭalaḥ al-ḥadīth*); Ibn Ḥajar al-'Asqalānī, ″Taqrīb al-Tahdhīb″ (Dār al-Kutub MS 533 *tārīkh*); Ibn Abī Shaybah, ″Al-Muṣannaf fī al-Ḥadīth″ (Tunis, Dār al-Kutub al-Waṭanīyah MS 3483, vols. 1, 3–7). There is no doubt that other manuscripts that had been part of al-Zabīdī's library are to be found in other libraries.

[18]About them, see F. Bauden, ″Les Ṭabariyya: histoire d′une importante famille de la Mecque (fin XIIe–fin XVe siècle),″ in *Egypt and Syria in the Fatimid, Ayyubid and Mamluk Eras: Proceedings of the 1st, 2nd and 3rd International Colloquium Organized at the Katholieke Universiteit Leuven in May 1992, 1993 and 1994,* Orientalia Lovaniensia Analecta 73, ed. U. Vermeulen and D. De Smet (Leuven, 1995), 253–66 + 5 pl.

[19]On them, see H. Touati, *Entre Dieu et les hommes: Lettrés, saints et sorciers au Maghreb (17e*

was ʿAbd al-Karīm ibn Muḥammad ibn ʿAbd al-Karīm al-Faggūn (d. 1073/1663), who had been appointed to the coveted post of chief of the caravan of Maliki pilgrims to Mecca, a position which would be transmitted within the family for some time. Al-Ziriklī[20] speaks about him and specifies that he had a son named Muḥammad. At first, it is tempting to identify him with the Muḥammad ibn ʿAbd al-Karīm who put his owner's mark in the notebook, but according to the sources he died in 1114/1702.[21] This would mean that he owned the manuscript prior to al-Zabīdī, and that the notebook made a journey between Cairo, Constantine, and then Cairo again, which is highly improbable, even if we consider that manuscripts have always travelled widely in the Muslim world. I prefer to believe that this person is another member of the family who died after al-Zabīdī. My hypothesis is supported by the fact that one of the manuscripts owned by al-Zabīdī, besides the Liège manuscript, also bears the ownership mark of Muḥammad ibn ʿAbd al-Karīm al-Faggūn.[22] This clue is insufficient in itself to prove my conviction unconditionally. What seems to me an unassailable argument lies in the Paris MS arabe 1535, a copy of Ibn Khaldūn's *Al-ʿIbar* (vol. 7). This copy was completed by ʿAbd al-Raḥmān ibn Badr al-Dīn ibn Muḥammad ibn ʿAbd al-Karīm al-Faggūn on 3 Dhū al-Ḥijjah 1179/13 May 1766 (fol. 160r). The name of the copyist is not important, except that he was from the same family, but the fact that on fol. 1r there is an ownership notation of Muḥammad ibn ʿAbd al-Karīm al-Faggūn is decisive. Fortunately, the date of the copy (1766) allows us to fix a *terminus post quem* for this owner's mark and to establish that this person lived after that date, thus confirming that the manuscript was first in the possession of al-Zabīdī before it went to Constantine. The circumstances in which it passed from al-Zabīdī to this member of the Banū Lafgūn are not clear, although we have seen that the Banū Lafgūn were in charge of the pilgrimage caravan to Mecca each year. During his stay in Egypt, al-Faggūn could have bought al-Maqrīzī's notebook, as well as the Tunis manuscript, directly from al-Zabīdī, or from an heir after his death, unless he received them as a gift. In any event, the manuscript was in Algeria at the beginning of the nineteenth century. Constantine was conquered by the French in 1837, and the Paris manuscript of *al-ʿIbar* entered the collection of the then Bibliothèque Royale in 1838, through J. J. Caussin de Perceval. Did the

[22]The manuscript of Ibn Abī Shaybah′s ″Al-Muṣannaf fī al-Ḥadīth″ already mentioned (see above). See Ibrāhīm Shabbūḥ, *Al-Makhṭūṭ* (Tunis, 1989), 14–15.

Liège codex follow the same path? In 1904, Chauvin bought it from a sale catalogue written in French. I will refrain from jumping to conclusions about this last part of the history of the manuscript, but this element is disturbing.

DESCRIPTION OF THE MANUSCRIPT

The manuscript is composed of 209 folios, plus one fol. A at the beginning and one fol. B at the end. It was foliated at the time it was catalogued, but 4 folios were overlooked and have been numbered by me, with the number of the preceding folio accompanied by the word *bis* (47bis, 82bis, 124bis, 195bis). When I discovered the manuscript, it was in a terrible mess, as several folios, which were now loose leaves, and even a quire, had gotten out of order over time. Careful study allowed me to reorder the notebook completely, which gives the following rearrangement: fols. 4–86, 122, 121, 97–120, 205, 2, 196–204, 123, 87–96, 124–126, 3, 127–195bis, 1. The average size of a folio is 137 by 185 mm. Al-Maqrīzī used two colors of ink: black for the text and red for some titles and words within the texts. For some resumés, he also took the time to write the catchword in the lesser margin of the verso of the folios, and one notices particularly the marginal headlines that appear in one of the resumés. The manuscript has been trimmed, probably after al-Maqrīzī's death: the note inscribed by Ibn Ḥajar on fol. 155r has lost part of its text. This is confirmed by the fact that the autograph volumes of *Al-Muqaffá* were described by a reader during the last year of al-Maqrīzī's life (844/1440) as a ream *(rizmah)*.[23] There is no reason to believe that the notebook was worth a binding if one of his personal works was not. The binding which was provided for the notebook was produced in the east, but is of the kind called Occidental, which means without the traditional flap. The boards are decorated with marbled paper, while the spine is covered with brown leather.

The paper is of two different kinds. The first one is a good quality paper, of the Oriental type, glossy and creamy. The other is thicker and darker, and its surface is slightly rough. The most interesting feature is that the paper (of both types) had already been used: this can be deduced from inscriptions written in larger characters throughout the pages. I was able to identify them as being Mamluk chancery documents which had been cut into pieces by paper merchants, who sold them in the form of quires. These quires were in fact composed of scrap paper. I managed to reconstruct from the Liège manuscript five of these chancery documents and could date them precisely and link them to a particular event.[24]

---

[23] See Witkam, "Les autographes d'al-Maqrīzī," 93–94.

[24] See the preliminary report on this aspect of my research on the notebook entitled "The Recovery of Mamlūk Chancery Documents in an Unsuspected Place," in *The Mamluks in Egyptian and Syrian Politics and Society*, ed. A. Levanoni and M. Winter (Leiden, in press). This is the prelude

Other samples had already been mentioned in the other autograph manuscripts of al-Maqrīzī,[25] but they had always been described merely as pieces of reused paper and were never paid close attention.

Description of the Content

The following description is divided into two sections: the first, which appears here, studies the epitomes, while the second, which will appear in a subsequent issue of this journal, will present the scattered notes. As I have tried to demonstrate elsewhere,[26] the notebook was composed progressively, year by year. At first, al-Maqrīzī wrote resumés for which he sometimes used several quires, sometimes not even one. The quires were put together at a time which cannot be fixed precisely, and the spaces that al-Maqrīzī had left blank were filled with notes. This did not necessarily take place after the quires were gathered, but probably both before and after. For this reason, the manuscript gives an impression of chaos at first glance, but this is not the case. In order to make the arrangement understandable, I have decided to follow the aforementioned division. In both sections, I have followed the physical order in which the resumés and the notes respectively appear. A serial number has been attributed to each item, running from I to XXII for the epitomes, and from XXIII to LXXI for the notes.

A. The Epitomes[27]

I. (quires I–III, fols. 4r–31v[28])

Title on fol. 4r, line 2: *[Mukhtār/Intiqā' min] Kitāb 'Uyūn al-Anbā' fī Ṭabaqāt al-Aṭibbā'*/Aḥmad ibn Abī al-Qāsim ibn Khalīfah al-Khazrajī al-Mutaṭabbib.

[مختار\انتقاء من] كتاب عيون الأنباء في طبقات الأطباء، جمع أحمد بن أبي القاسم بن خليفة الخزرجي المتطبب.

---

to my forthcoming study which will be entitled *Maqriziana III: Scraps of Paper to the Rescue of History: The Reconstruction of Mamlūk Chancery Documents from the Reign of Sultan 'Imād al-Dīn Ismā'īl (743/1342–746/1345).*

[25]See the list of the manuscripts in Bauden, "The Recovery."

[26]See my "Maqriziana IV: Le carnet de notes d'al-Maqrīzī: l'apport de la codicologie à une meilleure compréhension de sa constitution," to appear in the proceedings of the Third International Conference on the Palaeography and Codicology of Islamic Manuscripts, which was held in Bologna in October 2000 (St. Petersburg, in press).

[27]I follow the form of the title and the name of the author given by al-Maqrīzī in the first part of each number. Proper identification is provided in the commentary. For reasons of space, bibliographical references for the identification of the authors have been restricted to the minimum. Full references will be found in the critical edition of the text, which is in preparation.

[28]On fol. 28, a narrow strip of paper has been cut vertically prior to the scribbling.

الحمد لله وحده وصلواته وسلامه على نبينا محمد واله واصحابه
هذا شيء اختصرته وكله انتقيته من كتاب عيون الانباء في طبقات
الاطباء جمع احمد بن ابي القسم بن خليفة الخزرجي المتطبب رحمه الله
وجود صناعة الطب فمنهم فقوم يقولون بقدمه وقوم بحدثه
وذلك مبني على القول بقدم الاجسام المنفعلة للطب او حدوثها
فالقايلون بحدثه قسمان منهم من يقول انه خلق مع خلق الانسان
ومنهم من يقول بل استخرج بعد وهم الجمهور وهولاء منهم من يقول
هو الهام من الله للناس وهم ابقراط وجميع اصحاب القياس مثل
اليونانيين ومنهم من يقول ان الناس استخرجوه ثم اختلف
هولاء فقال بعضهم استخرجه اهل مصر وقال اخرون هرمس
استخرج ساير الصنايع والفلسفة والطب وقال اخرون ان اهل
قولوس استخرجوها من الادوية التي الفتها القابلة لامراة الملك وكان
بها سوء ... وقال قوم ان اهل كوس شيئا وافر وجيا استخرجوها
وان هولاء اول من استخرج الزمر وكانوا يشفون بتلك الالحان
والايقاعات الام النفس وتشفى الام النفس ما تشفى به البدن
وقيل ان المستخرج لها الحكما من اهل قو وهي الجزيرة التي كان بها
ابقراط واباوه وذكر كشيوش لقدما ان الطب ظهر في ثلاث
جزاير في وسط الاقليم الرابع وهي رودس وقنيدس وقو
وقيل استخرجها الكلدانيون وقيل سحرة اليمن وقيل سحرة بابل او
سحرة فارس وقيل الهند وقيل الصقالبة وقيل اهل اقريطش ...

رسول

Folio 37v. Courtesy Bibliothèque de l'Université de Liège, ms. 2232.

means that it is part of the epitome under discussion. It is highly probable that more passages have been used by al-Maqrīzī in the *Khiṭaṭ,* but this remains to be investigated.

II. (quires IV–VIII, fols. 37v–81v[30])

Title on fol. 37v, lines 7–8: *Talkhīṣ Kitāb Futūḥ Miṣr wa-Akhbārihā*/ʻAbd al-Raḥmān ibn ʻAbd Allāh ibn ʻAbd al-Ḥakam.

تلخيص كتاب فتوح مصر وأخبارها من تأليف عبد الرحمن بن عبد الله بن عبد الحكم.

Incipit (fol. 37v, lines 1–11):

بسم الله الرحمن الرحيم رب زدني علما وأعطني برحمتك معارف وفهما وارزقني الفهم عنك والاصغاء اليك [...] وبعد فإني قاصد تلخيص كتاب فتوح مصر وأخبارها من تأليف عبد الرحمن بن عبد الله بن عبد الحكم رحمه الله مع الاجتهاد في سرد ما حواه من الأخبار التي تدعو الحاجة إليها وترك ما لا يحتاج إليه الآن من ذلك كنحو ذكر الدور والمساجد التي دثرت وكذكر الأسانيد في الأخبار غير النبوية وشبه هذا والله أسأل تيسير ذلك بمنه وكرمه.

First quotation (fol. 37v, lines 12–13):

عن عبد الله بن عمر بن العاص قال خلقت الدنيا على خمس صور على صورة الطير برأسه [...]
(فتوح، ص ١)

List of the chapters *(dhikr):*

Fol. 37v	ذكر وصية رسول الله صلى الله عليه وسلم بالقبط (فتوح، ص ٢)
Fol. 40r	ذكر سبب نزول القبط بمصر وسكناها بها (فتوح، ص ٧)
Fol. 42v	ذكر استنباط الفيوم (فتوح، ص ١٤)
Fol. 47bis v	عمل البرابي (فتوح، ص ٢٧)
Fol. 49r	ذكر دخول بخت نصر (فتوح، ص ٣١)
Fol. 52r	ذكر بناء الإسكندرية (فتوح، ص ٣٧)
Fol. 57r	ذكر كتاب رسول الله صلى الله عليه وسلم إلى المقوقس (فتوح، ص ٤٥)
Fol. 59r	ذكر سبب دخول عمرو بن العاص مصر (فتوح، ص ٥٣)
Fol. 60v	ذكر فتح مصر (فتوح، ص ٥٥)
Fol. 71v	ذكر من قال إن مصر فتحت بصلح (فتوح، ص ٨٤)
Fol. 73r	ذكر من قال فتحت مصر عنوة (فتوح، ص ٨٨)

[30]On fol. 55r, al-Maqrīzī wrote only 3 lines of text, leaving the rest and the verso blank. He repeated this on fol. 56, where he wrote only 9 lines on the recto and the verso was left blank. Later on, he used these spaces to write down notes quoted from other sources. For their description, see numbers XXXI–XXXIV.

Fol. 74r	ذكر فتح الفيوم (فتوح ص ١٦٩)
Fol. 74v	كتاب الخطط (فتوح، ص ٩١)
Fol. 78r	ذكر المقطم (فتوح، ص ١٥٦)
Fol. 79v	ذكر أمر عمرو الناس بالخروج إلى الريف (فتوح، ص ١٣٩)
Fol. 81r	ذكر النيل (فتوح، ص ١٤٩)

Explicit (fol. 81v, line 21):
[...] فلما قدم الكتاب على عمرو فتح البطاقة فإذا فيها من عبد الله (فتوح، ص ١٥٠، سطر ١٨) [ends abruptly]

Commentary:
The source is Abū al-Qāsim ʻAbd al-Raḥmān ibn ʻAbd Allāh **Ibn ʻAbd al-Ḥakam** (d. 257/871), *Kitāb Futūḥ Miṣr wa-Akhbārihā*.
We rely on the edition published by Charles C. Torrey under the title *The History of the Conquest of Egypt, North Africa and Spain known as the Futūḥ Miṣr of Ibn ʻAbd al-Ḥakam, Edited from the Manuscripts in London, Paris and Leyden* (New Haven, 1922; Leiden, 1920). It was already well known that this source was used extensively by al-Maqrīzī for the *Khiṭaṭ,* where the name of the author as well as the title of the book is mentioned several times.[31] Indeed, the major part of this epitome is found in the *Khiṭaṭ* verbatim, without modifications in the wording. Comparison with the original source shows, however, some discrepancies, sometimes indicated by Torrey in his *apparatus criticus,* sometimes not.[32] The resumé ends, as it seems, abruptly within the story of the virgin who was sacrificed by the Copts in the Nile to induce its flood. This impression is strengthened by the fact that another hand added at a later date the word *kharm* (lacuna) in the lower margin. Another feature supports this idea: a clear examination of the resumé indicates that al-Maqrīzī wrote the catchword in the lesser margin of the verso of each folio, a custom which is generally observed in Islamic codicology, but this is not the case with the last folio of the resumé. Moreover, the last part of the resumé has been written on the fourth bi-folio of the quire, which means that, in this case, three folios remained blank at the end of the quire. These blank folios were filled with various notes at a later stage.[33] All this leads us to believe that al-Maqrīzī really ended his epitome of the *Futūḥ Miṣr* at this point, perhaps because the last

[31]See Guest, ″A List of Writers,″ 111; Harīdī, *Fihrist Khiṭaṭ Miṣr,* 2:82, 92.
[32]A detailed study of this epitome with the quotations found in the *Khiṭaṭ* is in preparation and will be published under the title ″Maqriziana V: Ibn ʻAbd al-Ḥakam and al-Maqrīzī.″
[33]See nos. XXXV–XXXVII, XXXIX–XL.

story had already been quoted previously,[34] though the source differs.[35] Nevertheless, one fact contradicts this impression : the whole story of the sacrifice of the virgin is to be read in the *Khiṭaṭ* (1:58)! At this point, several hypotheses may be conjectured: *(a)* the manuscript of the *Futūḥ* used by al-Maqrīzī ended abruptly at the point where he ended the resumé; *(b)* like *(a),* but he found a more complete copy later; *(c)* al-Maqrīzī decided to terminate the resumé at this point because nothing more interested him in the last parts of the book. The present state of my research makes me think that a complete version of the epitome did not exist, thus favoring the third hypothesis.

III. (quire X, fols. 121r–121v, 97r–98v)
No title. Fourteen *faṣl*s dealing with various subjects of the Egyptian economy.
List of the *faṣl*s:

Fol. 121r	١) فصل: كان مروان بن الحكم يكتب لعثمان بن عفان [...] (قوانين، ص ٦٤)
Fol. 121r	٢) فصل الذي كان يؤخذ بمصر من الجوالي (قوانين، ص ٣١٨)
Fol. 121r	٣) فصل الذي جرت العادة بشرائه للمتجر السلطاني (قوانين، ص ٣٢٧)
Fol. 121r	٤) فصل الشب (قوانين، ص ٣٢٨)
Fols. 121r–121v	٥) فصل النطرون (قوانين، ص ٣٣٤)
Fol. 121v	٦) فصل دار الضرب بالقاهرة والاسكندرية (قوانين، ص ٣٣١)
Fol. 121v	٧) فصل دار العيار (قوانين، ص ٣٣٣)
Fol. 97r	٨) فصل: كان بمصر الحبس الجيوشي بالبرين الشرقي والغربي [...] (قوانين، ص ٣٣٦)
Fol. 97r	٩) فصل الأسطول (قوانين، ص ٣٣٩)
Fol. 97v	١٠) فصل مقرر الجسور (قوانين، ص ٣٤٢)
Fol. 97v	١١) فصل موظف الأتبان بالديار المصرية (قوانين، ص ٣٤٤)
Fols. 97v–98r	١٢) فصل الخراج بالوجه القبلي من الديار المصرية (قوانين، ص ٣٤٤)
Fol. 98r	١٣) فصل القرظ (قوانين، ص ٣٤٧)
Fol. 98r	١٤) فصل: كانت قطيعة خراج الفدان القمح [...] (قوانين، ص ٢٥٨)

Commentary:
Most of this resumé was used by al-Maqrīzī in one place (*Khiṭaṭ* 1:109–11)

---

[34]See no. XXVI.

[35]I still must establish whether or not there are quotations of Ibn ʿAbd al-Ḥakam's *Futūḥ Miṣr* in the *Khiṭaṭ* that correspond to the last parts of the book which are missing in al-Maqrīzī's resumé. This matter will be dealt with in ″Maqriziana V.″

without indicating the source. I was able to identify the source as Abū al-Makārim al-As'ad ibn Muhadhdhab al-Khaṭīr **Ibn Mammātī** (d. 606/1209), *Qawānīn al-Dawāwīn*. References are made to the edition of 'Azīz Suryāl 'Aṭīyah (Cairo, 1943). This work is cited twice in the *Khiṭaṭ*, but only for other passages.[36] These *faṣl*s, like the entire notebook, were transcribed on the spot, while al-Maqrīzī read the source, and the fact that most of them appear at almost the same place in the *Khiṭaṭ* indicates that al-Maqrīzī was at a preliminary stage of writing.

IV. (quire X, fols. 98v–100r)

No title. Eight *faṣl*s concerning the geographical location of Egypt and its wonders, the marvels of the cities of Manf [Memphis] and al-Faramā [Pelusium], the *kharāj* and the Nile.

List of the *faṣl*s and incipit:

Fol. 98v

١) فصل: مصر جعلها الله متوسطة الدنيا وهي في الإقليم الثالث والرابع سلمت من حر الإقليم الأول والثاني ومن برد الإقليم السادس والسابع [...]

Fols. 98v–99r

٢) فصل: مصر ثمانون كورة ليس فيها كورة إلا وفيها طرائف وعجائب من أنواع البر والأبنية والطعام والشراب والفاكهة [...]

Fol. 99r

٣) فصل: مدينة منف ذات العجائب بها الأبنية والآثار والدفائن وكنوزها لا تحصى [...]

Fol. 99r

٤) فصل: الفرما هي أكثر عجائب وأقدم آثارا كان منها طريق إلى جزيرة قبرص في البر فغلب عليه البحر [...]

Fols. 99r–100r

٥) فصل في خراج مصر: جباها عمرو بن العاص عشرة آلاف ألف دينار فكتب اليه عمر بن الخطاب [...]

Fols. 100r–100v

٦) فصل النيل: انبعاثه من جبل القمر وراء خط الاستواء من عين تجري منها عشرة أنهار [...]

Fol. 100v

٧) فصل: وجعل الله مصر حاجزا بين بحر الروم وبحر الصين والحاجز بينهما مسيرة ليلة واحدة [...]

---

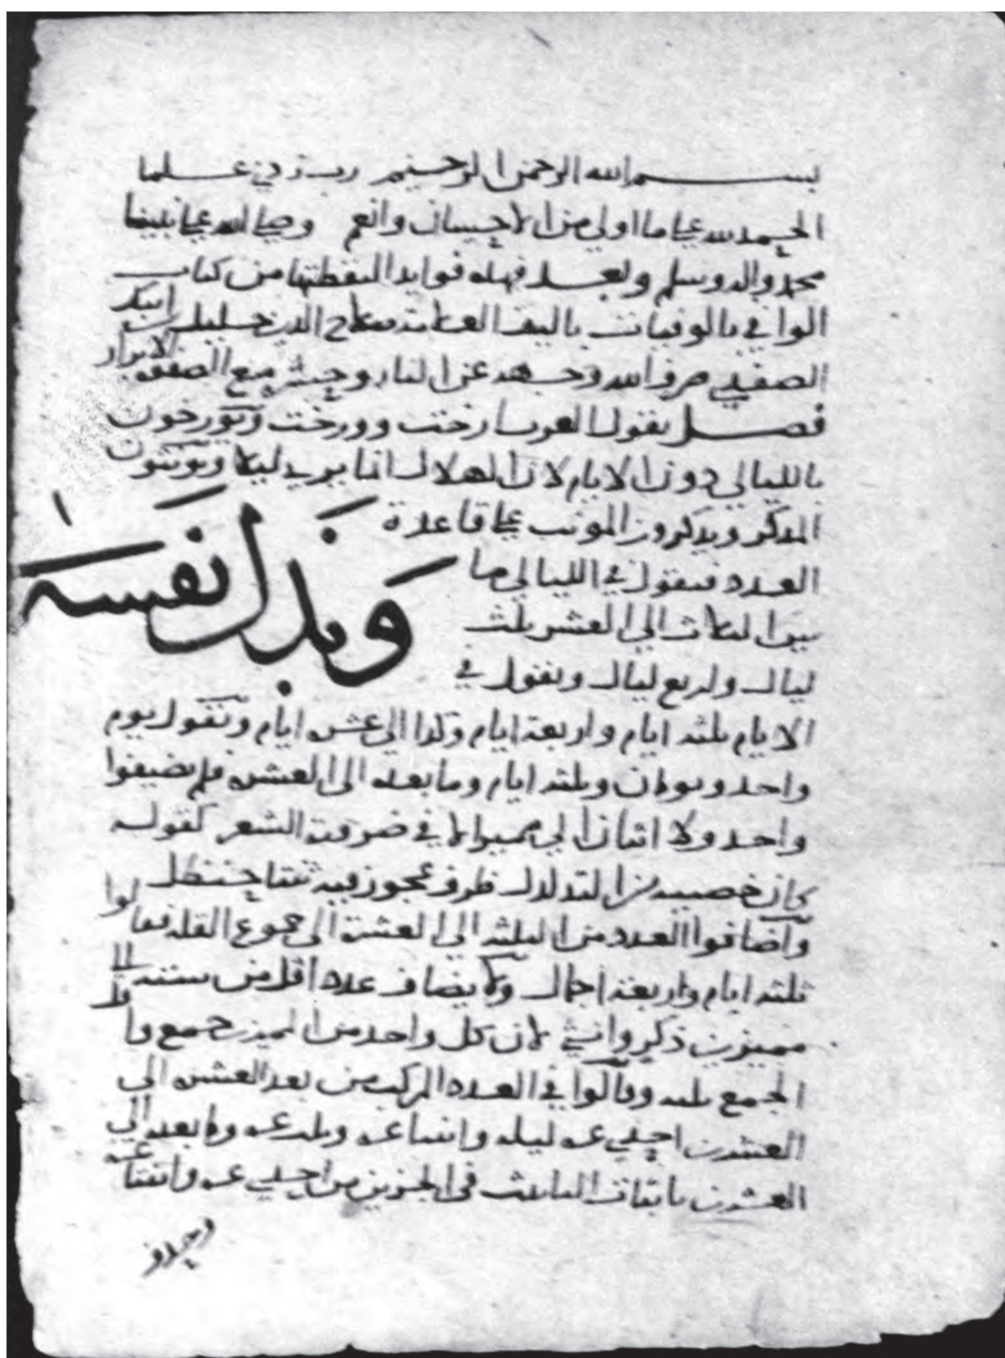
[36]Not mentioned in Guest, "A List of Writers," but mentioned in Harīdī, *Fihrist Khiṭaṭ Miṣr,* 2:93.

Fols. 100v–101r

٨) فصل: نقل من خط القاضي الفاضل ما صورته وجد في كتاب قبطي باللغة الصعيدية مما نقل إلى اللغة العربية أن مبلغ ما كان يستخرج لفرعون مصر [...]

Commentary:

All these *faṣl*s, except no. 3, appear extensively in *Khiṭaṭ* as follows: 1 and 2 in *Khiṭaṭ* 1:26, in this order; 4 in *Khiṭaṭ* 1:211, in this order too; 5 in *Khiṭaṭ* 1:98; 6 in *Khiṭaṭ* 1:53; 7 in *Khiṭaṭ* 1:212; and finally 8 in *Khiṭaṭ* 1:75. For no. 3, cf. *Khiṭaṭ* 1:134 sqq. In the notebook, it is possible to imagine that he wrote them at one sitting, as if they came from the same source. However, sometimes in the *Khiṭaṭ*, he identified, carelessly as usual, the original sources. It turns out that numbers 4 and 7 were taken from a work by Ibn al-Kindī,[37] and it may be presumed that number 3 came from the same source.[38] Although six *faṣl*s have the same origin, it would be untenable to attribute the two remaining to the same source and would constitute an anachronism, as number 8 is quoted from a work by al-Qāḍī al-Fāḍil (d. 596/1200, on him see number XXVIII), the *Taʿlīq al-Mutajaddidāt,* also titled as such with some variations by al-Maqrīzī.[39] But in the *Khiṭaṭ*, the work is attributed to al-Ḥasan ibn ʿAlī al-Asadī![40] Finally, for number 6, al-Maqrīzī indicates that it is to be found in Qudāmah ibn Jaʿfar's *Kitāb al-Kharāj,*[41] but it is not to be found there word for word. A careful examination of the text appearing in the



[37]ʿUmar ibn Abī ʿUmar Muḥammad ibn Yūsuf Ibn al-Kindī (date of death unknown), the son of al-Kindī (d. after 350/961). He is the author of a *Faḍāʾil Miṣr,* published by Oestrup under the title *Beskrivelse af Ägypten* (Copenhagen, 1896). G. Wiet, in his edition of the *Khiṭaṭ* (4:29–30), quoted the book and insisted that he found what corresponds to our *faṣl* 4 in the notebook in Oestrup's edition (on pp. 232–33). The *Faḍāʾil Miṣr* is cited on several occasions by al-Maqrīzī. See Guest, "A List of Writers," 114; Harīdī, *Fihrist Khiṭaṭ Miṣr,* 2:92.

[38]Indeed, we find texts 3 and 4, with the same wording, in Yāqūt, *Muʿjam al-Buldān* (Beirut, 1968), 4:256 (s.v. al-Faramā) and vol. 5:214 (s.v. Manf). Yāqūt could not be al-Maqrīzī's source for these passages, because al-Maqrīzī is more complete in his quotations than Yāqūt. It thus seems that Yāqūt took these data from Ibn al-Kindī's text as well. After having consulted recently a newer edition of the *Faḍāʾil Miṣr* (ed. Ibrāhīm Aḥmad al-ʿAdawī and ʿAlī Muḥammad ʿUmar, Cairo-Beirut, 1971), I have been able to identify clearly numbers 1–5 and 7 as coming directly from this source (respectively on pp. 45, 47, 51, 52, 54, 67 and in this same order).

[39]*Al-Mutajaddidāt*, *Mutajaddidāt al-Ḥawādith*, *al-Muyāwamāt*. See Guest, "A List of Writers," 110; Harīdī, *Fihrist Khiṭaṭ Miṣr,* 2:121.

[40]This source is mentioned neither by Guest, "A List of Writers," nor by Harīdī, *Fihrist Khiṭaṭ Miṣr.*

[41]Abū al-Faraj Qudāmah ibn Jaʿfar ibn Qudāmah al-Baghdādī (d. 320/932), *Kitāb al-Kharāj wa-Ṣināʿat al-Kitābah,* ed. Muḥammad Ḥusayn al-Zabīdī (Baghdad, 1981), 151. This source is quoted twice by al-Maqrīzī in the *Khiṭaṭ*. See Guest, "A List of Writers," 117; Harīdī, *Fihrist Khiṭaṭ Miṣr,* 2:82.

Folio 101v. Courtesy Bibliothèque de l'Université de Liège, ms. 2232.

Khiṭaṭ demonstrates that it comes from an indirect source that is probably al-Nuwayrī's (d. 733/1333) *Nihāyat al-Arab,*[42] 1:262–64. However, the text present in the resumé, although containing the same data and almost the same phrasing, contains some discrepancies from the final version found in the *Khiṭaṭ*. This could mean that the source was not al-Nuwayrī, even if ultimately it is from this source that al-Maqrīzī made the citation.[43] I cannot help but think that this section was written at a preliminary stage in the redaction of the *Khiṭaṭ,* and the order of the *faṣl*s has changed in the final version.

V. (quires XI–XIII, IX, fols. 101v–120v, 205, 2,[44] 196r–204v, 87r–96v[45])

Title on fol. 101v, lines 3–5: *Fawā'id [Multaqaṭah[46]] min Kitāb al-Wāfī bi-al-Wafayāt*/Ṣalāḥ al-Dīn Khalīl ibn Aybak al-Ṣafadī.

فوائد [ملتقطة] من كتاب الوافي بالوفيات، تأليف العلامة صلاح الدين خليل بن أيبك الصفدي

Incipit (fol. 101v, lines 1–5):

بسم الله الرحمن الرحيم، رب زدني علما. الحمد لله على ما أولى من الإحسان وأنعم وصلى الله على نبينا محمد وآله وسلم.

وبعد فهذه فوائد التقطتها من كتاب الوافي بالوفيات تأليف العلامة صلاح الدين خليل بن أيبك الصفدي صرف الله وجهه عن النار وحشره مع الصفوة الأبرار [...]

List of the *faṣl*s and the biographies:

Fols. 101v–102v

فصل: تقول العرب أرخت وورخت ويؤرخون بالليالي دون الأيام لأن الهلال إنما يرى ليلا (الوافي ١، ص ١٦)

---

[42]Cairo, 1923.

[43]The same passage found in al-Nuwayrī and the *Khiṭaṭ* appears in al-Suyūṭī's *Ḥusn al-Muḥāḍarah,* ed. Muḥammad Abū al-Faḍl Ibrāhīm (Cairo, 1968), 2:347–49, 355–56, where al-Suyūṭī declares that the passages were taken from the *Mabāhij al-Fikar* by Jamāl al-Dīn Muḥammad ibn Yaḥyá al-Waṭwāṭ al-Kutubī (d. 718/1318). See the facsimile of MS Fātiḥ 4116 published by F. Sezgin under the title *Encyclopædia of Four Natural Sciences,* 2 vols. (Frankfurt, 1990). It is highly probable that the *Mabāhij al-Fikar* was indeed the source used by al-Maqrīzī for the resumé (see no. LXX).

[44]A large vertical strip of paper was removed from fol. 2, prior to al-Maqrīzī's scribbling.

[45]This quire was placed between quires VIII and X; it was bound there and cannot be moved physically, until the manuscript has been restored. It is clear, however, that its orginal position was after quire XIII, which ends with biographies of those whose *ism* is Aḥmad. This quire begins with biographies of those whose *ism* is Ismā'īl.

[46]Al-Maqrīzī speaks in the first person: *fawā'id iltaqaṭtuhā*.

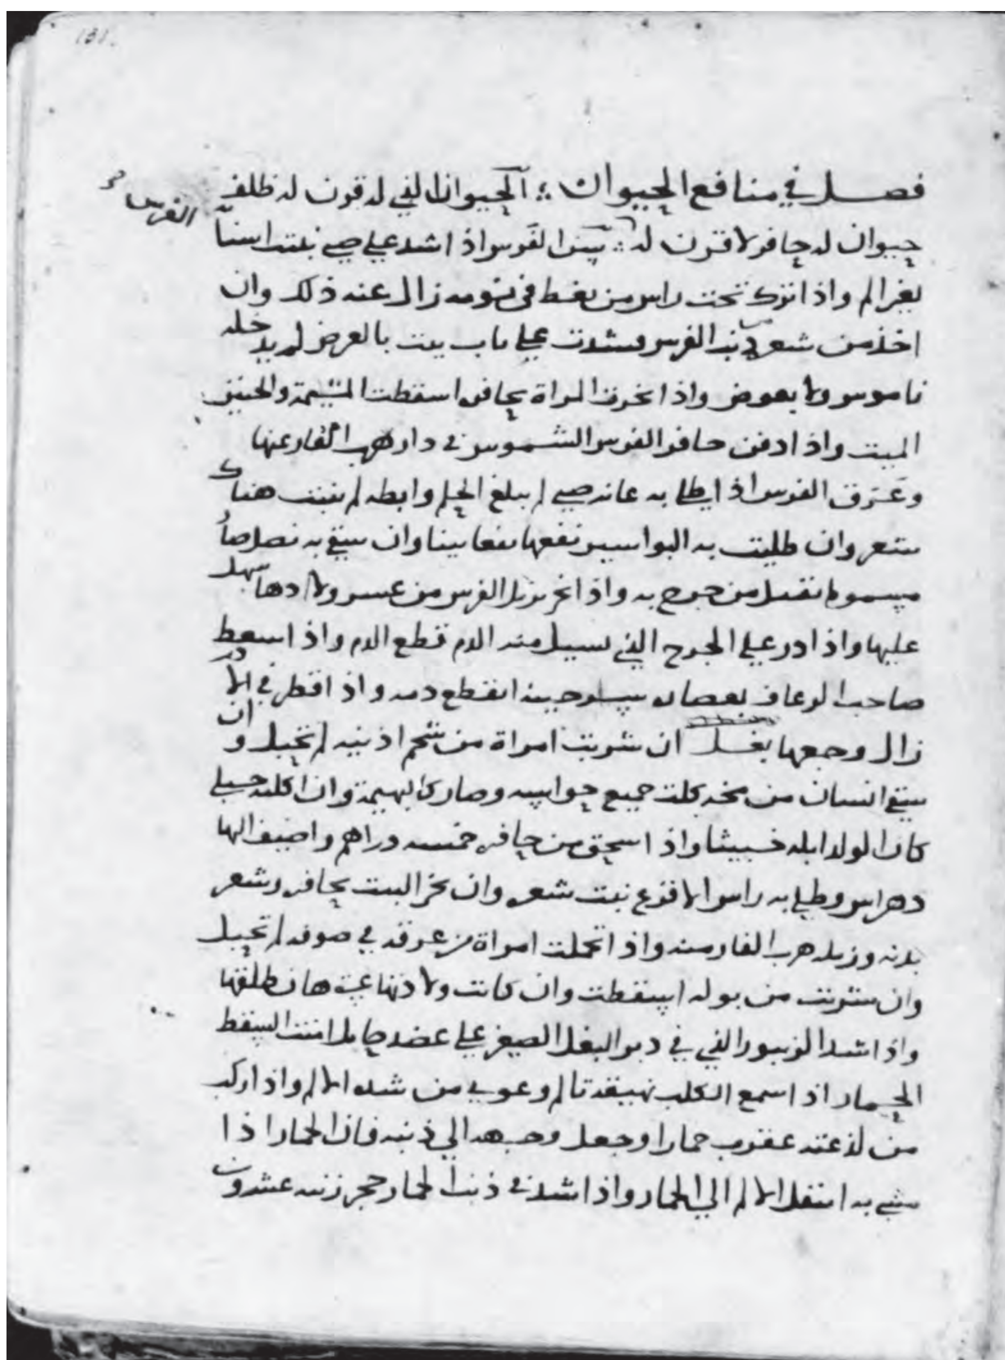
Commentary:
The source is Ṣalāḥ al-Dīn Khalīl ibn Aybak **al-Ṣafadī** (d. 764/1363), *Kitāb al-Wāfī bi-al-Wafāyāt.* References are to the edition published beginning in 1949,[47] with mention of the date of death (preceded by *tā'*), the volume and the number of the biography in it, and finally the page on which the biography begins.



Al-Ṣafadī is quoted only thrice in the *Khiṭaṭ,*[48] but most of the persons whose biographies are found in this resumé are mentioned in this work. When al-Maqrīzī speaks of a particular building erected by a celebrity, he adds details about his biography. For the Mamlūk period, most of the information can be traced back to this resumé, but it would be too reductive to believe that the resumé was used solely in the *Khiṭaṭ*. I have noticed that al-Maqrīzī also used this kind of biography in *Al-Muqaffá.* Further study will be required in order to verify whether this material also appears in *Itti'āẓ al-Ḥunafā'* and *Al-Sulūk.* The epitome resumes with what seems to be the end of the letter *hamzah,* and it is tempting to think that al-Maqrīzī did not go further. This is far from being the case: *Khiṭaṭ,* 2:35 contains a biography of Bashtāk, where al-Maqrīzī reveals that most of it was borrowed from al-Ṣafadī (i.e., *Al-Wāfī*). This citation shows that he made a resumé of *Al-Wāfī* which went far beyond what is found in the notebook.

VI. (quire XIV, fols. 124r–125v)
No title. Two *faṣl*s dealing with juridical matters, one regarding the law of inheritance when the deceased leaves three or more daughters and no son, the other the conditions according to the various schools of law in which the security for a debt *(rahn al-dayn)* vanishes.
List of the *faṣl*s and incipit:

[48] See Guest, "A List of Writers," 118; Harīdī, *Fihrist Khiṭaṭ Miṣr,* 2:69 *(A'yān al-'Aṣr),* 75, and 96. Note that Harīdī gives two titles on pp. 75 and 96: *Tārīkh* and *Kitāb,* but neither of them appears in the *Khiṭaṭ*. In fact, both of them are passages coming from the *Kitāb al-Wāfī* (number 1 of the resumé appears in *Khiṭaṭ,* 2:429).

Folio 131r. Courtesy Bibliothèque de l'Université de Liège, ms. 2232.

Commentary:
So far I have not been able to identify the source of these *faṣl*s, nor to see if something equivalent appears in al-Maqrīzī's extant works. Still I want to point out that he dwells on the problem of inheritance in the Fatimid period in the *Khiṭaṭ,* 1:111, which demonstrates that he was interested in this matter.

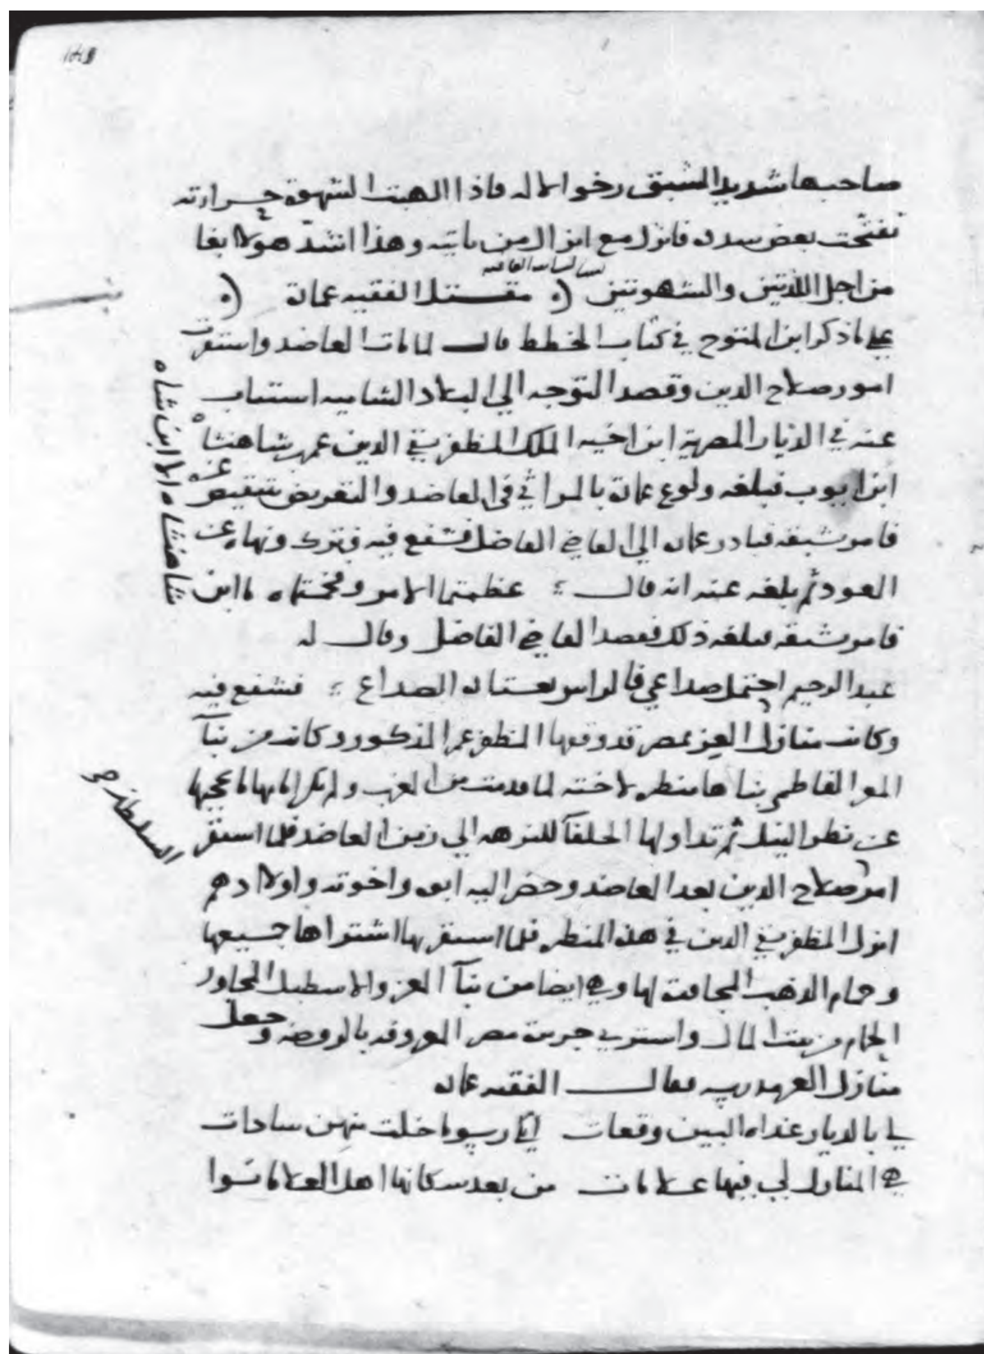
Commentary:
This *faṣl* deals only with animals, more precisely the medical usefulness of some parts of their bodies. Evidently, the animals are classified according to species, although al-Maqrīzī did not indicate in each case the precise species.[49] Within each species, the classification adopted is alphabetical, although one can see that some animals have been added at the end of each species, as if al-Maqrīzī was going backwards in the text he was reading. It is hard to conceive that this kind of information could have been of any use to al-Maqrīzī for any of his writings, but this impression is misleading. I was able to trace at least two quotations from this resumé in the *Khiṭaṭ*. Both of them deal with animals of the last classification: the crocodile (*Khiṭaṭ,* 1:67) and the *ra‘‘ādah* (the electric ray) (*Khiṭaṭ,* 1:65). In the first of these, two lines before the beginning of the passage, al-Maqrīzī cites the name of Ibn Zuhr,[50] which is preceded a few lines before by the name of Ibn

[49]It is only the case at the beginning of the resumé, where one perceives that we have first the *dawābb* (riding animals), followed by the *na‘am* (grazing livestock), then the *sibā‘* (beasts of prey).
[50]This is Abū al-‘Alā’ Zuhr ibn ‘Abd al-Malik ibn Muḥammad ibn Marwān ibn Zuhr al-Ishbīlī al-Iyādī (d. 525/1131). See on him *GAL* 1:486, no. 13 and S1:889, no. 13. He is the author of a

al-Bayṭār. It would, of course, be tempting to attribute the material to be found in the resumé to Ibn Zuhr, but this would be acting too quickly. The text that appears immediately after the name of Ibn Zuhr is not to be found in the resumé, which proves that the direct source is different. A comparison of the resumé with a manuscript of Ibn Zuhr's *Khawāṣṣ al-Ḥayawān* (Berlin, Ahlwardt 6166) reveals that the data contained in both texts are very similar. However, in Ibn al-Zuhr's text, the material is presented differently: all the animals are considered as a group, organized alphabetically, without taking into account a statement of species. It is highly improbable that al-Maqrīzī would have written the resumé reordering all the data according to the division in species. This is completely incompatible with his working method, as we will establish in "Maqriziana II." The fact that al-Maqrīzī's resumé bears resemblance to Ibn Zuhr's text indicates that he must have used an intermediate source which relied mainly on Ibn Zuhr. This is the case with Ibn al-Bayṭār (d. 646/1248) in his *Al-Jāmiʿ li-Mufradāt al-Adwiyah wa-al-Aghdhiyah*,[51] where Ibn Zuhr is quoted for the medical benefits of the crocodile. This proves that the material found in the *Khiṭaṭ* comes directly from Ibn al-Bayṭār, but it is impossible to identify the resumé as being an epitome of Ibn al-Bayṭār's book, which is comparable to Ibn Zuhr's work in its arrangement of the data (i.e., no distribution by species). We thus have to look for another author who would have relied on Ibn Zuhr, but would have rearranged the data according to species. This is the case with al-Qazwīnī's *ʿAjāʾib al-Makhlūqāt*.[52] Here again, a comparison of the resumé with the data included in this text reveals that there is an important relationship between the two, and one could believe that this is actually the original source of al-Maqrīzī in the Liège manuscript. Problems remain: al-Qazwīnī did not consider the aquatic animals, meaning that the crocodile and the *raʿʿādah* do not appear in his book, and data found in the resumé are lacking in the *ʿAjāʾib*. Al-Qazwīnī's book must thus be set aside, leaving the mystery of the source of the resumé in the Liège codex unresolved for the time being.[53]



---

book entitled *Khawāṣṣ al-Ḥayawān,* where *khawāṣṣ* is a synonym of *manāfiʿ*.

[51]Cairo-Būlāq, 1291/1874, 4 vols.

[52]Ed. F. Wüstenfeld (Göttingen, 1849) under the title *Zakarija Ben Muhammed Ben Mahmud el-Cazwini's Kosmographie: Erster Theil: Kitāb ʿAjāʾib al-Makhlūqāt.* Al-Qazwīnī died in 682/1283.

[53]M. Ullmann, *Die Natur- und Geheimwissenschaften* (Leiden/Cologne, 1972), 5–42, speaks of other works related to this kind of literature, where the material was classified according to species and then by alphabetical order of the animals, but I must still investigate this matter. One of these works, the *Mabāhij al-Fikar* of al-Waṭwāt, must be disregarded, as it does not deal with the medical uses of the various parts of animals *(khawāṣṣ).* See R. Kruk, "Some Late Mediæval Zoological Texts and Their Sources," in *Actas del XII Congreso de la U.E.A.I. (Malaga, 1984)* (Madrid, 1986), 424.

Folio 149r. Courtesy Bibliothèque de l'Université de Liège, ms. 2232.

In summary, Ibn Zuhr's *Khawāṣṣ al-Ḥayawān* is probably the basis of the resumé, but by way of another source which relied on it while reordering the material according to species.

VIII. (quire XVII, fols. 146r–149r)

No title. Text dealing with love and its various aspects.

List of the sections and incipit:

Fol. 146r	١) في القبلة: قال أبقراط الجماع بغير مؤانسة جفاء [...]
	٢) آداب المحادثة ثلاثة وعشرون [...]
Fol. 146v	٣) آداب المضاجعة: ١٤ أدبا [...]
Fol. 147r	٤) سبب العشق: التجانس وقوته وضعفه على قدر التشاكل [...]
Fol. 148r	٥) الكلام له أربع مراتب
Fol. 148v	٦) سبب اللياطة: تفحل الشهوة وغلبتها [...]

Commentary:

The main theme of the section is love. The various sections discuss how to kiss, to converse, to sleep with somebody, the reasons for passion, the different kinds of intercourse, and finally the reasons that could explain a leaning toward sodomy. It is very difficult to identify the original source from which al-Maqrīzī made this resumé and to determine whether he used it for any of his books, preserved or lost. While consulting the *Nihāyat al-Arab* of al-Nuwayrī, I realized that this encyclopedist spoke about human passion, and argues about the reasons for this facet of love . It appears that the material found there (*Nihāyat al-Arab,* 2:135–38) is similar to no. 4 in al-Maqrīzī's resumé. In spite of similarities, al-Nuwayrī cannot be considered to be al-Maqrīzī's direct source, because there are details in the resumé absent from the *Nihāyat al-Arab*. Both of them must have utilized the same source once more.

IX. (quire XVII, fols. 149r–149v)

Title on fol. 149r, lines 3–4: *Maqtal al-Faqīh ʿUmārah* from *Kitāb al-Khiṭaṭ*/Ibn al-Mutawwaj.

مقتل الفقيه عمارة على ما ذكر ابن المتوج في كتاب الخطط

Incipit (fol. 149r, lines 4–5):

قال لما مات العاضد واستقرت أمور صلاح الدين وقصد التوجه إلى البلاد الشامية [...]

Explicit (fol. 149v, lines 9–10):

[...] وعجل لك الاجتماع بإحبابك فقال إنما قتلني إحسانهم وإساؤكم.

Commentary:
The source of this epitome is clearly indicated by al-Maqrīzī as being the *Kitāb al-Khiṭaṭ* written by Ibn al-Mutawwaj. He is to be identified with Tāj al-Dīn Muḥammad ibn ʻAbd al-Wahhāb **Ibn al-Mutawwaj** (d. 730/1329), who is the author of a book dealing with *khiṭaṭ* entitled *`qāẓ al-Mutaghaffil wa-Ittiʻāẓ al-Muta'ammil,* which is considered lost. This work is one of the few that al-Maqrīzī cites in his introduction to the *Khiṭaṭ* (1:5) among the sources he relied upon.[54] It has previously been stated that all the references to this work in the *Khiṭaṭ* concern old Cairo (prior to the Fatimids) and refer only to archeological matters. The resumé preserved here brings up material which goes against this mistaken idea, and establishes the importance of the historical data presented here.[55]

X. (quire XVII, fols. 149v–150r)
Title on fol. 149v, line 10:

الأهرام

Incipit (fol. 149v, lines 10–11):

عددها ثمانية عشر هرما في مقابلة الفسطاط [...]

Explicit (fol. 150r, lines 6–7):

[...] وعند مدينة فرعون موسى أعظم مما قبلها وهرم ميدوم آخرها.

Commentary:
Some passages of this resumé on the pyramids can be identified in the *Khiṭaṭ* (1:116, 119). For the first occurrence, al-Maqrīzī identifies the source as *Kitāb Tuḥfat al-Albāb* of Abū ʻAbd Allāh Muḥammad ibn ʻAbd al-Raḥīm al-Qaysī [al-Gharnāṭī] (d. 565/1170). The data are almost identical and a date (501) which is mentioned in the resumé appears again in the *Khiṭaṭ,* on the same page. Moreover, the quotation in the *Khiṭaṭ* can be traced in the published version of the *Tuḥfat al-Albāb,*[56] which prompts me to regard this work as definitely the source of the resumé.

---

[54]For the quotations noticed in the *Khiṭaṭ,* see Guest, ″A List of Writers,″ 116 and Harīdī, *Fihrist Khiṭaṭ Miṣr,* 2:72, 74, 82, 94. The title given by al-Maqrīzī varies greatly from one reference to another: *`qāẓ al-Mutaghaffil, al-Khiṭaṭ, al-Tārīkh, al-Kitāb.*

[55]I have not traced exactly the data preserved here in al-Maqrīzī's books. But compare with *Al-Muqaffá* (ed. M. al-Yaʻlāwī, Beirut, 1991), 8:740 sqq. and *Ittiʻāẓ al-Ḥunafā'* (ed. Ḥilmī M. Aḥmad, Cairo, 1973), 3:332–34.

[56]See Ayman Fu'ād Sayyid's edition (London, 2002), 1:313–14.

XI. (quire XVII, fol. 150r)
Title on fol. 150r, line 7: *Khabar fīhi Mu'tabar*.

خبر فيه معتبر

Incipit (lines 7–8):

توفي الصاحب الوزير زين الدين يعقوب بن الزبير في ثالث عشر شهر ربيع الآخر سنة ٦٦٨ بالسجن [...]

Commentary:
The source of this very short excerpt (14 lines) remains to be identified. Part of the data is to be found in *Al-Sulūk,*[57] 1:447.

XII. (quire XVII, fols. 150r–150v)
Title on fol. 150r, lines 20–21: *Mukhtār min Akhbār Banī Ayyūb*/Muḥammad ibn 'Alī ibn 'Abd al-'Azīz Ibn Naẓīf al-Ḥamawī al-Kātib.

مختار من أخبار بني أيوب، تأليف محمد بن علي بن عبد العزيز بن نظيف الحموي الكاتب

Incipit (fol. 150r, lines 21–22):

سنة ٥٧٩ فيها ظهر بقرية بوصير من الجيزة بيت هرمس الثاني فتحه القاضي بن الشهرزوري [...]

Explicit (fol. 150v, lines 13–15):

[...] سنة ٦٢٤ في شوال منها أمر الكامل بن العادل الأيوبي بهدم مدينة تنيس وكانت من المدن الجليلة.

Commentary:
The stated source of this resumé is the *Akhbār Banī Ayyūb* by Muḥammad ibn 'Alī ibn 'Abd al-'Azīz **Ibn Naẓīf** al-Ḥamawī (d. in the second part of the seventh/thirteenth century). Ibn Naẓīf is the author of three books, of which only one has been preserved: *Al-Tārīkh al-Manṣūrī, Talkhīṣ al-Kashf wa-al-Bayān fī Ḥawādith al-Zamān.*[58] As its title indicates, the book is a shorter version of a universal history *(Al-Kashf wa-al-Bayān fī Ḥawādith al-Zamān)*. The *Al-Tārīkh al-Manṣūrī* ends with the year 624 and is considered to be the most important source for the Ayyubid period.[59] A close examination of the text reveals that

---

[57]Ed. M. Muṣṭafá Ziyādah (Cairo, 1967).

[58]See the critical edition of this work by Abū al-'Īd Dūdū (Damascus, 1981). The editor decided to publish only the part beginning with the year 589. Prior to this edition, a facsimile of the *unicum* preserved at St. Petersburg in Russia had been published by P. Griaznevich (Moscow, 1960).

[59]See Claude Cahen, *La Syrie du nord à l'époque des croisades et de la principauté franque d'Antioche* (Paris, 1940), 57–58; idem, "Editing Arabic Chronicles: a Few Suggestions," *Islamic*

material on early Islamic history and successive periods is by far more concise than the parts beginning with the year 580. It is thus not surprising to notice that al-Maqrīzī began his resumé with the year 579 and continued with the following years: 597, 601, 611, 622, 624, taking notes for events related to Egypt. The data correspond exactly to what is found in the original source, consequently confirming that what al-Maqrīzī entitles *Akhbār Banī Ayyūb* is equivalent to *Al-Tārīkh al-Manṣūrī,* and it has been reutilized for the *Khiṭaṭ* and other of his works, although neither the author′s name nor the title of the work appears in any of them.

XIII. (quire XVII, fols. 150v–151r)
Title on fol. 150v, in the margin: *Mukhtār min Tārīkh Ibn Naẓīf al-Kabīr*/Ibn Naẓīf.

مختار من تأريخ ابن نظيف الكبير

Incipit (fol. 150v, lines 15–16):

سنة ٧٦ من الهجرة نقش عبد الملك بن مروان على الدنانير والدراهم سكة الإسلام [...]

Explicit (fol. 151r, line 23):

[...] عن الشمس في نصف برج الحوت طول ذؤابته مائة وخمسون ذراعا.

Commentary:
Just below the resumé *(mukhtār)* of *Al-Tārīkh al-Manṣūrī,* al-Maqrīzī added other notes starting with the year 76, then proceeding with the following years: 91, 99, 133, 180, 199, 216, 234, 235, 237, 253, 258, 268, 274, 286, 310, 375, 398, 435, 487, 496, in which all events are more general and do not deal exclusively with Egypt. In the margin, he added a title: *Mukhtār min Tārīkh Ibn Naẓīf al-Kabīr*. We should understand from this title that al-Maqrīzī intended to summarize the longest text written by Ibn Naẓīf, i.e., *Al-Kashf wa-al-Bayān fī Ḥawādith al-Zamān,* a work which has not been preserved, except in a shorter version (i.e., *Al-Tārīkh al-Manṣūrī,* see the preceding entry). A comparison of the material found in the resumé and the beginning of *Al-Tārīkh al-Manṣūrī* shows that the wording of the latter is different and more complete. This proves that what al-Maqrīzī included in this resumé was not taken from *Al-Tārīkh al-Manṣūrī,* assuming that this was a part of the longest work, but from *Al-Kashf wa-al-Bayān* itself.

XIV. (quire XVII, fols. 151r–151v)
No title. Excerpt regarding the kings of Ḥimyar.

Studies 1 (1962): 11.

Incipit (fol. 151r, lines 24–25):

جميع ملوك حمير على اختلاف القول فيهم ستة وعشرون ملكا وامرأة أعني بلقيس [...]

Explicit (fol. 151v, line 8):

[...] قد طال ما أكلوا يوما وما شربوا فأصبحوا بعد ذاك الأكل قد أكلوا.

Commentary:

No source is indicated by al-Maqrīzī for this very short excerpt dealing with the kings of Ḥimyar. The main part consists in the quotation of six verses attributed to Sayf ibn Dhī Yazan. The purpose of this excerpt is quite clear: al-Maqrīzī evokes the kings of Ḥimyar several times in his *Khiṭaṭ,*[60] where the *Kitāb al-Tījān fī Mulūk Ḥimyar* by Wahb ibn Munabbih, in the transmission of Abū Muḥammad ʿAbd al-Malik ibn Hishām (d. 218/833), is quoted more than once as a source.[61] He even devoted a biography to Ḥimyar in his *Al-Muqaffá* (3:691–97). However, the material found in this excerpt was not used by him in either work. It must be considered a preliminary step for his books or an unused note.

XV. (quire XVII, fols. 151v–155r)

Title on fol. 155r, lines 19–20: [*Talkhīṣ*] *Mukhtār min Kitāb al-Danānīr wa-al-Darāhim*/Abū Bakr Muḥammad ibn Khalaf ibn Ḥayyān al-maʿrūf bi-Wakīʿ.

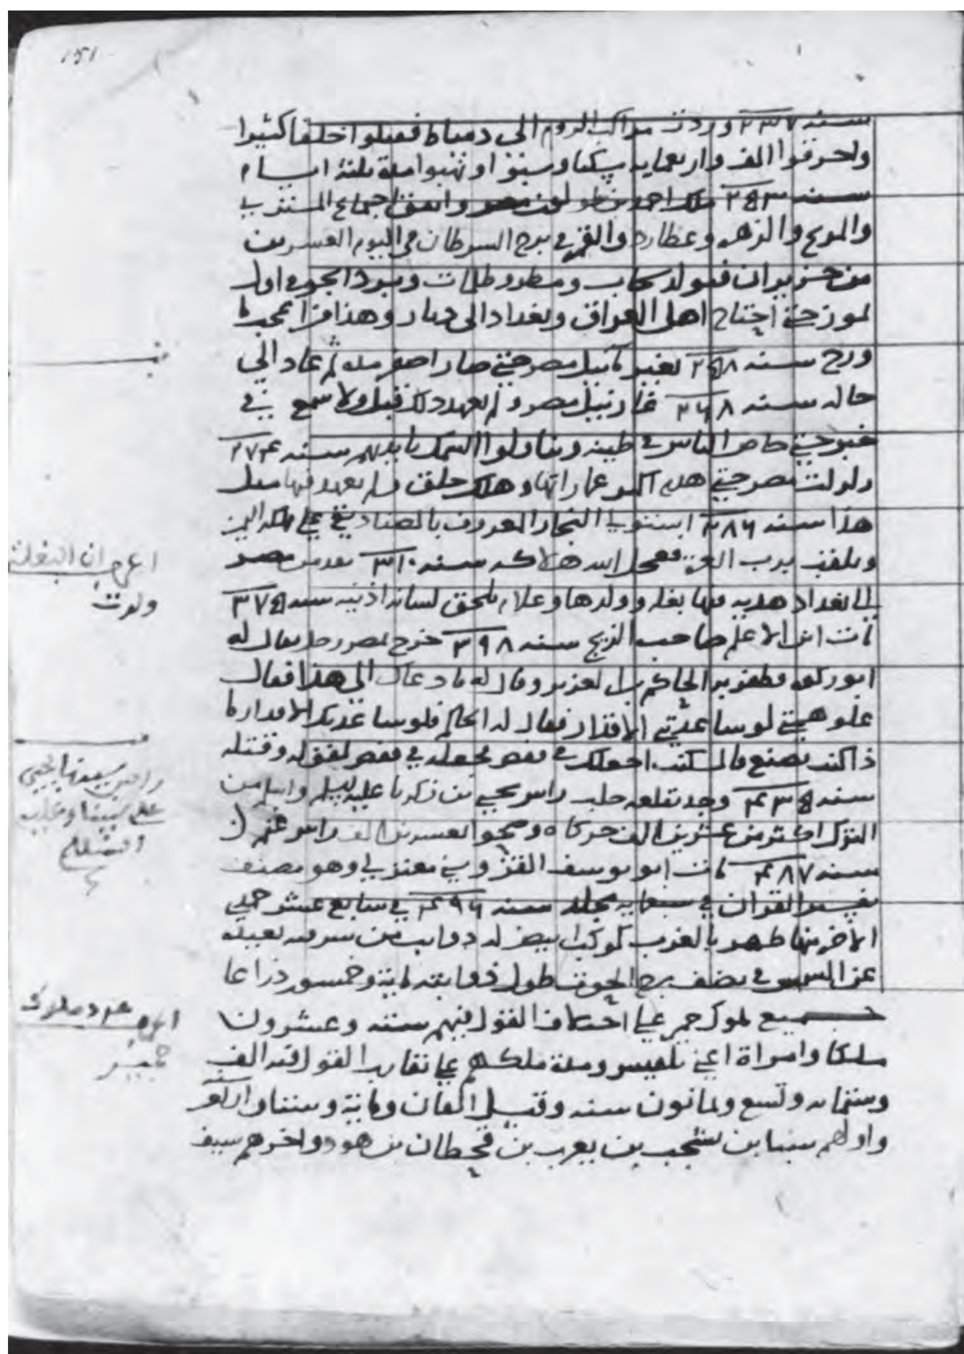
لخصت ما قيل في الدرهم والدينار من مختار من كتاب الدنانير والدراهم، تأليف أبي بكر محمد بن خلف بن حيان المعروف بوكيع.

Incipit (fol. 151v, lines 13–14):

القول في الدينار والدرهم: قال كعب الأحبار أول من ضرب الدنانير والدرهم آدم [...]

Explicit (fol. 155r, lines 17–18):

[...] وكان على بيت المال رجل من طيء يقال له سمير فأمره فأعطى الناس فجعل الناس يقولون دراهم سميرية فبذلك سميت سميرية.



Commentary:

Fortunately the title of the source is indicated by al-Maqrīzī at the end of the text, where with rare meticulousness he specifies that he had not seen the original work in its complete form (fol. 155r, line 20: *lam aqif ʿalá al-aṣl*), but rather a resumé *(mukhtār)* from which he made an epitome *(talkhīṣ)*. Undoubtedly this resumé had been prepared by another scholar and al-Maqrīzī decided to condense it. The original work was produced by Abū Bakr Muḥammad ibn Khalaf ibn Ḥayyān,

---

[60]See Harīdī, *Fihrist Khiṭaṭ Miṣr,* 1, s.v. Ḥimyar and Sayf ibn Dhī Yazan.

[61]See ibid., 2:80.

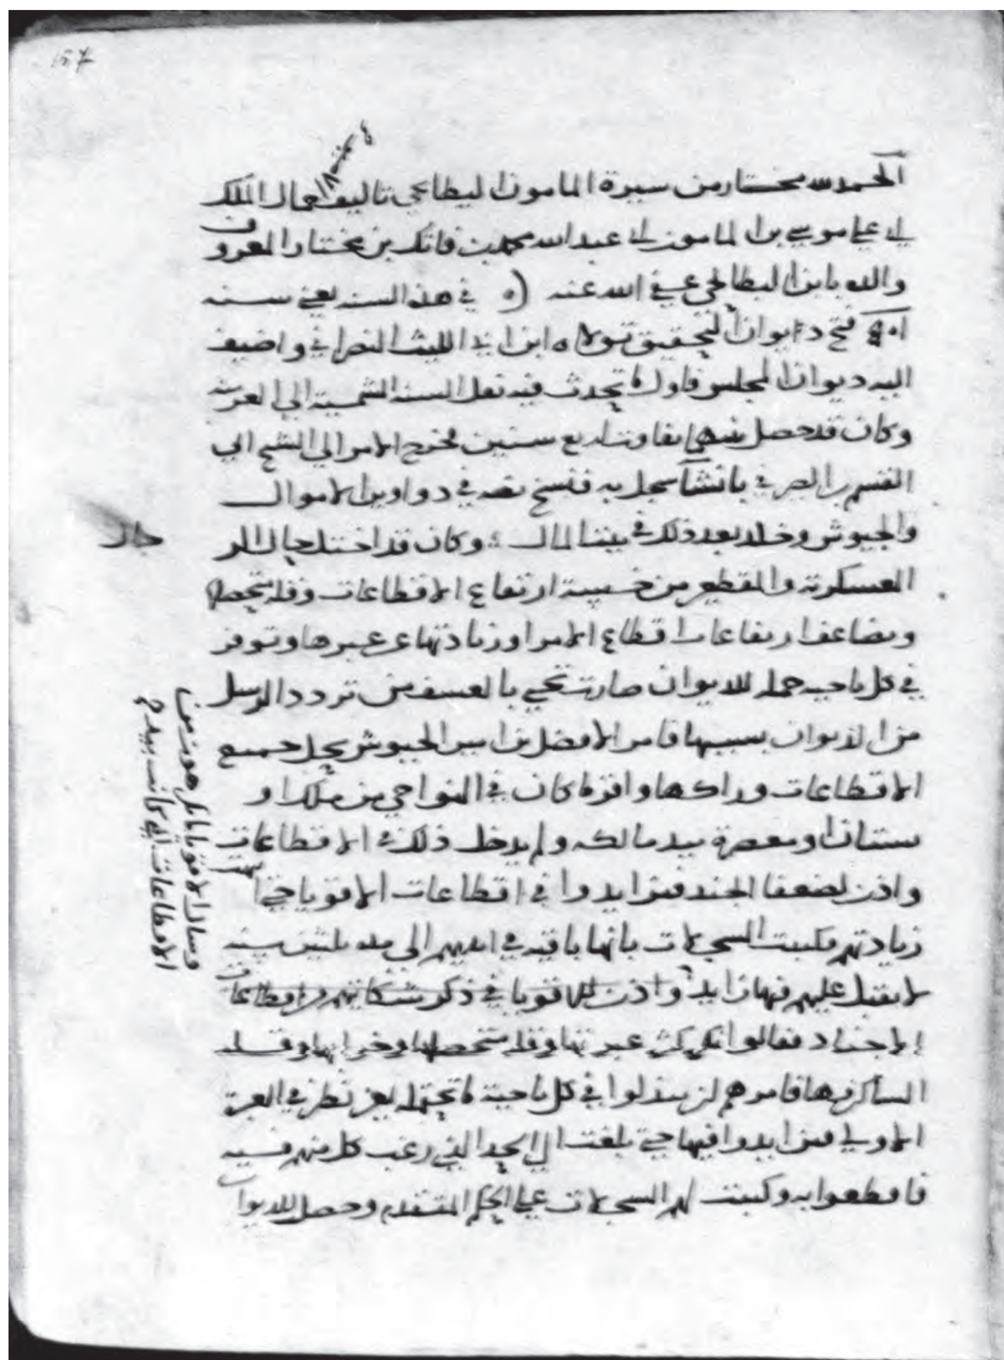
Folio 151r. Courtesy Bibliothèque de l'Université de Liège, ms. 2232.

known by his *shuhrah* as **Wakīʻ**. His *Akhbār al-Quḍāh* made his fame, but he was also renowned as the author of a book on numismatics. Here it is entitled *Kitāb al-Danānīr wa-al-Darāhim,* although according to the sources it was *Kitāb al-Ṣarf wa-al-Naqd wa-al-Sikkah*.[62] This text is now known to be one of the most ancient on this subject, thus making it a major discovery. Numerous parts of it were used by al-Maqrīzī for his treatise on numismatics, *Shudhūr al-ʻUqūd fī Dhikr al-Nuqūd*. In this case as in numerous others, neither the name of the author nor the title of his book has been cited.[63]

XVI. (quire XVII, fol. 155v)
No title. *Faṣl* on philosophical matters regarding the soul.
Incipit (fol. 155v, lines 1–2):
فصل [بياض]: كل مطلوب مدرك وإن كان شاهقا في السماء ومن رجع عن حاجته فهو غير طالب.
النفس الحية هي التي [...]

Commentary:
This passage consists of just a few lines, but al-Maqrīzī deemed it so valuable that he labelled it a *faṣl*. It contains remarks on the soul and aphorisms of philosophical or moral character. At this point, I have not been able to identify the source nor to determine whether al-Maqrīzī used this material.

XVII. (quire XVIII, fols. 155v–156v)
No title. Excerpts on numismatics and metrology.
List of the sections and incipit:



Fol. 155v	نقود الهند التي يتعاملون بها: اللك الأحمر مائة ألف تنكة ذهبا [...]
Fol. 156r	خان بالق من بلاد الخطا: ملكها اجل ملوك توران [...]
	ومعاملة أهل خوارزم والقفجاق ومعظم ممالك إيران بالدينار [...]
	ومعاملة بغداد ديناران أحدهما العوال عنه اثنا عشر درهما [...]

Commentary:
After no. XV, this is another text dealing with numismatics, but not exclusively.

---

[62]See Ibn al-Nadīm, *Al-Fihrist,* ed. G. Flügel (Leipzig, 1871–72), 114 *(Kitāb al-Taṣarruf . . .);* al-Ṣafadī, *Al-Wāfī,* 3:43–44; *GAL* S1:225 *(Kitāb al-Taṣarruf . . .);* not mentioned in Fuat Sezgin, *Geschichte des arabischen Schrifttums* (Leiden, 1967–2000).

[63]This material, as well as the other parts of the notebook related to numismatics (see below, numbers XVII and XX), will be the subject of my ″Maqriziana VI,″ which will appear in a forthcoming issue of *MSR*.

Folio 157r. Courtesy Bibliothèque de l´Université de Liège, ms. 2232.

The most interesting point here is probably his discussion of China and the currency used there: al-Maqrīzī describes, of course, the paper currency, stating that it is printed on pieces of mulberry bark. No source is indicated in this excerpt and no trace of it has been identified in his numismatic treatises: *Shudhūr al-ʻUqūd* or *Ighāthat al-Ummah bi-Kashf al-Ghummah.* In the last part, however, where the currency of Baghdad is studied, information is also given about weights. This material has been reused for his treatise on this matter, which is entitled *Al-Awzān wa-al-Akyāl al-Sharʻīyah.*

XVIII. (quire XVIII, fols. 157r–160v)

Title on fol. 157r, lines 1–3: *Mukhtār min Sīrat al-Ma'mūn al-Baṭā'iḥī*/Jamāl al-Mulk Abū ʻAlī Mūsá ibn al-Ma'mūn Abī ʻAbd Allāh Muḥammad ibn Fātik ibn Mukhtār Ibn al-Baṭā'iḥī.

مختار من سيرة المأمون البطائحي، تأليف الأمير جمال الملك أبي علي موسى بن المأمون أبي عبد الله محمد بن فاتك بن مختار المعروف والده بابن البطائحي.

Incipit (fol. 157r, lines 3–4):

في هذه السنة يعني سنة ٥٠١ فتح ديوان التحقيق تولاه ابن أبي الليث النصراني واضيف إليه ديوان المجلس

List of the dates and events dealt with:

Fol. 158r	سنة ٥١٢
Fol. 158v	سنة ٥١٣
Fol. 159r	خبر قتل الأفضل

Commentary:

The source is clearly indicated as being the *Sīrat al-Ma'mūn al-Baṭā'iḥī,* a work attributed to Ibn al-Ma'mūn al-Baṭā'iḥī. His full name was Jamāl al-Dīn Abū ʻAlī Mūsá **Ibn al-Ma'mūn** Muḥammad ibn Fātik ibn Mukhtār al-Baṭā'iḥī (d. 588/1192), son of the vizier al-Baṭā'iḥī, and his book, known as *Tārīkh Ibn al-Ma'mūn* or *Al-Sīrah al-Ma'mūnīyah,*[64] is considered one of the best sources for the Fatimid caliphate in Egypt, even though it is lost. Our knowledge of this source and its contents is based only on the passages found, whether attributed or not, in the works of Ibn Muyassar *(Akhbār Miṣr),* Ibn Saʻīd *(Al-Mughrib fī Ḥulá al-Maghrib),* al-Nuwayrī *(Nihāyat al-Arab),* Ibn Duqmāq *(Al-Intiṣār),* and al-Maqrīzī (*Al-Khiṭaṭ*, *Ittiʻāẓ al-Ḥunafā'*, and *al-Muqaffá*).[65] The excerpt preserved in the Liège codex is

[64]See Guest, "A List of Writers," 115; and Harīdī, *Fihrist Khiṭaṭ Miṣr,* 2:114.

[65]See Ayman Fu'ād Sayyid, "Lumières nouvelles sur quelques sources de l'histoire fatimide en

thus the first proof that al-Maqrīzī had access to the original source. Furthermore, we now know that he took notes from it to prepare a resumé which would serve him as a memorandum. The material has been identified in the three works of al-Maqrīzī where the Fatimid period is dealt with (see above). Another interesting feature of the notebook is that it contains a specimen of al-Maqrīzī's notecards (see no. LXIV), where part of the data from this resumé was transcribed later. This rare sample gives us an opportunity to better understand al-Maqrīzī's working method.[66]

XIX. (quire XVIII, fols. 161r–163v)
Title on fol. 161r, line 1: *Al-Khabar 'an Jinkiz Khān.*

الخبر عن جنكز خان.

Incipit (fol. 161r, lines 1–2):

قيل إن جنكز خان ينتهي نسبه إلى امرأة تسمى ألان قوا كانت تحت رجل أولدها و الدين [...]

Explicit (fol. 163v, line 16):

[...] وكان ولده تولى متصلا به فكان موضعه نقطة.

Commentary:
In a series of articles published between 1971 and 1973,[67] David Ayalon studied the problem of al-Maqrīzī's hypothetical source for the data about the *yāsa* in the *Khiṭaṭ* (2:219–22). After a close examination of the sources, Ayalon was inclined to identify it as Ibn Faḍl Allāh al-'Umarī's *Masālik al-Abṣār fī Mamālik al-Amṣār*. He identified it as such without reservation, even though the two texts were not quite the same, and without irrefutable proof. The resumé present in the notebook is anonymous in the sense that no source is indicated. Nonetheless, a comparison with what is found in the *Masālik al-Abṣār*[68] unequivocally demonstrates that it is the original source. Another element strengthens this attribution, an element of which Ayalon was not aware at the time he wrote his study: on the first folio of eight volumes among the twenty-seven of the *Masālik al-Abṣār* preserved, one

Égypte," *Annales Islamologiques* 13 (1977): 20–21. The passages that appear in the works of al-Nuwayrī and al-Maqrīzī have been edited by Sayyid, *Nuṣūṣ min Akhbār Miṣr li-Ibn al-Ma'mūn* = Passages de la Chronique d'Égypte d'Ibn al-Ma'mūn (Cairo, 1983).

[66]This argument will be treated extensively in "Maqriziana II."

[67]David Ayalon, "The Great Yāsa of Chingiz Khān: A Reexamination," *Studia Islamica* 33–38 (1971–73).

[68]I compared it with the facsimile of MS Ahmet III 2797/2 produced by Fuat Sezgin (Frankfort, 1988), 4:40–55. This part has been edited by K. Lech, *Das mongolische Weltreich: Al-'Umarī's Darstellung der mongolischen Reiche in seinem Werk* Masālik al-abṣār fī mamālik al-amṣār (Wiesbaden, 1968).

can read an inscription in al-Maqrīzī's hand, which is ″intaqāhu dā'iyan li-mu'īrihi Aḥmad ibn 'Alī al-Maqrīzī sanat 831.″[69] This is not the only example of this kind of note. Other samples can be found in various other manuscripts of sources used by al-Maqrīzī.[70] In all these cases, he chose the verb ″*intaqá*″ which in this context means ″to take notes, to digest.″[71] Thanks to the date, we now have a *terminus post quem* for this part of the notebook, and this is perhaps more important for the history of the composition of the *Khiṭaṭ*, given its inclusion in this book. This resumé proves definitely that al-Maqrīzī prepared a notandum of the part regarding Chingiz Khān and the *yāsa*.[72] But there is more to come: Ayalon stressed that the data found in the *Masālik al-Abṣār* had been deliberately distorted by al-Maqrīzī with the aim of discrediting the *yāsa* among his contemporaries. It will now be possible to compare the original version (Ibn Faḍl Allāh al-'Umarī) with the resumé, where some modifications are already visible, and finally with the version in the *Khiṭaṭ*. Once more, we will come closer to the working technique of this historian.[73]

XX. (quire XIX, fols. 166r–174v)
No title. Six *faṣl*s dealing with juridical matters.
List of the *faṣl*s and incipit:

Fol. 166r	فصل في بيان الذرع والكيل والوزن
Fol. 169r	فصل في حد المدعي الذي يحتاج إلى البينة والمدعى عليه الذي لا يحتاج إليها
Fol. 169v	فصل في حكم اليهود والنصارى الذين بمصر الآن
	فصل في ذكر اللعن وما جاء فيه
Fol. 172r	فصل في زيارة القبور والنذر لها والعكوف عندها والقراءة عليها
Fol. 172v	فصل في النذر
Fol. 174v	معنى تعذيب الميت بالبكاء عليه

[69]Moreover, marginal notes in al-Maqrīzī's own handwriting have been identified by the present writer in volumes 4, 5, 6, 14, 15, 17, and 19.

[70]For a complete list, see ″Maqriziana II.″

[71]I will come back to this particular point in ″Maqriziana II.″

[72]At least, it is the part that has been preserved. Scholars had already noticed that al-Maqrīzī took almost complete chapters from the *Masālik al-Abṣār* without acknowledgment, which confirms that he made several resumés of this book. See Ayman Fu'ād Sayyid's edition of Ibn Faḍl Allāh al-'Umarī's *Masālik al-Abṣār fī Mamālik al-Amṣār (Mamālik Miṣr wa-al-Shām wa-al-Ḥijāz wa-al-Yaman)* (Cairo, 1985), 28 (from the introduction in Arabic). This is confirmed by the note found on the first folio of several volumes of this text.

[73]This matter will be the subject of our ″Maqriziana VII.″

Commentary:
All these *faṣl*s seem to have been transcribed in sequence, as if they came from the same source. Indeed they all treat subjects that may be defined as juridical. It is difficult to recognize the source/sources from which al-Maqrīzī borrowed this material. Considering the first *faṣl* only, I noticed that it contains data about numismatics and metrology which can be found in *Shudhūr al-'Uqūd, Al-Ighāthah,* and *Al-Awzān wa-al-Akyāl al-Shar'īyah,* where no source is indicated. However, in the resumé, the name of a certain Ibn al-Rif'ah appears twice. He is anonymously quoted again, about an event where he speaks in the first person about the *dār al-ḥisbah,* to which, he says, he had been appointed. This person is to be identified as Najm al-Dīn Aḥmad ibn Muḥammad ibn 'Alī Ibn al-Rif'ah (d. 710/1310).[74] The sources consulted say that he was in charge of the *ḥisbah* in Cairo. Al-Maqrīzī mentions that he was the author of a commentary on al-Shīrāzī's *Al-Tanbīh* entitled *Kifāyat al-Nabīh fī Sharḥ al-Tanbīh* in fifteen volumes, and also of a work on measures and weights *(al-makāyīl wa-al-mawāzīn),* which was entitled, according to Ibn Ḥajar, *Ḥukm al-Mikyāl wa-al-Mīzān*.[75] It is, of course, very tempting and credible to see in this text the source of the resumé found in the notebook, at least for the first *faṣl.* It remains to be determined whether the other *faṣl*s come from the same author, and in this case maybe from his *Sharḥ al-Tanbīh.* Unfortunately, only the book on metrology has been preserved.[76]

XXI. (quire XX, fols. 176r–184r[77])
No title. Epitome of a Quranic commentary.
Incipit (fol. 176r, lines 1–2):

قوله تعالى في قلوبهم فزادهم الله مرضا ولهم عذاب أليم بما كانوا يكذبون المرض في القلب يجوز ان يكون حقيقة ومجازا [...]

Explicit (fol. 184r, line 8):

[...] وعن الأوزاعي لا يجوز تبرعها ما لم تلد أو تقم في بيت زوجها سنة.

---

[74]On him, see *GAL,* S2:164; al-Ṣafadī, *Al-Wāfī,* 7:395 (no. 3392); al-Maqrīzī, *Al-Muqaffá,* 1:623–24; Ibn Ḥajar al-'Asqalānī, *Al-Durar al-Kāminah* (Hyderabad, 1348/1929–30,) 1:284–87.

[75]Or rather, *Al-`ḍāḥ wa-al-Tibyān fī Ma'rifat al-Mikyāl,* according to al-Ziriklī, *Al-A'lām,* 1:222.

[76]*Al-Īḍāḥ wa-al-Tibyān* has been edited by M. Aḥmad Ismā'īl al-Khārūf (Mecca, 1980), but I was unable to consult a copy of it. My hypothesis, which consists in identifying the source of the first *faṣl* in the notebook with Ibn al-Rif'ah's *Al-Īḍāḥ wa-al-Tibyān,* seems to be corroborated as Muḥammad 'Abd al-Sattār 'Uthmān, in his edition of al-Maqrīzī's *Shudhūr al-'Uqūd fī Dhikr al-Nuqūd* (Cairo, 1990), 52, after having compared the two texts, asserts that *Al-Īḍāḥ* served as a basic source for al-Maqrīzī in writing his *Shudhūr al-'Uqūd.*

[77]Fol. 177 is in fact a tiny piece of paper, oblong in form, which was pasted in the margin of fol. 178.

Commentary:
A glance at this resumé shows immediately that it consists of an epitome of a Quranic commentary, beginning with Quran 2:10 and ending with Quran 4:4. No source is indicated by al-Maqrīzī, but I found the name of al-Zamakhsharī quoted once on fol. 177r. Comparison with al-Zamakhsharī's *Al-Kashshāf ʻan Ḥaqā'iq al-Tanzīl* reveals that it was the original source of the resumé. Al-Zamakhsharī is cited only once in the *Khiṭaṭ*[78] (1:161), for Quran 89:5–7. This could mean that al-Maqrīzī went on with the resumé, presumably until the end of the commentary. Here, once more, we have only a quire that has been preserved, and it would be too conjectural to conclude that an entire resumé of the book exists for the sole reason that a quotation related to the end of it appears in one of his books. The aim of a Quranic resumé is clear when one looks at the *Khiṭaṭ,* but other quotations must have been used by al-Maqrīzī for his other works, extant or not.

XXII. (quire XXI, fols. 187r–191v)
No title. Long biography of a Mamluk who died in 812.
Incipit (fol. 187r, lines 1–2):

يوسف بن أحمد بن محمد بن أحمد بن جعفر بن قاسم البيري جمال الدين البجاسي [...]

Explicit (fol. 191v, lines 1–3):

[...] واشتملت تركته على سبعمائة ألف دينار من الذهب وثمان [...] على ذكر [...] على ألفي ألف دينار ذهبا

Commentary:
This very long biography is written in al-Maqrīzī's handwriting, of course, but it differs from the other resumés. Diacritical dots are scarcer and the letters were written quickly. The person dealt with here was an important Mamluk who accumulated an immense fortune during his lifetime. The date of his death clearly indicates that this biography did not find its place in *Al-Muqaffá*, a biographical dictionary of Egyptian residents, from pre-Islamic times to the middle of the eighth/fourteenth century. As this Mamluk was a contemporary of al-Maqrīzī, his biography must have been written for another of his works: *Durar al-ʻUqūd al-Farīdah fī Tarājim al-Aʻyān al-Mufīdah*. Unfortunately, this important source has

[78]See Harīdī, *Fihrist Khiṭaṭ Miṣr,* 2:99.

not yet been fully published. It is preserved in an incomplete autograph manuscript in Gotha (A 1771),[79] and there exists a complete copy made from the autograph which is held in a private collection in Mosul, where it remains inaccessible to scholars.[80] Fortunately, my eyes fell by mere chance on the *Durar al-Fawā'id al-Munaẓẓamah fī Akhbār al-Ḥajj wa-Ṭarīq Makkah al-Mu'aẓẓamah,* a book written by 'Abd al-Qādir ibn Muḥammad ibn 'Abd al-Qādir al-Anṣārī al-Jazīrī (d. after 976/1568),[81] where I found an interesting passage (92–94) dealing with the same Mamluk. There, the author gives a detailed biography which, he says, he cites from the *Durar al-'Uqūd al-Farīdah* of al-Maqrīzī! In the absence of an edition of the complete manuscript, this information is, of course, vital. In this way, I have been able to compare the biography in the notebook with the one in al-Jazīrī's work, concluding that the texts are very similar, the information given in the notebook being more complete. This leads us to infer that the text found in the notebook is in fact a preliminary stage of redaction for the *Durar al-'Uqūd al-Farīdah,* or it may alternatively be the definitive one, conjecturing in this case that al-Jazīrī changed the wording of al-Maqrīzī, which would not be surprising. The fact that the script is abnormal (impression of rapid writing) reinforces this interpretation.

To be continued

---

[79]Published by M. Kamāl al-Dīn 'Izz al-Dīn 'Alī (Beirut, 1992). The manuscript on which this edition is based contains biographies beginning with the letter *alif,* part with the letter *bā'* (Abū Bakr), then some with the letter *'ayn* and one with the letter *dāl* (Dā'ūd). As M. al-Ya'lāwī has shown (*Al-Muqaffá,* 8:699–700), the biographies beginning with *'ayn* are related to persons who died prior to the middle of the eighth/fourteenth century. It is thus ruled out that they were part of the *Durar,* and it is more probable that we are dealing with part of *Al-Muqaffá* that was misplaced after the death of al-Maqrīzī.

Al-Maqrīzī, Hashimism, and the Early Caliphates*

Introduction

Like his contemporaries in the field of history such as al-ʻAynī and Ibn Ḥajar, al-Maqrīzī was an heir to a classical Arabic historiographical tradition stretching far into the past. Al-Maqrīzī inherited from this tradition not merely a corpus of ancient sources, but also the very form that his history-writing took. It was also from this tradition that al-Maqrīzī inherited many of the subjects that were considered to be the standard fare of any good medieval Muslim historian. Foremost among these subjects was an issue that formed *the* central debate of the formative era of Islam: the caliphate, a topic that enervated Muslim historians from the very beginning of Islamic history until today. At the crux of the issue was the concept of the *ahl al-bayt,* "The People of the Household," that is, of course, the household of the Prophet Muḥammad. Those who belonged to the *ahl al-bayt* could be said to have a legitimate claim to the Prophet's patrimony, that is, the office of the caliphate. Who, then, were classed as within the *ahl al-bayt,* and who without? Did it include only the Prophet's immediate ʻAlid descendants through his daughter Fāṭimah and her husband ʻAlī, did it include his whole clan, the Banū Hāshim, or did it stretch to include the broader tribe of Quraysh, to which the Banū Hāshim belonged alongside other clans such as the Banū Umayyah? Insofar as the question is usually seen as central to the distinction between Sunnis and Shiʻites, and between different historical visions within each of these two sects, it would be an understatement to say that the question has received more than a few contentious responses over the centuries.

Given the fact that al-Maqrīzī had eight centuries of writings about the caliphate in place before him, and given the fact that he was himself an established Sunni scholar of the Shafiʻi *madhhab,* one might expect al-Maqrīzī to follow his Sunni

---

*I would like to thank Bruce Craig, John Meloy, Nasser Rabbat, and Paul Walker for valuable points of assistance and correction during and after the conference where I presented an earlier version of this paper. Special thanks go to my Notre Dame colleagues Li Guo, who organized, planned, and executed the conference, and Asma Afsaruddin, who provided me with the proofs of her book *Excellence and Precedence: Medieval Islamic Discourse on Legitimate Leadership* (Leiden, 2002). Finally, Marina Smyth, Bibliographer of the Medieval Institute at the University of Notre Dame, and the staff of the Hill Monastic Manuscript Library of St. John's Abbey and University, Collegeville, Minnesota were instrumental in acquiring a microfilm of the Vienna manuscript of the *Kitāb fī Dhikr Mā Warada*. Naturally, the faults that remain are my own.

predecessors on this subject and simply favor one of two visions of the past favored by most Sunni writers before his time. That is, he might: (1) favor a generic conciliatory pro-Quraysh reading of Sunni history in which the Umayyad dynasty, wicked as they were, *and* the Abbasid dynasty (from the Banū Hāshim clan) that followed them were to be recognized as the legitimate successors of the Prophet, even if we do not always find in them models of proper Muslim conduct. Such a stance is easy to find, as, for example in the chronicle of al-Ṭabarī, a source on the early caliphates much used by later Arab historians.[1] Alternately, al-Maqrīzī might (2) exhibit a simple pro-Abbasid bias on the question of the caliphate, in which the Abbasid family, and neither their wicked predecessors the Umayyads nor the descendants of ʻAlī, had exclusive claims to be the legitimate successors of the Prophet. The anonymous *Akhbār al-Dawlah al-ʻAbbāsīyah* is the most famous example of this trend.[2] Then again, if we were willing to be broad-minded, we might even be willing to add a third stance for al-Maqrīzī to inherit, namely a pro-Umayyad stance, or at least a vision of the early caliphate that was less critical of the Umayyads as were so many of his predecessors. Such a vision of the early caliphates no longer survives intact, but telling fragments of it do exist.[3]

In fact, what one does find when one reads the several works of his that address the issue of the caliphate directly is a much more complicated picture. Al-Maqrīzī is certainly not pro-Umayyad; that is clear from all his writings. Nor is he any kind of crypto-Shiʻite. Yet, at the same time, he is not a blind partisan of the Abbasids either, and he is as free to criticize the Abbasids as he is the Umayyads, particularly in his work on Umayyad-Abbasid rivalry called the *Kitāb al-Nizāʻ wa-al-Takhāṣum,* aptly translated by Bosworth as ″The Book of contention and strife.″ Why does al-Maqrīzī have such a pessimistic opinion of the two caliphates?

After reading several of al-Maqrīzī′s shorter works, I am more willing than ever to entertain the answer that ″that′s just the way it is″: al-Maqrīzī was a very complex man, much more so than we usually think. However, I suggest that two factors shaped al-Maqrīzī′s attitude toward the early caliphates. First, we must be willing to recognize the realities of al-Maqrīzī′s historical context: al-Maqrīzī

See also the description of a *Kitāb al-Barahīn fī Imāmat al-Umawīyīn* (The Book of proofs of the imamate of the Umayyads) in al-Masʻūdī, *Kitāb al-Tanbīh wa-al-Ishrāf,* ed. M. J. de Goeje (Leiden, 1894), 336–37. On the survival of Umayyad sympathies, see Paul M. Cobb, *White Banners: Contention in ʻAbbasid Syria, 750–880* (Albany, 2001), 51–55.

wrote his different works about the early caliphate at different times and places, for different patrons, and this probably affected the substance of what he wrote. Second, I would also argue that one can make sense of al-Maqrīzī's complex assessment of the early caliphates by recognizing what I shall call his "Hashimism," his belief that any member of the Banū Hāshim clan is worthy of honor; this includes both Abbasids *and*—significantly—'Alids. But it cannot be stressed enough that al-Maqrīzī's Hashimism is *not* Shi'ism. For example, he does not recognize any line of Shi'ite imams, nor does he feel that 'Alī should have succeeded after the Prophet's death instead of Abū Bakr. However, al-Maqrīzī's Hashimism did lead him to condemn those regimes (Umayyads or even Abbasids) that persecuted other members of the Banū Hāshim and to sympathize with their victims, many of whom have, historically, been 'Alids. The result is an attitude toward the early caliphates that is best appreciated from a broad survey of al-Maqrīzī's works, rather than a study of one specific text.

AL-MAQRĪZĪ'S WORKS ON THE CALIPHATE

Al-Maqrīzī composed four principal works that address the issue of the caliphate directly. The first work is al-Maqrīzī's massive biography of the Prophet, the *Imtā' al-Asmā' bi-Mā lil-Rasūl min al-Anbā' wa-al-Amwāl wa-al-Ḥafadah wa-al-Matā'* (The Delectation of ears concerning stories about the Messenger, his possessions, his offspring and helpers and things of which he made use) written sometime during al-Maqrīzī's stay in Mecca prior to 1433, since it is cited in his short work of that year, the *Kitāb fī Dhikr Mā Warada fī Banī Umayyah wa-Banī al-'Abbās,* described below. The *Imtā'* is best known in Shākir's 1941 Cairo edition, but this is in fact only a partial edition, representing merely the first part of the work devoted to the more or less familiar narrative of the *sīrah* of the Prophet.[4] A complete edition is now available in fifteen volumes, and it shows that the work is very much more than a mere biography of the Prophet.[5] Just to give one small example, al-Maqrīzī's long excursus on Judaism and Christianity reflects his quite detailed knowledge of the People of the Book, and there is much more to be found besides.[6] Many traditions cited in the *Imtā'* address the vexed question of who could be counted as *ahl al-bayt*, and so bear directly on the issue of the caliphate.

The second work is al-Maqrīzī's best-known work about the caliphates, *Kitāb al-Nizā' wa-al-Takhāṣum fīmā bayna Banī Umayyah wa-Banī Hāshim* (Book of

contention and strife concerning the relations between the Banū Umayyah and the Banū Hāshim). Its date of composition is also unknown, but it too is cited in the *Kitāb fī Dhikr Mā Warada* and so must have been composed before 1433. The work was edited by Geert Vos in the nineteenth century and by many others since then.[7] It has even been translated into English with detailed annotations by Bosworth.[8] In this work, al-Maqrīzī sought to account for the speedy rise of the Umayyad house to the caliphate after the death of the Prophet and the much-delayed victory of the Abbasids, despite the fact that the Umayyads were among the Prophet's most inveterate enemies and the Abbasids were among his closest allies.

The third work is al-Maqrīzī's short epistle entitled *Kitāb fī Dhikr Mā Warada fī Banī Umayyah wa-Banī al-'Abbās,* or "Concerning what has come down to us about the Banū Umayyah and the Banū al-'Abbās," which has not yet been edited, and so survives only in a unique manuscript now housed at the Austrian National Library in Vienna.[9] Al-Maqrīzī composed this epistle in 1433, when he was living in Mecca toward the end of his life. He said he composed the work in response to a *mufāḍilah,* a discussion of the various merits of the Umayyads and Abbasids, that took place in the *majlis* of the epistle's unnamed patron. His intent was to sift through "the welter [of accounts] that have come down to us about the two groups."[10] Like some of the other short works al-Maqrīzī wrote on the subject, the *Kitāb fī Dhikr Mā Warada* is divided into two sections, one on accounts about the Umayyads, one on the Abbasids. The work appears to be stridently pro-Abbasid and so Bosworth speculated that the unnamed patron of the work was in fact a member of the Abbasid house, a point to which we will return.[11]

The fourth and final work is al-Maqrīzī's short epistle *Kitāb Ma'rifat Mā*

Wadād al-Qāḍī (Beirut, 1981), 39–45. The article provides a more thorough description of the work than that attempted here. On the possible identity of the patron, see p. 45.

Yajibu li-Āl al-Bayt al-Nabawī min al-Ḥaqq ʻalá Man ʻAdāhum (Book of knowledge about what should be recognized as the righteousness of the cause of the prophetic household against those who oppose it), written in 1438, when al-Maqrīzī was seventy-four and had returned from Mecca to take up residence again in Cairo.[12] It is a detailed examination of five Quranic passages that al-Maqrīzī held to be of relevance for the issue of the caliphate and of the status of the Banū Hāshim more generally. Incidentally, it also contains an interesting final chapter consisting of five anecdotes from al-Maqrīzī's own time demonstrating among other things the noble deeds of some of the *sharīfs* of Mecca, and, surprisingly, the alleged Hashimi lineage of Tīmūr Lenk.

AL-MAQRĪZĪ'S HASHIMISM

What do these four works have to say about al-Maqrīzī's Hashimism? I will begin with the *Imtāʻ*. Evidence for al-Maqrīzī's attitude toward the Banū Hāshim does not readily spring from this text, but it is there in great quantity mixed and scattered about with the various accounts about the details of the life of the Prophet, as, for example, in traditions in which the Prophet swears off shedding the blood of any Hashimi, or the accounts of the merits of specific Hashimis like Jaʻfar ibn Abī Ṭālib, slain in battle at Mu'tah in 629.[13] Other accounts are more subtle, as in a famous account about a campaign of the Prophet against some Meccan opponents. Before leaving, he put Abū Bakr in charge of the army, another companion in charge of Medina, and ʻAlī in charge of his household *(ʻalá ahlihi)*. The Prophet's opponents then began to suggest that he had done so merely to be rid of ʻAlī. When ʻAlī left Medina to join the Prophet and tell him this, Muḥammad replied: "They lie! I have truly only appointed you over what lies behind me. Now get back there and act as my deputy over my household and your household. Are you not satisfied to be in a relationship to me as Aaron was to Moses . . .?"[14] In another account the Banū Hāshim are said to have been the ones who prayed first over Muḥammad's dead body, and so on.[15]

While these sorts of accounts are scattered throughout the work, the clearest evidence for al-Maqrīzī's attitude about the Banū Hāshim and the caliphate comes in the sections of the work devoted to the Prophet's family and household. Here, al-Maqrīzī is careful to enumerate the various definitions of *ahl al-bayt* that Muslim scholars have propounded. He lists four definitions: (1) that the *ahl al-bayt*

---

[12]Al-Maqrīzī, *Kitāb Maʻrifat Mā Yajibu li-Āl al-Bayt al-Nabawī min al-Ḥaqq ʻalá Man ʻAdāhum,* ed. ʻAbd al-Muḥsin ʻAbd Allāh al-Sirāwī (Damascus, 1998), hereafter referred to as "*MMY*."

[13]*IA,* 1:108, 337–44.

[14]Ibid., 2:50.

[15]Ibid., 136.

are those to whom *ṣadaqah* is forbidden as a source of income; of this definition, there are three sub-sets, *(a)* those who identify this group as the Banū Hāshim and the Banū al-Muṭṭalib combined, *(b)* those who identify this group as the Banū Hāshim exclusively, and *(c)* those who identify this group as Quraysh more broadly, including the Banū Hāshim, the Banū al-Muṭṭalib, the Banū Umayyah, etc.; (2) that the *ahl al-bayt* are the children and wives of the Prophet exclusively; (3) that the *ahl al-bayt* are all the followers of the Prophet from now until Judgement Day; (4) that the *ahl al-bayt* are the truly God-fearing members of the *ummah*. Of these four options, al-Maqrīzī very explicitly chooses the first. For him, the *ahl al-bayt* are those to whom *ṣadaqah* is forbidden as a source of income; this group is identifiable with the Banū Hāshim and the Banū al-Muṭṭalib combined. Moreover, as al-Maqrīzī explictly states in his own words: ″this excludes the Banū ʻAbd Shams, the Banū Nawfal of ʻAbd Manāf, and all the rest of Quraysh.″ Not surprisingly, this is the stance on the issue taken by the Shafiʻi law-school to which al-Maqrīzī belonged.[16]

However, it is worth pointing out that in this discussion, al-Maqrīzī makes a point of mentioning Shiʻite claims about the *ahl al-bayt,* in particular their understanding of the famous *ahl al-kisā'* tradition, which defines the *ahl al-bayt* as ʻAlī, Fāṭimah, al-Ḥasan, and al-Ḥusayn exclusively. This exegetical tradition seeks to provide a context for Quran 33:33: ″God only desires to put away filthiness from you as his household, and with cleansing to cleanse you.″ According to this tradition, after this verse was revealed, the Prophet wrapped ʻAlī, Fāṭimah, al-Ḥasan, and al-Ḥusayn in a garment of his *(kisā'),* signifying that they alone belonged to his household. But even in discussing these traditions, al-Maqrīzī does so merely to refute them.[17] Indeed, the *Imtāʻ* includes a rousing plea for venerating the Quraysh and Companions in general, albeit not all of them as *ahl al-bayt*:[18]

> Know that the household of the Messenger of God and his beloved ones are of two kinds, those whom God took from us [during the Prophet′s life] . . ., and those whom God kept to serve as a consolation for the Prophet′s eyes, such as ʻĀ'ishah, Zaynab, and all the Mothers of the Faithful, and Fāṭimah and al-Ḥasan and al-Ḥusayn, and ʻAlī ibn Abī Ṭālib and al-ʻAbbās ibn ʻAbd al-Muṭṭalib . . . and Abū Sufyān and all the Companions [of the Prophet] and those whom

---

[16]Ibid., 5:372–405. See p. 382: ″Wa-hādhā al-qawl min an āl al-rasūl hum alladhīna tuḥrima ʻalayhim al-ṣadaqah huwa aṣaḥḥ al-aqwāl al-arbaʻah . . . wa-kharaja Banū ʻAbd Shams wa-Banū Nawfal ibnay ʻAbd Manāf wa-sā'ir Quraysh ʻan hadhayn al-baṭnayn.″

[17]Ibid., 383–88.

[18]Ibid., 6:20–21.

> he loved. [We should] love and honor every person in these two groups, accept their reports, glorify their cause, and invoke God's pleasure upon them, for he [the Prophet] has done so.

I cannot think of a clearer statement of Sunni conciliation inflected with Hashimism.

In the *Kitāb Maʿrifat Mā Yajibu*, al-Maqrīzī is the most explicit about his feelings for the Banū Hāshim. Indeed, he explains his motives behind the composition of the work as follows:[19]

> When I observed that most people were remiss in acknowledging the legitimacy of the Family of the Prophet, that they opposed what legitimacy they possessed, that they tarnished their glory, and were ignorant of their station relative to God Most High, I desired to produce a tract about this matter that demonstrates the greatness of their glory and that guides the God-fearing to the mightiness of their powers. [In this way, the God-fearing reader] might remain within the bounds of propriety and fulfill what God has promised them and bestowed upon them.

As indicated earlier, this work is organized into five chapters, each dealing with a separate Quranic verse that al-Maqrīzī feels pertains to the issue of the *ahl al-bayt*. In the first chapter, he returns to the issue of the *ahl al-kisāʾ* tradition that he broached in the *Imtāʿ*. He does not add much that is new, save that he includes a long extract from an anti-Shiʿite tract by an earlier Iraqi scholar, Najm al-Dīn al-Ṭūfī (d. 657/1258), a disciple of Ibn Taymīyah.[20] Although Shiʿite arguments about the *ahl al-bayt* are reproduced in this tract, they are nevertheless refuted, and doubly so as they are buried by a long excerpt from Ibn ʿArabī's *Al-Futūḥāt al-Makkīyah* which argues for an *ʿiṣmah*-like quality of grace for the *ahl al-bayt*.[21] At no time does al-Maqrīzī explicitly reveal to us here who *he* thinks the *ahl al-bayt* are, but the chapter ends significantly with a statement by ʿUmar ibn ʿAbd al-ʿAzīz (an Umayyad) speaking of ʿAbd Allāh ibn Ḥasan ibn ʿAlī (a Hashimi ʿAlid) that "There is not one member of the Banū Hāshim but that possesses the quality of intercession [for our sins on Judgement Day]." Chapter two (a commentary on Quran 52:21) argues that the descendants (*dhurriyāt*) of the Prophet will be forgiven for their crimes, their disobedience will be overlooked, and their sins

---

[19] *MMY,* 35.

[20] Ibid., 57–62.

[21] Ibid., 62–69.

absolved that they may enter Paradise without experiencing the pains of Hell.[22] The key question, of course, is whether the term *dhurriyāt* refers merely to the Prophet's sons and daughters, or also to his grandchildren, and, thus, to the 'Alids. Al-Maqrīzī presents both arguments, but never decides the issue here.[23] Instead, he waits for his third chapter (commenting on Quran 18:82) to make that point, arguing that if, as people say, the doves of the Ḥaram in Mecca are descended from two doves who had a nest in the mouth of a cave in which the Prophet sought refuge, then surely God would protect the descendants of his own Prophet, and, even more so, the children of Fāṭimah, and keep them from entering Hell on Judgement Day.[24] Along the same lines, chapter four (a commentary on Quran 13:23) demonstrates that these descendants will enter heaven on account of the Prophet's special regard for them and because of their own innate righteousness.[25] Chapter five, the last chapter (on Quran 42:23) and thus the one the reader/listener "takes home," returns to the issue of terminology and tries to define what is meant by *qurbah* or *qarābah*, "nearness," another crucial concept in the arguments about the caliphate.[26] For it was those with *qurbah* to the Prophet that God first directed Muḥammad to seek out as followers. As with *ahl al-bayt,* al-Maqrīzī lays out the various defnitions of the term for us, but finally settles on one, conciliatory reading. For al-Maqrīzī, *qurbah* is an attribute that every Muslim shares, even if in varying degrees. For the Arabs are the Prophet's kin-group, and even if the Quraysh are closer to him than the Arab tribe of Yaman, they are all descendants of Ismā'īl. However, because of their nearness, the Quraysh possess a special status above all other Arabs. It is incumbent upon us to respect them all.[27]

In the *Kitāb al-Nizā',* al-Maqrīzī returns to the issue of *qurbah,* but not before purveying a complicated tissue of evidence to explain why the impious Umayyads attained the caliphate prior to the Banū Hāshim, by which al-Maqrīzī of course means the Abbasid dynasty. The Umayyads, al-Maqrīzī shows us, were excluded from the Prophet's share of the booty from his raid on Khaybar (and so can be expected to be ineligible for a share in his legacy, i.e., the caliphate), they opposed and indeed fought the Prophet during his lifetime, they ruled as tyrants when they did become caliphs, and were furthermore arrogant in their station, forgetting to whom it was they owed their glory.[28] But, al-Maqrīzī tells us, the Abbasids were

no angels, either. For this Hashimi dynasty, when it finally did attain power, did so only by seizing power when Islam was weak. To make matters worse, they transformed the caliphate into a despotism, murdered other Muslims, and, like their Umayyad predecessors, came to rule as tyrants, with a greater preference for *adab* than for the *sunnah* of the Prophet.[29] As al-Maqrīzī puts it:[30]

> Now what connection is there between this tyranny and evil-doing, and the justice of the divine law revealed to Muḥammad and the exemplary lives of the Rightly-Guided Imams? Or between this frightful barbarity shown towards near kinsmen and the compassion evinced by the Prophet? By God, this conduct has nothing whatever to do with true religion; on the contrary, it is the sort of thing which God . . . has described in His words (Quran 47:22-23), ″If you turned away, would you perhaps then wreak evil in the land and sever all bonds of kinship?″

And it is here, finally, that one can see al-Maqrīzī′s feelings of reverence for the Banū Hāshim, as reflected in his understanding of that key term, ″nearness″ *(qurbah, qarābah).* In his discussion of the blockade upon the Prophet imposed by Quraysh, al-Maqrīzī notes that the Prophet′s ancestor ʻAbd Manāf produced two lineages of potential help to him. The first, the Banū Umayyah of ʻAbd Manāf, he excluded, since they had been godless and bitter opponents of him even in the Jāhilīyah. The second, the Banū al-Muṭṭalib of ʻAbd Manāf, however, had been early converts and supporters, and so he took them with him, even the members of the clan who did not convert to Islam. In al-Maqrīzī′s words:[31]

> They went into the ravine with him, both the believers and the unbelievers of the clan—the believers out of solidarity in faith, the unbelievers out of solidarity in kinship. So, if you consider all these points, two valuable conclusions will become plain to you. Firstly, the deciding factor is nearness of faith, not of the flesh *(al-ʻibrah bi-qarābat al-dīn, lā bi-qarābat al-ṭīn).* Secondly, mere blood relationship means nothing.

This then, allows us to make sense of some the more notable characteristics of al-Maqrīzī′s attitude toward the early caliphates. If Quraysh are all to be accorded

---

[29]Ibid., 88–97.

[30]Ibid., 97.

[31]Ibid., 67.

respect, and the Banū Hāshim especially so, because of their identity as *ahl al-bayt*, nevertheless, in the final analysis, it is their piety, not their genealogical status that determines our respect for them. And so, impious Hashimis get censured just as hotly as do wicked Umayyads. Even the Abbasid caliph al-Mutawakkil, whom many Sunni historians saw as the restorer of the faith after the unfortunate interlude of the Abbasid ″Inquisition″ or *miḥnah,* even he is not immune to al-Maqrīzī´s high standards, for he, in enforcing a restored *sunnah,* murdered other Muslims and other Hashimis.[32] And similarly, he makes an analogy between the Muslim community and the Israelites, bemoaning the scattered and fallen state of the Quraysh in his day by comparing it to the Diaspora of the Jewish people, and the impotence of the once so promising Abbasid caliphs under the Mamluks to the status of the Israelites under Greek rule after their return from Exile.[33]

In many ways, the last of al-Maqrīzī´s works to be considered here, the *Kitāb fī Dhikr Mā Warada*, is a summary of the *Nizā'*. That is, it too is a roughly historical work, dominated by two sections, one on the perfidy of the Umayyads, followed by one on the Abbasids. However, it is quite unlike the *Nizā'* in that it allows no room for the faults of the Abbasids, and instead concentrates solely on their merits. Thus, as in the *Nizā',* the work begins with a condemnation of the Umayyads as the ultimate opponents of the Prophet, excluded from his legacy at Khaybar.[34] It was the Umayyads, after all, who burned the Ka'bah during the Second Fitnah,[35] who murdered al-Ḥusayn ibn 'Alī and coldly gloated over that fact,[36] and who were responsible for any number of innovations against the *sunnah,* such as the delaying of canonical prayer-times.[37] The Abbasids, however, were pillars of righteousness, best represented by their pious forebears such as al-'Abbās ibn 'Abd al-Muṭṭalib and the very embodiment of Prophetic *'ilm,* 'Abd Allāh ibn 'Abbās.[38] Indeed, the reign of the Banū al-'Abbās would issue in the eschaton, in which Evil would perish and Good emerge victorious for all time.[39] If one had to provide only one example of their merits, al-Maqrīzī says to look no further than their decision to stop the ritual cursing of 'Alī from the pulpits, a practice begun by the Umayyads.[40] Here, again, al-Maqrīzī´s conciliatory Hashimism emerges:

what better symbol of it than the Hashimi Abbasids, so strongly associated with Sunnism to al-Maqrīzī, putting an end to the cursing of their fellow Hashimi ʻAlī, the first Shiʻite imam?

Yet the *Kitāb fī Dhikr Mā Warada* also contains at least one statement that might suggest something more than mere conciliation. In introducing the Umayyads, al-Maqrīzī takes a moment to place them chronologically, revealing both his vision of early Islamic history, and of the caliphate: "The reign of the Banū Umayyah came after the reign of the beloved Rightly-Guided Caliphs, who are Abū Bakr, ʻUmar, ʻUthmān, ʻAlī, and al-Ḥasan, may God be pleased with them."[41] The startling addition here of al-Ḥasan to what is otherwise the standard Sunni list of Rightly-Guided Caliphs might suggest that al-Maqrīzī has crossed the line into recognizing ʻAlid legitimacy and—who knows?—perhaps even doctrinal Shīʻism.

But it would be unfortunate if that conclusion were drawn, and it is here that one must return to the two factors shaping al-Maqrīzī's attitudes about the caliphate mentioned above. On the one hand, al-Maqrīzī is demonstrably "soft" on *all* members of the Banū Hāshim, Abbasid or ʻAlid, a point which should now be clear. On the other, al-Maqrīzī was not writing in a vacuum, and was himself writing for a patron. The work was written in 1433 in Mecca for a specific purpose: to summarize the faults of the Umayyads and the merits of the Abbasids in the wake of a debate about the subject in the *majlis* of al-Maqrīzī's unnamed patron. The overtly pro-Abbasid nature of the text, avoiding any of the condemnations of the Abbasids that al-Maqrīzī adduces in the *Nizāʻ,* for example, led Bosworth to suggest that the patron of the work was a member of the Abbasid family, a plausible suggestion given the Meccan context.[42] However, in light of al-Maqrīzī's list of Rightly-Guided Caliphs, I suggest that the patron might equally be a descendant of al-Ḥasan. After all, Mamluk-era Mecca was governed at the time by a local dynasty of *sharīfs.* In fact, when al-Maqrīzī composed the *Kitāb fī Dhikr Mā Warada,* it was governed by the Hasanid *sharīf* Barakāt ibn al-Ḥasan ibn ʻAjlān.[43] There is no proof positive, of course, but given al-Maqrīzī's nod to the ʻAlids and to al-Ḥasan in particular in this work,[44] it is certainly more than possible that the host of the Meccan *majlis* in 1433 and the patron of one of

---

[41]Ibid., fol. 159a: "wa-kānat dawlat Banī Umayyah baʻda dawlat al-khulafāʼ al-rāshidīn al-ʻazīz hum Abū Bakr wa-ʻUmar wa-ʻUthmān wa-ʻAlī wa-al-Ḥasan raḍiya Allāh taʻālá ʻanhum."

[42]Bosworth, "Al-Maqrīzī's Epistle," 45.

[43]On Meccan politics, economy, and society at this time, see John Lash Meloy, "Mamluk Authority, Meccan Autonomy, and Red Sea Trade, 797–859/1395–1455," Ph.D. diss., University of Chicago, 1998.

[44]Pace Bosworth, who claims that the work is "so silent in respect of the ʻAlids." See "Al-Maqrīzī's Epistle," 45.

al-Maqrīzī's last works was a Hasanid member of the sharifian family, if not the *sharīf* Barakāt himself.

CONCLUSION

All of al-Maqrīzī's four works described here comment on the course of early Islamic history, especially the *Nizāʻ* and the *Kitāb fī Dhikr Mā Warada.* Yet, significantly, despite the fact that in the *Nizāʻ* he traces the deeds of the Abbasids from their Jahili beginnings to their Mamluk-era *fainéantise,* he never once takes the opportunity in this tract about the Banū Hāshim, or indeed in any other of the works I mentioned, to discuss the Fatimids. This is especially frustrating as the hidden question behind any discussion of al-Maqrīzī's views of the caliphate is the question of his Shiʻite sympathies. Was al-Maqrīzī, with his fascination for Egypt's Fatimid past, a closeted Shiʻite himself? Simply: no. As I have shown, and as al-Maqrīzī explicitly states, his position vis-à-vis the *ahl al-bayt* was one solidly within the tradition of Shafiʻi thinking on the issue, and so al-Maqrīzī was in great degree merely toeing the party line. He even adduced refutations of Shiʻite arguments in doing so. Al-Maqrīzī's attitude *is* notably accented or nuanced with a clear veneration for the Banū Hāshim as *ahl al-bayt* and as a subset of Quraysh, but this hardly disqualifies him as a Sunni. Reverence for the Banū Hāshim and indeed the descendants of ʻAlī ibn Abī Ṭālib was a common feature of Sunni piety from an early date,[45] and we should certainly not be surprised to see it in a man of broad interests and deep learning like al-Maqrīzī, who was himself a product of the religious-cultural synthesis of the Middle Periods that Lapidus has aptly called "a broad synthetic middle ground—the Sunni-Shariʻa-Sufi position."[46]

Nevertheless, such a position does raise some questions. Even if one accepts al-Maqrīzī as an unobjectionable Sunni, one has to admit that he had a thing about the Banū Hāshim and the progeny of ʻAlī in particular, what contemporaries would have seen as forgivable Shiʻite inclinations *(tashayyuʻ ḥasan)*.[47] The man wrote three separate treatises about the subject, and the issue is a sub-theme of other of his works, too. He had, to use a felicitous idiom for the author of a treatise on apiculture,[48] a bee in his bonnet. Clearly, al-Maqrīzī is arguing a point here, and it may be that he is arguing against an identifiable trend among his fellow Sunni Muslims of the fifteenth century, in which the Banū Hāshim were

not being given due respect and in which the descendants of ʿAlī *were* being reviled. But what that position is, and whether there is more evidence for it, I do not know. Certainly, al-Maqrīzī′s writings are at least evidence of one man′s conviction that Sunnis of his day were in need of a little schooling.

Al-Maqrīzī and the Fatimids

The role of al-Maqrīzī in the historiography of the Fatimids is immense; he looms so large in fact that what he wrote often seems to overwhelm all other sources of information about them. Regardless of how one assesses his strengths and weaknesses as a historian in other respects, his contributions in this one area remain critical in any reconstruction or assessment of Fatimid history. Moreover, if he offered nothing other than the preservation of older sources, that would be enough. He provides a mass of material where little else exists.[1]

And several sources not by him nevertheless depend on him. For the study of the Fatimids, where so few works survive, especially for Egypt, those that we know because of his efforts stand out. One prime example is what remains of the Egyptian historian Tāj al-Dīn Ibn Muyassar′s *History of Egypt (Tārīkh Miṣr)*. Ibn Muyassar′s dates are 628–77 and thus he precedes al-Maqrīzī by over a century and a half. Thought by many to have been the most important work on the Fatimid period before al-Maqrīzī, it has long been known that this chronicle was al-Maqrīzī′s main source for the reconstruction of a major period—a fact easily demonstrated by comparing the surviving text of Ibn Muyassar with al-Maqrīzī′s Fatimid history, the *Itti'āẓ*. But in fact, what we possess of Ibn Muyassar is merely a set of detailed notes taken from the original by al-Maqrīzī himself in the year 814. It is not in all likelihood a verbatim transcription. The surviving manuscript is, moreover, only a copy of those same notes.

There are other less dramatic examples. Only a small section of the massive history by al-Musabbiḥī (d. 420/1029)[2] has been recovered and it is now in the Escorial. On the title page of that manuscript is the signature of al-Maqrīzī, indicating apparently that he once possessed and/or used it.[3] Similarly, al-Maqrīzī′s name and seal are visible on the title page of the Vienna manuscript of Ibn

[1]On the historiography of the Fatimids see in general my *Exploring an Islamic Empire: Fatimid History and Its Sources* (London, 2002).

[2]The amir al-Mukhtār 'Izz al-Mulk Muḥammad al-Musabbiḥī′s *History,* said to have comprised 13,000 folios in all, has for the most part all but disappeared. His life spanned the period 366–420 and his history the years 368–415.

[3]The same title page has the signature as well of al-Awḥadī. See the photograph of it reproduced in the edition by Ayman Fu'ād Sayyid and Thierry Bianquis, *Al-Juz' al-Arba'ūn min Akhbār Miṣr,* pt. 1 (historical section) (Cairo, 1978), plate 1 (transcribed on p. 1).

al-Furāt.[4] In two other cases, those of Ibn al-Ma'mūn and Ibn al-Ṭuwayr, much of what remains of their works are the sections that appear in the writings of al-Maqrīzī.

Several of al-Maqrīzī's own works concern the Fatimids in one way or another. The major ones are, first, the *Khiṭaṭ,* which is itself, at least in inspiration, a work on Fatimid Cairo and Fatimid institutions. A *khiṭṭah* (plural *khiṭaṭ*) is both a location or a building and as well an institution, such as a department of government. For al-Maqrīzī the office of chief *dāʻī,* the *dāʻī al-duʻāh,* is such an institution, a *khiṭṭah.*[5] Begun out of a sense of nostalgia for the city of his birth and boyhood and its antiquities, much of the *Khiṭaṭ* centers on the Fatimids, even though the final version came to encompass most of Egypt. Al-Maqrīzī's great biographical dictionary, *Al-Muqaffá al-Kabīr,* aspired to include all prominent individuals in the Islamic period who had lived in or visited Egypt. It is less obviously dedicated to the Fatimids. However, of the parts that survive, which contain some 3600 individual entries, I count over 500 related more or less to Fatimid history. Many are quite brief: Andalusians, for example, who passed through Egypt on the hajj; but a fair number of the entries are extensive. Several concern persons one might not expect: there is a biography of a Berber rebel who harried the Zirid rulers of North Africa in the period when they still recognized the suzerainty of the Fatimids in Egypt. After at last defeating and capturing this man, the Zirid ruler executed him and sent his head off to Cairo. And thus, comments al-Maqrīzī, this man merits inclusion in this book—at least his head came to Egypt. Among the longer and more noteworthy biographies are those of the first three Fatimid caliphs: al-Mahdī, al-Qā'im, and most peculiarly al-Manṣūr. Both al-Mahdī and al-Qā'im had lived in Egypt; al-Qā'im also twice led a Fatimid army into Egypt trying to capture it. But al-Manṣūr was born in the Maghrib and died there. His corpse, however, came with al-Muʻizz (along with the bodies of his grandfather and great grandfather) when the Fatimids moved their capital to Egypt. Thus he, too, fit al-Maqrīzī's requirement for the *Muqaffá.*

But, important as these two works are, al-Maqrīzī's major contribution was his *Ittiʻāẓ al-Ḥunafā' bi-Akhbār al-A'immah al-Fāṭimīyīn al-Khulafā'* (Lessons for the true believers in the history of the Fatimid imams and caliphs), a single, large work devoted exclusively to the Fatimids. It was, it is true, only one of a series of three works on the history of Egypt from the Arab conquest until the

---

[4]As noted by Ayman Fu'ād Sayyid in the introduction to his edition of Abū Muḥammad ʻAbd al-Salām Ibn al-Ṭuwayr, *Nuzhat al-Muqlatayn fī Akhbār al-Dawlatayn* (Beirut, 1992), 14*.

[5]See the *musawwadah*, ed. Ayman Fu'ād Sayyid (London, 1995), 94: "This institution *(al-khiṭṭah),* that is the office *(waẓīfah)* of the chief *dāʻī* I have not observed in any state other than that of the Fatimid caliphs, especially in Egypt. The institution is based on an appeal to the masses to accept what of the Ismaili *madhhab* they used to believe in." The Bulaq text ([1853], 391) is not the same.

year of al-Maqrīzī's own death. The first, his *'Iqd Jawāhir al-Asqāṭ min Akhbār Madīnat al-Fusṭāṭ,* went to the year 358.[6] Next is the *Itti'āẓ,* his history of the Fatimids, and finally his *Al-Sulūk li-Ma'rifat Duwal al-Mulūk,* which covered the Ayyubids and Mamluks. The pattern of these histories thus suggests that the Fatimids were not accorded as much attention as might be supposed from the one work in isolation. Still, even if it is one of a series, it stands out. Excluding those that are merely a part of a broader history and a few that deal with limited portions of the Fatimid experience as a whole, the *Itti'āẓ* is the only medieval history of them we have.[7]

Al-Maqrīzī's lavish attentions to the Fatimids, his evident sympathy for them, and his well-known acceptance of their genealogical claim of descent from 'Alī and Fāṭimah—despite its rejection by most Sunni authorities—gained him special notice among his contemporaries, both those friendly to him and those who were not. But a typical reaction is that of an unknown writer who added a comment in the margin of the Gotha ms. (the autograph) of the *Itti'āẓ* immediately after al-Maqrīzī's section on Fatimid genealogy.[8]

> The concern of the author with refuting what was said by the specialists in genealogy about the validity [of the claim of descent] of the Fatimids, and his attempt to vindicate them, his constant praise for them, and defense of their *madhhab* . . . is excused because he traced his own ancestry to them. He used to state, particularly in the beginning of a book and in his own hand, that his line went back to Tamīm [ibn al-Mu'izz].

As a descendant of the Fatimid caliphs he might well be expected both to support their position and to write a laudatory account of their reign. The view expressed in this comment was apparently shared by many others, as at least supplying a reason to explain al-Maqrīzī's interest in the Fatimids. Nearly all of his biographers mention it, for example. Some even, perhaps hoping to discredit him, hint at the possibility that he was personally attracted by Ismaili doctrine, that he was a

---

[6]This work is now lost.

[7]Remarkably, there is as yet no history of the Fatimids in a European language. The only modern example is Ḥasan Ibrāhīm Ḥasan's *Tārīkh al-Dawlah al-Fāṭimīyah fī al-Maghrib wa-Miṣr wa-Suriyā wa-Bilād al-'Arab* (2nd ed., Cairo, 1958; 3rd ed., Cairo, 1964). But the most important book on the Fatimids in Arabic is Ayman Fu'ād Sayyid's *Al-Dawlah al-Fāṭimīyah fī Miṣr: Tafsīr Jadīd* (Cairo, 1992; 2nd ed., Cairo, 2000) which by its very nature does not cover the North African phase.

[8]Given in Jamāl al-Dīn al-Shayyāl's note in his edition of the text, *Iṭṭi'āẓ al-Ḥunafā' bi-Akhbār al-A'immah al-Fāṭimīyīn al-Khulafā'* (Cairo, 1967–73), 1:54 n. 2.

crypto-Ismaili. These are, however, two separate problems: Was al-Maqrīzī, or did he think he was, a descendant of the Fatimids? And did he accept in any way Ismaili doctrines?

The question of his ancestry is immediately complicated by al-Maqrīzī´s refusal in all his works, despite the evidence of the statement above, to admit his Fatimid descent or provide a full genealogy going back to the Fatimids—a fact already noted by contemporaries such as Ibn Ḥajar. In other words, al-Maqrīzī himself did not make such a claim in his written work, but extended his line back no more than ten generations. From where, then, does this widely cited fact come and on what sort of evidence is it based?

Ibn Taghrībirdī, al-Maqrīzī´s own student, remarks in the *Nujūm al-Zāhirah* that al-Maqrīzī´s ancestry could be extended back to ʻAlī via the Fatimid caliphs, a fact he learned from al-Maqrīzī´s nephew al-Nāṣirī Muḥammad, the son of his brother.[9]

Ibn Ḥajar, in the *Inbāʼ al-Ghumr,* offers two bits of evidence.[10] A) The story of a Meccan scholar who read a work of al-Maqrīzī´s with him on the front of which he had written a list of al-Maqrīzī´s ancestors running back to Tamīm the son of al-Muʻizz, the Fatimid caliph who founded Cairo. But then al-Maqrīzī himself erased that same list and in his works he never (again?) extended the line that far back. B) Another story comes from al-Maqrīzī´s brother who was curious to learn how they were related to the Fatimids. Al-Maqrīzī supposedly told him that he and his father entered the Mosque of al-Ḥākim one day and the father told the son, ″My son, this is the mosque of your ancestor.″

In the same author´s *Al-Durar al-Kāminah*[11] he comments that al-Maqrīzī used to say that his father mentioned to him that he was a descendant of Tamīm ibn al-Muʻizz, the builder of Cairo, but that he should not reveal this fact to anyone he could not trust.

Al-Maqrīzī´s neighbor, friend, and fellow historian, al-Awḥadī, composed lines of verse in which he states rather directly, ″Boast among the people, Taqī al-Dīn, with full pride in a noble Fatimid ancestry; when you related something good about them and face opposition, trace it back to the Ḥākimī [al-Ḥākim].″[12]

---

[9]See, under the year 845, his obituary for al-Maqrīzī: Jamāl al-Dīn Abū al-Maḥāsin Ibn Taghrībirdī, *Al-Nujūm al-Zāhirah fī Mulūk Miṣr wa-al-Qāhirah* (Cairo, 1929–49; 1963–71), 15:490. There is, however, no detail given of such a genealogy. In Ibn Taghrībirdī´s *Al-Manhal al-Ṣāfī wa-al-Mustawfá baʻda al-Wāfī,* ed. Muḥammad Muḥammad Amīn (Cairo, 1984) there is a biography of al-Maqrīzī (1:415–20) but again no genealogy (nor any claim for it).

[10]*Inbāʼ al-Ghumr bi-Abnāʼ al-ʻUmr* (Hyderabad, 1976) under the year 845, 9:172.

[11]*Al-Durar al-Kāminah* (Cairo, 1966), 3:5.

[12]As far as I know Nasser Rabbat was the first to notice these lines, which appear in al-Maqrīzī´s biography of al-Awḥadī in the *Durar al-ʻUqūd al-Farīdah fī Tarājim al-Aʻyān al-Mufīdah,* ed.

There is in all this still no specific genealogy. Al-Sakhāwī in his *Al-Ḍaw' al-Lāmi'* also gives none, although he does repeat disparagingly what Ibn Ḥajar had said, adding a nasty comment about al-Maqrīzī's reliance on an untrustworthy genealogist.[13] Nevertheless in his *Al-Tibr al-Masbūk* he provides a complete genealogy going back, not merely to al-Mu'izz, but from him to 'Alī ibn Abī Ṭālib.[14] This is the only complete genealogy for al-Maqrīzī that I know of.[15]

What can we make of all this? Obviously someone wanted to be descended from the founder of Cairo. Tamīm, al-Mu'izz's oldest son, was the link. But Tamīm, born in 337, although the oldest, was passed over in the succession in the mid-350s when it was learned that he would never produce offspring *(lammā ra'á an lā yu'qib)*. We don't know exactly why: impotence or another physical defect. A Shi'i imam, however, must produce an heir, otherwise he cannot be the imam. But the point here is that Tamīm also cannot have been al-Maqrīzī's ancestor; or to put it another way, al-Maqrīzī was not his descendant. Whoever was originally responsible for this claim had made the wrong choice of a Fatimid.[16] Most importantly al-Maqrīzī knew about the impotence of Tamīm, or at least, he came to know of it. But in his *Itti'āẓ* he does not mention this fact, although it might be expected there. Nevertheless, in his biographical entry for Tamīm in the *Muqaffá,* he is quite clear about it.

Another fact worth repeating here also comes from al-Maqrīzī. When Saladin put an end to the caliphate he rounded up all the Fatimids and detained them where they could not procreate and thus produce more Fatimids. Thirty years later in 608, sixty were still held; in 623, forty remained. We have their names thanks to al-Maqrīzī. If sixty-three were still in custody after 30 years, there must have been many, many more in 558: possibly as many as 200? 300? Saladin was quite

---

'Adnān Darwīsh and Muḥammad al-Miṣrī (Damascus, 1995), 2:239. He quite rightly saw their significance as well. For this reference and some others I benefited from an unpublished earlier version of his paper in this volume which he kindly provided to me.

[13]Shams al-Dīn Muḥammad al-Sakhāwī, *Al-Ḍaw' al-Lāmi' li-Ahl al-Qarn al-Tāsi'* (Cairo, 1934–36), 2:21–26.

[14]Did al-Sakhāwī possibly accept as genuine the genealogy he gives for the line from al-Mahdī to Ja'far al-Ṣādiq: "al-Mahdī. . .ibn Majīd ibn Ja'far, ibn Muḥammad ibn Ismā'īl ibn Ja'far. . ."?

[15]As printed: Shams al-Dīn Muḥammad al-Sakhāwī, *Al-Tibr al-Masbūk fī Dhayl al-Sulūk* (Bulaq, 1896), 21–24; however, there are problems: the key segment runs: ". . . Tamīm ibn 'Alī ibn 'Ubayd ibn Amīr al-Mu'minīn al-Mu'izz . . ." which cannot be correct. Al-Mu'izz had four sons: Tamīm, 'Abd Allāh, Nizār (al-'Azīz), and 'Aqīl. See my "Succession to Rule in the Shiite Caliphate" (*Journal of the American Research Center in Egypt* 32 [1995]: 239–64), 246.

[16]Admittedly there is some confusion in the data presented to us. Tamīm ibn al-Mu'izz was the uncle of al-Ḥākim and therefore, even if he had produced offspring, he and al-Ḥākim belong to different lines.

thorough; there were to be no descendants at all![17]

At this point it is obvious that the evidence is hardly unambiguous and it is therefore difficult to explain all these claims with a simple solution. However, it appears that the basic assertion of Fatimid descent in the case of al-Maqrīzī is a family myth or legend. Note in particular the role of the father and the brother. The neighbor al-Awḥadī may have learned what he knew from the same source. At any rate al-Awḥadī died in 811, thirty-four years before al-Maqrīzī. His lines of verse therefore belong to the first half of al-Maqrīzī's life, quite possibly before he discovered how unlikely the family legend was. When he did, he simply stopped making the claim on his own behalf; but he could not—and perhaps saw no harm in not—prevent others (such as his own brother) from repeating it.

But what about those who saw him as a sympathizer, a Shiite, or even a crypto-Ismaili? His acceptance of the Fatimid claim of a valid descent from ʻAlī, despite its rejection by most Sunnis, his generally soft-hearted attitude to the Hashimids and the Alids (the Ashrāf, i.e., descendants of either Ḥasan ibn ʻAlī or Ḥusayn ibn ʻAlī), and his obvious tolerance for Shiite doctrines were well known. But do they indicate something deeper and more profound?

Here there are three separate questions to consider. The first involves his support of the Fatimid genealogy. The second is his attitude toward the public doctrines of the Ismailis as applied by the Fatimids. The third concerns his reaction to the secret esoteric doctrines of the Ismaili *daʻwah*. But did he even know about the last and if he did, in what manner and based on what sources? Sunni denunciation of Ismaili doctrine occurred regularly but rarely was it directed at authentic pronouncements by the Ismailis themselves.

The problem of Fatimid genealogy is interesting. Al-Maqrīzī was one of only a handful of the later Sunni writers to accept it. But his argument is curious.[18] According to him, it is plausible, which means that he could find specialists in the genealogy of the Alids who assured him that descent from Jaʻfar through Ismāʻīl and his son Muḥammad might well continue to al-Mahdī, the founder of the caliphate. Moreover, the main detractors, namely Akhū Muḥsin and Ibn al-Rizām, were obviously out-of-line and clearly consumed by bias. As were the Abbasids, who did not denounce it until they had lost a huge share of territory and were threatened directly and immediately, and even then they had to resort to force in

---

[17]It should be recognized that these facts by themselves do not exclude all lines of descent. Several sons of al-Mustanṣir fled Egypt during the dispute over the succession of al-Mustaʻlī and they are not all accounted for, nor their offspring. On this see "Succession to Rule in the Shiite Caliphate," 248–56.

[18]His comments occur in at least three places: *Ittiʻāẓ*, 1:15–54 (esp. 52–54); *Khiṭaṭ* (Bulaq), 1:348–51; *Kitāb al-Muqaffá al-Kabīr,* ed. M. al-Yaʻlāwī (Beirut, 1991), 4:523–70 (bio. of al-Mahdī, no. 1528).

order to convince the Ashrāf to sign on to their proclamation of the denunciation.[19] Had the Fatimids been liars, al-Maqrīzī continues, God would never have allowed them the tremendous successes they in fact achieved. (This latter argument is admittedly extremely weak, as al-Maqrīzī's contemporaries obviously realized.) But finally, and much more importantly, he observes that the major Egyptian historians accepted its validity, among them Ibn ʿAbd al-Ẓāhir,[20] Ibn al-Ṭuwayr,[21] and Ibn Khaldūn.[22] Those who rejected it were most often non-Egyptians, for example, the Syrians or the Baghdadis.

Al-Maqrīzī's accounts of public doctrines for the better part also down-play the differences between Shiite practice and that of the Sunnis. The Fatimids, in his view, simply followed the practice of ʿAlī and of the Ahl al-Bayt; it was their *madhhab*. To cite but one example, when al-Muʿizz's uncle died, the caliph allowed seven repetitions of the *takbīr* instead of the expected five. ʿAlī himself had approved, al-Maqrīzī notes, an adjustment of the number in accord with the rank of the deceased.[23] Al-Maqrīzī sees in this aspect of Fatimid doctrine, as with other examples of the kind, nothing denoting unacceptable heresy. Mild preference for ʿAlī *(tafḍīl ʿAlī)* apparently did not threaten him.

What about theology and the secret doctrines of the *daʿwah*? Did al-Maqrīzī really understand the true nature of Ismailism? This is an important question. He certainly had read anti-Ismaili tracts and refutations, many quite scurrilous and hostile. He knew therefore of the standard accusation leveled against them of antinomianism, that is, of having rejected the outward observance of legal rites and rituals in favor of esoteric knowledge. But did he actually know about the content of genuine Ismaili writings and of their actual doctrines?

Here it is useful to quote at length his assessment of the problem as reflected in the concluding pages of the *Ittiʿāẓ*. There he says the following:[24]

> What They May Be Faulted For (Or Not)
>
> There is no disputing the fact that this group was Shiʿi and that they maintained the superiority of ʿAlī ibn Abī Ṭālib over the rest

---

[19]The date of this famous proclamation issued in Baghdad by the Abbasids is 402.

[20]*Al-Rawḍah al-Bahīyah al-Zāhirah fī Khiṭaṭ al-Muʿizzīyah al-Qāhirah,* ed. Ayman Fu'ād Sayyid (Cairo, 1996), 6–7.

[21]Ibn al-Ṭuwayr's acceptance is reported by Ibn al-Zayyāt (*Al-Kawākib al-Sayyārah fī Tartīb al-Ziyārah,* 176) as noted by Ayman Fu'ād Sayyid in his introduction to Ibn al-Ṭuwayr's *Nuzhat al-Muqlatayn,* 14*.

[22]Whether or not Ibn Khaldūn counts as an Egyptian, when al-Maqrīzī knew him, he did live in Cairo.

[23]*Ittiʿāẓ*, 1:146.

[24]Ibid., 3:345–46.

of the Companions and that, out of the various *madhhab*s of the Shiʿah, they adhered to that of the Ismāʿīlīyah, who affirm the imamate of Ismāʿīl ibn Jaʿfar al-Ṣādiq and trace the continuation of it in offspring of his among imams that were hidden up to ʿUbayd Allāh al-Mahdī, the first of those who ruled in the Maghrib. The remainder of the Shiʿah do not recognize the imamate of Ismāʿīl and, in direct opposition to them, deny it vehemently.

Along with their deviation from the general *madhhab* of Shiism they were excessive in terms of *rafḍ* [i.e., refusal to accept the authority of others, ʿUmar and other Companions], although those who came earlier were more concerned to safeguard themselves from the kind of perversions engaged in by the later ones. Then al-Ḥākim bi-Amr Allāh went even further in meddling with doctrine. But he was hardly consistent in this and was quick to change his mind. When he leaned to one doctrine, he proclaimed it and imposed it on the people. But soon thereafter he reverted to something else and expected the populace to abandon what he had imposed on them and turn to what he had now come up with. A man known as al-Labbād al-Zawzanī [Ḥamzah][25] joined him and this man now professed openly the *madhhab* of the Bāṭinīyah.[26] There had been some of this among the earliest of them. However, the people rejected this *madhhab* in so far as it comprised things not known among the earlier imams and their successors, and also what in it contradicted the shariʿah.

Next, in the time of al-Mustanṣir, al-Ḥasan ibn al-Ṣabbāḥ[27] came to see him. He spread this *madhhab* in various regions, summoning the masses to it. He also permitted the killing of those who opposed him. Accordingly, disapproval [of them] intensified and the outcry against them increased in every direction up to the point that they were excluded from Islam and the community of believers.

When the Abbasids were overcome with hatred for them

---

[25]This Ḥamzah, who was originally a *dāʿī* in Egypt under al-Ḥākim, became the founder of the Druze.

[26]Al-Maqrīzī apparently means by this term those who subscribe to the inner *bāṭinī* understanding of the law and scripture to the exclusion of its outward *ẓāhirī* aspects. In other words they deny the physical reality of the law itself and no longer observe its strictures.

[27]Ḥasan-i Ṣabbāḥ created and led the Nizārī Ismailis who became legendary, if not notorious, for use of assassination to control their enemies, hence the common name for his followers, the Assassins.

[the Fatimids] and were reeling from the hurt of their having captured from them the territories of Qayrawan, the regions of Egypt, Syria, the Hijaz, the Yemen, and ultimately even Baghdad, the Abbasids found a special way to denigrate them. They repudiated any genealogical link of theirs to ʻAlī ibn Abī Ṭālib and insisted instead that they were the descendants of a Jew. The Abbasids procured spokesmen who would say this and the latter filled the books of history with it.

Later the Ghuzz arrived and from their number Asad al-Dīn Shīrkūh and his nephew Ṣalāḥ al-Dīn were appointed viziers of the Fatimids. These men were creatures of the Abbasid regime. They had been raised on its doorstep, nurtured by its favors; they were steeped in the doctrine of its supporters and in hostility toward its enemies. Their closeness to the Fatimid regime only increased their aversion to it and its favor to them filled them with nothing but ill-will and animosity, until having benefited from it, they attained enough power to bring about its end and do away with it completely.

However, the foundations of Fatimid rule were firmly grounded within proper limits; their eminence ascended higher than the stars; their followers and loyalists were too numerous to count; their supporters and backers had filled every region and territory. Wanting to obliterate their light, to replace their very lighthouses, the Abbasids attempted to smear them with charges of depravity and abomination. This is how an enemy acts, and is obviously in accord with the condition of his being an enemy.

But ponder, may God have mercy on you, the secrets of existence and distinguish among historical reports as you would distinguish between good and bad coins. Discover, by avoiding passions, the real truth. What you will discern in the great numbers of attacks on them is that those accounts of repulsive acts, especially those leading to their expulsion from the community of Islam, are found almost exclusively in the books by easterners, that is, among the Baghdadis and Syrians, as for example in the *Muntaẓam* of Ibn al-Jawzī, the *Kāmil* of Ibn al-Athīr,[28] the *History of Aleppo* of Ibn Abī Ṭayy, the *Tārīkh al-ʻImād* of Ibn Kathīr, the books by Ibn Wāṣil al-Ḥamawī, Ibn Shaddād, and al-ʻImād al-Iṣfahānī, and others

[28]For his judgment of Ibn al-Athīr, see also *Ittiʻāẓ*, 1:232. Ibn al-Athīr, he says, relied on Iraqi and Syrian historians who did not know Egypt well. Al-Maqrīzī prefers the Egyptian Ibn Zūlāq, for example.

> like these. Books by Egyptians, who took great care in recording what they report, contain almost nothing of the kind at all. So judge according to reason and vanquish the forces of prejudice, give everything its proper due, and be rightly-guided.

In the preceding passage al-Maqrīzī appears to minimize the heretical nature of Ismaili doctrine, except in the two cases of extremists, Ḥamzah and the Druze, and the Assassins after Ḥasan-i Ṣabbāḥ. The former group rejected Islamic law and the latter advocated the killing of those who opposed them. Both are clearly unacceptable and are intolerable in his mind. But al-Maqrīzī seems to be separating carefully these obviously heretical transgressions from what are, in his view, otherwise doctrines that remain within the bounds of Islam. It is more than likely that he personally did not subscribe to the Shiism of the Fatimids but he refused nonetheless to condemn it. He also will have nothing to do with what he sees as the flagrantly inaccurate and trumped-up charges against them put in circulation by the Abbasids and their hired guns. Moreover, he tends to reject the authority of any non-Egyptian, as the list he has just given well illustrates.[29]

But surely he knew more that he is not saying. Or, possibly, there are issues involved—subjects pertaining to the work of the Ismaili *da'wah*—that al-Maqrīzī had either ignored or had not yet discovered. As to this latter category, his remarks in the *Khiṭaṭ* introducing his discussion of the *da'wah* seem particularly to the point (statement from the *musawwadah*[30]):

> Most people of our time are ignorant of their beliefs and thus, as a way of disavowing it, I want to explain their doctrines here based on what I discovered in the books they themselves composed for that purpose (i.e., for the *da'wah*).

What did he ″discover″ in their books and when? What books?

Prior to dealing with these questions it is useful to return to some historiographical issues about what he wrote, when, and in what order.

MAIN WORKS RECONSIDERED FOR HISTORIOGRAPHICAL ORDER

The *Khiṭaṭ,* which was the first to enter modern scholarship, is well known and widely used despite the faulty Bulaq edition of 1853. Having now two versions of

---

[29]For a similar rejection of Ibn Abī Ṭayy whose bias he claims is not shared by any of the Egyptian historians, see *Itti'āẓ*, 2:119. Note also *Itti'āẓ*, 1:232 (and the comments of the editor al-Shayyāl, 1:30).

[30]P. 94.

it, a *musawwadah* and a final draft, allows the study of its development. The *Itti'āẓ* (also badly edited) by contrast is known only from a partial *musawwadah* and a copy of the whole that has been taken from what is likely the same original *musawwadah.* In other words, no final draft exists. And, in all probability, none was ever made.

Thanks to the recent investigations of Ayman Fu'ād Sayyid[31] and Frédéric Bauden[32] on al-Maqrīzī's methods, we are fairly sure that he employed his first drafts as a kind of working file to which he either added marginal additions or inserted bits of paper with new material between the pages. Apparently he planned to return to produce a final version at some future time.

As with the *Itti'āẓ,* the portions of the *Muqaffá* that survive represent an unfinished draft, a *musawwadah.* The *Itti'āẓ* was published in its entirety only in 1973; the latter in 1991. Neither one is as well known or as thoroughly studied as the *Khiṭaṭ*. In fact the *Muqaffá* is even now often ignored although it contains a great deal of information not in the other two.[33]

Given that two of these major works exist only as a first draft, it is quite reasonable to assume that al-Maqrīzī kept all three projects active simultaneously, adding from one to the others as he came upon new material. It is certainly essential for modern scholars to consult all three. Al-Maqrīzī often identifies his source in one but not in the others; presumably, therefore, the former is more likely to contain a verbatim quotation of the source and the others merely paraphrases or some other reworking of the same material. However, as Bauden's discoveries have shown, what might look like a quotation may already represent a paraphrase and thus not the original text. Accordingly, for example, the work now attributed to Ibn Muyassar and which is in reality a set of al-Maqrīzī's notes from it, may owe as much to al-Maqrīzī as to Ibn Muyassar.

It remains to be seen whether we can find a basis for arranging these three works of al-Maqrīzī in some chronological order. Here the differences among them in the presentation of facts or, more significantly, what is missing from one as opposed to another may help. Also there is a suggestive passage at the end of

---

[31]Ayman Fu'ād Sayyid's contribution to the study of al-Maqrīzī is extensive. See, for example, his introduction to his edition of the *Khiṭaṭ Musawwadah* as well as the following "Early Methods of Book Composition: al-Maqrīzī's Draft of the Kitāb al-Khiṭaṭ," in *The Codicology of Islamic Manuscripts, Proceedings of the Second Conference of Al-Furqān Islamic Heritage Foundation*, *1993* (London, 1995), 93–101, and "Remarques sur la compostion des Ḫiṭaṭ de Maqrīzī d'après un manuscrit autographe," in *Hommages à la mémoire de Serge Sauneron,* vol. 2, *Egypte Post-Pharaonique* (Cairo, 1979), 231–58 + plates.

[32]See his article in this volume.

[33]As but one example, note that it has a long biography of al-Yāzūrī which is not cited at all in the recent *Encyclopaedia of Islam* article on him.

the *Itti'āẓ* in which al-Maqrīzī comments:[34]

> In an account of the *khiṭaṭ* of Cairo, *in shā' Allāh,* I will describe the relics of their rule and review the management of their state so that, in regard to matters of this world, you will come to understand the extent of their achievement and the insignificance of those who came after them.

It appears therefore that when he finished this draft of the *Itti'āz*—which is the only one known to have existed—he had not yet written the *Khiṭaṭ;* the latter was then only a project in his mind (but perhaps one he was just about to begin). If so, all subsequent revisions of it also come after the *Itti'āẓ*. What he learned while gathering material for the *Khiṭaṭ* thus may or may not have found its way back also to the *Itti'āẓ*. And the *Muqaffá* is quite likely later still. We are quite sure in this latter case that he never completed it.[35]

Vis-à-vis the *Itti'āẓ,* the *Muqaffá* contains significant new information that ought to have been included in the former but is not to be found there. The *Itti'āẓ*, for example, contains four pages on the reign of al-Manṣūr (plus at most four additional pages on the pursuit of Abū Yazīd included at the end of the section on al-Qā'im). By contrast the *Muqaffá* has fifty-two pages on al-Manṣūr with quite valuable new information. It provides, for example, the details of how and why, with a fairly precise date for when, al-Manṣūr brought Qāḍī al-Nu'mān from his post in Tripoli to al-Manṣūrīyah—a date nearer the end of his reign and later than most scholars have supposed.[36] In the biography of Tamīm ibn al-Mu'izz we are given the reason, cited earlier, for his having been passed over. In a biography of the chief qadi Ibn Abī al-'Awwām, who was appointed by al-Ḥākim in 405, al-Maqrīzī makes clear he was a Hanafi (a fact that is surely correct). Ibn Ḥajar had claimed he was a Hanbali.[37] There is a biography of Ḥamzah ibn 'Alī, the founder of the Druze, which gives the date and details of his death.[38] For the later

[35]According to information supplied by al-Sakhāwī. See his *Al-Tibr al-Masbūk*, 23 and *Al-Ḍaw'*, 2:22.

[36]*Muqaffá,* bio. no. 780.

[37]Ibid., bio. no. 584. On the Hanafi affiliation of this qadi see Gary Leiser, ″Ḥanbalism in Egypt before the Mamlûks″ (*Studia Islamica* 54 [1981]: 155–81), 159–60.

[38]On this information and its meaning see Heinz Halm, ″Der Tod Ḥamzas, des Begründers der drusischen Religion,″ in *Egypt and Syria in the Fatimid, Ayyubid and Mamluk Eras*, ed. U. Vermeulen and D. De Smet (Leuven, 1995–2001), 2:105–13.

vizier al-Ma'mūn, new information reveals that he was Imami Shi'i.[39] And, in one more case, the biography of al-Musta'lī explains a simple conspiracy of al-Afḍal with a sister of al-Mustanṣir to throw the succession to this caliph (rather than, say, Nizār) with a tacit understanding that they, the sister and the vizier, would thereafter share power: he in public and she within the palace.[40] The point is that this is not what is reported in the *Itti'āẓ*.

All this suggests that al-Maqrīzī wrote the *Muqaffá* well after the *Itti'āẓ* and that he included in it a great deal of information that he had come upon in the meantime. Moreover, he did not bother to add it to the older *Itti'āẓ*. It seems likely as well that the *Khiṭaṭ* did not benefit from much of this material, it also being earlier, even in its final draft.[41]

Returning to the question of al-Maqrīzī's knowledge of authentic Ismaili works, we may now be in a position to see a chronological progression in his knowledge of the secret works of the *da'wah*. What he says in the *musawwadah* of the *Khiṭaṭ* in one place (as quoted above), and repeated in the Bulaq edition in different places, establishes that, according to his own account, he found genuine Ismaili books and treatises and learned from them. He speaks repeatedly in the latter of their books: ". . . matters stipulated in their books,"[42] "what is accepted in their books an account of which this book cannot include because of its length,"[43] ". . . and things of this sort are found in their books; the source of it is the writings of the Philosophers . . . they go on at great length with other expressions . . . this book cannot contain the full extent of the statements of this kind."[44] "They uphold the doctrine that God is neither eternal nor temporally created but rather what is eternal is His command *(amr)* and word *(kalimah)* and what is temporally produced is His creation as explained at length in their books."[45] Near the end of this section on the Ismaili *da'wah* he says: "It is dealt with in extenso in their books and all this constitutes the knowledge of the *dā'ī*. They have many books composed for that purpose from which I have taken the summary just given."[46]

His summary of esoteric Ismaili doctrine, i.e., the *da'wah,* is, moreover, despite some relatively unimportant problems, reasonably accurate and accords well with

---

[39]*Muqaffá,* bio. no. 2999.

[40]Ibid., bio. no. 638.

[41]I have not compared enough of the specific Fatimid material in these two for a sound judgment about how it relates precisely from one to the other.

[43]Ibid.

[44]Ibid., 395.

[45]Ibid.

[46]Ibid.

what we know from the writings of Abū Ya'qūb al-Sijistānī[47] and Ḥamīd al-Dīn al-Kirmānī,[48] to cite but two of the main Fatimid-era Ismaili authorities. Here is a key point: at the final stage of the initiation of an Ismaili, the candidate is taught that the prophet's miracle is the law, which is expressed on the one hand by "symbols a person of intellect will comprehend and on the other by an open declaration recognizable by everyone."[49] "Revelation is the delivering of God's word [to the prophet], following upon which the prophet embodies it [i.e., makes it incarnate, *yujassiduhu*] and then presents it to the people."[50]

But what "books" exactly? We have no way of knowing precisely except in one case. Bauden has now discovered in one of al-Maqrīzī's notebooks a passage from al-Kirmānī's *Rāḥat al-'Aql*. Clearly then al-Maqrīzī was able to find a copy of this one work and to use it.[51] Most probably he located more and thus when he says he derives his understanding of Ismaili doctrine from their books, that is in fact true.[52]

Is it possible to say when this happened, even relatively? If the chronology suggested above reflects reality, then it appears likely that al-Maqrīzī's work on the *Itti'āẓ,* which is his most sympathetic portrayal of the Fatimids and is a defense of them, and which closely follows in the appropriate sections what he gleaned from Ibn Muyassar, must belong to a period not long after 814, when he took his notes from this source. Why would he excerpt Ibn Muyassar after he had written the *Itti'āẓ*? It must be the other way around: the *Itti'āẓ* came later. Subsequently—i.e., after 814—he composed a first draft of the *Khiṭaṭ* and then reworked it at least once. And it contains an account of the secret doctrines of the Ismaili *da'wah* that is not in the *Itti'āẓ,* nor even alluded to there.

---

[47]On this fourth century *dā'ī* see the following studies of mine: *Early Philosophical Shiism: The Ismaili Neoplatonism of Abū Ya'qūb al-Sijistānī* (Cambridge, 1993); *The Wellsprings of Wisdom: A Study of Abū Ya'qūb al-Sijistānī's* Kitāb al-Yanābī' (Salt Lake City, 1994); and *Abu Ya'qub al-Sijistani: Intellectual Missionary* (London, 1996).

[48]On al-Kirmānī, see Daniel De Smet, *La Quiétude de l'Intellect: Néoplatonisme et gnose ismaélienne dans l'oeuvre de Ḥamīd ad-Dīn al-Kirmānī (Xe/XIe s.)* (Leuven, 1995), and Walker, *Ḥamīd al-Dīn al-Kirmānī: Ismaili Thought in the Age of al-Ḥākim* (London, 1999).

[49]Bulaq ed., 1:395. This doctrine implies a double *bāṭinī/ẓāhirī* form of the truth (in the manner, for example, advocated by the philosopher Ibn Rushd).

[50]*Musawwadah,* 105. Note that, according to this doctrine, the Prophet is the author of the written form of the revelation. He is the lawgiver, the *shāri'*. On this in the thought of al-Sijistānī, see my *Early Philosophical Shiism*, ch. 11 (pp. 114–23), *Intellectual Missionary,* 49–50, and *Wellsprings,* 8–10.

[51]Personal communication.

[52]Knowledge of and/or the citation of genuine Ismaili works by non-Ismailis was extremely rare.

Conclusion: Just as al-Maqrīzī eventually discovered that he could not have descended from the Fatimid caliphs, he also learned more and more about their secret doctrine, not from malicious detractors like Ibn al-Jawzī or Ibn al-Nadīm or the others he mentioned in the statement taken earlier from the *Itti'āẓ,* nor as revealed by the renegade Druze, the erratic and unstable al-Ḥākim, or the Assassins after Ḥasan-i Ṣabbāḥ, but from their own writings, the authentic works of true Ismaili *dā'ī*s. He then realized that the Ismaili *da'wah* was far more sophisticated yet also therefore dangerously alien to his own religious outlook than if it had been merely a *madhhab* of the Ahl al-Bayt. Subsequently, his former enthusiasm for the Fatimids abated.[53] He never went back to finish the *Itti'āẓ* and he expanded the *Khiṭaṭ* far beyond its original narrow focus on the Fatimid capital and governing institutions, until ultimately it encompassed all of Egypt and its history.

[53]That he lost his enthusiasm for the Fatimids does not mean also that he lost interest in the details of the history of their period since he obviously continued to collect such material. And I think, for example, it is quite obvious from his biography of al-Manṣūr that on a personal basis he deeply admired this one caliph (if not others).

The Hebrew University of Jerusalem

Al-Maqrīzī as a Historian of the Early Mamluk Sultanate (or: Is al-Maqrīzī an Unrecognized Historiographical Villain?)

It can be argued that al-Maqrīzī´s chronicle *Kitāb al-Sulūk li-Maʿrifat Duwal al-Mulūk* is the best known historical work from the Mamluk period, contributing in no small way to its author´s reputation as the most famous historian writing in the Mamluk Sultanate. The pride of place of this work can easily be understood. Al-Maqrīzī´s treatment of the early sultanate in the *Sulūk* was the first Mamluk chronicle to be translated into a European language.[1] I am referring, of course, to the fine translation by Quatremère, published in Paris in the years 1837–45.[2] The extensive notes and appendices, still valuable today, greatly increased the value of this translation, and it indeed served as a bedrock for the study of the early sultanate, as well as the waning years for the Frankish entity in the East. A second reason for al-Maqrīzī´s ubiquity and prominence in most studies on the period under discussion is the exemplary edition initiated by Ziyādah in 1934 and finally completed in 1973.[3] When publishing began in the 1930s, this was one of the first Mamluk chronicles to see the light of day in a competent scholarly edition, and thus it is not a surprise that the *Sulūk* continued to serve as a major source for the study of the period, even after the publication of various editions (some better than others) of chronicles and other sources which covered this period. In the present discussion, my focus will be only on the first volume (published in three parts), which deals with the sultanate up to the beginning of the eighth/fourteenth century.

I will suggest in this article that for the first decades of the Mamluk Sultanate, al-Maqrīzī was a summarizer of primarily one work, and not always an accurate one at that. I will propose, therefore, that for this early period of the sultanate´s history, he should be seen as an auxiliary source of only secondary importance. A

[1]Parts of the chronicles by Abū al-Fidā' and Ibn al-ʿAmīd were published and translated long before this, but these were sections related to the early history of Islam, and therefore are not relevant to the discussion here.

[2]M. E. Quatremère, *Histoire des sultans mamlouks de l´Égypte* (Paris, 1837–45), 2 volumes in 4 parts.

[3]Taqī al-Dīn Aḥmad ibn ʿAlī al-Maqrīzī, *Kitāb al-Sulūk li-Maʿrifat Duwal al-Mulūk,* ed. Muḥammad Muṣṭafá Ziyādah and Saʿīd ʿAbd al-Fattāḥ ʿĀshūr (Cairo, 1934–73), 4 volumes in 12 parts.

few modern scholars have already mentioned al-Maqrīzī's derivative and summary character in his account of the early sultanate, as well as his overall refusal to cite the names of his sources.[4] But al-Maqrīzī's carelessness in rendering his material has not, as far as I am aware, been explicitly noted. At the same time, some historians of the early sultanate and the late Frankish East have continued citing the *Sulūk* as if it was an independent source, in spite of the plethora of recently-published contemporary and near contemporary sources, as well as the much greater source-critical sophistication of Mamluk historiography.[5]

As I hope to demonstrate, for the first decades of the Mamluk Sultanate (up to 696/1296–97), al-Maqrīzī's *Sulūk* should be read in conjunction with his main, and at times exclusive (particularly for 658–80/1260–81), source. I am referring to the chronicle of the Egyptian historian Nāṣir al-Dīn ʻAbd al-Raḥmān ibn Muḥammad Ibn al-Furāt (d. 807/1405), *Kitāb al-Duwal wa-al-Mulūk,* parts of which have been published, and others are available still only in manuscript form.[6] I will show that the use of al-Maqrīzī as an independent source without

Petry, vol. 1, *Islamic Egypt (640–1517)* (Cambridge, 1998), 436–37; idem, *An Introduction to Mamlūk Historiography: An Analysis of Arabic Annalistic and Biographical Sources for the Reign of al-Malik an-Nāṣir Muḥammad ibn Qalā'ūn* (Wiesbaden, 1970), 77–78; Linda S. Northrup, *From Slave to Sultan: The Career of al-Manṣūr Qalāwūn and the Consolidation of Mamluk Rule in Egypt and Syria (678–689 A.H./1279–1290 A.D.)* (Stuttgart, 1998), 51. Peter Thorau, "The Battle of ʻAyn Jālūt: A Re-examination," in *Crusade and Settlement,* ed. Peter W. Edbury (Cardiff, 1985), 237, writes that "[al-Maqrīzī's] account of earlier centuries cannot always serve as a primary source," but proceeds to use him as an independent source for the reconstruction of the battle.

Scholars from an earlier generation held al-Maqrīzī in high regard. For the views of Hitti, Ziyādah, etc., see the citations and references found in: Little, *Introduction*, 77; idem, "Historiography," 436. Little, *Introduction*, 76, writes: "The grand scope of that work [i.e., *Sulūk*], its accessibility both in Arabic and translated versions, the praise it has received, have combined to secure al-Maqrīzī the hackneyed but apt title of dean of Egyptian historians." Little himself challenges that view by showing that at least one of al-Maqrīzī's contemporaries, Badr al-Dīn al-ʻAynī, wrote a chronicle whose scope (let alone accuracy) is no less comprehensive than the former's. See F. Rosenthal, "Maḳrīzī," *The Encyclopaedia of Islam,* 2nd ed., 4:193–94, for some discussion of criticism from al-Maqrīzī's contemporaries.

[5]The following recent studies, for example, use al-Maqrīzī's *Sulūk* for their discussion of the early sultanate as if it was an independent source: ʻAbd al-ʻAzīz al-Khuwayṭir, *Baibars the First: His Endeavours and Achievements* (London, 1978); Peter Thorau, *The Lion of Egypt: Sultan Baybars I and the Near East in the Thirteenth Century*, tr. P. M. Holt (London and New York, 1992); Stefan Heidemann, *Das Aleppiner Kalifat (AD 1261): vom Ende des Kalifates in Bagdad uber Aleppo zu den Restaurationen in Kairo* (Leiden, 1994). My historiographical reservations do not detract from the overall value of these studies.

[6]The annals of these years are found in the following volumes: (a) Vatican MS AR. 726 (years

recourse to Ibn al-Furāt can be misleading, since at best the former gives only a succinct rendering of his source, and as will be seen, a not always accurate one at that. Whereas al-Maqrīzī never names his source, Ibn al-Furāt is generally scrupulous in naming those historians whose works he cites. At this point, it might be noted that for Baybars's reign, Ibn al-Furāt relies heavily on the royal biography by Muḥyī al-Dīn ibn ʻAbd al-Ẓāhir, who is often cited by name.[7] To this central source, Ibn al-Furāt adds material from other writers, some of whose works are now lost. Some modern scholars have discussed in general al-Maqrīzī's reliance on Ibn al-Furāt for the annals describing the early decades of the sultanate,[8] but to the best of my knowledge, no one has yet explicitly noted that the former's almost complete dependence on the latter, and the frequent sloppy and inaccurate way in which this was done.

As I hope to show in the following discussion, Ibn al-Furāt reveals himself to be a master historian of tremendous significance for the study of the early Mamluk Sultanate,[9] while it will be suggested that al-Maqrīzī's role is merely that of a writer who has provided us with a convenient precis of events, which should be

---

639–59); (b) Vienna MS Staatsbibliothek 814 (years 660–71); (c) *Tārīkh Ibn al-Furāt,* vol. 7, ed. Qustantīn Zurayk (Beirut, 1942) (years 672–82); (d) *Tārīkh Ibn al-Furāt,* vol. 8, ed. Zurayk and Nejla M. Abu Izzeddin (Beirut, 1939) (years 683–96). Some of the material of these years, relevant to the Franks, has been published in *Ayyubids, Mamlukes and Crusaders: Selections from the Tārīkh al-Duwal wa-al-Mulūk of Ibn al-Furāt*, tr. U. and M. C. Lyons, intro. and notes J. S. C. Riley-Smith (Cambridge, 1971), 2 volumes.

[7]Published as Muḥyī al-Dīn ʻAbd Allāh ibn ʻAbd al-Ẓāhir, *Al-Rawḍ al-Ẓāhir fī Sīrat al-Malik al-Ẓāhir,* ed. ʻAbd al-ʻAzīz al-Khuwayṭir (Riyadh, 1396/1976).

[8]See the general comments in Claude Cahen, "Ibn al-Furāt," *EI²*, 3:769. Northrup, *From Slave to Sultan,* 51–52, notes that al-Maqrīzī's annals are generally a summary of Ibn al-Furāt's for the period that she discusses, but does not mention the former's sloppiness. Little, *An Introduction to Mamluk Historiography,* 77–78, notes the dependence of al-Maqrīzī on Ibn al-Furāt (along with additional sources) for the annal of 694/1294–95. He is unable to make such a comparison for the other two annals which he checked (699/1299–1300 and 705/1305–6, on pp. 78–80), since that part of Ibn al-Furāt's work is not extant. In his important article on Mamluk historiography in general ("Historiography of the Ayyūbid and Mamlūk Epochs," 436–37), Little does not note any dependence between the two historians, writing only: "As far as Baḥrī Mamlūk history is concerned, al-Maqrīzī had to rely completely, of course, on earlier sources, and these he adapted freely, and sometimes indiscriminately without identifying them."

[9]For an earlier appreciation of Ibn al-Furāt's importance for the study of early Mamluk history, see Eliyahu Ashtor, "Some Unpublished Sources for the Baḥrī Period," in *Studies in Islamic History and Civilization,* ed. Uriel Heyd (published as *Scripta Hierosolymitana*, vol. 9) (Jerusalem, 1961), 13–24. There is no discussion, however, of al-Maqrīzī's use of his work. Cf. Claude Cahen, *La Syrie du nord à l'époque des Croisades et la principauté franque d'Antioche* (Paris, 1940), 88: "Autant dire que pour le viie/xiiie siécle l'intérêt d'Ibn al-Fourât est pour nous des plus réduits."

consulted with care. I will first attempt to demonstrate al-Maqrīzī´s almost complete dependence on Ibn al-Furāt for these years, and then will give several examples of the former´s shoddy summary of his earlier contemporary. I must add, however, that here and there, al-Maqrīzī does provide a snippet of information—sources usually unnamed—not given by Ibn al-Furāt, showing that he had at his disposal other sources, and indicating that he was capable of writing a synthetic work when he chose.

My first task will be to demonstrate that al-Maqrīzī indeed based his chronicle for the early sultanate on that of Ibn al-Furāt. I will employ the method used by Donald Little in his introductory study on Mamluk historiography, i.e., a comparison of subjects covered by both historians in a particular annal; later on, I will compare the language of selective short passages. Where Ibn al–Furāt mentions the name of *his* source, this will be noted also. I will provide two examples, both being significant chunks from two annals. The first will be that of 658 (1259–60), i.e., the year of the battle of ʻAyn Jālūt, while the second will be from 663 (1264–65), describing Baybars´s conquest of Caesarea and Arsūf. In the following comparison **IF** stands for Ibn al-Furāt, and **Maq** for al-Maqrīzī. If the latter author provides only a parallel text, even if somewhat shortened, then generally only the page number is given.

I. YEAR 658 (1259–60)

EVENTS LEADING UP TO THE BATTLE OF ʻAYN JĀLŪT

1. **IF:** Hülegü takes Aleppo (MS Vat., fols. 226v–227r).
   Maq: 1:422.

2. **IF:** Cites Qirṭāy al-Khaznadārī quoting Ṣārim al-Dīn Özbeg al-Ḥimṣī on his experiences and the fate of Aleppo (227r–231v = Levi della Vida,[10] 358–64).
   Maq: Not in *Sulūk*.

3. **IF:** More on the fate of Aleppo; capture of seven members of the Baḥrīyah (231v).
   Maq: 1:422–23.

[10]G. Levi della Vida, ″L´Invasione dei Tartari in Siria nel 1260 nei ricordi di un testimone oculare,″ *Orientalia* 4 (1935): 253–76.

4. **IF:** Actions of al-Nāṣir Yūsuf, ruler of Aleppo and Damascus; his fleeing from Damascus, and end of his rule (231v–233r).
   Maq: 1:423.

5. **IF:** Mongols occupy Damascus (233r–234v).
   Maq: Hülegü comes to Damascus [wrong, and not in Ibn al-Furāt]; Mongols gain possession of city (1:423).

6. **IF:** Arrival of Mongol governors in Damascus (234r).
   Maq: 1:423–24 [governors together with Kitbughā; see below].

7. **IF:** Mongols raid Palestine (234r–v).
   Maq: 1:425.

8. **IF:** Christian ″outrages″ against Muslims in Damascus (234v).
   Maq: 1:425.

9. **IF:** Arrival of Kitbughā and Baydarā; rebellion of citadel in Damascus; communications with the Franks on the coast; Ayyubid ruler of Homs arrives at Damascus after having submitted to Hülegü (234v–235v).
   Maq: 1:425.

10. **IF:** Battle in Nablus between Mongol advance force and Ayyubid rear guard; latter defeated (235v–236r).
    Maq: Not in *Sulūk.*

11. **IF:** Citadel in Damascus subdued; Baalbek taken, as is al-Ṣubaybah (236r–v).
    Maq: 1:426.

12. **IF:** Mongols keep eye on Franks on coast and send advance force to Gaza to watch Egypt; destroy fortresses in southern Syria (236v).
    Maq: No mention of Franks at this point in *Sulūk.* Short mention of force that goes to Gaza and destruction of fortresses (1:426).

13. **IF:** Baybars returns to Syria on Rabīʿ I (236v).
    Maq: 1:426.

14. **IF:** Mongol siege of Mārdīn (236v–237r).
Maq: Very short mention (1:426).

15. **IF:** Fate of al-Nāṣir Yūsuf (237r–v).
Maq: 1:426.

16. **IF:** Quṭuz strengthens his position in Egypt (237v–238r).
Maq: 1:426–27.

17. **IF:** Al-Nāṣir Yūsuf's capture by Mongols (238r).
Maq: 1:427.

18. **IF:** Cites Sibṭ Ibn ʻAbd al-Ẓāhir (=Shāfiʻ ibn ʻAlī), author of *Naẓm al-Sulūk fī Tārīkh al-Khulafā' wa-al-Mulūk* (now lost), with more details about al-Nāṣir Yūsuf's capture (238r–v).
Maq: Not in *Sulūk.*

19. **IF:** Yet another version of this story (238v).
Maq: Not in *Sulūk.*

20. **IF:** Hülegü communicates with al-Mughīth ʻUmar, ruler of Karak, to get him to submit. Al-Malik al-Qāhir ibn al-Muʻaẓẓam ʻĪsá flees to Cairo (238v).
Maq: Not in *Sulūk.*

21. **IF:** Al-Qāhir goes with Baybars to Quṭuz to strengthen his resolve to fight the Mongols (238v).
Maq: Not in *Sulūk.*

22. **IF:** Cites Ibn Duqmāq's *Nuzhat al-Anām fī Tārīkh al-Islām* about al-Nāṣir Yūsuf telling Hülegü not to take the Mamluks seriously. Hülegü plans to go east, since he heard about conflict between brothers (238v–239r).
Maq: Not in *Sulūk.*

23. **IF:** Discussion of Mongol religious beliefs (239v–240v).
Maq: Not in *Sulūk.*

24. **IF:** Hülegü decides to return to east, but not before ordering Kitbughā and Baydarā to move south and invade Egypt (240r–241v).
Maq: 1:427.

25. **IF:** Again, cites Qirṭāy al-Khaznadārī citing Ṣārim al-Dīn Özbeg al-Ḥimṣī, who describes his adventures with the Mongols, and reports that the Mongol commanders Kitbughā and Baydarā were sent south (241v–242v = Levi della Vida, 364–65).
Maq: Cites line from this section (without mentioning source): ″wa-ja‘ala Kitbughā nuyan nā’iban bi-Ḥalab wa-Baydarā nā’iban bi-Dimashq″ (1:428).[11]

26. **IF:** Resistance of Ayyubid ruler of Mayyafāriqīn, and its eventual conquest by the Mongols (242v–243r).
Maq: Not in *Sulūk.*

27. **IF:** Quṭuz kills Mongol envoys and sets off for Syria, in spite of opposition among amirs; battle of ‘Ayn Jālūt (243r ff.).
Maq: 1:427ff.

This comparison shows that there is a great probability that Ibn al-Furāt′s *Tārīkh* served as the model for al-Maqrīzī′s *Sulūk* in this annal at least. The former writer built a narrative drawn from various sources, three of which he names here. The sequence of events (with a not-insignificant number of omissions) in the *Tārīkh* is found in the parallel text in *Sulūk.* The only explanation can be that al-Maqrīzī used Ibn al-Furāt′s text as a model. The former′s (unattributed) citation of the line given in item 25 (derived from Qirṭāy al-Khaznadārī, quoting Ṣārim al-Dīn Özbeg) in exactly this place as found in Ibn al-Furāt is a further indication of the connection between the two works. This correlation between the two texts can also be seen in the second example:

II. Year 663 (1264–65)
Events leading up to the Mamluk conquest of Caesarea and Arsūf

1. **IF:** At the beginning of the year, Baybars leaves Cairo to hunt (MS Vienna, fol. 62r).
Maq: 1:523.

[11]This information is actually incorrect. See the discussion in Reuven Amitai-Preiss, *Mongols and Mamluks: The Mamluk-Īlkhānid War, 1260–1281* (Cambridge, 1995), 30–35.

2. **IF:** News received that Mongols besieging al-Bīrah (62r).
   Maq: 1:523.

3. **IF:** Order sent to Cairo for lightly-equipped contingent to be sent off from Egypt to Syria immediately (62r).
   Maq: 1:523.

4. **IF:** Sultan returns to Cairo from hunting (62r).
   Maq: 1:523.

5. **IF:** Mamluk horses at pasturage, causing a delay; this information conveyed by unspecified Franks to Mongols (62r).
   Maq: 1:523, but no information about Franks sending intelligence to Mongols.

6. **IF:** More Mamluk contingents sent to Syria (62r–v).
   Maq: 1:523–24.

7. **IF:** Sultan sets off from Cairo (5 Rabīʿ II); hadith quoted; reaches Gaza (20 Rabīʿ II) (62v).
   Maq: 1:524, but hadith not quoted.

8. **IF:** News from al-Bīrah; Baybars writes to commander of expeditionary force to hurry (62v).
   Maq: 1:524.

9. **IF:** Baybars reaches Qaratayyah,[12] goes hunting (″wa-lammā nazala al-sulṭān fī Qaratayyah rakiba lil-ṣayd″) and gets hurt. Castallan of Jaffa arrives with gifts (62v–63r).
   Maq: 1:524, but the text is corrupt: ″fa-nazala qarīban min Ṣaydā'″ [!]. Whether this is in the manuscript or a mistake of the editor is unclear.

10. **IF:** Sultan arrives at Yubnā; report comes that Mongols have withdrawn from al-Bīrah; Mamluk force arrived at al-Bīrah; orders sent out by sultan to repair that fort (63r–64v).
    Maq: 1:524–25 [very terse description].

---

[12]This was a village in the region of Jerusalem, in the vicinity of Bayt Jubrīn; Yāqūt al-Ḥamawī, *Kitāb Muʿjam al-Buldān (=Jacut's geographisches Wörterbuch)* (Leipzig, 1866–70), 4:35.

11. **IF:** Money is collected for the repair project of al-Bīrah; details of work and arrangements there (64v–65r).
Maq: 1:525.

12. **IF:** Sultan meets commoners on bridge over al-ʻAwjā' and treats them well (ed. Lyons, 84).
Maq: Not in *Sulūk.*

13. **IF:** Sultan leaves al-ʻAwjā', after battalions hunt in forest of Arsūf; Sultan scouts out Arsūf and Caesarea (ed. Lyons, 84–85).
Maq: 1:526.

14. **IF:** Mangonels and ladders built (details of types of mangonels) (ed. Lyons, 85).
Maq: 1:526 [without details of the mangonels].

15. **IF:** Sultan goes to ʻUyūn al-Asāwir (ed. Lyons, 85).
Maq: 1:526 [adds detail about location of ʻUyūn al-Asāwir].

16. **IF:** Army receives order to don equipment and marches to Caesarea (ed. Lyons, 85).
Maq: 1:526–27.

17. **IF:** History of Caesarea up to battle (ed. Lyons, 86–87=MS Vienna, 66r–67v; not all of the text is in the edition).
Maq: Not in *Sulūk.*

18. **IF:** Caesarea attacked on the morning of 9 Jumādá I. City taken by assault; citadel put under siege. Raids sent out against Baysān and Acre (ed. Lyons, 87).
Maq: 1:527.

19. **IF:** Role of sultan during siege of Caesarea (ed. Lyons, 87).
Maq: 1:527.

20. **IF:** Mamluks take citadel and destroy the city (ed. Lyons, 87–88).
Maq: 1:527.

21. **IF:** Hadith cited (ed. Lyons, 88).
    Maq: Not in *Sulūk.*

22. **IF:** Mamluk raid against ʻAthlīth and Haifa; Sultan visits ʻAthlīth (ed. Lyons, 89).
    Maq: 1:527–28.

23. **IF:** Long panegyric to sultan (ed. Lyons, 89).
    Maq: Not in *Sulūk.*

24. **IF:** Sultan goes back to Caesarea; arrival of mangonels from al-Ṣubaybah; refugees from the Franks arrive; breakout of disease among the troops (ed. Lyons, 90).
    Maq: Not in *Sulūk.*

25. **IF:** History of Arsūf, derived from Ibn Shaddād al-Ḥalabī′s *Al-Aʻlāq al-Khaṭīrah,* which is mentioned by name (ed. Lyons, 91).
    Maq: Not in *Sulūk.*

26. **IF:** Sultan arrives at Arsūf on 1 Jumādá I; siege commences; role of sultan in fighting is lauded. Ibn ʻAbd al-Ẓāhir mentioned twice as source. Initial tunnels to citadel walls are constructed; Franks counterattack. Mamluks dig trench parallel to outside moat of city (ed. Lyons, 91–94).
    Maq: 1:528–29.

27. **IF:** Presence in Mamluk camp of *al-ʻubbād wa-al-zuhhād wa-al-fuqahā' wa-al-fuqarā'*. Sultan′s largess to certain shaykhs is described (ed. Lyons, 94–95).
    Maq: 1:529 [but only *al-ʻubbād wa-al-zuhhād wa-al-fuqahā'* are mentioned].

28. **IF:** Continued bombardment of Arsūf by mangonels; final attack on city (taken 8 Rajab); hadith cited. Sultan visits tomb of local shaykh. Attack on citadel on 11 Rajab. First barbican taken; citadel surrenders (ed. Lyons, 95–96).
    Maq: 1:529 [confused account: see below].

Note: The text of Ibn al-Furāt in items 1–16 is derived almost completely from Ibn ʻAbd al-Ẓāhir, *Rawḍ,* 221–30. For items 17–28, the parallel text is in *Rawḍ,* 230–43.

From the above, we can note that apparently the model of al-Maqrīzī was also the parallel passage in Ibn al-Furāt's *Tārīkh*. Although it is theoretically possible that al-Maqrīzī had Ibn ʿAbd al-Ẓāhir's *Rawḍ* (Ibn al-Furāt's main source here) as a direct model, the fact that al-Maqrīzī had based himself on Ibn al-Furāt for the year 658 leads to the conclusion that he was working from Ibn al-Furāt's text also for 663.

The above observations have been strengthened by a systematic comparison of 22 years of annals, described above. Of course, in the framework of a short article, it is impossible to demonstrate a 100% correlation between the two texts, but I hope that the examples adduced will be convincing. It is now my wish to give several examples of al-Maqrīzī's carelessness in rendering a summary of his source.

My first example will be from the above-mentioned annal of 658, to wit, the events of ʿAyn Jālūt. If nothing else, I hope to strengthen my assertion that al-Maqrīzī's description of the battle is taken directly from that of Ibn al-Furāt. The latter author writes about the opening stages of the battle (citing Ṣārim al-Dīn Özbeg al-Ḥimṣī, whose words were first conveyed by Qirṭāy al-Khaznadārī, who in turn is cited by name by Ibn al-Furāt). This is Ibn al-Furāt's text:

> . . . wa-hum munḥadirūn min al-jabal . . . thumma taṭābaʿat al-aṭlāb awwalan fa-awwal wa-inḥadarū min safḥ al-jabal wa-duqqat al-kūsāt wa-al-ṭablk[ān]āt. . . . thumma inna al-tatār inḥāzū ilá al-jabal. . . . [. . . They (the Mamluks) descended from the hill . . . then the squadrons followed each other one by one, and descended from the foot of the hill. The drums and orchestras were played . . . Then Mongols headed for the hill.][13]

Now compare the parallel, but much shorter, passage from al-Maqrīzī:

> Wa-taṭābaʿa ḍarb kūsāt al-sulṭān wa-al-umarāʾ fa-taḥayyaza al-tatar *[sic]* ilá al-jabal [The beating of the sultan's and amirs' drums was continuous, and the Mongols headed for the hill.][14]

A number of points can be noted: First, something which may not be obvious from my shortened rendition of Ibn al-Furāt's passage is that his text is about four times as long as al-Maqrīzī's. Secondly, also not apparent from the passage that I

---

[13]Ibn al-Furāt, *Tārīkh,* MS Vatican, fol. 247r (= ed. Levi della Vida, "L'invasione dei Tatari," 366).
[14]Al-Maqrīzī, *Sulūk,* 1:430.

have cited, is that Ibn al-Furāt names his source. Thirdly, al-Maqrīzī has conflated two matters, slightly changing the wording in the process: Ibn al-Furāt writes that the ″squadrons followed *(taṭāba'at)* one another,″ and then ″the drums and orchestras were played (or beaten),″ while al-Maqrīzī has ″the beating of the sultan′s and amirs′ drums was continuous *(Wa-taṭāba'a ḍarb kūsāt al-sulṭān wa-al-umarā')*. This ″editing″ is innocuous enough, though al-Maqrīzī′s use of *taṭāba'a* is a useful telltale sign of the origins of this passage. More seriously, al-Maqrīzī completely omits the twice-told information of the Mamluks coming off a hill or height of some type; his final remark, that ″the Mongols headed for the hill″[15] is perhaps inexplicable without the information which his source provides, i.e., that the Mamluks were advancing down the slope of the unnamed hill.[16]

Al-Maqrīzī′s version so far is thus somewhat confusing, but even without recourse to Ibn al-Furāt (or his source), it does not present an insurmountable problem in reconstructing the battle. A much more significant problem is found in the continuation of the passage by al-Maqrīzī, where he writes:

> Wa-marra al-'askar fī athar al-tatar ilá qurb Baysān fa-raja'a al-tatar wa-ṣāffū maṣāffan thāniyan a'ẓam min al-awwal [The (Mamluk) army moved to the vicinity of Baysān on the heels of the Mongols. They came back (or regrouped), and they fought a second battle greater than the first.][17]

This statement has given rise in several modern renditions of the battle to the suggestion that a second battle took place near Baysān (Beit Shan), after the defeated Mongols regrouped, only to be routed yet again.[18] Yet an examination of Ibn al-Furāt′s passage, derived he says from Ibn Duqmāq′s *Nuzhat al-Anām* (in a now non-extant section), shows that this was not the case:

> Wa-kasara [Quṭuz] al-'adūw al-makhdhūl kasratan qawīyan ilá qarīb madīnat Baysān thumma 'ādū wa-iltaqaw ma'a al-muslimīn wa-kānat al-thāniyah a'ẓam min al-ūlá [(Quṭuz) dealt the (God-)forsaken

[15]This particular sentence was misread by Quatremère, *Histoire,* 1:2:104: ″Les Tatars monterent alor à cheval,″ evidently reading *al-khayl* for *al-jabal;* Thorau, ″The Battle of 'Ayn Jālūt,″ 238, cites this mistaken translation without comment.

[16]For the possible location of this ″hill″ and a detailed reconstruction and analysis of the battle, see R. Amitai-Preiss, ″'Ayn Jālūt Revisited,″ *Tārīḫ* 2 (1991): 119–50.

[17]Al-Maqrīzī, *Sulūk,* 1:431.

[18]See, e.g., Joshua Prawer, *Histoire du royaume latin de Jérusalem,* tr. G. Nahon (Paris, 1970), 2:435.

> enemy a great defeat near the city of Baysān, then they came back, and encountered the Muslims (again). The second (defeat) was greater than the first.][19]

What Ibn al-Furāt is saying is that the battle which we know as ʻAyn Jālūt was fought *near* Baysān, which is certainly true, Baysān being the largest town in the vicinity of the battlefield. At this battle there were two rounds of fighting. After an initial Mamluk success, the Mongols regrouped *at the same spot;* in the second round, the Mongols were again, and finally, defeated.[20]

Al-Maqrīzī´s account of this battle contains other careless renderings of Ibn al-Furāt´s detailed and careful narrative, which misleads the historian if consulted without reference to his source. I will note here only a couple of illustrations of al-Maqrīzī´s haphazard method in rendering the details given by Ibn al-Furāt, from the account of the events which led up to the fighting itself. For example, Ibn al-Furāt has only that commissioners of some type (called here *nuwwāb*) of Hülegü entered Damascus on 16 Rabīʻ I 658 (1 March 1260),[21] while al-Maqrīzī writes that it was the commissioners *and Kitbughā,* then commander of the Mongol advanced forces in central and southern Syria, who entered Damascus on this date.[22] One might comment that perhaps al-Maqrīzī knew something that his source did not, and added it accordingly. While this is theoretically a possibility, it can be discounted here. No other Mamluk (or pro-Mongol) writer mentions Kitbughā entering the city at this time, and contemporary Damascene writer Abū Shāmah explicitly says that the *nuwwāb* arrived alone (albeit on 17 Rabīʻ I/2 March).[23] In addition, Ibn Kathīr writes that Kitbughā had arrived in the city as early as the last day of Ṣafar 658 (14 February 1260), and he left the city a few days later for points south, evidently not returning to Damascus until late April.[24] This is of course a small detail, but indicative of al-Maqrīzī´s working method of summarizing Ibn al-Furāt, conflating here, skipping there, and occasionally adding a little extrapolation from his imagination.

With this growing skepticism, we may now look at another example of al-

---

[19]Ibn al-Furāt, *Tārīkh,* MS Vatican, fol. 248r.

[20]Actually, the course of the battle was even more complicated; see the article cited above in note 16.

[24]Abū al-Fidāʼ ʻAbd Allāh Ibn Kathīr, *Al-Bidāyah wa-al-Nihāyah fī al-Tārīkh* (rpt., Beirut, 1977), 13:219. For details of Kitbughā´s itinerary during this period, see Amitai-Preiss, *Mongols and Mamluks,* 30–33.

Maqrīzī´s additions to his source, again from the events leading up to the battle of ʻAyn Jālūt: he writes that after the final conquest of Aleppo and north Syria in February 1260, Hülegü himself is reported to have advanced to Damascus.[25] Not only is this not found in the parallel passage in Ibn al-Furāt,[26] but all the other Mamluk and Persian sources state that Hülegü remained in the north of the country. Again, we have caught al-Maqrīzī trying to improve upon his source whilst attempting to summarize it.

So much for the Mongols in Syria; what about Mamluk reactions to events there? Ibn al-Furāt reports that the Egyptian army was swelled by Turcomans, bedouins *(al-ʻurbān),* and Shahrazurīyah Kurds.[27] This information is given by al-Maqrīzī, but without the Kurds,[28] a minor but telling omission. Once the Mamluk army has set out from Cairo and has established camp at Ṣāliḥīyah, Quṭuz encounters opposition from many of the amirs who were less than enthused about continuing on to Syria and confronting the Mongols. Ibn al-Furāt, citing the now lost *Naẓm al-Sulūk* by Shāfiʻ ibn ʻAlī, provides several anecdotes showing how the sultan was eventually able to convince these recalcitrant commanders to follow him to Syria.[29] Al-Maqrīzī conflates these stories in a disjointed way: he stops one anecdote in the middle and begins the next also in the middle, leading to confusion on the part of the unwary reader.[30]

To summarize so far, the best policy for the would-be historian of this crucial year in the history of the Mamluk Sultanate, and arguably the Middle East as a whole, would be to lay the *Sulūk* aside and concentrate on other works, starting with the Vatican manuscript of Ibn al-Furāt´s *Tārīkh*. I have found the relevant pages of *Sulūk* useful only as a rough guide of events and a serviceable precis for my students.

I have concentrated so far on the events of 658/1260, since during my research on the battle of ʻAyn Jālūt, I have devoted much attention to a detailed comparison of all of the sources, most of which are in Arabic. Yet, I have found additional examples of al-Maqrīzī´s imprecise summations of Ibn al-Furāt´s chronicle. For example, Ibn al-Furāt gives a detailed break-down of the Mongol army which invaded Syria in 680/1281, based on intelligence reports which Sultan Qalāwūn received. He gives the total figure of 80,000 ″pure″ Mongols (referred to here as *al-mughul*); the rest was composed of ″Georgians, [Saljuq troops from] Anatolia,

Armenians, Franks, and renegades";[31] the last mentioned term is *murtaddah,* literally "apostates," but in the Mamluk Sultanate this expression was applied to Muslim troops in the service of the Mongols. Al-Maqrīzī condenses this report, leaving out in the process the *murtaddah,*[32] an interesting and important tidbit of information.

Al-Maqrīzī's imprecision in rendering Ibn al-Furāt's text is not limited to the realm of Mamluk-Mongol relations. Thus, in 659/1261, the latter writes—deriving his information from Ibn ʻAbd al-Ẓāhir—that Baybars met with unnamed bedouin chiefs *(umarā' al-ʻurbān)* and gave them some type of allowance or livelihood *(arzāq).*[33] This is changed by al-Maqrīzī to *iqṭāʻāt,*[34] i.e., revenue granting lands, which for all we know may or may not have been his source's intention.

Another example is taken from the realm of building. Ibn al-Furāt cites (almost exactly, I might add) Ibn ʻAbd al-Ẓāhir in the description of Baybars's reconstruction works in various fortresses in Syria, as follows: "Their moats were cleaned out, their curtain walls *(badanāt)* were widened, and they were filled with equipment."[35] Al-Maqrīzī renders this with a difference: instead of *badanāt,* the word *abrāj* (towers) is found.[36] Ibn al-Furāt, however, has made one important change in the text, or rather where he has placed it. Ibn ʻAbd al-Ẓāhir had given his information as part of a general description of Baybars's good qualities, just after the report of his accession to the sultanate. Ibn al-Furāt, on the other hand, puts this in the course of events *sub anno* 659. Al-Maqrīzī does the same, thereby showing that he was not working with Ibn ʻAbd al-Ẓāhir's biography of the sultan as his direct model, but rather Ibn al-Furāt's chronicle.

I must admit that these examples are really small change: our view of the early Mamluk Sultanate is not going to be radically altered were we just to consult al-Maqrīzī on the above matters. A more egregious error is found in al-Maqrīzī's description of the siege of Arsūf, and particularly the final successful attack on the city and the citadel. He writes:

> Fa-lamma tahayyaʻa dhālika waqaʻa al-zaḥf ʻalá Arsūf fī yawm al-khamīs thāmin Rajab, fa-fataḥahā Allāh fī dhālika al-yawm ʻinda mā waqaʻat al-bāshūrah fa-lam yashʻarū illā bi-al-muslimīn qad tasallaqū wa-ṭalaʻū ilá al-qalʻah [When this (preparation for the

> attack) was organized, the assault took place against Arsūf on Thursday, the eighth of Rajab. Allāh conquered it on this day, when the barbican (of the citadel) fell. Before the Franks knew it, the Muslims had climbed and ascended to the citadel.][37]

It can be noted that al-Maqrīzī has conflated two discrete episodes from Ibn al-Furāt's text, the first reporting that the Mamluks took the city, and the second the taking of the citadel *three days later*. Over a page of text in the printed edition of Ibn al-Furāt's chronicle separates the two pieces of evidence:

> Wa-faragha min al-sarābāt allatī ilá janīb al-khandaq min al-jihatayn wa-futiḥat fīhā abwāb muttasi'ah ḥaṣala al-zaḥf 'alá Arsūf fī nahār al-ithnayn thāmin shahr Rajab al-fard min hādhihi al-sanah wa-futiḥat fī dhālika al-nahār[38] . . . fa-lammā qadara Allāh wuqū' al-bāshūrah fī al-sā'ah al-rābi'ah min nahār al-khamīs ṭala'a al-muslimīn ilayhā taslīqan wa-mā aḥassa al-faranj bi-al-muslimīn ilá wa-qad khālatūhum min kull bāb[39] [The ditches which were to the side of the moat on two sides were completed, and the wide gates were opened. The assault against Arsūf was carried out on Monday, the eighth of the holy month of Rajab in this year. (The city) was conquered this day. . . . When Allāh decreed the falling of the barbican in the fourth hour of Thursday, the Muslims went up (the citadel) by climbing. Before the Franks noticed them, the Muslims were among them from every entrance.][40]

I believe that this comparison speaks for itself: al-Maqrīzī has failed completely to summarize accurately his source and has conveyed a false impression of what happened. If we had only al-Maqrīzī's *Sulūk* to go on here, we would have a mutilated and confused picture of the conquest of Arsūf.

On occasion, however, al-Maqrīzī inserts some information that is not found in Ibn al-Furāt, but need not be rejected out of hand. One outstanding example for this is from the battle of 'Ayn Jālūt: in the midst of the fighting, Quṭuz's horse was shot out from under him. The sultan, therefore, was in the dangerous position of walking around in the midst of a cavalry battle, until a spare horse was brought

[39]Ibn al-Furāt, *Tārīkh,* ed. Lyons, 96; Ibn 'Abd al-Ẓāhir, *Rawḍ,* 242.

[40]I am currently preparing a study of the Mamluk conquest of Arsūf, where this passage is analyzed in detail.

up and he remounted. An additional detail is told: the horse was shot by a young Mongol, who had accompanied Mongol envoys several months before to Cairo, and had been pressed into the sultan′s mamluks; he was trying to kill Quṭuz, missed, and was then cut down himself.[41] The whole story is not found in Ibn al-Furāt′s extensive account of the battle. Given al-Maqrīzī′s record, we might be justified in wondering about the credibility of this story. But a somewhat similar version appears in *'Iqd al-Jumān* by al-'Aynī, [42] so whatever its ultimate veracity, al-Maqrīzī cannot be blamed for conjuring it up.

Here and there in the annals for Baybars′s reign we find other snippets of information added by al-Maqrīzī to his summary of Ibn al-Furāt′s chronicle. One interesting example is in the account of events leading up to the campaigns against Caesarea and Arsūf. Ibn al-Furāt writes that Baybars stopped at a location called 'Uyūn al-Asāwir.[43] Al-Maqrīzī adds at this point that these springs were in ″Wādī 'Ārah and 'Ar'arah,″[44] names still used today. This is important information; although it is unclear from whence al-Maqrīzī received it and it would be desirable to have independent confirmation, this detail does point to his wide geographical knowledge.

Of greater interest and significance is information provided in the obituary of Sultan Baybars, *sub anno* 676. Here al-Maqrīzī cites *inter alia* two passages *by name*.[45] As far as I can tell this is a unique occurrence for his annals of the first decades of the sultanate′s existence. In the first of these, the source is Baybars al-Manṣūrī′s *Zubdat al-Fikrah;*[46] the second passage is from Quṭb al-Dīn al-Yūnīnī′s *Dhayl Mir'āt al-Zamān*.[47] It is important to note that the evidence derived from al-Yūnīnī is not from the last-mentioned obituary of Baybars, but rather from that of an Ayyubid scion, al-Malik al-Qāhir 'Abd al-Malik ibn al-Mu'aẓẓam 'Īsá, whose death is reported to have been intertwined with that of the sultan. What this

But in the published version (at least) of the latter′s work, the account is less full: it indeed says that Quṭuz′s horse was shot out from under him, and the sultan was in danger until a spare was brought. There is, however, no mention of the role of the Mongol captive. See Shihāb al-Dīn Aḥmad ibn 'Abd al-Wahhāb al-Nuwayrī, *Nihāyat al-Arab fī Funūn al-Adab,* vol. 29, ed. M. M. Ziyādah and M. Ḍiyā' al-Dīn al-Rayyis (Cairo, 1992), 485.

and the previously mentioned examples show is that al-Maqrīzī had other works in front of him besides Ibn al-Furāt's *Tārīkh al-Duwal wa-al-Mulūk* when he was composing the history of the early sultanate. We see that he was capable of dipping into different sources, even once using a report that was not in the parallel passage in one of them. Why al-Maqrīzī relied almost exclusively on Ibn al-Furāt's work remains an unsolved matter.

With the advent of Qalāwūn's reign (1279–90), matters begin to change, albeit slowly. Linda Northrup has already noted the "great dependence" of al-Maqrīzī on Ibn al-Furāt's chronicle, the former being a summary of the latter, mentioning that in the process many of the important documents which Ibn al-Furāt cited *in extenso* were omitted.[48] She also gives two examples of information that al-Maqrīzī provides which is not found in the earlier chronicle. The first mentions that soon after his accession Qalāwūn refrained from riding out in a traditional sultanic procession for a while because some Ṣāliḥī and Ẓāhirī amirs had turned against him and were corresponding with Sunqur al-Asqar, the rebel governor of Damascus. Qalāwūn was therefore fearful for his life.[49] A second example is that in 1268 Qalāwūn turned to several Sufi shaykhs to pray for his son's recovery from his eventually fatal illness.[50]

Additional evidence indicates that although Ibn al-Furāt remained the model for al-Maqrīzī's chronicle in the post-Baybars era, the latter author shows an increasing tendency to insert additional information, the sources for which are not always clear. Thus, in the events before the battle of Homs in 680/1281, al-Maqrīzī describes the arrival of the splendidly attired Syrian bedouin, seeking to join the Mamluk army.[51] This information is not relayed by Ibn al-Furāt, but may have its origin in the chapters on the bedouin in Ibn Faḍl Allāh al-ʿUmarī's *Masālik al-Abṣār,* where this information is found.[52] This, then, is a further indication of al-Maqrīzī's wide reading in earlier sources, which only occasionally finds expression in the annals of these years.

Of greater significance for the history of the battle of Homs is a unique piece of information found, as far as I can tell, only in al-Maqrīzī's *Sulūk.* While several sources provide in great detail the Mamluk order of battle, evidently based on

[48] Northrup, *From Slave to Sultan,* 51.

[49] Al-Maqrīzī, *Sulūk,* 1:672.

[50] Ibid., 744–45.

[51] Ibid., 690–91.

[52] Aḥmad ibn Yaḥyá ibn Faḍl Allāh al-ʿUmarī, *Masālik al-Abṣār fī Mamālik al-Amṣār: Qabāʾil al-ʿArab fī al-Qarnayn al-Sābiʿ wa-al-Thāmin al-Hijrīyayn,* ed. Dorothea Krawulsky (Beirut, 1985), 142, who is cited by Shihāb al-Dīn Aḥmad al-Qalqashandī, *Ṣubḥ al-Aʿshá fī Ṣināʿat al-Inshā*ʾ (Cairo, 1913–19), 4:209–10.

Baybars al-Manṣūrī´s *Zubdah,*[53] only al-Maqrīzī gives the following evidence: originally Qalāwūn had near him 800 royal mamluks and 4000 *ḥalqah* troopers. Then the sultan took up position on a nearby hill with 200 of his mamluks. If he saw that a squadron was encountering difficulties, he planned to reinforce it with a force of 200 royal mamluks.[54] This is truly a significant bit of evidence. One wishes for confirmation from another writer, preferably a contemporary one. I would have been satisfied had al-Maqrīzī mentioned his source, but here he has not changed his habit of not providing a reference. There is, however, no *a priori* reason to reject this evidence out of hand.

The comparison of al-Maqrīzī and Ibn al-Furāt´s annals for Qalāwūn´s reign is facilitated by the existence of printed editions for the two volumes in question. Volume 8 concludes with the annal of 696/1296–97, and the manuscript containing the subsequent annals has not been found. We are fortunate, however, to have the analysis of D. P. Little for the annal of 694/1295, which shows the dependence, with some additional information, of al-Maqrīzī on Ibn al-Furāt´s text. Little, of course, was unable to make such a comparison for the other two annals (699/1299–1300 and 705/1305–6), which served as the basis for his research on the methods and interdependence of the Mamluk sources for Bahri history. We can suppose that if indeed al-Maqrīzī had at his disposal parallel manuscripts by Ibn al-Furāt for these years, and these manuscripts would have been extant, that we would probably have seen a continued reliance on this latter writer, but perhaps with increasing references to other sources.

By way of conclusion, a number of points can be made. Al-Maqrīzī has revealed himself in the annals examined to have been an often careless summarizer of the work of Ibn al-Furāt. His chronicle for the early Mamluk Sultanate should not be ignored, but it should always be remembered that generally he is not an independent source, and must be read in conjunction with the parallel parts of Ibn al-Furāt´s *Tārīkh*. On the whole, as I have pointed out above, he should be seen mainly as a general guide to the events of the period, and as an appropriate text for students to cut their teeth on early Mamluk historiography.

Al-Maqrīzī´s sloppiness that has been revealed here should turn on red lights for all students of Mamluk history and in fact anyone who uses his many works. We have seen, through a detailed comparison with Ibn al-Furāt´s chronicle in several places, that he cut corners and was careless in his attempt to be terse for the early history of the sultanate. Might he have been equally slipshod in his other

---

[53]Baybars al-Manṣūrī, *Zubdah,* 196–97.

[54]Al-Maqrīzī, *Sulūk,* 1:693. Mention is also made that Kurdish amirs were present at the battle, but their exact position is not specified.

works for which we do not have a control? It seems to me that all scholars using his works should take this possibility into account.

My focus has been on al-Maqrīzī's carelessness and imprecision when he summarizes earlier work. There does not appear to be an ideology behind this, and there is no indication that he deliberately manipulated material for some unknown end. Even so, it is worthwhile at this juncture to remember that al-Maqrīzī was capable of such historical machinations, as the late David Ayalon showed in his study of the Mongol Yasa. There, it can be remembered, it was demonstrated that al-Maqrīzī had taken information from Ibn Faḍl Allāh al-'Umarī on the Yasa, and deliberately added to it, in order to achieve the effect he desired, i.e., an attack on the Mamluk *ḥujjāb* (chamberlains) and the system of Mamluk administrative justice.[55] While I am far from accusing al-Maqrīzī of such fabrications in the present context, it may be that his carelessness, on the one hand, and creative additions, on the other, are two facets of the same intellectual personality. In any case, an appraisal of the man's works must take both traits into account.

It is an exaggeration to have called al-Maqrīzī a villain in my subtitle, even in the historiographical sense. Sloppiness in the reporting of history, annoying as it might be, is not normally a crime; no one, as far as I am aware, has died or been injured as a result of al-Maqrīzī's slipshod methods of summarizing. But the use of the term was not just to gain the attention of the reader. I also hoped to emphasize the unwarranted dependence that modern historians of both the early Mamluk Sultanate and the Frankish East have placed on his chronicle. My hope, then, is that henceforth al-Maqrīzī will be reduced to his proper stature for the period in question, and will be seen only as an auxiliary source for the first decades of the sultanate.

But while the expression "unrecognized villain" was overdrawn, it would certainly be appropriate to look for the "unsung hero" of the historiography of the early Mamluk Sultanate. This is, so it seems to me, Ibn al-Furāt, whose careful method of compilation, his many sources, and judicious judgment put him up there with the greatest of Mamluk historians and even Arabic historical writers of all time. Certainly, without him, our knowledge of the early sultanate would be much more meager than it is now. Without a doubt, a complete scholarly edition of the manuscripts of volume 5 and 6, found in the Vatican and the Staatsbibliothek in Vienna respectively, is a desideratum.

Al-Maqrīzī as a Historian of the Reign of Barqūq

When reading the *Kitāb al-Sulūk* of al-Maqrīzī one cannot help but notice the consistently negative assessment the historian made of Barqūq and his rule in the reports on his rise from simple mamluk to *amīr kabīr* (roughly from 768–79/1366–78), and then from *amīr kabīr* (779–84/1378–82) to sultan (784–91, 792–801/1382–89, 1390–9). The criticisms he voiced are simply too pervasive and too peculiar to his work—they are absent from most of his contemporaries′ chronicles—for them to be ignored or to be explained away as mere coincidence. The aim of this article is twofold: first, it will present the arguments marshalled by al-Maqrīzī[1] in his attacks on Barqūq,[2] and then verify whether or not they are present in the works of contemporary and later historians, namely Ibn al-Furāt′s (735–807/1335–1405) *Tārīkh al-Duwal wa-al-Mulūk,* Ibn Ḥajar al-ʻAsqalānī′s (773–852/1372–1449) *Inbāʼ al-Ghumr bi-Abnāʼ al-ʻUmr,* Ibn Qāḍī Shuhbah′s (779–851/1377–1448) *Al-Dhayl fī Tārīkh al-Islām,* Ibn Taghrībirdī′s (812–74/1409–70) *Al-Nujūm al-Zāhirah fī Mulūk Miṣr wa-al-Qāhirah*, al-Jawharī al-Ṣayrafī′s (819–900/1416–94) *Nuzhat al-Nufūs wa-al-Abdān fī Tawārīkh al-Zamān,* and Muḥammad ibn Aḥmad Ibn Iyās′s (852–930/1448–1524) *Badāʼiʻ al-Zuhūr fī Waqāʼiʻ al-Duhūr;*[3] second, it will examine the historiographical

---

[1]For the purposes of this paper, three of al-Maqrīzī′s works have been examined: *Al-Khiṭaṭ,* vols. 1–2 (Beirut, n.d.); idem, *Kitāb al-Sulūk li-Ma′rifat Duwal al-Mulūk,* vol. 3 (parts 1–2), edited by Saʻīd ʻĀshūr (Cairo, 1970); and idem, *Mamluk Economics: A Study and Translation of al-Maqrīzī′s Ighāthah,* translated by Adel Allouche (Salt Lake City, 1994).

[2]So far, the only attempt to analyze the aversion of al-Maqrīzī towards Barqūq was made by Amalia Levanoni in her ″Al-Maqrīzī′s Account of the Transition from Turkish to Circassian Mamluk Sultanate: History in the Service of Faith,″ in *The Historiography of Islamic Egypt (c. 950–1800),* ed. Hugh Kennedy (Leiden, 2001), 93–105, where she noted what she perceived as inconsistencies and prejudices on the part of al-Maqrīzī: among other things his over-emphasis, unsupported by evidence, on the decline of the Turks and the rise of the Circassians (91–101) and his own personal dislike of Barqūq and his kin, the Circassians (100–2). For Levanoni, his severe attitude vis-à-vis holders of power ″might be found in his deep commitment to the role Islam allotted to religious scholars, the ulama, in the guidance of their community [103].″ In other words, it is because he perceived that the new Mamluk regime ″fell short of the traditional Muslim political theory″ (103) that he took it upon himself to criticize it. Even though the explanations presented by Levanoni are undoubtedly central and essential to our understanding of al-Maqrīzī′s denigration of Barqūq, there are other factors that need to be examined.

[3]Ibn al-Furāt, *Tārīkh al-Duwal wa-al-Mulūk,* vol. 9, pts. 1 and 2, ed. Costi K. Zurayk and Najla

significance of al-Maqrīzī´s comments.

* * * *

The criticisms voiced by al-Maqrīzī towards Barqūq are part of a complex of negative opinions that indicate not only that he, alone among the historians of this period, seriously disliked the sultan, but also felt that he was witnessing the end of an era and the dawn of another fraught with a breakdown in the traditional order, social turmoil, danger at the borders, an increasingly predatory regime, etc. The criticisms levied by al-Maqrīzī do not pervade every page of his works. They do however appear consistently in those parts of the *Kitāb al-Sulūk* that cover the rise of Barqūq until the end of his first reign, whenever he described or recounted events that were symptomatic, in his eyes, of the ills of Egypt and Syria and more specifically of the *fin d´époque* he felt he was witnessing.

The most eloquent criticism of Barqūq and his regime is to be found in an often-quoted passage of the *Kitāb al-Sulūk* that is intended as an assessment of Barqūq´s first reign, which ended in 791/1389. After noting the taxes that he abolished, the structures he ordered built, his deference, unique amongst the ˝Turkish kings,˝ towards men of religion, al-Maqrīzī said the following:[4]

Izzeddin (Beirut, 1936–38); Ibn Ḥajar al-ʿAsqalānī, *Inbāʾ al-Ghumr bi-Abnāʾ al-ʿUmr,* vols. 1–4 (Beirut, 1986); Ibn Qāḍī Shuhbah, *Al-Dhayl fī Tārīkh al-Islām,* vols. 1, 3, 4, ed. ʿAdnān Darwīsh (Damascus, 1977–97); Ibn Taghrībirdī, *Al-Nujūm al-Zāhirah fī Mulūk Miṣr wa-al-Qāhirah,* vols. 11–13, ed. Muḥammad Ḥusayn Shams al-Dīn (Beirut, 1992); and idem, *History of Egypt 1382–1467*, trans. William Popper, University of California Publications in Semitic Philology, vols. 13, 17, 18 (Berkeley, 1954–); al-Jawharī al-Ṣayrafī, *Nuzhat al-Nufūs wa-al-Abdān fī Tawārīkh al-Zamān,* vol. 1, ed. Ḥasan Ḥabashī (Cairo, 1970); Muḥammad ibn Aḥmad Ibn Iyās, *Badāʾiʿ al-Zuhūr fī Waqāʾiʿ al-Duhūr*, vol. 1 (Wiesbaden, 1974–75). Al-ʿAynī´s *ʿIqd al-Jumān* is the only one of the major chronicles of the period I was unable to consult. As will become apparent below, of all the above-mentioned historians, Ibn Iyās (852–930/1427–97) is the only one to systematically denigrate Barqūq. Interestingly, the overwhelming majority of his criticisms are either taken directly from al-Maqrīzī or are paraphrases of his accounts.

[4]*Kitāb al-Sulūk,* 3:2:618–19. The translation is William Popper´s in Ibn Taghrībirdī, *History of Egypt,* 13:42–43. Ibn Taghrībirdī made up for the dearth of non-political facts in his chronicle by adding to his work the type of information which makes his chronicle extremely useful: the accounts he reports from people who lived through this period, namely his father´s associates and acquaintances, and the first-hand knowledge he had of the sultan and his family, to whom he was related. In the case of the quotation at hand, Ibn Taghrībirdī clearly identifies the passage as al-Maqrīzī´s (something he rarely does in his narrative unless, for example, he wants to challenge his teacher) in order to criticize him. I have added in italics a few sentences that are present in al-Maqrīzī´s *Kitāb al-Sulūk* but were written differently or simply omitted in the *Nujūm al-Zāhirah.* On the other hand, I have removed passages that are not to be found in the *Kitāb al-Sulūk* but are present in the *Nujūm al-Zāhirah.*

> But he was avaricious, and in his days has introduced the practice of the open offering of bribes; indeed he hardly ever appointed anyone to an office or administrative position except for money, *so the lowlifes acceded to prestigious positions and to high stations,* and on this account political corruption was common; he also had an inordinate predilection for advancing men of the lowest classes and debasing those of noble family so that *he changed the social order amongst people,*[5] *and he antagonized the grandees amongst the Turcomans and Arabs in Syria, Egypt, and the Hijaz.* In his days three disgraceful practices became notorious: pederasty, *to such an extent that prostitutes, for their lack of business, had to imitate the* ghulmān *in order to boost the demand for their debauchery,* because of the favor which he openly showed to handsome mamluks *and the accusation levied against him and his amirs that he had intercourse with them;* the frank acceptance of bribes, *in which he was imitated by district governors, until such behavior ceased to be reprehensible;* and the decline in the business of the market and the *paucity of gain,* because of his niggardliness and the rarity with which he made gifts to anyone. So his faults were many times more numerous than his virtues.[6]

The charges levelled here by al-Maqrīzī against Barqūq, namely the accusations of pederasty, the taking of briberies and niggardliness, his overturning of the social order, his antagonizing of internal and outside forces, etc., even though forcefully put,[7] do not cover the whole range of criticisms that are to be found in other parts of the *Kitāb al-Sulūk*.

For one thing, the criticisms elaborated by al-Maqrīzī concerning the character of Barqūq touch upon much more than the shortcomings noted in the quotation above. In those instances where al-Maqrīzī commented on the very persona of

---

[5]This is my understanding of ″wa-ghayyara mā kāna lil-nās min-al-tartīb,″ whereas Popper reads it as ″he brought about a change in the orderly conduct of people,″ Ibn Taghrībirdī, *History of Egypt*, trans. Popper, 13:43.

[6]Following this passage, Ibn Taghrībirdī systematically rebuked his former teacher by noting in the case of pederasty and the taking of bribes that they were old practices, the former going as far back as the Khurasānīs′ entry into Iraq during the Abbasid revolution (ibid.). Ibn Taghrībirdī stated that the accusation of niggardliness might hold if he is compared to his predecessors, ″but he was generous in comparison to those who came after him″ (ibid., 44). The refutation of al-Maqrīzī′s discourse is accompanied by harsh criticisms as for example, ″Shaikh Taqî al-Dîn (God have mercy on him) was guilty of well-known inconsistencies. . . .″ (ibid.).

[7]One of them, that of pederasty, was found nowhere else in the chronicle.

Barqūq, the latter is depicted as a conniving individual who maneuvered through the meanders of politics to secure his power. For example, as early as 23 Rabīʻ al-Thānī 779/ 28 August 1377, following the removal of Yalbughā al-Nāṣirī by Barqūq and Barakah, al-Maqrīzī noted that the civil wars, the mamluk revolts, and the changes in government that had previously taken place were all but a springboard for Barqūq's taking over of the country. Barqūq, continued al-Maqrīzī, quickly settled into office and governed on his own until he was taken to the grave, "[an] honored, invincible, revered, and lofty [man]."[8] The Machiavellian nature of Barqūq was again emphasized by al-Maqrīzī on a number of other instances. For example, when Barqūq used the services of the qadis and the ulama on 19 Ṣafar 782/ 25 May 1380 to ease the tension between himself and his former ally Barakah, al-Maqrīzī saw nothing in the motivation of the *amīr kabīr* but "ruse and cunning."[9] In 793/1391, one year after his return to the throne, the arrest of an amir by Barqūq is yet another opportunity for al-Maqrīzī to dwell upon the sultan's calculating ways; commenting on the arrest of Āqbughā al-Mārdīnī, he said: "This is the habit of the sultan: he is patient with his enemies in that he does not take revenge on them until he has the opportunity to discipline them for a punishable crime so that he does not appear to be seeking revenge, thanks to his self-command and *retenue*. Follow this and you will realize that it is as I said to you."[10]

---

[8]*Kitāb al-Sulūk,* 3:1:316. Ibn Taghrībirdī noted, for the same event, that the removal of Yalbughā took place a few days after Barqūq and Barakah had dismissed a number of amirs from office, *Nujūm al-Zāhirah,* 11:130. Ibn Qāḍī Shuhbah made no negative comments and simply mentioned Yalbughā's removal, *Al-Dhayl,* 3:548. Ibn Ḥajar simply commented that Barqūq "held absolute power," *Inbāʼ al-Ghumr,* 1:234. Ibn Iyās was the only one of the chroniclers to echo al-Maqrīzī: he repeated his account almost word for word and then added "and he established the Circassian regime," *Badāʼiʻ al-Zuhūr,*1:2:212.

[9]*Kitāb al-Sulūk,* 3:1:379. Al-Maqrīzī was more discerning in the analysis he later made of the causes behind the conflict between the two former "brothers." He mentioned the negative effects of the 781 rebellion led by Īnāl al-Yūsufī, the then *silāḥdār,* with the alleged collusion of Aytamish al-Bijāsī, Barqūq's close ally, whose purpose was to get rid of Barakah, and then he noted the following: because of the jealousy that appears frequently between associates, it was in the nature of things for the two amirs to try to monopolize power and to seek glory for their own person (ibid., 3:1:380–81). See Levanoni, "Al-Maqrīzī's Account of the Transition," 96–100, for an analysis of the Īnāl rebellion and al-Maqrīzī's alleged *parti pris* in its reporting. All four chroniclers who reported this event—Ibn Ḥajar, *Inbāʼ al-Ghumr,* 2:2; Ibn Taghrībirdī, *Al-Nujūm al-Zāhirah,* 11:141ff; Ibn Qāḍī Shuhbah, *Al-Dhayl,* 1:22; and Ibn Iyās, *Badāʼiʻ al-Zuhūr,* 1:2:254–55—refrained from making any negative comment about Barqūq.

[10]*Kitāb al-Sulūk,* 3:3:734. None of the chroniclers who also reported this event, namely Ibn Ḥajar, *Inbāʼ al-Ghumr,* 3:73, Ibn Taghrībirdī, *Al-Nujūm al-Zāhirah,* 12:8, Ibn Qāḍī Shuhbah, *Al-Dhayl,* 1:368–69, al-Jawharī al-Ṣayrafī, *Nuzhat al-Nufūs,* 1:323, and Ibn al-Furāt, *Tārīkh al-Duwal,* 9:2:247, made any comment that could be construed as being negative.

Thinly veiled references to Barqūq′s alleged cowardice and calculating personality can also be construed from the remark al-Maqrīzī made in his report on the aftermath of the conflict between Barakah and Barqūq in 782: ″It is incredible that during this serious incident, Amir Barqūq did not ride into battle for even an hour of the day, but remained put while the battle between his supporters—chief among them Amir Aytamish—and those of Barakah [was taking place], until God gave him victory effortlessly *(min ghayr ta'ab)*.″[11] On top of Barqūq′s cunning, al-Maqrīzī associated with him character flaws that are of a non-political nature such as indulgence in drinking[12] and pederasty.[13]

Beyond the alleged immorality of Barqūq the man, al-Maqrīzī also often sought to indict the regime that gave rise to him and that he later headed, its genesis and political personnel. And he does this from a particular angle, that of a member of the *khāṣṣah* who was witnessing the rise of ″men of the lowest classes″ and the debasing of those of ″noble family.″ The sentiment of dismay al-Maqrīzī felt towards this situation can be seen expressed in various parts of the *Kitāb al-Sulūk,* whether about the upstart and greedy *julbān* or members of the *'āmmah*. On 8 Dhū al-Qa'dah 779/8 March 1378, upon the nomination of a new roster of amirs, many of whom had been simple soldiers *(mafāridah)* prior to their rebellion, al-Maqrīzī exclaimed: ″The elevation of the lowlifes became the matter of proverbs as the mamluk recruits who yesterday had been unknown quantities, by means of murder, banishment, and various forms of torture, had become kings to whom the bounties of all things are brought and who ruled the kingdoms of the world according to their wants. From then on, the situation of the land changed with the

---

[11]*Kitāb al-Sulūk,* 3:1:385. Ibn Qāḍī Shuhbah, *Al-Dhayl,* 1:26, was the only chronicler to actually narrate this story that is almost identical to al-Maqrīzī′s.

[12]Of the two instances recorded in the *Kitāb al-Sulūk* concerning the drinking habits of Barqūq, the first is reported as a matter of fact without any criticisms (3:2:590). As for the other, in which al-Maqrīzī described a big party held by the sultan at the hippodrome, it is replete with negative comments (3:2:902): he stated that the sultan drank with the mamluks and was warned about doing so, and that later, at the end of the party, the populace was allowed to loot both food and beverages; this, al-Maqrīzī added, was an ugly day during which sacrilegious things occurred, so that it dawned upon *ahl-al-ma'rifah* that this was the end of it all. For the first event, the accounts of both Ibn Taghrībirdī, *Al-Nujūm al-Zāhirah,* 11:210, and al-Jawharī al-Ṣayrafī, *Nuzhat al-Nufūs,* 1:51, were either modeled upon that of al-Maqrīzī or simply directly quoted from the *Kitāb al-Sulūk.* The second incident elicited more negative reactions. For example, Ibn Taghrībirdī, *Al-Nujūm al-Zāhirah*, 12:66–67, Ibn Qāḍī Shuhbah, *Al-Dhayl,* 1:662, and Ibn Iyās, *Badā'i' al-Zuhūr,* 1:2:500–1, actually quoted al-Maqrīzī′s account, whereas Ibn Ḥajar stated the facts and then added that a *faqīr* who decried what was going on was beaten and humiliated, *Inbā' al-Ghumr,* 3:383–85.

[13]See note 7, above.

change of its rulers."[14]

The imbalance in the traditional social order was not only the work of the *julbān* but also that of the *'āmmah.* Al-Maqrīzī might have been more prone than, say, an Ibn Taghrībirdī to report the way events such as famine impinged on the lives of the populace,[15] but his comments on the *'āmmah,* particularly when it was involved in "political action" on the side of Barqūq, reveal a high degree of antagonism. Al-Maqrīzī noted on a number of occasions that the common people liked Barqūq and that he did his utmost to protect them so that they sympathized with and felt strongly for him.[16] Of note are his thoroughly negative characterization of the *'āmmah,* which he alone did among contemporary historians: during his description of the events surrounding Īnāl al-Yūsufī's rebellion in Rajab 781/November 1379, al-Maqrīzī noted Barqūq's appeal to the *'awāmm* and then immediately observed that he was "very cunning and deceitful. They [the plebeians] rose at once and shouted together: 'Walk ahead of us!' So he went, surrounded by them as if they were a swarm of locusts."[17]

---

[14]*Kitāb al-Sulūk,* 3:1:289. Only Ibn Iyās narrated this story by copying al-Maqrīzī almost word for word, *Badā'i' al-Zuhūr,* 1:2:191–92. Even though Barqūq had not yet emerged form obscurity and is not mentioned by al-Maqrīzī in reference to this event, namely the aftermath of the murder of al-Ashraf Sha'bān, as a Yalbughāwī mamluk, he was very much involved in the coup; see *Kitāb al-Sulūk,* 3:1:155 for a brief summary of Barqūq's travels and activities following the murder of Yalbughā al-'Umarī in 768/1366. See also *Kitāb al-Sulūk,* 3:1:277, 287–88, in which much is made about the lowly status and *arriviste* nature of the new military elite. On the political activities of the *julbān* and those Levanoni calls rank-and-file mamluks during the period at hand, see her "Rank-and-file Mamluks versus Amirs: New Norms in the Mamluk Military Institution," in *The Mamluks in Egyptian Politics and Society*, ed. Thomas Philipp and Ulrich Haarmann (Cambridge, 1998), 25–28.

[15]For a discussion of the way the *'āmmah* were treated by historians during the Circassian period, see Irmeli Perho, "Al-Maqrīzī and Ibn Taghrībirdī as Historians of Contemporary Events," in *The Historiography of Islamic Egypt*, 93–105.

[16]*Kitāb al-Sulūk,* 3:1:352–53. Here again, Ibn Iyās was the only one amongst the chroniclers to echo the relationship between Barqūq and the *'āmmah, Badā'i' al-Zuhūr,* 1:2:240.

[17]*Kitāb al-Sulūk,* 3:1:365–66. See also 3:1:382, 386. Only Ibn Iyās, *Badā'i' al-Zuhūr,* 1:2:257, used the term *jarād al-muntashir* (swarm of locusts). Interestingly, even the description of a rather mundane event such as a new fashion trend amongst women in Cairo provided al-Maqrīzī with the opportunity to criticize the uppitiness of the lower classes: "In this [the wearing of large dresses] the females of the populace overindulged until they imitated in their dress the women of the rulers and the elite *[al-mulūk wa-al-a'yān],"* *Kitāb al-Sulūk,* 3:2:750. The *a'yān/'awāmm* dichotomy can also be seen in al-Maqrīzī's account about a *maẓālim* court held by Barqūq on 28 Ramadān 789/ Saturday 12 October 1387: great fear, said al-Maqrīzī, overtook members of the elite "as the lowlifes became daring in dealing with the grandees," ibid., 3:2:566. Concerning this last event, Ibn Ḥajar said "and whoever amongst the villains wished to disrespect the grandees, did so," *Inbā' al-Ghumr,* 2:249, while al-Jawharī al-Ṣayrafī simply paraphrased al-Maqrīzī, *Nuzhat*

But nothing appears to hurt the class sensibility of al-Maqrīzī more than the perceived decline in standing and power of the civilian elite in general and the ulama class in particular, and the concomitant social ascension of *arbāb al-sayf* and their taking over of domains previously the exclusive preserve of the *arbāb al-qalam.* The importance al-Maqrīzī attached to the social class he belonged to is clearly discernible in his writings.[18] In *Kitāb al-Sulūk,* al-Maqrīzī reported on an event dated 9 Jumādá al-Thānī 781/ 21 September 1379 which witnessed the removal of a Hanafi judge who had harbored a man who, because he was sought by the *ḥājib,* had placed himself under the protection of the *shar'*. After stating that the *ḥājib* had complained to Barqūq who had then acquiesced to his wishes, namely the removal of the qadi, al-Maqrīzī then declared that "this was also one of the events which were unheard of before whereby the station of the *quḍāh* was diminished and the reach of the *hujjāb*'s rulings extended according to their fancy; and their evil flourished without it being checked by either knowledge or faith."[19]

Also of great concern to al-Maqrīzī, and a symptom in his eyes of the overall worsening of the state of the kingdom, was the very denigration and lowering of the standing of the ulama in the eyes of the holders of temporal power. Nowhere is this more obvious, and again peculiar to our historian, than in an incident that took place in 783/1381 during which Barqūq spoke ill of the ulama by declaring that they were not Muslims. "It was one of those ugly novelties," noted al-Maqrīzī,

> that the *amīr kabīr* and his entourage started to show ill respect to the *quḍāh* and the *fuqahā',* and that the amirs and mamluks started

al-Nufūs, 1:157.

[18]Levanoni, "Al-Maqrīzī's Account of the Transition," 102–5.

[19]*Kitāb al-Sulūk,* 3:1:361. Ibn Ḥajar, *Inbā' al-Ghumr,* 1:303–4, devotes two short paragraphs to this story but makes no comment à la al-Maqrīzī. In his *Badā'i' al-Zuhūr,* 1:244–45, Ibn Iyās presented an account similar to but shorter than al-Maqrīzī's. Al-Maqrīzī made similar comments concerning the office of the *ustādār* whose holders acted as if they were *quḍāh*, *al-Khiṭaṭ*, 1:222. For another incident of this type, see *Kitāb al-Sulūk,* 3:2:636–37, Ibn Ḥajar, *Inbā' al-Ghumr,* 2:329, and Ibn al-Furāt, *Tārīkh al-Duwal,* 9:1:110–12, who give similar accounts of the same event. In the same vein, see *Kitāb al-Sulūk,* 3:1:330, on the indignation expressed by al-Maqrīzī when reporting that people of high rank destined for mulcting were delivered to the *wālī* of Cairo instead of to the *shādd al-dawāwīn* or the *muqaddam al-dawlah,* both of whom usually acted upon edicts issued by the vizier: ". . . the rulings of the *wālī* never extended beyond the populace and the criminals *[ahl al-jarā'im]* amongst them. As for the soldiery, the secretaries, and the elite of the merchants, they were beyond the reach of his ruling, as they were the responsibility of *nā'ib al-sulṭān,* and if not his then that of the *ḥājib al-hujjāb,* because each individual has a station peculiar to him he does not exceed. Now barriers collapsed and each person started to exceed his station and to ignore his lot." Ibn Ḥajar, *Inbā' al-Ghumr,* 1:264, and Ibn Iyās, *Badā'i' al-Zuhūr,* 1:224, both mentioned this event without making any value judgment.

> to debase their immunity. All that after they (the *quḍāh* and the *fuqahā'*) had witnessed the lengths the sultan and the grandees from amongst the amirs used to go to dignify them, and after the realization that it was through them that they had known the religion of Islam, and that it was in the shadow of their sanctity that they lived. The grandest of them considered it a blessing to kiss the hand of the learned. Things changed dramatically *[inqalaba al-amr]* and the opposite situation started to prevail, so the instances of amirs and mamluks demeaning them increased because of what they had learned from the *amīr kabīr*. Things then came to a head, and from the end of the Ẓāhirī Barqūq regime, through that of al-Nāṣir Faraj and beyond, the rulers continued to demean the station of the *quḍāh* and the *fuqahā':* the lowest of the slave boys and the vilest of peddlers spoke ill of them. . . .[20]

Curiously, the outrage felt by al-Maqrīzī with regard to the fate of the class he belonged to did not prevent him from reporting stories about its corrupt practices, notably employment through money payments or the intercession of a powerful patron. Whether he decried his peers in order to uphold his attachment to "the long-held Islamic societal ideal of intellectual success—[that of a] scholar untainted by the corrupting hand of government,"[21] or to settle scores with them,[22] al-Maqrīzī was critical of those among his peers who bought their charges,[23] and of the state for encouraging such a practice.[24]

---

[20] *Kitāb al-Sulūk,* 3:2:448. Ibn Ḥajar, *Inbā' al-Ghumr,* 2:47–48, and Ibn Qāḍī Shuhbah, *Al-Dhayl,* 1:61, reported this incident without any comment while Ibn Iyās, *Badā'i' al-Zuhūr,* 1: 291, quoted al-Maqrīzī by name but made changes to his report.

[21] Anne F. Broadbridge, "Academic Rivalry and the Patronage System in Fifteenth-Century Egypt: al-'Aynī, al-Maqrīzī, and Ibn Ḥajar al-'Asqalānī," *Mamlūk Studies Review* 3 (1999): 85.

[22] One of the most devastating attacks on his peers is to be found in the annal of the year 820 in which he blasted the military personnel of the state as well as its civilian functionaries, especially the *muḥtasib*s and the *quḍāh, Kitāb al-Sulūk,* 4:1:388, 389.

[23] Government service need not taint an office-holder. For example, at the very beginning of his 785 annal, we see al-Maqrīzī give a glowing and very long description of the character and person of Shams al-Dīn Kātib Arlān, the newly appointed vizier who, in his eyes, constituted the quintessential example of the perfect civil servant, *Kitāb al-Sulūk,* 3:2:486–87.

[24] See for example *Kitāb al-Sulūk,* 3:1:293, 333–34, 3:2:454, 746, 810, 872. As usual, he is alone most of the time among Ibn Ḥajar al-'Asqalānī, Ibn Taghrībirdī, Ibn Qāḍī Shuhbah, and al-Jawharī al-Ṣayrafī in making value judgments about, and mentioning the influence of money on, nominations. Only Ibn Iyās usually copied or paraphrased him directly and thus mentioned the negatives without fail.

The role of the state in fostering bribery[25] has already been pointed out in the lengthy citation from the *Kitāb al-Sulūk* quoted above, but bribery is only one of what appears to be a panoply of means, other than the accepted ones, used by the regime to sustain and enrich itself. Certainly, most of the methods used by Barqūq and his collaborators were not new.[26] The sources dealing with the period preceding that of Barqūq all the way to the early Mamluk Sultanate and beyond abound with stories that illustrate various types of money extraction, whether ″shake-downs″ and the arbitrary seizing of property of both civilian and military personnel, looting, or the occasional forced sale or purchase of goods, etc. However, a cursory and admittedly unscientific survey of mostly secondary sources seems to show that the incidence of such stories as well as of reports about new means of money extraction, such as the confiscation of *awqāf,* is more pervasive in Barqūq′s period and later than in the preceding Bahri era.

Even though stories about mulcting are as prevalent in other chronicles as they are in his, in this respect al-Maqrīzī again differed from his contemporaries in going it alone with regard to emphasizing the evil inherent in the corruption of the state, and describing its mechanisms.[27] In his report about 13 Dhū al-Ḥijjah 779/12 April 1378, less than seven months after Barqūq and Barakah had monopolized power following the removal of Yalbughā al-Nāṣirī, al-Maqrīzī depicted the way this duumvirate functioned and presented the earliest evidence of systemic corruption in the state: the two then friends divided all matters between them and while decisions pertaining to nominations to and removals from office were taken in the house of Barakah, the countersigning of all was in the hands of Barqūq in the royal stables.[28] No position, continued al-Maqrīzī, could be obtained by anyone

---

[25]In his *Ighāthah* (trans. Allouche, 52–53), al-Maqrīzī indicted bribery as one of the three causes behind the crises of the years 807/1404–5 and 796/1393–94. See also the *Khiṭaṭ*, 1:111, where al-Maqrīzī dated back the practice of bribery to the Ayyubids while noting that Barqūq over-indulged in it.

[26]For a general work on this issue, see Ḥasanayn Muḥammad Rabī‘, *The Financial System of Egypt, A.H. 564–741/A.D. 1169–1341* (London, 1972).

[27]Examples of different types of malversation and administrative expedients on the part of the Ẓāhiri regime, such as mulcting, confiscations of properties, *awqāf,* and orphans′ money, forced sales and purchases, etc., are legion in the *Kitāb al-Sulūk:* 3:1:137, 140, 172, 215, 234, 235, 241, 253, 268, 282, 289, 290, 291, 292, 319, 321, 330, 336, 337, 341, 343, 346, 347, 352, 354, 355, 360, 364, 368, 369, 370, 371, 372, 377, 386, 389, 390, 391, 409, 410, 411, 412; 3:2:440, 450, 455, 456, 467, 468, 471, 482, 490, 500, 501, 520, 531, 553, 561, 566, 583, 624, 627, 628, 636, 637, 648, 649, 650, 659, 660, 661, 663, 668, 669, 672, 673, 675, 677, 678, 679, 680, 681, 682, 683, 690, 703, 709, 712, 721, 723, 724, 725, 727, 732, 734, 736, 746, 747, 761, 763, 765, 770, 773, 781, 784, 796, 799, 802, 810, 812, 816, 829, 833, 850, 852, 853, 854, 855, 856, 857, 861, 862, 871, 872, 880, 895, 896, 922, 924, 925, 928, 933.

[28]*Kitāb al-Sulūk,* 3:1:324.

without payment of money so that ″society′s lowlifes and wretches acceded to what their minds fancied in terms of prestigious positions and high situations, and a great disaster befell people and led necessarily to the destruction of Egypt and Syria. . . .″[29] Elsewhere, as part of the events of 23 Dhū al-Ḥijjah 781/31 March 1380, al-Maqrīzī described in detail the predatory fiscal policies of governors who enriched themselves at the expense of the local population, only to see themselves replaced while they were still in office by people who had paid a larger amount, and also mulcted and deprived of all that they had accumulated in terms of movable and immovable property; and the province of Egypt, concluded al-Maqrīzī, became corrupt because of this practice.[30]

The leitmotiv, encountered above, peculiar to al-Maqrīzī, that Egypt and Syria had declined and were no longer the same as before was used by him while highlighting the shortcomings of the state at yet another level: its antagonizing of both internal and external forces, namely the Arabs in both Egypt and Syria, and the Turcomans in the Anatolian marches, something which caused both political instability and economic hardship to the kingdom. For example, al-Maqrīzī related news that reached Cairo on 25 Dhū al-Ḥijjah 780/13 April 1379 about a Mamluk defeat in Anatolia: after having attacked and looted the encampments of Turcomans who had come to them bearing gifts and asking for peace, the Mamluk forces of Syria fell into a trap set by remaining Turcomans forces and were wiped out, their military equipment, their money, horses and camels, etc., taken away. ″This,″ commented al-Maqrīzī,

> caused a weakness in the state: the Turcomans were the equivalent of fortifications protecting the country, and every year tens of thousands of sheep would be garnered from them along with alms payment in kind called the *'idād.* From them, the people of Aleppo reaped uncountable benefits, and if the sultan delegated them to fight a war they acquiesced to his order and they went ahead in obeisance and prostration. The ill treatment and the oppression they were subjected to transformed them into the enemies of the state who kill its soldiers, loot its moneys, and take over its dependencies. . . .[31]

---

[29]Ibid. Ibn Ḥajar, *Inbā' al-Ghumr,* 1:326–27, Ibn Taghrībirdī, *Al-Nujūm al-Zāhirah,* 11:133, Ibn Qāḍī Shuhbah, *Al-Dhayl,* 3:555, noted the changes in the top echelons of the state, but offered no information on the mechanisms of corruption described by al-Maqrīzī. Ibn Iyās, *Badā'i' al-Zuhūr,* 1:220, offered almost the same account as al-Maqrīzī whom he appeared to have paraphrased.

[30]*Kitāb al-Sulūk,* 3:1:371–2. Ibn Iyās, *Badā'i' al-Zuhūr,* 1:251, is the only chronicler to give an account of this mechanism of money extraction. His report is almost exactly the same as al-Maqrīzī′s.

[31]*Kitāb al-Sulūk,* 3:1:347–48. Neither of the other chroniclers who reported this event, Ibn Ḥajar

Al-Maqrīzī used the same alarmist tone in his analysis of the relations between the state and the Arabs. For instance, on two occasions he decried the harshness of Mamluk governors in dealing with the nomads of Egypt and Syria, and on both occasions his reports ended with laments about the fact that such behavior was pivotal in the destruction of both regions.[32]

The last category of criticisms to be dealt with here is al-Maqrīzī's apparent dislike of the very ethnic stock of the new ruling elite, the Circassians. Politically, it has been shown that he displayed a marked bias against the Circassians in the very way he presented the events that accompanied the struggle between Barqūq and Barakah which came to a head in Rabī' al-Awwal 782/June 1380.[33] Thus, among other things, al-Maqrīzī generalized to all Circassians the accusation of inveterate plotting he had leveled earlier against Barqūq.[34] Elsewhere in his *Kitāb*

---

al-'Asqalānī and Ibn Qāḍī Shuhbah, made similar comments: the latter gave an account of the battle, *Al-Dhayl,* 3:579, while the former, in a couple of sentences, noted the defeat of the army and the fact that from then on, the Turkmān refrained from paying the *'idād, Inbā' al-Ghumr,* 1:273. Ibn Iyās's account, *Badā'i' al-Zuhūr,* 1:237–38, reproduced almost word for word al-Maqrīzī's comments.

[32]In the case of Egypt, the occasion is the reporting of the nailing of Awlād al-Kanz Arabs on 17 Muḥarram 781/5 May 1379: the severity of the governor's oppression caused the rebellion of those Arabs and their depredations, to such an extent that "Aswan escaped the control of the state and was then destroyed," *Kitāb al-Sulūk*, 3:1:352. Of the other chroniclers, only Ibn Ḥajar, *Inbā' al-Ghumr*, 1:297, reported the fact of the *wālī*'s oppression of the Arabs and their defeat at his hands, but made no value judgment. As for Syria, the event in question, in early Rajab 785/late August 1383, at the very beginning of Barqūq's sultanate, was the attack launched by Yalbughā al-Nāṣirī on Nu'ayr ibn Ḥayyār, who had just been replaced by 'Uthmān ibn Qārah as *amīr al-'arab.* Nu'ayr was defeated, his encampment looted, his womenfolk taken away: "this," said al-Maqrīzī, "was also one of the greatest reasons for the corruption of the state, and one of the most important reasons behind the destruction of Syria," *Kitāb al-Sulūk*, 3:2:496. Ibn Taghrībirdī and Ibn Ḥajar did not report the event, while Ibn Qāḍī Shuhbah, *Al-Dhayl,* 1:111, presented the bare facts without comment. As for al-Jawharī al-Ṣayrafī, *Nuzhat al-Nufūs*, 1:72–73, and Ibn Iyās, *Badā'i' al-Zuhūr*, 1:334, both offered accounts very close to al-Maqrīzī's that incorporated his negative characterization of the event: in al-Jawharī al-Ṣayrafī's story, al-Maqrīzī's name actually appeared directly before the quote describing the evils that befell Syria.

[33]See note 9, above.

[34]"And the Turkish government came to an end completely. They [the Turkish amirs] were pursued, executed, banished, and imprisoned. And the Circassians had already . . . spoken among themselves, saying that there would be a great civil war that would be put down, and after it another one would break out between them and the Turks in which they would vanquish the Turks after a fight, and [then] they would be under their command. And when there was the rebellion led by Īnāl, they spoke of it aloud and so unashamedly and made it public to the degree that the most senior and the most junior of them spoke of it. And thus it indeed happened;" Levanoni's translation, quoted in her "Al-Maqrīzī's Account of the Transition," 95; see also *Kitāb al-Sulūk,* 3:1 :385. Ibn Qāḍī Shuhbah, *Al-Dhayl,* 1:26, and Ibn Iyās, *Badā'i' al-Zuhūr,* 1:262, both quoted al-Maqrīzī

al-Sulūk, al-Maqrīzī appeared to be shocked at the fate of the mamluks of Uljāy al-Yūsufī (d. 775/1373), a former grandee of al-Nāṣir Ḥasan, who on 23 Rabīʿ al-Thānī 779/ 28 August 1377 were accused of plotting against Barqūq and were imprisoned in the Shamāyil treasury, the prison of the common criminals. ″It was unheard of before this incident,″ noted al-Maqrīzī, ″for the Turks, the foundation of the state *(rijāl al-dawlah),* to be humiliated in this fashion.″[35]

* * * *

The discourse of al-Maqrīzī on Barqūq′s reign is remarkable on many accounts. Firstly, even though, as will be shown below, his tone did change in his accounts of the sultan′s second reign, the antipathy he felt towards Barqūq is clearly evident. As a matter of fact, no other sultan of the Circassian period attracted the ire of al-Maqrīzī more consistently than Barqūq did. This is not to say that al-Maqrīzī did not have anything negative to say about post-Barqūq Circassian sultans or their regimes. As a matter of fact, in his *Kitāb al-Sulūk,* al-Maqrīzī did savage Faraj,[36] Shaykh,[37] Barsbāy,[38] and their respective regimes, but his criticisms do not

---

almost word for word, without identifying him as their source, especially his comments concerning the end of the Turkish state, but refrained from mentioning his litany about a conspiracy. Levanoni, ″Al-Maqrīzī′s Account of the Transition,″ 95, said that Ibn Taghrībirdī was influenced by al-Maqrīzī′s account and indicated a page number in the Cairo edition of the *Nujūm al-Zāhirah*. In the Beirut edition, however, I was not able to find this reference.

[35]*Kitāb al-Sulūk,* 3:1:331. Ibn Taghrībirdī presented no report on the incident, while Ibn Qāḍī Shuhbah stated the facts and then noted that ″a great humiliation befell the Turks the like of which they had never experienced before,″ *Al-Dhayl,* 3:571. As for Ibn Ḥajar, *Inbāʾ al-Ghumr,* 1:265, he simply related that ″they were greatly humiliated.″ Finally, Ibn Iyās stated the facts without referring to any humiliation, but concluded his report by saying ″this was the first assault by the Atābak Barqūq on the Turkish mamluks and the first public manifestation of the Circassian regime,″ *Badāʾiʿ al-Zuhūr,* 1:334.

[36]Faraj′s obituary is particularly telling since al-Maqrīzī does not seem to see anything redeeming about Barqūq′s son, *Kitāb al-Sulūk,* 4:1:225–28. Al-Maqrīzī also reported without fail what would later become a distinguishing characteristic of Faraj′s reign, the long list of atrocities he committed against his enemies, for example, ibid., 4:1:113, 114, 148, 180, 187, 188, 192, 196.

[37]Shaykh′s obituary, even though overwhelmingly negative, is not as devastating as Faraj′s, ibid., 4:1:550–1. Also, on one occasion, ibid., 4:1:532, al-Maqrīzī, while talking about the piety displayed by Shaykh, indicted his entourage rather than the sultan himself for the evils of his regime. As for Tatar (d. 824/1421), al-Maqrīzī stated that he did not rule long enough for his actions to be either lauded or denigrated, ibid., 4:2:550–1.

[38]My edition of the *Kitāb al-Sulūk* did not include al-Maqrīzī′s negative obituary of Barsbāy which is quoted by Broadbridge in her ″Academic Rivalry,″ 93–94. What appear to me to be the three major negative characteristics of Barsbāy′s rule, namely the endemic rioting of the *julbān* (4:2:673, 793, 804, 805, 909, 930, 931, 965, 975, 1006, 1025, 1027, 1047), the systematic recourse

come close to the *systematic* and *direct* attacks he made on Barqūq and his rule.[39] Secondly, al-Maqrīzī´s criticisms are all the more surprising since he did benefit from Barqūq´s and later from his son Faraj´s patronage,[40] and also since Sūl, a favorite slave-girl of his, was given to him by no other than the sultan.[41] Thirdly, al-Maqrīzī was the only one amongst the chroniclers[42] of this period to systematically criticize Barqūq, especially during his description of the sultan´s first reign.

In the light of what was said in the above paragraph, what is then, if any, the historiographical significance of al-Maqrīzī´s negative attitude towards Barqūq? An analysis of a passage from Ibn Taghrībirdī´s *Al-Nujūm al-Zāhirah* is one way to tackle this issue. After rejecting point by point the very serious accusations levelled by his former teacher against Barqūq in his assessment of his first reign, Ibn Taghrībirdī said:

> Shaikh Taqî ad-Dîn was guilty of well-known inconsistency; he said now this and now that. . . . And my statement that the Shaikh Taqî ad-Dîn sometimes praises Barqûq and sometimes blames him rests on the fact that *when the author was friendly with al-Malik aẓ-Ẓâhir during his second sultanate and aẓ-Ẓâhir made him the object of his beneficence, he went to extremes in praising him in several passages of his works, and forgot this earlier statement of*

---

to mulcting as a means to enrichment (4:2:619, 610, 621, 623, 631, 632, 633, 636, 644, 648, 662, 663, 673, 685, 688, 693, 709, 729, 735, 754, 747, 751, 754, 755, 767, 768, 791–92, 797, 798, 799, 800, 801, 802, 817, 819, 820, 821, 823, 824, 833, 860, 867, 868, 872, 887, 905, 906, 912, 913, 914, 919, 928, 929, 931, 933, 934, 936, 938, 950, 962, 965, 968, 1005, 1008, 1020), as well as the establishment of monopolies over the spice trade and other sectors of the economy (647, 824, 869, 905, 929, 1001), are very well documented in the *Kitāb al-Sulūk*. But al-Maqrīzī directly attacks Barsbāy only on one occasion: after the death of his arch-foe Jānbak al-Ṣūfī in 841, al-Maqrīzī stated that because of Barsbāy´s injustice, God made sure he did not savor his victory as the sultan ended up dying shortly after, ibid., 4:2:1024.

[39]Maybe it was the novelty of the new regime and the fact that it heralded new practices that later became commonplace that caused al-Maqrīzī to formulate very precise and scathing criticisms of Barqūq. Also, it may be that, in his eyes, Barqūq not only erected the new system but also came to epitomize it, so that he did not see the need to rehash at later stages of his writing things he had already observed.

[40]See Broadbridge, ″Academic Rivalry,″ 89–90.

[41]See al-Sakhāwī, *Al-Ḍaw' al-Lāmi' li-Ahl al-Qarn al-Tāsi'* (Beirut, 1992), 12:66–67. This reference as well as the information concerning Sūl was kindly brought to my attention by Nasser Rabbat.

[42]Of the major historians of this period, Badr al-Dīn al-'Aynī (762–855/1360–1451) is the only author whose work, *'Iqd al-Jumān fī Tārīkh Ahl al-Zamān,* I have not been able to consult. As was noted throughout this paper, only Ibn Iyās closely followed al-Maqrīzī in his denigration of Barqūq by either copying or paraphrasing his *Kitāb al-Sulūk*.

> *his and others similar to it;* it escaped his notice that he should have changed this earlier account, for, as the proverb runs, ″Who praises and blames is as though he lied twice.″[43]

One can sense that the tone of al-Maqrīzī′s writings with regard to Barqūq changed from one period to another: in the *Kitāb al-Sulūk*[44] the criticisms started[45] in full-swing in 778/1376–77 (the year that witnessed the successful coup led by the *julbān* and upstart mamluks against the sultan al-Ashraf Sha'bān), continued during al-Maqrīzī′s account of Barqūq′s rise to power in 779/1378, and peaked during the early 1380s, only to subside during the second reign of the sultan, from 792/1390 until 801/1399.[46] Strikingly, al-Maqrīzī′s obituary of Barqūq in 801/1399 contained only a handful of comments that could be construed as strictly negative (his greed and his advancement of Circassians over Turks, etc.) drowned as they were in more than four pages of praise (his love of men of religion, the illegal taxes he abolished, the structures he ordered built, his largesse, etc.[47]), a far cry

[43]Ibn Taghrībirdī, *The History of Egypt*, trans. Popper, 13:44–45. [Emphasis mine]

[44]Both *Kitāb al-Ighāthah* and the *Khiṭaṭ* contain a fair number of passages in which al-Maqrīzī condemns Barqūq and aspects of his rule, but it is in the *Kitāb al-Sulūk* that they are the most pervasive and systematic.

[45]The kind of dismay frequently expressed by al-Maqrīzī throughout the rise to power of Barqūq in the late 1370s and beyond can actually be encountered as far back as 768/1366–67 during the events surrounding the *coup* launched by his *ajlāb* against Yalbughā al-'Umarī and his assassination on 10 Rabī' al-Thānī 768/13 December 1366. Clearly discernible in al-Maqrīzī′s description of events are themes that will be recurrent in his criticisms against Barqūq, namely the ascension of lowly mamluks to positions of authority, the shaking up of the social order at the hands of an increasingly riotous populace, etc. See *Kitāb al-Sulūk,* 3:1:137–38, 143.

[46]The instances where al-Maqrīzī made negative comments about Barqūq or presented accounts that directly reflected badly upon him number 43 for the period between 778 to 791 and 8 for that stretching between 792 and 801: **778**: 3:1:277, 287–89, 293, 295; **779**: 3:1:315–16, 324; **780**: 3:1:327, 330, 331, 333–34, 337, 347–48; **781**: 3:1:352, 352–53, 360–61, 365–66, 371–72, 374; **782**: 3:1:379, 381, 382, 382, 385, 385, 386, 390; **783**: 3:2:447–48, 454, 457; **784**: 3:2:466; **785**: 3:2:490, 496, 499, 503; **784**: 3:2:466; **785**: 3:2:490, 496, 499, 503; **787**: 3:2:538; **789**: 3:2:563–64, 566; **791**: 3:2:618–19; **793**: 3:2:734, 750; **796**: 3:2:810; **797**: 3:2:826; **799**: 3:2:872; **800**: 3:2:902; **801**: 3:2:935, 943.

[47]*Kitāb al-Sulūk,* 3:2:937–47. Ibn Taghrībirdī made sure to note in his critique of al-Maqrīzī that the second reign of Barqūq was more deserving of criticism than the first one because the sultan ″was guilty of several abominable acts, such as putting some scholars to death and banishing and degrading others because after he had left al-Karak they had issued a decision legitimizing the war against him,″ *The History of Egypt*, trans. Popper, 13:42–45. Now compare this with what al-Maqrīzī had to say about this issue: ″he felt a great deal of dislike for the *fuqahā'* during his second reign because they had issued a *fatwá* allowing his killing, but he did not cease honoring them despite his anger towards them,″ *Kitāb al-Sulūk,* 3:2:944.

from the savaging he inflicted on the sultan in the report dealing with the end of his first reign.

Was it then, as Ibn Taghrībirdī maintained, the fact that Barqūq had made al-Maqrīzī ″the object of his beneficence″ which led the latter to tone down his criticisms in his reports on al-Ẓāhir′s second reign, and in the process, to suppress those sensibilities which had earlier made him prone to condemn the sultan? Ibn Taghrībirdī′s quotation actually raises more questions, historiographical and biographical in nature, than it provides answers. If it is indeed true that his *Kitāb al-Sulūk* reflected al-Maqrīzī′s changing relationship with Barqūq, and if, as Ibn Taghrībirdī argued, this transformation took place during the sultan′s second reign, this means that a substantial portion of the *Kitāb al-Sulūk*, that which contains the most virulent criticisms against Barqūq, must have been written before the rapprochement between the two, sometime during the second reign, which started in 792/1390. The dating of parts of the *Kitāb al-Sulūk* to this particular period raises a number of problems. First, if we take at face value the contentions that: one, the *Kitāb al-Sulūk* was the last of a series of historical works, starting with the *Khiṭaṭ*, depicting various periods of the history of Egypt;[48] two, that the *Khiṭaṭ* was written between 819/1417 and 839/1436;[49] and three, that evidence suggests that the first draft of the *Kitāb al-Sulūk* was written sometime around or after 1421–23 but no earlier than al-Maqrīzī′s return from Damascus following the death of Faraj in 815/1412[50]—then al-Maqrīzī′s chronicle could not have been written during Barqūq′s reign, and certainly not at the earliest stage of al-Ẓāhir′s rule because he was simply too young. For Ibn Taghrībirdī′s assertion to be correct, one needs to postulate that al-Maqrīzī had already written down extensive notes, tainted by his prejudices, on the first part of Barquq′s reign *during* this reign, long before he started using these notes to write a full-fledged book. It can then be argued that al-Maqrīzī had no qualms about using the old ″anti-Barqūq″ notes since he was no longer in danger of incurring the wrath of the sultan, who was then long dead.

This perspective makes good of the claim that the *Kitāb al-Sulūk* was written after al-Maqrīzī′s return to Cairo from Damascus in 820/1417,[51] since it is probable that he would have made use of material composed or gathered in the past along

[49]Muḥammad Muṣṭafá Ziyādah, *Al-Muʼarrikhūn fī Miṣr fī al-Qarn al-Khāmis ʻAshar al-Mīlādī, al-Qarn al-Tāsiʻ al-Hijrī* (Cairo, 1954), 10.

[50]This information was kindly made available to me by Nasser Rabbat. See his article in this volume on the life of al-Maqrīzī.

[51]Levanoni, ″Al-Maqrīzī′s Account of the Transition,″ 96. On the uncertainty concerning the date of al-Maqrīzī′s return to Cairo, see below, note 62.

with more recent data. But if, while writing the *Kitāb al-Sulūk* after 820/1417, al-Maqrīzī did more than simply record events but also ″took a moral stance against Barqūq both on personal and factional grounds,″ and thus embarked upon a retrospective revisiting of past events[52] tainted by the prejudices of a bitter man, then we have a problem to solve: we would still have to account for the generally neutral tone of the annals covering the second half of Barqūq′s reign and the dramatic decrease therein of criticisms directed at him by al-Maqrīzī. One way out of this problem would be to advance another albeit potentially weaker postulate: that al-Maqrīzī *did* write all of the *Kitāb al-Sulūk* starting after 820/1417 and that his retrospective assessment of events was influenced by his reliving, through a wide spectrum of moods, of the events he described in his chronicle.

Still, one might reject Ibn Taghrībirdī′s contention about a two-phased elaboration of al-Maqrīzī′s *oeuvre*. Despite the deference Ibn Taghrībirdī showed his former teacher qua historian,[53] his *Al-Nujūm al-Zāhirah* is replete with criticisms directed at al-Maqrīzī. On top of indicating historical inconsistencies,[54] Ibn Taghrībirdī, on a number of occasions, belittled al-Maqrīzī′s knowledge.[55] It might be that pointing out alleged inconsistencies on the part of al-Maqrīzī was just another means used by Ibn Taghrībirdī to damage the reputation of his teacher and, in the process, to elevate himself. Within the framework of the intensive competition for patronage and for sheer intellectual glory amongst academics and thinkers during this period,[56] this would come as no surprise. The possibility that it was his intention to discredit al-Maqrīzī is further supported by another statement made by Ibn Taghrībirdī. In the account of the year 841/1437–38 of his *Al-Nujūm al-Zāhirah,* Ibn Taghrībirdī again attacked his former mentor′s alleged historical inconsistencies, namely his criticisms against Barsbāy, and then said, as an explanation for al-Maqrīzī′s stand, that after the death of Barqūq ″he had no success with the rulers who came after him; they kept him away without showing him any favour, so he on his part took to registering their inequities and infamies.″[57] The fact that al-Maqrīzī was no kinder to later sultans than he was towards

---

[52]Ibid., 95–96.

[53]See for example *Al-Nujūm al-Zāhirah,* 14: 270, 15: 225–26.

[54]See Ibn Taghrībirdī, *The History of Egypt*, trans. Popper, 13:44 and idem, *Al-Nujūm al-Zāhirah,* 11:240, on the way he discredits al-Maqrīzī on historical grounds.

[55]Especially his and other chroniclers′ paucity of knowledge concerning things Turkish, Ibn Taghrībirdī, *Al-Nujūm al-Zāhirah,* 11:184–85.

[56]On this issue, see Broadbridge, ″Academic Rivalry.″ Ziyādah makes of the antagonisms, jealousies, and enmities amongst ninth/fifteenth century historians a fundamental characteristic of the historiography of this period, *Al-Mu'arrikhūn,* 84–88.

[57]Ibn Taghrībirdī, *The History of Egypt*, trans. Popper, 18:143 (emphasis mine); idem, *Al-Nujūm al-Zāhirah,* 14:270.

Barqūq during his first reign is supported by evidence.[58] What is interesting about the quotation above is the later statement, casually mentioned by Ibn Taghrībirdī, that al-Maqrīzī was a boon companion of Barqūq.[59] That no other chronicler or biographer, not even the generally caustic al-Sakhāwī, had related such a juicy accusation with high damage potential could indicate that Ibn Taghrībirdī might have been engaged in a low-level work of demolition of al-Maqrīzī's reputation.

Ibn Taghrībirdī could also have simply misunderstood the method used by his teacher in his writing of *Kitāb al-Sulūk,* so that he assumed that it was written during two distinct periods. But even if we reject Ibn Taghrībirdī's original assertion about al-Maqrīzī's writing, we are still not out of the woods: again, what caused al-Maqrīzī to change, in a significant manner, the tone of his comments on Barqūq?

In the light of all that has been said, the easiest way out of the enigma is to posit two scenarios. First, al-Maqrīzī probably started taking notes, from a variety of sources, very early on and this note taking reflected the mood he was in and his relationship with holders of political authority; upon his return to Cairo in 819/1417,[60] he started turning the notes he had assembled into a full-fledged book. This, as has been argued above, weakens the "retrospective presentation of events" postulate. The second scenario, even though not yet supported by research, is that al-Maqrīzī simply relied on another chronicle to write those sections of the *Kitāb al-Sulūk* that dealt with the sultan's first reign.

* * * *

Of course, this is all conjecture. As a matter of fact, many matters have to be resolved before the historiographical problem posed above can be dealt with effectively. For one thing, the very biography of al-Maqrīzī and the concomitant issue of the history of his literary production need to be addressed. Even though the general outline of his life is well known, some aspects of it are shrouded in uncertainty and are reported differently by scholars past and present. For example, when did he start working?[61] How long did he stay in Damascus after he went

[58]See Broadbridge, "Academic Rivalry."

[59]Ibn Taghrībirdī, *Al-Nujūm al-Zāhirah,* 14:270.

[60]Or no earlier than his return from Damascus following the death of Faraj in 815/1412.

[61]Broadbridge says it was in the year 788/1386, "Academic Rivalry," 87, and Ziyādah in 1388, "Tārīkh Ḥayāt al-Maqrīzī," 15. Al-Maqrīzī, in his *Khiṭaṭ*, said he started working in the *dīwān al-inshā'* around "al-sab'īn wa-al-sab' mi'ah," 2:225. If he were born in 766, as is generally accepted, then al-Maqrīzī was around 4 years of age when he started his career (!): it is therefore more than probable that a scribe made a mistake while copying the original or that the editor of the text himself erred in this respect. Surprisingly, the same inconsistency can be found in Ziyādah's *Al-Mu'arrikhūn,* 8, in which the date of birth is reported as 1364 and the year he started his career

there with Faraj in 810/1408 and, consequently, when did he return to Cairo?[62] As we have seen above, much of the interpretations of al-Maqrīzī's historiographical output was made on the assumption that he wrote this or that work on given dates, so what would become of these interpretations if the dates are themselves not to be trusted?

The present state of knowledge concerning the issue at hand calls for two comments: first, to the extent allowed by the primary sources themselves, that a definitive biography of al-Maqrīzī be produced, and second, that the "critical analysis of the originality, sources, and possible interdependence"[63] of "Burji" historians be undertaken at the same level of scholarship as that of the "Bahri" historiographical output.[64] Until then, the questions raised above will only be partially addressed.

---

as 1368, without any comment! A footnote actually refers the reader to page 225 of the *Khiṭaṭ*.

[62]Broadbridge, who probably based herself on al-Sakhāwī, states that he went back and forth the same year, "Academic Rivalry," 91. Franz Rosenthal in his *Encyclopaedia of Islam* article reported the figure of around ten years: "In Damascus where he spent about 10 years beginning in 810/1408 . . .," 6:194, and so do Levanoni, "Al-Maqrīzī's Account of the Transition," 96, and Ziyādah, *Al-Mu'arrikhūn,* 9.

[63]Donald P. Little, "Historiography of the Ayyubid and Mamluk Epochs," in *The Cambridge History of Egypt 640–1517*, ed. Carl Petry (Cambridge, 1998), 433. To my knowledge, the only studies that do just that are David C. Reisman, "A Holograph MS of Ibn Qāḍī Shuhbah's 'Dhayl,'" in *Mamlūk Studies Review* 2 (1998): 19–49 and Donald P. Little's article in this volume.

NORTHWESTERN UNIVERSITY

Al-Maqrīzī´s Discussion of Imprisonment and Description of Jails in the *Khiṭaṭ*

Al-Maqrīzī provides his views about the penalty of incarceration and its status under Islamic law as an extended preface to his survey of jails and prisons as they existed in Miṣr/al-Qāhirah from the founding of these towns to his own day.[1] Several themes and subtexts may be discerned as one reads through al-Maqrīzī´s comments. The most pointed of these is the dubious efficacy of imprisonment itself as a deterrent to criminal activity. Al-Maqrīzī´s ambivalence towards the quality of governance under the Mamluk Sultanate is readily apparent from his depiction of conditions prevalent in Cairo´s institutions of incarceration. As in his other works, al-Maqrīzī rarely misses an opportunity to castigate the Mamluk regime as the culprit behind most ills burdening the civil society of the Mamluk capital. Whether the sordid conditions he vividly portrays would, in fact, have differed appreciably under a regime more to his liking remains a problematic issue.

The entry on prisons is substantial. In the Būlāq edition (volume 2, p. 187), it fills two and one-quarter printed pages, with 39 lines on the full pages, 9 on the third.[2] The average Arabic word count per line is 14. Al-Maqrīzī begins with a statement quoted from Ibn Sīdah about the several terms and grammatical forms that derive from the two roots for incarceration: *sīn-jīm-nūn* and *ḥā'-bā'-sīn* (lines 3–6). He then relates several hadiths that express the Prophet´s concept of imprisonment. Since al-Maqrīzī chose these traditions to reinforce his own views about incarceration, the section merits quoting (with omission of the praise formulas) (lines 6–27):

---

[1]This analysis of al-Maqrīzī´s statements about imprisonment and jails in his *Khiṭaṭ* was undertaken in the context of a larger study of crime and criminal prosecution in the major cities of the Mamluk Sultanate: Cairo and Damascus. The study is based on more than 1000 incidents of crime and violence reported by prominent chroniclers of events in these cities. Al-Maqrīzī´s own chronicle, *Kitāb al-Sulūk li-Ma'rifat Duwal al-Mulūk,* was examined as an important source for such incidents.

[2]In addition to the section on prisons, al-Maqrīzī inserted a detailed description of a site he named Sijn Yūsuf (Prison of Joseph) (volume I, p. 207). This proved to be a revered shrine, located in al-Jīzah Province, attributed to the confinement of the Prophet Joseph during his sojourn in Egypt. He allegedly received divine revelation there. The site was the object of veneration and pilgrimage during the medieval period. It had no function as a prison for criminals.

The Imam Aḥmad and Abū Dāwūd transmitted from the hadith of Yahz ibn Ḥakīm from his father, and he from his grandfather . . ., who said that the Prophet held (a person) in custody *(ḥabasa)* under an accusation *(tuhmah)*. And in the *Jāmiʿ al-Jalāl* of al-Suyūṭī, on the authority of Abī Hurayrah . . . who said that the Messenger of God . . . confined *(ḥabasa)* (a person) under an accusation for a day and a night. For the legal incarceration is not the prison *(sijn)* (itself) in a straitened place. Rather, he (who is under an accusation/charge) is (to be) personally restrained and prevented from independent egress unless he be in a house *(bayt)* or a *masjid,* or his agent on his behalf, and sticks close by him *(wa-mulāzimatuhu la-hu)*. In this regard, the Prophet . . . named him a prisoner *(asīran)*.

As Abū Dāwūd and Ibn Mājih related from al-Hurmās ibn Ḥabīb from his father . . ., who said: ″I came before the Prophet with one (who was) indebted to me.″ And he (Prophet) said to me: ″Take custody of him.″ Then, he (Prophet) told me: ″O brother of the Banī Tamīm, what do you want me to do with your prisoner?″ According to the version of Ibn Mājih, the Prophet subsequently passed by me at the end of the day. He said: ″What did your prisoner commit, O brother of the Banī Tamīm?″ For it was this [personal custody] that was incarceration *(ḥabs)* during the time of the Prophet. Abū Bakr . . . did not possess a prison intended for incarceration of the disputants.

But when the populace *(al-raʿīyah)* were dispersed in the time of ʿUmar ibn al-Khaṭṭāb . . ., he [ʿUmar] bought from Ṣafwān ibn Umayyah . . . a house *(dār)* in Mecca for 4000 dirhams, and made it into a prison for incarceration. On this issue the ulama disputed as to whether the imam could establish a jail on the basis of two statements *(qawlayn)*. For one said: ″He who does not set up a prison bases his case on the fact that neither the Messenger of God . . . nor his successor after him established a prison. Rather, he (Prophet) would detain him in a certain place. Or, he would appoint over him a guardian. This [policy] would be called the safeguard or voucher *(al-tarsīm)*. Or, he would order his debtor to stick by him. It was said to him, that he who [does] institute a prison takes his proof from the act of ʿUmar ibn al-Khaṭṭāb. Thus was set the practice *(sunnah)* in the time of the Messenger of God . . ., and of Abī Bakr, ʿUmar, ʿUthmān and ʿAlī . . ., that one not be jailed for debts, but [rather] that the two contestants [in the suit] remain in close contact *(yatalāzimu)*. The first to incarcerate for debt was

> Shurayh the Judge *(al-Qāḍī).*
>
> As for imprisonment as it is now, it is not sanctioned for any of the Muslims, because it crowds [too] many individuals in a place confining to them, or [a site] making impossible the performance of [either] the ablution or the prayer. [Indeed], some of them [inmates] would see the genitals of others. The summer heat [or] winter cold would afflict them. One might well be jailed for a year without any recourse, since the original cause *(aṣl)* for his incarceration was by a warrant *(ʻalá ḍumān).*

When al-Maqrīzī addresses conditions in jails of his own day, he is vituperative:

> As for the prisons of the prefects *(walātah),* one cannot describe the distress/misfortune *(al-balā')* that afflicts their inmates. For it is widely known that they [prisoners] go out with aides [of the prefects] in irons. They beg for alms while they bewail their hunger in the streets. [But] whatever alms are given them they may not retain—except what enters their bellies. The charitable offerings collected for them from the people the jailer *(sajjān)* and staff of the prefect keep. He who does not please them, they punish excessively. Nonetheless, they [inmates] are employed in digging, construction, or similar hard labor. The [prefect's] aides goad them. When they finish their labors, they are returned to the jail in irons without having eaten anything. There are many similar conditions for which space does not permit relating.

Al-Maqrīzī's selection of traditions, and comments on contemporary circumstances of prison life, unambiguously disclose his own stand on imprisonment. If the Prophet's actions are to be viewed as an exemplary precedent for policy, then personal supervision or recognizance is legally mandated rather than physical confinement to a building. Such confinement is, in fact, attributed to the second of the Prophet's successors, ʻUmar, and as such should be interpreted as an innovation without legal sanction. Second, imprisonment for debt serves no purpose. Indeed, it is counterproductive. Although not explicitly stated, the presumed reason for allowing the debtor to remain unconfined, but under the recognizance of his own plaintiff, is his capacity to continue working for pay, and thus to discharge his debt. Incarceration for debt was widespread in the Mamluk Sultanate, and al-Maqrīzī denounced it as more than personally demeaning. The practice contributed to the fiscal decline of the state, over which al-Maqrīzī obsessed continuously throughout his works. At a time of labor shortages brought on by

plague mortality, the removal of debtors from the work force amounted to gross incompetence on the part of the ruling authorities. Not only would debtors be unable to reimburse their claimants, but the economy would suffer the loss of potential laborers, many of them skilled.

Finally, al-Maqrīzī fulminates over the degradation imposed on prison inmates of his own time, presumably from personal observation. Muslims, no matter the severity of their crimes, should not be treated inhumanely by fellow believers. I find al-Maqrīzī´s denunciations of prevailing conditions puzzling, if not truculent. His position is not intrinsically defensible if one accepts a relationship between severity of offense and punishment inflicted. Al-Maqrīzī´s subsequent discussion of Cairo´s jails and prisons does not ignore the heinous acts of hardened criminals, many of whom were repeat offenders, incarcerated in those prisons with forbidding reputations. But he remains stridently insistent on the fundamental rights of Muslim believers, especially when incarcerated by their co-religionists. (Note that al-Maqrīzī does not mention the confinement of non-Muslims in this passage. In the narrative sources, including his, one encounters imprisonment of Muslims, Christians [mostly Copts, a few Europeans], and Jews frequently. ʻAlawīs, Samaritans and Hindus appear infrequently.)

Al-Maqrīzī´s perspective is clearly apparent when he decries the close confinement of inmates and its hindrance of their religious obligations (ablution and prayer). The exploitation of charitable giving by sympathetic onlookers on the part of prison wardens he denounces outright. One must question whether release of convicted criminals to the recognizance of their victims would warrant any serious consideration by the legal authorities as a viable means of deterrence. Al-Maqrīzī´s exclusive focus on the suffering of inmates implies the primacy of his criticism for the regime that jailed them, to the subordination of realistic concern over reprisal for criminal behavior or of the public´s right to safety.

Al-Maqrīzī´s focus is sustained throughout his description of specific prisons (pp. 187, lines 28–39; 188, lines 7–39; 189, lines 1–8 and left margin). The Būlāq edition lists eight sites in Miṣr and al-Qāhirah designated either as a jail *(ḥabs)* or prison *(sijn)* (lines 28–30). This summary list differs from the following text, since the most prominent—and infamous—prison, al-Maqsharah, is not mentioned. It is, however, discussed in some detail below (p. 188, lines 34–39). By contrast, the jails of al-Daylam and Maydān al-Raḥbah do not appear in the text, as noted in the margin on p. 189. Al-Maqrīzī begins with the two institutions in Miṣr: the Jails of Succor *(Ḥabs al-Maʻūnah)* and of the Salt Fish Seller *(Ḥabs al-Ṣayyār)*. The former was presumably the oldest house of incarceration, its locale dating back to the founding of Miṣr al-Fusṭāṭ. The site was originally owned by Qays ibn Saʻd ibn ʻIbādah al-Anṣārī, who bequeathed it to the Muslim community. Over the centuries, the site was occupied by a warehouse for pepper, a police station

(shurṭah), a monetary exchange or customs house *(dār al-ṣarf),* a mosque residency, and finally a jail—after the year 381/991–92. Ultimately, the founder of the Ayyubid Sultanate, Ṣalāḥ al-Dīn Yūsuf, converted the jail into a madrasah, known as al-Ashrafīyah bi-Miṣr. It was functioning during al-Maqrīzī's lifetime. No reference to its inmates or their crimes appears in the text.

The Ḥabs al-Ṣayyār was set up after the Succor Jail was closed. It replaced a shop in an alley *(zuqāq)* where a repository for salted fish *(ṣīr al-mulūḥah)* had been located. The jail remained in use until the destruction of Fusṭāṭ after the end of the Fatimid period. Its inmates were political officials, with no reference to their offenses.

Al-Maqrīzī describes five prisons in al-Qāhirah: the Treasury of Banners [possibly, Troops] *(Khizānat al-Bunūd),* the Succor Jail *(Ḥabs al-Maʻūnah bi-al-Qāhirah);* the Treasury of Shamā'il *(Khizānat Shamā'il);* the Maqsharah Prison; and the Pit of the Citadel *(al-Jubb bi-Qalʻat al-Jabal).* Al-Maqrīzī provided background information about the original purposes of their sites and the careers of their founders. The Khizānat al-Bunūd, for example, was set up in the district *(khuṭṭ)* known as the Treasury of Banners, located near the Festival Gate *(Bāb al-ʻ`d).* Under the Fatimids, weapons were manufactured in it. It burned down in 461/1068–69, and was replaced by the prison. Amirs and civil notables were confined there until the end of the regime. The Ayyubids maintained the Khizānat al-Bunūd as a prison, but under al-Nāṣir Muḥammad ibn Qalāwūn it was converted into a residence *(manzil)* for Frankish officers *(al-ʻumarā' al-firanj)* and their families. It was razed in the year 744/1343–44 to make room for private residences.

The Khizānat Shamā'il was founded by an amir of peasant origin who rose to prominence during the reign of al-Malik al-Kāmil ibn al-ʻĀdil. During the French siege of Dumyāṭ in 615/1218, this Shamā'il swam across the blockaded harbor of the port to alert al-Kāmil's staff about weaknesses in the enemy's lines. Al-Kāmil named him "sword of his revenge" *(sayf niqmatihi)* and rewarded him with the prefecture of Cairo, a post he held until the enthronement of al-Malik al-Ṣāliḥ Ayyūb. The latter arrested and executed him. Shamā'il's prison was, according to al-Maqrīzī, "among the most heinous and ugly in appearance. Incarcerated within were those sentenced to death: habitual thieves and highwaymen, those the sultan intended to destroy among the Mamluks, and those who had committed serious crimes *(aṣḥāb al-jarā'im al-ʻaẓīmah).*" He commented wryly that "its warden *(sajjān)* was assigned to it by the prefect *(wālī)* of Cairo in return for [payment] of a certain sum of money each day. During the days of al-Nāṣir Faraj, this came to a large amount." The Khizānat Shamā'il continued in such vein until it was razed by Sultan al-Mu'ayyad Shaykh on Sunday 10 Rabīʻ I 818/18 May 1415 to make room for his madrasah and tomb adjacent to Bāb Zuwaylah.

Al-Maqrīzī dwelled on the wretched conditions prevailing in the last two

prisons he described: the Maqsharah and the Pit. To quote: ˝The Maqsharah is located in the vicinity of Bāb al-Futūḥ, [standing] between it and the Mosque of al-Ḥākim. Wheat was husked *(yuqshiru)* there. Among its several structures was a tower *(burj)* on the wall to its right outside Bāb al-Futūḥ. Houses were rebuilt above it, which stood until the Khizānat Shamā'il was razed. This tower and the Maqsharah were [then] designated as a prison for hardened criminals. The houses standing there were demolished in the month of Rabī' I in the year 823/March–April 1420. It was then [opened] as a prison and the criminals were transferred to it [presumably from the Khizānat Shamā'il]. It was one of the most heinous prisons, and among the most straitening. Within it languished prisoners in the depths of depression and despair—beyond description. May God spare us from its myriad tribulations.˝

The Pit of the Citadel (probably a cistern originally) acquired such a gruesome reputation that it transgressed the accepted limits of the peculiar code of camaraderie among Mamluks known as *al-khushdāshīyah*. To quote:

> Officers were incarcerated in it. It began operating in the year 681/1282–83. The sultan then was al-Manṣūr Qalāwūn. It continued functioning until al-Malik al-Nāṣir Muḥammad ibn Qalāwūn demolished it on Monday 17 Jumādá I, year 729/19 March 1329. This occurred because arguments for the reform of its use were intensifying. Amirs testified to its horrors of oppression, the multitude of bats, and foul odors emanating from it. Consequently, its [demolition was decided upon. The Amir Baktimur al-Sāqī had in his retinue an individual whom he had mocked and scorned. He consigned him to the Pit where he was left suspended. He then drew him back up after he had passed the night in it. When he was brought before Baktimur, he informed him of the atrocities he had seen with his own eyes in the Pit. He described terrifying acts [occurring there]. The debate became heated during the council, with amirs who had been in the Pit recounting what went on there with regard to afflictions. Baktimur [then] discussed the matter with the sultan. The latter ordered the amirs´ release, and filled it in. Over it [the site] he built a barracks for the Mamluks. Debris from the demolition of the large hall adjacent to the Main Treasury was used to fill in this pit. For God knows what is proper.

Al-Maqrīzī´s description of these jails emphasizes the inherent impropriety of their function, the sordidness of conditions endured by their inmates, regardless of their offenses, and, most interestingly, their transitory nature. All but the Maqsharah

had ceased operating, and had been replaced by other structures that served more positive purposes—such as private residences or places of learning. Only the Maqsharah was in operation at the time al-Maqrīzī stopped writing the *Khiṭaṭ*. My own research confirms that the Maqsharah was statistically the most frequently cited prison in Cairo up to the Ottoman conquest and possibly beyond.

To what extent al-Maqrīzī´s denunciation of wretched conditions in prisons as legally unsound and morally repugnant was representative of juristic opinion remains an open question. Certainly the limited number of jails he described for a metropolis the size of Miṣr/al-Qāhirah during the Mamluk period does not imply sufficient space, even under the inmates´ straitened circumstances, to confine large groups of offenders. Whether the institutions he discussed actually represented the full range of places where criminals or political prisoners were confined is also open to speculation. The motives behind al-Maqrīzī´s fulmination against prisons and conditions of imprisonment therefore remain as intriguing a question as his other controversial perspectives.

André Raymond
Institut d´études et de recherches sur le monde arabe et musulman

Al-Maqrīzī´s *Khiṭaṭ* and the Urban Structure of Mamluk Cairo

This paper is a continuation of a research project initiated twenty-five years ago on indications *(signes)* of urbanization in the Ottoman cities,[1] later enlarged to include the Mamluk period.[2] My interest in the Mamluk period derived principally from the need I felt to revert to the actual starting point of the Ottoman era, my main preoccupation, and also from a desire to test out some of the principles already applied to urban research on the ″modern″ Ottoman epoch against a ″classical″ period.

The postulate of this inquiry (not always accepted) is that the city´s public monuments constitute a ″production″ from which (by utilizing their dates and geographical location) a study can be built up of the history of urbanization and the evolution of urban demographics, the building of one of these monuments normally constituting a sign of the presence of inhabitants for the religious needs of whom they will provide. One must not forget, of course, that there are many exceptions to a principle which is valid only on a general, statistical level. The choice of which monuments to study is based on their ″urban content″ *(charge urbaine)* and the role they play in the activity of the city and the life of its inhabitants: thus the public fountains *(sabīl)* and baths *(hammām)* would be the most appropriate targets for such research, since their construction is directly linked to fundamental urban needs and implies the existence of a stable community of users. But their mention in texts is random, and details about them (particularly when it comes to dating) are often far from precise. For that reason I have taken mosques as my main focus for tracking urban realities, because they are more frequently mentioned in texts, more precisely dated (often by inscriptions), and better maintained and preserved, so that they form a good basis for study derived from both textual and archaeological evidence.

Sources Used for a Study of Mamluk Cairo

When it comes to the Mamluk era in the urban history of Cairo, our first source is naturally the *Khiṭaṭ*.[3] The second volume provides us with an enumeration of the principal landmarks of Cairo, be they religious (mosques, convents), public (fountains and baths), economic (markets, caravanserais), topographical (quarters, squares, bridges) or domestic (palaces), etc., and generally provides key information on their location and dating. I shall return later to the problem of the comprehensiveness of the author′s coverage and enumeration. Among these abundant lists (which I have already touched on in previous studies: markets and caravanserais, public baths and town quarters) I shall here concentrate on mosques. No distinction will be made between different types of mosques—such as the *jāmi‘* (mosques with *khuṭbah*), the *madrasah* (teaching institutions), the *masjid* (oratories). Even in al-Maqrīzī′s time it seems delineation was somewhat vague, with the same building sometimes being referred to as a *jāmi‘,* and other times as a *madrasah.* Among blatant examples of this confusion I shall mention the mosque of Ibn Maghribī,[4] which is studied twice by the (in this instance) careless al-Maqrīzī—once in the mosque chapter[5] and secondly among the *madrasah*s.[6] It is also the case with the famous Sultan Ḥasan mosque,[7] which is classified as a *jāmi‘*, but which, as al-Maqrīzī states right from the beginning, ″was known as the *madrasah* of Sultan Ḥasan″ *(hadhā al-jāmi‘ yu‘raf bi-madrasat al-sulṭān Ḥasan)*.[8] The difference between *jāmi‘* and *madrasah* became later so dim that the *Description de l′Egypte,* in its list of monuments in Cairo, refers only to *jāmi‘* whatever the original purpose or qualification of the monument.

Turning to the building of mosques as a means to study urbanization, I

---

[3]Aḥmad ibn ‘Alī al-Maqrīzī, *Kitāb al-Mawā‘iẓ wa-al-I‘tibār bi-Dhikr al-Khiṭaṭ wa-al-Āthār,* 2 vols. (Būlāq, 1270/1853).

[4]Before 1374, around G 15 (74).

In this article information about mosques is given so that the first number indicates the date the mosque was built. A letter followed by a number indicates the mosque′s location on one of the two maps appended to the article. The number in parentheses shows its place within our chronological list of the 122 mosques (dated 1260–1441) studied, and located on the plans. A number followed by a letter and another number refers to the ″Description abrégée de la ville du Caire″ *(Description de l′Egypte)* and to the location on the map of the *Description de l′Egypte* whose cartographic squaring I have reproduced on my map. ″No.″ followed by a number indicates the classification number in the list of Cairo′s monuments (*Index to Mohammedan Monuments in Cairo*, Survey of Egypt, 1951).

[5]*Khiṭaṭ,* 2:328.

[6]Ibid., 391.

[7]1362, 1 S 6 (68).

[8]*Khiṭaṭ,* 2:316.

found 92 monuments mentioned in the *Khiṭaṭ:* the *jāmi‘* chapter contains references to 110 monuments of which 53 pertain to the period which interests us (1260–1441). The most recent monument mentioned here is the Muḥammad al-Ghamrī mosque (number 120 in my own list) which dates from 1440.[9] The *madrasah* chapter enumerates 73 buildings, 36 of which fall into our time-frame. The *masjid* section describes 19 monuments, of which 3 are relevant to our study. To that total (92) must be added the *māristān* (hospital) al-Mu'ayyad,[10] transformed into a mosque in 1422.[11]

Although quite lengthy, this list is obviously incomplete. One of the most conspicuous absences is the prestigious *madrasah* of Barqūq, built in 1386[12] with which al-Maqrīzī—who lived in the Barjawān quarter, just 400 meters away[13]—was of course familiar; he moreover mentions the progress of its construction several times in the *Sulūk*. In addition to this exceptional case several other mosques are mentioned in the *Sulūk* but not in the *Khiṭaṭ:* this is the case with the last mosque whose construction al-Maqrīzī records, that of Jawhar al-Tawāshī at Rumaylah,[14] built in January 1441, and marking the *terminus ad quem* of his researches, not long before his death in February 1442. Reference to the *Index to Mohammedan Monuments in Cairo* is enough to illustrate the reality of important gaps in al-Maqrīzī: out of 66 monuments classified for the period 1250–1441, 19 are not mentioned in the *Khiṭaṭ*.

I estimated that, in order to present an outline of Cairo's urban development between 1260 and 1441, it was necessary to extend the research to sources other than the *Khiṭaṭ* to make up in a certain measure the missing information. Furthermore, taking into consideration other sources allows an investigation of al-Maqrīzī's accuracy.

The information provided by the lists of the *Khiṭaṭ* (93 monuments) was thus supplemented by al-Maqrīzī's own *Sulūk* (13 additional monuments), Ibn Taghrībirdī (6 mosques), Aḥmad Darrāj (*Barsbay:*[15] 1 monument) and the *Index to Mohammedan Monuments in Cairo* (19 mosques). This additional list of 29 mosques, which brings the grand total to 122 is, of course, again deficient: a more complete perusal of the sources, and especially of the *waqf* documents, would enlarge this corpus. Imperfect as it is, I intend to use it as a basis for a study of the

urbanization of Cairo and for some reflections on al-Maqrīzī´s work.

Let us first remark that if we take into consideration the information provided by the *Khiṭaṭ* and *Sulūk* we notice that al-Maqrīzī mentioned, on the whole, 106 monuments, a figure which (out of a grand total of 122) seems to confirm the reliability of our historian.

A study of the deficiencies of the *Khiṭaṭ* reveals no obvious neglect of any region of Cairo, except for an important deficit for the southern region (17 monuments out of a total of 48).[16] The quarters of Tabbānah,[17] Rumaylah,[18] and Ṣalībah[19] seem particularly affected by this neglect. In al-Qāhirah, where the deficit of the *Khiṭaṭ* is less important (10 monuments out of 43), it is the zone surrounding al-Azhar[20] which is the most ill-treated (mosques 116, 119, 72, 92, 110 missing in the *Khiṭaṭ*). In contrast the deficit of the *Khiṭaṭ* is quite limited in the northern region (one out of 12) and even more so in the western region (one out of 19). I have no explanation for the cause of this geographic disparity, the argument of distance which could be invoked in the case of the southern region being, of course, irrelevant in that of al-Azhar. I may at least remark that it is difficult to reconcile al-Maqrīzī´s omission of a significant number of monuments in the western region with the fact that it is precisely in this zone that his information is otherwise the most complete.

I feel that on the whole the consideration of chronology offers a better explanation of the lacunas in the *Khiṭaṭ*′s information. Contrary to what would seem logical (that al-Maqrīzī´s information would be more complete for the most recent constructions), it is clear that the omissions mainly concern the newest monuments. Between 1260 and 1398 al-Maqrīzī´s *Khiṭaṭ* omitted only 14 monuments out of a total of 86 (one sixth); the figure is 15 monuments out of 34 in the period 1404 to 1441 (one half). It is mainly around 1420 that the historian´s documentary effort obviously slackened. This strong deficiency (11 omissions out of 22 between 1420 and 1441) was only partly compensated for by a kind of last minute effort of the historian to augment his documentations, hastily noting ten

[16]In my description of the geography of Cairo I use ″al-Qāhirah″ to designate the Fatimid city inside its walls, east of the canal (al-Khalīj al-Miṣrī). ″Northern region″ is used for the area which is located to the north of the Fatimid wall (Bāb al-Futūḥ), on both sides of the Khalīj. ″Southern region″ is the area stretching south of the Fatimid wall (Bāb Zuwaylah), east of the Khalīj. The ″western region″ is the area limited by the wall (north), the Khalīj (east), and the Khalīj al-Nāṣirī (west).

mosques (numbers 100 to 106, 113, 114, 120) built after 1420, on the last page (331) of the *jāmiʻ* chapter, but without giving any details about these monuments. This character of the lacunas is also obvious when one analyzes the mosques mentioned in the *Sulūk* and not in the *Khiṭaṭ:* out of 13 monuments neglected, 6 are from the period after 1420.

Jean-Claude Garcin has insisted upon the fact that al-Maqrīzī's inventories upon which I dwelt are not fully comprehensive: "One can try to grasp the result of this urbanization movement through the work of al-Maqrīzī, even though his historical and literary evocation of Cairo (in the *Khiṭaṭ*) does not have the nature of an inventory which held pretensions of being complete (as it was later on held by the *Description de l'Egypte,* in an already colonial context."[21] Garcin again took up this stance in a recent publication: "The value accorded to the pre-colonial type of census analysis undertaken in the *Description de l'Egypte* seems less applicable to al-Maqrīzī's work, where his city description is less than comprehensive. . . . One cannot hope to find, in his records, every name of every quarter, each monument, each souk, or artisan's workshop which existed in his time."[22]

My point of view is that, whatever their evident imperfections and deficiencies, the lists compiled by al-Maqrīzī constitute an ensemble of such variety, richness, and precision that they can well withstand statistical utilization for a study of the city structure. The research already carried out on the souks and caravanserais[23] is, I think, confirmed by this study of mosques. In any event, while awaiting more exhaustive documentation, there is no richer or more reliable source of information at our disposal than what al-Maqrīzī affords. It is, then, important to try and extract everything we can from it, without losing sight of its "not totally complete" nature.

The Urban Structure of Cairo (1260–1441) According to al-Maqrīzī

The documentation at our disposal allows us to examine the evolution of the structure of the city over nearly two centuries, from 1260, the beginning of the Mamluk era, to 1441 (the end of al-Maqrīzī's investigations), in a geographic framework which I limit to what I propose to define as "traditional Cairo": the area described in the Cairo map of the *Description de l'Egypte,* thus excluding the regions located outside the Khalīj al-Nāṣirī to the west, and Ḥusaynīyah to the

[23] Raymond and Wiet, *Les marchés du Caire*.

north, and naturally the ″suburbs″ of Cairo (Būlāq and Old Cairo).

The cartographic problems concerning Mamluk Cairo have been discussed recently by Jean-Claude Garcin in *Grandes villes méditerranéennes,*[24] accompanied by maps 4 (″Le Caire au XIVème siècle″) and 5 (″Le Caire au début du XVIème siècle″) which delineate zones of ″urbanisation dense supposée″ and ″urbanisation peu dense supposée.″ My own conclusions are based on the previously described corpus of 122 religious monuments, mosques *(jāmi‘),* colleges *(madrasah),* and oratories *(masjid),* for which we have presented the necessary information about their dating and location. But this study on urbanization in Mamluk Cairo, of course, takes into account previous research carried out on other components of the urban environment, such as places of economic activity (markets and caravanserais), public baths (*ḥammām*s) and the residential quarters of the city *(ḥārāt).*

The Northern Region

An analysis of the fluctuation in the number of religious buildings constructed over time leads us to the conclusion that there was vigorous urbanization in the northern part of Cairo. The building activity in the Ḥusaynīyah quarter and the Birkat al-Ratlī region[25] was launched from the time of Sultan al-Ẓāhir Baybars (1260–77), starting with the building of the great mosque which bears his name, in 1269.[26] The numerous mosques that were founded afterwards (twelve, of which eight were built in al-Nāṣir′s time) bear witness to a phenomenon of urban growth and demographic development, which al-Maqrīzī recorded. However the effects of this urbanistic move seem to have been temporary: no construction is mentioned there after 1397, and al-Maqrīzī himself, in several often-quoted passages, recognized the decline and fall of this area about the turn of the century. It is also significant that of those monuments recorded by al-Maqrīzī, few have survived: in fact only two (the already-mentioned Ẓāhirīyah mosque and the Maẓharīyah *madrasah*),[27] which would confirm a later slump within the quarter, firstly at the end of the Mamluk, then in the Ottoman era. The construction of some rare religious monuments in the zone to the north of Ḥusaynīyah (at Raydānīyah and Siriyaqūs) would seem to indicate a real interest in developing Cairo in this direction (on the pilgrims′ route and on the road to Syria), but there is no evidence of any durable urban growth in the area outside Ḥusaynīyah. To conclude: an important development took place in the areas of Ḥusaynīyah and Birkat al-Ratlī,

but it regressed before the end of the fourteenth century: between 1402 and 1517 only three mosques were built in the area.

AL-QĀHIRAH

The indications provided by a census of the religious edifices built in the al-Qāhirah region would, alternatively, reflect an intense and durable demographic increase. The massive occupation of the ″Fatimid″ city started during the Ayyubid period, when the seat of political and military power was transferred to the Citadel, leaving the old center of the Fatimids available for economic development, and settlement of the Mamluk elite and indigenous population: 43 mosques were founded in this 153-hectare zone between 1260 and 1441, just over a third of all the religious buildings under examination. Nine of these monuments were erected during the reign of Sultan al-Nāṣir Muḥammad, a number which is just in proportion with the duration of his reign (1293–1340).

The most spectacular of these new developments was the transformation of Bayn al-Qasrayn (the place ″between the palaces″) into a splendid avenue lined by prestigious monuments: the *madrasah*s of al-Ẓāhir Baybars,[28] of Qalāwūn,[29] of al-Nāṣir,[30] and much later of Barqūq,[31] utilized the space existing in the great Fatimid esplanade. Later it expanded southwards with the Ashrāfī mosque[32] and Mu'ayyad mosque.[33]

But during this long period religious monuments were also built throughout the entire region, the religious network expanding in order to adapt to the increase in population. It was the northern part of al-Qāhirah which was first affected by urban expansion, as shown in the number of new mosques in the area. Besides the Qaṣabah, the favorite spot was that of Jamālīyah, between Bāb al-Naṣr[34] and the Ḥusaynī region,[35] where nine mosques were constructed between 1300 and 1430, of which seven still remain and are registered on the inventory of the monuments of Cairo. The southern part of al-Qāhirah was to experience most of its development in the later part of the period: 5 of the 8 mosques built south of al-Azhar are posterior to 1420.

After 1442 the movement of construction went on, particularly in the south

of al-Qāhirah (8 mosques out of 12 monuments built in al-Qāhirah between 1442 and 1517) (see map 2). The mosque network had reached its completion in a region now fully urbanized. The importance of the development of al-Qāhirah in the Mamluk period is confirmed by a comparison between the number of mosques standing there in the *Description* (67 mosques), and that slightly higher recorded by al-Maqrīzī (69 mosques). This suggests that the residential population of the central zone reached in the Mamluk era a level that would remain largely stable until the end of the eighteenth century when, according to my calculations in "Signes urbains," there were 90,000 inhabitants.

The Population Growth of the Region South of the City, between Bāb Zuwaylah and the Citadel

The occupation of this huge 266-hectare region, outside al-Qāhirah, between the outskirts of the Fatimid city (Bāb Zuwaylah), the Citadel, and the Khalīj was the key event in the urban history of Cairo during the Mamluk period (and until the end of the "Ottoman" seventeenth century). This expansion was the natural consequence of Saladin's construction of the Citadel (started in 1176) which opened up a large area for urban settlement between al-Qāhirah and the new center for the army and government. This region saw a demographic expansion which began in the Ayyubid era and continued until about 1700. Under the Ayyubids the movement was still in its initial phase, but it really took off in Mamluk times, when important changes fundamentally altered the structure of the city. One only needs to compare, in the list of classified monuments, the three Ayyubid mosques with the 35 Mamluk monuments, to understand the scale of the transformation. Construction in the period covered by al-Maqrīzī's work was remarkably prolific: 48 mosques were built between 1260 and 1341 (more than in al-Qāhirah), of which 33 are classified, an indication that it was not only the quantity of construction, but the quality of architectural design which was out of the ordinary. The most notable examples within this list are the al-Nāṣir mosque at the Citadel,[36] and, naturally, the monument which is the very emblem of the Mamluk era, the Sultan Ḥasan mosque.[37]

The study of the chronology of these buildings does not reveal a clear pattern of planning within this expansion. Sultan al-Nāṣir obviously gave his strong backing to the urban development in this region, as he did in the western part of the city, with the use of "concessions" *(ḥikr)* to encourage the setting up of housing settlements and infrastructure to accommodate a growing population,

[36]1335, no. 143, 54 T 3 (36).

[37]1362, no. 133, 1 S 6 (68).

often organized around a religious center.[38] This aid from the sultan encouraged the foundation of mosques by all the main amirs: the mosques of Ylmās,[39] Qawṣūn,[40] Bashtāk,[41] and Altunbughā al-Māridānī[42] are the most remarkable of the fourteen mosques which were erected in this region under the reign of al-Nāṣir, mostly along the main roads leading from Bāb Zuwaylah to the Khalīfah,[43] by way of Ṣalībah[44] and to the Citadel, by way of Darb al-Aḥmar[45] and Tabbānah.[46] These were logical itineraries for expansion to the south, but there was apparently no chronological order in this movement. The two most southerly mosques, for example, were constructed as early as 1298[47] and 1315.[48]

After al-Nāṣir the movement continued, creating a network of religious buildings scattered fairly evenly throughout the region with two high density zones: one near Darb al-Aḥmar, at the southernmost end of Bāb Zuwaylah (six mosques) and the other between Sūq al-Silāḥ and Rumaylah, below the Citadel (nine mosques)—two nerve centers of Cairo, politically and economically. The extreme south of the town (between Ṣalībah and Khalīfah) was also the locus of nine mosques, their construction being strongly linked to the importance of the traffic on the roads towards Old Cairo and the Ṣaʻīd, and to its proximity to the cemetery.

Two regions, situated on the western side of the area, remained little touched by this burst of building. One lies in the large stretch to the southwest of Bāb Zuwaylah, between the Fatimid wall, the Khalīj, the north bank of Birkat al-Fīl, and that part of the great avenue which was later to be named "Qaṣabat Riḍwān."[49] This was where the tanneries were located, which in the sixteenth century would have covered as many as a dozen hectares:[50] we can assume that this was the main reason for the lack of residential settlement and the quasi-absence of mosque-

building in the area. The Qawṣūn mosque[51] and the mosque built at Taḥt al-Rab‘ after 1420[52] are both located outside the area, and it was not until 1429 that the modest Qāḍī Amīn al-Dīn mosque,[53] briefly mentioned by al-Maqrīzī[54] and not even recorded in the *Description,* was built in Suwayqat ‘Aṣfūr.[55] The problem of the presence of the tanneries *(madābigh)* which blocked urban development in this region, so close to the south limit of al-Qāhirah, was only raised in the sixteenth century by the Ottomans, and eventually resolved, in 1600, with their transfer to Bāb al-Lūq:[56] this move made way for the building of two prestigious religious monuments (the mosques of Malikah Ṣafīyah in 1610 and of Burdaynī in 1629).[57]

The region surrounding the vast Birkat al-Fīl pond was another special case. According to al-Maqrīzī´s lists there were no mosques constructed in the immediate neighborhood of the water´s edge, which was at that stage already given over to residences of the wealthier strata of the population.[58] It was not, therefore, an empty zone, but one which was devoted to the residence of the rich rather than to that of the common man. This segregation was reinforced towards the end of Mamluk rule and the beginnings of Ottoman days—until the end of the seventeenth century, when Azbakīyah became the new fashionable location, enticing the elite away from Birkat al-Fīl.

Overall the mosque building activity in the southern region of Cairo in al-Maqrīzī´s days reflects the demographic expansion of the area with telling accuracy. This urban development was something al-Maqrīzī himself noted, in an emphatic manner: people ″one and all″ started building there; buildings followed one another ceaselessly ″from the edges of al-Qāhirah to the Ibn Ṭūlūn mosque.″[59] In actual fact the process was then only in its early stage and would continue until the end of the Mamluk age (26 additional mosques were built there between 1442 and 1517, compared to the 12 in al-Qāhirah) and well into the Ottoman period. The *Description de l´Egypte* mentions no less than 93 mosques in this southern

area, a much larger figure than in al-Maqrīzī's time and even for the entire Mamluk period: the development of urbanization begun during the Mamluk era was far from having reached its apogee.[60] There is no question that in al-Maqrīzī's time, and even in 1517, the population of the southern region was much less than the 100,000 inhabitants I have estimated for 1798.

The Evolution of the Western Region

The problem of the evolution of the region west of Cairo—in other words, the zone beyond the Khalīj al-Miṣrī—is a point for discussion. In his map 4 of *Grandes villes méditerranéennes* (fourteenth century) Garcin suggests that in the fourteenth century the western region (beyond the Khalīj al-Miṣrī: "zone des principaux ahkar") was sparsely populated ("urbanisation peu dense supposée") with a zone of dense occupation along the Khalīj al-Nāṣirī. In map 5 (beginning of the sixteenth century) the western region is considered by him as a zone of dense urbanization ("urbanisation dense supposée"). My view, based on locations of mosques, is quite different.

When discussing the issues of the western region's urbanization during al-Nāṣir's time, historians have relied heavily on al-Maqrīzī's comments about the sultan's policy of expansion through concessions *(ḥikr)* on six- or even twelve-hectare plots. This would have resulted in a boom in population, described by al-Maqrīzī in glowing terms: the two banks of the Khalīj (al-Nāṣirī) were covered with houses with markets, baths, and mosques. In fact the region beyond al-Qāhirah, on the west side, became "a string of cities."[61] However, when one looks at the list that al-Maqrīzī gave of the mosques built in this very area by al-Nāṣir, one comes to more modest conclusions. Between 1300 and 1340 al-Maqrīzī mentions only eight religious buildings in the whole western region in his list of mosques built by al-Nāṣir[62] and in his chapters on the *jāmi', madrasah,* and *masjid* in the *Khiṭaṭ*. The location of these mosques is significant. Four were constructed around 1314, 1337, 1340, and 1341 in the zone between Bāb al-Qanṭarah[63] and Bāb al-Baḥr;[64] one was built in 1320 on the banks of the Khalīj near al-Amīr Ḥusayn bridge;[65]

one in 1308 on the road between Bāb al-Kharq[66] and Bāb al-Lūq;[67] and the last two, both built around 1340, were located in the Suwayqat al-Sabbā'īn quarter.[68] The geography of these mosques suggests a densely urbanized zone around the road leading from Bāb al-Qanṭarah[69] to the gate of the city, but in no other areas of the region. This is not the urban boom described by al-Maqrīzī. Similarly hypothetical is the ″high density″ settlements suggested in Garcin´s map along the Khalīj al-Nāṣirī and on the east bank of the Nile, between Būlāq and Old Cairo. If the two satellite cities experienced a development which confirmed the importance of Old Cairo and the burgeoning of Būlāq, one is struck by the small number of constructions along the Nile recorded by al-Maqrīzī. Examples of what appears to be the fragility of these creations reinforce this feeling of scepticism: the al-Ṭaybarṣī mosque, constructed in 1307 at Bustān al-Khashshāb, beside the Nile, fell into ruin after the decline of the area about 806/1403–4;[70] the mosque of Fakhr Nāẓir al-Jaysh at Jazīrat al-Fīl, built before 1332, was ruined at some point after 1388.[71] Such examples lead us to believe that expansion here was not the result of a lasting demographic development, hence the difficulties encountered when times got hard, as they did after 1348 until the end of the century. Even mosques constructed in less problematic conditions led apparently precarious existences: erected around 1340, just outside Bāb al-Baḥr,[72] the Ibn Ghāzī mosque[73] had only slight popularity; al-Maqrīzī states that, although people continued to say the *khuṭbah* there, it was shut the rest of the time since there were not enough local residents to support it *(li-qillat al-sukkān ḥawlahu)*.[74]

A study of what happened after 1340 seems to confirm this overall impression of al-Nāṣir´s reign. The list established for the whole of the period (1260–1441) shows that 19 mosques were erected in the western zone (out of a total of 122, of which 43 were in al-Qāhirah and 48 in the south). The only regions where the locations of mosques indicate dense occupation are the two areas previously mentioned: the zone extending from Bāb al-Qanṭarah[75] to the city gate (9 mosques)

and the zone between the Khalīj and the Birkat al-Saqqā'īn[76] (5 mosques). In the region which was soon to become Azbakīyah, the fate of the mosque/*madrasah* of Ibn al-Maghribī,[77] on the Khalīj al-Nāṣirī, near Birkat Qarmūt,[78] seems quite significant: it is recorded as destroyed in 1411–12.[79] Outside the two aforementioned areas a few mosques were built near the Khalīj al-Miṣrī and Bāb al-Lūq.

This situation did not change substantially in the period 1442–1517, with a meagre total of 5 mosques built in the whole western region (out of 46 for the whole of Cairo, of which 12 were in al-Qāhirah, and 26 in the southern region), in the areas previously mentioned. The only exception was the building of Amir Azbak's mosque along the "Azbakīyah" in 1484.[80] But the problematic character of such an attempt was revealed by the ultimate failure of the enterprise, although hailed by a commentary of Ibn Iyās, every bit as enthusiastic as al-Maqrīzī's in similar circumstances: "Everybody wanted to live in Azbakīyah, which thus became an independent residential district."[81] In fact, Azbakīyah's day was not to come until much later, under the Ottomans, in the seventeenth and, more so, in the eighteenth centuries.

The fact that the western region beyond the Khalīj al-Miṣrī remained largely unoccupied is confirmed by what we learn, thanks to al-Maqrīzī and his *Khiṭaṭ,* from the geographical distribution of the public baths,[82] from that of the market places and caravanserais,[83] and from that of the *ḥārah*. I would like to be allowed here to refer, concerning these various aspects, to the maps published in my "Cairo's Area and Population."

I tried to show earlier that there is no likelihood in the suggestion that the "scarcity" (and even absence) of mosques in the larger part of this region is a consequence of the defects of our source and not the result of the real situation, since it is precisely in this area that al-Maqrīzī's counts are the most complete. Furthermore there is no explanation why, of the mosques thus overlooked by al-Maqrīzī, so few would have withstood the test of time and survived: in effect only four in this vast area (compared with 35 monuments in the southern quarter):

the al-Zāhid mosque,[84] Amir Ḥusayn,[85] Sitt Ḥadaq (Miskah),[86] and the Arghūn Shāh,[87] all of them mentioned by al-Maqrīzī and lying in a location that confirms the conclusions I have been proposing. The enormous changes that this region underwent at the end of the nineteenth century can hardly be held responsible for such a situation: mosques, due to their religious purpose and use, are monuments of remarkable stability, and even if this area of the city was completely transformed by the ″modernization″ which affected Cairo at that time, the mosques would have remained active, continuing to serve the large population of this area.

During the Mamluk period the western region remained nearly unoccupied in its central part (between the Birkat al-Azbakīyah and al-Nāṣirīyah/Saqqā'īn); it was densely populated only on its fringes in the north, and in the south. It seems then difficult to evoke any dense urbanization in 1517. The urbanized area probably developed on less than one hundred hectares, much less than in 1798 (215 hectares). In the absence of architectural evidence it would also seem unjustifiable to assume that there was continuous dense urbanization along the Khalīj al-Nāṣirī and the east bank of the Nile between Būlāq and Fuṣṭaṭ. Again, it is the absence of urbanization, not the imperfection of our main source, which explains the lack of mosques in the area.

Using the available sources, we may arrive at reasonable conclusions as to the surface area that was populated during al-Maqrīzī´s time. I should estimate it to be around 450–500 hectares, and suggest a population figure of much fewer than 200,000 inhabitants (in 1798, 660 hectares, and 263,000 inhabitants). This evaluation might appear, at face value, to be on the low side. But taking into account Fuṣṭaṭ—which was still thriving at that time—and Būlāq, which was then expanding, Cairo still was one of the major cities in the Mediterranean basin.

Although the study of monuments belonging to art history is generally kept separate from political and economic history, I suggest that by considering the mosques as not just religious buildings and ″oeuvres d´art,″ but as ″products″ of human urban enterprise, meant to provide for the needs (here religious) of a population, we may draw from them some information about the urban evolution of the city. It is a principle I have used in studying the architecture of Ottoman Cairo, and it seems to me quite as pertinent for the Mamluk period. If we group the dates of construction

[84] 1415, no. 83, 324 E 10 (96).

[85] 1319, no. 233, 36 L 9 (25).

[86] 1340, no. 252, 131 Q 11 (41).

[87] 1347, no. 253, 192 R 13 (54).

of the mosques by 25-year spans, we arrive at a picture which bears some relation to Cairo′s history:

1276–1300: 11 mosques built
1301–1325: 14
1326–1350: 30
1351–1375: 17
1376–1400: 12
1401–1425: 23
1426–1441: 12 (16 years)

This table confirms the exceptional building activity that took place during the reign of al-Nāṣir. The decline which followed the crisis of 1348 reached its nadir in the last part of the fourteenth century, with a normal time lag before the effects of the political/economic situation were felt in human activities, such as building religious monuments. This crisis was very severe, with a paroxysm between 1376 and 1400. One is also struck by the frequency and length of periods for which our sources mention no building at all: five years each between 1351 and 1356, 1362 and 1367, 1386 and 1391, and 1399 and 1404; and four years between 1377 and 1381. The table shows how the architectural activity bounced back and was particularly important at the very beginning of the fifteenth century (1401–25). In some measure this contradicts al-Maqrīzī′s contemporary pessimistic comments: in this case, the conclusion that we can reach using the factual information ″innocently″ provided by the historian in his *Khiṭaṭ* and *Sulūk* is at variance with his own statements on the evolution of Cairo as developed in his historical discourse.

Chronological List of the Mamluk Mosques in Cairo (1260–1517)

The following list of mosques (1260–1517) is divided into two parts: the period 1260–1441, and the period 1442–1517. Each listing includes successively the date (ca. = circa, if it is approximate), the reference to al-Maqrīzī, Ibn Taghrībidrī, or Ibn Iyās, the number in the *Index to Mohammedan Monuments* (I), and the location (a. = around, if it is conjectural) by reference to the map of the *Description de l'Egypte* (in bold type if the monument is mentioned in the *Description,* and with the name given in the *Description* if it is different).

Abbreviations are as follows:

M: mosque
m: madrasah
Kh: al-Maqrīzī, *Khiṭaṭ* (Būlāq, 1270/1853)
Sulūk: al-Maqrīzī, *Sulūk* (Cairo, 1934–)
Quatremère: al-Maqrīzī, *Sulūk,* trans. as *Histoire des sultans mamlouks* (Paris, 1837–45)
ITB, Nujūm: Ibn Taghrībirdī, *Al-Nujūm al-Zāhirah,* ed. William Popper (Berkeley, 1926–29)
ITB, History: Ibn Taghrībirdī, *Al-Nujūm al-Zāhirah,* trans. William Popper as *History of Egypt, 1382–1469 A.D.* (Berkeley, 1954–60)
ITB, Ḥawādith: Ibn Taghrībirdī, *Ḥawādith al-Duhūr,* ed. William Popper (Berkeley, 1930–42)
IIW: Ibn Iyās, *Histoire des mamlouks circassiens* (872–906), trans. Gaston Wiet (Cairo, 1945)

I. 1260–1441

1. m. al-Ẓāhir Baybars - 1263 - Kh 2:378 - I 37 - **274 H 6**
2. masjid around *mashhad* al-Ḥusaynī - Baybars - 1264 - Kh 2:413 - a. I 5

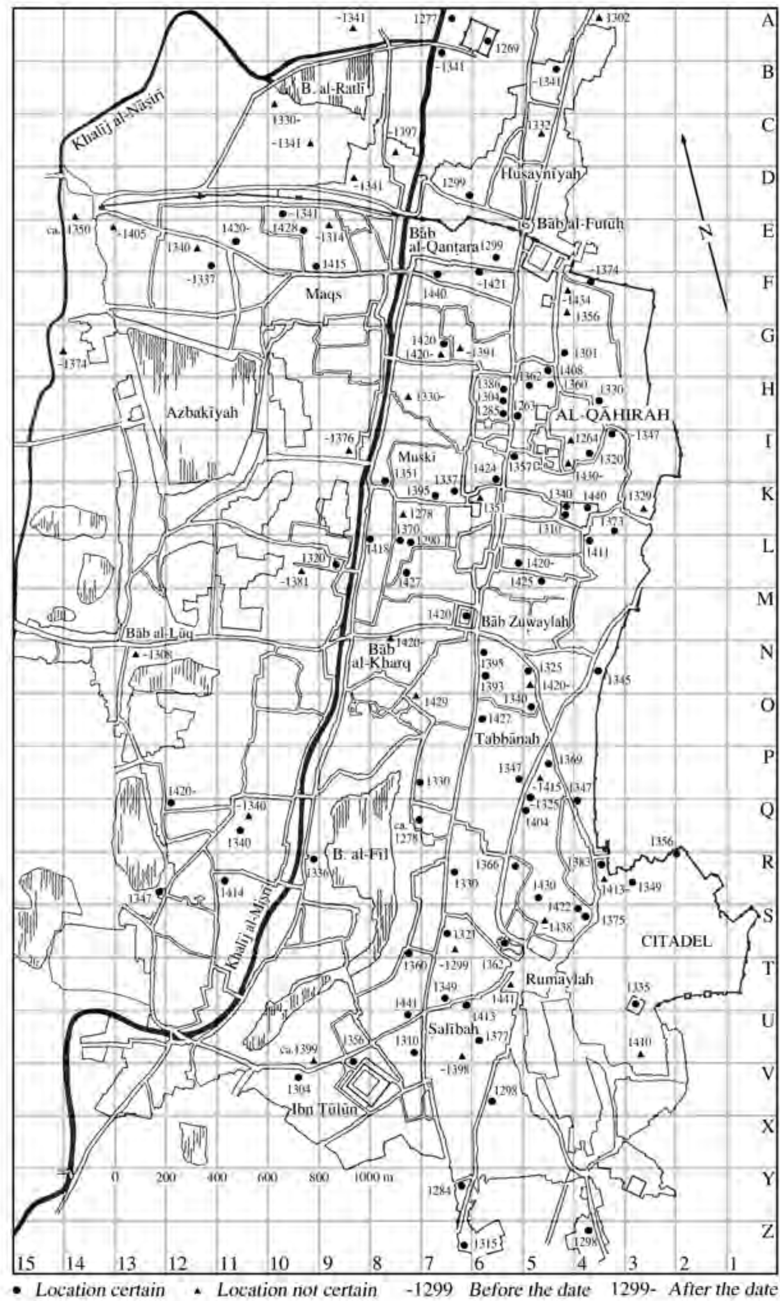
12. m. Mankūtumurīyah - 1299 - Kh 2:387 - a. 98 E 6

13. m. Tafjīyah - before 1299 - Kh 2:397 - a. S 7
14. m. Maẓharīyah - 1299 - I 8 - **384 D 7**
15. m. Qarāsunqurīyah - 1301 - Kh 2:388 - I 31 - **293 G 5**
16. M. Karāy al-Manṣūrī - 1302 - Kh 2:325 - a. A 4
17. m. Sālār and Sanjar al-Jawlī - 1304 - Kh 2:398 - I 221 - a. 169 V 10
18. m. al-Nāṣir Muḥammad - 1304 - Kh 2:382 - I 44 - **278 H 6**
19. M. Jamāl al-Dīn Āqūsh - before 1308 - Kh 2:315 - **99 N 13** (Tabbâkh)
20. m. Ṭaybarsīyah - 1310 - Kh 2:383 - I 97 - 150 K 5
21. M. Aḥmad Bey Kuhyah - 1310 - I 521 - a. 110 U 7
22. M. al-Jākī - before 1314 - Kh 2:314 - a. 330 D–E 9 ?
23. M. al-Nāṣir at *mashhad* al-Nafīsī - 1315 - Kh 2:306 - **81 Z 7** ? (al-Sayyida)
24. m. al-Jukandār - 1320 - Kh 2:392 - I 24 - a. 85 I 4
25. M. Amīr Ḥusayn - 1320 - Kh 2:307 - I 233 - **36 L 9**
26. m. al-Sa‘dīyah - Sunqur - 1321 - Kh 2:397 - I 263 - **68 S 7** (A‘gâm)
27. m. Dawādārīyah - before 1325 - Sulūk 2:1:269 - a. 143 P–Q 5–6
28. m. al-Mihmandārīyah - 1325 - Kh 2:399 - I 115 - **185 N 5**
29. M. al-Barqīyah - al-Tūbah - Mughulṭāy - 1329 - Kh 2:326 - a. 8 K 3
30. M. Ylmās - 1330 - Kh 2:307 - I 130 - **85 R 7** (al-Mâż)
31. M. Qawṣūn - 1330 - Kh 2:307 - I 202, 224 - **106 P 8**
32. m. Mughulṭāy al-Jamālī - 1330 - Kh 2:392 - I 26 - **109 H 4**
33. M. al-Tūbah - Ṭaqṭā’ī - after 1330 - a. H 8
34. M. Akhū Sārūjā - after 1330 - Kh 2:315 - a. B 10–11
35. M. al-Malik - 1332 - Kh 2:310 - Ḥusaynīyah
36. M. of the Citadel - al-Nāṣir Muḥammad - 1335 - Kh 2:325 - I 143 - **54 T 3** (Qalāwūn)
37. M. Bashtāk - 1336 - Kh 2:309 - I 205 - **54 R 10**
38. M. Muḥammad al-Turkmānī - before 1337 - Kh 2:313 - **261 E 12**
39. M. Qāḍī Sharaf al-Dīn - 1337 - I 176 - **123 K 7** (zâwiya)
40. M. Aqsunqur - before 1340 - Kh 2:309 - a. 132 Q 11
41. M. Sitt Ḥadaq (Miskah) - 1340 - Kh 2:313, 326 - I 252 - **131 Q 11**
42. M. Māridānī - 1340 - Kh 2:308 - I 120 - **180 O 5**
43. m. Aqbughā - 1340 - Kh 2:383 - I 97 - K 5
44. M. Ibn Ghāzī - 1340 - Kh 2:313 - a. E 12
45. M. Karīm al-Dīn - before 1341 - Kh 2:245 - a. D 9
46. M. Dawlat Shāh - before 1341 - Kh 2:325 - a. 432 C 10
47. M. at Birkat al-Ratlī - before 1341 - Kh 2:326 - a. 437 A 9
48. M. Qīdān al-Rūmī - before 1341 - Kh 2:312 - a. 394 A 7
49. M. Muẓaffar al-Dīn ibn al-Falak - before 1341 - Kh 2:326 - a. 345 B 5
50. M. Jawhar al-Sahratī - Ṭawāshī - before 1341 - Kh 2:325 - **145 D 10**

51. M. Aslam - 1345 - Kh 2:309 - I 112 - **94 N 4** (Aslân)
52. m. Aydumur- Baydar - before 1347 - Kh 2:391 - I 22 - **92 I 4** (zâwiya)
53. M. Aqsunqur - 1347 - Kh 2:309 - I 123 - **82 P–Q 5** (Ibrâhîm Âghâ)
54. M. Arghūn Shāh al-Ismā‘īlī - 1347 - Kh 2:327 - I 253 - **192 R 13** (Isma‘înî)
55. m. Qatlūbughā al-Dhahabī - 1347 - I 242 - a. 39–40 P 5
56. M. Manjak al-Yūsufī - 1349 - Kh 2:320 - I 138 - **36 R 3** (Manshakiyya)
57. M. Shaykhū - 1349 - Kh 2:313 - I 147 - **229 T 7**
58. M. al-Akhḍar - Maliktamur - about 1350 - Kh 2:324 - a. D 14
59. m. al-Ṣaghīrah - 1351 - Kh 2:394 - a. K 6–7
60. m. al-Qaysarānīyah - 1351 -Kh 2:394 - a. 221 K 8
61. m. al-Fārisīyah - 1356 - Kh 2:393 - a. F 5
62. M. Niẓām al-Dīn - 1356 - I 140 - **12 Q–R 3** (Ludâmî)
63. m. Sarghatmish - 1356 - Kh 2:403 - I 218 - **212 U 9** (Qawâm al-Dîn)
64. m. al-Budayrīyah - 1357 - Kh 2:392 - a. 247 I 6
65. m. Bashīr al-Jamdār - 1360 - Kh 2:399 - I 269 - **138 S 8** (Shaykh al-Zalâm)
66. m. Ṭāṭār al-Hijāzīyah - 1360 - Kh 2:382 - I 36 - **261 H 5** (zâwiya)
67. m. Sābiqīyah - Mithqāl - 1362 - Kh 2:393 - I 45 - **283 H 5** (Shaykh al-Islâm)
68. M. Sulṭān Ḥasan - 1362 - Kh 2:316 - I 133 - **1 S 6**
69. m. Iljāy - 1367 - Kh 2:399 - I 131 - **146 R 6** (al-Sâ’îs)
70. m. Umm al-Sulṭān Sha‘bān - 1369 - Kh 2:399 - I 125 - **167 P 5**
71. m. Asanbughā - Būbakrīyah - 1370 - Kh 2:390 - I 185 - **18 L 8**
72. m. Ghannāmīyah - 1373 - Sulūk 4:1:545 - I 96 - **54 K 4** (zâwiyat al-Nanâmiyya)
73. m. al-Baqrīyah - before 1374 - Kh 2:391 - I 18 - **135 F 4**
74. M./m. Ibn al-Maghribī - before 1374 - Kh 2:328, 391 - a. G 15
75. m. Sha‘bān - 1375, demolished in 1411 - Sulūk 3:1:251, 4:1:175 - **50 S 4** (al-maristân al-qadîm)
76. m. Abī Ghālib al-Kalbashāwī - before 1376 - Sulūk 3:1:262 - I 9?
77. M. Khushqadam al-Aḥmadī - 1377 - I 153 - **74 U 6**
78. m. Ibn ‘Arrām - before 1381 - Kh 2:394 - a. L 10?
79. m. Aytmish al-Bajāsī - 1383 - Kh 2:400 - I 250 - **63 R 4** (Bâb al-Wazîr)
80. m. Sulṭān Barqūq - 1386 - Sulūk 3:2:547 - I 187 - **279 H 6**
81. masjid Ibn al-Shīkhī - before 1391 - Kh 2:411 - a. G 7
82. m. Īnāl - 1393 - Kh 2:401 - I 118 - **234 N 6** (Sinân al-Yusufî)
83. m. Zimāmīyah - Muqbil - 1395 - Kh 2:394 - I 177 - a. 121 K 7
84. m. al-Maḥmūdīyah - 1395 - Kh 2:395 - I 117 - **237 N 7**
85. M. Kīmkhatī - Gunaynah - before 1397 - Kh 2:325 - a. 412 C 8?
86. M. Qalamtāy - before 1398 - ITB, History 1:203 - a. 66 U 7
87. M. Barakah - around 1399? - Kh 2:326 - a. U–V 10



88. M. Sūdūn Min Zādah - 1404 - Sulūk 3:3:1122 - I 127 - **158 Q 6** (Masdâda)
89. M. al-Fākhirī - before 1405 - Kh 2:324 - a. D–E 14
90. m. Jamāl al-Dīn al-Ustādār - 1408 - Kh 2:401 - I 35 - **302 G 5** (Mu'allaq)
91. M. al-Hawsh - 1410 - Kh 2:327 - Citadel, a. U 3
92. m. al-'Aynī - 1411 - Quatremère, 2:224 - I 102 - **53 L 4**

″It Has No Root Among Any Community That Believes in Revealed Religion, Nor Legal Foundation for Its Implementation″: Placing al-Maqrīzī′s Comments on Money in a Wider Context

I

It is certainly nothing new to state that the works of al-Maqrīzī have been one of the most important sets of resources used by scholars of the economic and monetary history of the medieval Middle East in general, and for the Mamluks in particular. His short treatises *Ighāthah* and *Shudhūr* are well known for their focus on economic matters, and his chronicle the *Sulūk* and topographical work the *Khiṭaṭ,* among others, also reflect the author′s concern with these issues.[1] As a result, one can scarcely pick up an article or chapter about Islamic money without finding the obligatory reference to Sauvaire′s nineteenth-century compilation of monetary and metrological citations, which contains more references to the works of al-Maqrīzī than any other author.[2] When it comes to the history of Mamluk Egypt, the reliance is even greater. This is clear if we examine the nuts and bolts of Mamluk monetary research. Citations to al-Maqrīzī′s many works are common in the ″Currency″ section of William Popper′s *Systematic Notes to Ibn Taghrî Birdî′s Chronicles of Egypt*.[3] Paul Balog, the author *Coinage of the Mamlūk Sultans of Egypt and Syria,* relied primarily on French translations of some of al-Maqrīzī′s major texts for much of the historical context which he included in his works

It is also worth noting that Isaac de Sacy had translated al-Maqrīzī′s *Shudhūr al-ʻUqūd* at the end of the eighteenth century.

[3]William Popper, *Egypt and Syria under the Circassian Sultans, 1382–1468 A.D.: Systematic Notes to Ibn Taghrî Birdî′s Chronicles of Egypt,* University of California Publications in Semitic Philology, no. 16 (Berkeley, 1957), 41–73.

about Mamluk numismatics.[4] Jere L. Bacharach, the first scholar to combine systematically the exploitation of Mamluk numismatic evidence with information derived from the many chronicles and other written sources, counted more than 850 references to money and prices in the *Sulūk* for the period from 1382 up to the end of the chronicle alone.[5] These citations have been the grist for many other studies.

Yet as any recent text on historical methods would point out, and as many of the papers of this conference have emphasized, using al-Maqrīzī´s oeuvre is not a simple matter of looking up what he says and plugging that into our work. As Cahen wrote, ″the very remarkable merits of this author are incontestable; but . . . it must be kept in mind that for the early periods he is, in the final analysis, in the same position as ourselves, and that his opinion cannot, therefore, bear the validity of formal testimony.″[6] The topic of al-Maqrīzī´s use of earlier sources has been much discussed and does not directly concern us here.[7] There is more to the question of al-Maqrīzī´s reliability and historical approach than chronology, however. What is also relevant are the prisms through which al-Maqrīzī viewed those economic matters both prior to and contemporary with him. As is clear to anyone who has read the *Ighāthah* and the *Shudhūr,* al-Maqrīzī was not an impartial observer of the events he described.

For example, al-Maqrīzī had much to say about the disastrous effects he concluded were the result of the Mamluks having put large numbers of *fulūs* into circulation. The following passage appears in his *Ighāthah* (written in 808/1405):

> Know—may God grant you eternal happiness and felicity—that the currency that has become commonly accepted in Egypt is the *fulūs.* They are used in exchange for all sorts of edibles, all types of drinks, and other common goods. They are accepted for payment of land taxes, the tithe on the profits of merchants, and other imposts

> due the sultan. They are used to estimate labor costs for all works, whether significant or insignificant. Indeed, the people of Egypt have no currency other than the *fulūs*, with which their wealth is measured. . . . This is an innovation and a calamity of recent origin. *It has no root among any community that believes in revealed religion, nor [does it have] any legal foundation for its implementation* [emphasis added]. Therefore, its innovator cannot claim that he is imitating the practice of any bygone people, nor can he draw upon the utterance of any human being. He can only cite the resultant disappearance of the joy of life and the vanishing of its gaiety; the ruination of wealth and the annihilation of its embellishments; the reduction of the entire population to privation and the prevalence of poverty and humiliation: ″That God might accomplish a matter already enacted″ (Q 8:42).[8]

What are we to do with such a jeremiad? On the one hand, it is clear to us today that there was nothing unique about the minting of copper coins in the Mamluk Sultanate. Not only are there many examples of copper coins issued by earlier Islamic dynasties, but al-Maqrīzī himself wrote about the issuance of copper coins in Egypt by the Ayyubid al-Malik al-Kāmil in the early seventh/thirteenth century (see below) and mentioned numerous other occasions of the minting of *fulūs*.[9] There are also many surviving specimens of Mamluk gold and silver coins minted in the first decade of the ninth/fifteenth century, the period when the *Ighāthah* was written, so other currencies clearly existed, although perhaps they were not in circulation but were hoarded.[10] On the other hand, it needs to be pointed out that what al-Maqrīzī seems to have been the most concerned with in this passage was the tremendous reliance on copper *fulūs* and its ubiquity in all facets of economic life—that it had usurped the roles reserved for gold and silver monies. This development was objectionable to al-Maqrīzī on two interrelated grounds; there was no basis for it in ″revealed religion″ nor any ″legal foundation″ for such a development. These reasons suggest that we need to examine the contemporary legal texts for what they have to say about money and its use if we wish to understand al-Maqrīzī′s point of view.

[10] For an overview of monetary developments in Mamluk Egypt, see my ″The Monetary History of Egypt, 642–1517,″ chapter 12 of *The Cambridge History of Egypt*, vol. 1, ed. Carl F. Petry (Cambridge, 1998).

This article thus provides a case study of a set of related issues and problems which have not been adequately discussed in the context of Mamluk monetary history. When it comes to al-Maqrīzī´s comments on the money and monetary policy of the Mamluks, I believe we would be well-served to adopt an approach that places al-Maqrīzī in the intellectual milieu of medieval Islamic economic thought. In other words, we need to understand what John Meloy has adroitly termed al-Maqrīzī´s ″economic *sunnah*.″[11] This article contributes to that goal by examining brief segments of al-Maqrīzī´s economic writings and then comparing those segments to similar material found in contemporary and near-contemporary *ḥisbah* and *fiqh* materials. It concludes with a discussion of the repercussions of this approach and the implications for future research.

II

While the office of *muḥtasib* was not everywhere the same across the expanse of the medieval Dār al-Islām, it is clear that a common matter of general concern of this economico-moral officer was the prevention of actions that resulted in usury *(al-ribā')*.[12] Al-Maqrīzī was twice appointed *muḥtasib* of Cairo during the period 801–803/1399–1401.[13] With that experience, and in light of the mentions of the duties of the *muḥtasib* which occur in al-Maqrīzī´s own writings, it is perhaps safe to assume that he was familiar with the *ḥisbah* manuals of the age.[14] One such *muḥtasib* manual was the *Nihāyat al-Rutbah fī Ṭalab al-Ḥisbah* by the Syrian author al-Shayzarī.[15] While al-Shayzarī was a twelfth-century author, his work

[15]'Abd al-Raḥmān ibn Naṣr al-Shayzarī, *Nihāyat al-Rutbah fī Ṭalab al-Ḥisbah*, ed. al-Sayyid al-Bāz al-'Arīnī (Beirut, 1981). It has been translated by R. P. Buckley as *The Book of the Islamic Market Inspector: Nihāyat al-Rutba fī Ṭalab al-Ḥisba: The Utmost Authority in the Pursuit of*

was evidently popular among a Mamluk-era audience, as the number of surviving manuscripts known to have been copied during the Mamluk era may indicate. The two fourteenth-century Egyptian authors Ibn al-Ukhūwah and Ibn Bassām, for example, are known to have relied on al-Shayzarī´s work in their own.[16]

The following passage comes from chapter 30 of al-Shayzarī´s manual, devoted to regulation of money-changers:

> It is not permitted for anyone to sell gold coins for gold, nor silver for silver, except in the same quantities and by taking immediate possession. For if the money changer makes a profit when he is exchanging the same metal, or if he and the customer part company before possession is taken, this is unlawful. As for selling gold for silver, profit is permitted here, but credit and concluding the sale before delivery is made are unlawful. It is not permitted to sell pure coinage for that which is adulterated, nor to sell adulterated gold and silver coins for other adulterated ones, such as selling Egyptian dinars for those from Tyre, or those from Tyre for the same, or Ahadi dirhams for those from Qairouan because of ignorance as to their value and the lack of similarity between them.
>
> It is likewise not permitted to sell whole dinars for cut pieces of a dinar because of their difference in value. Nor is it permitted to sell dinars from Qashan for those from Sabur due to the difference in their composition.
>
> *It is also not permitted to sell a dinar and a garment for two dinars* [emphasis added]. Some money changers and cloth merchants occasionally practice this usury in another way. They give the buyer a dinar as a loan and then sell him a garment for two dinars, so that he owes them three dinars for a specified period when they will ask for it all back. This is unlawful and it is not permissible to do it with this condition because it is a loan bringing profit. If they had not loaned him the dinar, he would not have bought the garment for two dinars.[17]

Ḥisba, by ʿAbd al-Raḥmān b. Naṣr al-Shayzarī, Journal of Semitic Studies Supplement 9 (Oxford, 1999). Very little is known about this individual´s life or career. Al-Shayzarī´s *madhhab,* for instance, is as yet undetermined.

[16]See Buckley, *The Book of the Islamic Market Inspector,* 14.

[17]This excerpt from R. P. Buckley´s translation of al-Shayzarī´s *Nihāyat al-Rutbah fī Ṭalab al-Ḥisbah,* 94–95. The passage appears in pp. 74–75 of the Arabic edition. A similar yet briefer passage occurs in Ibn al-Ukhūwah, p. 36 of the abridged translation and pp. 178–79 of the Arabic text.

The passage is concerned with eliminating practices that could lead to usurious and therefore illegal profit by forbidding transactions involving more than one type of coinage made from the same metal. The market manual thus condemns what was likely among the most common features of the contemporary marketplace: in a market where coins of multiple provenance, age, weight, and purity were in use (as both the Geniza and hoard evidence indicates was the case), it is hard to imagine transactions above the most petty day-to-day type always involving coins that were exactly the same type.[18] While neither the common folk nor the ulama may have been fully cognizant of the differences and variables amongst the circulating coinages, it is safe to assume that moneychangers and successful merchants were. It was, after all, a primary job of the *sayrafī* to determine value. While the dichotomy is not absolute, passages such as this one seem to represent an incongruity between the competing ideals of the moral economy of the jurists and the market economy of the moneychangers and merchants.

For my purposes, it is useful to compare the just-cited *ḥisbah* regulations about using multiple coinages in purchase transactions with the following passage from the *Ighāthah.* This story was related by al-Maqrīzī as the reason why the Ayyubid sultan al-Malik al-Kāmil Muḥammad caused copper coinage to be "introduced" into Egypt in 622/1225. In order to understand this passage, it needs to be stated that in 622/1225, silver dirhams of multiple alloyage were present in Ayyubid Egypt. One type was the *dirham wariq* (or *waraq*).[19] Another type was the silver coin issued under al-Kāmil, and therefore known as Kāmilī dirhams. Both the Kāmilī and *wariq* dirhams were low silver coins, of one-third silver content or less.[20] There were also higher quality silver coins still in circulation (from the reign of Saladin in particular).

> The reason behind their mintage for the first time in Egypt during the reign of [Sultan] al-Kāmil was the following: a woman stopped

Goitein, *A Mediterranean Society,* vol. 1, *Economic Foundations* (Berkeley, 1967), 229–72; and idem, "The Exchange-Rate of Gold and Silver Money in Fāṭimid and Ayyūbid Times: A Preliminary Study of the Geniza Material, *Journal of the Economic and Social History of the Orient* 8 (1965): 1–46. For the evidence derived from Mamluk-era silver hoards, see my "The Circulation of Dirhams in the Bahri Period," forthcoming in the Proceedings of the International Conference on the Mamlūks in Egyptian and Syrian Politics and Society.

[19]For an overview of the monetary uses of the term *"wariq/waraq,"* see Michael L. Bates, "Wariḳ," *EI*[2], 11:147–48.

[20]Al-Maqrīzī's error in stating that the Kāmilī dirham contained two-thirds silver is discussed by Andrew Ehrenkreutz, "Contributions to the Knowledge of the Fiscal Administration of Egypt in the Middle Ages," *Bulletin of the School of Oriental and African Studies* 16 (1954): 504. Cahen suggests the reason for al-Maqrīzī's error was his reliance on an incorrect report in al-Nuwayrī. See Cahen, "Monetary Circulation," 330, n. 46.

> the *khaṭīb* [preacher] of the mosque of Old Cairo, who then was Abū'l-Ṭāhir al-Maḥallī, and asked him for a legal opinion: ″Is it legally permitted to drink water?″
>
> He answered: ″O slave of God, what forbids the drinking of water?″
>
> She said: ″The sultan has struck these dirhams [i.e., the Kāmilī dirhams], and I buy a waterskin for half a dirham. I hand the water carrier one dirham and he gives me back half a dirham in *wariq*. Therefore it is as if I bought water and half a dirham from him for a dirham.″
>
> Abū'l-Ṭāhir disapproved of this. He met the sultan and discussed this matter with him. Hence [the sultan] ordered the minting of *fulūs*.[21]

What are we to make of this anecdote? One option would be to take it at face value as an accurate account of what really happened. That is how the account was treated by Hassanein Rabie.

> Al-Maqrīzī stated in *Ighatha* that the main purpose of striking large numbers of copper fulūs was to put a coin in circulation that would facilitate daily shopping for household items worth less than one *dirham* or part of it. He tells the story of a woman who asked Abi Ṭāhir al-Maḥallī, the *Khaṭīb* of the mosque of Miṣr [Fusṭaṭ], if drinking water was legal. When he asked her in turn what prevented her from drinking it, she said that the sultan had coined *dirham*s (she may have had Kāmilī *dirham*s in mind) and she bought a waterskin at 1/2 *dirham,* paid the water-carrier one *dirham,* and received 1/2 *dirham waraq* change. This obviously means that she had obtained from him water and 1/2 *dirham waraq* in exchange for one (Kāmilī) *dirham,* and was plagued by remorse that she had underpaid the water-carrier who was, perhaps, unaware of the difference in the value of the two coins of the same denomination. It is possible that al-Maḥallī knew nothing of transactions of this kind, either because it was wrong to give the water-carrier a Kāmilī *dirham* with its poor silver content instead of a *dirham waraq,* or because he feared that might lead to usury. Thus he consulted Sultan al-Kāmil, who ordered *fulūs* to be issued. This story indicates

[21]This translation found in Allouche′s *Mamlūk Economics,* 68–69.

> that *fulūs* fulfilled a real need, as there were no half or quarter Kāmilī *dirham*s in existence.[22]

Rabie accepted the story as true, and then proceeded to provide a moral explanation for the woman's question—she felt remorseful at the possibility that she had cheated the water carrier. His further explanation of al-Maḥallī's possible reasons for taking the action he did, however, is built upon a misunderstanding of the circulatory value of the *dirham wariq* which was of similar "poor silver content" as the Kāmilī. Moreover, his "obvious" conclusion is built upon a series of speculations (chief among them identifying which specific dirham type was used at each stage of the story) which, while plausible, reads a degree of specificity into the source that just is not there. Finally, his suggestion that the issuance of copper *fulūs* would fulfill the need for small change, while sound, ignores the situation that there was an inexact correlation between the actual silver coin objects (whether *wariq* or Kāmilī) and their unit of account (Rabie uses the term denomination). The surviving coins of both *wariq* and Kāmilī types are very irregular in weight, and it is most probable that both types were valued in direct proportion to their weight.[23]

Another alternative would be to consider the anecdote as apocryphal and to dismiss it as an after-the-fact attempt to provide a single causation explanation for the complex monetary events of al-Kāmil's reign. Admittedly, this was my reaction when I first encountered the passage some years ago. However, that view now strikes me as not particularly useful or insightful for it ignores some interesting features of the account. First of all, the general context of the anecdote—one of many dirhams in circulation—does match the situation described in the Geniza and other non-normative sources—that many different types of silver coins were in circulation, and that all were called dirhams.[24] (The lack of specificity in identifying coin types is also what one typically encounters in the contemporary sources.) Secondly, regardless of whether the conversation between the woman and the *khaṭīb* took place or not, the anecdote allows us to explore how al-Maqrīzī understood what happened. In the account, the woman said "it is as if I bought water and half a dirham from him for one dirham." This is a situation where silver was being exchanged for silver and merchandise, and is analogous—in all but the metal of

---

[22]Hassanein Rabie, *The Financial System of Egypt* (London, 1972), 182.

[23]It thus more useful to think of the actual coins as fractional rather than as individually matching up with units of account like the quarter, half, or full *dirham*. For a succinct overview of the wider monetary context in which al-Kāmil's new coin issues took place, see Michael L. Bates, "The Function of Fāṭimid and Ayyūbid Glass Weights," *Journal of the Economic and Social History of the Orient* 24 (1981): 63–92.

[24]See notes 18 and 23.

the coin—to the example cited by al-Shayzarī where two dinars were exchanged for one dinar and a dress. It seems to me that this would have struck al-Shayzarī and al-Maqrīzī, or any other *muḥtasib,* as a forbidden transaction fraught with the possibility of usury.[25] If we still care to read remorse into the woman, it would thus be due to her having participated in a usurious act rather than cheating the water seller. Moreover, from the perspective of a *muḥtasib,* the primary value derived from this issuance of *fulūs* would not be from the convenience of providing small change for small transactions but from their reducing the possibility of wrongful transactions taking place involving different types of dirhams. This is also speculative, but I believe it reflects an aspect of the economic *sunnah* which al-Maqrīzī must have shared.

III

What is missing from this discussion, however, is the fact that the rich *fiqh* tradition produced before al-Maqrīzī's life had taken into account the existence of multiple coin types in the marketplace. Indeed, by the thirteenth century, as Brunschvig demonstrated, *fiqh,* "established in an age of pluralism and monetary fluctuation, commanded that coins not be taken at face value, but according to weight (allowing for alloyage), in order to insure honesty, as one would deal in any other form of merchandise."[26] Al-Maqrīzī did not acknowledge this tradition in the *fiqh* in either of his two monetary treatises. While we know that al-Maqrīzī's maternal grandfather was of the Hanafi *madhhab,* his father was a Shafi'i and al-Maqrīzī "opted for Shāfi'ism in early manhood."[27] Udovitch has detailed that the Hanafi *madhhab* had generated many regulations for commerce that permitted transactions involving types of coins of the same metal.[28] The Shafi'i tradition, meanwhile, tended to be more restrictive of commercial practices than the Hanafi, and al-Maqrīzī may thus have regarded some of those regulations which permitted the use of multiple coin types in one transaction as *ḥiyal,* which were more common within the Hanafi *madhhab* than the other schools.[29] *Ḥiyal* were intended to bridge the gap between legal theory and practice in order to expand the area in which commercial and other practices would be within the realm of shari'ah. In short, Hanafi law tended to recognize the needs of the marketplace.[30] While it is

---

[25]The usury explanation was raised by Rabie but not developed.
[26]Cited by Cahen, "Monetary Circulation," 326. Cf. Robert Brunschvig, "Conceptions monétaires chez les jurists musulmans (VIIIe–XIIIe siècles)," *Arabica* 14 (1967): 113–43.
[27]Franz Rosenthal, "Al-Maḳrizi," *EI*[2], 6:193–94.

[30]Udovitch, *Partnership and Profit,* 42–43.

admittedly speculative, al-Maqrīzī´s silence on these matters would seem more fitting of his Shafiʻi leanings.

Al-Maqrīzī´s attitudes toward the reprehensible copper coinage seem to support this. In addition to the passage cited in the first section of this article, al-Maqrīzī included longer rants against *fulūs* at two other points within the *Ighāthah*.[31] As Allouche has pointed out, underlying al-Maqrīzī´s blanket condemnation of *fulūs* is the Shafiʻi corpus condemning copper coinage in general, although again, al-Maqrīzī does not mention these Shafiʻi prohibitions explicitly.[32] It should be pointed out that one stream of thought within the Hanafi *fiqh* tradition was willing to accept currently circulating copper *fulūs* as capital suitable for the forming of partnerships.[33]

The extent to which the legal instruments allowed in commerce by any of the *madhhab*s were utilized in the Mamluk-era marketplace will likely never be known due to the non-survival of archival sources.[34] But while we have no Mamluk court records analogous to those from the late sixteenth century recently exploited by Nelly Hanna, those later records clearly indicate that the institutions and processes set up within the *fiqh* tradition to govern pecuniary affairs in a properly Islamic manner were at work slightly more than a century after al-Maqrīzī´s death.[35] Whether we posit their existence in the earlier Mamluk era is of course subject to our own judgments and methodologies. In any case, it seems safe to assess al-Maqrīzī´s view of the marketplace as being implicitly shaped by normative assumptions about moral economic behavior current at the time.

IV

Such an assessment recognizes that al-Maqrīzī´s discussions of economic events are, to paraphrase Bonner, discourses on history and the economy inextricably bound up with and part of the discourse on the norms of religious law.[36] We know that al-Maqrīzī was partial, but we must also recognize that he was viewing and recording events through a prism shaped by normative concerns as well as a desire to preserve an account of what happened. This prism—one he was unlikely

to acknowledge—had, in the cases discussed above, significant problems meshing what should be (an ideal pure coinage of standard weight in circulation everywhere) with what actually was. But the desire to describe one of the prisms through which al-Maqrīzī viewed his world establishes the necessity of acknowledging the prisms through which we view him and his work.

For example, al-Maqrīzī has been called the "most vocal critic of Circassian monetary policy."[37] And it is true that he frequently placed blame for the economic decline of Egypt at the feet of the Mamluks in general, and specific individuals in particular. There are numerous examples of this in his works. A particularly illustrative case is that of Barqūq's *ustādār* Maḥmūd ibn ʻAlī, whom al-Maqrīzī fingered as the man responsible for the explosion of *fulūs* in circulation at the end of the eighth/fourteenth century. Al-Maqrīzī mentioned this case in the *Ighāthah, Shudhūr,* the *Sulūk,* and the *Khiṭaṭ*.[38] What I find most interesting about al-Maqrīzī in this and other such passages is his assumption of control. He was in effect saying "this individual did these things and bad things resulted." Now many have argued quite effectively that in economic matters, particularly as they relate to sources of precious metals and therefore currency supplies, the Mamluk Sultanate cannot be separated from regional and even hemispheric developments.[39] I am not interested here in dismissing al-Maqrīzī explanations of complex economic conditions by resorting to blaming specific individuals as reflecting the "simplicity of [his] medieval mind," as Ashtor put it,[40] but I am curious as to whether some of us moderns have not fallen prey to such "simple" mindsets as well.

Take, for example, assertions that the Mamluks had official monetary policies, or that they had official metallic standards (whether mono-, bi-, or tri-metallic), which the Mamluks consistently manipulated for their gain, or that they engaged in economic warfare through their coinage. All of these may be found scattered throughout the scholarship. Many scholars now argue that these assertions—and the degree of control they imply—are untenable, as I have discussed elsewhere.[41] All share a common assumption of Mamluk control over monetary matters. This is not surprising, since these assertions spring from economic theories derived and

delineated in an age when states and central banks could control the money circulating within set borders. But did the Mamluks, or any other pre-modern dynasty for that matter, in fact have this control? There was no Mamluk Central Bank, nor was there a Mamluk Greenspan-Dār presiding over a Mamluk Federal Reserve Board, yet like al-Maqrīzī′s attempts to pin problems on officials such as Maḥmūd ibn ʻAlī the *Ustādār* or others, some continue to explain developments as if there were.

I think our assessment of Mamluk monetary history in its entirety, from the issuing of new coin types to attempts at recall of old, from the use of ″foreign coins″ to attempts to manipulate exchange rates, all of it, needs to be looked at from a different starting point. One that views ″official″ Mamluk governmental economic activities as essentially and primarily reactive in nature. One where the initial assumption is that the Mamluks could only react to economic developments; they could not control them in the long run—any more than they could control the wider regional trade and economic developments. They could, of course, perhaps hope to benefit in the short term from their reactions to these developments, but that is the extent of their control. What I am proposing here is analogous to that which Udovitch argued that in the seminal article ″From England to Egypt,″ that while Mamluk policies likely exacerbated Mamluk economic decline, the long-term underlying factors—such as the plague, shifts in regional trade patterns and goods, etc.—were not under their control.[42]

This perspective changes everything. We need to consider, for example, that the Mamluks could not control the bullion (in the form of coins) that circulated in their domains—not because I say so but because there is no evidence that indicates that they could. There were no active gold, silver, or copper mines in Egypt in the Mamluk period, as far as can be determined. All bullion thus had to come in trade, from booty (an obvious example is Armenian silver), or from existing stocks. If instead we accept at face value what the sources also tell us about the Mamluks′ constant need and demand for money, then it should be readily apparent that they had no vast reservoir of specie that they could use to manipulate monetary markets. When the Mamluks accepted and used whatever coin they could find of gold and silver, terms like ″official money″ become meaningless. This is not simply saying that the market is king, although clearly the relative supply and demand of specie at any instance could have a tremendous effect on exchange rates. It is saying that just as we must examine al-Maqrīzī′s operating assumptions, we need to re-examine the assumptions underlying our explanatory theories. Since there is no evidence that the Mamluks could control the money circulating in their domains, all those explanations based on the rules which need that assumption, such as those that

---

[42]″From England to Egypt,″ 120–28.

invoke Gresham′s Law, are rendered problematic.[43]

As a final example, we can look at what Allouche has to say about the events of 806/1403-4, which al-Maqrīzī stated was the starting point of the ″current situation″ he described in the *Ighāthah*.[44] Citing from the *Sulūk* account of that year, Allouche places great emphasis on two events said to have taken place.[45] The first was a declaration that copper coins were to pass henceforth by weight, and not by count. The second was a declaration that the *darāhim min al-fulūs* was ordered to be the basis of the monetary system. Two objections to Allouche′s interpretation of these events need be raised. With regards to the first, there was nothing unusual about the declaration to accept *fulūs* by weight rather than count.[46] In fact it was a relatively common occurrence in the first half of the eighth/fourteenth century.[47] Weighing *fulūs* appears to have been a tactic used to control the valuation of copper coinage whenever there were large numbers of *fulūs* in circulation, which there most certainly were in 806. Second, the passage in the *Sulūk* says nothing about a fundamental reordering of the Mamluk monetary system. All it says is that the *Qāḍī al-Quḍāh* ordered that the rates paid for various things be written in *fulūs* and not in dirhams.[48] It makes more sense to me to see this as reflecting the contemporary prevalence of copper in the marketplace and acknowledging its widespread use for payment. If we are to read anything into this development, it is that copper was now accepted for payment of fees owed to the Mamluk regime, not that it was henceforth the ″official money″ of the sultanate.

The Merits of Economic History: Re-Reading al-Maqrīzī's *Ighāthah* and *Shudhūr*

Historians have long recognized the importance of economic issues in al-Maqrīzī's writings and the value of his historical works as sources for economic data. Clearly economic matters figure largely within his legacy. His two short books in particular, *Ighāthat al-Ummah bi-Kashf al-Ghummah* (Saving the community by examining its distress) and *Shudhūr al-'Uqūd fī Dhikr al-Nuqūd* (Pearls of the divine ordinances concerning money), have been used ever since the days of A. I. Silvestre de Sacy at the end of the eighteenth century as key sources for the economic history of Mamluk Egypt. The *Ighāthah* and the *Shudhūr* have traditionally been characterized as histories of economic phenomena or, more recently, as critiques of the economic policy of the Mamluk regime. However, the importance of these two books lies not in their value as economic histories or in their criticism of the sultanate but rather in the insight they give on al-Maqrīzī's approach to economics and his use of knowledge of the past. Clarifying al-Maqrīzī's intentions in writing these works is a necessary first step toward assessing his views on the economy and its role in history.

As Adel Allouche has noted, the *Ighāthah* has been known as an account of famines in Egypt since the early nineteenth century. In the introduction to his translation of al-Maqrīzī's *Kitāb al-Sulūk,* Étienne Quatremère summarized the contents of the *Ighāthah* and referred to it as "The Treatise on Famines," although he also admitted that the manuscript he read did not include the title.[1] Decades before Quatremère, Silvestre de Sacy had encountered the title of the *Ighāthah,* which is mentioned in al-Maqrīzī's *Shudhūr,* but had not read the text itself, translating it as "Remède offert au public contre le chagrin." Towards the end of the nineteenth century, H. Sauvaire relied heavily on data in the *Ighāthah* and the *Shudhūr* to produce his extended study of Islamic numismatics and metrology.[2] Sauvaire used manuscript versions of both texts from the Bibliothéque Nationale, but was also familiar with the translations of both texts and retained the translated titles in referring to the works. It was, however, Quatremère's version of the title

[1]Étienne Quatremère, *Histoire des sultans mamlouks de l'Égypte* (Paris, 1845), 1:xv.

[2]For the articles on numismatics, see: H. Sauvaire, "Matériaux pour servir à l'histoire de la numismatique et de la métrologie musulmanes," *Journal asiatique* (7th ser.) 14 (1879): 455–533; 15 (1880): 228–77, 421–78; 18 (1881): 499–516; 19 (1882): 23–77, 97–163, 281–327.

that stuck, no doubt in great measure because in 1940, the editors of the standard edition of the treatise, Muḥammad Muṣṭafá Ziyādah and Jamāl al-Dīn Muḥammad al-Shayyāl, stated categorically in their introduction that the *Ighāthah* "deals with the history of famines which descended on Egypt from most ancient times to the year 808 H."[3] No doubt this view further confirmed in the mind of Gaston Wiet that Quatremère's title had "the advantage of clearly defining its subject," and he went on to express the opinion that the "Treatise on famines is rather more explicit than the translation from Arabic of the actual title."[4]

Adel Allouche was the first scholar to challenge this long-standing interpretation of the work and he duly warned readers of his English translation and study of the text, published under the title *Mamluk Economics,* that Wiet's understanding—expressed in his title and in his French translation—"fails to account for the essence and scope of the work."[5] In contrast to Wiet's reading of the text, Allouche concluded that it was "a critique, if not an outright indictment, of the Circassian administration's economic and monetary policy."[6] Allouche's approach will be discussed further below, but it is important here to note that his contribution effectively transformed the modern conception of the text from a straightforward economic historical narrative to a more abstract argument, based on the term "inflation" as a more accurate reading of the operative concept in the work, *ghalā*'. Allouche's reading thus re-conceptualized the text from a history of famines to an attack on the economic policies of the Mamluk Sultanate.

The reading of *Shudhūr al-'Uqūd* has had a less complicated history although it has followed a similar trajectory. Since the end of the eighteenth century, the text has been regarded as a straightforward treatise on money. Silvestre de Sacy published his French translation under the title *Traité des monnoies musulmanes,* using also the literal translation of the short Arabic title, "Les perles des colliers." His translation was undertaken in part as a corrective to the errors contained in O. G. Tychsen's edition and Latin translation, published in the same year under the title *Historia monetae Arabicae*.[7] Indeed, Silvestre de Sacy expressed his admiration

for the text, noting that ″al-Maqrīzī′s ideas [were] more true to real monetary principles than many writers of our century.″ He also noted that, although ″[t]his short treatise on Arab money is not as complete as one would have hoped since it contains a number of inaccuracies,″ it is of ″great use″ to the study of Islamic numismatics.[8] Later scholars also treated the text as a treatise on the history of money. As mentioned above, Sauvaire used it in his series of articles on numismatics, referring to it as ″Traité des monnaies,″ and citing the Arabic title of the manuscript as ″Faṣl fī al-Nuqūd al-Qadīmah,″ a title used in some manuscripts of the text to refer to a particular section within it.[9] Anastase-Marie de Saint-Elie published an edition of the text under the title *Al-Nuqūd al-ʻArabīyah wa-ʻIlm al-Nummīyāt*.[10] L. A. Mayer published a facsimile of a Leiden manuscript—an autograph containing also his marginal notes and corrections—of the text, referring to it in a typescript note at the end of the text as ″al-Maqrīzī′s treatise on coins.″ In this brief note, Mayer stated that the second and third installments of his publication would consist of a translation with ″copious notes″ followed by a final recension of the text.[11] Daniel Eustache published his edition and French translation of *Shudhūr al-ʻUqūd* in a two-part article, ″Études de numismatique et de métrologie musulmanes,″ which appeared in *Hespéris-Tamuda* in 1969. The first part discussed money in al-Balādhurī′s ninth-century chronicle, *Futūḥ al-Buldān,* while the second part contained his edition, translation, and notes on the *Shudhūr,* in which he followed Silvestre de Sacy′s title: ″′Les perles des colliers,′ ou Traité des Monnaies.″ Eustache, like his predecessors, read the text as a scholarly treatise on money and weights, ″reproduced, with obvious modifications, from the treatise of al-Maqrīzī on famines.″[12] Muḥammad al-Sayyid ʻAlī Baḥr al-ʻUlūm, in his edition and study of the *Shudhūr,* also read the work as a study of Islamic numismatics and used the text as the principal part of his volume on Islamic money entitled *Al-Nuqūd al-Islāmīyah.*[13] As with the *Ighāthah,* Adel Allouche characterized the *Shudhūr* as an ″indictment of the monetary policy of the Circassians.″[14] The negative reading

of the *Shudhūr* and the *Ighāthah* has been further enhanced by Warren Schultz´s brief reference to them as ″screeds.″[15]

The conclusion that the texts are fundamentally critiques seems to have arisen because he wrote them, including their scathing accusations, in response to particular episodes. The conclusion that these texts were written chiefly as histories has of course followed from the dominating presence of their historical information. Modern scholars who have used these texts have largely been interested in economic and monetary history. Consequently, the collective desire of scholars to gather data on Islamic economic history has led them to interpret the essence and scope of these works according to their empirical needs. The result has been that al-Maqrīzī has not been read on his own terms. Of course, the accounts can be used for the information they contain, but it is nevertheless important to appreciate that these data are part of an argument concerning particular economic situations and do not necessarily represent the comprehensive view of the past that Silvestre de Sacy, for one, had hoped to find.

While one cannot deny the historical approach and negative tone of these two texts, emphasis on these characterizations obscures ″the essence and scope″ of both works. To be sure, in these texts al-Maqrīzī excoriates Mamluk officials and sultans and chronicles economic phenomena. However, both texts share a number of features that indicate that his broader aim was to make prescriptions for the management of monetary affairs. First, they both concern specific episodes in Mamluk monetary policy—al-Maqrīzī discussed the episode of 806 (July 1403–July 1404) in the *Ighāthah* and that of 818 (March 1415–March 1416) in the *Shudhūr*. al-Maqrīzī believed these episodes were especially significant because they directly related to issues that struck at the heart of his understanding of the monetary economy.

Furthermore, while large portions of both texts contain accounts of economic and monetary history, these narratives are part of broader arguments about the implementation of economic policy, which al-Maqrīzī believed could be addressed by means of monetary policy. Accordingly, al-Maqrīzī concluded the argument of each text with his recommendations for how the Mamluk regime should conduct Egypt´s monetary affairs. In writing these texts, he was following the Islamic literary tradition of *nasīḥat al-mulūk,* advice for rulers, as much as the tradition of *tārīkh,* history proper. In *Ighāthat al-Ummah,* he offered this advice in an attempt to save the community from a difficult economic situation, while in *Shudhūr*

---

[15]Warren Schultz, ″Mamluk Monetary History: A Review Essay,″ *Mamlūk Studies Review* 3 (1999): 193. Schultz gives an earlier assessment in his ″Mahmûd ibn ʻAlî and the ′New Fulûs′: Late Fourteenth Century Mamluk Egyptian Copper Coinage Reconsidered,″ *American Journal of Numismatics* (2nd series) 10 (1998): 130.

al-ʻUqūd he offered the Mamluk sultan religiously sound advice concerning the management of money. *ʻUqūd* is read in the sense of ordinances—obligatory bonds imposed by God, rather than necklaces: Quran 5:1: ″O believers, fulfill the bonds″ *(al-ʻuqūd)*.[16] In either case, al-Maqrīzī presented the collective knowledge in these texts as strings of pearls of divinely inspired wisdom concerning the economy and money. In the *Ighāthah* and the *Shudhūr,* he hoped to bring the conduct of the regime into line with religious teaching.

Like so many of his contemporaries whose writings constitute our access to the Mamluk past, al-Maqrīzī was a scholar trained in the religious sciences. After an upbringing influenced by his Hanafi grandfather, he followed his father as a Shafiʻi, although he later fell under the influence of the Zahiri legal tradition.[17] And like many of the ulama of his time, he also served the state in a variety of offices until his career was cut short and he devoted his life to writing[18]—on a tremendous variety of topics. Given his scholarly training and religious background, he quite naturally based his recommendations on principles presented as religiously prescribed economic practice. Consequently, al-Maqrīzī based his arguments in the *Ighāthah* and the *Shudhūr* on the prescribed practice of the religious tradition, a monetary *sunnah,* or on historically based meritorious behavior, a monetary *faḍā'il*—overlapping categories but both of which rely on a knowledge of received history and law. His primary objective in writing these texts was to ensure that the management of monetary affairs conformed to Islamic precedent and practice as he presented them in his texts. Thus his argument for monetary reform, using the idiom of religious scholarship, was grounded in knowledge of the past—a past expressed in terms of the prescribed practice of the Muslim community. Amalia Levanoni, in discussing the transition to Circassian rule, has described al-Maqrīzī′s historiographical approach as ″history in the service of faith.″[19] Consideration of his *Ighāthah* and *Shudhūr* shows that his economic history was not only in the

[19]Amalia Levanoni, ″Al-Maqrīzī′s Account of the Transition from Turkish to Circassian Mamluk Sultanate: History in the Service of Faith,″ in *The Historiography of Islamic Egypt (c. 950–1800)*, ed. Hugh Kennedy (Leiden, 2001), 93–105. This book arrived at AUB in the months after the conference and I was pleased to discover that my ideas and those of Professor Levanoni follow similar tracks.

service of the faith and the state, but was also guided by his faith. Examination of these texts in tandem—as expressions of his economic thought over the course of a decade—allows us to understand more fully his approach to and the development of his thought on economic matters, providing a more nuanced picture of an intellectual figure struggling with important affairs of his time.

806 and *Ighāthat al-Ummah:* Economic History as *Sunnah*

Al-Maqrīzī understood the crisis of 806 to be the result of a string of economic problems, culminating with actions undertaken during the administration of Sultan al-Nāṣir Faraj ibn Barqūq (r. 801–8, 808–15/1399–1405, 1405–12). In the *Ighāthah* and his other writings, al-Maqrīzī held Sultan Barqūq responsible for the monetary ruin of Egypt because of his appointment of the Ustādār, Maḥmūd ibn ʻAlī, who allegedly mismanaged the treasury and the minting of copper money in particular. The episode has attracted considerable scholarly attention and the discussion to a great extent has revolved around the plausibility of al-Maqrīzī's explanation—could one man have actually caused that amount of damage or was Egypt's economic crisis the product of larger economic forces?[20] There are still issues to be examined but most recently Warren Schultz has demonstrated, based on careful study of the numismatic and textual evidence, that "modern scholars should not be so quick to dismiss the accounts of Maḥmûd ibn ʻAlî."[21] The concern here is not with the matter of plausibility, and in any case, the story of Maḥmūd and Sultan Faraj is a part of the broader argument that al-Maqrīzī was making about money; rather the concern here is al-Maqrīzī's larger purpose in writing the *Ighāthah*.

Al-Maqrīzī's excoriation of Sultans Barqūq and Faraj and the Ustādār Maḥmūd in the *Ighāthah* may read like an indictment, but it is by no means the central feature of the text. The work as a whole consists of a carefully structured argument made explicit with clearly marked headings for its various sections. After a brief prologue, al-Maqrīzī started with "A Logical Premise."[22] In this section he presented his thesis that conditions in Egypt in 806 were exceptional in the sense that crises in the past were far worse, the evidence for which conclusion he supplied in his

Bacharach, "A Study of the Correlation between Textual Sources and Numismatic Evidence for Mamluk Egypt and Syria, A.H. 784–872/1382–1468," Ph.D. diss., University of Michigan, 1967, 243–45.

[21]Schultz, "Mahmûd ibn ʻAlî," 144.

[22]I have cited both the edition by Ziyādah and al-Shayyāl as well as Allouche's translation. Quotations in English are generally taken from Allouche's translation although in some cases I have provided my own translation; the title here translated in full reads: "A section stating the logical introduction that comprises the whole work" *(qāʻidah kullīyah)*.

section entitled ″The [Years of] *Ghalā'* in Egypt.″[23] The exceptionalism of 806, the discussion of which is contained in a section entitled ″Current Prices and Present Ordeals,″ is also based on the notion that the conditions of the crisis were not an act of God, as were all previous crises, but were caused by human action and thus could be remedied by the adherence to legal practice concerning the management of money—a kind of ″monetary *sunnah*.″ The basis for this monetary practice he provided in a section entitled ″The Causes of Our Ordeals.″ Sound economics then was based fundamentally on religiously prescribed monetary practice; therefore, one can look to legitimate precedent as a guide.

Al-Maqrīzī advocated the return to a monetary system in which gold and silver were used as the basis on which to measure the value of economic transactions, a call for reform that Allouche mentioned but did not emphasize. Al-Maqrīzī′s argument was based on the Shafi'i doctrine that only gold and silver are valid metals for currency and that to use others would be to contravene the law and to cheat people of what they are due.[24] His argument, made all the more urgent by the desperate economic crisis of 806, was directed, as the title implies, at saving the community from the affliction of this crisis, and was based on, as Allouche noted, a thorough understanding of the etiology of the crisis. Al-Maqrīzī′s etiological approach is significant because he thought of the crisis as a disease that afflicted Egypt—the symptoms were known to all; nevertheless the cause was not obvious. Furthermore, the text, a description and analysis of the economic problem, culminated with his prescription—a section entitled ″The Means to Eradicate the Disease.″ For al-Maqrīzī, the etiology was understood by means of a historical understanding of the past. Such an understanding required first an account of the history of *ghalā'*—what Wiet translated as famine and what Allouche translated as inflation—and second an account of the history of money.

Before discussing the substance of al-Maqrīzī′s recommendation, it is important to address the question, who would apply the remedy? While the substance of the text appears to be a fairly dry and impersonal discussion of economic matters, one nevertheless gets the impression that he was not addressing the general readership of a treatise but rather that he was advising the more particular readership of a policy recommendation. Each major section of the work begins with an invocation for the assistance of God to help the reader—who is addressed directly—understand the argument, lending a rather personal quality to the work as a piece of deliberately argued advice: the first begins ″Know—May God support you with His mercy and

---

[23]The title translated in full, ″A section setting forth what occurred in Egypt in times of dearth and anecdotes from those years.″

[24]Robert Brunschwig, ″Conceptions monétaires chez les jurists musulmans (VIIIe–XIIIe siècles),″ *Arabica* 14 (1967): 139–40; it is interesting to note Brunschvig′s observation that the Zahiri stance on the issue was not particularly rigid, p. 140.

guide you to comprehend him—that bygone events, however difficult experiencing them was, are engaging when recounted"; the second, "Know—May God guard your prosperity and protect you—that since the day God created mankind dearth has alternated with plenty . . . "; the third, "Know—May God protect and guide you, and not deprive you of His bounty and divine providence—that from reports that have reached us . . ." And so on.[25]

Clearly al-Maqrīzī was addressing someone whom he thought could rectify Egypt's economic condition by means of the reformation of its monetary policy and, in particular, the reformation of innovations introduced under the reign of Sultan Faraj. The colophon of the work dates the text to Muḥarram 808 (June–July 1405) but Allouche convincingly argues, on the basis of internal evidence, that the text could not have been composed before Jumādá I (October–November) of that year.[26] While Allouche notes that a reference in the *Kitāb al-Sulūk* indicates that a final draft may have been produced in Muḥarram 809 (June–July 1406),[27] the hypothesis is nevertheless worth considering that al-Maqrīzī may have taken advantage of the interregnum of al-Malik al-Manṣūr ʻAbd al-ʻAzīz ibn Barqūq, who reigned from Rabīʻ I until Jumādá II (August–December 1405), to submit his recommendations to be put into practice. One can speculate as well that he may have wanted to obtain for himself a position in the administration yet again—by that time he had been out of government service as *muḥtasib* of Cairo since Dhū al-Qaʻdah 807 (May 1405), at least his third term of service in that capacity since 801 (September 1398–September 1399).[28]

A more detailed recap of the recommendation's argument, including al-Maqrīzī's view of the crisis, shows how he used historical information on *ghalā'* and money to convince his reader of the efficacy of the prescription and it provides also the basis for understanding his analysis of the episode of 818. In his discussion, "The Causes of Our Ordeals," he observed that although the Nile failed to reach plenitude

[25]The others: the fourth, "Know—May God grant you toward every good and easy path, and on every grace a sign and a guide—"; the fifth, "Know—May God guard you with His sleepless eye and His fearsome might—"; the sixth, "Know—May God grant you eternal happiness and felicity—"; the seventh, "Know—May God guide you to your own righteousness and inspire you to follow the straight paths of your fellow humans—"; the eighth, "Know—May God embellish you with virtues, and protect you from the disgraces of vices—."

[26]Allouche, *Mamluk Economics,* 6–7.

[27]Al-Maqrīzī, *Kitāb al-Sulūk li-Maʻrifat Duwal al-Mulūk*, ed. Saʻīd ʻAbd al-Fattāḥ ʻĀshūr (Cairo, 1972), 4:28.

[28]Rosenthal, "Maḳrīzī," 193; Allouche, *Mamluk Economics,* 3, 120, n. 12. On the extraordinary turnover in the position of *muḥtasib* during this period, see Allouche, 4, and Aḥmad ʻAbd al-Rāziq, "Le *ḥisba* et le *muḥtasib* en Egypte au temps des Mamluks," *Annales islamologiques* 13 (1977): 115–78.

in 796 and then excessively flooded the land the following year causing prices to rise, by 798 prices had returned to their pre-796 level. The price increase was a result of a shortage of seed while the supply of grain was especially low since a smaller quantity of land was cultivated in 796. By no means was this unusual: "This is characteristic of Egypt since ancient times," he wrote, "whenever the Nile delays in flooding, prices continue to increase for two years."[29]

In 806, however, when the Nile again failed to reach plenitude, one would have expected the situation to have improved within two years. But the ensuing grain shortage resulted in unusually high prices. This period of exceptional inflation was due, first, to officials intentionally maintaining high prices by withholding foodstuffs. al-Maqrīzī closed this section with the account of the Ustādār Maḥmūd ibn ʿAlī who increased the production of copper currency and stopped the production of silver currency. But it was not until his discussion entitled "Current Prices and Present Ordeals" that he explained that the inflation of 806 also resulted from the proliferation of *fulūs* and the disappearance of dirhams:

> *[Fulūs]* are used in exchange for all sorts of edibles, all types of drinks, and other common goods. They are accepted for payment of land taxes, the tithe on the profits of merchants, and other imposts due the sultan. They are used to estimate labor costs for all works, whether significant or insignificant. Indeed, the people of Egypt have no currency other than the *fulūs,* with which their wealth is measured. . . . This is an innovation *(bidʿah)* and a calamity of recent origin. There is no basis for it among the community of believers and there is no foundation for it in legal practice *(ṭarīqah sharʿīyah).*[30]

Thus al-Maqrīzī presented the uncanonical management of the monetary system as the fundamental cause of the crisis. It comes as no surprise, then, that the rectification of this unlawful innovation was the principal feature of his recommendation.

His argument that the inflation of 806 required special consideration, then, was founded on his history of "*Ghalāʾ* in Egypt," and his history of money in Egypt. The latter history, included in his second major section after the "Logical Premise," entitled "The Causes of Our Ordeals" (but which Allouche broke into a separate section entitled "Currency"), was a chronological compilation of didactic reports prescribing models for proper monetary management. His account may be

divided into two parts: currency of the caliphs up until the ninth century followed by an account of currency in Egypt. His discussion on currency starts with his appeal to the reader to "Know . . . that the currency that has been used to determine prices of goods and costs of labor consists only of gold and silver."[31] The rest of the account, what has been construed as a history of money, runs in a similar vein. He constantly reminded the reader that gold and silver alone have always been recognized as the only legal tender. The account then comes across as a chronologically ordered compilation of "monetary hadith," starting with Adam: "In fact, it is said that the first to mint the dinar and the dirham was Adam, who said that life is not enjoyable without these two currencies. This was related by al-Ḥāfiz Ibn 'Asākir (d. 571/1176) in his *Tārīkh Dimashq*."[32] Al-Maqrīzī offered reports, assessed in terms of hadith scholarship, from the pre-Islamic and Islamic periods to argue for the exclusivity of gold and silver: "According to all reports, either valid or invalid (*fi khabar saḥīḥ wa-la-saqīm),* no nation or group of people is ever known to have paid for goods or remunerated for works in ancient or recent times in a currency other than gold and silver."[33]

After stating this thesis about money, al-Maqrīzī explained:

> I shall narrate to you some reports in this regard to illustrate the veracity of what I have pointed out. I say—seeking the help of God my Lord, indeed He is the only Protector—know—may God increase your knowledge and grant you intelligence and comprehension—that the dirham was, and still is, the currency of mankind at all times, so that it is said that the first to mint dinars and dirhams and make jewelry out of gold and silver was Fāligh son of Ghābir son of Shālikh son of Arfakhshad son of Sām son of Noah, since whose time people have [always] used currency.[34]

Of course, it was the lack of dirhams that was precisely the problem in 806 and it was by means of such reports that al-Maqrīzī hoped to convince his reader that he should follow the practice of his illustrious predecessors like the Umayyad caliph 'Abd al-Malik ibn Marwān by re-issuing dirhams:

> The dirhams struck by 'Abd al-Malik had three merits *(faḍā'il):* first, they [conformed to the rule] that the weight of seven *mithqāl*s

[33]Al-Maqrīzī, *Ighāthah,* 47; Allouche, *Mamluk Economics,* 55.

[34]Al-Maqrīzī, *Ighāthah,* 48; Allouche, *Mamluk Economics,* 56.

> equaled that of ten dirhams. Second, ʻAbd al-Malik made the weight uniform: the dirham came to weigh six *dānaq*s instead of having large and small dirhams. Third, these [dirhams] were in conformity with the practice of the Messenger of God with regard to the obligation of [paying] *zakāt* without loss or excess. Thus, the Prophet′s tradition was followed and the Islamic community agreed on [the new dirham].[35]

His account of Islamic coinage ends with the ninth century Abbasid caliphs, and the entry of Turkish interlopers into high politics, where he found a convenient opportunity to foreshadow the problem he addressed at the beginning of the fifteenth century: ″Precepts of the divine law and religious prescriptions changed when the Turks innovated and invented ways that God did not allow, among which was the adulteration of dirhams.″[36] Al-Maqrīzī′s account of money in Egypt begins with the statement that gold has traditionally been used in Egypt and to support this he cited Abū Hurayrah, the companion of the Prophet and narrator of his traditions. It was in this section that he finally explained the introduction of copper money—he had to account for it at some point—attributing it to the reign of the Ayyubid sultan al-Kāmil (r. 615–35/1218–38). But he justified the use of copper for the purchase of ″goods of insignificant value,″ and stated that al-Kāmil′s innovation was legally sanctioned with the approval of one Abū al-Ṭāhir al-Maḥallī.[37] His failure to explain its existence prior to that time conformed to the widespread conviction that it was not worthy of discussion. For example, in the *Muqaddimah* Ibn Khaldūn consistently disregarded copper in his discussions of money, as do al-Maqrīzī′s sources in the *Ighāthah* such as Abū Yūsuf′s *Kitāb al-Kharāj*. It would seem that rather than deliberately ignoring the existence of pre-Ayyubid *fulūs,* al-Maqrīzī was not able to state that any legal authority had permitted it until the time of al-Kāmil. After all, its legality was his main concern.

In his account of *ghalāʼ*, al-Maqrīzī traced the history of ″all kinds of catastrophes and ordeals″ in Egypt starting with the ancient king Afraws son of Manāwash and ending with Sultan al-Ashraf Shaʻbān (r. 764–78/1363–76). His point here was that these ordeals have been caused by ″natural catastrophes sent by God″ but that the ordeal of 806 ″differs from the aforementioned disasters″[38] and may be explained by human corruption: the acquisition of positions by means of bribery, the artificially

imposed high cost of land, and the deliberate overproduction of *fulūs*.[39] The thrust of this argument is sharpened when we consider that al-Maqrīzī was making an argument about the concept of *ghalā',* a notion that is weakened in Allouche's otherwise effective translation since he uses a variety of terms—inflation, rise in prices, dearth, etc.—to denote a central feature of al-Maqrīzī's argument.[40] If we use one of Allouche's terms, "dearth," which connotes a rise in prices as well as a scarcity, the latter of which does not necessarily occur with inflation, we see more clearly that al-Maqrīzī was in fact using all of these episodes as a single phenomenon of analysis to demonstrate that dearth, historically caused by the natural order, could in fact be a disease with an entirely different etiology—similar symptoms, different cause. His point was that the dearth of 806 was fundamentally different from previous episodes, as Allouche himself observed,[41] and that it was theoretically monetarily treatable because it was an inflationary event caused simply by the overproduction of copper money and the resulting replacement of silver as a legal tender with copper—which could never be a legal tender according to religious teaching. Accordingly, the crisis could only be alleviated by human action guided by religiously prescribed economics. The histories of *ghalā*' on the one hand and money on the other, thus, converged in 806 to make the year unique in Egypt's history.

With the influx of copper currency in the Egyptian economy it became standard practice to measure value, not in terms of gold and silver as had previously been practiced, but rather in a money of account known as the *dirham min al-fulūs*—that is to say, a silver dirham's worth of copper money.[42] With the cessation of the minting of silver, dirhams became so rare that they were available, he claimed, only through auction. But people were accustomed to thinking in terms of dirhams and in effect it came to exist only as an abstract quantity of value used to measure copper coins. This practice led to the widespread use of *dirham fulūs* to measure values of goods and labor costs—a legally untenable situation that was unacceptable from al-Maqrīzī's point of view. The dirham of account came to be unreliable in its value—he claimed that in Cairo the *mithqāl* equaled 150 dirhams of account while in Alexandria the *mithqāl* equaled 300 dirhams of account. "This caused a catastrophe that rendered money useless and foodstuffs scarce; at the same time, necessary goods became unavailable because of the variety of currencies. It is

[40]Allouche, *Mamluk Economics:* "dearth" (pp. 27, 33, 46, 50); "a period of inflation" (pp. 31, 36); "famine" (pp. 27, 28, 29, 37, 40, 41, 47, 49); "grain shortage" (pp. 29, 40, 48); and "high prices"/"prices increased" (pp. 29, 40, 44, 51).

[41]Ibid., 13.

[42]Schultz, "Mamluk Monetary History," 188.

feared that if this should continue the population of this country will be in an unbearable situation."[43] And this "unbearable situation" leads us to the heart of the problem.

The inflation of 806 was most obviously exceptional because of its differential effect on the populace. Natural disasters affected everyone, but not the inflation of 806. After a lengthy disquisition on prices, al-Maqrīzī concluded, "Anyone who considers these prices in light of the rate of gold and silver will realize that they have increased only slightly, but if he considers them in relation to the abundance of *fulūs* that has afflicted the people, he will find this is a frightening abomination that is too odious to mention."[44] Perhaps he should have said "too odious to mention *again*," since in fact he mentioned the abomination earlier in the text in his "Description of the Population,"[45] in which he argued that the inflation of 806 affected different categories of society in different ways. Those who were in a position to negotiate their income generally did pretty well. Merchants "content themselves only with larger profits, even though a few hours later they will spend the amount they have gained on necessities."[46] Those dependent on fixed incomes, like *waqf* employees—a group, of course, near and dear to al-Maqrīzī's heart—did poorly.[47] If this had been a normal period of *ghalā'*, everyone would have been affected.

Al-Maqrīzī's solution here was simple—to re-introduce a silver currency so that values would be based on gold and silver rather than arbitrary values of copper. As mentioned above, the text culminates with a section entitled "The Means to Eradicate the Disease,"[48] in which al-Maqrīzī outlined his recommendation: "Whenever God guides the person who is entrusted with the destiny of His subjects to the right path, he should respect the gold-silver ratio when striking silver currency. This will lead to an end to this general decay and to a return of prices and costs of labor to the level that existed prior to these ordeals."[49] This view is based on the conviction that:

[48]The full title translated reads, "A section on eradicating this disease from mankind and setting out a remedy for the disease of the era."

[49]Al-Maqrīzī, *Ighāthah,* 81; Allouche, *Mamluk Economics,* 81.

> the currencies that are legally, logically, and customarily acceptable are only those of gold and silver, and that any other [metal] is unsuitable as a currency. By the same token, the situation of the people cannot be sound unless they are obliged to follow the natural and legal course in this regard [i.e., the currency], namely, that they should deal exclusively with gold and silver for pricing goods and estimating labor costs.[50]

The solution was directed at relieving the community of the unfair and difficult conditions produced by the inflation of 806. He concluded his recommendation in "A section explaining the benefits of this plan *(tadbīr),* the gain of which will help the populace":

> If God would guide those whom He has entrusted with the welfare of His servants to reinstate gold as the exclusive basis for transactions as it was previously—to link the value of goods and of all [types of] work either to the dinar or to minted silver that would later be adopted as currency and thereby reinstate the silver dirham as [the unit] for measuring the price of goods and the cost of labor—this would lead to the succor of the community, the amelioration of the [general] situation, and the checking of the decay that heralds destruction.[51]

Not only was this solution simple, but it was also doomed to fail, as al-Maqrīzī later recognized. But the gist of his argument was that the use of copper as a currency, that is, as a primary means of measuring and storing value and as a means of exchange—distinct from a means to facilitate a transaction by simply making change—was anathema not so much because corrupt officials were making money off of it, but rather because it contravened the law and "monetary *sunnah*." In *Ighāthat al-Ummah,* al-Maqrīzī's concluding advice is presented in his guise as a *muḥtasib* of the monetary economy of Egypt, "commanding right and forbidding

---

[50]Al-Maqrīzī, *Ighāthah,* 80; Allouche, *Mamluk Economics,* 80. This attitude about the exclusivity of gold and silver was by no means unusual. Among his contemporaries, Ibn Khaldūn advocated an exclusive status for gold and silver; *Muqaddimah,* trans. Franz Rosenthal (New York, 1958), 3:277: "It was God's wise plan that gold and silver, being rare, should be the standard of value by which the profits and capital accumulation of human beings are measured"; also see 1:168; 2:313. The reluctance of a central authority to administer base coinage is by no means unusual; for example, Queen Elizabeth I declined to undertake such a project; John Craig, *The Mint: A History of the London Mint from A.D. 287 to 1948* (Cambridge, 1953), 248.

[51]Al-Maqrīzī, *Ighāthah,* 82–83; Allouche, *Mamluk Economics,* 83.

wrong˝ *(al-amr bi-al-maʻrūf wa-al-nahy ʻan al-munkar)*. In this regard he was acting in a long Shafiʻi tradition.[52]

Subsequent events, however, afforded al-Maqrīzī the opportunity to test his solution and to modify his views on money—which brings us to 818 and his *Shudhūr al-ʻUqūd fī-Dhikr al-Nuqūd.*

818 AND *SHUDHŪR AL-ʻUQŪD:* MONETARY HISTORY AS *FAḌĀʼIL*

As mentioned above, *Shudhūr al-ʻUqūd* has typically been read as a source on the history of Islamic money, an approach that has largely obscured al-Maqrīzī´s intention in writing it. al-Maqrīzī wrote the *Shudhūr* in response to a directive to write ˝a refined précis on Islamic monetary matters˝ *(nabdhah laṭīfah fī umūr al-nuqūd al-islāmīyah).*[53] Scholars since Silvestre de Sacy have concluded that it was the Sultan al-Mu'ayyad Shaykh (r. 815–24/1412–21) who made this request, and the substance of the text, as will be discussed below, bears this conclusion out. Thus the *Shudhūr* may be dated to the years 818–24, although al-Maqrīzī corrected an autograph manuscript in 841.[54] The request may have been for a treatise on money, or even a history, but as in the *Ighāthah,* al-Maqrīzī used the monetary situation of a particular point in time, which we may take as 818, to support an appeal for action.

Al-Maqrīzī, however, chose not to present his prescription in terms of rectifying *bidʻah* by means of adherence to economic *sunnah;* after all, his reliance on legitimate monetary practice in the *Ighāthah* failed to remedy the crisis of 806. Clearly, by 818 some adjustment was needed, and adjusting the *sunnah* would, of course, have been inappropriate. However, once again, he relied on history to address an economic issue using an approach that he alluded to in his earlier recommendation. By viewing the past in terms of the merits *(faḍāʼil*; sg. *faḍīlah)* of monetary precedent, he could sufficiently modify his conclusions in the *Ighāthah* from ten years before in order to produce an effective prescription. For al-Maqrīzī, sound economics then was based on the excellences of predecessors, which required a review of previous monetary exempla. By using the notion of such *faḍāʼil* to present his case, al-Maqrīzī in effect composed in the *Shudhūr* a monetary mirror

---

[52]Michael Cook, *Commanding Right and Forbidding Wrong in Islamic Thought* (Cambridge, 2000), 354.

[53]Al-Maqrīzī, *Shudhūr,* ed. Baḥr al-ʻUlūm, 2; ed. Eustache, 97.

[54]Note that some of the manuscripts of the *Shudhūr* include the name of al-Mu'ayyad Shaykh: ˝Inspire our master the sultan [al-Mu'ayyad Shaykh] with the . . . ,˝ while others simply state ˝the sultan.˝ But there is an ambiguity to the imperative appeals to ˝Our master the sultan,˝ which suggests that perhaps al-Maqrīzī´s corrections to the text in Ramaḍān 841 (February–March 1438) eliminated these so that the text could be used as an appeal to Barsbāy´s successor. Barsbāy fell ill in Shaʻbān 841 and died by the end of the year.

for princes. As with the other branches of Islamic statecraft, such knowledge required a grounding in the excellent examples of predecessors. History in the *Shudhūr* comes across clearly as a didactic subject and its role here was to provide advice for sound economic policy. The first part of the lesson may be summed up in the hadith he cited of Musaddad ibn Mirhad that "The dinar and the dirham sundered corruption forever."[55] But statecraft required addressing new circumstances, and al-Maqrīzī's recommendation to abolish the *dirham al-fulūs* was an attempt to ensure the continuation of meritorious rule.

It has been noted that the *Shudhūr* is largely taken from the section on money in the *Ighāthah* but al-Maqrīzī re-structured the information to suit his particular needs in this context. After prefatory remarks, he began the body of the text with a straightforward history of money organized into "A Section on Ancient Money," "A Section on Islamic Money," and "A Section on the Money of Egypt." Unlike the version in the *Ighāthah*, he ended the latter section with the episode in economic history that al-Maqrīzī wishes to address. Sultan al-Mu'ayyad Shaykh came to power in 815, supported by his allies and a pile of silver. In 817 he began minting, and in 818 officially announced, a silver dirham that became known as the Mu'ayyadīyah,[56] an event that answered al-Maqrīzī's call in the *Ighāthah* for a properly minted silver coinage to accompany the dinar. However, the production of silver did not initially have the effect that al-Maqrīzī had expected in 808, although he recognized later in the *Kitāb al-Sulūk* that the economic situation had indeed improved:

> [Shaykh] struck dirhams known as Mu'ayyadīyahs. People exchanged them by count (i.e., not by weight) during his time and the situation of the people improved so the currencies of Egypt become copper, gold in various forms and Mu'ayyadī silver. However, the currency circulating was *fulūs* and the value of labor and the price of goods were calculated in *[fulūs]* as stated earlier.[57]

Consequently he found it necessary in the *Shudhūr al-'Uqūd* to address more directly the issue of the *dirham min al-fulūs*.

The relationship of precious metal and base metal coinages is a central issue in the administration of money. It was a problem that plagued medieval monetary systems on both sides of the Mediterranean and which was not solved in a practical manner until the beginning of the nineteenth century. The requirements are simple:

---

[55]Al-Maqrīzī, *Shudhūr,* ed. Baḥr al-'Ulūm, 32; ed. Eustache, 133.

[56]Al-Maqrīzī, *Shudhūr,* ed. Baḥr al-'Ulūm, 32; ed. Eustache, 133.

[57]Al-Maqrīzī, *Kitāb al-Sulūk,* 3:943; this observation was recorded in his account of Sha'bān 838.

These coins should be tokens—the commodity value should be less than the monetary value, which thus requires that the state authorities should monopolize the issue of base metal coinage and guarantee its exchange with precious metal coins. Finally, the quantity of coins in circulation should be limited to the needs of the economy—determining this need was the most difficult problem to solve.[58] That al-Maqrīzī did not resolve the issue is not the concern here; rather, it is his effort to marshal the foundation for an economic prescription that warrants our attention.

Al-Maqrīzī organized the *Shudhūr* in such a way as to bring together two moments in Islamic monetary history for comparison of their respective *faḍā'il*. The bulk of the "monetary hadith" discussed in the *Ighāthah*'s section on money are found also in the *Shudhūr*. However, the central section of the *Shudhūr,* given the heading *Waṣl,* connects his historical account to his last section *(Faṣl)* where he makes his recommendations concerning copper money *(wa-ammā al-fulūs . . .)*.[59] The two moments are the issue of the dirhams issued by the Umayyad Caliph ʻAbd al-Malik ibn Marwān and their three merits, which he had cited in the *Ighāthah,* but where, unlike his discussion in the *Ighāthah,* his history of Islamic coinage begins, and the issue of dirhams by the Sultan al-Mu'ayyad Shaykh and their *six* merits, where his account of Egyptian money ends. He managed to present the merits of Shaykh's silver so as to double those of ʻAbd al-Malik by being slightly redundant: first, they conform to the *sunnah* of the Prophet; second, they follow the way of the believers in following the example of the Rāshidūn caliphs; third, they do not follow the way of the corrupt; fourth, they avoid the avarice of this world; fifth, they put an end to cheating; and sixth, they conform to the counsel of God and the Prophet.[60] For al-Maqrīzī, Shaykh's minting of silver coins in 818 was the culmination of his discussion of money in Egypt since they provided a legally prescribed basis for the regime's monetary system. Gold was not an issue; rather the issue was the presence of an illegal tender that was displacing the rightful role of silver.

In the *Ighāthah*, al-Maqrīzī had simply assumed that, given the proper supply of silver, people would naturally measure value according to gold and silver. In the *Shudhūr,* he explained his revised view:

> My astonishment was great that these Mu'ayyadī dirhams, which had the importance and merit that we have previously described,

[59]Eustache translates *waṣl* as *transition;* p. 132.

[60]Al-Maqrīzī, *Shudhūr,* ed. Baḥr al-ʻUlūm, 33–34; ed. Eustache, 133, 135.

> and our master the sultan having the power and the glory well-known to all, nevertheless, [simply] supplemented [the *fulūs*] and were counted according to the *fulūs* which God most high never made legal tender.[61]

He ended this statement by concluding that "The [coinage that] should supplement (i.e., copper) was supplemented [by silver]." In other words, the legally prescribed status of silver was perverted; what should have been a foundation of the monetary system became simply an accessory to the system. Mu'ayyadī dirhams, counted in terms of *fulūs,* were thus relegated to a subsidiary coinage. By expressing his astonishment, al-Maqrīzī acknowledged that the mere re-introduction of a silver coinage into circulation was an inadequate measure in itself to solve the monetary situation.

To remedy this unacceptable state of affairs, he made the plea: "O God! Inspire our master the sultan with the beneficence of the noble mission to scorn that his currency should supplement others and [rather] that his currency should make other currencies supplement it."[62] Al-Maqrīzī had recommended in the *Ighāthah* "to link the value of goods and of all [types of] work either to the dinar or to minted silver."[63] In the *Shudhūr,* al-Maqrīzī made his recommendation to the sultan more explicit: "to issue a whole decree to our masters the chief judges—God strengthen their religion—that they require the notaries to write land registers, building contracts, marriage contracts, and loan documents only in dirhams." He also recommended that the judges be directed to require that the *muḥtasib* enforce market transactions in dirhams and that government finances be counted in terms of silver currency.[64]

What to do about the copper coinage? In his account of the events of 806 in the *Ighāthah,* he associates the importation of copper with Maḥmūd ibn 'Alī's greed for profits. In the *Shudhūr,* aside from his remarks about Maḥmūd ibn 'Alī, he also observed that:

> the Franks undertook the transport of copper wanting to profit from it. The striking of *fulūs* continued for a number of years and the Franks took the dirhams of Egypt to their lands and the people here melted down the copper in demand for profit until it increased in price so that it was on the verge of being a legally valid [money].

[64]Al-Maqrīzī, *Shudhūr,* ed. Baḥr al-'Ulūm, 35–36; ed. Eustache, 135, 137.

> The *fulūs* circulated to the degree that all goods were valued in it. It came to be said that the dinar was worth so many *fulūs*.[65]

In the *Shudhūr* he justified the importation of copper, the matter that had troubled him so much in the *Ighāthah.* His uncertainty betrays some hesitance in the matter but it would seem that, in principle, the importation of copper did not pose a danger: "It is hoped that God would eliminate this [period of] destitution with the beneficence of the noble mission (of minting silver coins) and," he continued,

> I hope—God willing—that the state of affairs would be alleviated [because] if one considers the disks of red copper imported from the land of the Franks, the price of a *qinṭār* of it, and the price of the *qinṭār* is added to the sum of what one spends on it at the mint until it becomes copper money. If that is known, one knows how much one spends for each dinar of copper coinage and if one knows how much each dinar of it is, one knows how much each Mu'ayyadī dirham is. And in this there is an honorable transaction *(shay' sharīf)*[66] . . . if this copper coinage is struck it becomes the currency of the people which is the Mu'ayyadī silver dirham and the Mu'ayyadī copper *fulūs.*"[67]

Al-Maqrīzī seems not to have been aware of the importance of regulating the quantity of copper money in circulation. To be sure, he had observed that the excess production of copper in the 790s led to the crisis of 806 but for him the greater problem was the loss of silver coinage. The implication of his hope, quoted above, was that if the minting was carried out at cost—without taking a profit—then all would be well. That is to say that normal demand would be sufficient to allow the authorities "to control the quantity of petty coins in circulation."[68] Thus the re-institution of silver coinage in 818 was the first part of the solution, what was required then was its use as a measure of value. What he did not fully grasp was the relationship between the two. His assumption that silver would "absorb," or be supplemented by, copper, becoming the primary means of monetary measure, was a view that was not tenable.

Was al-Maqrīzī's advice heeded? This is a difficult problem to address since official wages and prices might not be measured in the same units of value. Wage

data from *waqfīyāt* from the reign of Shaykh are sparse, but indicate that up until 818 values were measured in *dirham fulūs* while those after, and until the succeeding reign (al-Muẓaffar Aḥmad II ibn Shaykh [824/1421]), were measured in half dirhams *(niṣf dirham)*. This aspect of the problem requires further examination.[69]

Conclusion: Al-Maqrīzī's Economic History

To the extent that the *Ighāthah* and the *Shudhūr* were written for particular authorities, the essence of the two works lies in their function as advice literature to ensure the legal conduct of monetary affairs in 808 and a decade or so later. al-Maqrīzī expressed his reasoning and recommendations in terms of the discourse of hadith and *faḍīlah*. Correct economic, and particularly monetary, policy rested on sound religious teaching. However, the scope of these two works, historical in approach but not histories per se, is far wider. The question arises, what was the impact of his economic views—historically grounded as they were—on his ideas about history?

Ayman Fu'ād Sayyid has pointed out the significance of 806 in his introduction to the *musawwadah* of al-Maqrīzī's *Khiṭaṭ*.[70] The crisis of 806 manifested itself in a number of ways—the collapse of markets, religious institutions, and other urban features—all of these, al-Maqrīzī wrote, were due to the economic crisis. Indeed, the *Khiṭaṭ* was to include, according to the Būlāq edition's introduction (which I believe is not precisely datable), a chapter on the causes of the ruin of Egypt, which if it followed the approach taken in other parts of the *Khiṭaṭ,* would have associated signs of economic hard times with the monetary crisis of 806. The finality of the crisis of 806 as depicted in parts of the *Khiṭaṭ* is matched by its depiction in the *Ighāthah.* Sayyid has suggested that the *Ighāthah* may be taken as the fulfillment of the intention he expressed in the introduction to the *Khiṭaṭ*.[71]

However, in the *Shudhūr,* Egypt's problem was not economic ruination. Historians of Cairo, most recently André Raymond in his history of the city, have noted Cairo's re-growth from the teens of the fifteenth century, both in the center as well as in Būlāq—perhaps not to previous levels, but growth nevertheless.[72] Al-Maqrīzī's implicit recognition of these developments, reported in the *Kitāb al-Sulūk* as well as the *Khiṭaṭ,* might suggest why he never completed the *Khiṭaṭ*'s chapter on ruin. It would then seem likely that al-Maqrīzī advocated this explanation

for Egypt′s ruin in the years between the writing of the *Ighāthah* in 808 and his recognition of a rather more stable economic situation in Egypt after Shaykh′s minting of silver coin in 818. By the end of Shaykh′s rule the economic history of Egypt must have appeared to him to be more complex than it had appeared in 806, involving instead the waning and waxing of economic fortune. In this light, these two texts may be read as an attempt to achieve a conceptual framework—a kind of economic *Muqaddimah*—for the history of Egypt. Of course, although the two books do not achieve the grand vision of Ibn Khaldūn′s masterpiece, they nevertheless represent an attempt to understand the role of the economy in Egypt′s history.

At a broader level, while in these two books al-Maqrīzī has provided us with insight into his views of the economy and of the state′s role in managing the economy, the *Ighāthah* and the *Shudhūr* also provide us with considerably more insight into his views on the practice of history. History was a means to remedy the ills of the age, whether by means of the exhortation of the market inspector to save the community or the pearls of instruction offered by the princely advisor. In either case, by no means was al-Maqrīzī an impartial observer of the economic past; these two books make arguments about issues of immediate concern. What about his other, longer historical works? The *Khiṭaṭ,* it would seem, made an argument that was never completed. But this characteristic—the lack of impartiality—should not be considered so much a personal foible rather than a salient feature of the historiography of the age. Tarif Khalidi has argued that this era was dominated by a historiography of politics. Moreover, history was no longer written as entertainment, but rather ″as a moral sermon.″[73] Even after al-Maqrīzī′s retreat from public service, he continued to act as *muḥtasib,* offering advice by means of his historical work. After all, history properly understood should always provide the lessons for correct action. Consequently, the boundaries between advice and history become blurred. Al-Maqrīzī, like his contemporaries, was at root captivated by political power and saw his role as a historian to engage in the field of power, not with the weapons of war as the Mamluks were trained to do, but rather with the ultimately more durable weapons of religious learning and knowledge of the community′s past.

A Comparison of al-Maqrīzī and al-ʻAynī as Historians of Contemporary Events

My paper was written on the assumption that the aim of a conference on the legacy of al-Maqrīzī is to put him in his proper place. Such a goal may well involve demoting him from the lofty heights to which some of our scholarly forebears have raised him, but may well not. There can be no doubt, however, that several eminent scholars of a generation or two ago were lavish in their praise. Philip Hitti, for example, announced that ″beyond doubt the most eminent of the Mamluk historians″ was al-Maqrīzī.″ Of *Al-Khiṭaṭ* A. R. Guest writes that al-Maqrīzī

> has accumulated and reduced to a certain amount of order a large amount of information that would, but for him, have passed into oblivion. He is generally painstaking and accurate, and always resorts to contemporary evidence if it is available . Also he has a pleasant and lucid style, and writes without bias and apparently with distinguished impartiality.[1]

To this latter tribute, the translator, R. J. C. Broadhurst, adds that these words ″can equally be applied to the *Sulūk*.″[2] The views of these Western scholars were shared, and magnified, by Arab academicians, most prominently M. M. Ziyādah, editor of the *Sulūk,* which he declared ″deserves without dispute to occupy the first place among the historical works of his era.″[3] Furthermore, al-Maqrīzī himself, according to Ziyādah, ″was indisputably in the forefront of the Egyptian historians in the first half of the ninth century *hijrī*.″[4] ″Sufficient proof of this,″ Ziyādah goes on, is the fact that Ibn Taghrībirdī and al-Sakhāwī were his students. Two other contemporaries, Ibn Ḥajar al-ʻAsqalānī and al-ʻAynī, are disqualified from the first prize, he says,″because they did not devote themselves fully to history as

[4]Ibid.

al-Maqrīzī did, but were traditionists more than historians."[5] Recently, in a typically stimulating and nuanced article, Ulrich Haarmann compares al-Maqrīzī, who "has always, rightly or not, been held in highest esteem for his precision, factualness and learnedness," with his "sloppy" and "not very smart" disciple, Abū Ḥāmid al-Qudsī, who nevertheless may have been a "'truer' witness to his time than the sober, maybe even impeccable, yet in his way inevitably also myopic al-Maqrīzī?"[6]

But in the same volume of conference papers in which Haarmann's paper was published, Amalia Levanoni takes al-Maqrīzī to task for his inaccuracy in the presentation of facts and interpretations, particularly regarding the supremacy of the Circassians under Barqūq and his successors. In this respect she echoes Ibn Taghrībirdī's judgment of al-Maqrīzī's shortcomings as a historian "'with his known nonconformities every now and then.'"[7] Be that as it may, she concedes that Ibn Taghrībirdī stressed "al-Maqrīzī's original contribution to history . . . [saying that he] 'did not stop to be an accurate and careful observer of the events and history until his death. . . .'" Further, Levanoni acknowledges that al-Maqrīzī "gained fame as an historian of considerable authority in the scholarly circles of his own time. . . ."[8] More fully, Ibn Taghrībirdī states, in Popper's translation quoted by Anne F. Broadbridge:

> . . . Shaikh Taqī ad-Dīn (God have mercy on him) had certain aberrations for which he was well known, though he is to be forgiven for this; for he was one of those whom we have met who were perfect in their calling; he was the historian of his time whom no one could come near; I say this despite my knowledge of the learned historians who were his contemporaries. . . .[9]

Ibn Taghrībirdī goes on to say that al-Maqrīzī lost his status when Barqūq died and he failed to receive the patronage of subsequent sultans, "so he on his part took to registering their iniquities and infamies. . . ."[10]

[10]Ibid., 93.

Finally, if you will indulge me in citing myself, in my salad days I proved, to my own satisfaction at least, that for the Bahri period al-Maqrīzī was not as faithful or full a recorder of his sources, which he rarely named, as was his contemporary, al-ʻAynī, who did. More trenchantly, David Ayalon demonstrated that al-Maqrīzī egregiously misrepresented al-ʻUmarī and thereby, in my own paraphrase, ″inflated and distorted the influence of Mongol law on Mamlūk administrative justice.″[11] More judiciously, I concluded that

> [u]nfortunately, until such time as the contemporary annals of *al-Sulūk* have been compared with those of other historians, especially of al-ʻAynī, al-Maqrīzī′s significance as a historian will remain as a compiler and preserver of the work of others.[12]

Which brings me, almost, to the subject of this paper. First, however, let it be noted that such comparative study has already begun with the publication of an article by Irmeli Perho on ″Al-Maqrīzī and Ibn Taghrībirdī as Historians of Contemporary Events.″[13] Perho argues that the former′s background as a scholar and the latter′s as one of the *awlād al-nās* are evident in their attitudes toward events involving the common people. As the son of a mamluk Ibn Taghrībirdī shows practically no interest in the *ʻāmmah* at all, whereas the scholarly civilian al-Maqrīzī occasionally shared and reported the hardships of the commoners.[14]

This distinction does not obtain in the present case, for both al-Maqrīzī and al-ʻAynī were scholar bureaucrats of substantial though aberrant rank in Mamluk judicial positions, as has been documented recently by Broadbridge.[15] The main differences are, one, that al-Maqrīzī was a native Egyptian while al-ʻAynī, being from ʻAyntāb in northern Syria, was not; two, al-ʻAynī capitalized on his fluent knowledge of Turkish to maintain the patronage of more than one Mamluk sultan (al-Mu'ayyad Shaykh, al-Ẓāhir Ṭaṭar, and Barsbāy) as a history teacher, ambassador, unofficial advisor, and biographer (granted, al-Maqrīzī also enjoyed the patronage and friendship of two sultans—Barqūq and Faraj); and, three, al-ʻAynī remained in public service until two years before his death in 855/1451, while al-Maqrīzī took early retirement around 820/1417, as is well known, having ″decided to give

up an unsatisfactory public career and devote himself full-time to historical scholarship (instead of part-time as he had done before).″[16]

That being said, I shall now turn to what our German colleagues refer to as a *Stichprobe,* which means, quite simply, a random sample, in which I shall compare the annals of one year 824/1421 from al-Maqrīzī and al-ʻAynī. True to the spirit of *Stichprobe,* my selection of this particular year has been truly random, if not arbitrary, and I would be the first to concede that comparison of other annals might yield different results. In any case 824 was a pregnant year for historians if only because it gave birth to the reigns of two sultans after the death of al-Malik Mu'ayyad Shaykh at the beginning of the year, which allowed our historians to descant on the merits and defects of their reigns from their different vantage points. As al-ʻAynī himself points out, it was an unusual occurrence that there were four sultans in this year: al-Malik al-Mu'ayyad; al-Malik al-Muẓaffar, his son; al-Malik al-Ẓāhir [Ṭaṭar]; and his son, al-Malik al-Ṣāliḥ.[17] It should also be pointed out that this is the annal of a partial edition of al-ʻAynī′s contemporary annals, which covers only the years 825–50/1421–47. The author died, out of favor, in 855/1451, nine years after the death of al-Maqrīzī in 845/1442. Limited though my efforts may be, I hope that I am taking a tentative step in the right direction toward characterizing al-Maqrīzī as a historian of the events of his own lifetime by comparing him with his contemporary, al-ʻAynī, and, of course, vice versa. To lend a bit of structure to this undertaking I shall adopt as criteria of comparison the following: format, number and types of events and obituaries recorded, sources, style, and attitudes. If in so doing I betray an old-fashioned approach to historiographical studies, so be it.

Al-Maqrīzī, having left his ten years′ residence in Damascus as teacher and financial administrator around 1417, returned to Cairo as a free-lancer, as far as we know, and stayed there until his sojourn in Mecca in 833/1430. While al-Maqrīzī, according to Ziyādah, was ″without work or position,″[18] al-ʻAynī, also in Cairo, was flourishing. A boon companion to al-Mu'ayyad, this sultan reappointed him as

> *nāẓir al-aḥbās,* a post he was to hold—except for a few brief periods—until 853/1449. Al-ʻAynī′s fluency in Turkish was a distinct asset, which he used to his advantage, for in addition to

> academic and financial appointments, al-Mu'ayyad made the 'Ayntābī native his ambassador to the Qaramanids at Konya in 823/1420.[19]

During the short reign of al-Mu'ayyad's successor, Ṭaṭar, al-'Aynī's career improved "and reached its height during the reign of Barsbāy."[20] How were these discrepancies in material circumstances reflected in the two authors' works, if at all?

Before we try to answer that question of subjective attitudes, let us look first to the external forms of their chronicles. Both are cast in the familiar form of annals followed by obituaries. Though they are of about the same length, *Al-Sulūk* covers substantially more events than does *'Iqd*. Both, to be sure, record with more or less the same details the major political events in Egypt and Syria involved in the machinations occasioned by the death of two sultans and the selection and installation of their successors. But perhaps it was in part al-Maqrīzī's obsession with dates and chronology that led him to include events that al-'Aynī did not. Or maybe al-Maqrīzī's state of unemployment left him with time on his hands, which he killed by writing about as many events as possible, whereas the busy bureaucrat and boon companion al-'Aynī had to focus on essentials in the spare time he could devote to his writing? In any case, 824 in the *Sulūk* is a month-by-month, day-by-day diary of events.[21] Al-Maqrīzī tells us the name of the day on which each month begins and sometimes gives the corresponding date in the Coptic calendar when that is significant—the flood of the Nile, for instance. The demands of chronology are ignored only at the beginning and the end of the annal. The year starts with a list of the principal officers of state both in Egypt and in the provinces and ends with undated happenings such as the wars in al-Andalus which had reached the author's attention during this year. The format of *'Iqd al-Jumān* is similar: its annal also begins with a list of members of the ruling circles, virtually the same and in the same order, in fact, as al-Maqrīzī's, and ends with undated events—in this case a report on the prices of commodities and currencies of the year, plus mention of the annual hajj and the flooding of the Nile, but not the wars in Spain. In the middle, al-'Aynī also follows a chronological path, complete with dates but less ostentatiously, without al-Maqrīzī's meticulous detail. Speaking of dates, I should point out that quite often the two versions are out of kilter by a day or two. Why? Is one historian more accurate in this respect than another? Given al-Maqrīzī's preoccupation with dates, we might expect him to be careful in recording them, but obsessions are no guarantee of precision, I would submit.

---

[19]Broadbridge, "Academic Rivalry," 94.

[20]Ibid., 95.

[21]*Al-Sulūk,* ed. Sa'īd 'Abd al-Fattāḥ 'Āshūr (Cairo, 1972), 4: 547–600.

Frankly, I do not know how to set a test for accuracy without recourse to independent contemporary sources if available. The most important question is are these minor discrepancies of any significance. I doubt it.

Chronology is also the key to al-Maqrīzī's organization of his obituaries.[22] Brief notices of the lives of sixteen notables are arranged in strictly chronological order according to the specified date of death. Sultans and amirs are mixed with *muḥtasib*s and qadis. Even a physician of Jewish descent finds his way into the obituaries, between an amir and a *muḥtasib*. Al-ʻAynī covers only eleven individuals,[23] two of whom are not mentioned by al-Maqrīzī. Ignoring dates for the most part, al-ʻAynī follows a hierarchical order, beginning with sultans, followed by amirs and a judge. He does not bother with *muḥtasib*s, the physician, or the ruler of Rūm. It is interesting that both authors make similar comments about some of the deceased. For example, both observe that al-Amīr Faraj was handsome; according to al-Maqrīzī, his good looks account for his favor with al-Mu'ayyad.[24] Al-ʻAynī adds that he was "a succulent youth *(shābb ṭārī)*."[25] Both characterize al-Amīr Badr al-Dīn al-Ṭarābulsī as a tyrant who deserved the punishment and execution he received from al-Mu'ayyad and Ṭaṭar, but both give details not mentioned by the other: al-Maqrīzī, that he was the son of a Muslimānī;[26] al-ʻAynī, that he was "stupid and foolhardy *(aḥmaq ahwaj)*."[27] In any event it would be difficult, but not impossible, to argue on the basis of rare textual similarities that either historian was indebted to the work of the other. Be that as it may, al-ʻAynī's editor, writing from a wider perspective than a single annal, remarks that "al-ʻAynī frequently followed al-Maqrīzī in the *Sulūk* and refutes him without mentioning him by name." In fact, a specific example is cited in which al-ʻAynī brands "a certain historian," i.e., al-Maqrīzī, as a liar on two counts.[28]

As far as sources are concerned, al-Maqrīzī names none, not one, as was indeed his practice for the annals preceding his lifetime. Al-ʻAynī cites only one source—the sultan Mu'ayyad himself—twice for information on which the sultan had first-hand knowledge.[29] On another occasion, moreover, he writes in the first person to say that al-Malik al-Ẓāhir Ṭaṭar "had instructed him to cast into the language of the Turks *Kitāb al-Qudūrī fī Fiqh al-Imām Abī al-Ḥanīfah,* may God

[29]Ibid., 101, 168.

be pleased with him, with no changes in meaning or alteration in its chapters."[30] But al-ʻAynī's intimacy with sultans is well known if only because he wrote biographies of three of them, including al-Mu'ayyad and Ṭaṭar, plus Barsbāy—all three his contemporaries.

Which brings us to the respective attitudes of the two historians toward the events and personalities of 824. Being highly placed in the corridors of power, al-ʻAynī can scarcely be expected to be very critical of the reigns of his patrons. In general, he adopts a formal and correct stance toward the complex and volatile affairs of state. For example, despite the fact that al-Mu'ayyad's successor as sultan, al-Malik al-Muẓaffar Aḥmad, was an infant less than two years old, al-ʻAynī persists in pretending that he was in charge of affairs as long as he held the title of sultan, even though Ṭaṭar was acclaimed as Niẓām al-Mulk wa-al-Mutaḥaddith from an early date.[31] Thus when Ṭaṭar decided to put Syrian affairs in order, al-ʻAynī tells us that on the 19th of Rabī' al-Awwal, al-Sulṭān al-Muẓaffar marched out, and with him were Niẓām al-Mulk Ṭaṭar and the troops . . .; "on 19 Jumādá al-Ūlá a group of 500 Syrian troops came to the sultan in Gaza . . .; on 20 Jumādá al-Ākhirah the troops accompanying al-Muẓaffar set out for Aleppo . . .;" on 3 Shaʻbān "the sultan and al-Amīr Ṭaṭar set out with the victorious troops from Aleppo, headed for Damascus." [32] Free from the necessity to observe the niceties of protocol and naming the sultan first, al-Maqrīzī is more likely to reverse the order and refer first to the real holder of power, Ṭaṭar, accompanied by the sultan, or even "Ṭaṭar and those with him."[33]

More substantively, al-ʻAynī's interest in keeping up appearances is also evident from the way he describes the transference of power from one sultan to another, emphasizing that all the legal niceties of installing a new sultan were observed. Thus, before al-Mu'ayyad had even been prepared for burial, al-ʻAynī reports that

> Al-Amīr Ṭaṭar, *amīr majlis,* proceeded to assemble the judges, the caliph, and all other *ahl al-ḥall wa-al-ʻaqd.* They sent for al-Mu'ayyad's son from his mother. He is called Aḥmad, and his age is one year and seven months. They contracted the sultanate for him, giving him the title of al-Malik al-Muẓaffar. The amirs kissed the ground before him.[34]

[33]*Al-Sulūk,* 4: 576, 577, 579, 580.

[34]ʻ*Iqd*, 117.

Although al-Maqrīzī conveys much the same information, his account is both more precise in some respects but general and, at the same time, almost folksy in others:

> He was installed in the sultanate on the day his father died, at twenty minutes past midday, Monday, 9 Muḥarram 824, his age being one year, eight months, and seven days. He was mounted on a horse from Bāb al-Sitārah, and he cried as he was led all the way to the castle where the amirs, the judges, and the caliph kissed the ground before him. They gave him the title al-Malik al-Muẓaffar Abū al-Saʻādāt.[35]

However poignant the sight of a bawling sultan may be, it does not find its way into al-ʻAynī′s sober account. If, after all, al-ʻAynī was intent on presenting the legitimacy of the new sultanate, why should he call attention to the tearful inadequacies of the baby sultan? If, on the other hand, al-Maqrīzī was not happy with this turn of events, why should he not call attention to its fatuity? A difference is also apparent in the two historians′ versions of the installation of Ṭaṭar as sultan some eight months later. Al-Maqrīzī comments bluntly that after arresting and/or executing his perceived enemies, ″Ṭaṭar decided to depose al-Muẓaffar from the sultanate . . . and sat on the throne of monarchy in the Damascus citadel on Friday, 29 Sha'bān 824, corresponding to Nawrūz of the Copts of Egypt.″[36]

In contrast, al-ʻAynī takes considerable pains to set the action in an ameliorative context, explaining that a severe sickness had overtaken Ṭaṭar on the march from Aleppo to Damascus, and this gave rise to rumors of possible sedition and even an assassination attempt.[37] It was clearly in response to this threat that Ṭaṭar took action against his enemies and assumed the sultanate for himself. Primly, al-ʻAynī makes no mention of the deposition of the infant Aḥmad but gives a (discrepant) date of Ṭaṭar′s accession, complete with an assembly of *ahl al-ḥall wa-al-ʻaqd* and their conferral of a black caliphal robe of honor upon him.[38]

And yet, all is not so clear cut and simple, for al-Maqrīzī goes to some lengths to demonstrate the legitimacy of Ṭaṭar′s status as spokesman for the infant sultan. In the presence of the chief qadis, amirs, functionaries, and Royal Mamluks, Ṭaṭar declared that given the dissatisfaction of the Syrian amirs, ″it is necessary to have a ruler *(ḥākim)* to take charge of the management of the affairs of the people.″

---

[35]*Al-Sulūk,* 4:563.

[36]Ibid., 581–82.

[37]*ʻIqd,* 143–46.

[38]Ibid., 147.

Those present proclaimed, ″′We want you!′″ at which point ″the caliph delegated all the affairs of the subjects to al-Amīr al-Kabīr Ṭaṭar . . . except the title of sultan, prayers for him from the pulpit, and striking his name on dinars and dirhams, all three of which were reserved to al-Malik al-Muẓaffar.″ These steps were certified by the four chief justices and the amirs swore allegiance to him. All this, al-Maqrīzī explains, was because a fellow Hanafi jurist had advised Ṭaṭar that ″if a sultan was a minor and the power-elite *(ahl al-shawkah)* agreed that a imam should be installed to act as spokesman until he reached majority. . . .″ [39] Curiously, al-ʻAynī does not mention this episode in extenuation of Ṭaṭar′s action.

Nevertheless, there is clear evidence of al-Maqrīzī′s attempt to spin the official version of events as presented by al-ʻAynī in their biographies of sultans, most blatantly those of al-Mu'ayyad and, in a later annal, Barsbāy.[40] Al-Maqrīzī′s sketch of al-Mu'ayyad is short and very much to the point. It begins in a moderate and judicious vein, conceding full credit to the sultan′s virtues:

> He was more than fifty when he died, having reigned eight years, five months, and eight days. He was brave and bold. Fond of scholars, he used to meet with them, honoring the prophetic law and submitting to it. He did not disapprove if someone who appealed to his jurisdiction went from him to the judges of the *sharʻ;* indeed, he approved of that. But he disapproved of his amirs who opposed judges in their decisions. He was averse to any innovation and sometimes spent the night in devotions.[41]

But then al-Maqrīzī launches into a full-scale diatribe against al-Mu'ayyad, pulling no punches:

> But he was miserly and grasping, stinting even in what he ate; stubborn, cross, envious, with an evil eye, who paraded various reprehensible deeds. Vituperative, dissolute, intimidating, he was mindful of his companions without indulging them. . . . He was the biggest reason for the ruin of Egypt and Syria, thanks to the evils and strife he stirred up while viceroy of Tripoli and Damascus and then by corrupt deeds of injustice and plunder while he was ruler, empowering his followers over the people, forcing them into

[41] *Al-Sulūk,* 4:550.

> submissiveness, taking what they possessed without impediment of reason or interdiction of religion.[42]

In a spiteful aside, revealing that when al-Mu'ayyad's corpse was being prepared for burial, there was neither towel nor cup to wash and dry the corpse, nor even a sash to hide his genitals, so that the woolen Ṣa'īdī scarf of one of his slave girls had to be used for this purpose, al-Maqrīzī opines that these circumstances constituted "an exhortation containing the direst of warnings," since the sultan had died rich.[43] Perhaps, it has been suggested, these examples of al-Maqrīzī's spleen may stem from his unemployment and lack of patronage.[44] If that is so, then al-'Aynī's conventional, temperate, but by no means fawning, biography may well reflect the favor he enjoyed under al-Mu'ayyad. In any case there is no hint of exhortation or warning to be gained in *'Iqd al-Jumān* from the description of the preparation of his body for burial. Rather, al-'Aynī focuses on a somewhat clinical explanation of his illnesses, which included "arthritis, retention of urine, diarrhea, and headaches, climaxed by the hiccups which did him in."[45] The ministrations of physicians from Ḥamāh and Iran plus a Jew from Damascus were unavailing. Then al-'Aynī embarks on a matter-of-fact account of al-Mu'ayyad's ethnic origins and career pattern until he became sultan, whereupon he delivers an appraisal of his character and deeds which, though similar to al-Maqrīzī's, is much less obstreperous:

> He was a resolute and a brave officer, fond of learning and dervishes and good to them. But he was avid in accumulating the goods of this world: he loved money and was not averse to taking bribes, being inclined to pleasure and entertainments. Though not openhanded with money, he gave many alms, especially to scholars and dervishes. He could be impetuous and volatile. Fearsome, he wrote off the Turks.[46]

Striking is the lack of any suggestion from al-'Aynī that an unscrupulous sultan brought about the ruin of the Mamluk Empire. Even his reservations regarding al-Mu'ayyad's character are offset by a long, detailed list of the public buildings which he had constructed, so that any defects are buried in the details of his

[46]Ibid., 108.

distinctions at the beginning and end of al-ʿAynī's biography.

Finally we should look briefly at any evidence that al-Maqrīzī's, and al-ʿAynī's, plebeian origins emerged in concern for the common people in their annals, as suggested, in al-Maqrīzī's case, by Perho, in contrast to Ibn Taghrībirdī's aloofness from the hoi poloi. Well, despite similar backgrounds and again possibly because of their different stations in life in 824 , al-Maqrīzī certainly seems more receptive to the plight of the masses and more inclined to mention them from time to time than al-ʿAynī. Thus, although both record the prices of commodities and coinage, only al-Maqrīzī points to the general turmoil, set against the death of the sultan, to which economic and social conditions had deteriorated.[47] More telling of al-Maqrīzī's interest in common folk—women even—is his observation, absent from *ʿIqd al-Jumān,* that women were prohibited from holding public obsequies at tombs, despite the fact that wide-spread sickness had resulted in many deaths during this year.[48]

In conclusion, it is difficult to answer the question with which we started, namely, is al-Maqrīzī's status and legacy as a historian enhanced or tarnished in comparison to al-ʿAynī as historian of contemporary events. While I have tried to show, on the basis of only one year, that al-ʿAynī was a defender and legitimizer of the status quo and that al-Maqrīzī was more critical of it, outspoken and even scathing at times, neither historian is uniformly predictable or, accordingly, rankable. In general I would say that *Al-Sulūk* is invaluable for, one, the candor, sometimes extreme and maybe embittered candor, of al-Maqrīzī's views, in contrast to the sobriety, perhaps even dull moderation, of al-ʿAynī's. And, two, al-Maqrīzī's attention to many "minor" events that do not attract al-ʿAynī's notice certainly makes his work indispensable. Also, I would suggest that al-Maqrīzī's casual reference to the exhortatory character of a racy anecdote, and the absence of such in al-ʿAynī, might deserve further study. I make the final observation that the fortuitously early publication of *Al-Sulūk* and the neglect of *ʿIqd al-Jumān* until recently may well have caused distortions in our view of Burji Mamluk history, *pace* Ibn Taghrībirdī, which may, perhaps, be balanced with the publication and study of the rest of al-ʿAynī's text.

Al-Maqrīzī and Ibn Khaldūn, Historians of the Unseen

According to Sir Lewis Namier, the great historian of Hanoverian England, "historians imagine the past and remember the future."[1] It is evident that Namier intended his paradoxical-seeming dictum to apply to all historians, but there are few, if any, of whom it is more true than of Ibn Khaldūn and his one-time student, al-Maqrīzī. In modern times Ibn Khaldūn has mostly been studied by historians, philosophers, and sociologists. None of those who have picked their way through his *Muqaddimah* seem to have engaged fully with the width and intensity of his interest in divination and the future. A remarkable amount of space in Ibn Khaldūn's philosophical prolegomena to the study of history is devoted to consideration of divination and the occult sciences more broadly. In general, he took a hard-headed, even hostile view of the occult sciences. Alchemy and astrology were, like philosophy *(falsafah),* part of the *'ulūm al-awā'il* and, as such, inimical to true Islam.

Ibn Khaldūn judged alchemy to be a pernicious kind of sorcery, when it was not simply actual fraud.[2] *Maṭālib,* the occult science of treasure-hunting, was, like alchemy, not a natural way of making a living and the treasure-hunters were, like most of the alchemists, confidence-tricksters who used forged documents and other trumped-up pieces of evidence to prey upon the weak-minded. The section on *maṭālib* is entitled "Trying to make money from buried and other treasures is not a natural way of making a living."[3] A great deal of mumbo-jumbo was associated with treasure-hunting and, according to Ibn Khaldūn, this sort of thing was bound to appeal to the Egyptians, as they had a centuries-long attachment to anything to do with sorcery. One only had to look at the confrontation of Moses with the Egyptian sorcerers, as it was related in the Quran, to see that this was so.[4] Again the invocation of the Divine Names for magical purposes was wicked and blasphemous. Ibn Khaldūn was here denouncing the sort of magic set out in

treatises like the thirteenth-century *Shams al-Maʿārif,* attributed to al-Būnī (and popular among adherents of the Shadhilī Sufi *ṭarīqah* in Egypt).[5]

But Ibn Khaldūn's main interest was in those occult techniques that seemed to promise knowledge of the future. Here again his approach was hostile and suspicious. What he wanted to affirm was that knowledge of the future was reserved to God alone. However, his hostility to divination was tinged by ambivalence and he was not consistent in his approach to this subject. At times he seems to be saying that knowledge of the future is reserved to divinely guided prophets; at other times he seems to be saying that those who are not divinely guided prophets should not seek to enquire into the future—which is a rather different thing. Moreover, Ibn Khaldūn clearly viewed the subject as of remarkable importance, for he devoted one of the key prefatory discussions of the *Muqaddimah* (the sixth prologue) to an exploration of different ways of knowing the future, including such diverse topics as Prophetic revelation, Sufi meditation, numerology, astrology, and the *zā'irajah*.[6] As a Muslim, Ibn Khaldūn had to accept the authenticity of prophecy and, having done so, he found that the distinction between prophecy and divination was a subtle one. He was particularly interested in the political and historical uses to which divination might be put. Hence his discussion in the sixth prologue of *ḥisāb al-nīm.*[7] *Ḥisāb al-nīm* (it is not known why it was so called) was a kind of *jafr,* or a numerological divination based on the letters in the names of dynasties or rulers, that was used for making political and historical predictions. In medieval times it was widely thought that *ḥisāb al-nīm* had been vouched for by Aristotle in his famous treatise, the *Politics*. However, those who thought this were confusing the *Politics* with the *Sirr al-Asrār,* or *Secreta Secretorum,* an anonymous and immensely popular ragbag of wise maxims, stories, and spells. Ibn Khaldūn, after careful consideration, seems to have rejected the efficacy of *ḥisāb al-nīm,* though his rejection was tinged with ambiguity. The subject had after all attracted the attention of distinguished men. (He also doubted whether it was correct to attribute the *Sirr al-Asrār* to Aristotle.)[8]

When he came to consider such divinatory techniques as catoptromancy,

[7]*Prolégomènes*, 16:209–13; *Muqaddimah,* 1:234–38.

[8]On the misattribution to Aristotle and Ibn Khaldūn's doubts, see *Muqaddimah,* 1:81–82, note; cf. Dorothee Metlitzki *The Matter of Araby in Medieval England* (New Haven, 1977), 107. On Ibn Khaldūn's ambivalence with regard to the supernatural and miraculous in general, see Armand Abel, "La place des sciences occultes dans la décadence," in *Classicisme et déclin culturel dans l'histoire de l'Islam*, ed. Robert Brunschvig and G. E. von Grunebaum (Paris, 1957), 304–5; Toufic Fahd, *La divination arabe* (Paris, 1987), 45–50.

geomancy, and divination from entrails, he denied that there was any sound, logical basis for making predictions from these techniques. Nevertheless, he did suggest that such practices might permit their practitioners to allow their minds to drift and, if they were spiritually gifted, their souls might ascend into the realm of the spiritual.[9]

In a later section devoted to astrology, Ibn Khaldūn argued that the boasts of the astrologers were not justified by their results.[10] Another reason for disapproving of astrologers was that their predictions often focused on coming crises and in so doing were liable to provoke civil strife.[11] Yet, when he encountered Tīmūr in Damascus in 1401, he told the would-be world-conqueror that Maghribi soothsayers and saints had predicted his coming. More specifically in 766/1365, astrologers in the western Islamic lands, basing themselves on the impending astrological conjunction of the two highest planets, Saturn and Jupiter—an event that occurred only once every 960 years—had deduced the coming of Tīmūr in 784/1382. Prophecies about the political consequences of this planetary conjunction seem to have originated in Isma'ili circles in North Africa and were originally held to foretell the coming of a Fatimid Mahdi (a possibility that Ibn Khaldūn did not rule out). Only subsequently were the prophecies reapplied to fit the coming of Tīmūr.[12]

Moreover, to stick with Ibn Khaldūn's belief that the coming of Tīmūr had been foretold, in a lengthy chapter in the *Muqaddimah,* entitled "Forecasting the future of dynasties and nations, including a discussion of predictions *(malāḥim)* and exposition of the subject called divination *(jafr),*" he reproduced a lengthy, though fragmentary poem attributed to a Qalandar Sufi, al-Bājarbaqī (d. 724/1324).[13] Al-Bājarbaqī's poem (which will remind many Western readers of Nostradamus's *Centuries*) makes obscure prophecies about the future, the obscurity being enhanced by the frequent use of initials or gibberish assemblages of consonants to identify,

or perhaps rather to conceal the identity of people and things. One of the fragments runs as follows:

> This is the lamed Kalbite. Be concerned with him!
> In his time there will be disturbances, and what disturbances!
> From the East, the Turkish army will come . . .

And then the warning tails off into more obscure *jafr*. Presumably, the author of this verse was intending to refer to the limping Turk, Tīmūr, and that was how Ibn Khaldūn read it (though why Tīmūr should be associated with the South Arabian tribal grouping of Kalb is a bit of a mystery). Another of the fragments quoted by Ibn Khaldūn is also of interest:

> His father will come to him after an emigration
> And a long absence and a hard and filthy life.

This Ibn Khaldūn took to refer to the Sultan Barqūq and his summoning his father from Circassia to join him in Egypt.

One can, if one wishes, credit al-Bājarbaqī with remarkable powers of prescience, but, of course, it is more likely that the relevant verses were composed after the rise to power of both Tīmūr and Barqūq and falsely dated earlier, in order to confer more prestige on the prophetic verses as a whole. Ibn Khaldūn surmised that this was the case with the Bājarbaqī oeuvre—yet he remained fascinated by the subject and devoted an inordinate amount of space to it. Now Ibn Khaldūn only encountered al-Bājarbaqī's prophecies after he had arrived in the Mamluk lands in 1382. The bulk of the *Muqaddimah* was written in the late 1370s in Qal'at Ibn Salāmah in the Oranaise. However, it is important to bear in mind that he continued to expand and revise his work after his arrival in Mamluk Egypt and, as late as 1404, he was still revising his masterwork.[14] This raises the possibility that some of the historians who studied with Ibn Khaldūn in Egypt, such as al-Maqrīzī and Ibn Ḥajar, may conceivably had some influence on the final shape of the *Muqaddimah*. However, intriguing though this notion may be, it will not be pursued further here.

Also while in Egypt, Ibn Khaldūn had heard from learned people of the book of predictions attributed to Ibn al-'Arabī al-Ḥātimī (not the famous Andalusian Sufi Ibn al-'Arabī), in which the author "speaks about the horoscope of the foundation of Cairo." If one followed Ibn al-'Arabī's somewhat complex calculations, then it

[14]Franz Rosenthal, "Introduction," in *Muqaddimah,* civ–cvii.

could be deduced that Cairo would be destroyed in 832/1428–29.[15] Ibn Khaldūn relayed the prophecy without comment. However, the fact that this prophecy, like the Bājarbaqī prophecies, as well as another prophecy of Ibn al-ʻArabī′s concerning an eschatological redeemer of Fatimid descent, were circulating in Cairo in the 1390s suggests the doom-laden atmosphere in which Ibn Khaldūn and al-Maqrīzī thought and wrote. *Malḥamāt,* prophecies concerning the last days and final slaughterings, preoccupied Ibn Khaldūn, just as they had an earlier scholar, Khalīl ibn Aybak al-Ṣafadī. (Ṣafadī wrote a treatise on the subject).

In the latter part of the *Muqaddimah*, Ibn Khaldūn included a section on *taʻbīr,* or dream interpretation.[16] Dream interpretation was not part of the dodgy corpus of the *ʻulūm al-awāʼil;* rather it ″belongs to the sciences of the religious law.″[17] It was clearly possible to divine the future in dreams, for Joseph in the Quran did so. Moreover, the Prophet had declared ″A good dream is the forty-sixth part of prophecy.″ The problem for Ibn Khaldūn was how to distinguish a good dream from a false one, but at the end of his discussion, he concluded that ″dream interpretation is a science resplendent with the light of prophecy.″

The divination technique that above all others fascinated Ibn Khaldūn involved the use of a device called the *zāʼirajah*. He discussed this thing at length in two places in the *Muqaddimah*. In the first place he discussed whether it could validly be used for telling the future. In the second place he went into enormous detail on the mechanics of the *zāʼirajah*′s operation, including an operational manual cast in cryptic verse and attributed to al-Sabtī. The *zāʼirajah* was a kind of calculating machine, relying on rotating, concentrating circles, marked with devices that combined *ḥurūf* and *jafr*. It bears a curious similarity to Ramon Lull′s engine for demonstrating the existence of God and answering all questions, the Ars Magna. Ibn Khaldūn described the *zāʼirajah* as ″a remarkable technical procedure″ and remarked that ″Many distinguished people have shown interest in using it for supernatural information. . . .″[18] Despite his fascination with it, he suggested that the machine was incapable of determining the future by supernatural means. Rather the answers it produced were predetermined by the phrasing of the questions that were posed to it. Still Ibn Khaldūn remained fascinated by the device and went into extraordinary detail about its workings. He remonstrated with critics of

[15]*Prolégomènes*, 17:196; *Muqaddimah,* 2:224.

[16]*Prolégomènes*, 18:80–86; *Muqaddimah,* 3:103–10.

[17]*Prolégomènes*, 18:80; *Muqaddimah,* 3:103.

[18]*Prolégomènes*, 16:213; *Muqaddimah,* 1:239; for the *zāʼirajah* generally, see *Prolégomènes*, 16:213–20, 3:146–79; *Muqaddimah,* 1:238–45, 3:182–214; cf. D. M. Dunlop, *Arab Civilization to A.D. 1500* (London, 1971), 243–46; Fahd, *La divination*, 243–45.

the *zā'irajah* who denounced it as merely hocus-pocus.[19] It also seems, though he expresses himself somewhat obscurely on the topic, he believed that people with mystical training could use the device as a kind of springboard for veridical divination.[20] Through this strange science secrets could indeed be uncovered, though he believed that it would be impious to seek to divine the future through this technique. It also seems that Ibn Khaldūn may have been even more obsessed with the device than he let on in the *Muqaddimah*. Ibn Ḥajar, in his obituary of Muḥammad ibn Aḥmad ibn al-Khaṭīb al-Marrākushī (d. 735), described how this man was obsessed with the *zā'irajah* and how he left his *zā'irajah* to Ibn Khaldūn, who continued to research the topic intensively, though he kept his findings to himself.[21] A North African treatise on the *zā'irajah* quoted an eyewitness to Ibn Khaldūn in 1371 testing the device by asking it how old this particular technique of divination was. The *zā'irajah*′s response was that it was invented by Idrīs (i.e., Hermes) and since then its mystery had ascended to the highest rank. When Ibn Khaldūn got this answer, he was so pleased and excited that he spun and danced on the terrace of his house.[23] It is easy to exaggerate the modernity of Ibn Khaldūn by discounting his flirtations with the supernatural, as well as his intense, though rather conventional piety.

Neither Ibn Khaldūn′s knowledge of the past history of the Maghrib and al-Andalus, nor his study of what was to come inspired him with optimism. Referring to the ravages of the Black Death, he wrote that it ″was as if the voice of existence in the world had called out for oblivion and restriction, and the world responded to its call. God inherits the earth and whomever is upon it.″[23] Ancient ruins testified that a large area of North Africa had once been settled and prosperous, though this was no longer so. Civilization in the region had shrunk: ″This fact is attested by relics of civilization there, such as monuments, architectural sculpture, and the visible remains of villages and hamlets.″[24] The ruins and abandoned cities of Yemen, Iraq, and Syria similarly testified to the decay of the world. One of the main aims of the *Muqaddimah*—arguably its chief aim—was to explain why there

were more ruins in North Africa and the Islamic world generally than there were settled habitations.

The Arab race had long ago exhausted itself, and with the exhaustion of the Berbers would come the extinction of Maghribi civilization.[25] Ibn Khaldūn believed that power was moving from the Andalusian clime to the north. As Aziz Al-Azmeh has noted, ″Ibn Khaldūn seems . . . to have had a strong sense that momentous developments were taking place in the North [i.e., in Christian Europe], and surmised that the centre of gravity of human habitation was moving northwards—for which there were (according to him) ample stellar causes, as well as mundane ones he could not quite grasp. The passage is difficult to interpret, as the allusion in it might equally have been to the growing power of the Ottomans, to which there are other vague references in the *Muqaddimah.*″[26]

All of the above serves as a rather lengthy introduction to certain aspects of the historical thinking of al-Maqrīzī. Al-Maqrīzī knew Ibn Khaldūn and he appears to have read at least some of the *Muqaddimah,* but how much did al-Maqrīzī learn from this? Although the only subject that we know al-Maqrīzī formally studied with Ibn Khaldūn was *mīqāt,* the science of time measurement (which was used both for religious and for astrological purposes), it is perfectly clear that al-Maqrīzī was familiar with Ibn Khaldūn′s ideas about history. He gave Ibn Khaldūn a fairly lengthy entry in his biographical dictionary, the *Durar al-ʻUqūd,* in which he was unstinting in his praise of Ibn Khaldūn′s mastery of historiography and most specifically enthusiastic about the *Muqaddimah.*[27] Among other praiseworthy features, ″it reveals the truth of things, events, and news; it explains all the state of the universe and reveals the origin of all beings in an admirable plain style.″ Moreover, at several points in the *Durar,* al-Maqrīzī borrowed from Ibn Khaldūn.[28] Ibn Ḥajar and al-Sakhāwī later quoted al-Maqrīzī on the incomparability of the *Muqaddimah,* though they both had doubts whether the

book really was as good as al-Maqrīzī cracked it up to be.[29] (Incidentally, composition of *Durar al-'Uqūd* seems to have had a melancholy inspiration, for as al-Maqrīzī noted in the introduction, "By the time I was fifty most of my friends and acquaintances had perished. . . .") Ibn Ḥajar sardonically observed that al-Maqrīzī was only so enthusiastic about Ibn Khaldūn because he had not understood him properly. Although al-Maqrīzī was unstinting in his praise of Ibn Khaldūn, the casually arrogant immigrant genius from the Maghrib never troubled to mention the latter at all—neither in the *Muqaddimah,* nor in the *Ta'rīf.*

It is perfectly plausible that al-Maqrīzī learned important lessons from the older historian, but, of course, what modern thinkers, like Arnold Toynbee, Ernest Gellner, and others, have admired in Ibn Khaldūn and taken away from a reading of the *Muqaddimah* may not be the same as what al-Maqrīzī may have learned from his acquaintanceship with the man and the work. Indeed, al-Maqrīzī in the fifteenth century seems to have read a rather different book from the one we read today. But first I would like to draw attention to some obvious contrasts between the two historians. Although the *Muqaddimah* concentrated on broad historical developments and their underlying social and economic causes, when Ibn Khaldūn actually came to write history in the *'Ibar* and, more briefly and scrappily, in the *Ta'rīf,* the results, as many have noted, are disappointing. Ibn Khaldūn mostly wrote a thoroughly conventional narrative history. By contrast, al-Maqrīzī was actually the more theoretical when it came to writing history as opposed to theorizing about it. He did give weight to broad social and economic causes. It is only disappointing that his economic information was so often erroneous and his social analyses skewed by a religious and moralistic perspective.

Secondly, if, as we have seen, Ibn Khaldūn was a rather gloomy historian, al-Maqrīzī was even gloomier. Though Ibn Khaldūn was gloomy about the Maghrib and about the End of the World in general, he actually took a thoroughly upbeat view of life in Cairo, on the peaceful nature of existence in Mamluk Egypt and Syria, and of the dynamic and Islamic virtues of the Mamluks themselves. Ibn Khaldūn presented an essentially false picture of life in Egypt as prosperous and peaceful and free from tribal disputes.[30] In Ibn Khaldūn's eyes, the Mamluks were benign patrons of scholarship and architecture and, above all, they were the saviours of Islam. For al-Maqrīzī, on the other hand, they were "more lustful than monkeys,

[30]On Ibn Khaldūn's (unduly rosy) picture of the Mamluk sultanate, see Robert Irwin, "Rural Feuding and Mamluk Faction Fighting in Medieval Egypt and Syria," to be published in *Texts, Documents and Artifacts: Islamic Studies in Honour of D. S. Richards*, ed. Chase F. Robinson (forthcoming 2002). See also Fischel, *Ibn Khaldūn in Egypt,* 78–79, on Ibn Khaldūn's neglect of the great famine in Egypt.

more ravenous than rats, more harmful than wolves."[31]

Al-Maqrīzī, by contrast preferred to harp on all the disasters that had recently befallen Egypt—most of which, according to the *Ighāthah,* had been caused by the ruling regime's mismanagement and corruption.[32] Notoriously, al-Maqrīzī was nostalgic about the glory days of the Fatimids. He also painted for himself an unduly positive assessment of the condition of Egypt and Syria under the early Bahri Mamluk sultans. Historical nostalgia mingled with personal nostalgia—nostalgia for the time before he lost his only daughter, for the time when he enjoyed the favor of the sultan Barqūq to such an extent that one of his contemporaries described him as the sultan's *nadīm,* for the time when most of his friends were still alive, for the time when one could still buy the sweets he particularly liked in the Cairo market. The flipside of al-Maqrīzī's pervasive nostalgia was, as we shall see, his apprehension about the future.

Thirdly, if al-Maqrīzī was gloomier than Ibn Khaldūn, he was also much loonier—and he was totally uncritical in his embrace of the occult and the prophetic. Al-ʻAynī in his brief obituary of al-Maqrīzī accused him of being obsessed with history, yes, but also of being obsessed with *darb al-ramal,* or geomancy.[33] According to al-Sakhāwī, al-Maqrīzī cast Ibn Khaldūn's horoscope and, on the basis of this, predicted that the latter would hold high office. Al-Sakhāwī described al-Maqrīzī as an expert on *zā'irajah,* the astrolabe, geomancy, and *mīqāt* (time-keeping).[34] Al-Maqrīzī was also convinced of the predictive power of dreams. Towards the end of the reign of al-Ashraf Shaʻbān an acquaintance of al-Maqrīzī's dreamt of Barqūq as an ape preaching from a *minbar* and unsuccessfully trying to lead the people in prayer. From this he deduced that the dream had predicted the rise of Barqūq, as the Circassian sultan had the qualities of an ape—niggardliness and corruption. Ibn Taghrībirdī thought al-Maqrīzī's interpretation of this quite ridiculous.[35] Incidentally, Ibn Taghrībirdī, al-Maqrīzī's student, fan, and historiographical rival, had no time for astrology at all and in the *Nujūm* he repeatedly went out of his way to highlight the failed predictions of the *munajjim.*

He believed that astrology, like the other *'ulūm al-awā'il,* was doomed to disappear.[36] Moreover, to return to dreams, the narrative of al-Maqrīzī's chronicle, the *Sulūk,* is peppered with accounts of political dreams that came true.[37]

In the *Khiṭaṭ,* al-Maqrīzī wrote that, since the Egyptian people were governed by Gemini, they were especially gifted in predicting the future. He instanced the time when in 791 Barqūq escaped from prison in Kerak in Transjordan and people in the Bayn al-Qasrayn in Cairo knew that very day.[38] It is natural that the *Khiṭaṭ* should have been read primarily as a source on the topography of Cairo and on the history of the Fatimids and Mamluks. However, to do this runs the risk of neglecting entire sections of the *Khiṭaṭ* that offer the modern reader no useful historical information (at least not useful in terms of mainstream historiography). But it is noteworthy that, after some preliminary pious throat-clearing, the *Khiṭaṭ* actually opens with a substantial disquisition on astrology. According to al-Maqrīzī, a grasp of this subject is necessary if the reader is to follow what he is to going to write about later. The familiar great names in Islamic astrology, Abū Ma'shar, al-Bīrūnī, and so on are cited, but al-Maqrīzī's interest was not merely theoretical and, for example, in order to predict the annual rise of the Nile flood, al-Maqrīzī followed a technique set forth by al-Bīrūnī, a method which involved a board and lots of seeds.[39] Most important, al-Maqrīzī believed that the fate of Egypt was foretold in the doom-saying of astrologers—as we shall see.

Al-Maqrīzī's gloomy ponderings on the future of Egypt arose naturally from his imagining of what Egypt's past had been. He knew—or thought he knew—that Egypt had once been a land of fabulous wealth, or rather it had several times been a land of fabulous wealth.[40] First, there had been the wealth of the Pharaohs, both before and after the Flood. Then there was the wealth of Egypt under its Rumi (Greek and Roman) rulers. Then, there was the well-attested wealth of the Fatimid caliphs. It even seemed to al-Maqrīzī that in the early Mamluk period Egypt had been more prosperous than it now was. So the question naturally arose, if, in former times, Egypt had been so very wealthy, where had all that treasure gone? Barqūq's Cairo was after all a dump in al-Maqrīzī's eyes. Ibn Khaldūn, in his

---

[39]Ibid, 1:8–14.

[40]Though the theme is pervasive throughout the *Khiṭaṭ,* al-Maqrīzī devoted a short section specifically to the destruction of the wealth of Egypt (*Khiṭaṭ,* 1:73–74), which contains some characteristically eccentric speculations about fossilized watermelons, cucumbers, and other fruits.

discussion of treasure-hunting, had asked himself precisely the same question. What had happened to the great wealth of past cultures? The sensible answer, as far as Ibn Khaldūn was concerned, was that those riches had been transferred elsewhere to other more successful cultures. Ancient Egypt′s wealth had been plundered, first by the Persians and then by the Greeks.[41] Al-Maqrīzī, who was never so fond of sensible answers, took a somewhat different view.

In his chapter on the *maṭālib* in the *Khiṭaṭ,* al-Maqrīzī wrote about *The Book of Treasures,* or *'Ilm al-Kunūz:* ″It is said that the Greeks [i.e., Byzantines] in leaving Egypt and Syria hid most of their treasures, but they wrote down in books where they had hidden those treasures and these books were deposited in a church in Constantinople.″[42] Alternatively, according to al-Maqrīzī, the Greeks took older treasure books (presumably dating from Pharaonic times) to the church in Constantinople. Each servant of the church who guarded those valuable texts received one page of where to find treasure as his reward. Ibn Khaldūn took the more sensible view that no one who was hiding treasure would then set about writing out instructions that others could use to find that treasure.[43] However, it was obvious to al-Maqrīzī at least that most of the treasures of antiquity had been hidden here and there all over Egypt. It is worth remembering that he lived in an age of thesaurisation, when viziers and other state functionaries routinely salted away the proceeds of office-holding in hollow columns, hidden cupboards, and holes beneath their courtyards.[44] Al-Maqrīzī actually devoted a whole treatise to hidden treasures, the *Kitāb al-Dhakhā'ir,* which has not survived. However, he also discussed the subject in the *Khiṭaṭ* and he relayed stories that are found in Ibn Waṣīf Shāh, al-Mas'ūdī and al-Murtaḍá, about the treasure-hunting *muṭālibūn,* who ventured into the pyramids and other places.

The pyramids were not merely storehouses of material treasure—of gold, silver, and jewels, but they were also repositories of intellectual treasures. Al-Maqrīzī shared the widely held view that the pyramids were a sort of collection of educational time- capsules that had been built to preserve ancient Egypt′s intellectual heritage from a predicted catastrophe (the theme of ecpyrosis). Egypt had once been home to Hermes, or Idrīs, and he taught all the sciences to the inhabitants of the land before the Flood.

According to Ibn Waṣīf Shāh (fl. ca. 1000), the author of a widely credited but quite fantastic history of ancient Egypt, King Surīd had a dream which his counsellors

interpreted as a warning of coming catastrophe. Unable to determine whether it would be by fire or by water, they built the pyramids to preserve within them their wisdom in a picture language that people in future centuries would be able to decode and they also drew diagrams on the walls of their temples. Al-Maqrīzī related a series of tales, also found in al-Mas'ūdī, al-Idrīsī, and others, about those who ventured into the pyramids looking for treasure or excitement. Most of these tales had a moralizing burden.[45] One story must have been particularly dear to the author of *Shudhūr al-'Uqūd*. It was related that treasure hunters excavating in the area of the pyramids presented Aḥmad ibn Ṭūlūn with a jar of ancient pure gold dinars in one of the pyramids and the inscription on the dinars declared in the ancient *barbatī* script ″He who has been able to issue pure currency will be pure in this life and the next.″[46]

The Sphinx was the talismanic guardian that saved Giza from being engulfed by sands. Another factor behind al-Maqrīzī′s engagement with the occult was his fierce patriotism. He wanted to boast about his land and, in order to do so, he invoked it′s *'ajā'ib,* its marvellous temples, talismans, wonder-working pillars, and buried treasures.

Some of the messages that the ancients had transmitted across the centuries were warnings for al-Maqrīzī and his contemporaries. According to al-Maqrīzī, there was once a temple in Ikhmīm, now lost, with pictures and images that recorded the past and future of the world. He was steeped in the writings of the eighth-century Sufi Dhū al-Nūn al-Miṣrī—or at least the writings ascribed to him, for much or all of the occult material is presumably pseudepigrapha. According to al-Maqrīzī, Dhū al-Nūn had succeeded in deciphering a Pharaonic inscription in a temple, presumably in Ikhmīm. The inscription warned its readers, ″Beware of freed slaves, young men, military men become slaves, and Nabataeans who claim that they are Arabs.″[47] (So it would seem that ancient sages had foretold the coming of the Mamluks.)

More conclusively for the pious Muslim, Egypt′s sad fate had been foretold in Prophetic hadiths. Egypt was safe only as long as Iraq was unscathed, according to several hadiths, but according to another hadith, there would come a time when Egypt would be ruined by the overflowing of the Nile and military revolts would break out. According to yet another hadith, Egypt and Basra would become the most desolate of places. Red fighting and dry hunger would ruin Egypt and the

[46]Al-Maqrīzī, *Khiṭaṭ,* 1:73.

[47]Ibid, 1:69.

Nile would dry up. More puzzlingly it had also been foretold that ″when men with yellow flags shall enter Egypt the Syrians shall dig roads under the ground.″ The ″men with yellow flags″ might well be the armies of the Ayyubids or Mamluks (for yellow was the color of their standards), but what is supposed to be going to happen in Syria? Again Egypt should beware when it should be the target of the fourfold blows of the Andalusians, Abyssinians, Turks, and Rumis.[48] And so on… and al-Maqrīzī proceeded from these and numerous other doom-laden prophecies to a description of the ruined situation of al-Fusṭāṭ in his own time.[49]

In the opening pages of the *Khiṭaṭ*, al-Maqrīzī declared that the purpose of the study of history was to warn people and prepare them for departure from mortal life. Also that history was the most important of the sciences ″for it contains warnings and exhortations reminding man that he must quit this world for the next.″ Also, ″through such study, a person whose blindness of heart and vision was removed by God, will learn about the destruction and final disgrace which fell to the lot of his fellow-men after the handling of wealth and power.″ And in a version of the text of the *Khiṭaṭ,* quoted in al-Sakhāwī′s *I'lān*, al-Maqrīzī continued ″and he will come to abstain from this world and to wish for the other world.″[50] His gloomy animadversions on the decline of Egypt under al-Nāṣir Muḥammad ibn Qalāwūn and his descendants and the slide to worse yet under the early Circassian sultans should be seen within the broader framework of his historical vision, which encompassed the pre-Adamite sultans, the antediluvian Pharaohs, the Deluge, and the rule of Rome. The *Khiṭaṭ* considers how many centuries have passed since the world was created and how few years yet it and Islam have to endure, before the coming of the Mahdi.[51] Ever since Silvestre de Sacy and his student, Quatremère, historians have stressed al-Maqrīzī′s importance as a historian and it is certainly true that history was his chief interest. However, this stress has been at the expense of al-Maqrīzī′s wider literary and intellectual interests. For, after all, he wrote poetry, as well as treatises on bees, on precious stones, on music, on dogmatics, on the domestic objects in the household of the Prophet, a life of Tamīm al-Dārī, a polemical attack on the followers of Ibn al-'Arabī in Damascus, a biographical dictionary of artists (*The Light of the Lamp and the Answer of Company in Respect of the Annals of Artists),* as well as a treatise on secret letters and talismans.[52] All in all, he claimed to have written more than 200

works. History was at the core of his oeuvre, but occult and eschatological concerns were at the core of his history. It is difficult to be sure what Ibn Khaldūn and al-Maqrīzī talked about when they met, but it is probable that they talked more about knowledge of the future than the past. If Ibn Khaldūn in Egypt succeeded in anything, it was in passing on his pessimism and his speculative interest in the future to al-Maqrīzī.

Royal Authority, Justice, and Order in Society: The Influence of Ibn Khaldūn on the Writings of al-Maqrīzī and Ibn Taghrībirdī

Modern historians of the Ottoman Empire have long been familiar with the decline paradigm, which was espoused by Ottoman intellectuals in the late tenth/sixteenth, eleventh/seventeenth, and twelfth/eighteenth centuries. These intellectuals felt that the empire had undergone a societal, financial, and administrative transformation for the worse. This transformation, or more accurately, decline, was often evaluated unfavorably in the context of previous periods of Ottoman history, especially but not exclusively the reigns of Mehmed I (r. 855–86/1451–81), Selim I (918–26/1512–20), or Suleyman the Magnificent (r. 926–74/1520–66).[1] Ottoman decline theorists tended both to describe society's ills, and to offer practical advice for curing them. This they did in the *nasihatnamah*s, a new type of advice manual that was peculiar to the Ottoman literary scene.[2] Unlike the older and well-established genre of mirrors-for-princes, which tended to proffer general advice on all aspects of royal behavior, the *nasihatnamah*s were unique in that they presented both descriptions of actual societal decline, and pragmatic programs for the reform of society.

Modern historians writing on the Ottoman Empire took over this model of decline, which resulted in the appearance of scholarly works on Ottoman history arranged according to the notions of rise, apogee, decline, and disintegration. More recently, however, it has been argued that the general hand-wringing about the state of the times and the proliferation of advice manuals written by concerned Ottomans points not, as previously suspected, to an actual state of decline and disarray in matters social, financial, and administrative, but rather to the health and vigor of the Ottoman system. Scholars are still discussing the usefulness of

---

[1]Ottoman nostalgia for times past has been described in modern literature as referring to a "Golden Age." For the complexities both of this nostalgia and the Golden Age model, see Cemal Kafedar, "Ottoman Historical Consciousness in the Post-Sülymânic Age: The Myth of the Golden Age," in *Süleymân the Second and His Time,* ed. Halil İnalcık and Cemal Kafadar (Istanbul, 1993), 37–48.

[2]Cornell Fleischer, "From Şeyhzade Korkud to Mustafa Âli: Cultural Origins of the Ottoman *Nasihatname,"* in *Third Congress on the Social and Economic History of Turkey: Princeton University, 24–26 August, 1983,* ed. Heath W. Lowry and Ralph S. Hattox (Istanbul, Washington, and Paris, 1990), 67.

the decline paradigm as a way to understand Ottoman history, but such a discussion is too broad for the scope of this article, and will not be addressed here.[3]

More pertinent to the current venue is the question of the intellectual inspiration for Ottoman decline literature. Many sources played a role in the development of the genre, but only the intellectual contributions of one particular figure will concern us here.[4] The figure in question is the North African scholar Ibn Khaldūn (d. 808/1406), whose work served to inspire the *nasihatnamah*s of several important Ottoman decline theorists.[5] Ibn Khaldūn presented a clear analysis of several crucial ideas: the cyclical theory of history with its assumptions about the rise and fall of dynasties; the related comparison of the state to the body with a life cycle of birth, growth, maturity, old age, and death; and the connections among strong royal authority, justice, and an ordered society, with the consequent assumption that weak royal authority led to the spread of injustice and societal disorder.[6] Ibn Khaldūn was not unique in presenting these notions, especially that of the relationship between royal authority and order; indeed, although central to his arguments in the *Muqaddimah,* this concept is in fact recognizable as the ancient political theory of the Circle of Justice, which had already entered the Ottoman intellectual scene in the writings of such thinkers as Nāṣir al-Dīn Ṭūsī (d. 672/1274) and Jalāl al-Dīn Davānī (d. 908/1502–3). Like Ibn Khaldūn himself, they drew on the full array of Persian, Greek, and Indian statecraft, all of which helped contribute to the decline genre.[7] Indeed, Ibn Khaldūn was so popular not because his ideas were unique (although some of them were), but rather because he expressed familiar ideas in a systematic and straightforward way.[8] Thus probably during the tenth/sixteenth century and certainly by the eleventh/seventeenth, Ibn Khaldūn had developed a following of well-educated Ottoman admirers, many of whom

[8]Ibid., 202.

believed both in the reality of Ottoman decline, and in their own power to suggest reform.[9]

A familiarity with the question of Ottoman decline might prompt historians of the Mamluk Sultanate to investigate the Mamluk case in light of the Ottoman model. Certainly Mamluk Egypt and Syria experienced considerable societal and economic disarray during the ninth/fifteenth and early tenth/sixteenth centuries, if not earlier.[10] And certainly at least two major ninth/fifteenth-century Mamluk-era intellectuals, Taqī al-Dīn Aḥmad ibn ʻAlī al-Maqrīzī (d. 845/1442) and his student Jamāl al-Dīn Yūsuf Ibn Taghrībirdī (d. 874/1470), appear to have felt that they were living in a period of societal decline. Furthermore, of these two men, al-Maqrīzī was unquestionably influenced by the work, theories, and person of Ibn Khaldūn, while Ibn Taghrībirdī appears to have absorbed Ibn Khaldūnian notions indirectly through al-Maqrīzī.

The parallels between the Ottoman and Mamluk cases are certainly far from complete, however, for whereas Ottoman intellectuals responded to the challenge of perceived decline by penning pragmatic programs of renewal, Mamluk authors—with only few exceptions—displayed little interest in writing advice literature at all.[11] Furthermore, it has been taken as axiomatic by modern scholars

---

[9]Ibid., 199–203.

[10]For a discussion of the problems in society begun during the reign of al-Nāṣir Muḥammad ibn Qalāwūn, see Amalia Levanoni, *A Turning Point in Mamluk History: The Third Reign of al-Nāṣir Muḥammad ibn Qalāwūn* (Leiden, 1995).

[11]Two exceptions to this rule are the *Kitāb Taḥrīr al-Aḥkām fī Tadbīr Ahl al-Islām* of Badr al-Dīn Muḥammad Ibn Jamāʻah (d. 833/1333), and the *Āthār al-uwal fī Tartīb al-Duwal* of al-Ḥasan Ibn al-ʻAbbāsī (fl. 708/1308–9). See Badr al-Dīn Muḥammad Ibn Jamāʻah, *Kitāb Taḥrīr al-Aḥkām fī Tadbīr Ahl al-Islām*, ed. Hans Kofler as ″Handbuch des Islamichen Staats- und Verwaltungsrechtes von Badr al-Dīn Ibn Gamāʻah,″ *Islamica* 6 (1934): 347–414, and Ḥasan Ibn al-ʻAbbāsī, *Āthār al-uwal fī Tartīb al-Duwal,* ed. ʻAbd al-Raḥmān ʻUmayrah (Beirut, 1989). However, both works were composed long before the accepted ″decline″ phase of Mamluk history began in the ninth/fifteenth century. Predictably, these two works address the greatest concern of early eighth/fourteenth century Mamluk society, the threat of military, cultural, and religious annihilation at the hands of the Ilkhanids. As a result, both works seek to provide advice and moral support to the ruler in the face of this danger. A later example of advice work is the *Fākihat al-Khulafā' wa-Mufākahat al-Zurafā'* by the ninth/fifteenth-century author Ibn ʻArabshāh (d. 854/1450). This work is a collection of enlightening tales featuring both humans and animals, and also includes snippets of historical narrative. A second advice work attributed to Ibn ʻArabshāh is the Persian *Marzubān-nāmah,* but Ibn ʻArabshāh was merely a translator for this work, not the author. Furthermore, although Ibn ʻArabshāh began and ended his life in the Mamluk Sultanate, his many years spent in Central Asia and Anatolia make him a unique intellect and voice, and not a product of the Mamluk intellectual milieu. Thus he and his advice works should be considered exceptions to the Mamluk norm. For the best short biography of Ibn ʻArabshāh to date, see Robert G. Irwin, ″What the Partridge told the Eagle: a Neglected Arabic Source on Chinggis Khan and the Early

writing in English that Ibn Khaldūn had little effect on intellectuals writing in Arabic. (The opposite point of view has been taken as axiomatic by modern scholars writing in Arabic.) Regardless, Ibn Khaldūn did serve as an important mentor and teacher to al-Maqrīzī, who, like the Ottoman decline theorists, argued powerfully that his own day and time suffered from societal, administrative, and financial disfunction and disarray. Al-Maqrīzī supported his arguments by defaming his contemporaries, particularly members of the military elite and their civilian advisors. In the later stages of his life, al-Maqrīzī displayed a marked interest in the past, whether that of his own family or of Egypt as a whole, which could be interpreted as nostalgia for an earlier (and better) vanished age.

I myself have argued elsewhere that both al-Maqrīzī's disillusionment with contemporary life and his criticism of the ruling elite can be traced in part to his own personal failures in the competitive world of the Mamluk ulama.[12] Certainly the particulars of al-Maqrīzī's own experience cannot be discounted in understanding the grim vision he brought to some of his writings on contemporary society.[13] Nevertheless, in view of the effect that Ibn Khaldūn had on Ottoman theorists of decline, it seems sensible to question his effect on al-Maqrīzī. After all, al-Maqrīzī was extremely impressed by Ibn Khaldūn, whom he described as: ". . . the elite that the Age brings only rarely."[14] And al-Maqrīzī not only read Ibn Khaldūn's *Muqaddimah*, but praised it highly: ". . . [It is] unlike any other work . . . the essence of knowledge and science, and the product of sound intellect and understanding."[15]

Thus if Ibn Khaldūn's work was influential enough in the Ottoman Empire to produce a group of admirers who knew him only through his writing, surely the same compelling ideas might have had some effect on a student like al-Maqrīzī, who knew Ibn Khaldūn personally and was favorably impressed by him. Furthermore, since Ibn Khaldūn's intellectual legacy in Ottoman territory was primarily due to his appealing formulations of the notions of royal authority and justice, the cyclical history of dynasties, and the human metaphor for the body

politic, might not al-Maqrīzī also display signs of having been influenced by some of those inspiring ideas?

Indeed al-Maqrīzī does demonstrate a marked interest in at least one notion dear to Ibn Khaldūn: that of the connections among royal authority, justice, and the maintenance of order in society. In al-Maqrīzī's hands, however, the concept is most frequently shown in reverse as the weakening of royal authority, the proliferation of injustice and the resultant spread of societal disorder. Evidence for al-Maqrīzī's interest can be found in his little treatise *Ighāthat al-Ummah fī Kashf al-Ghummah,* which was written in 808/1405 in response to an economic crisis in Egypt.[16] The crisis in question had begun in 806/1403–4, and was characterized by rapid and unprecedented inflation, especially in the prices of foodstuffs and clothing. The seriousness of the matter is indicated by the behavior of the Royal Mamluks, who rioted early in 806/1403 to force the sultan al-Nāṣir Faraj (r. 801–8/1399–1405; 808–15/1405–12) to give them their pay, clothing allowances, and fodder for their horses.[17] Indeed, the difficulties of the situation were further mirrored by the behavior of Faraj's viziers, three of whom went into hiding in 806/1403–4 because they could not handle the financial demands of the vizierate and the expenses of the Royal household and Royal Mamluks.[18] This crisis at the highest levels of the financial administration was exacerbated throughout society by a poor Nile flood, a spate of bad weather that led to illness and death, and inflation in the price of medicine.[19]

The economic trouble of 806/1403–4 was surely worsened by diplomatic tribulations, for it was in this year that Faraj was forced to profess his vassalage to the Turkic warlord Timur (d. 807/1405), who had occupied and devastated Damascus in 803/1400–1. Relations between the two sides were tense for months, beginning in Muḥarram 806/July–August 1403 when ambassadors from Timur arrived and paraded through the streets of Damascus and Cairo, waving Timur's banners from the back of an elephant.[20] Worse yet, with this embassy Timur sent an adolescent-

[18]In the previous year there had only been one disappearance; al-Maqrīzī, *Sulūk,* 3:1104. For the disappearances in 806/1403–4, see 3:1113, 1116, and 1119.

[19]For Nile flood problems, see al-Maqrīzī, *Sulūk,* 3:1115; for bad weather, illness, and death, see 3:1119–20, 1124–25.

[20]Al-Maqrīzī, *Sulūk,* 3:1111; Ibn Qāḍī Shuhbah mentions their arrival in Damascus in Dhū al-Qa'dah 805/May–June 1403 on the way to Cairo in *Tārikh Ibn Qāḍī Shuhbah,* ed. 'Adnān Darwīsh (Damascus, 1977–97), 4:312; Ibn Ḥajar al-'Asqalānī, *Inbā' al-Ghumr fī Abnā' al-'Umr,* ed. Ḥasan Ḥabashī (Cairo, 1389/1969), 2:256.

sized robe of honor to the adolescent sultan.[21] The flags, the elephant, the robe: all these served as a proclamation of Timur′s superiority and a humiliating public indication of Mamluk vassalage. When Timur′s ambassadors were finally sent back to Samarqand at the end of the year, they were accompanied by a Mamluk ambassador and an unspecified amount of material goods, which appears to have been meant as tribute.[22] Any loss in money and goods to Samarqand may have struck a further financial blow to an administration already in dire straits. Interestingly, however, al-Maqrīzī does not mention these material goods either in the *Kitāb al-Sulūk,* or in the *Ighāthah.* This suggests either that al-Maqrīzī was unaware of the tribute leaving the sultanate for points east, or (like most other Mamluk chroniclers) was too embarrassed to discuss it.[23]

At any rate, the focus of the *Ighāthah* is on internal matters, which implies that it was intended for some person of authority within the Mamluk administration. Unfortunately the work does not address any particular individual, thus al-Maqrīzī′s specific audience—if he had one—is unknown. The contents of the work indicate that al-Maqrīzī understood Ibn Khaldūn′s maxim about the need for strong royal authority to provide justice to a well-ordered state, for in the treatise al-Maqrīzī goes to some trouble to identify the reasons for current financial decline and explain the singular role played in that decline by the injustice of the ruling class. In the text al-Maqrīzī describes a historical series of dearths and famines in Egypt, but takes care to suggest that they were all caused by natural disasters or insufficient Nile floods. When he reaches the economic crisis of the early ninth/fifteenth century, by contrast, al-Maqrīzī attributes it directly to the incompetence and mismanagement of the ruling class, stating: ″. . . what has befallen the population is caused solely by the malfeasance of the leaders and

[21]The Mamluk amirs refused to let Faraj put the robe on; Ibn Ḥajar, *Inbā*ʾ*,* 2:256.

[22]Ibn ʿArabshāh mentions the arrival of a Mamluk ambassador with tribute in Samarqand. See Ibn ʿArabshāh, *ʿAjāʾib al-Maqdūr fī Nawāʾib Tīmūr,* ed. Aḥmad Fāʾiẓ al-Ḥimṣī (Beirut, 1407/1987), 380; J. H. Sanders, *Tamerlane: or, Timur, the Great Amir* (Lahore, 1936), 220. Sanders does not appear to have realized the significance of the Arabic technical terms for tribute, *ḥaml* and *taqādum* (sing. *taqdimah*), which he translates merely as ″various gifts.″ Ruy Gonzalez de Clavijo also makes a passing reference to a Mamluk ambassador and a collection of ″gifts″ [tribute?] in *Narrative of the Embassy of Ruy Gonzalez de Clavijo to the court of Timour at Samarcand, A.D. 1403–6,* tr. Clements R. Markham, Hakluyt Society Second Series No. 26 (London, 1859), 86–87.

[23]The only contemporary Mamluk historians to discuss Timur′s ambassadors in humiliating detail are Ibn Ḥajar and Ibn Qāḍī Shuhbah. See Ibn Ḥajar, *Inbā*ʾ*,* 2:256–57, and Ibn Qāḍī Shuhbah, *Tārikh,* 4:312. The others, al-Maqrīzī included, mention the embassy but omit the embarrassing parts. I cannot believe, however, that they were unaware of them. After all, who could miss banners waving from an elephant that paraded in public in multiple Mamluk cities?

rulers, and their negligence with regard to the public interest.″[24]

Al-Maqrīzī lists three reasons for the current economic disaster, all of which stem from inappropriate and oppressive behavior (i.e., injustice) among the ruling elite. First is the fact that important positions in the civil administration can only be gained or kept through the payment of bribes. He argues that this practice results in oppression by the appointed official on those beneath him, since he needs to make back the investment that gained him the position in the first place.[25] Al-Maqrīzī specifically mentions market inspection *(ḥisbah)* as an example of one of these corrupt positions, which may reflect his own loss of that post after an unpleasant struggle with his rival, the historian Badr al-Dīn Mahmūd al-ʻAynī, in 801–3/1399–1400.[26]

Al-Maqrīzī identifies the second reason for the economic crisis as the increase of taxes and fees collected from estates (*iqṭā*ʻs) controlled by members of the military elite. He explains that this increase has taken place solely so that the military elite can squeeze these estates of every last drop of profit, to the detriment both of those working the land, and the land itself.[27] Like the changes in the system of civil appointments, this demonstrates not only the greed of the military elite, but the injustice of their behavior as they permit their civilian subordinates to plunder estates and oppress the laborers on them.

The third reason al-Maqrīzī gives for the current economic malaise is the ill-advised and tyrannical decision of the Mamluk administration to circulate copper coins *(fals*, pl. *fulūs)* as currency. This is the main target of al-Maqrīzī′s essay.[28] When elaborating on this theme, al-Maqrīzī identifies the major villain in the economic ruin of Egypt as one Mahmūd ibn ʻAlī, a civilian from Alexandria who rose in the military hierarchy until he reached the position of the high steward *(ustādār)* under Barqūq in 790/1388, shortly before that sultan was thrown from power in the civil war of 791/1388–89.[29] Mahmūd′s exemplary loyalty to the sultan during the unrest of 791/1388–89 earned him a stint in prison in chains; this seems to have inspired Barqūq to reinstate Mahmūd shortly after he himself fought his way back to power in Muḥarram 792/December 1389–January 1390. Mahmūd soon reached glorious heights of responsibility, power, and wealth.[30]

[28]Allouche, *Ighāthah,* editor′s introduction, 2–4; text, 55–72.

[29]Al-Maqrīzī, *Sulūk,* 3:579.

[30]See the events of 791/1388–89 in the *Sulūk,* especially 3:621, 624, 627–28, 651, 655, 673, 677;

Indeed, it was only the machinations of his own ambitious protégé, one Ibn Ghurāb, that led to the high steward′s downfall, the confiscation of his enormous wealth, and his ultimate imprisonment, torture and death in Rajab 798/April–May 1396.[31]

Although al-Maqrīzī chronicles Mahmūd′s rise and precipitous disgrace in detail in the *Kitāb al-Sulūk,* his censure of Mahmūd appears to hinge on a solitary event. This took place in 794/1391–92, when at the height of his power Mahmūd ordered copper coins to be struck in the mint at Alexandria. At that time copper was already in use in Cairo; nevertheless, the creation of additional coins caused al-Maqrīzī great concern, for the new Alexandrian coins were of a lower weight and quality than those circulating in Cairo. Furthermore, Mahmūd stopped the minting of silver dirhams at the same time, with the result that silver coins became rare.[32] To make matters worse, al-Maqrīzī claims, the little silver that did remain was melted down into jewelry and thereby removed from circulation.[33] Al-Maqrīzī goes on to outline a program of minting and regulating coins, which would return the currency to a shared gold-silver standard and limit copper coins to a marginal role. In his opinion, such a program would solve the economic difficulties Mamluk society was facing.[34]

In sum, al-Maqrīzī argues that the financial disarray of the early ninth/fifteenth century is solely a result of the injustice of the ruling class, which results in a corrupt appointment system, excessive taxes, and the promotion of a bad currency. This linking of injustice with societal trouble both echoes Ibn Khaldūn and foreshadows the Ottoman concern with weakened royal authority, the spread of injustice, and the resultant appearance of decline. Like the Ottoman *nasihatnamah*s, the *Ighāthah* appears to have been designed not only to draw attention to the reasons for disarray, but to propose a cure for them, in this case through currency reform, which was to restore society to its proper financial order and arrest the otherwise inevitable weakening of the body politic. It is noteworthy that al-Maqrīzī′s criticisms focus on the ruling elite, both its military men and its civilian advisors, since al-Maqrīzī himself aspired to the ranks of the latter. In this way he resembles Ottoman decline authors, who tended to be members of the very ruling apparatus they sought to improve. Interestingly, however, al-Maqrīzī does not offer solutions

[34]Ibid., 80–85.

to the problems either of bribery within the civil administration, or of extortion from estates. In fact, he does not challenge the existing political system in any way, but merely suggests his limited currency reform as a panacea for greater problems.

In order to implement his program of reform, al-Maqrīzī would have needed to capture the attention of a highly-placed member of the military elite. But as mentioned above, the intended audience for the work is unknown. It appears unlikely that Faraj was a candidate, since Faraj is never mentioned in the text, and since al-Maqrīzī's relations to the sultan do not appear to have been close at the time he wrote the *Ighāthah.* A second likely choice was the amir Yashbak al-Sha'bānī, who was another of al-Maqrīzī's patrons, but Yashbak was busy rebelling against and reconciling with Faraj in 807–8/1405–6.[35] Regardless of the intended audience, al-Maqrīzī's plan of currency reform was never carried out.

After this unpromising beginning, al-Maqrīzī did not immediately compose other advice works. This may have been a result of his own career stagnation, for even as he wrote the *Ighāthah* his distance from those in power was steadily increasing. Later, however, al-Maqrīzī returned to his fledgling reforming notions by taking a chapter of the *Ighāthah* and expanding it into a separate tract, the *Shudhūr al-'Uqūd fī Dhikr al-Nuqūd.* Unlike the *Ighāthah,* the *Shudhūr* had an explicit royal audience, the sultan al-Mu'ayyad Shaykh (r. 815–24/1412–21).[36] It appears to date from the early years of Shaykh's reign, and was probably written shortly after Shaykh's currency reforms of 817/1414–15 and 818/1415–16, which al-Maqrīzī mentions in the text.[37] Al-Maqrīzī himself states that he received a royal order to write about money for the sultan.[38]

In the *Shudhūr,* al-Maqrīzī returns to his earlier theme of the relationship among weak royal authority, high-level malfeasance, and financial trouble. He also returns to his griping about Barqūq's high steward, Mahmūd ibn 'Alī, and the 794/1391–92 minting of copper in Alexandria. Here al-Maqrīzī refines his argument slightly, dropping his references to the uses of silver as jewelry, and instead focusing on Mahmūd's minting activities as the primary cause of the increase in copper coinage and the eventual near-abandonment of gold and silver for copper. Al-Maqrīzī argues that shortly after Barqūq's death copper became the standard currency: all prices were reckoned and wages paid in *fulūs,* and all other currencies

[38]Al-Maqrīzī, *Shudhūr,* [2].

were linked to copper.[39] As in the *Ighāthah,* al-Maqrīzī does not merely identify the reason for financial decline, but proposes a program designed to stop it. This time, he recommends that copper simply be removed from the market, so that all transactions would be undertaken in silver coins. The enforcement of this regulation would be the task of the sultan and his officers, especially the market inspector. The reform would bring about financial resurgence and—perhaps most importantly—the reassertion of proper royal authority.[40]

No source records the reception of al-Maqrīzī's little exhortatory tract at Shaykh's court, even though Shaykh himself commanded that the work be done. This may have been one of al-Maqrīzī's two attempts to gain Shaykh's favor, the other being the composition of a panegyric about the sultan based on a poem written by Ibn Nāhiḍ (d. 841/1438), which also appears to have received no recognition.[41] Any meaningful response to al-Maqrīzī's advice-giving impetus has gone unremarked by history, and indeed al-Maqrīzī himself seems to have soon abandoned his reforming zeal in favor of immersing himself in history and the past.

But if al-Maqrīzī was truly imbued with a desire to improve Mamluk society through practical advice, was his merely a reformer's voice crying in the wilderness? Although ninth/fifteenth century Mamluk historians in general do not display much interest in advice literature, an investigation of the writing of al-Maqrīzī's student Ibn Taghrībirdī does lead to the observance of a peculiar phenomenon. It must be stated outright that Ibn Taghrībirdī produced no advice works whatsoever. Nor was he personally inspired by Ibn Khaldūn and his compelling ideas, as was al-Maqrīzī; indeed Ibn Taghrībirdī did not even know the North African scholar since he was born after Ibn Khaldūn's death. Ibn Taghrībirdī's biography for Ibn Khaldūn—copied from al-Maqrīzī—is ordinary in the extreme, omits al-Maqrīzī's lengthy praise of the North African scholar, and makes no mention whatsoever of the *Muqaddimah*.[42]

Nevertheless, through al-Maqrīzī Ibn Taghrībirdī may have gained something of Ibn Khaldūn's ideas, especially his concern with royal authority, justice, and society. He may also have gained al-Maqrīzī's predilection for advising rulers, although Ibn Taghrībirdī presented his advice in a form that al-Maqrīzī himself did not use: historical narrative. In fact, Ibn Taghrībirdī appears to have felt that one purpose of historical writing was to function as a didactic tool for the instruction

---

[39]Al-Maqrīzī, *Shudhūr,* 31; also see *Sulūk,* 3:1131–33.

[40]Al-Maqrīzī, *Shudhūr,* 35–36; 40.

[41]Broadbridge, "Rivalry," 92.

[42]Ibn Taghrībirdī, *Al-Manhal al-Ṣāfī wa-al-Mustawfá ba'da al-Wāfī,* ed. Muḥammad Muḥammad Amīn (Cairo, 1993), 7:205–9.

of the ruling elite. In an often quoted description of the historian al-ʿAynī, for example, Ibn Taghrībirdī praises al-ʿAynī for his success in transforming Barsbāy into a wise and thoughtful sovereign by reading history aloud to him.[43]

Ibn Taghrībirdī himself wrote two major histories, the *Al-Nujūm al-Zāhirah fī Mulūk Miṣr wa-al-Qāhirah,* and the *Ḥawādith al-Duhūr fī Madá al-Ayyām wa-al-ʿUṣūr*. The *Ḥawādith* was intended as a continuation of al-Maqrīzī's *Kitāb al-Sulūk,* and does not appear to have been written with any particular patron in mind.[44] By contrast, the *Nujūm* was penned at least initially for a specific royal personage: Muḥammad, the son of Sultan Jaqmaq (r. 842–57/1438–53). Muḥammad was not only a candidate for the throne, but was also Ibn Taghrībirdī's friend and the husband of Ibn Taghrībirdī's niece.[45]

A preliminary examination of the *Nujūm* reveals an awareness of decline as a product of weakened royal authority and injustice. Of course, during Ibn Taghrībirdī's lifetime the sultanate was undergoing a period of actual societal and financial difficulty, thus Ibn Taghrībirdī's descriptions of decline must obviously be understood in part as a reflection of existing conditions. Nevertheless, Ibn Taghrībirdī invokes the specter of decline not only to describe actual conditions in the sultanate, but also to make a moral and didactic point about the connection between injustice and decline. In fact, occasionally Ibn Taghrībirdī manipulates his historical narrative in order to draw this connection, and thereby give a moral lesson. Thus if al-Maqrīzī served as a conduit both for Ibn Khaldūn's idea on royal authority and decline, and for the possibility of correcting decline through advice, Ibn Taghrībirdī seems to have transformed the ideas to motifs decorating a historical work designed to be both entertainment and a didactic tool. Muḥammad ibn Jaqmaq served as an ideal candidate for Ibn Taghrībirdī's advice, being both a personal friend and a potential sultan.

To give a few examples:

In the section of the *Nujūm* that corresponds roughly to his own lifetime, Ibn Taghrībirdī mentions a number of declining institutions. These institutions were diverse, and included such areas of society as the silk spinning industry, irrigated agricultural land, the vizierate, and the office of the comptroller, to name a few. In general, Ibn Taghrībirdī posits that the breakdown of these institutions can be

[45]Shams al-Dīn, *Ibn Taghrībirdī,* 34.

attributed to trouble among the ruling elite, i.e., to weakened ruling authority and injustice.

For example, Ibn Taghrībirdī asserts that the decline of silk spinning in Egypt is the direct result of the tyranny, injustice, and mismanagement of the rulers since the 790s/1390s.[46] He also describes the glory of the vizierate in "olden days," then bemoans the present degraded situation: ". . . at the end of the eighth[/fourteenth] century *the rulers of Egypt abased themselves* [emphasis added] and in their days the office was filled by the refuse among men and the lowest type of Coptic scribe, while the functions of the office also were changed. *With these appointments there disappeared the splendor of this great offic*e."[47] Elsewhere he argues that the sultans of his own day no longer made wise decisions in other important military appointments, as had been the case in past ages: "The kings of this time of ours have debased themselves."[48] Since Ibn Taghrībirdī actually had good relationships with many of the sultans who were his contemporaries, including Barsbāy (r. 824–41/1422–38) and Jaqmaq, his general comments about misrule and debasement should be understood as fodder for his moral and didactic points about proper rule.[49] Indeed, in his obituary for Barsbāy, Ibn Taghrībirdī gives both positive and negative moral lessons by condemning Barsbāy's avariciousness as an example to avoid, but touting the large amount of money Barsbāy left behind, and praising his reign as one of "extreme security and low prices."[50]

But Ibn Taghrībirdī's concern with the question of royal behavior also appears in those sections of the *Nujūm* that treat historical periods prior to his own lifetime. One striking example is in his discussion of Timur's occupation of Damascus in 803/1400–1, where he presents less a straightforward historical narrative than a cautionary tale of the evils that misgovernment can wreak on society. In this passage, Ibn Taghrībirdī identifies the struggle for power among the Mamluk amirs as an example of weak royal authority, and suggests that it was the ultimate reason for Timur's invasion of Syria and his destruction of the major Syrian cities.

In the passage, Ibn Taghrībirdī focuses on the arrival of ambassadors from the Ottoman Sultan Beyazid (r. 791–804/1389–1402) in Cairo in Dhū al-Ḥijjah 802/July–August 1400, some months before Timur's armies reached Mamluk territory. The Ottoman envoys asked Sultan Faraj for a military alliance against Timur, but the Mamluk amirs rejected the proposal and scorned Beyazid. At this point, Ibn Taghrībirdī departs from his narrative to opine that such an alliance

[50]Ibn Taghrībirdī, *History,* 4:156.

would have been a good idea, argues that the Mamluk amirs *should have* arranged one, and criticizes them for quarreling and failing to identify the correct course of action. ″What Beyazid suggested was one of the best possible courses of action *[min akbar al-maṣāliḥ]*.″[51] If only the Mamluk amirs had behaved properly, Ibn Taghrībirdī moans, Timur would not have been able to defend himself against the combined Ottoman-Mamluk forces: ″The common good *[al-maṣlaḥah]* required that a truce be reached with the abovementioned Beyazid ibn ʻUthmān. He would send someone to lead the Egyptian armies, while the Egyptian armies would be sent to Beyazid ibn ʻUthmān to cooperate with his armies. Then Timur would not have been able to withstand them. Indeed, both armies would have been capable of defeating him, if not for what we mentioned [i.e., the amirs′ refusal to ally themselves with the Ottoman sultan].″[52]

To heighten his portrayal of the stupidity of the Mamluk leadership, Ibn Taghrībirdī quotes the dramatic confidence of a Mamluk amir, one Asanbāy, who had been captured by Timur and escaped years later: ″Timur told me that in his lifetime he had met and fought many armies. In all that time he had never seen armies equal to two: the Egyptian army, and the Ottoman army.″[53] The impression given is that Timur′s dreadful treatment of Damascus only came to pass because the Mamluk amirs refused to stop quarreling and focus on seizing the opportunity presented by the Ottoman ambassadors.

Although poignant, Ibn Taghrībirdī′s lament was probably unjustified. In actual fact, Beyazid had already taken over a number of Mamluk forts in Eastern Anatolia by the time this embassy was sent. Beyazid had also annexed the lands of the Mamluks′ Anatolian Turkmen vassals, the Dulqadirids. If military cooperation between the Mamluks and the Ottoman ruler had indeed taken place, it might have been just as disastrous for the Mamluks as their eventual abandonment of Damascus to Timur. Most striking about this passage, however, is the moralistic and didactic effect of Ibn Taghrībirdī′s commentary. Ibn Taghrībirdī′s presentation of the material suggests the dangers of weak royal authority, which is here represented by the shortsighted and bickering amirs, who were filling in for the adolescent sultan. By adding his own critical remarks to the narrative, Ibn Taghrībirdī emphasizes the poor behavior of the Mamluk amirs, connects this behavior to the eventual military disaster, and thereby gives a lesson about proper rule.[54]

[52]Ibid., 174–75.

[53]Ibid., 174.

[54]Ibn Taghrībirdī′s lament over the campaign of Timur is also colored by his desire to glorify his

Nor is Ibn Taghrībirdī´s treatment of the early Mamluk era free of unfavorable comparisons between past and present. A striking example occurs in his obituary for Qalāwūn, where he uses a description of Qalāwūn´s strict control of his mamluks as an opportunity to bewail the fallen standards of his own day. He sighs nostalgically about the discipline, military skills, and masterful participation in jihad demonstrated by Qalāwūn´s mamluks, then launches into criticism of contemporary mamluks for their small number, physical weakness, and cowardice. He regrets that the only opportunity for jihad in his own century was the advent of Timur, in which Mamluk forces were completely disgraced. Perhaps to deepen the contrast between the good old days and the bad new days, here Ibn Taghrībirdī neglects to mention the three successful naval campaigns Barsbāy sent to Cyprus in the 820s/1420s, although elsewhere the historian celebrates them as a shining example of jihad and one of Barsbāy´s greatest achievements.[55]

Ibn Taghrībirdī continues the theme of jihad in Qalāwūn´s obituary by waxing eloquent about the martial virtues of such great warriors as the Ayyubids Saladin (d. 589/1193) and al-Malik al-Kāmil (d. 635/1238). While praising them, he neglects to mention that al-Kāmil actually ceded Jerusalem to Emperor Frederick II Hohenstaufen in 626/1229, although Ibn Taghrībirdī is perfectly well aware of this event, and in fact mentions it in his entry for that year.[56] In Qalāwūn´s obituary, Ibn Taghrībirdī also discusses the general qualities of rulers of yore, whom he characterizes as well-mannered, decorous, modest with elders, kind to juniors, and endowed with kingly honor *[nāmūs]*.[57] The military elite of Ibn Taghrībirdī´s own day suffers by comparison, for he describes its members as arrogant, unskilled in the martial arts, greedy, unscrupulous, and unmanly. He even includes a comparison of apparel between Qalāwūn´s day and the present, and naturally presents the modest fashions of Qalāwūn´s time as superior.[58] Since elsewhere Ibn Taghrībirdī´s opinion of both the contemporary and historical ruling elites is far more balanced, we must understand this comparison more as a moral lesson for a potential ruler (i.e., Muḥammad ibn Jaqmaq) and less as a reflection of reality.

Thus two major and interconnected historians of the Mamluk Sultanate, al-Maqrīzī and Ibn Taghrībirdī, were well aware of the problems endemic in their society. Both appear to have understood at least in part the theoretical connections among weakened royal authority, injustice among the ruling elite, and trouble in society, connections espoused and promulgated by none other than Ibn Khaldūn. Of the two, al-Maqrīzī seems to have been directly and strongly influenced by the North African scholar, while Ibn Taghrībirdī´s at best tenuous connection to Ibn Khaldūn must have been made indirectly through al-Maqrīzī. Nevertheless, in the writings of each author, one element foreshadows the full-blown decline paradigm developed under the Ottomans in part as a result of Ibn Khaldūn´s formulation of compelling ideas. For al-Maqrīzī, this element is his composition of works that simultaneously describe the causes of financial decline, and propose a pragmatic solution to them. For Ibn Taghrībirdī, this element appears in his manipulation of history to demonstrate a causal link among weakened royal authority, injustice, and decline, which he then uses to suggest a moral lesson about the way to rule. Thus each author in his own way foreshadows the development of Ottoman decline literature. Why then, did Ottoman intellectuals develop an active movement of reform, but Mamluk intellectuals did not?

Fāyizah al-Wakīl, *Al-Shiwār: Jihāz al-'Arūs fī Miṣr fī 'Aṣr Salāṭīn al-Mamālīk* (Cairo: Dār Nahḍat al-Sharq and Dār al-Wafā', 2001). Pp. 543.

Reviewed by Vanessa De Gifis, University of Chicago.

In this book, al-Wakīl discusses the wedding trousseau in the Mamluk period. She sets out to describe the physical and design components of the trousseau and its surrounding ceremony; she then attempts to imagine the dynamics of the trousseau in its social and economic contexts. Al-Wakīl's sources include contemporary historical accounts, secondary historical and art historical works, and trousseau lists, marriage documents, and artifacts housed in museums such as the Louvre, the Museum of Islamic Art, the Coptic Museum, and the Museum of the School of Archaeology at the University of Cairo. The end of the book contains transcripts of marriage documents and trousseau lists, descriptions of artifacts, and photographs (however, often unclear) of select items. One obvious omission in her bibliography of primary sources is al-Sakhāwī's (831–902/1428–97) *Al-Ḍaw' al-Lāmi' li-Ahl al-Qarn al-Tāsi',* the last section of which is a collection of biographies of women contemporary to the author.[1]

Al-Wakīl originally conceived a broader scope for her study: initially to cover the Islamic period generally, and then both the Mamluk and Ottoman periods. Her final concentration on the Mamluk period still bears the signs of her broader outlook—particularly in her use of Ottoman material evidence to fill in the blanks of Mamluk artifacts, and in her comparison of Mamluk trousseau lists with those of earlier periods.

The comparative contextualization of the Mamluk situation in Islamic history leads her to conclude that the Mamluk trousseau was generally increasing in luxury over time, being more extravagant than its predecessors in pre-Mamluk times. Within the Mamluk period itself,[2] al-Wakīl identifies the economic peak in Cairo in the first half of the fourteenth century under al-Nāṣir Muḥammad (p. 315). This economic peak, she asserts, means a corresponding peak in the quality of trousseaux. In her chapter entitled "The Trousseau in Light of Economic Life," al-Wakīl argues for a direct correspondence between economic prosperity and the elaboration of the trousseau, assuming that both suppliers and consumers, given disposable wealth, will maximize luxury in production and acquisition respectively.

Al-Wakīl's application of economic theory extends to her understanding of

[1]See Huda Lutfi, "Al-Sakhāwī's *Kitāb al-Nisā'* as a Source for the Social and Economic History of Muslim Women during the Fifteenth Century A.D.," *Muslim World* 71 (1981): 104-24.

[2]Cf. L. A. Mayer, "Costumes of Mamluk Women," *Islamic Culture* 17 (1943): 303, who cites al-Maqrīzī in noting an increase in luxury from the Bahri to Circassian periods.

the varieties in trousseaux among different social classes, which she discusses in her chapter entitled ″The Trousseau in Light of Social Life.″ She categorizes social groups according to their financial (specifically, spending) power. For those groups that rank highest in financial viability, such as the ruling military elite and merchants, she explains that their trousseaux will be more extravagant, while the trousseaux of the peasants will be more modest in proportion to their wealth.[3] In this way, she argues, the trousseau is a means to demonstrate one′s wealth and social status. The idea of associating relative opulence of the trousseau according to social class is not original to al-Wakīl; Aḥmad ʻAbd al-Rāziq says as much in *La Femme au Temps des Mamlouks en Egypte*.[4] Since most of the sources available to al-Wakīl for studying the trousseau pertain to the higher classes, her emphasis on the opulence of trousseaux is amplified. Despite this, she is mindful not to neglect hypothesizing on the characteristics of the more meager trousseaux that are not well documented in the historical or archival records.[5] Moreover, she provides several extraordinary examples of trousseaux, demonstrating her awareness that the matter did not absolutely conform to a simple class-based categorization of trousseaux.[6]

As for her typological study of the components of the trousseaux, al-Wakīl presumes that most household items, including furnishings and cookware, are acquired as part of a trousseau, as are jewelry, clothes, and cosmetics (p. 8).[7] Having accepted this probability, she organizes her typological presentation of these items into functional categories and stylistic subcategories. She includes brief explanations of production processes. Most of her book (over 300 pages) consists of these functional and stylistic descriptions of the components of the trousseaux. The portions of this descriptive section that deal with the origins of materials and designs and the methods of production enhance the economic dimension of al-Wakīl′s thesis, particularly global trade (of both goods and ideas) and Egyptian marketplace activity.

Al-Wakīl′s use of Ottoman material data in her study suggests that she considers the Mamluk period as a nearly indistinguishable part of a greater cultural continuity,

---

[3]She mentions also that the surrounding ceremonial aspects of marriage, including the procession of the trousseau, are similarly proportional to the wealth of the participants.

[4]Aḥmad ʻAbd al-Rāziq, *La Femme au Temps des Mamlouks en Egypte* (Cairo, 1973), 140.

[5]Al-Wakīl′s sources for the poorer classes are less often contemporary, consisting of later, sometimes Western, sources. Al-Maqrīzī is occasionally cited, such as in mentioning the overwhelming popularity of amber necklaces (sing. *qilādah*) among all groups of society (p. 435).

[6]For example, she notes several cases of upper-class trousseaux whose values were less than their class would theoretically suggest (p. 420).

[7]The jewelry, clothes, and cosmetics, she notes, would definitely be included when used in the wedding ceremony itself.

a view which may lead to some insensitivity in perceiving distinctive Mamluk qualities in trousseau furnishings. Nonetheless, she recognizes various stylistic variants in many categories of artifacts, which demonstrates her attention to intra-Mamluk diversity. Since the functions of furnishings and personal items do not change drastically from one political period to the next, al-Wakīl's use of Ottoman artifacts to help generally identify the components of the Mamluk trousseau is reasonable; she is aware that the specific decorative elements of these items are not to be as readily appropriated into our vision of the Mamluk character of trousseaux.

A valuable aspect of her study is her inclusion of the prices of some of the components of the trousseaux, as well as the amounts of dowries. In this way, she has gathered helpful data for reconstructing the monetary climate of the period. Although she does not explain matters such as the influences of inflation and devaluation on interpreting monetary rates, she does recognize various foreign and domestic policies involving market regulations and taxation, as well as the influence of other factors like famine and factional disputes on the security of the Mamluk economy.

Another enlightening point in al-Wakīl's book is how material and behavioral reality did not conform to principles of the shari'ah. For example, she notes that despite the legal prohibitions of gold kitchenware and ear and nose piercings, the popularity of these things are found frequently in material and documentary evidence. This reminds us of the importance of interpreting material and documentary evidence without straining to conciliate findings with the ideals presented in legal codes, and of recognizing the inaccuracy and inadequacy of legal codes in reconstructing an image of real life.

Perhaps the most important aspect, from the woman's perspective, pertaining to the value of the trousseau is absent from al-Wakīl's study: how the trousseau facilitated the woman's economic maneuverability, which in turn could have fostered social and intellectual independence. This would have been an intriguing and germane issue for her to have addressed. Other pertinent but neglected issues are marriage among relatives as a means to preserve wealth within the family,[8] and the relative rarity of marriage between different socioeconomic classes.[9]

[8]Although the evidence al-Wakīl presents on the familial sources of trousseau items demonstrates people's interest in circulating wealth within the family unit, she does not discuss marriages in which the bride and groom are actually closely related to each other.

[9]She does address the frequency of marriage between sultans' and amirs' families and the resulting similarity in the values of their trousseaux; however, the closeness in class between these two groups as contrasted with the difference between the princely class and the peasant class makes the frequency of the aforementioned marriages not surprising, whereas a marriage between members of the princely and peasant classes would be more remarkable examples of the use of the trousseau

Al-Wakīl′s penultimate chapter, in which she attempts to analyze the decorative motifs evident in trousseaux, is more descriptive than analytical. She mainly focuses on identifying the stylistic variants of typical motifs, and recalls only general interpretations of the various symbols, which are abstracted from the context of the trousseau. The question of why these symbols are evoked in the particular circumstance of marriage is not answered. While the philosophical details may be better left to the scholars whose works are dedicated specifically to those issues (to whom she does refer in her footnotes), the absence of a substantial discussion speculating on the significance of the presence of these symbols in the trousseaux effectively reduces this penultimate chapter to a selective reorganization of her data, in which she presents some of the material evidence according to decorative criteria, rather than the functional categories that she employs in the preceding chapters.

The comprehensive scope of al-Wakīl′s study of the trousseau and its cultural context is admirably ambitious. *Al-Shiwār* illuminates some of the connections between economic, social, and material patterns of culture and stimulates the reader to consider the material consequences of economic and social trends in light of the wedding ceremony and homemaking. It can be read in conjunction with other works that flesh out the more specific socioeconomic dynamics that comprise the milieu for the Mamluk trousseau. The annoyance of occasional typos and frustrating footnotes, in which she cites works incompletely in reference to earlier citations that are not immediately preceding the incomplete citation, should not distract the reader from appreciating the thoughtful work al-Wakīl presents.

Yasser Tabbaa, *The Transformation of Islamic Art during the Sunni Revival* (Seattle: University of Washington Press, 2001).

Reviewed by Nasser Rabbat, MIT

The field of Islamic art and architectural history is among the least theoretically developed areas of both art history and Islamic history. Very few studies exist that move beyond the monographic or taxonomic framework on the one hand, or the religiously or culturally essentialist and generalizing on the other. This polarity of

as an expression of class identification. Lutfi notes some of these rare instances in which a woman marries a man of a lower social class in ″Al-Sakhāwī′s *Kitāb al-Nisā*′ ,″ 113.

approach reflects the two influences that dominated the development of the field in the last century. The first is the authoritative Western historiography of art history, which until recently delimited the possible scope and methods of all subfields, including Islamic art and architecture, and assigned them their proper place in a culturally and even ideologically stratified art historical hierarchy. This is a dignified scholarly tradition to be sure: it finds its roots in the nineteenth-century German and French history of art and archaeology. But it is a tradition in the Hobsbawmian sense nonetheless, that is, it forms the most powerful proclamation by which a project or a specialty can gain legitimization by association with an already established network of conventions that produce and use art historical knowledge.

The second influence comes from the peculiar historiography of the study of Islam in the West, that we came to call Orientalism, and its various peregrinations. The Orientalist tradition produced a fundamentally self-contained discourse, charting the evolution of Islamic art and architecture but not communicating their cultural variety or the interdependence between them and other cultures′ art and architecture. Of particular relevance in this vein is a brand of Islamic esotericism which prospered in the 1970s and 1980s among a certain number of Western and Western-educated Muslim scholars. These scholars saw Islamic art and architecture primarily as symbolic manifestations of a transcendental and rather acultural and ahistorical Islam. This view promoted, and even demanded, comprehensive studies of art and architecture enframed within an essentialist vision that could not admit any form of cultural or historical criticism.

Thus the appearance of a thoroughly and critically historical study on Islamic art and architecture such as Yasser Tabbaa′s *The Transformation of Islamic Art during the Sunni Revival,* is a positively welcome event. Here we have a book that outwardly and almost harshly rejects the approaches delineated above and adopts a historical method which asserts that specific artistic forms acquired and disseminated distinct meanings primarily in relation to and in conjunction with their cultural, social, and ideological contexts. This deeply and strongly contextualizing framework gives the book its verve and underscores its palpable sense of purpose. It also endows it with remarkable coherence despite the otherwise selective character of its content, which focuses on particular artistic and architectural changes in the studied period and leaves some others out, notably the resurgence of figural representation.

With the publication of this book, Tabbaa deliberately chooses to belong to and complete a scholarly genealogy of sorts. He situates his book historically, discursively, and methodologically between two influential treatises: Oleg Grabar′s *The Formation of Islamic Art* (1973, 1987 2d ed.) and Gulru Necipoglu′s *The Topkapi Scroll : Geometry and Ornament in Islamic Architecture* (1995). The

former, which deals with Umayyad and early Abbasid art, was a pioneering study that formed the foundation upon which most historical interpretations in the field have depended until now. The latter, which marked the forceful reintroduction of theory about Islamic ornamental modes abandoned since Ernest Diez′s 1930s stylistic studies, focuses primarily on the Timurid and post-Timurid art since the fourteenth century. Tabbaa′s *Transformation of Islamic Art* fits snugly in the historical space left between Grabar′s and Necipoglu′s timeframes. The book spans the ostensible trajectory of a heterogeneous and historically ambivalent movement, the Sunni Revival, which may have defined the struggle that occupied the central Islamic world during the period between the rise of a traditionalist Ashʿarism in the second half of the tenth century and the demise of the Ismaʿili Fatimids in 1171. Tabbaa particularly centers his investigation of artistic transformations around the reign of Nur al-Din Mahmud ibn Zangi (1146-74), a period that he convincingly projects as the triumphant culmination of the Sunni Revival.

Tabbaa tries to do exactly what the title of his book implies: to catalog, explain, contextualize, and interpret a number of artistic transformations both in writing and in two- and three-dimensional ornamentation, that coincided with the Sunni Revival. After briefly introducing the historical, ideological, and political context of the Sunni Revival, he moves to discuss, in two tightly-knit chapters, the transformation of Arabic writing from the angular (generally known as Kufic) style to the proportioned cursive style first in Qur'anic writing and later in monumental inscriptions on buildings. He then takes on the intricate vegetal and geometric patterns, alternately named Arabesque and *girih* by various scholars working from different vantage points, which he sees as having acquired potent religious meanings in the architectural works of the period. Lastly he tackles in two chapters the most important Islamic architectural innovation of the medieval Islamic world, the *muqarnas,* as well as five other stereotomic devices that appeared in the stone architecture of the various dynasties of Syria, Jazira, and Anatolia in the twelfth and thirteenth century. The brief conclusion sums up the driving forces of these artistic transformations —theology, politics, technology, and patronage— and insists on the symbolic role of the art as mediating between the vision of an idealist, ecumenical Islamic nation and the reality of a politically fragmented, though increasingly orthodox, medieval Islamic world.

Tabbaa argues that the timing of these transformations was not incidental. In fact, he ascribes the very reason of their occurrence to ″the forces of the Sunni Revival.″ This is indeed a tall order. No cohesive body of textual evidence exists to prove it, or to disprove it for that matter. Tabbaa consequently ekes out of a multitude of disparate and incomplete documents —historical, theological, biographical, scientific, and of course the art itself— the contours of a coherent,

theologically and politically driven artistic movement, a movement that is otherwise never hinted at in the chronicles of the period. This is a formidable task, and Tabbaa succeeds brilliantly by sketching the historical circumstances surrounding the emergence and consolidation of a vigorous Sunnism in the central Islamic lands and its influence on the development of Arabic writing and monumental inscriptions as well as on the geometric ″Arabesque″ decoration. He is less convincing in his reading of Sunni and especially Ash‘ari symbolic references in a number of architectural, decorative, and structural innovations —chief among them is the *muqarnas*. In this last case, the present reviewer finds two of Tabbaa′s causative forces, the developing technology and competitive patronage, more fruitful venues for interpretation than either the theological or politics forces. In fact, for a study predicated on the exploration of the tension between political fragmentation and a unifying impulse, Tabbaa′s book is short on examining the roles of the diverse Turkic and other small dynasties in the promotion and exploitation of the new artistic inventions.

Nevertheless, Tabbaa′s main point, the need to historicize and contextualize art making in the medieval period independent of positivist or essentialist views of Islam and Islamic history, is forcefully validated throughout the book. Henceforth, it will be very difficult indeed to see in the *muqarnas* or the monumental inscriptions of the Zangids, Ayyubids, Mamluks, and other medieval Islamic dynasties, expressions of the spirit of Islam *tout court*. Art historians will have to pay more attention to changes, discontinuities, innovations, and other telltale details in the art instead of lumping them all together as additional manifestations of an overarching and unchanging Islamic vision of art, even when the art itself has specific religious or sectarian meanings.

Tabbaa′s book also presents an effective reminder to Medieval Islamic historians to widen their investigative domains to encompass art and architecture. With the dearth of interpretable historic documents that often impede the study of medieval Islamic history, the inclusion of visual clues adds a new dimension of interpretation. Art and architecture complement other cultural expressions such as religious treatises, poetry, and legal texts, which have been explored by a small number of imaginative historians who have begun to sketch the mental structures of several classes of Muslims involved in the upheavals that changed the face of the medieval Islamic world. Visual documents in fact may be even more representative of collective mentalities than textual ones. They are public, more numerous, and their messages may have been more legible to the masses than literary or religious texts. More than any other cultural artifact, they can truly frame the historical and cultural characteristics of an era. Tabbaa′s *Transformation of Islamic Art* is a forceful and creative case in point.

Nabīl Muḥammad ʻAbd al-ʻAzīz, *Riyādat al-Ṣayd fī ʻAṣr Salāṭīn al-Mamālīk* (Cairo: Maktabah al-Anglo al-Miṣrī, 1999). Pp. 256, illustrations.

Reviewed by Niall Christie, University of British Columbia

Hunting was an important pursuit to the Mamluk sultans and their amirs, forming another of the branches of *furūsīyah*.[1] In this two-part work Nabīl Muḥammad ʻAbd al-ʻAzīz gives a portrayal of Mamluk hunting, dealing in turn with a wide variety of topics. He opens the first part, which considers hunting on land, with a discussion of what hunting was, followed by a treatment of the customary practices and manners of Mamluk hunters, both the rulers and the ordinary soldiers. He then describes the clothes worn on hunting expeditions, the officials and servants who accompanied the hunt, and the weapons and equipment used. There then follow chapters on birds and animals, dealing in each case with creatures both used for hunting and hunted, edible and otherwise, along with some consideration of their use as gifts or in trade. The second of these also includes some discussion of animals kept in menageries. The first section of the work ends with a long description of actual hunting expeditions engaged in by both the Mamluk sultans and their amirs.

The second, shorter part of the work discusses hunting in seas and rivers, and fishing in particular. This section, consisting of two chapters, begins with a consideration of the fishing grounds of Egypt and the *shām* region, and closes with a description of the various fish and other animals found in the rivers, lakes and seas of these countries. Several illustrations of hunters and animals follow. The work ends with a detailed bibliography and a contents page.

Nabīl Muḥammad ʻAbd al-ʻAzīz′s selection of sources is wide and thorough, but it is not surprising, given their variable nature, that he has relied on some works more than others. Al-Qalqashandī′s (d. 821/1418) chancery manual, *Ṣubḥ al-Aʻshā fī Ṣināʻa al-Inshā*', and al-Nuwayrī′s (d. 733/1333) encyclopedia, *Nihāyat al-Arab fī Funūn al-Adab*, are among the works that feature particularly prominently. His major emphasis is on the evidence of primary sources, both in manuscript and published editions, although he has also made use of a relatively small amount of secondary literature in Arabic, French and English. References to the sources are rigorously footnoted, and occasional explanatory footnotes help to illuminate the text. However, this reviewer would have preferred to have seen more analysis of the sources. Too often the texts were allowed to speak for themselves, but the questions of how far the examples cited represented the normal practices of the period, and how far they had been idealized or otherwise altered by the writers

[1]David Ayalon, ″Furusiyya (In the Mamluk State)," *The Encyclopaedia of Islam*, 2nd ed., 2:955.

who recorded them, were not fully addressed.

Nevertheless, despite these shortcomings Nabīl Muḥammad ʻAbd al-ʻAzīz′s work is still an important contribution to the field. It gives a detailed description of Mamluk hunting, as it is depicted in the sources from the period, and will be of great use as a resource for scholars interested in this noble pursuit.

SHAWQĪ ʻABD AL-QAWĪ ʻUTHMĀN, *Al-Tijārah bayna Miṣr wa-Afrīqiyā fī ʻAṣr Salāṭīn al-Mamālīk, 1250–1515 M, 648–922 H.* (Cairo: al-Majlis al-Aʻlá lil-Thaqāfah, 2000). Pp. 161.

REVIEWED BY ADAM SABRA

Although this book has a promising title, it does not live up to that promise. The author, a professor of history at Cairo University, is the author of a previous study on the Indian Ocean trade and several studies on Egyptian folklore. Despite this background, however, the work under review fails to address the topic promised in its title in a scholarly or focused manner. This is doubly unfortunate since the field could use a good study of just this topic. The last overall study of Mamluk trade to cover the subject of Egypt′s foreign trade comprehensively is the well-known study by Ṣubḥī Labīb. More recent scholarship has generally focused on one or another aspect, primarily focusing on the Mediterranean or Indian Ocean. While Terry Walz has done a study of Egypt′s trade with Bilād al-Sūdān in the Ottoman period, we still lack a comprehensive treatment of the subject for the Mamluk period.

The book is divided into four chapters. The first deals with Egypt′s geographical position and the role of Arab and Muslim geographers in writing the history of the continent. The author is influenced by the Egyptian geographer Jamāl Ḥamdān and by Nasserist ideology in stressing Egypt′s three circles: Arab, Islamic, and African. While there is nothing inherently wrong with this view of Egypt′s identity, the author is primarily interested in emphasizing Egypt′s leading role in all three groups, rather than examining the interaction between them in a more open-minded manner. Furthermore, the author cites historical and geographical sources without any real concern for historical period or for the development of geographical literature as a genre. The latter subject has been studied in great detail by André Miquel and ʻAzīz al-ʻAẓmah, among others.

The lack of concern for historical period carries over into the second chapter, which deals with the spread of Islam in Sub-Saharan Africa and its connection

with trade. Again, despite the promising character of the subject, the author does not really go beyond existing accounts. Most of his material comes from an earlier period, and there is nothing new here. Unfortunately, the author's acquaintance with European language studies of African history (or Mamluk history for that matter) is limited. This is unfortunate, since much has been done in recent years, especially on the important, although sensitive, subject of the slave trade. The author's treatment of this all-important topic is confined to delimiting the Islamic legal teachings on the subject without any attempt to examine whether these teachings were actually followed or what effects this trade might have had on the societies of Sudanic Africa. Indeed, the author plays down the importance of this trade, saying that it is insignificant in comparison with the number of slaves taken by "the white man." At the same time, the author clearly subscribes to a view that attributes cultural superiority to Arab Muslims, and sees the conversion to Islam by black Africans as something natural. While Islam was no doubt attractive to many people in Bilād al-Sūdān, one requires a more sophisticated and less patronizing model of explanation to contextualize conversion.

Chapter three deals with different trade routes connecting Egypt with Sub-Saharan Africa. Some of the information here is interesting, but it is taken from a group of primary and secondary sources without any sense of historical period. Material from the tenth century is indiscriminately mixed with material from the nineteenth century. Most of the material is simply paraphrased from travelogues without any real attempt at analysis. Nor is any effort made to reconstruct the West or East African role in most aspects of this commerce.

The fourth and final chapter deals with Egypt's role as a center of trade for African goods and the significance of this role for the Mamluk empire. Here one would expect that there would be considerable material of interest to the Mamluk historian. Unfortunately, however, the author, being unaware of most recent literature on his subject, misses this opportunity. For example, he argues that the rise of the Mongols endangered the land routes of trade from Asia. He is totally unaware of Janet Abu-Lughod's argument that it was the collapse of the Mongol imperium that led to Egypt's increased role in the trade between Asia and the Mediterranean world. Much more could have been said in this chapter about the role of West African gold in allowing the Mamluks to carry on trade with the Italian city states and the Catalans. Much of the remainder of the book deals with the Mamluk interest in the Red Sea trade, insofar as that required Mamluk influence in Upper Egypt and in East Africa. Here, it would have been helpful if the author had seen Jean-Claude Garçin's work on Qūṣ. The author does address the rise of the Portuguese empire, but in insufficient detail.

This book seems to have been intended as a textbook for Egyptian undergraduate students of history. Such a textbook would be a welcome addition, and might

have been used by scholars of the period as well, had it been more carefully thought out, better researched, and less defensively written. Unfortunately, this book will not fill the need for a solid work on its subject.

ANDRÉ RAYMOND, *Cairo: City of History*, tr. Willard Wood (Cairo, The American University in Cairo Press, 2001). Pp. 436

REVIEWED BY BERNARD O´KANE, The American University in Cairo

This is a translation of the author´s *Le Caire*, originally published by Fayard in 1993. André Raymond has also published monographs on the major cities of the Arab world in the Ottoman period, and his early works such as *Artisans et commerçants au Caire au XVIIIe siècle* (Damascus, 1974) and *Les marchés du Caire* (Cairo, 1979) established him as one of the foremost authorities on Ottoman and urban history. Anyone working on urban history should be aware of the pitfalls that Orientalists have dug for themselves, and as it was Raymond himself who has exposed many of their limitations[1] (e.g. straight lines good, crooked lines bad) it is reassuring to find him taking on this task.

It will come as no surprise them to learn that this is a masterful exposition of the topic by one thoroughly in command of the sources. Raymond has been a pioneer in the use, not just of texts, but of all the sources available to historians, including the enormously rich legacy of Cairene monuments and their epigraphy. The generous quotations of these interwoven throughout the text lend much to the flavour of the periods they describe, and are analysed in conjunction with social data that they provide.

For example, al-Ghawri´s restoration of the old aqueduct is familiar to most visitors to Cairo from its monumental intake tower. Naturally one´s first assumption is that it brought drinking water from the Nile to obviate the cost and inconvenience of transporting it in the normal way, by camel or donkey. Raymond shows how most of it instead went to irrigate the sultan´s new garden at the Maydan below the citadel, filled with tress and plants imported, with their soil, from as far away as Syria.

The extensive material available for Mamluk history enables Raymond to provide separate histories of individual districts of the city. Among the topics

[1]″Islamic City, Arab City: Orientalist Myths and Recent Views,″ *British Journal of Middle Eastern Studies* 21 (1994):

considered are the problem of encroachments of houses and shops on the streets, and the flight of the elite from the center to the suburbs — cases of *plus ça change*... Raymond's earlier work on al-Maqrizi's account of markets is put to good use together with his knowledge of *waqfiyya*s to give us a vivid picture of contemporary mercantile life.

As one might expect, the Ottoman city is given substantial coverage, and the emphasis on the expansion of the city is a useful corrective to the widely-held earlier views of decline in this period. "City Administration and Daily Life" is appropriately given a separate chapter, in which the importance of the *waqf* institution is awarded its due. Here too economic activities are considered in detail, as are housing types and the fashionable or unfashionable neighbourhoods in which they were situated.

Within the section nineteenth and twentieth centuries he shows how the development of Cairo was held back by the granting of public utilities to foreign companies as concessions. The corresponding privileges granted to foreigners in the form of the Capitulations, overseen by the Mixed Tribunals, meant that it was only when the court of Mixed Trubunals wer abolished in 1949 that Cairo received a municipal charter. I wonder, however, whether this backwardness might have had an unforeseen positive consequence, a delay in street widening à la Muhammad Ali, with its concomitant destruction of monuments.

Raymond's last chapter is entitled "the Nightmare of Growth." He does not sidestep the problems that growth has occasioned, but notes that the public service infrastructure no longer seems incapable of meeting the challenge. There is now perhaps a small cause for optimism — since the ten years in which the book was written, for the first time the population aged five years or younger is smaller than that aged 6-10.

The illustrations, as in the original French edition, are small and mostly of poor quality, although the line drawings from nineteenth century works such as the *Description* reproduce rather better on the matt paper. More importantly, a whole new series of maps were made for the book (and which have also been redrawn for this English edition) which greatly supplement existing medieval maps and which reproduce well as slides can serve as a useful teaching aid to courses on history and urban development.

The translation is fluent and imaginative, substituting "Preview" and "Retrospective", for instance, for Raymond's "Préambule" and "Conclusion" (although on p. 369 "Saroit" should be rendered as "Sarwat", and elsewhere *"odjaq"* as *"ojaq"*).

The bibliography has not been brought up to date since the appearance of the original in 1993. To it should be added Nasser Rabbat's study of the citadel of

Cairo,[2] *The Cambridge History of Egypt*,[3] and a competitor, Max Rodenbeck's *Cairo: The City Victorious*.[4] In fact, though ostensibly a competitor, Rodenbeck's work is really aimed at a different audience, those who are encountering Cairo for the first time and who do not necessarily have any background knowledge of the region. Rodenbeck's is an engagingly written book that can be confidently recommended for the tourist, but for the audience reading this review, Raymond's book will long remain a classic of its kind.

ADAM SABRA, *Poverty and Charity in Medieval Islam: Mamluk Egypt, 1250–1517* (Cambridge; New York: Cambridge University Press, 2000). Pp. 192.

REVIEWED BY BOAZ SHOSHAN, Ben-Gurion University of the Negev

There are topics, as important as they may be, that for some reason cannot generate books. Adam Sabra's *Poverty and Charity in Medieval Islam* is a case in point. It is a book in form but hardly in content. This regrettable observation stems from an unavoidable fact that Sabra should have been the first to recognize. That is, one cannot write a book on poverty and charity in medieval Islam, not even in Mamluk Egypt (as the subheading has it), when such sparse information is available. The result is that the book under review is a collection of discussions artificially stitched together, some of which are original, some less so.

Following a brief introduction, Chapter 2 promises to deal with poverty as a social reality and as a religious ideal. As it turns out, Sabra, handicapped by his sources, has much more to tell on the latter than on who and how one was poor in Mamluk Egypt. He gives us a sample of writings by Muslim thinkers—incidentally, none of whom was a medieval Egyptian—on the nexus of poverty and piety, and on the Sufi poor (*faqīr,* in itself an ambiguous term) and pious in particular. Thus, for the renowned al-Ghazzālī, adopting the "virtue" of poverty was a sign of contempt for this world. Yet, the sort of intellectual aloofness that appears in this scholar's views (something not quite obvious to Sabra, it appears) can be detected in al-Ghazzālī's definition that "all beings other than God are poor (or needy,

[3]*The Cambridge History of Egypt. Vol.1: Islamic Egypt, 640-1517.* ed. Carl F. Petry, *Vol. 2: Modern Egypt from 1517 to the End of the Twentieth Century*, ed. M. W. Daly (Cambridge, 1998)

[4]Cairo, 2000.

faqīr), since they all depend on Him for the continuation of their existence" (p. 20). If the so-called ivory tower was ever in need of bad press, al-Ghazzālī provides it. Indeed, it is significant that in his categorization of the states of poverty, only one out of the five groups of the poor consists of "the hungry man who lacks bread or the naked man who lacks clothes." What a flexible definition of poverty does the master of medieval Islamic thought provide; how detached from social reality it is, where there are poor and "poor." Similarly, how ironic sounds the "espousal of poverty" as an attitude that "appealed even to the elites" (p. 30). One wonders how much consolation to the poor man's (and woman's) heart was al-Ghazzālī's quoting the Prophet to the effect that "no one is more virtuous than the pauper, if he is content" (p. 21).

Since Sabra's section on poverty as a religious ideal is basically a synopsis of some Sufi views, it appears quite ironic that al-Ghazzālī's opponent, the Hanbalite Ibn al-Jawzī, attacks the very basis of Sufi advocacy of poverty and stresses the negative side of poverty in that Sufi hallucinations are caused by hunger (p. 23). Some decades later, Ibn Taymīyah, a no less prominent Hanbalite, rejected the Sufi equation of piety with poverty. That an analysis of the sort that Sabra is engaged with here can easily slide from the terra incognita of the poor into the more familiar domain of the "poor" Sufis can be seen in the author's turning to the Sufi institution of the *khānqāh* and Egyptian Sufi orders (pp. 27–29). When, in the conclusion of the second chapter, Sabra anticipates the reader's confusion as to where poverty as a social phenomenon ends and poverty as a religious ideal begins, it seems only too easy to blame it on the "ambivalence inherent in the Mamluk sources." It is no astonishing news that the sources in question were not much concerned with the poor. The task of the social historian is, however, not to accept the smokescreen they put up in their insistent attempts to represent poverty as an intellectual-religious phenomenon. After all, as Sabra tells us, al-Ghazzālī believed that the poor should conceal their shameful status. It is the historian's task to expose the camouflage that was part of the intellectual enterprise.

With the notable exception of famine relief, there was no system of government-sponsored poor relief, and the Mamluk state left most acts of charity to individual initiative. Sabra opens up his third chapter with discussion of the legal aspects of the mandatory alms tax *(zakāh)*. Here again, the synopsis of al-Ghazzālī's view epitomizes the practical marginality, not to say non-existence, of the poor in this context. For al-Ghazzālī's interest is in the conditions that a person paying the *zakāh* must fulfill. Thus the latter has to have the correct intention; or, the tax should be divided among the eight categories of recipients, provided they are present in the place where the tax is paid. The pauper is only in the role of an intermediary between the wealthy and God, a means to express devotion (pp. 37–38). When al-Ghazzālī comes to speak of the recipients, he begins ("interestingly

enough,″ according to Sabra, but ″unsurprisingly″ would seem to fit better) with the ascetics and the Sufis, then goes on to the pious, and only then comes to the conventional poor, so to speak. Here Sabra does not fail to critically observe how al-Ghazzālī identified the ″deserving″ poor and his emphasis on the Sufis in particular (p. 38). The extent to which al-Ghazzālī′s detached discussion of alms was irrelevant to the Mamluk situation we learn from the fact that a state-sponsored alms distribution was abolished by the Mamluk period (p. 40).

When it comes to begging, al-Ghazzālī′s disapproval is illuminating: by begging, one complains that God has not provided for one′s livelihood (p. 42). Sabra notes correctly that al-Ghazzālī′s prohibition of begging when one is able to subsist for a whole year has little connection to reality, since no beggar in Mamluk Cairo can have been so fortunate (p. 44). As with the *zakāh,* al-Ghazzālī′s premium is rather on the benefactor, not the beggar: the former may give alms out of embarrassment, which presumably means not out of sincerity. Alternatively, he may be placed at the level of the Creator. If this indeed be the case, the beggar should refuse (pp. 42–43). The fourteenth-century al-Subkī appears no less cynical than al-Ghazzālī: he sees the street beggars as actually blessed by God, since He could have made then dumb or crippled, and thus unable even to plead for alms. The paupers are an embarrassment to al-Subkī and to the Muslim community as a whole. To the jurists, begging was not a subject of interest, while Sufi authors disapproved of begging and praised concealment of need instead. In Sufi circles, begging was considered as distracting one′s attention from God. The kind of intellectual sport that the phenomenon stood for is reflected in the confession of one Baghdadi Sufi to have started begging as a means to overcome his own ego (p. 41). Here again, it is indicative of the treatment of beggars that to late medieval writers they are a ″professional group,″ or a folkloric phenomenon, such as the *harāfīsh,* who use various tricks to attract almsgivers. Hence al-Subkī recommends their punishment (pp. 45–46). And Sabra himself looks for these ″professionals″ in medieval Arabic *belles lettres,* such as the *Qaṣīdat Banī Sāsān* or the *Maqāmāt* that served as entertainment for the elite (pp. 46–49), obviously unaware that what is at issue is an elitist manipulation of the acute problem of poverty into a sort of burlesque.

On actual begging in Mamluk Cairo we know next to nothing, but we know more on sporadic attempts by the government to regulate the beggars (pp. 60–1). No state program for almsgiving was developed; almsgiving for the paupers or the ill is sparsely recorded, mainly on the occasion of public celebrations, religious holidays, or funerals. Specific sultans, amirs, scholars, and others are mentioned in the sources as providing alms (pp. 50–58, 96–98). Thus the scant data suggest that almsgiving was basically a private affair (p. 68). The Mamluk state was satisfied in exercising supervision over orphans′ property and intervening on behalf of debtors.

Chapter 4 deals with the institution of *waqf* as the most permanent form of charitable giving (pp. 69, 70). However, while we find information on the administration of these pious endowments, to a great extent already known, the role of *waqf* in the context of poverty and charity is marginal in the discussion. Here or there we learn that Sultan Qalāwūn, for example, arranged for sixty orphans to receive lessons in a complex he established (p. 75). The same ruler ordered that in an endowment he had arranged, poor and sick people were allowed to reside and receive treatment without payment (pp. 77–78). A rather revealing bit of information is that at least forty-six *waqf*s were established between 1300 and 1517 in Cairo to provide education to boys whose families could not pay for it, or to orphans (pp. 80–81). However, there is little evidence that the state or private individuals took much interest in housing for the poor and orphans (pp. 84, 85). By and large, until the mid-fifteenth century it was rare to find a *waqf* that takes care of feeding the poor (pp. 86–89). Sabra′s calculation of about a thousand poor receiving food from *waqf*s illustrates the extreme marginality of the phenomenon in a city where the number of the poor was very much higher (p. 92).

Chapter 5, which is devoted to ″standards of living,″ tells more, like its predecessor, about various aspects of late medieval Cairo than about the book′s major theme. A case in point is the section on housing. The short section on clothing concludes with the unstartling statement that the poor people′s clothing was simple and that they owned few items of it (p. 112). Also as regards food, it comes as no surprise that the poor were unable to consume meat (p. 114). The sort of quantitative section and the periodic breakdown of the standard of living that Sabra provides, or his attempt to figure out the effect of the Black Death in wage terms, do not add much to the vague idea that we already have. Were the poor among the wage-earners who benefited from the demographic decline? Was there a shortage of skilled labor, of the type for which the poor were usually not qualified?

Chapter 6 is an analysis of the dynamics of food shortages in Mamluk Egypt. This topic has been variously treated in recent scholarship, yet Sabra adduces further material that adds to our fair knowledge of the grain market mechanism. Here again, what we learn of the poor directly is relatively meager. On some occasions sultans and the military elite distributed food, but, as Sabra speculates, only about 15,000 Cairenes out of many more in need benefited on such occasions. On other occasions the poor were reduced even to cannibalism.

In conclusion, as a result of its informal character, much of Mamluk charity is hidden from the eye of the historian, which practically means that he will face difficulties writing about it. That almsgiving was an important social practice in Mamluk Cairo (p. 174) is a plausible guess, yet quite anti-climatic and too general

at the end of a book that promises to tackle the topic. Charity under the Mamluks was unsystematic and unorganized.

One final comment. Sabra begins his book by stating that the social history of the pre-modern Middle East is in its infancy and ties it to the scholarly lack of interest in it until recently. How recent is Sabra's "recently" is unclear, but such a statement seems now not only inaccurate but also disserviceable to the scholarly field of which Sabra is a member. Some decent social history of the pre-modern Middle East has been written since the late 1960s at the latest. In fact, given the grave problems of historical material of the sort which Sabra's own book demonstrates, the potential for the social history in question may be less than one would certainly wish.

TABĪQ AL-ASHRAFĪ AL-BAKLAMĪSHĪ, *Ghunyat al-Rāmī wa-Ghāyat al-Marāmī fī ʻIlm al-Ramy ʻan al-Qaws*. Edited with notes by ʻAbd al-Qādir al-Ẓāhirī (ʻAmmān: Dār ʻAmmār lil-Nashr wa-al-Tawzīʻ, 1998). Pp. 176, illustrations.

REVIEWED BY NIALL CHRISTIE, University of British Columbia

This book is an edition of a text on archery by a Mamluk named Tabīq al-Ashrafī al-Baklamīshī al-Yunānī. Little is known of the author, apart from that he was a Mamluk of the sultan al-Ashraf Shaʻbān (r. 764/1363-778/1377), and was a distinguished member of a group of Mamluks who completed their education at a military college, and were then sent to work in military workshops. This is the second edition of al-Baklamīshī's work, the first having been made by J. D. Latham and W. F. Paterson in 1970 from a manuscript located in Istanbul. For his edition, ʻAbd al-Qādir al-Ẓāhirī relies primarily on a different manuscript, located in Aleppo.

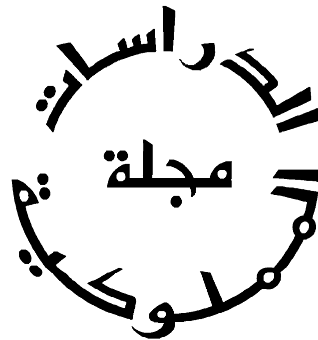
Dealing as it does with archery, al-Baklamīshī's work falls into the genre of *furūsīyah* (horsemanship) literature. Despite its narrow literal meaning, the term *furūsīyah* covered a wide range of expertise that a Mamluk was expected to gain, including the use of various weapons, the training of horses and battle tactics. David Ayalon has extended the meaning to cover "all that a horseman had to master by systemic training in order to become an accomplished knight."[1] The Mamluk sultanate saw the production of a large number of manuals devoted to the

[1]David Ayalon, "Notes on the Furusiyya Exercises and Games in theMamluk Sultanate," *Scripta Hierosolymitana* 9 (1961), 34.

subject,[2] of which this is one particularly specialized example.

After an introduction in which he discusses the merits of archery, al-Baklamīshī presents his reader with a *qaṣīdah* (poem) in which he discusses the subject. Then in the second part of his work, he gives a line-by-line explanation of most of the poem. He bases his discussion on six *uṣūl al-ramy* (sources of archery), these being positioning the body, loading, gripping the arrow, drawing, aiming and releasing. He then discusses a number of other matters, including shooting from horseback, stringing the bow (a seventh *aṣl*, according to some other mediaeval scholars, but not counted as such by al-Baklamīshī) and the qualities a student of archery should have. He also digresses into consideration of numerous other topics, including stringing the bow on horseback or when submerged up to the neck, illnesses common to archers, the effects of differences in the size and shape of the body on the archer′s technique, and advice on ways to practice archery. As should by now be clear, al-Baklamīshī discusses his subject in painstaking detail. He illuminates his work with quotations from the Quran, legal texts, poetry and other masters of archery. A final digression on strength and courage finishes the original work, after which the name of the scribe (Muḥammad ibn Muḥammad ibn ʻAbd al-Raḥīm al-Tulwānī) and the date of copying (805/1402) are given. There then begins a new section that has been added to the original manuscript, although the authorship is unclear. The new section supplements the original work, adding further discussions of topics related to archery, including shooting from above or below the enemy, the use of crossbows and different types of arrows and the laws of conduct in battle.

The book ends with a glossary of terminology used to refer to various types of arrows, a conversion table of Damascene measurements to French (metric) and English (imperial) ones, a section giving statistical information on bows, twenty-one illustrations and a contents page. The illustrations provided in the book are useful aids to understanding of the text, although it is not made clear when they were added, as they do not seem to be contemporary. The text also refers the reader several times to illustrations that are either clearly not the ones intended or simply non-existent, which is slightly frustrating.



Al-Baklamīshī′s text gives an interesting insight into the mind of a Mamluk who was a true master of his craft. Through his attempt to provide a ″how to″ guide for his peers, he reveals much about his own perceptions and attitudes. Naturally, one can not say how far his work reflects the actual practice of archery; indeed, it is much more likely that his work demonstrates his own view of how it *should* be practiced. However, it remains of interest to scholars of the period, particularly those studying Mamluk military theory and warfare.

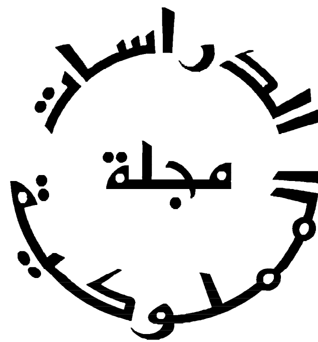
Published by the Middle East Documentation Center (MEDOC)
The University of Chicago

Mamlūk Studies Review is a biannual refereed journal devoted to the study of the Mamluk Sultanate of Egypt and Syria (648–922/1250–1517). It appears in January and July. The goals of *Mamlūk Studies Review* are to take stock of scholarship devoted to the Mamluk era, nurture communication within the field, and promote further research by encouraging the critical discussion of all aspects of this important medieval Islamic polity. The journal includes both articles and reviews of recent books. Submissions of original work on any aspect of the field are welcome, although the editorial board will periodically issue volumes devoted to specific topics and themes. *Mamlūk Studies Review* also solicits edited texts and translations of shorter Arabic source materials (*waqf* deeds, letters, *fatāwá* and the like), and encourages discussions of Mamluk era artifacts (pottery, coins, etc.) that place these resources in wider contexts. Transliterated Middle Eastern languages should conform to the system utilized by the Library of Congress. All questions regarding style should be resolved through reference to *The Chicago Manual of Style*, 14th edition. All submissions should be typed double-spaced. Submissions must be made on labeled computer disk together with a printed copy. The print copy should have full and proper diacritics, but the disk copy should have no diacritics of any kind.



Note: Readers of *Mamlūk Studies Review* who have access to the World Wide Web are referred to the MEDOC home page: http://www.lib.uchicago.edu/e/su/mideast. This site provides links to the searchable primary and secondary Mamluk bibliographies maintained by MEDOC. Authors may download editorial and style guidelines from the Mamluk Studies Review page. The site also has information about subscribing to the Mamluk listserv. The Mamluk listserv is an open forum for discussions of all aspects of the history and culture of the Mamluk Sultanate. The Editors of *Mamlūk Studies Review* encourage readers to use the listserv to comment upon and discuss issues raised in the *Review*.

Ceramic Evidence for Political Transformations in Early Mamluk Egypt*

The third reign of al-Nāṣir Muḥammad (610/1310–641/1341) is viewed by most scholars as a watershed in the history of the Mamluk Sultanate.[1] Often described as the ″Golden Age″ of Mamluk art, this period is generally recognized as one of security and affluence.[2] With the victory over the Mongols at ʻAyn Jālūt in 659/1260 and the campaign against Acre in 690/1291, the borders of the Mamluk state were, for the time being, relatively secure. Al-Nāṣir Muḥammad benefited from a lull in regular military activity to develop the infrastructure of Mamluk society. The formation of ″classic″ Mamluk institutions (such as the fully-developed hierarchy of amiral rank and offices, the structure of the army and the *iqṭāʻ* system, and official ceremonial and ideology) was one positive contribution of his reign in this regard.[3] His reign, nonetheless, may have had a negative impact on

Holt, *The Age of the Crusades: The Near East from the Eleventh Century to 1517* (London, 1986), 114–20, and Robert Irwin, *The Middle East in the Middle Ages: The Early Mamluk Sultanate 1250–1382* (Carbondale, IL, 1986), 105–24. Amalia Levanoni, *A Turning Point in Mamluk History: The Third Reign of al-Nāṣir Muḥammad Ibn Qalāwūn (1310–1341)* (Leiden, 1995), and Ḥayāt Nāṣir al-Ḥajjī, *The Internal Affairs in Egypt During the Third Reign of Sultan al-Nāṣir Muḥammad b. Qalāwūn* (Kuwait, 1978), offer specialized studies of this reign.

[2]Esin Atıl, *Renaissance of Islam: Art of the Mamluks* (Washington, D.C., 1981), and Henri and Anne Stierlin, *Splendours of an Islamic World: Mamluk Art in Cairo 1250–1517* (New York, 1997), survey the artistic achievements of this period.

[3]On the artistic representations of graded offices, see L. A. Mayer, *Saracenic Heraldry* (Oxford, 1933); on the structure of the Mamluk army: David Ayalon, ″Studies on the Structure of the

Egyptian society and economy in the long run. Amalia Levanoni′s claim that the excesses of al-Nāṣir Muḥammad′s policies ushered in the political and economic decline of the fifteenth century constitutes an important paradigm for the present study.[4]

The following is an art historical contribution to the debate on Mamluk decline, one that highlights the ways in which the demographic upheavals of the later fourteenth century transformed Egyptian society and the arts. This article specifically explores the relationship between ceramic development in the fourteenth century and government practices that affected social mobility and, thus, structured patronage. Sgraffito ware is an important category of glazed ceramics, in this regard, because it is the most visible archaeologically (it is the hallmark of Mamluk-period sites in Egypt), experienced significant development in form and decoration during this period, and seems to have passed out of fashion (at least in Egypt) by the beginning of the fifteenth century. ″Sgraffito″ refers to a surface design cut through a light-colored slip, laying bare the dark-colored earthenware body of the vessel′s fabric. Ideally suited to the reproduction of lengthy inscriptions, the sgraffito technique was adopted in Egypt for the rapid and large-scale manufacture of monumental, ceremonial vessels with complex, militarized designs. This study attempts to demonstrate that the mass-production of this ware was related to the rise of the amiral class at the turn of the fourteenth century and that its subsequent development was a response to the social effects of particular policies initiated by al-Nāṣir Muḥammad during his third reign and continued by his successors.

Transformations of Mamluk Society under al-Nāṣir Muḥammad

Modern scholars frequently note the ″nostalgic idealization″ of the fourteenth century by fifteenth-century Egyptian historians.[5] Al-Maqrīzī, for instance, regularly bemoans the political corruption of turn-of-the-century Cairo. In contrast with the fiscal and moral bankruptcy of the fifteenth century, the Bahri Mamluk period, was considered a ″Golden Age″ when there were periods of peace between Egypt

and her neighbors, the state coffers were full, and the arts and crafts flourished. The third reign of al-Nāṣir Muḥammad ibn Qalāwūn (710/1310–741/1341) is considered by many to be a watershed in this regard. Scholars have emphasized various ways in which his reign was a turning point in the fortunes of the state: in the realm of the arts,[6] policy-making,[7] and the physical development of the modern city of Cairo,[8] for example. Until recently, his sultanate was considered, by both medieval and modern historians alike, to be one of security, prosperity, and growth.

This view, however, is not embraced by all students of the period. Modern historians are increasingly turning to the "Golden Age" of the fourteenth century in order to explain the origins of Mamluk decline. While acknowledging the economic dilemmas of the fifteenth century, they emphasize social and demographic developments of the late Bahri period that weakened the state early on and contributed to the collapse of the regime in 1517.

A series of plagues (beginning with the Black Death of 748/1347–750/1349) and natural disasters (earthquakes, drought, famine) were certainly factors that, when combined, were demographically devastating.[9] Al-Maqrīzī's estimate that one-third to one-fifth of the combined population of Egypt and Syria was lost to the plague seems to be accurate.[10] Abu-Lughod, citing Michael Dols, suggests that

For a general discussion of the decline of the Mamluk state in geographical Transjordan, see Bethany J. Walker, "Mamluk Administration of Transjordan: Recent Findings from Tall Hisban," *Al-'Uṣūr al-Wusṭá* 13 no. 2 (2001): 30–33; idem, "Mamluk Investment in Southern *Bilad al-Sham* in the Fourteenth Century: The Case of Hisban," *Journal of Near Eastern Studies* (2003) (forthcoming); and idem, "Mamluk Investment in the Transjordan: a 'Boom and Bust' Economy," *Mamlūk Studies Review* 8 no. 2 (2004) (forthcoming). The author's forthcoming monograph, *Life on the Mamluk Frontier: Transjordan, 1260–1516 A.D.,* treats this topic in more detail, drawing on archival, faunal and floral, numismatic, and archaeological data.

10These statistics are also supported by Ibn Ḥabīb, *Tadhkīrat al-Nabīh fī Ayyām al-Manṣūr*

a death toll of 10,000 daily in Cairo alone would account for a drop in population of 40% when the plague was at its worst.[11] These numbers support the popular claim that the economic depression, political corruption, and artistic decline of the fifteenth century were the result, in part, of the demographic changes that followed the fourteenth-century plague.

For Abu-Lughod, Dols, Ashtor, and Irwin the Black Death (*ṭāʻūn,* or bubonic plague) was the single most important factor in the economic disasters of the following century. According to Abu-Lughod, reduced labor led to a shortfall in surplus. Burji Mamluk sultans, who depended on ″labor-intensive methods of production″ to support their high expenditure, responded with the exploitative practices mentioned above.[12] Government monopolies, whimsical taxation, confiscations of property, and the export of raw materials to Europe contributed to the ″technological stagnation″ of Egyptian industries described by Petry.

Dols′ frequently-cited *The Black Death in the Middle East* examines the phenomenon of Mamluk decline in its cultural totality and stresses that the Black Death and recurrent epidemics had an enormous effect on the Egyptian economy, industries, arts, and social structure. Artistic development and social change are interrelated in Dols′ model of economic decline. Most art historians agree that Mamluk art declined as a result of the plague, but they seldom define what is meant by ″artistic decline″ and generally fail to account for its origins. The traditional notion is that stylistic and technical quality fell because skilled artisans died during the plague and there were fewer customers to buy their products. Furthermore, many crafts, such as ceramics and textiles, were replaced by the higher-quality European and Chinese imports that flooded the markets in the fifteenth century. Dols suggests a more complex process. He argues that some industries (for example, sugar production) flourished for a time because the shortage of labor pushed up salaries. Artisans also benefited by the rise in wages: their social status rose as a result of the demand for skilled labor.[13] However, other industries and crafts (which Dols calls ″unessential manufactured products″) disappeared.[14]

In a similar vein, the economic historian Eliyahu Ashtor writes about the role of the plague in the three-fold crises of the mid-fourteenth century: demographic,

economic, and social.[15] For Ashtor, the new elite which emerged after the plague was civilian and was comprised primarily of successful merchants and the ulama (religious scholars). Their rise in status is attributed to the sale of *ḥalqah iqṭāʿāt* in the mid-century and, ironically, government monopolies.[16] The title of *khwājah,* adopted by the sultan's merchants in the fifteenth century, is cited as evidence of social advancement.[17]

The emergence of a new social elite in the second half of the fourteenth century has become a regular theme of recent Mamluk scholarship. Unlike Ashtor, who describes the increasing power of the business and intellectual elite, Levanoni describes the process through which a new Mamluk elite emerged, inverting the "traditional" Mamluk social order. Over the course of his third reign, al-Nāṣir Muḥammad rejected the restrictive recruiting and slow but steady process of advancement maintained by earlier Mamluk sultans. In a passage in his *Kitāb al-Sulūk,* al-Maqrīzī explains his innovations in the areas of recruitment, promotion, and military expenditure as necessary for helping mamluks forget their homeland.[18] Levanoni, on the other hand, interprets these as methods for this sultan of non-mamluk background to buy the support and loyalty of the Mamluk corps.[19] His recruitment of non-mamluks and the promotion of *awlād al-nās* and unseasoned mamluks to amirships, however, gradually dissolved the solidarity between mamluk and master and among mamluks that gave the Mamluk system its cohesion and strength.[20]

According to Levanoni's model, high expenditures combined with counter-productive practices such as these weakened the governing body so that it could not properly respond to the succession crisis after al-Nāṣir Muḥammad's death. It is primarily through the inversion of the Mamluk social order after 1341, that is, with the rise of previously disenfranchised groups, that the strength of the sultanate began to wane. The new "elites" of this period were not veteran amirs, but second-

---

[15]Ashtor, *A Social and Economic History,* 301.

[16]The sale of these *iqṭāʿāt* began as early as 1337, and by 1347 they were taxable, like any other civilian property. According to al-Maqrīzī, Sultan al-Ashraf Shaʿbān's (ruled 746/1345–747/1346) establishment of the *dīwān al-badal,* the administrative department that regulated the sale of *ḥalqah iqṭāʿāt* to civilians, was necessitated by the impoverishment of the *ḥalqah* that followed the *rawk al-Nāṣirī* in 615/1315 (al-Maqrīzī, *Kitāb al-Sulūk,* in Levanoni, *A Turning Point in Mamluk History,* 171).

generation amirs (sons of amirs) and rank-and-file mamluks.[21] These second-class soldiers, the *ḥalqah,* and common civilians *(ʿāmmah)* participated in the power struggles that took place in Cairo′s streets in this period.[22] The rebellion of the *julbān* in the fifteenth century, therefore, had a precedent. The poor economic state of Egypt in the fifteenth century is attributed, in part, to a divided and dissolute governing body, bullied by new recruits and the masses, which was ill equipped to handle the economic and political challenges of the time.

What Levanoni and others are describing is a social crisis created by the proletarianization of the army and the rise to power of certain sectors of the civilian population. Social transformations such as these certainly impacted the arts: new classes of patrons emerged and artistic sensibilities (tastes) may have changed accordingly. Historians have begun to explore the impact plague and government policies had on artistic production in the fourteenth century. Dols, for example, describes the ambiguous effects of the Black Death on the arts. Because of the labor shortage, skilled artisans were able to demand higher prices for their work, and their social status rose accordingly.[23] One material expression of this process may be the sharp increase in the number of potters′ signatures on underglaze-painted ware in the fifteenth century. Some crafts survived and seemed to thrive because they served a particular purpose. In the case of architecture and architectural revetment, these industries continued to do well because of increased building activity, which Dols argues was one reason for increased endowments of property as *awqāf*.[24] Burji Mamluk architecture, however, pales in comparison to the fresher, more innovative styles of the Bahri period. In this sense, artistic decline in the later Mamluk period can be defined in terms of a stagnation of style, where quantity (or proportions) takes precedence over quality. At the same time other art forms disappeared. While the imitation of Chinese blue-and-white porcelains in underglaze-painted ware was popular in the fifteenth century, Egyptian Mamluk sgraffito seems to have passed out of fashion. The disappearance of sgraffito may be related to either a change in taste or shifting patronage patterns.

The inversion of Mamluk social structure, envisaged by Levanoni, is a useful model for describing the development of sgraffito in the fourteenth century. The empowerment of the amiral class (and particularly the *khāṣṣakīyah*) early on in

---

[21]Amitai-Preiss describes Levanoni′s ″social inversion″ as a ″remaking of the [Mamluk] elite.″ With the replacement of veteran (Mansuri) amirs with his own amirs, who were promoted immediately to amirships of 100, al-Nāṣir Muḥammad effected the ″transformation,″ rather than the ″decline,″ of the Mamluk′s social order (Amitai-Preiss, ″The Remaking of the Military Elite″).

[23]Dols, *The Black Death,* 270.

[24]Ibid.

al-Nāṣir Muḥammad′s third reign and its replacement by second-class soldiers (*awlād al-nās* and other non-mamluks) and the assumption of mamluk prerogatives by civilians after his death—all are reflected in the decorative development of sgraffito ware in Egypt. These practices, to which Levanoni devotes her book, combined with the plague in mid-century to create a new elite, or, for our purposes, a new class of patrons. It is their adoption of earlier elitist symbols that accounts for the degeneration of sgraffito designs by the end of the century.

THE ORIGINS AND DEVELOPMENT OF MAMLUK SGRAFFITO[25]

DEFINITION OF EGYPTIAN SGRAFFITO (FIG. 1)

The standardization of art forms from capital to province is one frequently noted characteristic of the Mamluk period. However, there is marked regionalism in ceramic styles. Mamluk lusterware, for example, was probably a Syrian specialty, and there is some question whether it was manufactured at all in Egypt.[26] Recently, the differentiation of Syrian underglaze-painted wares from Egyptian products has been a focus of active scholarly debate.[27] Similarly, the mutually exclusive styles of slip painting in Syria and Egypt, an area understudied at present, bespeaks of regionalism in ceramic production. Among other regional specialties are the imitation celadons of Egypt, which are among the most numerous ceramic types from excavations at Fustat.[28]

The production and distribution of sgraffito ware present unique problems for the study of Mamluk art. There seem to have been at least two distinctive regional sgraffito styles produced in the fourteenth century: the ″military style″ of Egypt with blazons and inscriptions (the focus of the following study) and a Levantine variety found in Israel, and perhaps Syria.[29] ″Mamluk sgraffito″ in Israel, for

[25]The following typological study of Egyptian sgraffito is based on fieldwork conducted piecemeal over several years in Egypt (Cairo: the Islamic Museum, ARCE′s Fustat stores in al-Ḥilmīyah, A.U.C.′s Fustat study collection; Alexandria: the Greco-Roman Museum and the Polish Institute′s on-site stores at Kom ed-Dikka), Cyprus (various national and regional museums and private collections throughout the island, south of the Green Line), Canada (Royal Ontario Museum in Toronto), and the United States (Metropolitan Museum of Art in New York and the Brooklyn Museum). Approximately 1300 sherds and 15 whole vessels of the Egyptian ware were analyzed for this study; of comparative material in Cyprus, some 2500 sherds and 150 complete vessels were consulted. The author would like to thank the Departments of Antiquities in Egypt and Cyprus for the permits that made access to the relevant collections possible.

example, is essentially a development of earlier Crusader and Ayyubid sgraffito wares under the influence of Venetian and Egyptian sgraffito designs. There is considerable local variation within this regional ware. A brick-red fabric, yellow glaze, and coarsely-incised designs characterize much of the thirteenth- and fourteenth-century sgraffito excavated at Acre; a freer sgraffito pattern under a brown or yellow glaze is more common in Jerusalem.[30]

Levantine Mamluk sgraffito must, then, be differentiated from Egyptian Mamluk sgraffito. While both groups are indebted, to some degree, to earlier Crusader and Byzantine-derivative wares, the Egyptian variety is distinctive. Furthermore, its stylistic and technical development in the fourteenth century is closely related to the social circumstances of contemporary Cairo. The variety of Mamluk sgraffito produced and distributed only within Egypt is a uniquely Egyptian phenomenon, a point that will be demonstrated later in this paper.

Egyptian sgraffito (hereafter called ″Mamluk sgraffito″) has several readily recognizable characteristics. Although there are exceptions, most vessels are coarsely potted and thick-walled.[31] There is a tendency for vessels that imitate metalware shapes to be very heavy, quite possibly the result of trying to reproduce sharp profiles in a less plastic, coarse clay. The clay itself is Nile alluvium; several chemical and petrographic studies have been devoted to separating the constituent elements of the fabric.[32] The body of Mamluk sgraffito vessels is covered by a stonepaste white slip, which contrasts with the clay slip of contemporary slip-painted ware.[33] Because of the porosity of the clay, the slip is either thickly applied or tends to peel off the vessel surface, obliterating the design. In a later stage of sgraffito development, a thick layer of white or brown slip stands in relief and enhances particular areas of the design, such as the letters of an inscription.

---

sherds excavated in the Acre area. The major publication dealing with ceramics from Syrian excavations (later thirteenth and fourteenth centuries) is P. J. Riis and V. Poulsen, *Hama: fouilles et recherches, 1931–1938,* vol. 4 pt. 2, *Les verreries et poteries médiévales* (Copenhagen, 1957). There seems to be considerable variety in fabric and decoration in the Levantine wares. Publication of these wares by the Departments of Antiquities in Israel, Syria, and Jordan will be eagerly awaited.

[30]Personal communication, Edna Stern.

[31]The best products of the Sharaf al-Abawānī ″workshop″ are of high quality, with thin walls, sharp carinations, and even slipping and potting (see below).

[32]For chemical profiles see M. A. Marzouk, ″Egyptian Sgraffito Ware Excavated at Kom ed-Dikka in Alexandria,″ *Bulletin of the Faculty of Arts, University of Alexandria* 13 (1949): 3–23, and A. ʻAbd al-Rāziq, ″Le sgraffito de l′Égypte dans la collection d′al-Sabah,″ *Annales Islamologiques* 24 (1988): 1–23. Recent petrographic analysis can be found in R. B. Mason and E. J. Keall, ″Petrography of Islamic Pottery from Fustat.″

[33]Mason and Keall, ″Petrography of Islamic Pottery from Fustat,″ 180–81.

Color enhancement of designs in the earlier phase (transitional late Ayyubid-early Mamluk) is achieved through green and yellow-brown ″stains.″ These colored glazes are applied to the sgraffito decoration and bleed into the covering glaze.[34] A yellowish lead glaze covers the vessel, appearing a golden yellow or brown over lightly slipped or bare surfaces.

Floral, geometric, inscriptional, and heraldic designs are incised through this slip into the earthenware body.[35] The distribution of these designs over the vessel surface adheres to a more or less standardized decorative program. The bowl well, an area emphasized in thirteenth-century sgraffito wares throughout the Byzantine and Crusader territories, was incised with faces, gouged circles, imitative Kufic inscriptions, or amiral blazons (Fig. 2). Amiral blazons not only occupied this zone but were also utilized in wall registers to break up inscriptions (Fig. 3). The influence of metalwork can be seen in the reliance on registers to organize inscriptional and heraldic designs (Fig. 4). Inscriptional registers are often framed by floral rinceaux and ″drip lines,″ vertical dashes that recall textile fringes.[36] Narrow registers filled with a repeating series of ″Mamluk braids,″ a stylization of the Coptic version of the Byzantine-late antique guilloche, are a familiar sight in sgraffito ware, and can be found at the juncture of stem and bowl, just below the

---

[34]Lead-based stains and glazes naturally ″run″ into one another during firing, and indeed, this is often the desired effect.

[35]Figural designs are very rare. See George T. Scanlon, ″Preliminary Report: Excavations at Fustat, 1964,″ *Journal of the American Research Center in Egypt* 4 (1965): 7, ″Frontispiece″ for illustrations of sherds from Fustat, now in the study collection of the American University in Cairo. These were initially identified as Persian (thirteenth-fourteenth c.) and Rhodian or Anatolian (fifteenth c.) imports. It is more likely, however, that ″face bowls,″ angels, and equestrian figures such as these were local imitations of sgraffito designs current in eastern Anatolia and Transcaucasia in the thirteenth century.

[36]Similar arguments have been made by Fouquet, in emphasizing the role of Coptic textiles in determining patterns of decoration of Mamluk sgraffito in the thirteenth century (Daniel Fouquet, ″Contribution à l′étude de la céramique,″ *Mémoires présentés à l′Institut Égyptien publiés en l′honneur de la naissance de S. A. Mohammed ʻAbd-ul-Munaima* 4 [1900]: 71), and much later by Mackie, who discusses the possible decorative influences of wrapping metalware in textiles for transport (Louise W. Mackie, ″Toward an Understanding of Mamluk Silks: National and International Considerations,″ *Muqarnas* 2 [1984]: 143). The interplay of textile and ceramics warrants future investigation. Lisa Golombek has made a significant contribution in this regard in her description of the ″textile mentality″ of medieval Islamic society (Lisa Golombek, ″The Draped Universe of Islam,″ in *Content and Context of Visual Arts in the Islamic World,* ed. P. P. Soucek [University Park, PA, 1988], 25–38). Here she compares Samanid epigraphic pottery to white linens with *ṭirāz* bands (p. 35). See also Yasser Tabbaa, ″Bronze Shapes in Iranian Ceramics of the Twelfth and Thirteenth Centuries,″ *Muqarnas* 4 (1987): 98–113, and J. W. Allan, ″The Survival of Precious and Base Metal Objects from the Medieval Islamic World,″ in *Pots and Pans,* ed. M. Vickers (Oxford, 1986), 57–70, on the relationship between the metalworking and ceramics industries.

Figure 2. Cypriot sgraffito bowl with pseudo-heraldic design in well, 13th century, Polis

Figure 3. Early Mamluk sgraffito bowl with inscription and pseudo-heraldic designs, 13th century

Figure 4. Egyptian sgraffito designs inspired by metalwork (top and center) and underglaze-painted ware (bottom), late 13th century, Fustat

vessel′s rim on the exterior face, and framing the tondo inside.[37]

Sgraffito ware, like much of Mamluk art, is stylistically hybrid and borrows extensively from other media. Most of the motifs adopted by Mamluk potters belong to the decorative vocabulary of thirteenth-century sgraffito, fourteenth-century underglaze-painted ware, and metalwork. ″Eastern Mediterranean wares,″ as Seljuk, Crusader, and Byzantine-derivative wares are often called, were most influential for the early development (thirteenth-century) of Mamluk sgraffito. Some motifs with a long history in Byzantine art (the guilloche, rinceaux, and repeating arch friezes, for instance) could have been borrowed directly from much older Coptic painted wares.[38] In the fourteenth century, potters imitated the forms and decoration of Islamic metalwork, an extensively traded commodity both within and outside Mamluk domains . The ″Y-pattern,″ broad interlaces, and animal friezes are among the motifs lifted directly from the repertoire of Mamluk metalworkers by sgraffito artists.[39] The popularity of amiral blazons and Arabic inscriptions in many media in the fourteenth century, the most distinctive characteristic of this phase of sgraffito in Egypt, was probably also due to the influence of metalwork. At the same time, contemporary underglaze-painted styles exercised an influence on sgraffito. For instance, radial designs were achieved through the use of sgraffito lines and differently colored stains.

Mamluk sgraffito vessels conform to two main shapes: a deep, hemispherical cup on a high pedestal foot and an even deeper, carinated bowl (or ″chalice″) with straight, flaring sides on a splayed foot (Fig. 5). The hemispherical cup, often called a ″goblet,″ has parallels in glassware and metalware and was a common form for drinking vessels. The carinated form has no clear parallels in any other media but is strongly suggestive of a prototype in inlaid brass that may have had ceremonial or commemorative significance. The only regular exceptions to these

---

[37]This braid has been called by various names: a ″Greek key″ (George T. Scanlon, ″Some Mamluk Ceramic Shapes from Fustat: ′Sgraff′ and ′Slip,′″ *Islamic Archaeological Studies* 2 [1980]: 62), an ″S-shaped motif″ (Atıl, *Renaissance of Islam,* 188), and ″a band of undulating lines″ imitating *ablaq* arches (*The Luxor Museum of Ancient Egyptian Art: Catalogue* [Cairo, 1979], 204).

[38]Daniel Fouquet first recognized the similarity of designs in Coptic slip-painted wares of the seventh and eighth centuries and thirteenth- to fourteenth-century sgraffito (Fouquet, ″Contribution à l′étude de la céramique,″ 125, Pl. XV). Coptic and Mamluk bird designs have been compared in C. Décobert and R.-P. Gayraud, ″Une céramique d′époque mamlouke trouvée à Tod,″ *Annales Islamologiques* 18 (1982): 101. A comprehensive study of the designs used in medieval Coptic pottery can be found in William Y. Adams, *Ceramic Industries of Medieval Nubia* (Lexington, KY, 1986). For illustrations of the Byzantine guilloche, see Gawdat Gabra, *Cairo, the Coptic Museums and Old Churches* (Cairo, 1993).

[39]One such animal frieze in sgraffito has been illustrated in Aly Bahgat and Félix Massoul, *La céramique musulmane de l′Égypte* (Cairo, 1930), Pl. XLIX.6.

Figure 5. Most common forms in Egyptian sgraffito: hemispherical (top) and carinated (bottom) bowls, 14th century, probably Fustat, Phase II Egyptian Mamluk sgraffito ware

shapes are those that directly imitate contemporary metalware, such as basins, tray stands, and possibly candlesticks. Regardless of the shape, sgraffito vessels tend to take on largish, if not monumental, proportions.

The goblet form is also shared by two other groups of Mamluk pottery: slip-painted and underglaze-painted wares.[40] Many designs are common to all three wares. Slip-painting and sgraffito are related techniques. The basic application of a slip (clay slip in the first case and quartz-based in the second) and the technique of painting a design in slip (the primary decoration in slip-painting and a secondary one in sgraffito) are grounds for association. Furthermore, sgraffito and underglaze-painted wares were fired together in the same kilns; the proficiency of some workshops in both techniques is discussed below.[41]

In spite of the designs and range of motifs shared by the various categories of Mamluk pottery, the wares differ in their individual histories. Slip-painted wares are stylistically more related to underglaze-painting and the contemporary slip-painted styles of eastern Anatolia and Iran.[42] There is continuity from the Ayyubid period in underglaze-painted and lusterwares. Blue-and-white porcelains and celadons imported from China were imitated locally in Egypt and had a significant impact on the development of local underglaze-painted wares in the fifteenth century.

The history of Mamluk sgraffito is quite different. Although it shares designs with many of the groups listed above, its earliest phase (thirteenth century) was oriented to the Crusader eastern Mediterranean. During its later development in the fourteenth century the ware imitated contemporary Islamic metalwork. The stylistic differences between Mamluk sgraffito and other Egyptian ceramic groups are due to several factors, not the least of which relates to marketing, or patronage. The classification of Mamluk sgraffito ware has, therefore, traditionally focused

---

[40]Atıl, *Renaissance of Islam,* 169, cat. #78 is an example of the goblet form in underglaze-painting. For slip-painted ware, see the profiles in Scanlon, ″Some Mamluk Ceramic Shapes.″

[41]In modern kilns all ″slip-wares,″ including sgraffitos and slip-painted styles, are fired at the same time. Both require a leather-hardening process before firing, the clays (and the temperatures at which they are fired) are common to both, and they generally take the same glazes. Although there is no historical evidence to support this, one could argue that, like underglaze-painted ware, slip-painted ware was produced alongside sgraffito in Mamluk Cairo.

[42]The history of fourteenth-century slip-painted wares is complex and poorly understood. For assorted attempts at clarifying the relationship of the Mamluk ware with foreign ones see George T. Scanlon, ″The Fustat Mounds: a Shard Count, 1968,″ *Archaeology* 24 (1971): 229 (who emphasizes the influence of ″Eastern Mediterranean relief slip-wares″ and the trailed glaze of ″Athlit wares″) and Atıl, *Renaissance of Islam,* 149 and 192 (pointing to parallels in underglaze-painting and imitation celadons). Lane′s comments concerning the influence of the so-called ″Sultanabad″ wares (Arthur Lane, *Early Islamic Pottery* [London, 1947]) are somewhat outdated.

on its comparatively restricted range of decorative styles and the technical aspects of form and fabric.

Unlike other wares, Mamluk sgraffito can be considered a purely Egyptian product.[43] Evidence of production at Fustat in the form of wasters and kilns and the sheer quantity of the material collected from medieval sites throughout Egypt attest to an intensive, indigenous production.[44] Moreover, there is no convincing evidence that it was ever transported to Syria or any of the other Mamluk provinces, not to mention ever having been manufactured in these places.[45] The extra-Egyptian provinces had their own local styles of sgraffito that were quite different from the Fustat product. To my knowledge there are no published examples of clearly Egyptian-style Mamluk sgraffito from sites in Syria or Israel. Ambiguous references in archaeological reports to scraps of ″Egyptian″ sgraffito found at Syrian sites are never illustrated and do not alter the picture of an Egyptian-only distribution.[46]

If ″military″ sgraffitos are found at administrative sites and garrisons throughout Egypt, why are they not found in Syria? Egyptian amirs were given *iqṭāʻāt* in Syria, were made governors there, lived there, retired there. Yet, there was apparently no export of Egyptian sgraffito to Syria, and if an Egyptian amir had commissioned a vessel in Cairo before his posting in Syria, he apparently did not take it with him. Taking into consideration the indigenous ceramic tradition in Syria one

[43]Décobert and Gayraud, ″Une céramique de l′époque mamelouke,″ 102.

[44]Aly Bahgat, ″Les fouilles de Foustât: Découverte d′un four de potier arabe datant du XIVe siècle,″ *Bulletin de l′Institut Egyptien* 8 (1914): 245–333 (excavation of a fourteenth-century kiln at Fustat; wasters did not include sgraffito, however); Mason and Keall, ″Petrography of Islamic Pottery,″ 180, Fig. 13 (ROM cat. # 909.43.21 is a waster with an attached tripod from the Fustat excavations. Petrographic thin-sectioning verified local manufacture). Egyptian Mamluk sgraffito has been excavated at the following sites: ″metro″ Cairo (Fouquet, ″Contribution à l′étude de la céramique,″ 121; Bethany J. Walker, ″New Approaches to Working with Old Maps—Computer Cartography for the Archaeologist,″ *Journal of the American Research Center in Egypt* 31 [1994]: 189–200); ″metro″ Alexandria (see references to Kubiak, François, Marzouk, and Lane throughout this paper); Quseir al-Qadim (Donald Whitcomb and Janet Johnson, *Quseir al-Qadim 1980: Preliminary Report* [Malibu, 1982]); Jebel Adda (N. Millet, ″The Jebel Adda Project, Nubia, 1962,″ in *National Geographic Research Reports [1961–1962],* ed. P. H. Oehser [Washington, 1970], 191–200); Tod (Décobert and Gayraud, ″Une céramique de l′époque mamelouke,″ 98); Akhmim (Fouquet, ″Contribution à l′étude de la céramique,″ 121); Dronca (Fouquet, ″Contribution à l′étude de la céramique,″ 121); and Luxor *(Luxor Museum).*

[45]On the issue of transport, evidence from shipwrecks would be particularly illuminating. However, there are precious few excavated wrecks from this time period in the eastern Mediterranean and of those cargoes that have reached the attention of scholars, none seem to have included this kind of pottery (see Rachel Ward, *Islamic Metalwork* [New York, 1993], 113; reference is to a shipwreck of ca. 1400 off the coast of Syria, published in *From the Depths of the Sea,* The Israel Museum [Jerusalem, 1985]).

[46]Décobert and Gayraud, ″Une céramique de l′époque mamelouke,″ 99.

could conclude that:

1. The unattractiveness of Mamluk sgraffito did not find a market in Syria, which had its own respectable, long history of sgraffito manufacture.
2. A high tax on ceramic imports in Syria discouraged Egyptian potters from sending their wares there.[47]
3. The Glazed Relief Ware of Syria served the same purpose as Egyptian sgraffito and was of a generally higher quality. This mass-produced ware was also decorated with dedicatory inscriptions and blazons and distributed to administrative centers and garrisons throughout the region.[48]

It is difficult to assess the Syrian ceramic aesthetic or to find documentary evidence for taxes on a commodity that is very rarely mentioned in either historical or administrative sources. I consider the following as socio-political factors that contributed to the restricted distribution of Mamluk sgraffito.

1. Mamluk ″military″ sgraffito, or the inlaid brasswares it imitates, was the special prerogative of amirs serving in the capital, as were certain styles of

---

[47]Pringle cites documentary evidence from commercial treaties for a 25% tax on all pottery sold in Acre in the 1230s (Denys Pringle, ″Pottery as Evidence for Trade in the Crusader States,″ in *I comuni italiani del Regno Crociato di Gerusalemme*, ed. B. Kedar and G. Airaldi [Geneva, 1986], 469). He argues, unconvincingly, that this was an effort on the part of local officials to preserve ″local stocks of pottery that were needed by the local citizens.″

[48]Glazed Relief Ware is a mold-made ceramic of a fine, white or pinkish clay (5 YR 7/4), decorated in Arabic inscriptions and, for the most part, pseudo-heraldic devices, and covered in a heavy green or yellow lead glaze. Vessel shapes tend to be hemispherical or carinated bowls, with either a simple rounded rim or a characteristic incurving rim, placed on a high pedestal foot. Vessel sizes range from miniature (bowls as small as 8 cm high, 13 cm max dia. at rim) to monumental (bowl rim dia. max. 38 cm wide). Distribution of this ware seems to be concentrated in southern Syria. They have been excavated in large quantities in administrative centers/regional capitals: Jerusalem (M. Avissar, ″The Medieval Pottery,″ in *Yoqne′am I: The Late Periods,* ed. A. Ben-Tor, M. Avissar, and Y. Portugali [Jerusalem, 1996], 102–4); Kerak (M. Milwright, ″Trade and Patronage in Middle Islamic Jordan: The Ceramics from Kerak Castle,″ Ph.D. diss., Oxford University, 1998, 176–79 and 184–91); and Ḥiṣbān (Bethany J. Walker, ″The Islamic Age,″ in *Hesban 11: The Pottery of Hesban*, ed. J. A. Sauer and L. G. Herr [Berrien Springs, MI, 2003], forthcoming; Bethany J. Walker and Ø. S. LaBianca, ″The Islamic *Quṣūr* of Tall Ḥiṣbān: Preliminary Report on the 1998 and 2001 Seasons,″ *Annual of the Department of Antiquities of Jordan* 47 [2003], forthcoming). They were likely manufactured in Jerusalem, and perhaps also Damascus, and sent from there to Mamluk garrisons throughout the region (R. B. Mason and M. Milwright, ″Petrography of Middle Islamic Pottery from Kerak,″ *Levant* 30 [1998]: 188; M. Ben-Dov, *The Dig at the Temple Mount* [Jerusalem, 1982], 365; Avissar, ″Medieval Pottery,″ 102). The inscriptions tend to be generic wishes for prosperity for an unnamed amir (″Glory, good fortune, achievement, and happiness, to the amir″), a statement of commission (″Made [on the order of] the amir . . .″), or poetic verses. Glazed Relief Wares were both made-to-order and mass-produced throughout the fourteenth and fifteenth centuries.

dress and lifestyle privileges (hunting excursions with the sultan, monopolies on certain commodities).

2. This ceramic style was part of the way the city of Cairo framed its self-view in artistic terms.[49] In other words, it was a specifically Cairene art style, like monumental architectural façades with niches.[50]
3. Mamluk sgraffito was the product of a time and place, a product of the socio-political atmosphere of the time. Most of the characteristics of al-Nāṣir Muḥammad's reign relevant to the ceramic arts were phenomena of Egypt only.
4. This style of sgraffito was made in imitation of vessels in more expensive materials that played an important role in Mamluk ceremonies carried out in the capital.

TYPOLOGY OF THE WARE

Egyptian sgraffito ware is the hallmark of the Mamluk period in the country. No other kind of pottery is found in such abundance, it was distributed throughout Egypt, and it is readily recognizable to archaeologists and art historians by its characteristic surface decoration. In spite of this, sgraffito has limited archaeological value, because it cannot be dated using traditional techniques; it is often retrieved from secondary (the trash heaps of Fustat and Alexandria) and unstratified (and thus chronologically contextless) deposits during excavation or as isolated surface finds on surveys.[51] Pottery from these contexts is often poorly preserved: the predominance of sherds makes it difficult to ascertain the forms (and range of forms) of the original vessels. The abundance of sherd material in Egyptian museums has encouraged the art historical analysis of surface designs, and this kind of scholarship has a long history in Arabic, French, and English literature. However, the fragmentary nature of the pottery has discouraged any broader analysis, which would enable archaeologists to date it (and, in turn, allow them to use this pottery

---

[49]Sgraffito would have been associated with Cairo as the luster technique was with Damascus. The "popularization of forms and the use of techniques . . . may have served to reduce socioeconomic distinctions in urban society and to enhance a common local identity" (Michael Morony, "Material Culture and Urban Identities: The Evidence of Pottery from the Early Islamic Period," in *Identity and Material Culture in the Early Islamic World,* ed. Irene Bierman [Los Angeles,1995], 30).

to date sites and their strata with some precision) or explain to historians the unique role it played in fourteenth-century Egyptian society. Until now, there has been no typology of Egyptian sgraffito ware.

The formal art historical study of the ware began a century ago with Daniel Fouquet, whose stylistic analysis of sgraffito sherds has remained influential until today.[52] Although outdated, his monograph, *Céramique orientale*, has been singularly responsible for the current debate on the influence of eastern Mediterranean sgraffito. His work was ground breaking on many accounts. Fouquet was concerned with the historical context of sgraffito ware and dated sherds on the basis of inscriptions and blazon designs. He analyzed artists′ signatures in order to reconstruct workshop structures, examined stylistic parallels in media as far afield as textiles and metalworking, and examined decorative motifs with an eye towards seriation. One legacy of these approaches can be seen in the several generations of signature studies that have followed.[53] He was, most importantly, the first to suggest a connection between Crusader (particularly Cypriot) and Mamluk sgraffito (an idea that has only recently gained some popularity)[54] and to recognize the impact of ″Mosul″-style metalwork on ceramics.[55] These have remained key concepts in the interpretation of sgraffito designs, even though scholars of Mamluk sgraffito seldom cite Fouquet as an authority on the matter. Fouquet′s stylistic analysis was not hampered by the fragmentary remains of sgraffito, and perhaps it is for this reason that archaeologists, consciously or unconsciously, have adopted his approach in working with this material.

With Scanlon′s publication of profiles for sgraffito and slip-painted wares in 1980, discussion about the development of sgraffito forms became possible.[56]

[55]Fouquet, ″Contribution à l′étude de la céramique,″ 131; Marzouk, ″Three Signed Specimens,″ 498.

[56]Scanlon, ″Some Mamluk Ceramic Shapes,″ is an extremely useful study in this respect, although many conclusions made about origins and stylistic parallels can be challenged.

Very few complete profiles were available and of those that were published (such as the whole vessels in the gallery of the Islamic Museum in Cairo) emphasis was placed on rare forms, ones slavishly imitative of metalware.[57] One is given an impression in the art historical literature that vessel forms were static. Scanlon′s preliminary study, made possible by a careful piecing together of copious sherd material from Fustat, indicates that a typology of sgraffito based on its constantly changing vessel form is possible. Therefore, while the high-footed hemispherical bowl and carinated ″chalice″ with high, straight walls are the most common forms, there is enough variety within those two groups to consider the possibility of continuity with the Ayyubid period and steady development of form within the Mamluk period.

Modern research on sgraffito has dealt less with typology and chronology, the building blocks of ceramic analysis, and more with the larger issues of trade and provenance. Several recent studies have focused on the roles played by eastern Mediterranean pottery imported through the port of Alexandria, although Fouquet and his contributions in this area are never acknowledged.[58] Another line of inquiry begins with laboratory analyses of fabric and glaze as methods of locating centers of manufacture.[59] In spite of the unquestionable usefulness of such studies, other crucial questions remain unanswered, such as the origins of the Mamluk sgraffito style, its specific dates of manufacture and use, the process and social significance of its development, and the reasons for its restricted distribution.

The typology developed in this paper goes beyond the stylistic analyses of Fouquet and Scanlon in two ways. First, it attempts to overcome the stratigraphic problems associated with Egyptian Mamluk sgraffito by developing a relative chronology for different phases of its development (an archaeological contribution). Second, it relates ceramic development to social, political, and economic challenges to the Mamluk establishment in the fourteenth century (a socio-historical contribution). Egyptian sgraffito underwent two distinct phases of development. I date Phase I sherds by their stratigraphic association with chronologically secure

François, ″Contributions à l′étude d′Alexandrie islamique: la céramique médiévale de Kom el-Dikka et Kom el-Nadoura,″ in *Alessandria e il Mondo Ellenistico-Romano* (Rome, 1995), 314–22, Pls. XLVI–XLVII. Scanlon, ″Some Mamluk Ceramic Shapes,″ highlights the influence of foreign sgraffito styles in Fustat.

[59]The methods of analysis are varied: chemical (included in Marzouk, ″Egyptian Sgraffito Ware″ and ʻAbd al-Rāziq, ″Le sgraffito de l′Égypte″) and petrographic (Mason and Keall, ″Petrography of Islamic Pottery″).

imports (where that is possible) and through stylistic comparisons with non-Egyptian sgraffito wares at archaeological sites outside Egypt. For Phase II I rely on datable elements of Mamluk metalwork that are adopted by potters in the fourteenth century. Most important in this regard are the shift from *naskhī* to *thulūth* script in inscriptions (roughly 1320s), the replacement of figural designs with epigraphic ones (1320s on), and the use of blazons (first used in metalwork during al-Nāṣir Muḥammad′s reign) and names in inscriptions that can be identified from inlaid brasses or historical sources.[60] My reliance on foreign and domestic stylistic criteria is necessitated by the absence of stratigraphic information that the archaeologist normally expects from excavated material.

PHASE I

The influence of the thirteenth-century Mediterranean sgraffitos on the Egyptian ceramic industry has long been recognized, although the emphasis has traditionally been on Byzantine-derivatives and Levantine Crusader (″al-Mina,″ Athlit, etc.) wares.[61] In recent years, the Cypriot connection has been cited as an important element in the emergence of Mamluk sgraffito (Fig. 6).[62] It is difficult to distinguish between the various regional styles of sgraffito in the eastern Mediterranean, thus the confusion in equating all eastern Mediterranean products with either al-Mina or Cyprus. Most archaeologists have focused their efforts on a single region and have acquired an intimate familiarity with one sgraffito group. My own fieldwork has covered three regions (Cyprus, Israel, and Egypt), and it is on the basis of intensive analysis of the Cypriot and Mamluk sgraffitos that I can make the following generalizations.

The great debt Mamluk sgraffito owes to its Cypriot counterpart is indicated by the earliest products of the local Ayyubid and Mamluk Phase I period. I have grouped them into the following categories.

1. Alexandrian Zeuxippus″—a coarsely potted ware in Nile alluvium. The exterior is left plain and rather unfinished, and the slip has a tendency to peel. There is no added color. The tondo designs cut in a wide, shallow sgraffito recall the deeply gouged designs of ″thirteenth-century Aegean wares″ and other Zeuxippus-derivative produced at coastal sites on Cyprus (see below). The most common design is the circle divided into two by double, curved lines in its center (Fig. 7). The complete vessel form is unknown (I have seen only heavy bases). It is found at Kom ed-Dikka in large numbers (some 15% of the Mamluk sgraffitos at the site) and more rarely at Fustat. An analogous

---

[60]These developments are conveniently summarized in Atıl, *Renaissance of Islam,* 50–53.

[61]Kubiak, ″Overseas Pottery Trade,″ 12–13, and idem, ″Crusaders′ Pottery.″

[62]Scanlon, ″Some Mamluk Ceramic Shapes.″

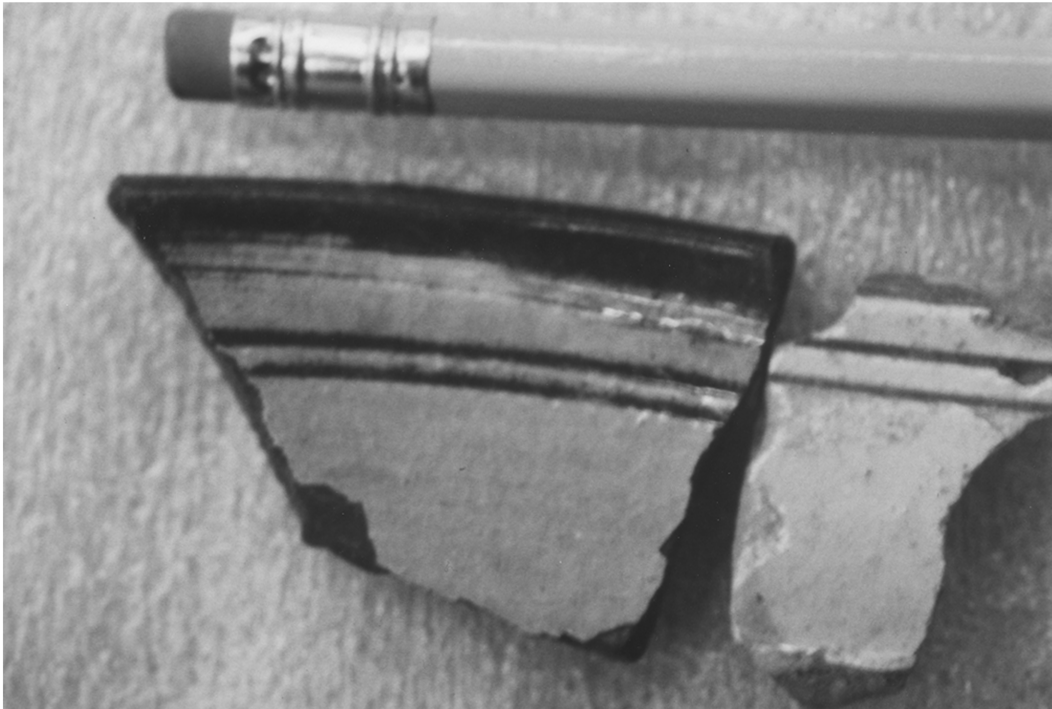

Figure 6. Egyptian (left) and Cypriot (right) sgraffito rim sherds compared

Figure 7. Alexandrian Zeuxippus, 13th century, Kom ed-Dikka, Ayyubid sgraffito ware

product found at Fustat, ″Fustat Zeuxippus,″ was probably derived from the Alexandrian ware. The tondo circle of ″Fustat Zeuxippus″ is bisected by three or more lines.

2. ″Wide Rim Arabesque″—This is a crucial ware typologically, because it bridges the transition between local derivates of eastern Mediterranean sgraffitos and the fully developed Mamluk ware of ″Phase II.″ It is the most finely potted of Egyptian sgraffitos, and its red fabric is well levigated. Most of the sherds are large, straight wall sections, so the original vessel form was probably the straight-walled, carinated chalice. This form is confirmed by a variant with lightly incised, doubly outlined floral designs on a scribbled ground. The fine, double outlines relate it to Zeuxippus-derivative wares. The exteriors of both styles are plain or very lightly glazed, but the interiors are covered with a slip and incised with a floral arabesque or Arabic inscription (both real and imitative) on a scribbled sgraffito background, designs which share both Phase I and Phase II characteristics. Yellow glaze (Fig. 8) is as common as the green glaze (Fig. 9). This group is found in Alexandria and Cairo. It represents approximately 6% of the Mamluk sgraffitos at Kom ed-Dikka (the Greco-Roman Museum collection).

The most prominent surface decoration is a wide inscriptional register, which is executed in a deep and wide incised line, often on a scrolled background. Such scrolling is not uncommon in Cypriot sgraffito, where the uprights of pseudo-Kufic are also repeated as part of a general rim design.[63] In ″Wide Rim Arabesque″ this inscriptional register is widened, occupying much of the vessel′s wall interior down to the carination. The inscriptions are either illegible or pseudo-calligraphic. One Egyptian potter, Sharaf al-Abawānī, has signed several examples of ″Wide Rim Arabesque″ that have parallels with Cypriot and Transcaucasian sgraffitos of the late thirteenth century.[64] In later stages of his work the scribbled ground disappears, but the inscriptional register is retained, including legible and formalized Arabic dedications to military dignitaries along with sultanic emblems and amiral blazons. This later style belongs to Phase II, or the ″military style,″ the one most readily recognized as Mamluk sgraffito by archaeologists working in Egypt.

Phase I products share a common repertoire of designs that have currency throughout the eastern Mediterranean in the thirteenth century: the six-pointed

---

[63]J. du Plat Taylor and A. H. S. Megaw, ″Cypriot Medieval Glazed Pottery,″ *Report of the Department of Antiquities of Cyprus* (1937–39): Pl. VII (14) and Pl. IX (3.15).

[64]Compare Bahgat and Massoul, *La céramique musulmane,* Pl. 50 (bottom center) with A. I. Dikigoropoulos and A. H. S. Megaw, ″Early Glazed Pottery from Polis,″ *Report of the Department of Antiquities of Cyprus* (1940–48): 77–93, Pls. VIII and IX. Also Bahgat and Massoul, *La céramique musulmane,* Pl. 50 (uppermost left) with R. L. Hobson, *A Guide to the Islamic Pottery of the Near East* (London, 1932), Pl. 13, Fig. 37.

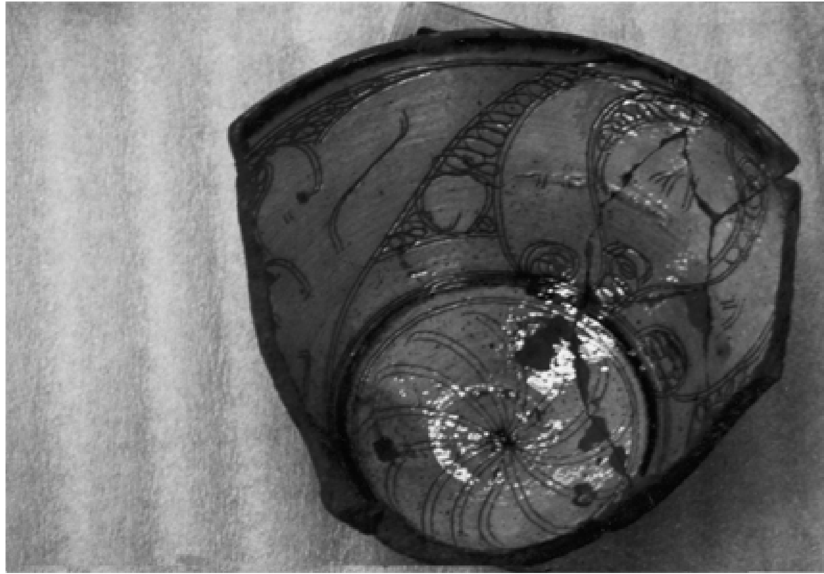

Figure 8. Yellow-glazed Wide Rim Arabesque, late 13th century, Fustat, Phase I Egyptian Mamluk sgraffito ware

Figure 9. Green-glazed Wide Rim Arabesque, late 13th century, Fustat, Phase I Egyptian Mamluk sgraffito ware

star tondo, registers of ″fat″ Kufic, pseudo Kufic inscriptions in the tondo, the scribbled sunburst, the ″Mamluk braid″ (also called a cable or S-motif), champlevé triangles and checkerboards, registers of crescents, textile-imitative fringes framing registers, pseudo-Arabic inscriptions, and proto-blazons (or ″sultanic devices″) and ″Norman shields″ in the tondos. A variety of designs and decorative techniques are adopted from Crusader and Anatolian wares, such as the ″al-Mina leaf″ pattern, the double-incised rim, and champlevé guilloches and sunbursts.

These late Ayyubid and early Mamluk sgraffitos are usually found in stratigraphic association with ceramic imports from throughout the eastern Mediterranean. Although previous scholarship has emphasized the presence of Levantine Crusader imports (al-Mina wares) in Alexandria, Cypriot pottery was, in fact, imported in significantly larger numbers.[65] The majority of all ceramic imports at Kom ed-Dikka, roughly 40-50%, are clearly identifiable as Cypriot; Byzantine, Byzantine-derivative, and Crusader wares are the minority. Several groups of Cypriot imports are represented in Alexandria; Groups III (west and southwest coast products) and IV (produced throughout Cyprus) are dominant (Fig. 10).[66] Of other Byzantine-style wares, Zeuxippus ware dominates, followed by Levantine Crusader and Megaw′s ″thirteenth-century Aegean.″[67] At the salvage

---

[65]See Kubiak, ″Overseas Pottery Trade″ and idem, ″Crusaders′ Pottery″ for interpretation of ″al-Mina″ imports at Kom ed-Dikka and Fustat.

[66]The Cypriot typology refers to categories and a relative chronology established by A. H. S. Megaw in the 1930s, based on stylistic analysis (du Plat Taylor and Megaw, ″Cypriot Medieval Glazed Pottery,″ 1–13). His ″groups″ are still valid among archaeologists working on the island today. Excavation of well-stratified sites and church cemeteries, both with coins, have verified many of Megaw′s dates (D. Papanikola-Bakirtzis, ″Ξρονολογημενη Κεραμεικη 14ου Αιωνα απο την Παφο,″ *Report of the Department of Antiquities of Cyprus* [1988]: 245–48; J. du Plat Taylor, ″Medieval Graves in Cyprus,″ *Ars Islamica* 5 [1935]: 56–86). Groups III and IV are dated to the late thirteenth and early-mid fourteenth centuries, respectively. The kind of Group III Cypriot sgraffito bowls found in Egypt tend to be typical products of the Lemba and Paphos kilns (verified by petrographic analysis—Walker, ″The Ceramic Correlates of Decline,″ 175–76); Group IV imports are, for the most part, Polis products.

[67]For technical definitions of Zeuxippus and thirteenth-century Aegean ware, se Ch. 3 of Walker, ″The Ceramic Correlates of Decline.″ For Megaw′s intuitive discussion of both wares and their relationship to Cypriot sgraffito, see A. H. S. Megaw, ″Zeuxippus Ware,″ *British School at Athens* 63 (1968): 67–88 and idem, ″An Early Thirteenth-Century Aegean Glazed Ware,″ in *Studies in Memory of David Talbot Rice,* ed. G. Robertson and G. Henderson (Edinburgh, 1975), 34–54. For regional varieties of Zeuxippus ware, see P. Armstrong, ″Zeuxippus Derivative Bowls from Sparta,″ in *Φιλολακων: Lakonian Studies in Honour of Hector Catling,* ed. J. M. Sanders (Athens, 1992), 1–9. For additional studies of Aegean ware and its distribution, consult G. Philotheou and M. Michailidou, ″Plats byzantins provenant d′une épave près de Castellorizo,″ in *Recherches sur la céramique byzantine,* ed. V. Deroche and J.-M. Spieser (Athens, 1989), 173–76, and idem, ″Βυζαντινα Πινακια απο το Φορτιο Ναυαγισμενου Πλοιου Κοντα στο Καστελλοριζο,″

Figure 10. Group III Cypriot sgraffito import from Prastion-Paphos, found at Fustat, 13th century

excavations of Kom al-Nadoura, also in Alexandria, Cypriot ″bird bowls″ and ″wedding bowls″ were rare finds.[68] What is interesting about this distribution of ceramic types is that not only are Levantine imports rare, but so are the highest-quality groups of Cypriot sgraffito. The most common type of sgraffito import at Kom ed-Dikka belongs to Megaw′s Group II and is of very poor quality (roughly incised, often overfired). The picture is similar to Fustat, where 28% of the imports are clearly Cypriot, and of the Cypriot wares an equal number were of the ″Lemba III″ and ″Polis IV″ varieties.[69]

PHASE II (SEE FIG. 5)

War, plague, and a change of economic fortunes took their toll on the city of Alexandria in the fourteenth and fifteenth centuries. The native craft industries, including ceramic production, went into decline. At some early point in the fourteenth century the ″Alexandria school″ of sgraffito was abandoned. The absence at Kom ed-Dikka of vessels with fully developed dedicatory inscriptions, true blazons, or imitations of the *thulūth* script indicates that the ″Fustat school″ took over the Alexandrian market sometime before the 1320s and even as early as 1290.[70]

The supposed ″hiatus″ in ceramic production in Fustat during much of the thirteenth century has often been attributed to the burning of the city by Shāwar in 1168. According to Kubiak, the *kharāb* (ruins) of Fustat were the result of the abandonment of the eastern and southern parts of the city after the famine and plague of 1066–72, but in the thirteenth century Fustat (those areas still occupied) was fully functioning socially and industrially.[71] There does seem to have been a

Loucas, ″Les plats Byzantines à glaçure inédits d′une collection privée de Bruxelles,″ in Deroche and Spieser, *Recherches sur la céramique byzantine*, 177–83.

[68]François, ″Contribution à l′étude d′Alexandrie islamique,″ 316, and personal communication.

[69]The attribution of one complete ″Lapithos IV″ bowl in the ROM study collection (inv. # 909.25.46) to Fustat, on the basis of the art dealer′s reports of 1909, can be rejected. The excellent preservation of this vessel is not in keeping with the fragments normally recovered from the Fustat mounds. Moreover, this particular group of Cypriot sgraffito was particularly popular for medieval burials on Cyprus. It is unfortunate that the looting of church cemeteries of their grave goods provided the international antiquities market with vessels of this sort.

[70]In metalwork large inscriptions in *thulūth* and heraldic blazons replaced figural decoration and the *naskhī* script after the 1320s (Atıl, *Renaissance of Islam,* 50–51). The first blazon of office has been located on two candlesticks of Zayn al-Dīn Kitbughā while he was still amir; it was made around 1290 (Atıl, *Renaissance of Islam,* 52 and 64–65, cat. #15–#16).

[71]W. B. Kubiak, ″The Burning of Misr al-Fustat in 1168: A Reconsideration of Historical Evidence,″ *Africana Bulletin* 25 (1976): 51–64.

reduction in the production of luxury ceramics after the Fatimid period,[72] but the kilns themselves were still operative in the thirteenth century. Thirteenth-century sgraffito styles such as "Fustat Zeuxippus" and "Wide Rim Arabesque" are proof of the activity of Fustat's kilns in the period of the "hiatus."

Ceramic production at Fustat came into full swing in the fourteenth century, as is evidenced by the extensive "sherd mounds" excavated by the American Research Center in Egypt.[73] The sgraffito style associated with the Fustat kilns in this period (Phase II—the "military style") is characterized by formulaic Arabic inscriptions dedicating the vessel to a military dignitary (usually an amir) and the extensive use of amiral blazons within these inscriptional wall registers and in the tondos. Occasionally contemporary designs from other Mamluk wares are imitated. The most important influence, though, comes from contemporary metalwork. The shapes (basins, tray stands), designs (woven bands, the "Y-fret," animal friezes), and color scheme (yellow glaze as brass, white slip as silver inlays) of silver-inlaid brasses are reproduced in sgraffito.

"Military style" vessels were commissioned primarily by amirs and mass-produced for the general public, who had developed a taste for the vessels they had seen displayed at official banquets and at amiral palaces. It was an extremely popular style, probably because it was an effective but less costly alternative to inlaid brasses. Vessels were distributed throughout Egypt but not outside her borders.

Phase II should be roughly dated from 1290 to the late fourteenth century. Phase II sgraffito imitates many of the changes in metalwork of the 1290s–1320s in terms of script, inscriptions, and heraldic blazons. The style apparently petered out by the end of the fourteenth century. Atıl cites the absence of the compound blazons of Burji officers as evidence that the "military style" had passed out of fashion by the fifteenth century.[74] The absence from sgraffito inscriptions of the names of Burji officers or Mamluk sultans of the fifteenth century, in addition to the title *khwājah* (for civilian patrons) that appears in this period, further supports the fourteenth-century chronology.[75]

Not only in decoration but also in form does Phase II sgraffito continue the long development begun in the thirteenth century with eastern Mediterranean sgraffitos and Ayyubid lusterwares (Fig. 11). The hemispherical bowl changes little from the thirteenth century to the fourteenth. It is the carinated profile that is

transformed. The ″classic Mamluk chalice″ usually associated with military inscriptions and blazons in Cairo is not a static form but is remarkable for its variety.

Summary of Typology

In summary, Egyptian sgraffito developed in two distinct stages in the Mamluk period, each related to special social and economic circumstances of the late thirteenth and fourteenth centuries. The first phase is chronologically earlier because it shares so many traits with Cyprus′ Group III and some Group IV sgraffitos. The second phase is later and recalls Islamic inlaid metalwork covered with military inscriptions. Some decorative designs of Egyptian sgraffito shared with Cypriot sgraffito include wall registers interrupted by generic shield blazons and the placement of heraldic devices in the tondo circle and on the wall.[76] This use of heraldic devices is also found in Anatolian sgraffito of the thirteenth century and may well have had some currency throughout the eastern Mediterranean.[77]

The following summarizes a preliminary relative chronology for the Mamluk sgraffitos that is based on the data available at present.

Ayyubid (1200–1250): influence from Zeuxippus and other Byzantine-derivative wares (like ″Thirteenth-century Aegean″). Groups include ″Alexandrian Zeuxippus,″ ″Fustat Zeuxippus,″ and tondos circles with the radial design.

PHASE I Mamluk: 1250–1300: strong Cypriot influence. Groups include ″Wide Rim Arabesque,″ green-glazed wares, poorly incised inscriptions in *naskhī,* fake or practically illiterate inscriptions for decorative value, green and brown stains, generic symbols of authority used outside of Egypt (like the rosette, the lion, and the double-headed eagle), and pseudo-blazons or ″Norman shields.″

PHASE II Mamluk: fourteenth century: less Mediterranean influence and more emphasis on eastern Islamic art (the ″Mosul″ metalwork style). Characteristics include the mature, classic profile of the Mamluk chalice, formalized military inscriptions and blazons, slip-painted relief inscriptions outlined in sgraffito, the absence (or rarity) of staining, biographically identifiable amirs, and careful

imitations of metalware shapes (candlesticks, inlaid basins, stands). Mass-produced vessels carrying generic dedications and decorative blazons can be considered the latest phase.

By the end of the Ayyubid period, eastern Mediterranean imports (most importantly Cypriot sgraffito) exerted a stylistic and technical influence on Egyptian potters, who adapted such elements as scribbled inscriptional registers, shield devices, the beveled rim and upturned ringfoot, and the use of brown and green stains to designs that appealed to the military elite. The steady development in design from ″scribbled sgraffito″ to ″Wide Rim Arabesque″ and then to the Phase II ″military style″ was paralleled by the accentuation of the Zeuxippus carinated profile, resulting in the ″classic Mamluk chalice″ form. Additional evidence for continuity in Mamluk sgraffito is found in the work of Sharaf al-Abawānī, an Egyptian potter usually associated with the reign of al-Nāṣir Muḥammad. His signature is found on both Phase I and Phase II products. It is possible to trace the maturation of his style from the thirteenth century, when he continues the practices of Cypriot and other Mediterranean potters, to the fourteenth century, at which time he adopts the militarizing style of other Mamluk arts.[78]

Historical Backdrop of Ceramic Development in Egypt

Why is Cypriot influence so marked in Egypt and why at this period? A comparison with Cypriot exports to the Crusader Levant is informative. At Acre, Cypriot sgraffito and slip-painted wares (Groups I–III) are represented in high numbers (8% at coastal sites and 24% inland), although at coastal locations proto-majolica and Crusader Levantine wares (″al-Mina″) predominate.[79] Coastal distribution of Cypriot ceramic imports (Groups Ic/X, II, and III) is, in fact, characteristic of the Crusader States.[80] The pattern of Cypriot sgraffito imports in Egypt differs, however, from that in the Levant in two important ways. First, while the overall percentages are much lower in comparison to local products (3% of all sgraffito at Kom ed-Dikka and far below 1% at Fustat), Cypriot sgraffito far outnumbers any other ceramic import. This may indicate a difference in consumption patterns: the mercantile communities of the coastal Levant relied on both imported and domestic pottery, while Egyptian residents were largely satisfied by the local market. Second, the Cypriot groups represented in Egypt (Groups III–V) are chronologically later

[78]The development of his style is more fully described below.

[79]E. Stern, ″Exports to the Latin East of Cypriot Manufactured Glazed Pottery in the 12th–13th Century,″ in *Cyprus and the Crusades,* ed. N. Coureas and J. Riley-Smith (Nicosia, 1995), 335, Fig. 5.

[80]Pringle, ″Pottery as Evidence for Trade,″ Fig. 2.

than those in the Levant (Groups I–III). Mamluk destruction of the Crusader strongholds in the Levant is the obvious factor in the absence of these later Cypriot styles at Acre and other sites.

The high visibility of Cypriot imports at coastal sites is a characteristic shared by both the Levant and Egypt. Thus, one factor that contributes to the location of imports and the period of the importation is the foreign mercantile community. The influence of Cypriot sgraffito imports on the early development of Mamluk sgraffito is intimately connected to the history of the mercantile communities in Alexandria. The imposing presence of Cypriot pottery in thirteenth and fourteenth-century Alexandria is probably not due to the local residence of Cypriot merchants. The large numbers of Lemba III sgraffito (an estimated 44%), one of the poorest products of Cyprus′ kilns in this period, do not necessarily indicate a Cypriot community in the port city. They were, more likely, the tablewares of the international crews manning the ships coming from Cyprus. Many of the Cypriot ″imports,″ which are unexpectedly inconsistent in firing and general appearance, may not have been imported, as such, but belonged to the inhabitants of the foreign *funduq*s in Alexandria or were used as ballast in transport ships.

Cyprus had neither a consul nor a *funduq* in the city. The state of political tension between Cyprus and Egypt during the late thirteenth and early fourteenth century, the result of corsair activities generally encouraged by the Cypriots, did not make Cypriots welcome in Mamluk territory.[81] However, European merchants coming from Cypriot ports were able to establish residences and businesses in Alexandria. Venice, Genoa, Pisa, Marseilles, and the Catalans had permanent communities in the city.[82] Cypriot merchants who wanted to trade in Egypt generally leased the ships of these European states and hired their crews.[83] The demands of Peter de Lusignan in 1368 for the appointment of a consul, the establishment of a *funduq*, and customs exemptions in Alexandria for Cypriots underline the fact that European middlemen handled the bulk of the Cyprus-Egypt commerce in this period.[84]

The papal bulls prohibiting mercantile activity in Mamluk territories forced

clandestine trade through Cypriot ports. So, in spite of the state of ″cold war″ between Cyprus and Egypt, Cypriot pottery reached the shores of Egypt in large numbers. This is a useful lesson: one should not necessarily equate pottery with people. Cypriot pottery in Alexandria represents the local activities of Venetian merchants and other European businessmen, not the presence of Cypriots.

The changing status of Cyprus as the middleman in east-west trade in the second half of the fourteenth century had important consequences, not the least of which was the disappearance of Cypriot sgraffito in Egypt. This was, ironically, a catalyst for the further development of Mamluk sgraffito. A series of events contributed to this state of affairs. Peter I′s invasion of Alexandria in 1365, which left much of the city in ruins, marks the beginning of the city′s decline.[85] A series of plagues in the middle of the century drastically reduced the city′s population, forcing the temporary closure of the *Dār al-ṭirāz*, *Dār al-wikālah,* and the markets and customs houses. By the end of the century the city recovered, as the population recovered and the markets were able to reopen.[86]

The decline of the city of Alexandria did not render her port useless, however, and trade continued in spite of internal problems. The decline of Cyprus was a much more important factor in the transition in Egypt from Crusader-derivatives to the ″military style″ of Mamluk sgraffito. The Genoese wars of the 1370s and changing trade routes weakened the Lusignan dynasty and the Cypriot economy, in general, by the second half of the century. Moreover, relations with the Mamluks were strained until 1370, when a peace treaty was finally signed. A final factor that contributed to the marginalization of Cyprus in east-west trade was the damage done by earthquakes to the island′s major ports. The port at Paphos, from which merchant ships departed directly for Alexandria, was all but abandoned after the earthquake of 1222.[87] Limassol then took over its commercial traffic, but in the first half of the fourteenth century it, too, suffered a series of devastating earthquakes that rendered its port useless. With the Genoese in possession of Famagusta and its port from 1373 on, Cypriot control of dependable ports on the island was disrupted.

At the same time, events coincided to make the European merchants independent of Cypriot ports. The disintegration of the Il Khanid empire and Mamluk operations

[86]S. Labib, ″ al-Iskandariyya,″ *The Encyclopaedia of Islam,* 2nd ed., 4:134. Labib has estimated that 200–700 deaths were recorded on a daily basis from 1347 to 1350.

[87]R. Gertwagen, ″Maritime Activity Concerning the Ports and Harbours of Cyprus from the Late 12th to the 16th Centuries (1191–1571),″ in Coureas and Riley-Smith, *Cyprus and the Crusades,* 511–38.

against the southern coast of Anatolia in the mid fourteenth century forced European merchants to look for ports of call further south in the Mediterranean. Venice began its annual, direct service to Alexandria in 1345. The visits were more regular than during the papal prohibitions, and they bypassed Cyprus altogether.[88] Therefore, by mid-century regular traffic between the Cypriot ports and Alexandria was coming to an end.

The implications of the decline of Cypriot ports and Alexandria for the further development of Mamluk sgraffito are two-fold. First, by the middle of the fourteenth century contact between Alexandria and Cyprus was less regular. By avoiding Cypriot ports, Venice, among the other mercantile states, had no occasion to bring Cypriot pottery to Egyptian shores.[89] Second, the concurrent decline of Alexandria negatively affected several crafts, including the city's textile industry. Whether the gradual impoverishment of the city contributed to the decline of the local kilns and the expansion of a ceramic market based in Cairo, the country's political and military center, cannot be substantiated at this point. The notion, however, does explain the shift from a ceramic industry based on the tastes of well-traveled merchants in Alexandria (eastern Mediterranean influence) to one that catered to the military elite of Cairo ("military wares"). A transition in style such as this indicates a shift in patronage, one that could have been facilitated by the waning influence of Alexandria.

The most important development in Mamluk sgraffito, the transition from Phase I to Phase II, can be attributed, in part, to Egypt's political isolation from Cyprus. When Cypriot sgraffito was no longer available locally, Egyptian potters no longer imitated its styles. They began to rely, instead, on indigenous art forms. If Phase I Mamluk sgraffito adopted characteristics of thirteenth- and fourteenth-century Cypriot sgraffito, Phase II was imitative of fourteenth-century Islamic metalwork. The transition was a gradual one. The following three sections serve to document the continuity from the Cypriot-influenced style to the mature Mamluk style with formal military inscriptions and amiral blazons.

The Social Significance of Egyptian Sgraffito

Production

I. Cairo's ceramic market

---

[88]Lapidus, *Muslim Cities,* 24; Müller-Wiener, *Eine Stadtgeschichte,* 66.

[89]A sharp increase in the numbers of Venetian pottery in Alexandria in the second half of the fourteenth century would verify this hypothesis. The latest deposits at Kom ed-Dikka are slightly earlier than this, so such statistics from this site are unavailable. Full publication of the ceramic finds from Kom el-Nadoura may provide this information (see preliminary study in François, "Contribution à l'étude d'Alexandrie islamique").

Phase II sgraffito ware imitated more expensive vessels of brass or bronze inlaid with gold and silver. The metal prototypes were produced for the military elite, as their dedicatory inscriptions indicate. The decorative inscriptions of the less expensive earthenware, on the other hand, was a convenient avenue for the nouveaux riches to express their newly acquired status. While the objects and inscriptions alone illustrate this pattern of patronage, they reveal little by themselves about production or marketing. Archaeological excavations, potters′ signatures, and a reading of contemporary Arabic sources do provide information, however limited, about the ceramic market in Mamluk Cairo.

What is Cairo today consisted of two cities in the medieval period: al-Qāhirah and Fustat. The economic health of medieval Cairo depended, in part, on the dynamic relationship between the marketplaces of those two cities. Their markets, although distinct and independent, overlapped to some degree. Most (but not all) of the official or semi-official centers of manufacture, trade, and sale in the Mamluk period were located in al-Qāhirah, close to the palaces of the amirs.[90] The Fustat markets, on the other hand, consisted of small, privately-owned businesses, managed with little interference from the state, and organized by an informal ″guild″ system or ″craft group.″[91]

There has been much debate about the character of Islamic guilds and the way they compare or contrast with the sophisticated guild system of medieval Europe.[92] Guilds in Europe were formed voluntarily by the artisans to protect their economic interests. By contrast, the ″guilds″ of medieval Egypt were created by the state to facilitate tax collection and urban policing and to stop fraud.[93] The state delegated these responsibilities to market inspectors (*muḥtasib*s), who were appointed to collect market taxes, ensure quality of merchandise, control prices and coinage,

---

[90]The concentration of Mamluk and Ottoman *wakālah*s and *khān*s off of the Qasabah between Bāb al-Futūḥ and Bāb Zuwaylah is illustrated on Map 9 (p. 330) and Map 10 (p. 331) in R. B. Parker, B. Sabin, and C. Williams, *Islamic Monuments: a Practical Guide* (Cairo, 1988).

[91]The art historian Irwin argues that formal guilds in the European sense (called *asnab* in later sources) did not exist in Egypt before the Ottoman period. For an overview of the history of the guild structure in Islam, see R. Irwin, *Islamic Art in Context: Art, Architecture, and the Literary World* (N.Y., 1997), 138.

[92]ʻA. M. Rezq, ″The Craftsmen of Muslim Egypt and Their Social and Military Rank During the Medieval Period,″ *Islamic Archaeological Studies* 3 (1988): 4–5, and Lapidus, *Muslim Cities,* 97–105. Lapidus′ bibliography on European and Islamic guilds is worth consulting.

[93]The state imposed the guild system on local craftsmen as a way of controlling the economy of the private sector. This arrangement even penetrated the amiral-run establishments. According to al-Maqrīzī, the workshop space in the textile market belonging to one Amīr al-Juyūsh was organized according to guilds (W. ʻIzzi, ″Objects Bearing the Name of an-Nasir Muhammad and His Successors,″ in *Colloque International sur l′Histoire du* Caire, ed. A. Raymond, M. Rogers, and M. Wahba [Cairo, 1972], 235).

and maintain moral standards.[94] The *muḥtasib,* in turn, selected representatives from among the craftsmen (*'ārif*s) to assist him in these tasks. The functional equivalent of the *'ārif* among the merchants was the *shaykh,*[95] a term also applied to the head of a craft workshop, as the potter's signature "*Shaykh al-Ṣinā'ah*" indicates. That Egyptian craftsmen routinely signed their work is, to use Lapidus' words, "a sign of pride and individuality out of keeping with the guild spirit as we know it for the West."[96]

The Arabic sources have little to say about the ceramics industry of Mamluk Cairo in any detail, however some generalizations can be made. Most of the pottery made for both local consumption and export was produced in Fustat. Ceramics, along with glass, metal smelting, and soap making, were mainstays of Fustat's economy.[97] The American and French excavations of Fustat have produced a large quantity of ceramic material, including wasters and kilns, providing archaeological evidence for a vibrant ceramics industry in the city.[98] Mamluk sgraffito, found in abundance during the excavations, was, apparently, a specialty of the Fustat kilns and had a strong popular appeal. However, neither the local production nor import-export of pottery in the Mamluk period was so lucrative a business that it attracted the interest of the state. [99] Thus, there is no evidence for a state monopoly on pottery manufacture or the inclusion of potters within amiral or sultanic *wakālah*s and only sporadic references to the industry in contemporary written sources.

While the majority of the Fustat kilns were small, the large number of signed vessels in this period attests to some degree of industrial-scale production. For example, roughly one hundred underglaze-painted vessels alone can be attributed to the potter who signed his name "Ghaybī."[100] This, compared with the twenty known vessels signed by the earlier Fatimid artist "Muslim"[101] (a prolific potter in

[96]Ibid., 276, n. 47.

[97]'A. Rezq, "Crafts and Industries in Medieval Egypt and Their Role in Building the Social Structure of its Main Urban Centers," *Islamic Archaeological Studies* 4 (1991): 72.

[98]See especially Bahgat, "Les fouilles de Foustât." For a comprehensive list of publications related to modern excavations at Fustat, see B. J. Walker, "New Approaches to Working with Old Maps."

[99]In his recent review of the contemporary Arabic sources touching on this industry, Marcus Milwright concludes that pottery was generally of little interest to historians of the day and not as highly valued by Egyptian and Syrian consumers as other goods (M. Milwright, "Pottery in the Written Sources of the Ayyubid-Mamluk Period [c. 567–923/1171–1517]," *Bulletin of the School of Oriental and African Studies* 62 no. 3 [1999]: 504–18).

[100]Abel, "Un maître céramiste," 149.

[101]M. Jenkins, "Muslim, an Early Fatimid Ceramist," *Bulletin of the Metropolitan Museum of Art*

his own day), illustrates to what degree ceramic production had grown by the Mamluk period. The most prolific of Mamluk potters, Sharaf al-Abawānī, seems to have specialized in the production of sgraffito wares. It is difficult to make an estimate of the scale of his workshop's output. Much of the material that bears his signature is fragmentary and inaccessible.[102] The few publications of his work are based, for the most part, on the whole vessels on display at the Islamic Museum or random sherds from small excavations in Cairo and Alexandria and do not reflect the impressive extent of his production. [103] Nonetheless, the quantity of excavated sherds from Mamluk sites far surpasses that for any other period of Muslim Egypt's history.

Regardless of the quality of the individual vessel, glazed pottery (such as underglaze-painted, luster, and sgraffito wares) was time-consuming and expensive to produce. The application of the slip, the incision, the glazing, and additional slip-painted designs were stages in the manufacturing process that, in spite of the number of firings, added to the production time.[104] Even the most simple and quickly executed designs were produced in this manner. The sheer volume of sgraffito fragments recovered from Mamluk deposits in Egypt is one indication of the extensive activity of these workshops. It is significant that the long process of manufacture did not prevent mass-production of such wares by the ceramic shops.

No single workshop monopolized sgraffito production either through special order or for the general market. The multiplicity of potter's signatures supports this notion and so do scattered references to ceramic kilns in the Arabic sources. The historian Ibn Duqmāq merely mentions the locations of *fakhkhūrah,* that is groups of ceramic kilns, and their owners.[105] His brief notes are important, because they indicate that individual potters routinely managed multiple kilns and that these kiln groups were scattered throughout the city. Although Ibn Duqmāq names several of the kiln owners, none of the names corresponds to the potters' signatures inscribed on sgraffito ware. The historian does not specify the products of the kilns, but it is probable that they did not specialize in sgraffito and sold, instead,

---

26 (1986): 363.

[102]Large cases of the ceramic material from the Fustat mounds are stored in the Islamic Museum in Cairo, where much of it is uncataloged, difficult to access, and largely unstudied. My own work is based on the sherds and complete vessels in the gallery and the museum's small study collection.

[103]Marzouk, "Three Signed Specimens" (3 sherds); ʻAbd al-Rāziq, "Le sgraffito de l'Égypte," 1–23, Pls. 1–8 (2 sherds); idem, "Documents sur la poterie" (3 complete vessels and 7 fragments). Bahgat and Massoul, *La céramique musulmane,* do not estimate the number of sherds carrying this potter's name from their excavations at Fustat.

[104]In some cases, sgraffitos may have been fired twice (Décobert and Gayraud, "Une céramique d'époque mamelouke trouvée à Tod," 98, n. 1).

ordinary, unglazed table and kitchenwares.[106]

Allusions to kiln specialization can be found in the Geniza documents, where terms used for particular kinds of potters are defined. For example, the *fakhkhār* (pl. *fakhkhūrī*) made architectural pipes from clay. The *qaddār* specialized in pots for export, the *kūzī* produced narrow-necked and spoutless water jugs, and the *ghadā'irī* made translucent dishes.[107] On the basis of this, Goitein concludes that "each type of vessel was made by a separate group of artisans."[108] Such a rich vocabulary also suggests that the average Cairene consumer was quite knowledgeable about pottery and could distinguish among the many products of an extensive and specialized urban market.[109] However, the kinds of pottery described in the Geniza documents are unglazed and industrial wares, not the glazed and signed vessels excavated at Fustat.

References to pottery in the chronicles and administrative manuals are more problematic. The difficulty with these texts rests in the ambiguous ceramics terms that are used intermittently in the narratives. Various attempts by scholars to define these terms have had some limited success.[110] Many of the terms refer to vessel shapes and fabric composition, which are the most important criteria in determining ceramic typology. In the Arabic chronicles, *aṭbāq* (serving trays), *suḥūn* (dishes), *awānī* (vessels), and *mā'idah* (table or large tray) were inclusive terms that correspond to a variety of vessel types based on broad categories of shape and function.[111] Occasionally, the medieval author offers additional information about the vessel, such as its composition (gold, silver porcelain/earthenware), relative size, and function (for serving meat, for drinking flavored refreshments), especially when he is describing an important affair, like an official banquet *(simāṭ)*. These descriptions, however, are short and inconsistent in the details they provide. The chroniclers were not as interested in the serving vessels or even the food served on these occasions as in the expense of the affair and the guest list.[112] The shape and decoration (if any) of the serving and drinking

[106]For a definition of *fakhkhūrah,* see below.

[107]S. D. Goitein, *A Mediterranean Society,* (Los Angeles, 1967–93), 1:110.

[108]Ibid., 111.

[109]The same is true for textiles. The Geniza texts reveal a language replete with terms to describe raw materials, colors, cuts, and technologies of weaving and embroidery.

[110]Goitein, *A Mediterranean Society,* 1:110–11; Bahgat and Massoul, *La céramique musulmane,* 4–7.

[111]The definitions I have provided are based on the way al-Qalqashandī uses the terms in his description of banquet ceremonial (Shihāb al-Dīn Aḥmad al-Qalqashandī, *Kitāb Ṣubḥ al-A'shá* [Cairo, 1963]).

[112]Al-Qalqashandī's descriptions of court banquets held on the two *'īd*s is more informative than those al-Maqrīzī includes in his *Khiṭaṭ*. See especially *Ṣubḥ al-A'shá,* 3:523–24, as described

vessels used at banquets cannot be reconstructed from these chronicle entries alone.

Vessel shapes are not the only criteria by which we can determine workshop specialization in the medieval sources. *Khazaf* and *ṣīnī*, for example, refer to fabric composition. They are problematic terms. *Ṣīnī* ("in Chinese style") literally refers to porcelain; *khazaf* has until today retained its traditional meaning of ordinary pottery, or earthenware. The differentiation between the two materials may not have been so clear-cut, though, to authors like al-Maqrīzī and al-Nuwayrī. The two terms are used almost interchangeably in the texts.[113] *Zabdīyah* (plates or platters) are usually described as *"ṣīnī"*;[114] expensive grilled lamb and sweet chicken were served in *suḥūn khazafīyah* (clay tableware/dishes).[115] The textual association of earthenware with Chinese porcelain may indicate that a fine, glazed earthenware, rather than true porcelain, was intended.[116] It is likely that these were underglaze-painted earthenwares (the local imitations of Ming blue-and-white porcelains), although the texts are not specific on this point.

A third source of information on the products of medieval ceramic kilns, in addition to the Geniza documents and the Arabic chronicles, are the *ḥisbah* manuals. These were written for the market inspectors (*muḥtasib*s) and provide invaluable information on prices, quality, and market terminology from the twelfth century and throughout the Mamluk period.[117] One Mamluk manual, *Maʿālim al-Qurbah fī Aḥkām al-Ḥisbah,* is of particular importance for its contribution to our knowledge about ceramic specialization. The author, who is known as Ibn al-Ukhūwah (d. 1329), was an Egyptian *muḥtasib* and a contemporary of al-Nāṣir Muḥammad.[118] Ibn al-Ukhūwah devotes two chapters (chs. 55 and 56) to the sellers of earthenware and waterpots *(fī al-ḥisbah ʿalá bāʿati qudūri al-khazafī wa-al-kizānī)* and clay merchants and molders *(fī al-ḥisbah ʿalá al-fākhīrānīn wa-al-ghaddārīn),* respectively.[119] In spite of their brevity, these two entries are informative. The author differentiates between two kinds of ceramic products: unglazed cooking pots and small jugs and glazed wares of a finer quality clay. In the first entry (ch. 55) the guidelines are addressed to those who sell common, unglazed wares. The

[119]Ibid., 222–23.

merchants themselves may have been the potters, because they are advised not to sell broken vessels plastered in such a way that they appear whole.[120]

The second entry (ch. 56) is particularly interesting for its data on raw materials. In this section, Ibn al-Ukhūwah specifies the market standards for ceramic kilns and deals with such issues as the proper dung to fire kilns and the composition of clays and colored glazes. He distinguishes between potters *(fākhīrānīn)* and clay merchants *(bāʿatu al-ghaddārī);* it is significant that fine clay could be sold separately from the finished product. The term used for this fine clay *(ghadar)* has been translated by Levy as ″porcelain clay,″ but Goitein′s ″finely glazed earthenware″ seems more suitable.[121] Furthermore, Levy′s ″porcelain vase″ *(zabādī),* described in the text as produced from either crushed pebbles or sand,[122] is likely a local imitation of porcelain made of the friable Egyptian and Syrian stonepastes usually associated with Mamluk underglaze-painted ware.[123] The author refers to the raw materials acceptable in the production of blue, green, and manganese coloring.[124] There is little doubt that underglaze-painted ware is what is being described here, rather than sgraffito. In fact, there are no specific references to sgraffito ware in Ibn al-Ukhūwah′s text.

The potters of medieval Cairo specialized in a variety of earthenware tablewares and accessories. It is difficult to determine, however, exactly how this market specialization operated, because of the ambiguity of the ceramic terms used in the Arabic sources. The sources provide little detailed information on vessel shape and have nothing to say about cost of manufacture or prices paid for special orders. Furthermore, neither the Arab historians nor the authors of the documents in the Ben Ezra geniza specifically address the production, marketing, and use of sgraffito wares. In fact, there seems to be no Arabic term that we can identify with sgraffito.[125]

What may at first appear to be an oversight on the part of the historians may, rather, reflect a significant characteristic of the sgraffito manufacturing process. The patterns of some Phase I Egyptian sgraffito resemble the radial designs of underglaze-painted ware produced in the Bahri Mamluk period and they may

[124]Ibn al-Ukhūwah, *Maʿālim al-Qurbah,* 89 (l. 6) and 223 (ll. 5–6).

[125]There is no standard term in modern Arabic for ″sgraffito.″ *Maḥfūr* (dug or carved) is often used today in Egypt for both sgraffito and champlevé.

have been fired together in the same kilns.[126] According to medieval sources, unglazed wares were made and sold separately from glazed wares. Furthermore, the production of glazed pottery was specialized, and a wide variety of function-specific types were available to the general populace. It is possible that most, if not all, of these glazed wares were produced in the same workshops. That there was no term for ″sgraffito″ (otherwise known as ″incised and slipped pottery″) in Mamluk Egypt may indicate that most workshops did not specialize in sgraffito manufacture. In this scenario, sgraffito would have been produced by the same potters that made underglaze-painted wares and fired them in the same kilns. The range of potters′ signatures and their products supports this argument. The names of Ghaybī, al-Ustādh al-Maṣrī, Ghāzī, and Shaykh al-Ṣināʻah are inscribed on both sgraffito and underglaze-painted wares.[127]

Potters′ workshops were organized by the state-imposed guild structure outlined earlier.[128] The workshops that constituted these proto-guilds were organized internally according to a hierarchy of offices, some of which were by state appointment while others were earned through artisanal proficiency. The shaykh and his assistant in the provinces, the *nāqib,* were selected by the state. They acted on behalf of the workshops in dealings with the state, oversaw their daily activities, and resolved problems among craftsmen. Another supervisory officer, the *ustādh,* assisted the *nāqib*. Among the regular craftsmen, the *muʻallim* (master craftsman) occupied an important position within the workshop. He was responsible for the management of the kiln and training new apprentices.

The word *muʻallim* was inscribed on many objects and buildings in Cairo.[129] It may have been common practice for guild and workshop directors to sign their works. It is this custom which is reflected in the potters′ signatures. Signatures such as *al-Ustādh al-Maṣrī* (the Egyptian ″master,″ or supervisor), *Shaykh al-Ṣināʻah* (workshop director), and *al-Muʻallim* (the master craftsman) are titles that correspond to rank within the workshop or guild and are not names or nicknames in and of themselves.

It is also possible that the apprentices of the master craftsmen signed their works with the titles of their teachers. There is precedence for this practice in the

[126]When going through boxes of sherds in Cairo, Alexandria, and Toronto, I found many sgraffitos with spots of blue glaze adhering to the exterior, the result of simultaneous firing with blue-stained, underglaze-painted pottery.

[127]ʻAbd al-Rāziq, ″Documents sur la poterie,″ 4; M. A. Abel, *Gaibi et les grands faïenciers égyptiens*, 142–43; and idem, ″Un maître céramiste.″ Of course, the workshop of Sharaf al-Abawānī is an obvious exception. His signature has not been associated with underglaze-painted wares.

[128]Rezq, ″The Craftsmen of Muslim Egypt,″ 6.

[129]Ibid., 5–7.

Fatimid period: the lusterware artist Muslim sometimes countersigned the work of his students.[130] Apprenticeships seem to have been more important in the fourteenth century than in the fifteenth. For instance, the vessels signed by Sharaf al-Abawānī were produced over a long period of time, considering the long development of signature style, decorative program, and vessel shape. There is little doubt that this artist′s name came to be associated with quality sgraffitos, and no other name is as well known in the realm of ceramic objects with ″military″ inscriptions. Not only did his students continue to copy their master′s style(s) after his death,[131] but they may have adopted his signature as a brand name. This would account for the large number of vessels signed by him and the wide range of styles represented.

Potters′ signatures indicating either guild-workshop status or ethnicity are more a phenomenon of late fourteenth and fifteenth century underglaze-painted ware than of sgraffito.[132] Signatures are relatively rare on Bahri Mamluk ceramics; the series ascribed to Sharaf al-Abawānī and other isolated signatures[133] are some notable examples and most are associated with sgraffito. This, compared to the roughly thirty different signatures inscribed in the foot rings of Burji Mamluk underglaze-painted vessels,[134] suggests changes in ceramic production patterns. One impetus for the widespread use of potters′ signatures was porcelain imported from China.[135] The import of Ming blue-and-white porcelains bearing reign marks (painted in blue on the exterior base of the ring foot) may have initiated the practice of marking the foot ring of blue-and-white underglaze-painted bowls with two oval blue dots in fifteenth-century Egypt.[136]

[133]For instance, a single bowl in Kuwait signed by one ″Ḥannā,″ (ʻAbd al-Rāziq, ″La sgraffito de l'Ègypte,″ 4). The inscription is broken, however, and the author is unsure of the reading of the artist′s name. There are also references to work in sgraffito (?) by Ghaybī (Abel, ″Un maître céramiste,″ 143) and several signatures mentioned in ʻAbd al-Rāziq, ″Documents sur la poterie,″ 4. Unfortunately, the authors do not clarify whether their work was true sgraffito or a plain glazed earthenware.

[134]Atıl, *Renaissance of Islam,* 149.

[135]There have been many studies on the impact of Yuan and Ming imports on the development of Islamic underglaze-painted wares. Some of the more comprehensive ones include Peterson, ″Blue and White Imitation Pottery″; Atıl, *Renaissance of Islam,* 150–51; B. Gyllensvard, ″Recent Finds of Chinese Ceramics at Fustat (Parts 1 and 2),″ *Bulletin of the Museum of Far Eastern Antiquities* 45 (1973): 91–119 and 47 (1975): 93–117; and L. Golombek, R. B. Mason, and G. A. Bailey, *Tamerlane′s Tableware: A New Approach to the Chinoiserie Ceramics of Fifteenth- and Sixteenth-Century Iran* (Toronto, 1996).

[136]Chinese reign marks in porcelains began with the reign of Xuande, ca. 1426. For illustrations of the blue-dot mark in Mamluk pottery see Peterson, ″Blue and White Imitation Pottery,″ 79 (cat.

Whatever the stylistic origins, the need for including a workshop mark (as an inscribed signature or a painted dot) reflected general developments in the organization of production. Guild membership was originally restricted to skilled craftsmen. Only through lengthy apprenticeships could an inexperienced artisan gain a foothold in a respected and established workshop.[137] Whether the preponderance of signatures and marks in the fifteenth-century underglaze-painted wares corresponds to an expansion of the ceramic industry (which is unlikely) or a breakdown of the internal hierarchy of the workshops (and the abrogation or shortening of apprenticeships) cannot be determined. These factors, apparently, did not exist in the first half of the fourteenth century, when potters′ signatures were much less common. That only the signature of Sharaf al-Abawānī appears at all frequently in this period may indicate a smaller or more exclusive ceramics industry.

Lapidus reduces the Mamluk class structure to four components: the ruling elite *(al-khāṣṣah)* comprised of the sultan and his retinue and the highest ranking amirs and civil officials; the notables *(al-aʻyān),* that is the religious leaders (ulama) and low level officials, the rich merchants, distinguished local families, and skilled individuals (physicians, architects); the common people *(al-ʻāmmah);* and the lumpenproletarians.[138] The social status of potters in Mamluk society was nebulous. According to al-Maqrīzī, craftsmen, including potters, belonged to the sixth class of Egyptian society—collectively called *al-ʻāmmah* (commoners) or *al-ʻawāmm* (the masses).[139] To this class also belonged the taxpayers, retailers, and the working class in general.[140] Clearly, they were not among the elite of society. In today′s parlance, we would call them lower middle-class. However, certain trades enjoyed some respectability. Both al-Maqrīzī and Ibn ʻAbd al-Hādī (a market inspector) write about a social hierarchy of trades that reflects relative degrees of religiosity, cleanliness, and prosperity. Tailors, bakers, carpenters, and furriers were the most respectable trades; goldsmiths and silk merchants were moderately respectable; and slaves, singers, prostitutes, and garbagemen were social outcasts.[141]

[141]Ibid.; Rezq, ″The Craftsmen of Muslim Egypt,″ 4.

Pottery production was a moderately respectable profession and perhaps occupied the lower end of the scale, because the work dirtied the craftsman's hands. To equate an individual with the "potters in Fustat" was an insult.[142] That potters are seldom mentioned specifically in the Arabic sources also illustrates their relatively low status among "respectable" Cairenes. However, as in all the crafts, there was an opportunity for advancement within the workshop and some degree of social mobility. Skilled craftsmen were in demand and were held in some esteem. A master craftsman, for example, could be addressed as shaykh[143] and, with the assistance of an important or wealthy patron, could attain official positions in the government.[144] The career of Sharaf al-Abawānī may reflect this pattern; the work he did for amirs and judges gave him a practical monopoly on inscriptional sgraffito.

What effect the plague of 1348–49 had on the social status of craftsmen is difficult to ascertain. Crafts certainly went into decline, because both craftsmen and patrons perished. Al-Maqrīzī informs us that "most of the crafts ceased and it was difficult to find a water-carrier or any craftsman."[145] The decline and demise of sgraffito production in Egypt could, then, be related to the events of this year. The proliferation of potters' signatures on underglaze-painted wares of the late fourteenth and early fifteenth century may indicate that the social position of potters had improved in this period and that production was growing.

II. Potters' signatures—Sharaf al-Abawānī

It was relatively rare for medieval potters in the Islamic world to sign their work. With the exception of Iranian Seljuk[146] and Fatimid lusterware, only Mamluk sgraffito (fourteenth century) and underglaze-painted wares (late fourteenth-fifteenth centuries) were signed on a regular basis. The incorporation of the potter's name into the inscriptional design of Mamluk sgraffito is a complicated phenomenon that requires a reassessment of medieval Cairene "guild" structure and patterns of market and patronage. A precedence for such practice may have been set in the Fatimid period, with the work of the potter Muslim.

---

[142]Goitein, *A Mediterranean Society,* 1:91–92.

[143]Ibid.

[144]Lapidus, *Muslim Cities,* 129.

[145]*Kitāb al-Sulūk,* quoted in Rezq, "The Craftsmen of Muslim Egypt," 13.

[146]A. Caiger-Smith, *Lustre Pottery* (New York, 1985), 71, cites the signatures of two potters from Kashan, Abū Ṭāhir ibn Muḥammad and Abū Zayd. There are also isolated examples of signatures from earlier ceramic traditions, such as the "Aḥmad" that appears on one Samanid ware vessel from Nishapur (personal communication, Lisa Golombek). An example of a potters' signature from Anatolian sgraffito is published in Ö. Süslü, *Tasvirlere Göre Anadolu Selçuklu Kiyafetleri* (Ankara, 1989), Photo 149.

Various forms of the signature *'aml Muslim ibn al-Dahhān* ("the work of Muslim, the son of al-Dahhān") appear on some twenty known lusterware vessels of the Fatimid period.[147] Several of these are inscribed with the name of the patron, usually a member of Caliph al-Ḥākim's (r. 996–1021) court. Chronological attributions depend entirely on these dedicatory inscriptions. For example, Marilyn Jenkins has identified Ghaban, named as Commander-in-Chief in the inscription on one plate in the Islamic Museum in Cairo, as a military commander who served al-Ḥākim in 1011–13.[148] It is a very useful piece of information, because it narrows the production of Muslim to at least this two-year period. Likewise, the dedication of another plate in the Benaki Museum in Athens—which reads "[The work of] Muslim, son of al-Dahhān, to please . . . Ḥassān Iqbāl al-Ḥākimī"—can be attributed to the reign of al-Ḥākim on the basis of the *nisbah* "al-Ḥākimī," even if the particular individual is unknown from historical sources. The work of the Mamluk sgraffito artist Sharaf al-Abawānī can be dated in the same manner. The *nisbah* "al-Nāṣirī" in the dedicatory inscription identifies the patron as a mamluk of the sultan al-Nāṣir Muḥammad (r. 1293–94, 1299–1309, and 1310–41) or al-Nāṣir Ḥasan (r. 1347–51, 1354–61).

Many parallels can be drawn between the vessels signed by Muslim and those produced some three and four hundred years later by Mamluk ceramists. Muslim painted his signature in various locations on the vessel: in the foot (the name usually reduced to "Muslim"), on the exterior, within the interior wall registers, and in the bowl's well.[149] Likewise, abbreviated signatures are painted in the vessel foot of fourteenth- to fifteenth-century underglaze-painted ware. Sgraffito signatures of the fourteenth century were more ambitious: Sharaf al-Abawānī initially inscribed his signature upside-down in hidden areas of the decoration and, in a later phase of his work, incised and slip-painted his name in a signature phrase in individual, prominent registers. Furthermore, Muslim's incorporation of his signature into a scrolled register seems to foreshadow the early inscriptional, scribbled registers and later signature registers that distinguished the work of Sharaf al-Abawānī two hundred years later.[150]

---

[147]Jenkins, "Muslim, an Early Fatimid Ceramist," 363.

[148]Ibid., 361.

[149]For illustrations of these, see Jenkins, "Muslim, an Early Fatimid Ceramist." Other sources include Bahgat and Massoul, *La céramique musulmane,* and 'A. Yūsuf, "Pottery of the Fatimid Period and its Artistic Style," *Bulletin of the Faculty of Arts, Cairo University* 20 no. 2 (1958): 173–279 (in Arabic).

[150]Two bowls in the Islamic Museum in Cairo are important in this regard. Muslim has signed the exterior of one bowl, the interior of which is occupied primarily by a wide, scribbled inscriptional register (inv. #15958—Jenkins, "Muslim, an Early Fatimid Ceramist," 368, App. #12). On another his signature appears below the interior rim festoon, apparently taking the place of a dedicatory

Do these similarities constitute continuity or revival of ceramic styles? Inscriptional registers on a scribbled ground continued in Ayyubid luster and sgraffito ware, but artists' signatures apparently did not. It would seem, then, that the singular emphasis by Sharaf al-Abawānī on his own signature at a time when potter's signatures were rare would represent a revival of an earlier practice. If potter's signatures are somehow related to the production process, then one could argue for parallelisms in kiln or "guild" organization, as the signature of sgraffito artist "Shaykh al-Ṣināʻah" indicates. There is another important point of comparison between the work of Muslim and Sharaf al-Abawānī. The dedicatory inscriptions which are so prominently displayed on their vessels emphasize that they worked, at least part of the time, for court patrons. The association of Muslim with al-Ḥākim's court and Sharaf al-Abawānī with the amirs of al-Nāṣir Muḥammad and his sons suggests commonalties in patronage practices, ones that will be discussed further in this section.

Sharaf al-Abawānī is not the only Mamluk potter who signed his work. Although his signature is the most well known for local sgraffito, other names of sgraffito artists are known to us. ʻUmar, Mūsá, ʻUmar al-Asyūṭī (from Asyūṭ, Upper Egypt), Aḥmad al-Asyūṭī, al-Ra'īs (the master craftsman),[151] ʻAlī, Ḥannā (or Ḥasan), and al-Kaslān ("the lazy") are names that have appeared only rarely on sgraffito sherds in the Islamic Museum in Cairo and in the Dār al-Āthār al-Islamīyah in Kuwait.[152] Other signatures on sgraffito ware have also been found on sherds of contemporary underglaze-painted ware, which is perhaps our best evidence that the two wares were fired together in the same kilns. Among the artists who manufactured both wares were al-Ustādh al-Maṣrī (or simply al-Maṣrī, "the Egyptian supervisor"), Shaykh al-Ṣināʻah ("the workshop director"), Ghāzī, and al-Faqīr ("the poor").[153]

---

register (description in ibid., 369, App. #20; illustrated in Bahgat and Massoul, *La céramique musulmane,* Pl. XXII, 8a and b).

[151]The organization of workshops must have been more or less the same for all crafts, because many terms of "guild" hierarchy can be found in artists' signatures in different media. L. A. Mayer, *Islamic Metalworkers and Their Works* (Geneva, 1959), provides some useful definitions of some of these terms from metalwork. The terms *tilmīdh, ghulām, ra'īs,* and *'ājir* are defined as student, apprentice, master, and journeyman, respectively (p. 14). His point of reference, in this case, is the medieval European professional guild, which probably differed to some degree from the structure of Islamic workshops.

[152]The names can be found in ʻAbd al-Rāziq, "Documents sur la poterie"; idem, "Le sgraffito de l'Égypte"; and Bahgat and Massoul, *La céramique musulmane,* 84.

[153]Bahgat and Massoul, *La céramique musulmane;* Abel, *Gaibi et les grands faïenciers;* idem, "Un maître céramiste," 142; and Bahgat and Massoul, *La céramique musulmane,* Pl. XLIV.1, 2, and 3.

Few of the sherds that bear these signatures are illustrated in publications, but of those that are one is given the impression that the artist made no attempt to hide the signature. The artists′ names can be the primary decoration of the well of the bowl or may be placed in inscriptional registers just below the interior rim or in the larger cavetto along with dedications to patrons or general blessings.[154]

With the exception of Sharaf al-Abawānī, signing sgraffito was not a common practice. While ceramic signatures are rare in the Bahri Mamluk period (1250–1382), in the Burji period (1382–1517) more than thirty names are known.[155] Abel′s analyses of signatures in Mamluk underglaze-painted wares, published sixty years ago in an article and monograph, remain the most comprehensive catalogue and stylistic study of what he considers different workshops.[156] The signatures are usually painted in blue in the underside of the foot and, like the signatures inscribed on sgraffito ware, represent a wide range of personal names, nicknames, *nisbah*s, and professional titles.[157] Many are family names; one imagines father and son working alongside one another or the son receiving his training from his father.[158] Other names indicate professions other than pottery making, such as ″al-Khabbāz″ (the baker). The majority of the signatures are not identifiable as personal names. The potters were, therefore, anonymous to most consumers of fourteenth- and fifteenth-century Egypt and Syria, as they are to us today.[159] The purpose in placing what are, for the most part, nicknames on the underside of the foot may be related to the same workshop practices that are described by Cushion and Honey

---

[154]For signatures as tondo designs, see Bahgat and Massoul, *La céramique muslmane*, Pl. XLIV. 2 and 3. For more published illustrations of artists′ names in inscriptional registers, see ʻAbd al-Rāziq, ″Le sgraffito de l′Égypte,″ and Bahgat and Massoul, *La céramique muslmane*, Pl. XLIV.1.

[155]Atıl, *Renaissance of Islam,* 149.

[156]Abel, *Gaibi et les grands faïenciers,* and idem, ″Un maître céramiste.″

[157]This is by no means an exhaustive list of names, although I have tried to be as thorough as possible: Sār al-Fākhūrī al-Maṣrī (″the chief Egyptian potter″), al-Ustādh al-Maṣrī, Shaykh al-Ṣināʻah, al-Muhandim (″the tidy″), al-Tawrīzī (from Tabrīz), Ghaybī, Dāhin (″painter, glazer″), al-Faqīr, al-Naqqāsh (″inciser″), Darwīsh (Sufi ″dervish″), al-Khabbāz (″the baker″!), al-Buqaylī (″little green-grocer″?), al-Hurmūzī (from Hormūz), ʻAjamī (a Persian), Ghazzāl (″gazelle″?), Ghāzī (″frontier warrior″), al-Shāmī (″the Syrian″), al-Shāʻir (″the poet″), al-Muʻallim (″master craftsman″), al-Ujayl (″Speedy″), al-Razzāz (″the polisher″), Bādir, Abū al-ʻIzz, and al-Barrānī (″potter″) (Abel, ″Un maître céramiste,″ 142, and Jenkins, ″Mamluk Underglazed-painted Pottery,″ 112).

[158]There are, for instance, Sār al-Fākhūrī ″et ses fils,″ Ghāzī and Ibn Ghāzī, and al-Khabbāz and Ibn al-Khabbāz (Abel, ″Un maître céramiste,″ 142) and Ghaybī and Ibn Ghaybī al-Tawrīzī (ibid., 151; idem, *Gaibi et les grands faïnciers*, 17; and Jenkins, ″Mamluk Underglazed-painted Pottery,″ 111–12).

[159]Ghaybī, for one, worked in both Syria (probably Damascus) and Egypt (Cairo) (see Jenkins, ″Mamluk Underglazed-painted Pottery,″ 112, and Abel, ″Un maître céramiste,″ 151–52).

for European porcelains.[160] Abbreviated signatures were all that was needed to separate one artist′s products from another in the kiln.[161] This is particularly significant, given the evidence that underglaze-painted wares and sgraffito (and probably other ceramic types) were produced in the same workshops and fired in the same kilns.

The most prolific of the fifteenth-century potters of underglaze-painted ware is known to us as Ghaybī. His name appears on approximately 100 sherds in the holdings of the Islamic Museum in Cairo and a tile in Damascus.[162] Known alternatively as Ghaybī al-Tawrīzī and Ghaybī al-Shāmī, his signatures indicate that he originally came from Tabrīz (″al-Tawrīzī″) and then worked in Syria (″al-Shāmī″) and Egypt.[163] His nickname, ″Ghaybī,″ literally means ″hidden″ or (in a slightly different form)″ absent″; it is a fitting signature for a migrant or, more likely, Sufi artist (see below).

On the basis of design parallels with Persian manuscripts and Chinese blue-and-whites, signed underglaze-painted wares can be dated from the third quarter of the fourteenth century to the end of the fifteenth.[164] The most conclusive evidence for dating Ghaybī′s work to the mid-fifteenth century is a tile panel from the mausoleum complex of Ghars al-Dīn Khalīl al-Tawrīzī al-Dasarī in Damascus, completed in 1423 and signed by Ghaybī al-Tawrīzī.[165] This is not the only instance of an underglaze-painted tile signed by an artist hailing from Tabrīz. Ghaybī has signed another tile from the shrine of Sayyidah Nafīsah in Cairo.[166]

This relationship between the tile and pottery industries may be the key to understanding the role of potters′ signatures in the fifteenth century. Clearly, artists who worked in the underglaze-painting technique produced both ordinary tablewares and architectural tiles, most likely in the same workshops. Signatures on tilework may have served a purpose similar to masonry marks from Crusader

---

[160]J. P. Cushion and W. B. Honey, *Handbook of Pottery and Porcelain Marks* (London, 1956), 115.

[161]The practice is still used today in kilns shared by multiple potters. Students in ceramics classes generally carve their names into the foot of the vessel to identify their work from that of their classmates.

[162]Abel, ″Un maître céramiste,″ 149, and Jenkins, ″Mamluk Underglazed-painted Pottery,″ 104.

[163]Artists in the fourteenth century frequently changed their *nisbah*s when moving within and outside of Iran. See S. Blair, ″Artists and Patronage in Late Fourteenth-Century Iran in the Light of Two Catalogues of Islamic Metalwork,″ *Bulletin of the School of Oriental and African Studies* 48 (1985): 58–59.

[164]Atıl, *Renaissance of Islam,* 150. Abel, ″Un maître céramiste,″ 153, suggests a fourteenth-century date for Ghaybī′s work by stylistic comparisons with Chinese elements in Il Khanid manuscripts.

[166]Atıl, *Renaissance of Islam,* 151.

monuments in the Latin Kingdom, which identified the work of individual artisans or companies of masons to facilitate the division of labor and payment.[167] This practice would then have been extended to tablewares, particularly if several artists shared the same kiln. Thus, the signature is placed in the ringfoot, out of the way of the vessel's decoration and of importance only to the internal operations of the workshop.

The *nisbah* "al-Tawrīzī" indicates a style associated with a place and is comparable, in this sense, to the popularity of the Mawṣilī *nisbah* in late Ayyubid and early Mamluk metalwork.[168] Atıl identifies potters' signatures in the Mamluk period with workshops, regional styles, and types of wares (underglaze-painted and sgraffito, for instance).[169] This would be a logical enough explanation if it were not for the fact that the fifteenth-century signatures are essentially invisible to the public eye and that both fourteenth- and fifteenth-century signatures are more or less anonymous to the consumer. I would argue that underglaze-painted signatures were meaningful primarily within the workshop. Sgraffito signatures, while functioning in the same manner, may have served an additional purpose. The placement of the signatures within the vessels' decoration would have caught the attention of the public. This, indeed, was probably its purpose.

Sharaf al-Abawānī is remarkable for signing his work at a time when sgraffito artists remained essentially anonymous. Much of his work is of rather fine quality, surpassing the indifferent appearance of most Mamluk sgraffito products, which are of coarse fabric, poor finish, and careless manufacture. His name, moreover, stands out for its sheer visibility. Rather than hiding his signature in the footring, like ceramic artists of the following century, in the latest phase of his career al-Abawānī incorporated his name within the main registers of the vessels' exterior decoration, relegating the patrons' names and titles to the less conspicuous interiors. This would seem to be contrary to the consumer practices of Mamluk patrons, who delighted in the grandiose display of their own names and blazons on the vessels they commissioned. For a patron to have purchased a vessel on which the artist's name appeared in a location more prominent than his own speaks of the reputation of this potter and the ambiguity of artistic patronage in Mamluk Egypt.

In spite of his importance, very little is known about Sharaf al-Abawānī. There are no monographs on his career comparable to Abel's *Gaibi et les grands faïenciers égyptiens d'époque mamlouke* and surprisingly few articles devoted to

[169]Ibid.

him.[170] His association with the court of al-Nāṣir Muḥammad is confirmed by the dedicatory inscriptions and amiral blazons that appear on many of the vessels signed by this artist.[171] Al-Abawānī′s best work is dominated by blazons of office, several of which were introduced by al-Nāṣir Muḥammad. There is steady technical and stylistic development in al-Abawānī′s pottery; these emblazoned vessels represent the apex of his career. There is little doubt that he was manufacturing sgraffito wares well before the advent of the ″military″ style of al-Nāṣir Muḥammad′s third reign, but exactly when his career began or how long it lasted is difficult to determine. Furthermore, as no catalogue of his work has been published and many collections in Egypt are difficult to access, one cannot begin to estimate the quantity of his production.

His signature includes the geographical *nisbah* ″al-Abawānī,″ ″from Ab(a)wān.″ Yaqut *(Mu'jam al-Buldān)* lists three places in Egypt by this name. 'Abd al-Rāziq cites the third, a village in the province of Bahnasā in Upper Egypt (well-known for pottery production), as the most likely candidate for the artist′s home.[172] The *nisbah* may have stood for a regional ceramic style, as ″al-Mawṣilī″ did for metalwork and ″al-Tawrīzī″ did for underglaze painting. Whatever his origins, al-Abawānī did not limit his market to Upper Egypt. Vessels and sherds with his signature have been found in Cairo (Fustat), Alexandria (Kom ed-Dikka), and Luxor (Luxor Temple).[173] Wasters signed by him have been recovered from Fustat.[174]

If the origins of this artist are enigmatic, so is his identity. ″Sharaf al-Abawānī,″ like so many other potter′s signatures, is a nickname and not identifiable from historical sources. The name is an abbreviation for ″Sharaf al-Dīn,″ a fairly common title for Mamluk amirs in the fourteenth century.[175] The title was equally popular among the civilian elite of Cairo in the fourteenth and fifteenth centuries, where it was adopted by the ulama as well as artisans, and frequently used in conjunction

with a geographical *nisbah*.[176] The title was by no means limited to Muslims, as Copts in the administration used it as well.[177] While the historical potter, then, cannot be identified, his signature form fits in comfortably with the titles assumed by many (we may believe successful) artists of the fourteenth century.

ʻAbd al-Rāziq describes five different signature styles used by Sharaf al-Abawānī.[178] They fall into two distinct categories: his name carelessly scratched in small *naskhī* characters, often upside-down and discreetly incorporated into the interior design,[179] and a longer, more complex signature phrase carefully inscribed and often slip-painted in large *thulūth* characters, which usually occupies the main decorative register of the vessel exterior. These groups clearly belong to different stages of the potter′s career. *Naskhī* script, while it continued to be used for Qurans during the Mamluk period, is more characteristic of Ayyubid-period decoration. Similarly, *thulūth,* a script with long and straight uprights, barbed heads, and long and deep flourishes on final letters, was the decorative script *par excellence* of Mamluk art.

The more decorative and technical aspects of his work also indicate that Sharaf al-Abawānī′s career probably spanned the late Ayyubid-early Mamluk period. In stylistic terms, the artist was initially influenced by contemporary eastern Mediterranean sgraffito wares and then, with the enormous popularity of emblazoned and inscriptional damascened vessels, by local inlaid metalwork. What is most likely his earliest work is rather experimental and hybrid in style. There are many sherds from Kom ed-Dikka, signed by him, with exaggerated beveled rims and Cypriot-like shapes. A variety of designs on scribbled ground, familiar to thirteenth-century luster, underglaze-painted, and Byzantine-derivative sgraffito wares, on sherds from Fustat bear his signature in scrawled *naskhī*.[180] Anatolian-style champlevé, some of fine quality, and radial designs adopted from late Ayyubid and early Mamluk underglaze-painted wares were also adopted by al-Abawānī.[181]

At the turn of the fourteenth century al-Abawānī′s style underwent a transformation. Like most arts of the period, Mamluk pottery fell under the powerful influence of contemporary metalworking.

Metalwork artists of the thirteenth and fourteenth centuries routinely signed their work. Most Mamluk vessels signed in this manner date from 1275–1350.[182] The signature phrase usually associated with Sharaf al-Abawānī, *'aml al-'abd al-faqīr al-miskīn Sharaf al-Abawānī ghulām al-nās kullihim* (″the work of the poor, humble slave, Sharaf al-Abawānī, servant of all the people″), is an elaboration, and an unexpectedly humble one, of the way metal artisans of the mid-thirteenth century signed their work. *'Aml*, and less frequently *ṣāni',* are terms used by the metalworkers to describe their final products.[183] The problematic term is *ghulām*. According to Mayer, *ghulām* was a guild term that corresponded to an apprentice, that is, the artisan who was one step below the master, or *ra'īs*.[184] Rice takes a different view on the matter. He suggests that while *ghulām* took on many shades of meaning over time, by the middle of the thirteenth century, the period the ″Mosul school″ of metalworking was at its height, a *tilmīdh* was the guild master′s student, and a *ghulām* was literally the master′s ″slave″ or at least a hireling.[185] Al-Abawānī, therefore, adapted a signature phrase commonly associated with the contemporary metalworking industry.[186]

In this second phase of his career, al-Abawānī was heavily influenced by expensive metalwork. By imitating silver, gold, and brass work in earthenware through the use of color and forms, the quality of his work improved accordingly. Thinner walls in some cases, monumental but elegant proportions in other instances, and the application of slip-painted designs to highlight blazons and inscriptions created a product that was very different from the Byzantine and Cypriot-derivative sgraffito styles with which he was associated earlier. A change of taste alone would probably not account for such a significant development in ceramic style. It is apparent that al-Abawānī was producing sgraffito for a new market in the

[184]Ibid., 14.

[185]D. S. Rice, *The Baptistére de Saint Louis* (Paris, 1953), 67.

[186]It is likely that al-Abawānī, like many artisans of his day, was a practicing Sufi, as the title ″al-'abd al-faqīr al-miskīn″ and even ″ghulām al-nās″ indicate. The nicknames taken by contemporary potters when signing their work attest to the same affiliation (al-Faqīr, Darwīsh, and Ghaybī). If this is so, the potters′ organization of Fustat would be one of only two known ″craft-based religious fraternities″ in the Mamluk state (on the oft-cited silk-workers fraternity in Damascus, see Lapidus, *Muslim Cities,* 102–3). For the relationship between the quasi-guilds of the day and Sufi brotherhoods, see ibid., and Carl F. Petry, *The Civilian Elite of Cairo in the Later Middle Ages* (Princeton, 1981), 271.

fourteenth century.

Al-Abawānī sold his work to a variety of clients. While there is no doubt that his earlier products were mass-produced, everyday tablewares for Cairo′s civilian population, by the fourteenth century Sharaf al-Abawānī was commissioned privately part of the time for amirs. The inscriptions occasionally name particular patrons. The majority, however, include a long list of formal military titles, without specifically naming a particular client. In spite of the standardization of vessel shape, size, and, above all, decorative program, the quality of these inscriptional wares varies considerably. Michael Rogers′ suggestion that Sharaf al-Abawānī ″may have been a high contractor who supervised the issue of standard equipment to an emir upon his appointment to high office″ is a reasonable one.[187]

All of these factors suggest that al-Abawānī began to manufacture sgraffito wares in the early Mamluk period, a transitional one for Egyptian art, and continued to be productive throughout al-Nāṣir Muḥammad′s third reign. This is a very long career for an individual potter. However, the name may have referred to the original master of a workshop. Given the quantity of vessels that contain his name, it is more reasonable to consider ″Sharaf al-Abawānī″ the brand of a workshop that specialized, at some point, in outfitting the kitchens or ″mantle pieces″ of amirs. It is significant that the popularity of this kind of inscriptional and emblazoned sgraffito ware probably did not survive into the fifteenth century, in spite of the fact that the hierarchical social system that promoted its production did. In a sense, the name of Sharaf al-Abawānī has come to stand for a passing Mamluk ″fad.″

Market

I. Heraldry

Scholarship on Mamluk heraldry tends to emphasize the sultanate of al-Nāṣir Muḥammad because the elaboration of blazon forms and adoption in all media as surface decoration can be largely dated to his third reign. This was a period of artistic development. Amiral blazons of office were introduced into metalworking at this time and replaced the more universal emblems of royal authority. Contemporary with this innovation is the introduction of the epigraphic blazon, intimately related to the replacement of figures with inscriptions.

In his notes to Ibn Taghrībirdī′s *Tārīkh Miṣr,* William Popper enumerates those objects and privileges he considers the ″emblems of authority″ for sultans and amirs.[188] Among the sultan′s prerogatives were the royal saddle cover *(ghāshiyah),* sunshade *(miẓallah),* tents *(khiyām),* and official inscriptions in

---

[188] William Popper, *Egypt and Syria under the Circassian Sultans* (New York, 1977), 84–87.

embroidery *(ṭirāz)*.[189] The amirs′ symbolic world, on the other hand, consisted of the overcloak *(fawqanīyah)*, robes of honor *(khilā‘)*, horses and swords, and coats-of-arms, or blazons (*rank*). The widespread use of Arabic inscriptions and heraldry in all media of Mamluk art, including ceramics, in the fourteenth century is a phenomenon that requires a somewhat lengthy explanation.[190]

The Arabic sources have little to say about Mamluk blazons. Outside of isolated references to unidentified blazons, the most important information about Mamluk heraldry has been documented by Abū al-Fidā, Ibn Taghrībirdī, al-Dhahabī, and al-Qalqashandī. A frequently cited passage from the chronicle of Abū al-Fidā (1273–1331) associates certain emblems *(‘alāmāt)* with particular amiral offices.[191] For instance, the emblem of the *dawādār* was the penbox, the *silāḥdār* was the bow, the *jāmdār* the napkin, and the *jāwīsh* the golden dome. That amirs of a certain rank and office were assigned blazons of that office is supported by Ibn Taghrībirdī, according to whom the last Ayyubid sultan al-Malik al-Ṣāliḥ gave his taster *(jāshankīr)* Aybak the table *(khanjah)* as an emblem,[192] and also by al-Dhahabī, who describes the blazon of the amir Kitbughā as a gold cup (the symbol of his office as cupbearer, or *sāqī*) on a *fesse* and red ground.[193] The association of Mamluk blazons with amiral office is, in this way, established by the Arabic sources.

Both Arabic and European sources record the methods by which amiral blazons were awarded. According to Ibn Taghrībirdī, the sultan assigned blazons to his amirs upon their promotion.[194] Al-Qalqashandī, on the other hand, claims that

---

[189]To the category of official, sultanic inscriptions belong the sultan′s ″signature″ *(‘alāmah)* that validates documents of appointments to public office (*taqlīd*s) and assignments of *iqṭā’* (*manshūr*s) (Aḥmad ibn Faḍl-Allāh al-‘Umarī, *Masālik al-Abṣār fī Mamālik al-Amṣār: L′Égypte, la Syrie, le Higaz et le Yemen*, ed. A. F. Sayyid [Cairo, 1985], 43–46). This point is discussed in detail in the following section.

[190]*Rank* is a Persian term that originally meant ″color″ or ″dye″ (L. A. Mayer, *Saracenic Heraldry* [Oxford, 1933], 26; Nasser Rabbat, ″Rank,″ *EI²*, 8:431; and Abū al-Mahāsin Yūsuf Ibn Taghrībirdī, *Al-Nujūm al-Zāhirah fī Mulūk Miṣr wa-al-Qāhirah* [Cairo, 1963–72], 15:36, n. 1). The term was used by medieval Arab historians in the general sense of ″emblems.″ It designates, more specifically, the colorful insignia of the amirs and sultans of Egypt, Syria, and al-Jazira in the Ayyubid and Mamluk periods (Rabbat, ″Rank″). Mamluk *runūk* (pl.) have been broadly understood as symbols of military office.

[191]*Al-Mukhtaṣar fī Akhbār al-Bashar;* passage quoted in Mayer, *Saracenic Heraldry,* 4.

[193]W. Leaf and S. Purcell, *Heraldic Symbols, Islamic Insignia, and Western Heraldry* (London, 1986), 58. In his *Al-Muntaqá,* al-Dhahabī provides what is probably the only illustration of a Mamluk blazon in a contemporary Arabic source (Mayer, *Saracenic Heraldry,* 1, n. 7).

[194]W.-H. Rüdt de Collenberg, ″L′héraldique de Chypre,″ *Cahiers d′héraldique* 3 (1977): 95.

each amir chose his own.[195] European historians also recognized the relationship between late Ayyubid and early Mamluk heraldry and amiral promotions. Describing events following the Battle of Mansura during St. Louis′ First Crusade (1250), the French historian Joinville writes:

> The arms of the sultan were gold, and such arms that the sultan bore, these young lads bore as well; and they were called *baharīz*. . . . When their beards started to grow, the sultan knighted them and they continued to bear his arms except that they were differenced, in that they had crimson charges such as rosettes, red bends or birds or other charges that they placed on their gold arms as they pleased.[196]

There was a general understanding, then, among both Arab and European historians that Mamluk blazons were amiral prerogatives related to promotion to particular offices.

The proliferation of amiral blazons in glasswork, metalworking, ceramics, textiles, architecture, and painting in the early fourteenth century may be related to an intensified purchase of mamluks and an accelerated system of amiral promotion. Our primary sources on army statistics for the period are al-Maqrīzī *(Khiṭaṭ)* and al-Ẓāhirī *(Zubdat Kashf al-Mamālik),* who report on the redistribution of *iqṭāʿāt* by al-Nāṣir Muḥammad in 1314–15 *(al-rawk al-nāṣirī)* and an army census of unidentified date, respectively.[197] It is difficult to ascertain the numbers of mamluks made amirs from one reign to the next, but one does detect a general trend over time towards accelerated promotions and the enlargement of the sultan′s private corps, the *khāṣṣakīyah*. Although al-Nāṣir Muḥammad was said to have bought mamluks on a scale never known before, the size of his army does not seem to have surpassed that of his predecessors.[198] In spite of this, the four hundred twenty-four amirs of different ranks accounted for in the *rawk al-nāṣirī* exceeds the one hundred sixty-four amirs ″of former times″ and eighty to three hundred amirs of

---

[195]*Ṣubḥ al-Aʿshá*, in Mayer, *Saracenic Heraldry,* 3.

[196]From his *Histoire de St. Louis,* translated and cited by Leaf and Purcell, *Heraldic Symbols,* 57–58.

[197]These accounts are reviewed in D. Ayalon, ″Khāṣṣakiyya,″ *EI*^{2}, 4:1100.

[198]Ayalon, ″Studies on the Structure of the Mamluk Army,″ *BSOAS* 15 (1953): 223–24; Irwin, *The Middle East in the Middle Ages,* 108. Al-Maqrīzī repeats 12,000 as the number of Royal Mamluks under three different sultans—Qalāwūn, al-Ashraf Khalīl, and al-Nāṣir Muḥammad (Ayalon, ″Studies on the Structure of the Mamluk Army,″ *BSOAS* 15 [1953]: 224). Rather than take this figure too literally, we may consider this a statement emphasizing the equivalent sizes of the respective armies.

different years of the Circassian period.[199] As the numbers of amirs increases, so does the number of *khāṣṣakīyah,* from whose ranks most of the high amirs were recruited. Statistics taken from a variety of sources indicate that al-Nāṣir Muḥammad invested in the *khāṣṣakīyah*. The numbers vary according to the source: al-Ashraf Khalīl maintained some thirty to fifty *khāṣṣakīyah,* al-Nāṣir Muḥammad increased this number to at least forty and as many as ninety-two, Barsbāy named some one thousand, and al-Ghūrī supported nearly one thousand two hundred.[200]

Although the numbers of *khāṣṣakīyah* fluctuated throughout the Mamluk period, there is a more or less steady trend towards expanding the corps over time, a practice that seems to have begun with al-Nāṣir Muḥammad and was further developed by his successors. Al-Nāṣir's practice of accelerated promotion of mamluks to amirships continued after his death. The references to the immediate promotion of common mamluks to an amirship of ten and the office of *sāqī* in mid-fourteenth-, fifteenth-, and sixteenth-century sources are too numerous to mention.[201] This practice, according to Ayalon, began around the end of Qalāwūn's reign. He adds:

> Thus the numbers of amirs who, during the Circassian period, are stated to have passed directly from the rank of private to that of the highest amirs, is extremely great. The common expression used for such elevations is "(promoted) at one stroke" *(daf'atan waḥīdatan)*.[202]

Rapid promotion of amirs in the mid-fourteenth century was, in part, a response to a shortage of manpower following a series of plagues.[203] The practice, however, continued an initiative of al-Nāṣir Muḥammad that aimed at fostering a circle of intimate and trustworthy associates, as Levanoni has demonstrated. This may also have been the rationale behind the build-up of the royal guard, the *khāṣṣakīyah.* Al-Nāṣir Muḥammad actively promoted his *khāṣṣakīyah,* advancing them to

---

[199]The sources used here by Ayalon should be treated with caution (Ayalon, "Studies on the Structure of the Mamluk Army," *BSOAS* 15 [1953]: 471).

[200]Figures from the Circassian period may reflect a change in nomenclature, as *"khāṣṣakīyah"* came to mean the Royal Mamluks in general (Rabbat, *The Citadel of Cairo,* 290). From other numbers take from al-Maqrīzī, al-Ẓāhirī, al-Qalqashandī, Ibn Taghrībirdī, and Ibn Iyās, see Ayalon, "Studies on the Structure of the Mamluk Army," *BSOAS* 15 [1953]: 215.

[201]Rabbat refers to the high incidence of *suqāh* reaching prominent amirships in the mid-Bahri period but does not cite sources (Rabbat, *The Citadel of Cairo,* 138). A full discussion of the Circassian sources appears below.

[202]Ayalon, "Studies on the Structure of the Mamluk Army," *BSOAS* 15 [1953]: 475.

[203]Irwin, *The Middle East in the Middle Ages,* 136.

important administrative and ceremonial offices. [204]

The rise of the *khāṣṣakīyah* and the creation of ceremonial offices for them was a gradual process. Many administrative positions under Baybars were borrowed from the Ayyubids and organized according to a system of amiral rank. However, the first ceremonial offices (the *silāḥdārīyah* or sword-bearers, for example) appeared with Qalāwūn, who also introduced new styles of dress that identified amirs of different ranks.[205] The *suqāh* (cupbearers) and *jāmdārīyah* (wardrobe masters), offices that were later to become extremely influential, gained importance under al-Ashraf Khalīl as his personal bodyguard.[206] It was al-Nāṣir Muḥammad, however, who extended and codified this system of ceremonial offices.[207]

These trends, then, have important implications for the development of the ″military style″ in sgraffito, among the other arts, in early to mid-fourteenth-century Egypt. As larger numbers of mamluks became amirs, and many of these were advanced from the *khāṣṣakīyah* to high-rank amirships, amiral blazons of ceremonial office came to dominate the decorative scheme of Mamluk art. The relationship between the advancement of the *khāṣṣakīyah* and the decorative use put to blazons can be implied from a reference from al-Ẓāhirī, a mid-fifteenth-century source.[208] At the time al-Ẓāhirī was writing, the largest numbers of *khāṣṣakīyah* assigned to the heads of important administrative and ceremonial offices were as follows: ten *dawādārīyah* (pen-box holders), ten *suqāh khāṣṣ* (cup bearers), seven *rā's nawbat jāmdārīyah* (wardrobe masters), four *khāzindārīyah* (treasurers), four *silāḥdārīyah* (armor bearers), and four *bashmaqdārīyah* (shoe bearers). It is no coincidence that the blazons most frequently encountered on objects, including sgraffito bowls and cups, are the chalice of the *sāqī*, the sword of the *silāḥdār*, the napkin of the *jāmdār*, and the pen-box of the *dawādār*.[209] We have every indication of extensive patronage of the arts by the amirs. Not only were financial resources available for

---

[204]The increase in *khāṣṣakīyah* numbers and further elaboration of the ceremonial offices occupied primarily by them can be related to his expansion of Mamluk ceremonial in all its manifestations—protocol, architecture, and military office. This subject has been admirably analyzed by Rabbat in his study of the Cairo Citadel, cited above.

[205]Levanoni, *A Turning Point in Mamluk History,* 12.

[206]Rabbat, *The Citadel of Cairo,* 289.

[207]Ayalon, ″Studies on the Structure of the Mamluk Army,″ *BSOAS* 16 (1954): 68–69. The crucial source in this regard is Ibn Taghrībirdī′s *Nujūm al-Zāhirah*. Ayalon′s review of his entries for the sultanates of Qalāwūn and al-Nāṣir Muḥammad is preliminary, and a more detailed study of the source material, a task beyond this article, is needed.

[208]*Kitāb Zubdat Kashf al-Mamālik wa-Bayān al-Ṭuruq wa-al-Masālik,* cited in Ayalon, ″Studies on the Structure of the Mamluk Army,″ *BSOAS* 15 (1953): 214.

artistic sponsorship, but so was the sponsorship: the potential patrons from among the amiral class, and particularly the newly promoted *khāṣṣakīyah,* were numerous. Contemporary developments in sgraffito, along with all art forms, illustrate these trends. The widespread use of amiral blazons, specifically blazons of ceremonial office, in Mamluk art of this period reflects the rise of the favored amirs.

The earliest heraldic devices adopted in Mamluk art, however, were not amiral but sultanic. Such emblems served to legitimize the sultan's rule by visually linking him with earlier Islamic dynasties. The first blazons to appear in the interior of Mamluk sgraffito bowls—eagles, rosettes, lions, and the fleur-de-lys—were borrowed from the artistic repertoire of the Seljuk and Seljuk-successor states. The bicephalic eagle is one of the most common symbols of royal power in Seljuk Rum and appears in glazed tiles, architectural façades, and ceramics.[210] Its long association with royal sovereignty in the arts of the Buyids, Ghaznavids, and Artuqids (from whom the Anatolian Seljuks no doubt borrowed much of their iconography)[211] made for easy transfer to the Egypt-based sultanate just beginning to develop its own royal iconography in the mid-thirteenth century. Rosettes, common to both Seljuk Rum sgraffito and slip-painted wares, were astral symbols suitable for adoption as royal icons.[212]

The origins of the lion *passant,* usually associated with Baybars, is more difficult to determine. Lions used in architectural fixtures in Seljuk Anatolia are, with few exceptions, depicted in frontal view.[213] Gazagnadou's argument that Baybars adopted the lion *passant* from Mongol silver coins is not convincing for its lack of evidence and confusing chronology.[214] The lion *rampant* was introduced to Cypriot coins, architectural façades, and ceramics in the same period. The Lusignan and Mamluk lions are depicted in different stances, true, but they are both profile figures and noteworthy for the heraldic purposes to which these contemporary dynasties put them. Familiarity with Crusader coins may also explain

[212]Oney, "Kubadabad Ceramics," 74.

[213]The apotropaic effect of the frontal lion has long been valued in Anatolia and was also applied to gateways by the Hittites of the second millennium B.C. The talismanic qualities of figural art in Seljuk Rum architecture are explored in Scott Redford, "Thirteenth-Century Rum Seljuq Palaces and Palace Imagery," *Ars Orientalis* 23 (1993): 219–27. One exception to the frontal pose is the lion *passant* that appears in a portal relief at the Çifte Medrese in Kayseri (1205–6) (Otto-Dorn, "L'Aïas dans le dernier tiers," 110, Fig. 8).

[214]See D. Gazagnadou, "Note sur une question d'heraldique mamluke: l'origine du 'lion passant à gauche du Sultan Baybars I al-Bunduqdārī," *Der Islam* 65 (1988): 98–101.

the adoption of the fleur-de-lys by Nūr al-Dīn in the second half of the twelfth century.[215]

The bicephalic eagle, fleur-de-lys, lion *passant,* and rosette can best be described as dynastic symbols. They were hereditary to some extent: the lion *passant* was used by Baybars and his son and the eagle and rosette by al-Nāṣir Muḥammad and his sons. Mamluk armorial blazons did not come into their own, however, until the early fourteenth century, when amiral symbols of office began to dominate the decoration of architecture, metalworking, glass, ceramics, and painting. The transition from sultanic symbols of authority to amiral blazons is a crucial one for Mamluk art. It affects all media and is socially significant for two reasons: it illustrates the rise of a new social class and the creation of a new self-image for the Mamluks.

Leaf and Purcell outline three developmental stages of Mamluk blazons.[216] At the beginning of the Mamluk period (the middle of the thirteenth century), amirs adopted the sultans′ emblems as their own.[217] At the end of the century simple amiral blazons of office began to replace the lion, fleur-de-lys, eagle, and rosette and were placed on bipartite shields. The earliest dated examples of an amiral blazon of this sort are the cup blazons of the *sāqī* displayed on two candlesticks made for Kitbughā, the important amir who became sultan in the interlude between al-Nāṣir Muḥammad′s first and second reigns.[218] The cup was the most common sign of the twenty some amiral blazons that appeared now, followed in number by the sword of the *silāḥdār* and the napkin of the *jāmdār*—all ceremonial offices. Blazons such as these were not entirely an Egyptian invention. According to Abū al-Fidā *(Kitāb al-Mukhtaṣar fī Akhbār al-Bashar),* the Mamluks may have been influenced by the practice of the Khwarazm-Shahs, whose leader Muḥammad ibn Tekish [r. 1200–20] assigned members of his guard emblems of office (here called ʻ*alāmah*).[219] The full flowering of blazons of office in the fourteenth century,

---

[215]J. W. Allan, ″Mamluk Sultanic Heraldry and the Numismatic Evidence: A Reinterpretation,″ *Journal of the Royal Asiatic Society* 2 (1970): 104. Some of the earliest instances of an Islamic ″blazon″ can be found on the doorways of Nūr al-Dīn′s foundations in Damascus (his madrasah, 1154–73) and at Ḥimṣ (his Congregational Mosque) (Mayer, *Saracenic Heraldry,* 22).

[216]Leaf and Purcell, *Heraldic Symbols,* Ch. 3 (67–76). While the authors too often define developments in Islamic heraldry according to European criteria, the following outline is a reasonable one and is based heavily on the material evidence provided by Mayer, *Saracenic Heraldry.*

[217]Leaf and Purcell compare this practice to the European livery (*Heraldic Symbols,* 63). Examples in Egypt include Aydamūr al-Jāmdār, an amir of Baybars, who used the lion *passant* as his own insignia (ibid.), and contemporary amirs who adopted the fleur-de-lys, eagle, and rosette normally associated with the sultan (ibid., 70).

[218]Atıl, *Renaissance of Islam,* 52, cat. #15–16.

[219]Rabbat, ″Khāṣṣakiyya,″ 432; for the reign of ʻAlā al-Dīn Muḥammad (ibn Tekish), see C. E.

though, were a uniquely Mamluk contribution.

In the second stage of blazon development, around 1320–30, the sultans had adopted inscribed cartouches as their emblems, and blazons of office were now the exclusive property of the amirs. The introduction of the tripartite shield (or ″composite shield,″ to use Mayer′s nomenclature) defines the third and final stage and is a fifteenth- and sixteenth-century phenomenon. The sword blazon disappears while the cup and penbox (of the *dawādār*) come to prominence. Composite blazons combine the emblems of several offices and probably represent the offices held in sequence by a particular head of state. One blazon of this sort may be adopted by a number of amirs who belong to the same household, that is *khushdāsh* (mamluks of the same master) who wish to affiliate themselves with their former master.

Changes in heraldry such as these reflect changes in the Mamluk social structure, ones that had important consequences for Egypt′s economy in the fourteenth century. At the risk of oversimplifying the processes of cultural change, each of the ″stages″ presented above can be related to the various stages of restructuring of the Mamluk elite and the ways each of these groups chose to identify themselves artistically. Blazons thus became a mode of self-expression for newly empowered social groups.

The Arabic sources are unanimous in acknowledging the strength of the sultanate under Baybars and Qalāwūn. Mamluk heraldry at this point corroborates the picture of an authoritative sultan supported by a disciplined body of mamluk soldiers and commanders. Sultanic emblems of authority (the lion and eagle, for example) are assumed by the amirs as their own, emphasizing the bonds of sponsorship between mamluk and master. There are signs of the breakdown of sultanic authority in the early fourteenth century as the amirs begin to assert themselves. The appearance of the amiral blazons of office illustrates the growing influence of this class and its ability to forge an identity independent of the sultan. The centralizing policies of al-Nāṣir Muḥammad are one reaction to the rise of the amiral class and are reflected in the subsequent adoption of the sultanic inscribed cartouches.

These processes are further accentuated by the use of the penbox blazon (of the *dawādār*) on a large scale and the proliferation of composite shields containing the cup blazon in the fifteenth and sixteenth centuries. The widespread occurrence of the penbox blazon would, as the *sāqī* blazon (cup) in the previous century, signal the growing importance of the *dawādārīyah,* in whose hands much power

---

Bosworth, *EI*^{2}, 4:1067–68.

was concentrated towards the end of the Mamluk period.[220] The cup blazon is a familiar element, as well, in composite blazons and illustrates one aspect of the fifteenth and sixteenth-century promotional procedures which the Arabic sources confirm: the preliminary advancement of mamluks to amirships of ten and then to the *suqāh.* Most sultans of the period began their careers as *suqāh,* and this is reflected in the composite blazons adopted by their amirs. Unlike the amiral blazons of office that were characteristic of the fourteenth century, the composite blazons of the following centuries represented not office but membership in a mamluk ″household″ and identification with the sultan as head of this household. In this way composite blazons are equated with a sultan and his entire mamluk establishment.[221]

As in all media, the adoption of amiral blazons in sgraffito decoration in the early fourteenth century is socially, politically, and economically significant. It is the single most important factor behind the development of Mamluk sgraffito and is, I believe, one of the keys to understanding the central role this mass-produced but short-lived ceramic style played in contemporary Egyptian society. Furthermore, the precise dating and seriation of Mamluk sgraffito is guided by the chronological development of not only the amiral blazons themselves, but the historical circumstances behind their growing popularity.

In the late Ayyubid period Egyptian potters adopted the decorative layout of inscriptional registers with roundels. Roundels were transformed into pseudo-heraldic (″Norman″) shield devices and placed in the wall registers and in the tondo area, as was the custom in Crusader sgraffito of the Kingdom of Jerusalem and Lusignan Cyprus. The early Mamluk sultans adopted symbols of authority used by the Seljuks, Byzantines, and Crusaders, such as the lion and eagle, and incorporated them into the decoration of their tablewares at the end of the thirteenth century. Amiral blazons of office began to appear in all art forms and gradually replaced the lion, eagle, rosette, and fleur-de-lys motifs. The development of ceremonial offices and the subsequent rise of the *khāṣṣakīyah* in the early fourteenth century are reflected in the proliferation of complex amiral blazons of office on round shields and accompanied by elaborate dedicatory inscriptions. The composite blazons of the fifteenth century are not found in sgraffito wares. We can infer

[220]For instance, the amir Yashbak was not only *dawādār,* but also *amīr silāḥ, wazīr, ustādār, kashf al-kushshāf, mudabbir al-mamlakah,* and *ra's al-maysarah.* Before he became sultan, Tūmānbay also held these offices (Ayalon, ″Studies on the Structure of the Mamluk Army,″ *BSOAS* 16 [1954]: 63—citing Ibn Iyās, *Kitāb Tārīkh Miṣr*).

[221]Atıl, *Renaissance of Islam,* 54; Michael Meinecke, ″Zur mamlukischen Heraldik,″ *Mitteilungen des Deutschen Archäologischen Instituts Abteilung Kairo* 27 no. 1 (1972): 47–80, and idem, ″Die Bedeutung der mamlukischen Heraldik für die Kunstgeschichte,″ *Zeitschrift der Deutschen Morgenländischen Gesellschaft,* suppl. 2 (1974): 213–40.

from this that sgraffito ware was no longer manufactured at this time.[222] The development of sgraffito decoration, and particularly the transformation of the heraldic devices executed in it, is therefore typical of general developments in Mamluk art in the fourteenth century.

Fully developed sgraffito decoration of Mamluk Egypt consisted primarily of shield devices (of various forms) and inscriptional registers. Other motifs and techniques—such as scrolling, the occasional human figure or cross, and floral rinceaux—were either borrowed from Crusader wares or belonged to the more trans-Mediterranean milieu of Zeuxippus-derivative sgraffitos. Heraldic and inscriptional registers clearly belong to the realm of Mamluk metalworking.

It was in the general layout of design that metalwork most influenced other media. The organizing system of registers and cartouches (or roundels) was adopted and canonized in Egyptian metalwork, glass, ceramics, and textiles, while other characteristics of the northern Mesopotamian style were modified. Inscriptions of blessings on the patron, for example, were adapted to emphasize his military titles. The court scenes and zodiac figures originally placed in cartouches were replaced by amiral blazons in pointed or round shields. Characteristics of sgraffito wares, in particular, illustrate the dependence of Mamluk designs on the effect produced by inlaid brasses. The color play of earthenware ground against a white base slip, yellowish glaze, and yellow, brown, and green slips and stains imitated rather successfully the color contrasts of yellow brass and silver and gold inlays of metalwork. Furthermore, the scrolled ground of late Ayyubid and early Mamluk sgraffito recalls not only Ayyubid luster wares but also Ayyubid-period metalwork, such as the Cleveland Ewer, dated by an inscription on the vessel to 1223 and signed by Aḥmad al-Dhākī al-Mawṣilī (″of Mosul″).[223] Similarly, the familiar ″Y-fret″ roundels encountered on sgraffito sherds from Fustat are unquestionably reproductions of metalwork designs as is the ″T-fret″ pattern associated with metalwork signed by ″Mosul″ artists.[224]

The impact of Mosul and the greater northern Jazira on early Mamluk art lies not in the specifics of metalwork decoration but in the broader category of figural art. Figural decoration in all media—coins, manuscript illumination, metalwork, and architecture—was particularly rich in this region in the twelfth and thirteenth

---

[222]Atıl, *Renaissance of Islam,* 149.

[223]Line drawings and discussion of this vessel can be found in Rice, ″Inlaid Brasses from the Workshop of Ahmad al-Dhaki al-Mawsili,″ *Ars Orientalis* 2 (1957): 283–326. Scrolling is a common technique in this period and widespread in many media.

[224]The Y-fret is called an ″arrow interlace″ by Scanlon (″Some Mamluk Ceramic Shapes from Fustat,″ 62, Pl. IV.b). For the use of the T-fret in Mosuli metalwork, see G. Fehervari, *Islamic Metalwork of the Eighth to the Fifteenth Century in the Keir Collection* (London, 1976), 96 and J. W. Allan, *Islamic Metalwork: The Nuhad Es-Said Collection* (London, 1982).

centuries. The visual vocabulary of the Artuqid and Zengid northern Jazira and Rum Seljuk central Anatolia was one and the same. Many of the sovereign symbols found in early Mamluk art, including the double-headed eagle and astrological motifs, while originating in Seljuk Iranian art, reached their full development in these areas.[225] Thus, the north Jazira-east Anatolia region was a distribution point for figural art with political connotations.

In a revealing study by Rabbat, the impact that wall paintings of one *qā'ah* (hall) from Badr al-Dīn Lu'lu''s palace in Mosul may have had on the interior decoration of early Mamluk palaces in Cairo, now gone, has been pieced together from little-known historical references.[226] Figures seated in a row and enclosed within circles most likely represent the attendants of Badr al-Dīn Lu'lu' and can be compared to so many other similar representations from metalwork, where the ruler is flanked by his attendants or officers and all is arranged in registers and circular cartouches. The Mamluk-period "St. Louis basin" is decorated in this manner, along with amiral blazons.[227] Such parallels extend to Egyptian palaces where, according to Ibn al-Dawādārī, the walls of Sultan Khalīl's *īwān* (palace or reception hall) had "representations of his amirs, each with his own *rank* above his head."[228]

There is a nuanced relationship between the adoption of the Mosul-based figural program and the emergence of heraldry in Mamluk art. In this regard, Whelan's critical analysis of the social significance of Mamluk blazons and their art historical and social historical origins is ground-breaking and has become a catalyst for debate about developments in symbols of authority in Islam.[229] The focus of the study is the "highly developed sovereign imagery" of northern Mesopotamia in the middle of the twelfth century until about 1230. Her arguments are somewhat complicated but can be reduced to the following: 1) Mamluk heraldry (my amiral blazons of office) is a reduction of *khāṣṣakīyah* figural imagery developed from the iconography of the Mesopotamian courts; 2) the codification of Egyptian blazons in the late thirteenth and early fourteenth centuries was the direct result of problems of succession inherent in the Mamluk system, where blood ties were at

---

[225]The Urtuqid setting of some of these motifs is presented in S. N. Redford, "How Islamic Is It? The Innsbruck Plate and its Setting," *Muqarnas* 7 (1990): 119–35.

[228]*Al-Durrah al-Zakīyah;* cited in Rabbat, *The Citadel of Cairo,* 170.

[229]The study is published in E. Whelan, "Representations of the *Khāṣṣakiyyah* and the Origins of Mamluk Emblems," in *Content and Context of Visual Arts in the Islamic World,* ed. P. P. Soucek (University Park, PA, 1988), 219–43. For another discussion of image making in northern Mesopotamia see W. F. Spengler and W. G. Szyles, *Turkoman Figural Bronze Coins and Their Iconography*, vol. I (Lodi, Wisconsin, 1992).

odds with the bonds of *khushdāshīyah.* By marking all personal belongings with their emblems of former office, amirs were, initially, expressing legitimate claims to the sultanate by emphasizing relationships with former sultans. The widespread use of blazons in fourteenth-century art illustrates the amirs′ success in establishing their positions vis-à-vis the sultan.

Whelan defines the *khāṣṣakīyah* as ″intimates with ceremonial responsibilities.″[230] The term itself is a product of the Mamluk period, even though related institutions of ceremonial offices probably existed under the Ghaznavids, Seljuks and Zengids.[231] The term *khawāṣṣ* appears in the Ayyubid period to denote the closest personal associates and bodyguards of Sultan al-Ṣāliḥ Ayyūb.[232] The elite corps of Baybars′ mamluks were called *khāṣṣakīyah,* an adjectival derivative of the Turkish colloquial term for the Arabic *khāṣṣah,* or ″special″ (privileged group).[233] With al-Nāṣir Muḥammad, who elaborated Mamluk ceremonial and codified amiral ranks, the word was applied to amirs of high rank who usually performed ceremonial duties.[234] By this period, according to Whelan, the *khāṣṣakīyah* had come to be the ″recognized organ of upward social mobility.″[235] Membership in this privileged corps was the first step to amiral advancement. The majority of the *suqāh* (cup-bearers), *jāmdārīyah* (wardrobe master), *silāḥdārīyah* (sword-bearers) and other such ceremonial officers of the fourteenth and fifteenth centuries came from this select group.

Much of the figural art of northern Mesopotamia in the twelfth and thirteenth centuries relates to the court. In addition to the familiar ″courtly pleasures″ (scenes of revelry and the hunt) there are representations of the sovereign and his entourage. The figures include not only servants but high-ranking officials who walk towards the ruler carrying objects associated with ceremonial offices—a sword, an ax, polo sticks, and a bottle and beaker, to name only a few. One of the earliest examples of these scenes appears on an Urtuqid stone bridge at Ḥiṣn Kayfa, dated to the reign of Qara Arslan (r. 1148–67).[236] Single relief sculptures of striding figures in Turkish costume, carrying a spear, bird, and sword are depicted. The procession

[230]Whelan, ″Representations of the *Khāṣṣakiyyah,*″ 220.

[231]Rabbat, *The Citadel of Cairo,* 290–91.

[232]Ibid.

[233]Ibid., 135.

[234]Ibid., 288. A central thesis of Rabbat′s book is the relationship between al-Nāṣir′s development of Cairo′s Citadel and the expansion of state pomp-and-circumstance. He suggests that the term *khāṣṣakīyah* meant, in this period, those specially selected mamluk recruits who lived in the Southern Enclosure with the sultan himself.

[235]Whelan, ″Representations of the *Khāṣṣakiyyah*,″ 234.

[236]Ibid., 222.

of ceremonial officers is a popular theme in silver-inlaid brassware of the mid-twelfth century to about 1230. Whelan describes several of these, three of which are signed by artists that use the *nisbah* "al-Mawṣilī."[237] Basins and candlesticks of this style were made in Egypt under the Mamluks.

The most important developments in Mamluk metalwork can be dated between 1275 and 1350, when the figural style was at its best and inscriptional decoration was just beginning to appear.[238] This was a crucial period for Mamluk sgraffito, too, as figural art, in the form of sovereign symbols, was gradually replaced by large inscriptional registers and amiral blazons. The reduction of figural scenes to hieratic, military symbols is symptomatic of the maturation of Mamluk art and the internal development of visual forms more appropriate to Mamluk society. The shift to non-figural decoration was due to a combination of factors. The stabilization of the state under al-Nāṣir Muḥammad, in part attributable to the disappearance of foreign threat, demilitarized the state in an active sense. The growth of ceremonial and military art in the fourteenth century only masked the increasing acculturation of the mamluks to the civilian culture of Cairo. The artistic correlates of this development may be seen in the growing emphasis on epigraphy (reflecting perhaps intensified cultivation of the ulama by the state) and the iconoclastic removal of figural art.[239] Artistic factors may also have contributed to the disappearance of figural art: as inscriptional registers got larger, there simply was no room left on the vessel for processional or court scenes.

On the eclecticism of Mamluk architecture, Rabbat states:

> Their use of various imported and revived modes and techniques to decorate their structures indicates that they had no strong and binding cultural tradition of their own, and this allowed them to choose from several that were available.[240]

I believe this statement is aptly true for the minor arts, namely metalwork and ceramics. Mamluk artists borrowed from everyone, adapting all figural and symbolic design to the requirements of their militarized social system.[241] There is some

---

[237]Ibid., 222–23.

[238]Atıl, *Renaissance of Islam,* 51.

[239]Rabbat, *The Citadel of Cairo,* 179. For the late Mamluk period, see B. Flemming, "Literary Activities in Mamluk Halls and Barracks," in *Studies in Memory of Gaston Wiet,* ed. M. Rosen-Ayalon (Jerusalem, 1977), 249–60.

[240]Rabbat, *The Citadel of Cairo,* 179.

[241]Rabbat's argument in this regard is convincing: "the Mosuli style was directly introduced to the Mamluk realm, where it was adapted to the new requirements and incorporated the features specific to the Mamluk heraldic system" (*The Citadel of Cairo,* 177).

indication, though, that the reduction of figural representations of the *khāṣṣakīyah* to amiral blazons of office was not entirely a Mamluk innovation. According to Abū al-Fidā, the Khwarazmshah Muḥammad ibn Tekish (r. 1200–20) was, like al-Nāṣir Muḥammad, interested in the image-making potential of official ceremonies.[242] He maintained a personal group of mamluks, many of whom were later promoted to amirships. Emblems of their ceremonial offices displayed on their banners identified them in processions: a bow for the *silāḥdār,* for instance, or a horseshoe for the *amīr akhūr*.

Historical and cultural associations with the Khwarazmians may in part explain how many motifs of sgraffito, including sovereign emblems (the bicephalous eagle) and amiral blazons (the cup of the *sāqī*) came to Egypt. After the Mongol advance into their territory in the 1220s and 1230s, many Khwarazmian Turks entered the service of the Ayyubids in Egypt as mercenaries. They are mentioned as late as the reign of Quṭuz, who was the reputed descendant of a Khwarazmian prince, and Baybars, who married the daughter of an important Khwarazmian *wāfidī*.[243] An artistic style is not introduced to a country through the migration of military men alone. However, banners used in procession and on the battlefield, basic accouterments of the soldier, do and it is perhaps through martial accessories such as these, brought by foreign mercenaries, that the Mamluks in Egypt became acquainted with amiral blazons and other symbols of military authority. The impact of coins, discussed above, must have been equally important in making familiar certain sovereign emblems—the bicephalous eagle and lion, for instance. Therefore, rather than overemphasize the role of migrating craftsmen,[244] we should consider military equipment brought by mercenaries (weapons and banners), coins in circulation throughout the eastern Mediterranean, and objects imported in large numbers (most importantly inlaid brasses) as the most plausible modes of transferring sovereign imagery to Egypt.

Mamluk amiral blazons can be understood as either the actual objects these former *khāṣṣakīyah* carried in procession or the objects emblazoned on the gear

---

[242]*Kitāb al-Mukhtaṣar fī Akhbār al-Bashar,* cited by Whelan, ″Representations of the *Khāṣṣakiyyah*,″ 220–21.

[243]Irwin, *The Middle East in the Middle Ages,* 33 and 62, respectively.

[244]Rogers rejects the role of immigrant artists in transmitting Mongol (J. M. Rogers, ″Evidence for Mamluk-Mongol Relations, 1260–1360,″ in Raymond, Rogers, and Wahba, ed., *Colloque International sur l′Histoire du Caire,* 385–403) and Seljuk art styles (J. M. Rogers, ″Seljuk Influences on the Monuments of Cairo,″ *Kunst des Orients* 7 no. 1 [1970–71]: 40–68) to fourteenth-century Egypt. In both articles he argues for the defining role of imports, which both respond to and create a ″taste″ for foreign objects, and Egyptian travelers to Iran and Anatolia, upon whom local monuments would have made an impression.

carried and worn by them during processions.[245] Blazons were meant to be seen; they were public expressions of military rank and authority. In this sense, al-Nāṣir Muḥammad adopted the sovereign images of the former Seljuk world, claiming a stake in the "larger political arena"[246] of the Islamic borderlands of the eastern Mediterranean and legitimizing his rule in the process. The development of amiral blazons during the third reign of al-Nāṣir Muḥammad can be related to these attempts to define an appropriate visual image for the Mamluk state.

On the level of the individual, the Mamluk blazon helped to identify the patron for which the object was made. Its role in public propaganda and legitimization within the Mamluk social structure should not be underestimated. It is not entirely clear whether an amiral blazon referred to the present or a former tenure of office, the first stage in amiral advancement, or the position held by the bearer's father or manumitter. In fact, it is probable that the meaning and use of blazons was not static and changed with the progressive codification of rules concerning their use and elaboration of official relationships within Mamluk society. While objects decorated with blazons are usually attributed to amiral patrons, the widespread use of blazons of office in poor-quality sgraffito ware suggests mass-production of the product for other patrons. We should not automatically assume that there was a consistent, one-to-one correspondence between blazon and amir. Other aspects of the decoration of emblazoned sgraffito vessels, for example, indicate that blazons, while generally understood by the larger public as military emblems, had at some point become commonplace status symbols. The popularization of blazons and titles used in inscriptions indicates the dissolution of official control over Mamluk prerogatives and the breakdown of the system that maintained the social hierarchy.

II. Dedicatory Inscriptions

Blazons are not the only method which Mamluk potters employed to identify their patron and his social class. Vessels are often decorated with dedicatory inscriptions that include formulaic production orders (usually *mimmā ʿumila bi-rasm al-dārī*),[247]

---

[245] See Mayer, *Saracenic Heraldry,* 5.

[246] Whelan, "Representations of the *Khāṣṣakiyyah,*" 232.

[247] This is the standard commissioning formula used with Mamluk sgraffito. The word "dār" probably indicates that the vessel was destined for the amir's own residence and kitchen (see definition of *dār* in M. M. Amīn and L. A. Ibrāhīm, *Architectural Terms in Mamluk Documents (648–923 H/ 1250–1517)* [Cairo, 1990]). *Dār* could also refer to the Mamluk "household." Alternative terms like *tisht-khānah*, *rabāṭ*, and *bayt Allāh al-Ḥaram* in inscriptions on brass, bronze, and glass vessels specify other destinations (illustrations in Atıl, *Renaissance of Islam*). One view, still followed by many scholars, defines *dār* as the wife or daughter of an amir or sultan (M. van Berchem, *Matériaux pour un corpus inscriptionum arabicarum, Égypte I* [Paris, 1903], 188).

standard phrases used to honor military patrons *(al-amīr al-kabīr, al-muḥtaram, al-'ālī),* the patron's personal name (often abbreviated) or office, and well-wishes for prosperity and success (*adāma 'izzuhā*, for instance). The inscriptions are produced through a combination of sgraffito and slip-painting and are displayed in the most prominent zones of the vessel—usually a wide register just below the lip and above the carination (if there is one). The placement of the dedicatory inscription in the interior of the vessel and the artist's signature on the exterior is characteristic of most vessels signed by Sharaf al-Abawānī. Military-styled inscriptions seem to be inspired by the designs of contemporary metalworking and are found on glasswares and textiles.[248] In Egyptian ceramics these formal dedications are limited to sgraffito wares. They do not normally appear on underglaze-painted or lusterwares.

Dedicatory inscriptions on sgraffito wares occasionally include the name or office of the amir. His full title could consist of an honorific *(laqab),* his personal name (in Turkish), a fictitious patronymic (*'Abd Allāh*, for instance), patron affiliation *(nisbah),*[249] and his rank (which would theoretically correspond to the blazon).[250] Official inscriptions containing Mamluk names, titles, or official forms of address represent the status and authority of the patron in much the same fashion as amiral blazons. Mamluk names carried prestige. In spite of the official restrictions, there were attempts by civilians to adopt the Turkish names of the Mamluk aristocracy. The leaders of the *'urbān* (bedouin) took on Mamluk names as a way of expressing their authority locally.[251] Foreigners could enter the upper strata of the Mamluk military apparatus by adopting Turkish names to conceal their ethnic background to slave dealers.[252] Turkish names given to children of private citizens in Mecca honored the dignitaries of the local Mamluk garrison.[253] The adoption of Turkish names by non-Mamluks was rare in Cairo. The few exceptions were individuals among the *awlād al-nās* (sons of Mamluks) who

---

[248]S. N. Redford, "Ayyubid Glass from Samsat Turkey," *Journal of Glass Studies* 36 (1994): 81–91, discusses possible levels of meaning in glass inscriptions from the Ayyubid period.

[249]The "īyah" ending reflects the status of a Mamluk to his master—he was formerly his master's slave and belonged to him. The masculine form of this ending is also used as a nickname of ethnicity or geographical origin (*al-Miṣrī*—the Egyptian, *al-Tabrīzī*—the man from Tabrīz). In this sense the individual "belongs" to his homeland.

[250]Ayalon, "Names, Titles, and 'Nisbas,'" 190. Few ceramic inscriptions include all of these elements. The titles, in particular, are abbreviated in comparison to those found on metalworking and in architecture.

[251]Ibid., 208.

[252]Ibid., 195. The elite of Mamluk society were slaves of Turkish stock purchased for the sultan and manumitted by him.

[253]Ibid., 209.

preferred Turkish names to the more traditional Arab-Muslim ones.[254]

While dedicatory inscriptions on inlaid metalwares, glass, and silks may include the full name of the patron, it is very rare on pottery. The incompleteness of inscriptions is one factor behind the scholarly neglect of Mamluk sgraffito. ″Nicknames″ and abbreviated titles do not lend themselves easily to historical study. It is nearly impossible in most cases to identify the patron with any certainty from the *nisbah* or office alone. In those rare instances where an amir is named, misspellings in transliterating his name from Turkish into Arabic, inconsistencies in titulature, and unclear inscriptions render the task of accurate identification equally difficult. Furthermore, most inscriptions refer to the patron only as an ″amir″ and enumerate a list of honorific titles without including the individual′s name. Generic dedications like these may indicate that many of the vessels were mass-produced for a broad clientele within the Mamluk network.

The majority of the legible and specific dedicatory inscriptions in sgraffito include personal names (Kitbughā) and *nisbah*s (al-Malikī al-Nāṣirī) that can, like the amiral blazons, be associated with al-Nāṣir Muḥammad.[255] This is equally true for metalworking, textiles, and glass, a fact which indicates the range of patronage of this sultan and his amirs. Incomplete and ambiguous dedicatory inscriptions on all media but ceramics have been studied for their historical content.[256] The following study attempts to do the same for four sgraffito vessels in the Islamic Museum in Cairo that carry partial inscriptions with the aim of identifying the amir and recognizing changing patterns of ceramic patronage. We begin with a review of the primary sources.

The identification of Mamluk officers relies on an accurate reading of the original inscription and interpretation of the patron′s name as it appears in the inscription to determine the personal name or familiar title of the individual. The patron is then identified as a historical figure by relating his name or title to obituary notices in Mamluk chronicles, forms of address explained in administrative manuals, and the personal entries found in contemporary biographical dictionaries. Secondary sources on the spelling and formation of Turkish names used in the Mamluk period and problems of Mamluk titulature have been important resources in this process.[257] Primary sources include al-Maqrīzī′s *Kitāb al-Sulūk* and *Khiṭaṭ,* Ibn al-Dawādārī′s *Kanz al-Durar,* al-Qalqashandī′s *Ṣubḥ al-Aʿshá,* the biographies

---

[254]Ibid., 229.

[255]Most of these remain unpublished; some are discussed below.

[256]Mayer, *Saracenic Heraldry;* Rice, ″The Blazons of the ′Baptistère de Saint Louis′″; Atıl, *Renaissance of Islam,* to name a few.

[257]J. Sauvaget, ″Noms et surnoms de Mamelouks,″ *Journal Asiatique* 238 (1948): 31–58; Ayalon, ″Names, Titles, and ′Nisbas′″; and Mayer, *Saracenic Heraldry.*

of al-Yūsufī and al-Shujāʿī, and several biographical dictionaries that cover the fourteenth century.[258]

The first of the four vessels is a heavily-potted chalice with carinated and everted walls and sits on a pedestal foot (the classic Mamluk shape—Fig. 12).[259] Both the interior and exterior are divided into three registers, the top one of which carries a sgraffito and slip-painted inscription in *thulūth* script. A floral design with six pointed petals occupies the tondo circle, and the inscriptions on the wall are interrupted by abstract fleur-de-lys. The lowest exterior register is filled with a guilloche band.

The interior inscription expresses the good wishes of the artist and includes his name.

> al-ʿizz wa-al-iqbāl wa-bulūgh al-aʿmāl wa-saʿādat al-faqīr, al-miskīn
> Sharaf al-Abawānī, ghulām al-nās kullihim
>
> [Glory, good fortune, achievement, and happiness—the poor, miserable
> Sharaf al-Abawānī, servant of all the people]

Some of the best products of Mamluk sgraffito have been signed by this potter, who also inscribed the following dedication that filled the main register on the exterior.

> mimmā ʿumila bi-rasm al-dār al-ʿālīyah, al-mawlawīyah, al-maḥrūsah, al-maʿmūrah
> Kitbughā, mulkuhā al-ʿizz, al-iqbāl, wa-bulūgh

[258]The biographies are incomplete: al-Yūsufī, *Nuzhat al-Nāẓir,* and Shams al-Dīn al-Shujāʿī, *Tārīkh al-Malik al-Nāṣir Muḥammad ibn Qalāwūn,* ed. B. Schäfer (Wiesbaden, 1978), vol. I. The most important of the biographical dictionaries are Khalīl ibn Aybak al-Ṣafadī, *Al-Wāfī bi-al-Wafayāt* (Istanbul, Damascus, and Cairo, 1931–83); Shihāb al-Dīn Aḥmad ibn ʿAlī Ibn Ḥajar al-ʿAsqalānī, *Aʿyān al-ʿAṣr wa-Aʿwān al-Naṣr,* ed. ʿA. Abū Zayd (Beirut, 1998); and Abū al-Maḥāsin Yūsuf Ibn Taghrībirdī, *Manhal al-Ṣāfī wa-al-Mustawfá baʿd al-Wāfī,* ed. M. M. Amīn (Cairo, 1985–90), also summarized by G. Wiet in "Les biographies du Manhal Ṣāfī, *Mémoires de l'Institut d'Égypte* 19 (1932). Other dictionaries consulted include Muḥammad ibn Shākir ibn Aḥmad al-Kutubī, *Kitāb Fawāt al-Wafayāt,* ed. N. al-Hurīnī (Cairo, 1866) and Faḍl Allāh ibn Abī al-Fakhr Ibn al-Suqāʿī, *Tālī Kitāb Wafayāt al-Aʿyān,* ed. J. Sublet (Damascus, 1974).
[259]Isl. Mus. #15679, by purchase in 1948. Published in ʿAbd al-Rāziq, "Documents sur la poterie," 26 and Pl. IV. Another very similar sgraffito chalice, also signed by al-Abawānī, is in the Egyptian Embassy in Washington, D.C. and is illustrated in Atıl, *Renaissance of Islam,* 188–89 (cat. #95).

Figure 12. Phase II Egyptian Mamluk sgraffito chalice with historical inscription and signed by Sharaf al-Abawānī, 14th century, probably Fustat

> [Among the things made (on order) for the excellent, sovereign, protected, flourishing house of
> Kitbughā. Glory, prosperity, and achievement to its sovereign]

The Kitbughā addressed in this dedication is probably Zayn al-Dīn Kitbughā, the mamluk acquired by Qalāwūn at the first battle at Ḥimṣ (1260). Kitbughā ruled as sultan in the years after al-Nāṣir Muḥammad's first reign (taking the title "al-'Ādil" in 1294–96) and later served as Sultan al-Nāṣir's viceroy. The blazon of the *sāqī,* or cupbearer, appears on an inlaid brass candlestick dedicated to him.[260] The cup blazon is not represented on this sgraffito chalice. However, the designs that take its place are not blazons in themselves and do not contradict the identification of the patron with this amir. The form of address used in the inscription indicates that the vessel was made for Kitbughā while he was still an amir and not yet sultan.

In the same collection in Cairo is a round earthenware basin decorated in sgraffito inscriptions and blazons (Fig. 13).[261] It has a flat bottom[262] and three decorative spouts attached to the rim, probably in imitation of more functional prototypes in brass or bronze. The decoration consists of a single, wide inscriptional register. The dedication in both the interior and exterior registers is addressed to the son of an amir of al-Nāṣir Muḥammad, Shihāb al-Dīn. The name of the father is somewhat unclear from the inscriptions and has been variously read as "al-Sayfī Qarjī"[263] and "al-Sayfī Farajī."[264] The interior inscription reads:

> mimmā 'umila bi-rasm al-ajall, al-muḥtaram, al-makhdūm, al-a'azz, al-akhāṣṣ
> Shihāb al-Dīn ibn al-janabī, al-'ālī, al-malawī al-Sayfī Qarjī/Farajī al-Malikī al-Nāṣirī
>
> [Among the things made (on order) for the most magnificent, the honored, the well-served, the most glorious, the favored Shihāb al-Dīn, the son of His High Excellency, the lord al-Sayfī Qarjī/Farajī, the amir of al-Malik al-Nāṣir]

[264]Mayer, *Saracenic Heraldry,* 207.

Figure 13. Phase II Egyptian Mamluk sgraffito basin with historical inscription, 14th century, probably Fustat

This is an important dedication for three reasons: the name is more or less complete, a sultan is mentioned, and the patron is a member of the *awlād al-nās*. The title "Shihāb al-Dīn" is a relatively common amiral title for the early Mamluk period.[265] The *awlād al-nās* also took titles of this form, usually in combination with an Arab-Muslim personal name, rather than a Turkish one. For instance, the personal name "Aḥmad" was usually combined with the title "Shihāb al-Dīn" for sons of Mamluks.[266] The patron of this vessel, then, was probably one Aḥmad Shihāb al-Dīn, the son of the amir Qarjī/Farajī.

I have been unable to locate this Aḥmad in the biographical dictionaries or obituary notices; the name is too common to make a proper identification. The identity of his father is extremely important, though, given his relationship with Sultan al-Nāṣir, as indicated in the amir's title. Neither "Qarjī" nor "Farajī" are typical Turkish names of the period. However, "Qirmishī" ("Qurmushī" or "Qurmujī")[267] and "Qarajā"[268] are. On both the interior and exterior inscriptions a faint *mīm* can be discerned above and between the *rā'* and *jīm;* there could be either one or two dots above the first letter. Therefore, the name could read "Qurmujī" instead of "Farajī" or "Qarjī."

There is a contemporary of al-Nāṣir Muḥammad by the name of Qurmujī/Qirmishī who figures rather prominently in Mamluk politics in the early fourteenth century. The amir Qurmujī Sayf al-Dīn was the brother of the *silāḥdār* Aslam Bahā' al-Dīn; the brothers are mentioned in the chronicles on account of their arrest and lengthy imprisonment in Alexandria.[269] Qurmujī was a mamluk of the *nā'ib al-Shām,* Tankiz al-Ḥusāmī, and later became a *ḥājib* in Syria and the *nā'ib* of Ḥimṣ.[270] These events relate him to a Qarajā Sayf al-Dīn who, according to al-Shujā'ī, served as *nā'ib* of Ḥamāh and was arrested with his brother, the

[265]Ayalon, "Names, Titles, and 'Niṣbas,'" 191. It was also popular with the *tājir-khawājah* (high-ranking Karimi merchants) in the Circassian period (Lapidus, *Muslim Cities,* 214–16).

[266]Ayalon, "Names, Titles, and 'Niṣbas,'" 230; Mayer, *Saracenic Heraldry,* 207.

[267]The alternative spellings are due to the inconsistencies of transliterating Turkish names into Arabic in the Mamluk texts. "Sh" and "j" are often alternated (see Sauvaget, "Noms et surnoms"). Sauvaget also lists the name "Qirmish," which means "he broke into pieces" (ibid., 53, #171).

[268]The name appears in Sauvaget's Turkish name list with the meaning "little black" (ibid., 52, #160).

[269]Al-Yūsufī, *Nuzhat al-Nāẓir,* 190 (also in al-Ṣafadī's *Al-Wāfī bi-al-Wafayāt* and al-Maqrīzī's *Al-Bayān wa-al-I'rāb;* K. V. Zettersteen, ed., *Beiträge zur Geschichte der Mamlukensultane* (Leiden, 1919), 178 and 187).

[270]Levanoni, *A Turning Point*, 83; Zettersteen, *Beiträge zur Geschichte der Mamlukensultane,* 198.

silāḥdār in Cairo.[271] Qurmujī died in 1346 (747), five years after the Sultan al-Nāṣir Muḥammad.[272]

The title "al-Sayfī" that precedes Qurmujī's name in the sgraffito inscriptions is an abbreviation for the more formal "Sayf al-Dīn." This was, according to the Arabic sources, the proper title of the Syrian amir. The inscriptions also state that Qurmujī was the mamluk of a Sultan "al-Nāṣir" (*al-Malikī al-Nāṣirī*).[273] If the amir of the inscriptions can be identified with the Syrian amir of the chronicles, then this *nisbah* would appear to be a misnomer: Qurmujī was the mamluk of an amir, and not a sultan. It is possible, though, that Qurmujī changed his *nisbah*. There are a few examples of mamluks changing their titles in gratitude for favors bestowed on them by amirs or sultans.[274] Al-Shujāʿī reports that al-Nāṣir Muḥammad offered a position to Qurmujī in exchange for Tankiz's assassination.[275] Under these circumstances, it would not be surprising if Qurmujī had changed his title to reflect his new relationship with the sultan.

The meaning of the blazon that appears in the inscriptional registers, the tondo, and the exterior of the base is ambiguous. It is a golden half-dome supported by a triangular stand, decorated with a round, target-like device. This symbol has been variously called a target, canopy, saddle, and Mongol *tamgha* and could represent a range of offices. Mayer has associated the office of the *jāwīsh* (macebearer or guard) with two early Mamluk *ḥājib*s whose blazons were described as "dome-shaped palanquins."[276] There is not enough evidence, yet, to equate either the *jāwīsh* or the *ḥājib* with the blazon that appears on this basin.

The significance of this basin is that it was commissioned for a son of a Mamluk amir. The rise of the *awlād al-nās* began with the third reign of al-Nāṣir Muḥammad, who gave positions to the sons of amirs as a way of rewarding his favorite Mamluks. However, it is with the reign of al-Nāṣir Ḥasan that the empowerment of this social class is usually associated. The *awlād al-nās,* and

---

[271]Al-Shujāʿī, *Tārīkh al-Malik al-Nāṣir Muḥammad ibn Qalāwūn,* 177, 235, and 254. The period of imprisonment differs from that mentioned for "Qurmushī" in Zettersteen. Qarajā and Qurmushī/Qurmujī may be the same individual, but this is far from certain.

[272]Al-Yūsufī, *Nuzhat al-Nāẓir,* 191, n. 6.

[273]The *nisbah* could just as well refer to Sultan al-Nāṣir Ḥasan (r. 1347–51, 1354–61), the son of al-Nāṣir Muḥammad, under whom the *awlād al-nās* came to positions of political power, or his brother Sultan al-Nāṣir Aḥmad (r. 1342). That the *nisbah* probably reflects the reign of al-Nāṣir Muḥammad is indicated by the identification of the amir Qurmujī with this sultan.

[274]A list of these for the early Mamluk period appears in Ayalon, "Names, Titles, and 'Nisbas,'" 218–19.

[275]Levanoni, *A Turning Point*, 83.

[276]Mayer, *Saracenic Heraldry,* 18. The blazons are not illustrated.

particularly the sons of amirs, emerged as a new class of nobility in the middle of the fourteenth century—they held a number of top amirships and some of the largest *iqṭāʿāt*.[277] Ceramics is one area of artistic patronage of this newly empowered class.

The basin in Cairo is not the only sgraffito vessel commissioned by a Mamluk′s son. One of the highest quality Mamluk earthenwares in the Cairo collection is a round-bottomed, carinated basin, signed by Sharaf al-Abawānī.[278] Both the potter′s signature and the dedicatory inscription appear in two registers on the exterior of the vessel. A variant of the dedication appears in the interior register, which is interrupted along its length by a round shield device carrying three broad bands.[279] The patron named is the ″great amir″ (*al-amīr al-kabīr*) Saʿd al-Dīn ibn al-Musṭī.

The identity of this Saʿd al-Dīn has not been established yet, however the inscriptions indicate that he was the son of someone important. The formal names of the *awlād al-nās* consist of the personal name of the patron followed by the personal name of his father, the father′s office, his *nisbah,* or any combination of them. Occasionally the father′s ″nickname″—a reference to his place of origin, his manumitter, or personal characteristics—is included.[280] This could be the form of the patron′s name that appears on the al-Abawānī basin. If the shield device is a Mamluk blazon, which it appears to be, then either Saʿd al-Dīn or his father was a Mamluk officer. It is highly doubtful that Saʿd al-Dīn was a Mamluk himself, because his father′s name is included in the inscriptions.[281] Moreover, religious titles, such as ″Saʿd al-Dīn,″ were adopted by civilians or the *awlād al-nās* and not foreign-born Mamluks. Whether Saʿd al-Dīn was the son of a Mamluk or a private citizen with no direct connections to the military aristocracy, this basin is another example of the ways ceramics express Mamluk social policies. The promotion of non-Mamluks (*awlād al-nās* or otherwise) under al-Nāṣir Muḥammad and his sons is illustrated in the titulature of dedication inscriptions such as these.

The final sgraffito vessel with a complete inscription in the Cairo collection is a large, footed basin of a slightly piriform shape (Fig. 14).[282] There is little doubt

---

[277]Levanoni, *A Turning Point*, 46–49.

[278]Isl. Mus. #9089.

[279]It could be a penbox, the blazon of the *dawādār* (secretary) (drawings in Mayer, *Saracenic Heraldry,* 12).

[280]Al-Ṣafadī, *Al-Wāfī bi-al-Wafayāt,* 6:267 and 10:196; Ibn Taghrībirdī, *Nujūm al-Zāhirah fī Mulūk Miṣr wa-al-Qāhirah* (Cairo, 1963–72), 9:286; Ayalon, ″Names, Titles, and ′Nisbas,′″ 229–31.

[281]In the Mamluk system, the father was considered to be the master *(ustādh)* or the manumitter, if it was a different individual. For formality′s sake, a father′s name is sometimes included in Mamluk titles, ʿ*Abd Allāh*—a false name that alludes to the Mamluks′ origins in slavery.

[282]Isl. Mus. #3713. Published in ʿAbd al-Rāziq, ″Documents sur la poterie,″ Pl. VIIA; idem, ″Notes on Islamic Graffito Ware of the Near East,″ *Annales Islamologiques* 9 (1970), Pl. XXB; idem, ″Le

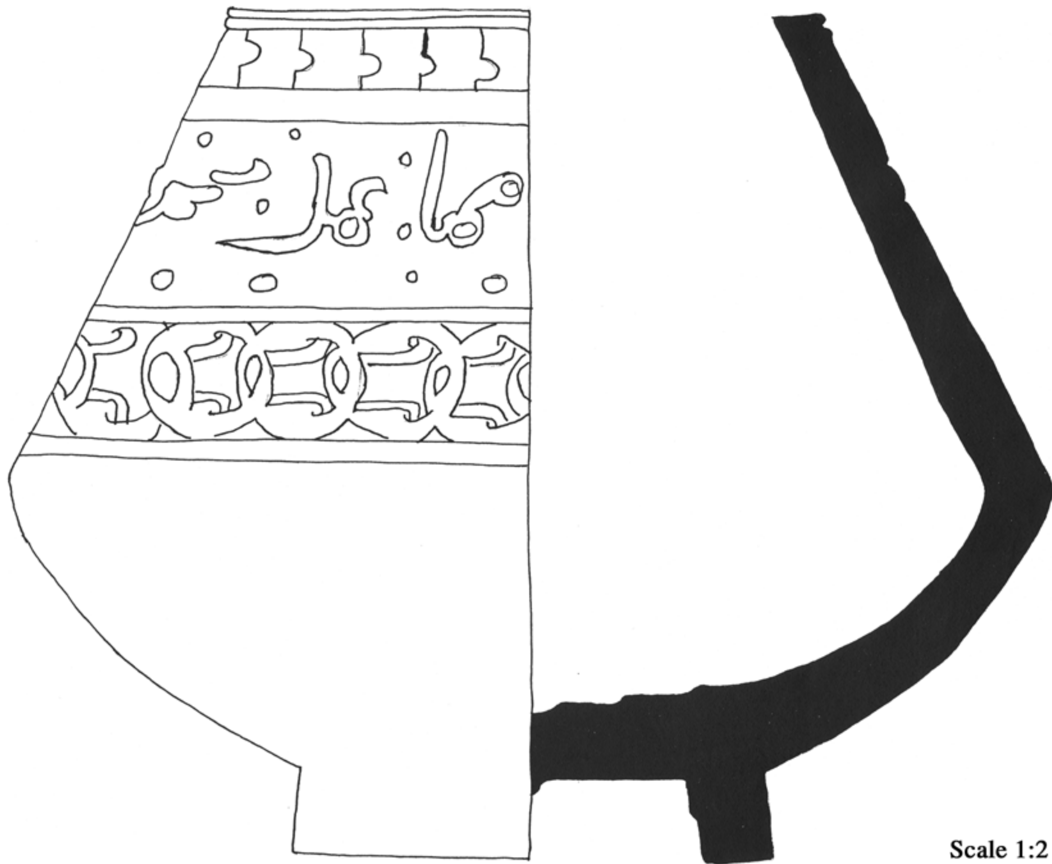

Figure 14. Profile drawing of a Phase II Egyptian Mamluk sgraffito basin—ceramic imitation of a 14th-century Persian brass basin, probably Fustat

that the basin is meant to imitate the form and decoration of cast brass basins with silver and gold inlay from fourteenth-century Persia.[283] The largest of the exterior registers contains the following inscription:

> mimmā ʻumila bi-rasm al-dār al-ʻālīyah, al-mawlawīyah, al-maʻmūrah, al-makhdūmah,
> al-maḥrūsah—al-Azjīyah al-Aydakīyah. ʻadāma ʻizzuhā bi-biqāʼ mulkihā. al-barakah.
>
> [Among those things made (on order) for the excellent, sovereign, prosperous, well-served, protected house of al-Azjīyah al-Aydakīyah. May its glory continue in preserving its sovereignty. Blessings.]

No blazons accompany this inscription.

The quality of potting and the size of the vessel indicate that the patron had some wealth and social stature. His full name, unfortunately, has been reduced to two *nisbah*s, which makes identifying him a difficult task. Consecutive titles in this form often indicate a chronological series of the patron′s masters or the master and the master′s manumitter.[284] Thus, the patron would have been a mamluk of an ″Aydak″ or ″Aybak″ or ″Aydakīn.″ The first *nisbah* makes little sense linguistically in the form above. A scribal error may have produced ″al-Azjīyah″ from ″al-ʻIzzdīyah,″ the abbreviated form of ″ʻIzz al-Dīn.″[285] This would make the patron a Mamluk of one ʻIzz al-Dīn Aybak.[286] Another error could have rendered ″al-Uzkūshī″ as ″al-Azjīyah.″[287] The name would be, then, the mamluk of Aydakīn al-Uzkūshī.

Aydakīn al-Uzkūshī was the mamluk of amir Badr al-Dīn Muḥammad ibn al-Uzkūshī, the governor of Raḥbah. He served as Sultan al-Nāṣir Muḥammad′s

sgraffito de l′Égypte,″ Pl. VII.D; and *Islamic Art in Egypt* (Cairo, 1969), 157 (cat. #146). In his 1967 study (″Documents sur la poterie″), ʻAbd al-Rāziq includes the vessel in a study on Sharaf al-Abawānī. The signature of this potter does not appear anywhere on the basin, however.

[283]Compare with Allan, *Islamic Metalwork*, 107, cat. #24, and E. Baer, *Metalwork in Medieval Islamic Art* (New York, 1983), 280, Fig. 227a.

[284]Ayalon, ″Names, Titles, and ′Niṣbas,′″ 217.

[285]A *dāl* can easily be made a *jīm* by the extension of the final line of the letter. The *ʻayn* may have simply been left out.

[286]The honorific ″ʻIzz al-Dīn″ was usually associated with the personal name Aybak in the early Mamluk period (Ayalon, ″Names, Titles, and ′Niṣbas,′″ 194).

[287]This is more plausible—the *jīm* in Turkish names was transliterated a variety of ways by Arabic-speaking scribes.

walī of Cairo and worked closely with him on projects of urban development.[288] His collaboration with the *nāẓir al-khāṣṣ* ″al-Nashw″ in collecting Mamluk fines led to his dismissal from this post and banishment to Syria.[289] Aydakīn died in 1339–40.[290]

There were other Mamluks by the name of Aydakīn who appear in the Arabic sources in the Circassian period.[291] However, given the parallels with fourteenth-century damascened basins from Iran and the phraseology of the inscription, the vessel and its patron should probably be dated to the fourteenth century. The identification of the patron with a mamluk of Aydakīn al-Uzkūshī is a plausible, however unprovable, suggestion.

The amirs of al-Nāṣir Muḥammad were not the only patrons of large sgraffito vessels. Occasionally a vessel was dedicated to a judge (*qāḍī*) or a judge′s son, according to the inscription (Fig. 15). One large rim fragment in the Royal Ontario Museum in Toronto carries duplicate inscriptions on its interior and exterior faces:

> ʻumila bi-rasm al-qāḍī al-ajall al-makh[dūm] . . .
>
> [Among the things made (on order) for the qadi, the most magnificent, the (well-served) . . .]

The sherd comes from the excavations at Fustat.[292] Its inscription is a generic dedication to an unnamed judge and honors him with the same military epithets as an amir or amir′s son. Not enough of the sherd remains to determine whether or not a blazon was included.

The same formula appears on a surface find (fragments of a large hemispherical bowl) from an archaeological site at Tod, Upper Egypt. The qadi is unnamed, as on the rim sherd in Toronto. The absence of a higher title, such as *qāḍī al-quḍāh* or *qāḍī al-ʻaskar* indicates the lower status of the judge.[293]

Qadis are mentioned in the dedicatory inscriptions of other media. The grandson of a prominent Egyptian judge is the recipient of one damascened brass basin studied by Mayer. The inscription is similar to the ROM sherd in its application of

Figure 15. Rim sherd of a Phase II Egyptian Mamluk sgraffito bowl, inscription refers to a judge, late 14th century, Fustat

military honorifics for a civilian patron.[294] A different set of epithets appears on a penbox dedicated to the qadi Burhānī. In this instance the patron is described in terms more appropriate for a member of the civilian, rather than the military, elite.[295]

Other members of the urban religious establishment are mentioned in sgraffito inscriptions. A hemispherical bowl of unknown provenance in the Kuwait National Museum is dedicated to a *shaykh Yāsīn,* who was apparently the head of a Sufi establishment.[296] Its dimensions (D 22.5 cm, H 11.3 cm) compare with those of the Tod bowl (D 24 cm, H 13 cm) and other similarly inscribed, hemispherical bowls from Fustat[297] and Jebel Adda (Nubia).[298] The layout of the decoration on the bowl conforms to a standard type: a wide internal register just below the rim frames either a long inscription or short, generic, honorific phrases (*al-a'azz, al-ajall,* for example) separated one from the other by ″Norman shields.″ The tondo motifs consist of a single figure (like a common bird or eagle), genuine blazon, or, more rarely, geometric interlace design. Monolithic hemispherical bowls are a distinct subgroup of Mamluk sgraffito and are found throughout Egypt. The widespread use of generic inscriptions (or explicit dedications to a civilian official), ″Norman shields,″ and decorative tondo circle devices reflects the lower social status of the consumers of this group, as compared to those of the carinated bowls (″military chalices″) and earthenware basins.

A complex relationship existed between the military elite (the Mamluks) and the civilian elite (the merchants and the ulama).[299] The daily life of civilians was organized by legal, financial, and educational institutions funded by private patrons

[299]A discussion of this complicated subject is beyond the scope of this article. The reader should consult the following sources for detailed analysis of Mamluk-ulama relations: Lapidus, *Muslim Cities;* Petry, *The Civilian Elite;* Ayalon, ″Studies on the Structure of the Mamluk Army,″ *BSOAS* 16 (1954); and Goitein, *A Mediterranean Society*, vol. 1.

and put under the jurisdiction of members of the ulama, many of whom were chosen by the state. These scholars further supported the Mamluks by working in the state administration and acting as the sultan's spokesmen on the local level. There was a degree of social mobility inherent to this system. A civilian with enough education and ambition could, if he gained the favor of an amir or the sultan, rise to a position of wealth and influence in the Mamluk bureaucracy. This sort of mutually-beneficial patronage "reinforce[d] the bonds between the elites."[300]

The qadis, in particular, acquired positions of some power under Mamluk patronage. On a local level, the qadis occupied some of the most prominent positions in education and the courts as teachers and directors, head preachers and shaykhs, *waqf* overseers, and judges. They were often appointed by the sultan to the upper levels of the state bureaucracy as *kātib al-sirr, nāẓir al-khāṣṣ, nāẓir al-jaysh,* and *wazīr*.[301] In Ayalon's list of army-related offices, only one is said to have been held by a member of the religious establishment—the *qāḍī al-ʿaskar*. Four "army judges" were appointed to accompany the army during expeditions and keep court on behalf of the soldiers while they were on campaign.[302]

Some civilian officials were entitled to honorific names.[303] These often take the form of titles (the *laqab*) familiar from dedicatory inscriptions, like "Sharaf al-Dīn" or "ʿIzz al-Dīn." The inscription on the ROM sherd, as well as dedications to qadis on other pieces of art, reflect the high status of the Muslim judge in the Mamluk society and his position within the military bureaucracy. Civilian patronage of the arts may have been more considerable than it appears at first. The adoption of honorific titles in dedicatory inscriptions may not necessarily indicate that the patron was a Mamluk or even a member of the *ḥalqah,* particularly if the dedication is generic, in other words the patron is not specifically named. The patron in this case could be either a military officer or a high-ranking civilian official.

The majority of dedicatory inscriptions in sgraffito make no specific mention of the patron. The formulae below, or variants of them, are among the most common:

---

[300]Lapidus, *Muslim Cities,* 138.

[301]Ibid., 136–37. The responsibilities of the *wazīr* changed over time. In the early Mamluk period it was the most important office in the fiscal administration (Irwin, *The Middle East in the Middle Ages,* 40). Under Barqūq the office was reduced to management of the army's meat supplies (Ayalon, "Studies on the Structure of the Mamluk Army," 61).

[302]Ayalon, "Studies on the Structure of the Mamluk Army," 67.

[303]Lapidus, *Muslim Cities,* 128 and 266–67, n. 7. Merchants, market inspectors, judges, and a variety of craftsmen held honorific titles and were known by such in the Arabic biographical dictionaries.

> [Among the things made (on order) for the sovereign house. May its glory continue in preserving its sovereignty.[305]]

The title "amir" is often absent from generic inscriptions. In fact, there is otherwise no indication that these vessels were produced for military clientele or dignitaries of any sort. The omission of titles from inscriptions on the part of the potter was certainly deliberate. In the case of vessels decorated with blazons, the combination of a generic dedication with an amiral symbol may indicate that the piece was made ahead of time for amirs promoted to this military office (Isl. Mus. #9277).[306] The "Norman" shield (a round-topped, pointed-bottom emblem with an empty field) often take the place of official amiral blazons, particularly in generic wall inscriptions (Isl. Mus. #4673). In the absence of a true blazon or any reference to an amir in the inscription, one can assume the vessel was sold to the general public in the city bazaars. Products targeting both groups of consumers were mass-produced and sold publicly. The poor quality of potting, incision, transcription, and coloring of many "generic" pieces such as these reinforce these assumptions.[307]

By the end of the fourteenth century many of the common people had the

---

[304]The inscription is broken at this point but apparently leads directly into al-Abawānī's signature—Isl. Mus. #14754, published in ʻAbd al-Rāziq, "Le sgraffito de l'Égypte," Pl. VII, C. This is a ceramic imitation of an inlaid metal tray stand. Compare to a fourteenth-century Mamluk silver and gold inlaid cast brass stand in Allan, *Islamic Metalwork,* 97 (cat. #19).

[305]Isl. Mus. #9277. This is the interior inscription. The exterior carries the signature of Sharaf al-Abawānī. Although the inscription is generic, the polo master's blazon occupies the tondo. The rim is strongly beveled inwards, in Cypriot style.

[306]Atıl, *Renaissance of Islam,* 149.

[307]For an analysis of "official" inscriptions on Ayyubid glasswork, see Redford, "Ayyubid Glass from Samsat Turkey."

material means to purchase goods previously accessible only to the upper classes.[308] Furthermore, they adopted customs of the elite: their dress, their ways of socializing, and their tastes in art. With the breakdown of Mamluk social structure in the second half of the fourteenth century, there was a broadening in artistic patronage. Sgraffito vessels that carry generic, non-military dedications and are of a poorer quality than ″official″ military chalices and bowls may have been produced sometime after al-Nāṣir Muḥammad′s death (641/1341). The distribution of poor-quality, inscribed sgraffito in Nubia may also represent imitation of Cairo elite culture by smaller courts in the south.[309]

While sgraffito vessels could be dedicated to either military or civilian dignitaries, it seems that they were never produced specifically for the sultan. Neither sultanic titles nor the personal names of a sultan have appeared on vessels or sherds that I have seen or which have been published.[310] This pattern of patronage probably reflects on the status of glazed earthenware in Mamluk society. Although Arabic inscriptions, and particularly military titles, were prestigious, ceramics decorated in this fashion were of lower commercial value than similarly inscribed damascened brasses and bronzes and enameled glass.[311] The sultan could afford more expensive ways of promoting his name than through inscriptions on common ceramics. Vessels of precious metals, public architecture, and textiles were avenues of self-expression generally closed to patrons of non-elite status. This is especially true of Mamluk silks and robes of honor, the production of which, while not truly a state monopoly, was to some extent controlled by the sultan and the Mamluk elite.[312] A comparison of the ways in which inscriptions were used on Mamluk pottery and textiles is instructive of these different levels of patronage.[313]

The most significant difference between ceramic and textile inscriptions lies

---

[308] Levanoni, *A Turning Point in Mamluk History,* 113.

[309] The ceramic material from the UNESCO salvage excavations at Jebel Adda, Nubia remains unpublished.

[310] The large sgraffito chalice in the Islamic Museum in Cairo with Kitbughā′s name is one exception. However, the piece was probably produced for him when he was still amir. The titles used in the dedication are typical honorifics for amirs (Atıl, *Renaissance of Islam,* 66). The inscriptions found on royal silks, as below, are more common for sultanic commissions.

[311] Copper wares were also preferred to earthenwares. The higher value of copper vessels is reflected in trousseau lists of the Fatimid period (Goitein, *A Mediterranean Society*, vol. 4, App. D). Ceramics are usually not included in the trousseau (p. 106).

[312] Lapidus, *Muslim Cities,* 60.

[313] For one such analysis of Mamluk textiles and their inscriptions, see B. J. Walker, ″The Social Implications of Textile Development in Fourteenth-Century Egypt,″ *Mamlūk Studies Review* 4 (2000): 167–217.

in the kind of patrons named.[314] Sgraffito wares were generally produced for a lower class of amirs, while silks were manufactured for and distributed by the sultan. Access to wealth was the determining factor in these consumer patterns. In terms of housewares, the sultan and his top amirs could have afforded silver and gold-inlaid bronze and brass basins and candlesticks and finely enameled glass beakers and chalices. The less affluent amirs and urban dignitaries would have, instead, commissioned earthenware vessels (often oversized), inscribed with their names and titles. The inscriptions ″personalized″ housewares for the patron, serving a purpose similar to the *ṭirāz* borders of textiles.[315]

Comparisons can also be made between the generic court inscriptions of pottery and textiles. Dedications to ″the sultan″ (otherwise unnamed) or ″al-Malik al-Nāṣir″ (a title used by a number of Mamluk sultans[316]) on silks ensured the propriety of the garment for the regimes to follow. Similarly, ceramic inscriptions praising unnamed amirs were appropriate for a broad market and guaranteed greater sales. The expansion of ceremonials necessitating the distribution of robes of honor and the process of easy promotion to amirships under al-Nāṣir Muḥammad may account for the large demand for these kinds of goods.

On the other hand, unofficial inscriptions take a different form in Mamluk sgraffito and textiles. Poetry, proverbs, and congenial wishes for prosperity and happiness have been part of the decorative vocabulary of ceramics, textiles, and metalworking since the early Islamic period. Mamluk textiles continue this tradition; Mamluk sgraffito does not. Generic inscriptions on sgraffito wares duplicate the formal honorific dedications to amirs and high officials common to inlaid metalwork and enameled glass. The placement of these inscriptions in visible areas (like the wide register below the rim on the exterior of a vessel) and their official format are clear indications that the objects were meant to be seen in public places. Therefore, generic inscriptions in sgraffito are a development of official art, rather than popular art. Likewise, sgraffito wares belong to the official and public realm of Mamluk art. The mass-production of these for the general public then reflects, to some degree, on social developments related to the Mamluk elite.

Inscriptions were widely recognized symbols of sovereignty and occupied an

---

[314]Inscriptional registers are just one mode of decoration that potters may have borrowed from the design of textiles. The influence of rug fringes on the margin arcades of sgraffito registers has been discussed above. For other studies on the influence of textiles on ceramics see L. W. Mackie, ″Toward an Understanding of Mamluk Silks,″ 143–44, and L. Golombek, ″The Draped Universe of Islam.″

[315]The phrase ″textile mentality″ was coined in L. Golombek and V. Gervers, ″Tiraz Fabrics in the Royal Ontario Museum,″ in *Studies in Textile History in Memory of Harold B. Burnham,* ed. V. Gervers (Toronto, 1977), 82–125.

[316]Atıl, *Renaissance of Islam,* 233.

important position in the visual world of medieval Islam. Architectural inscriptions, although incomprehensible to the many illiterate of medieval society, publicly expressed the power and authority of the patron. Objects decorated with inscriptions were held in high esteem because they represented wealth and status. It was not necessary for the inscriptions to be legible, though. Surface decoration consisting of abstract Kufic letters,[317] abbreviated words,[318] and pseudo-epigraphic registers[319] was quite common in medieval ceramics, metalwork, and textiles. The decorative quality and symbolic value of the Arabic script, in this sense, were more important than the meaning of the inscription. Ibn Khaldūn informs us that textiles with the sultan′s name lent prestige to the person of lower rank on whom the garment was bestowed.[320] Inscriptions on objects were socially meaningful. Likewise, the symbolic effect of inscriptions on Mamluk pottery should not be underestimated. The appearance of an inscription (especially if it was accompanied by a blazon) increased the status of both object and owner, regardless of the quality of the vessel it was decorating.

The Mamluk epigraphic style of decoration, established under al-Nāṣir Muḥammad, gradually replaced figural decoration in all media.[321] A variety of factors may have contributed to this development: growing religious orthodoxy, a conscious break with Mediterranean styles associated with the Crusaders, the influence of contemporary metalwork,[322] or simply the changing tastes of the Mamluk elite.[323] The most important catalysts in this stylistic development, however,

---

[317]Rim registers of repeated pseudo-Kufic letters were quite common in metalwork in ceramics produced in both the Islamic and Byzantine worlds of the twelfth century. See the characteristic beveled uprights of false Kufic letters in Byzantine sgraffito from Corinth (C. H. Morgan, *Corinth: Results of Excavations Conducted by the American School of Classical Studies at Athens, Vol. XI: The Byzantine Pottery* [Cambridge, MA, 1942], Pls. xliv.e, xlviii.b, and xl.a, b).

[318]*Al-sulṭān* was often abbreviated to one or two letters in Mamluk textiles (Atıl, *Renaissance of Islam,* 236). Single and double-letter characters represent the phrases *li-ṣāḥibihi* and *al-yumn* in Samanid ceramics and continues in the painted pottery of eleventh-century Afghanistan (J. C. Gardin, *Lashkari Bazar: Les trouvailles, Vol. II: Céramique et monnaies de Lashkari Bazar et de Bust* [Paris, 1963], 60, n. 6).

[319]Possibly because of its much shorter production time, pottery is more prone to decoration in rapidly executed (and often illegible) inscriptions than other media. For examples from early thirteenth-century Bamiyan see J. C. Gardin, ″Poteries de Bamiyan,″ *Ars Orientalis* 2 (1957): 231, Fig. 2; for Mamluk Egypt see Atıl, *Renaissance of Islam,* 186–87, cat. #94.

[320]L. W. Mackie, ″Increase the Prestige,″ *Arts of Asia* 26 (1996): 84.

[321]Atıl, *Renaissance of Islam,* 90.

[322]Inlaid brasses produced in fourteenth-century Fars are decorated in large *thulūth* inscriptions dedicated to unnamed dignitaries (Ward, *Islamic Metalwork,* 99–100).

[323]Mamluk blazons and inscriptions containing the titles associated with amiral offices replaced the figural designs popular with Mosul metalworkers (Ward, *Islamic Metalwork,* 111 and 113).

may have been the changes in Mamluk administrative, fiscal, and social policies initiated by al-Nāṣir Muḥammad. Sgraffito inscriptions are particularly illustrative of Mamluk society during and following his third reign. The upward mobility of the *awlād al-nās* is reflected in inscriptions dedicated to sons of amirs. The rapid promotion of Mamluks to amirships is paralleled in the proliferation of vessels inscribed with dedications to unnamed amirs. The mass-production of poorer quality vessels with blanket dedications may be related to the rise of the ″rank-and-file″ soldiers and non-elite members of the civilian population. These formerly marginalized groups became familiar with the epigraphic art of the elite through official ceremonies. The role of Mamluk ceremonial in popularizing inscribed objects, such as textiles and ceramics, is the focus of the following section.

Function

Of al-Nāṣir Muḥammad′s ambitious building program on the Cairo Citadel, only his Congregational Mosque remains.[324] Contemporary sources on other constructions, no longer standing—the Qaṣr al-Ablaq (built in 1313–14) and the Great Īwān (final rebuilding by al-Nāṣir in 1333)—emphasize the relationship between al-Nāṣir Muḥammad′s monumentalization of the Citadel during his third reign and the complicated rituals which were staged in them.[325] The Great Īwān, the ceremonial hall *par excellence,* served as al-Nāṣir′s *dār al-ʻadl* (court of justice). It was here that public hearings with the sultan took place and the processional route through the lower city ended. Al-Nāṣir Muḥammad rebuilt the original structure in 1333 on a much larger scale, presumably to accommodate the increasing elaboration of important public events, such as the investiture and the reception of foreign dignitaries.[326] The ceremonies associated with the monumental Qaṣr al-Ablaq (″Striped Palace″) were semi-private. The morning *asmiṭah* (banquets)

---

[324]Tradition claims that Muḥammad ʻAlī (viceroy of Egypt and Pasha, 1805–188) cleared most of the Citadel platform of earlier Mamluk constructions for his own mosque and military barracks. Nevertheless, the remains of a series of vaults flanking an enclosure wall south of Muḥammad ʻAlī′s mosque have been identified as the subterranean supporting structures of the Qaṣr al-Ablaq (Rabbat, *The Citadel of Cairo,* 34–36). Archaeological work on the Citadel in the 1980s has uncovered the remains of further buildings, the identification of which is still undetermined (M. al-Ḥadīdī and F. ʻAbd al-ʻAlīm, ″Aʻmāl Tarmīm al-Qaṣr al-Ablaq bi-Qalʻat Ṣalāḥ al-Dīn,″ *ʻĀlam al-Binā'* 26 (1986): 4–16; archaeological report reviewed in Rabbat, *The Citadel of Cairo,* 36).

[325]For a reconstruction of the ceremonies held in these two structures consult Doris Behrens-Abouseif, ″The Citadel of Cairo: Stage for Mamluk Ceremonial,″ *Annales Islamologiques* 24 (1988): 35–51; Rabbat, *The Citadel of Cairo,* Ch. 6; and J. S. Nielsen, *Secular Justice in an Islamic State: Maẓālim Under the Baḥrī Mamlūks 662/1264–789/1387* (Istanbul, 1985).

[326]Rabbat suggests that developments in court ceremonial and processions early in al-Nāṣir′s reign may also have necessitated the first reconstruction in 1311, which replaced al-Ashraf Khalīl′s earlier *īwān* (Rabbat, *The Citadel of Cairo,* 193).

and *khidmah* (royal audience) held here were restricted to the highest-ranking officials and the *khāṣṣakīyah.*[327]

The effect of al-Nāṣir Muḥammad's elaboration of Mamluk ceremonial was the militarization of state functions. This is particularly evident in the area of judicial administration. The *maẓālim* sessions, initiated by Nūr al-Dīn in the twelfth century, were public hearings where civilians could demand redress from wrongs suffered at the hands of government officials. The convergence of these hearings with the ceremonial, twice-weekly *khidmah* and the transfer of both functions to the Īwān Kabīr transformed both events into a public display of the sultanate and government authority.[328] It was a powerful legitimizing tool that the sultan controlled for his own benefit. Al-Nāṣir Muḥammad, furthermore, regularized the *khidmah,* which convened on Mondays and Thursdays, and ritualized the parades *(mawākib)* and banquets *(asmiṭah)* which preceded and followed the royal audience, respectively.

According to Nielsen, al-Nāṣir Muḥammad completed the process of "militarization" of the *maẓālim* sessions which took place in the *dār al-ʿadl,* now situated in the Citadel's Īwān Kabīr. Al-ʿUmarī *(Masālik al-Abṣār)* describes in detail the seating arrangement of the *maẓālim* sessions: the sultan was flanked by the four *qāḍī al-quḍāh* and his vizier, surrounded from behind by his top military officers, preceded on each side by the most important administrative officers *(wakīl bayt al-māl, nāẓir al-ḥisbah, kātib al-sirr, nāẓir al-jaysh,* and *kuttāb al-dast),* and the amirs of the royal council remained standing beyond this circle. A protocol for seating was maintained for the banquets, as well; likewise, the line-up of officers who took part twice weekly in the military parades (held before the *khidmah*) reflected the current social and professional hierarchy within the Mamluk elite. In fact, Nielsen argues that such seating/standing arrangements were designed to recreate this hierarchy for public view, yet another method of legitimization with highly political overtones.[329]

It was the participation of the Mamluk military elite in the *maẓālim* sessions that "militarized" the ceremonial events that accompanied them. Nielsen explains this phenomenon:

---

[327]Ibid., 201.

[328]Nielsen, *Secular Justice,* 53.

[329]Ibid., 56. N. Rabbat, "Mamluk Throne Halls: *Qubba* or *Īwān*?," *Ars Orientalis* 23 (1993): 201–18, also addresses the relationship between the ceremonialization of the *dār al-ʿadl* sessions and the architectural history of the Īwān Kabīr. For the general history of the term "īwān" see N. Rabbat, "Al-Īwān: Maʿnāhu al-Farāghī wa-Madlūluhu al-Tadhkarī," *Bulletin d'Études Orientales* 49 (1997): 249–67.

> The involvement of the Mamluk military officers in the *khidma* inevitably led to their involvement in the *maẓālim* session when the two were combined in Dār al-ʻAdl. . . . [U]nder the Mamluks the amirs [for the first time] had a permanent place [in the Dār al-ʻAdl session]. This change is underlined by the Mamluk predilection towards appointing military officers to government posts, such as the vizierate, which had previously been filled by civilians.[330]

Ironically, it is at this time, the early fourteenth century, which one can, in one sense, speak of a ″demilitarization″ of the Mamluk state. Recruitment and training of mamluks continued, it is true, but after the victories at ʻAyn Jālūt (1261) and Acre (1291), the borders of the Mamluk state were, for the time being, secure against foreign threat. However, the winding down of military activity abroad was accompanied by a ″militarization″ of ceremonial and culture. The arts of the period are characterized by the military quality of their decoration. What initially appears as an anomaly makes sense if one considers the methods, and purpose, of legitimization of power in the Mamluk sultanate. From the inception of the Mamluk state, the sultans presented themselves as the representatives and defenders of Islam in the eastern Mediterranean and the Hijaz. Their initiatives against the Crusader States and the Mongols established them as leaders of jihad, one requirement of legitimate secular rule as defined by the political thought of the day. The Mamluk sultans, moreover, annually provided the embroidered cover for the Ka'bah in Mecca (the *kiswah*), had their names mentioned in the *khuṭbah,* and provided financial and organizational support for the ulama—all of which were traditional methods of legitimizing rule in medieval Islam.

With military threats removed, at least for the time being, the sultans were able to focus their energies and resources into transforming their image at home. They created new visual images, meant to solidify and legitimize their regimes. Among these were the development of ceremonial with military themes and the ″militarized″ objects that went with them. The militarization of Mamluk art can, in part, be related to this phenomenon.[331]

The precise origins of the ceremonies associated with the Īwān Kabīr and the Qaṣr al-Ablaq are obscure. Mamluk sources, as related in al-Maqrīzī, al-Qalqashandī, and Ibn al-ʻAbbās′ manual for kings, credit the Persians for various

---

[330]Nielsen, *Secular Justice,* 61.

[331]For a complementary view on the militarization of the early Mamluk state consult N. Rabbat, ″The ′Militarization′ of Architectural Expression in the Medieval Middle East (11th–14th Century): An Outline,″ *Al-ʻUṣūr al-Wusṭá* 6 no. 1 (1994): 4–6.

aspects of not only ceremonial but also architecture.[332] The Il Khanid court represented the ″imperial ideal″ in the late thirteenth and early fourteenth centuries, most notably in the areas of ceremonial and state-sponsored art.[333] Two Mongol practices, the ritual drinking of *qumiz* (a fermented and sweetened mare′s milk) and the organization of state-sponsored banquets, were shared by the Mamluk court. Formalized drinking and eating at court were easily translated into a Mamluk context, where they strengthened the bonds of *khushdāshīyah.*[334] Both the protocol and dress adopted for these occasions were incorporated into Egyptian court practice.[335] As for the arts, there are numerous examples of Il Khanid influence in the fourteenth century: the decorative use of faience on minarets (Amir Aytamish′s village mosque, al-Nāṣir Muḥammad′s Citadel mosque, Amir Qawṣūn′s mosque in Cairo);[336] the layout and iconography of Sultan Ḥasan′s mosque-madrasah complex at the base of the Citadel and the so-called ″Sulṭānīyah″ complex in the Southern Qarafah;[337] the stucco mihrab of al-Nāṣir Muḥammad′s madrasah on the Bayn al-Qaṣrayn; large Qurans and ″bestiaries″;[338] ceramics (the so-called ″Sultanabad ware″);[339] and large inlaid jugs and ewers with military inscriptions.[340] The aesthetic and overall visual impact of Mongol and Mamluks arts of this

---

period are the same: they are monumental in size, colorful, and meant for ostentatious display.

As regards the role of such ceremonies in Egyptian society, more suggestive comparisons may be made with Fatimid customs, upon which many aspects of both public and semi-private ceremony were based.[341] Cairo's Citadel under al-Nāṣir has been described as a stage for the elaborate ceremonials that he developed.[342] Similarly, in her recent work on Fatimid ceremonies, Paula Sanders has described Fatimid Cairo as a "ritual city" and has emphasized how public processions and banquets played against the backdrop of Cairo's urban landscape contributed to the city's "urbanness." [343] Fatimid ceremonies, such as the biweekly audience, the Opening of the Khalīj, urban processions, and official banquets, were adopted by the Mamluks, modified, and elaborated, and many were moved from the Bayn al-Qaṣrayn (the Fatimid center) to the architectural "stage" built for them on the Citadel. By moving parades and sultanic audiences, for instance, to the Citadel, al-Nāṣir Muḥammad was able to claim the Fatimids' symbolic heritage as his own.[344]

"Insignia of sovereignty" associated with the Fatimid court—the throne, parasol, flags and banners—can also be found in Mamluk processions and receptions.[345] The lengthy, detailed descriptions of Fatimid banquets, processions, and formal audiences in which historians like al-Maqrīzī and al-Qalqashandī indulge illustrate their interest in the kinds of ceremonies that were the most important in their own day.[346] In these ways, it can be argued, the Mamluks borrowed from the visual vocabulary of Fatimid sovereignty as a way of legitimizing their rule locally.

---

341 For a different view, see R. S. Humphreys, "The Expressive Intent of the Mamluk Architecture of Cairo: A Preliminary Essay," *Studia Islamica* 35 (1972): 86–87, where the "ideology of kingship" symbolized in Mamluk ceremonial is contrasted with the Fatimids' public symbols of universal monarchy.

342 Behrens-Abouseif, "The Citadel of Cairo," 66.

343 Paula Sanders, *Ritual, Politics, and the City in Fatimid Egypt* (New York, 1994). See also Jonathan Katz's review of her book in *Journal of the American Research Center in Egypt* 33 (1996): 212–13.

344 Similarly, Rabbat argues that some architectural developments in the early fourteenth century "dissociat[ed] the Mamluk ceremonial and official image from that of the Fatimids" (Rabbat, "Mamluk Throne Halls," 208).

345 Behrens-Abouseif, "The Citadel of Cairo," 30–31.

346 It is significant, in this respect, that al-Maqrīzī documents the organization of the royal kitchen under the sultans al-Ashraf Khalīl and al-Nāṣir Muḥammad (Taqī al-Dīn Aḥmad al-Maqrīzī, *Kitāb al-Mawāʿiẓ wa-al-Iʿtibār fī Dhikr al-Khiṭaṭ wa-al-Āthār* [Bulaq, 1853], 2:230–31) with the same relish for detail on expense as in his descriptions of Fatimid banquets for ʿĪd al-Fiṭr (ibid., 1:387; compare al-Qalqashandī, *Ṣubḥ al-Aʿshá,* 3:523–24).

These symbols and ceremonies were familiar to Egyptians and accepted by them.

Al-Nāṣir Muḥammad developed complex rituals around these Mongol, Ayyubid, and Fatimid customs.[347] The biweekly audience in the *dār al-ʿadl* (practiced by both the Fatimids and Ayyubids) was moved to the monumental Īwān al-Kabīr on the Citadel. The Qaṣr al-Ablaq was the scene of the *khidmah* (royal audience or review of mamluks/service ceremony); audiences were followed by large, formal banquets where either the Mamluk elite (in the mornings) or the army as a whole (for afternoon sessions) attended and where, as always, stringent rules regarding seating, serving, and eating were observed.[348] The biweekly polo games, held initially at the Hippodrome,[349] and formalized hunting excursions were innovations of al-Nāṣir and were accompanied by ceremonial extravagance in gift-giving, processions, and banquets. Over the course of the Mamluk period, processions began to take on an increasing importance and were used to mark occasions as diverse as major holidays (the ʿĪds, plenitude ceremony, the *maḥmal* procession),[350] coronations, military victories, hunting excursions,[351] and the return of the sultan or an important amir from abroad.[352]

Processions and banquets were rare occasions for the Mamluks to come into contact with the local populace and were taken full advantage of by the sultan as a way of popularizing his rule.[353] The development of ceremonial during al-Nāṣir Muḥammad´s third reign was, furthermore, another aspect of his policies geared

---

[347]Al-ʿUmarī (*Masālik* and *Al-Taʿrīf*) is the principle source on ceremonial under al-Nāṣir Muḥammad´s reign. As al-Nāṣir´s *kātib al-sirr* in Syria, al-ʿUmarī was personally familiar with the organization of festivals and the daily routines of the court. Both al-Maqrīzī (*Khiṭaṭ* and *Sulūk*) and al-Qalqashandī *(Ṣubḥ al-Aʿshá)* rely heavily on al-ʿUmarī for their information on Mamluk customs (Rabbat, *The Citadel of Cairo,* 308). They do not differentiate between the Bahri and Burji periods, however, and do not account for developments in ceremonial over the fourteenth and fifteenth centuries. Two secondary studies on Mamluk architecture and the role it played in ceremonial—Behrens-Abouseif, ″The Citadel of Cairo,″ and Rabbat, *The Citadel of Cairo*—document the most important developments, particularly the ways in which Mamluk ritual was simplified and curtailed by the Circassian sultans. Other sources consulted for the present study include Stowasser, ″Manner and Customs,″ and B. Shoshan, *Popular Culture in Medieval Cairo* (Cambridge, 1993).

[348]A description of dining etiquette can be found in Ibn al-ʿAbbās´ manual for kings, *Atar al-Uwwal* (Behrens-Abouseif, ″The Citadel of Cairo,″ 44–45).

[349]The polo games were moved to the *ḥawsh* (animal pens) of the Citadel by the Circassian Mamluks (Behrens-Abouseif, ″The Citadel of Cairo,″ 65).

[350]Shoshan, *Popular Culture,* describes several of these events.

[351]Stowasser, ″Manner and Customs,″ 18.

[352]Shoshan, *Popular Culture,* 74.

[353]Popular support for al-Nāṣir Muḥammad´s regime was exhibited in mob riots during the usurpation of Baybars al-Jāshankīr (609–10/1309–10) (Shoshan, *Popular Culture,* 52–54).

towards consolidating his power vis-à-vis the factious mamluk system which had dethroned him two times previously. The daily repetition of rituals designed to demonstrate the exalted status of the sultan over the other mamluks reinforced the Mamluk class structure while emphasizing his sovereignty in terms derived from Fatimid symbols of authority.

Drinking parties and formal banquets (both public and semi-private) were focuses of Mamluk ceremonial. To what degree vessels, and particularly ceramic vessels, played a visible role in these is suggested in references to banquets found in the Arabic sources and illustrations of the same in metalworking and manuscript painting. These vignettes of Mamluk daily life are few and restricted in detail.[354] However they are suggestive of a specialization in vessel form and decoration that relates to both their ceremonial use and the Mamluk social hierarchy.

The following section serves two purposes. First, references to vessel shape, decoration, and use will be documented and compared to the typology of sgraffito set forth earlier in this paper. Second, the visibility of the *khāṣṣakīyah* in Mamluk banquets and processions is analyzed and related to characteristics of sgraffito decoration in the fourteenth century. It is argued that the development of sgraffito in Egypt is related to general developments in Mamluk ceremonial introduced by al-Nāṣir Muḥammad and continued by his successors.

The term most often applied to banquets in the Arabic sources is *asmiṭah* (singular *simāṭ*).[355] Later historians, such as Ibn Iyās (d. ca. 1524), use the term *walīm* (pl. *walā'im*) interchangeably with *simāṭ*. In Ibn Iyās they appear in the common phrase *wa-fīhi walīmat/asmiṭat ḥaflatin, wa-kāna yawman mashhūdan* ("and in that year was a *dinner party*, and it was a notable day").[356] *Khiwān* is less common: a more formal kind of banquet may be intended in this case.[357] The

---

[354]Illustrations from al-Ḥarīrī's *Maqāmāt* often include scenes from banquets and dinner parties. See D. Haldane, "Scenes of Daily Life from Mamluk Miniatures," in *The Eastern Mediterranean Lands in the Period of the Crusades,* ed. P. M. Holt (Warminster, 1977), 85, Fig. 3 for a banquet at a merchant's wedding (fourteenth century, Syrian). D. Hill, *The Book of Knowledge of Ingenious Mechanical Devices* (Dordrecht, Holland, 1971), 99, Fig. 82 (fifteenth century) and 219, Pl. 13 (fourteenth century) reproduce drinking sessions from Badī' al-Zamān al-Jazarī's *Kitāb fī Ma'rifat al-Ḥiyal al-Handasīyah.*

[355]In Fatimid usage it refers to the place where food is eaten, often a temporary construction built of wood or a long, varnished wood table (al-Maqrīzī, *Khiṭaṭ,* 1:387).

[356]Muḥammad ibn Aḥmad Ibn Iyās, *Kitāb Tārīkh Miṣr,* ed. M. Muṣṭafá (Wiesbaden and Cairo, 1975–84), vol. 3 has many examples. See especially p. 468, ll. 18–19.

[357]Humphreys, "The Expressive Intent," 87. In al-Qalqashandī, *Ṣubḥ al-A'shá,* 4:56, ll. 1–7, there seems to be slight distinction between *khiwān* as a banquet held on a special occasion and *simāṭ,* one of the daily meals attended by the mamluks at the Citadel. Sayyid, the editor of the 1985 edition of *Masālik al-Abṣār,* equates al-Qalqashandī's *khiwān* with al-'Umarī's *simāṭ;* in this case, both indicate the sultan's table (al-'Umarī, *Masālik al-Abṣār,* 40, n. 3).

chronicles and biographies are full of references to banquets of all kinds, but details are often lacking. The occasion for the banquet, however, is usually noted. Banquets could mark a variety of events, such as weddings, national holidays, procession-days, and the completion of a building project or literary work,[358] as well as the five daily group meals that the mamluks attended.[359] The pattern of extravagance established by the sultan was followed by his governors,[360] lesser amirs,[361] and even the civilian elite. The ulama were often invited to sultanic and amiral banquets during special events.[362] They, in turn, held their own banquets, which were attended by other religious scholars, government officials, and members of the court.[363] In this way, civilian Cairo became acquainted with the expensive food, drink, and serving vessels used by the court in the Citadel.

Other information provided by the contemporary historians relates to the expense of the banquet, such as the quantity of chicken consumed, the measure of saffron used in food preparation, and the amount of money spent on food and drink. Al-Maqrīzī is particularly interested in the minutia of pocketbook and kitchen. His descriptions of Fatimid banquets, about which he borrows heavily from earlier

---

[358]While amirs marked the completion of a palace in this way in the fourteenth century, this practice becomes more common for sultans, amirs, and the civilian elite in the fifteenth and sixteenth centuries, according to the numerous references in Ibn Iyās, *Kitāb Tārīkh Miṣr*. See, for example, 1:1:549, ll. 15–20; 2:207, ll. 5–12; 333, ll. 21–24; and 406, ll. 6–10; and 3:218, ll. 14–21.

[359]There were, technically, two sets of banquets given daily for the mamluks. Of the first set, one was in the morning, the second was called *al-khāṣṣ,* and the third was *al-ṭārī* and was attended personally by the sultan (al-ʻUmarī, *Masālik al-Abṣār,* 40). There were two seatings in the evening (Stowasser, "Manner and Customs," 18; Rabbat, *The Citadel of Cairo,* 201).

[360]The governors in Alexandria and Syria held biweekly justice hearings followed by meals for those officials attending as well as sponsored banquets for the Īd celebrations, in the manner of the sultan. For instance—al-ʻUmarī, *Masālik al-Abṣār,* 43, and al-Qalqashandī, *Ṣubḥ al-Aʻshá,* 4:24, l. 7; 197, ll. 7–8; and 225, ll. 16–19.

[361]Amiral banquets usually followed weddings and the inauguration of a new building. See Ibn Iyās, *Kitāb Tārīkh Miṣr,* 3:302, ll. 6–9 (*walīmatu-ʻarsin,* "wedding banquet").

[362]On procession days, the head qadis and civilian administrators attended banquets held at the Īwān al-Kabīr (al-Qalqashandī, *Ṣubḥ al-Aʻshá,* 4:56). According to al-Qalqashandī, it was the custom of the sultan to share a simple morning meal *(simāṭ)* of stew and sweets with the head shaykhs (ibid., 5:205). His reference to banquets held after military drills, to which the ulama and other civilian elite were invited, suggests that this was a somewhat regular practice (ibid., 206). In 906 Quran readers, preachers, and all of the amirs were invited to an amiral banquet in Ezbekīyah (Ibn Iyās, *Kitāb Tārīkh Miṣr,* 3:467).

[363]One example has been dated to 842 by Ibn Iyās. The *qāḍī al-quḍāh* (head judge) sponsored a banquet *(asmiṭah/walīmatu ḥaflatin)* to celebrate his completion of a commentary on al-Bukhārī. In attendance were the sultan's son, the other head qadis, Sufi shaykhs, the *kātib al-sirr,* and the *nāẓir al-khāṣṣ* (*Kitāb Tārīkh Miṣr,* 2:207, ll. 5–12).

historians, are long and detailed. The banquet held for ʿĪd al-Fiṭr by the caliph was particularly lavish.[364] Al-Maqrīzī devotes considerable attention to the food and the vessels in which it was served. Silver, gold, and ″porcelain″ *(ṣīnī)* vessels were placed on the table; chicken and bread were stacked ″as high as a man is tall″ on large ceramic *(khazafī)* trays.

For the Mamluk period, the biographer and contemporary critic of al-Nāṣir Muḥammad, al-Yūsufī (d. 1358), likewise emphasizes the great expense lavished by the sultan on banquets held in honor of political dignitaries.[365] One is described as an eating frenzy, a festive gorging that lasted as many as four days.[366] Similarly, al-Maqrīzī devotes a lengthy section on the kitchen expenditure of al-Nāṣir Muḥammad and includes such details as the number of chickens killed daily for the morning banquets, the amount of sugar purchased annually for Ramaḍān, and the household expenses of al-Nāṣir′s son, al-Ṣāliḥ Ismāʿīl.[367] The wealth and extensive personal estates accumulated by the royal cooks are documented by al-Maqrīzī, but the day-to-day management of the kitchen is not a point of interest.[368] Nowhere in any of these Mamluk accounts are the vessels for cooking, serving, or consumption described or, for that matter, even mentioned.

Short references to vessels can be found, however, in the descriptions of Fatimid banquets, food rations in the Mamluk period, a Mamluk drinking ceremony, and the Geniza documents. The large Fatimid serving trays described by al-Maqrīzī were supported by heavy cylindrical stands. These trays and supporting stands were still used in the Mamluk period, as is suggested by historical references to sizable ceramic trays *(khawāfiq ṣīnī)* used to serve large quantities of sweets and meat at the daily mamluk banquets[369] and the fourteenth-century brass and ceramic stands displayed in museum collections.[370] One sgraffito vessel in the gallery of the Islamic Museum in Cairo is a ceramic copy of a brass or bronze stand of this sort (Fig. 16).[371]

The term *zabādī* (sing. *zubdīyah*) describes vessels in which rations or measured portions of meat or sweets were distributed.[372] Individual servings of meat purchased from the *sūq* were sold in *zabādī,* which were, in this case, smallish ceramic bowls. References to the *zubdīyah* as a "take-out" dish for meat span the Fatimid to Mamluk periods. According to Ibn Iyās, the vizier's sister sent him daily a *zubdīyah* of meat from the market, presumably to save him the trouble of going himself.[373] In the late fifteenth century (873), during a food shortage, amir Yashbak reduced the meat rations *(zabādī-laḥmī)* of Sufis and all "turbaned men"; he then confiscated all meat sold in the *sūq* for the mamluks.[374]

Individual servings of sweets at banquets and during Ramaḍān were also distributed in *zabādī*.[375] At his wedding (892, turn of the sixteenth century), Sultan al-Ghawrī distributed small bowls of sweets *(zabādī ṣīnī fīhi sukkar)* in the mosque.[376] The term also appears in the much earlier Geniza documents. According to Goitein, the *zubdīyah* was the most common vessel on the average Cairene's table and the regular eating bowl so ubiquitous in museum collections.[377] It came in a variety of sizes and was used for a variety of purposes. In the smallest *zabādī* were served fruits and nuts. They may have been made of wood, at least in the middle-income households of Fatimid and Ayyubid Cairo. Dessert bowls like these were relatively small. The servings distributed to the masses during Ramaḍān would have been meager. Furthermore, references to confiscated *zabādī* from personal treasures in the Fatimid and Mamluk periods number into the tens of thousands; the numbers argue for a small size.[378] The term is current in Egypt today and designates a small yoghurt bowl.

Liquids were also served and consumed in ceremonial vessels called *zabādī*. An important passage in *Kitāb al-Tārīkh* describes the Mamluk custom of drinking

---

middle drawing. The Cairo stand has been signed by Sharaf al-Abawānī and carries a generic military inscription of dedication.

[372]The word *khafiqīyah* appears much less regularly. It is also associated with meat ration distribution. Sultan al-Ashraf Khalīl was said to have sent his army into the markets while on campaign to get their daily meat. The servings were brought back in *khafiqīyah ṣīnī* (al-Maqrīzī, *Khiṭaṭ,* 2:230, l. 36; Bahgat and Massoul, *La céramique musulmane,* 7.

[373]Ibn Iyās, *Kitāb Tārīkh Miṣr,* 1:1:219.

[374]Ibid., 3:22–23.

[375]Al-Nuwayrī, a contemporary of al-Nāṣir Muḥammad, describes *zabādī* as vessels for serving sweets (R. P. A. Dozy, *Supplément aux dictionnaires arabes* [Leiden, 1881], 1:578).

[376]Ibn Iyās, *Kitāb Tārīkh Miṣr,* 3:241.

[377]Goitein, *A Mediterranean Society,* 4:145–46.

[378]Ibn Iyās, *Kitāb Tārīkh Miṣr,* 1:1:193 (confiscation of the vizier Jawhar's treasury, tenth c.); ibid., 454 (contents of an amiral house, fourteenth century).

qumiz (fermented mare's milk or a sour milk sweetened with sugar),[379] a practice the Qipchak Turks brought from their homeland in the southern Russian steppe.[380] According to Ibn Iyās, in 791 (1389) Sultan al-Manṣūr Ḥajjī formalized this practice by obliging the amirs every Sunday and Wednesday to join him in the Maydān below the Citadel for drinks. The ceremony followed the protocol of formal banquets: the amirs were seated according to rank and served *qumiz* by those members of the *khāṣṣakīyah* whose function it was to serve drinks at banquets, the *sāqī*s. The *sāqī*s served the drink in individual ceramic bowls *(zabādī ṣīnī):* "wa-al-suqāh tasqīhim al-qumiz fī al-zabādī al-ṣīnī."[381] Like many other formalities initiated by al-Nāṣir Muḥammad and his successors, the formal drinking ceremony came to an end after the reign of Barqūq (r. 1382–89, 1390–99).

In another entry from al-Yūsufī, the drinking of *qumiz* is described in an informal setting.[382] The *khān* Abū Sa'īd (r. 1316–35), a contemporary of al-Nāṣir Muḥammad, has confronted the bedouin leader, Mahāh, about his alliance with the Mamluks. In order to fortify himself for the verbal confrontation, the *Īlkhān* drinks *qumiz* from a *hanab,* or beaker. The incident is informative on several accounts. First, the drinking of *qumiz* was a pan-steppe tradition also practiced by the Mongols. Second, it was a custom that could at times be informal and practiced "at home." Finally, one drank *qumiz* from a cup. Unfortunately, neither the size nor shape of the *zubdīyah* or the *hanab* can be established on the basis of these accounts alone.

More detailed information on the custom of drinking *qumiz* is provided by accounts written by European visitors to the Mongol court. The Franciscan William of Rubruck, who spent time in Karakorum from 1253 to 1255, writes frequently about the centrality of *qumiz* drinking parties in the court life of the Mongols. He writes that silver and gold goblets studded with precious stones were kept at the entrance to the Mongols' tent, along with large containers of *comos*.[383] Drunkenness was not only approved of, but was considered honorable, and both men and women were encouraged to drink as much as they could during these parties. Even guests were showered with drink. "When they want to challenge someone to drink, they seize him by the ears, tugging them vigorously to make him open his

[383]William of Rubruck, *The Mission of Friar William of Rubruck: His Journey to the Court of the Great Khan Möngke 1253–1255*, ed. P. Jackson (London, 1990), 132.

gullet, and clap and dance in front of him."[384]

The khān's drinking sessions were important occasions with all the formalities of official banquets. Mengu Khān, for example, held court-wide drinking parties twice a year at Karakorum, during which time he distributed garments and other presents to his nobles and organized parades and feasts.[385] This description resembles Marco Polo's account of the Great Khān's "White Feast" on his birthday, where the cupbearers, tasters, and guards played focal roles and embroidered gold silks with golden belts covered with precious stones and pearls were given to the khān's intimates.[386]

The few details that can be obtained from these accounts indicate that *qumiz,* whether consumed alone at drinking parties or along with food at banquets, was served from large ceremonial vessels. Marco Polo writes:

> The wine, or precious beverage . . . is drawn into large golden vessels, big enough to contain sufficient wine for eight or ten men. Of these vessels, one is placed on the table for every two guests. Each of the two guests has a golden cup with a handle, and with it he draws his drink from the large golden vessel. And so with the ladies, every two of whom have one of the large vessels and two cups, like the men.[387]

The somewhat fanciful drawing by William of Rubruck of a silver fountain with four spouts for each of the four alcoholic "staples" of the Mongol diet—*qumiz,* wine, mead, and rice wine—suggests that a variety of vessels were used to contain and distribute the drink.[388]

In twentieth-century Western culture, we differentiate between eating and drinking and between bowls and cups. This is far from a universal concept, however. In the modern Middle East soup is drunk (not eaten) from a vessel that could be called a bowl or cup. The nomenclature is subjective; in fact, many industrial potters in the modern United States reject the labels and call their vessels of consumption (regardless of shape, size, or form) "bowls." The distinction between "cup" and "bowl" is a fine one that exists only in the mind of the typologist, at least as far as medieval pottery is concerned. The term *zubdīyah,* for example, could refer to either: both food and liquids were served in this vessel-type.

---

[388]R. Tannahill, *Food in History* (New York, 1973), 135.

The medieval Egyptian sources do, however, mention vessels that were used only for drinking liquids. A variety of drinking vessels were used in the average Cairene home. The *ṭāsah* and *kūz* are two types of cups mentioned in the Geniza documents, differentiated by function and shape.[389] Goitein has defined the *ṭāsah* as a ″wide, but shallow, drinking vessel.″ He suggests it was a communal cup, passed around the table from person to person, and of monumental size. That this was a vessel used on special occasions is suggested by Dozy, who mentions, for instance, that black eyes could be treated by water held in the *ṭāsat al-tarbah,* or ″concussion cup.″[390] Likewise, one drank lukewarm milk, honey, or water from a ″magic bowl″ *(ṭāsah)* inscribed with incantations or instructions for medical use in order to cure a variety of common maladies.[391] The cup used on a daily basis was called a *″kūz,″* which is an Arabic term used today in Egypt. Like *zubdīyah,* the term *kūz* can refer to a variety of shapes, sizes, and materials. The ceremonial *kūz* was rare: it was made of silver and was large and heavy.[392]

Banquet-ware differed from regular tableware in size, material, and decoration. Some of the most well-known banqueting vessels were recovered from a hoard in northwest Iran and have been dated to the late tenth century.[393] They comprise a set of silver and nielloed jugs, bowls, and a platter—the sorts of vessels used in Fatimid banquets, according to al-Maqrīzī′s account. The three bowls have steeply sloping sides, which are internally inscribed with a frieze showering blessings on the patron, one amir Abū al-ʻAbbās Walkin ibn Hārūn. Ward suggests these were dessert bowls, because their steep walls would render drinking difficult.

The notion that form follows function is useful only if one is clear about what *range* of forms are suitable for a particular task. Steep walls do not necessarily eliminate drinking. For example, the silver and enameled Byzantine chalices used for the Eucharist had high, vertical walls. One cannot eliminate the possibility that, like the communion cup, ceremonial drinking vessels among the Mamluks were larger and of a different shape than regular household cups. The deep and wide spaces afforded by carinated or vertical-sided vessels would also have been ideal for serving fruit.[394] Fruit was consumed in some quantity at banquets, both in the Mamluk and Fatimid periods. However, large bowls with straight sides are

394Although I disagree with his notion that large, carinated ceramic bowls held fruit at Mamluk banquets, I am grateful to Prof. Daniel Crecelius of California State University for the suggestion (personal communication, August 1996, ARCE Fellow′s Luncheon, Cairo).

never mentioned in association with fruit and banquets. We read, instead, of dried sweets served on large platters[395] and fruit in baskets.[396] In the banqueting passages from al-Maqrīzī and al-Qalqashandī mentioned earlier, we get the impression that food in general (whether meat, vegetables, or sweets), if served in large quantities, was carried on large platters. Bowls/cups with carinated or vertical walls, if found at all at banquets, would have functioned in another manner.

Rare illustrations of banqueting vessels in metalwork and illuminated manuscripts are informative about form and function in a way that the historical sources are not.[397] Little is known about the artist who signed his work ″Ibn al-Zayn,″ except that he was a contemporary of al-Nāṣir Muḥammad and his work represents some of the best inlay work of the early Mamluk period.[398] At least two pieces can be attributed to him on the basis of his signature: the well-known St. Louis basin and the Vasselot bowl.[399]

The ″St. Louis basin,″ now in the Louvre, is so-named because it was originally identified as a fourteenth-century royal French baptismal basin. This notion was rejected with Rice′s 1953 monograph, in which he identified the patron as Salār and assigned its production to the period of his amiral promotion (1290–1310).[400] The central register pictures an array of armed amirs and members of the royal household, bringing ″gifts″ to single equestrians framed by a roundel. Although Rice did not specify these figures as the *khāṣṣakīyah,* the *silāḥdār, jumāqdār, bunduqdār, jāmdār, jukāndār, bāzdār, sāqī,* and *jāshankīr* clearly carry symbols of their office across the surface of the basin in what seems to be a ceremonial procession. The placement of the *sāqī* (cupbearer) and *jāshankīr* (royal taster) close to the equestrian figures and the detailed execution of the vessels they carry emphasize the ceremonial importance of these two officials. The *sāqī* carries a bulbous carafe and offers a drink from a long-stemmed, vertical-sided goblet. At the other end of the procession stands the *jāshankīr* holding a wide, shallow, hemispherical ″bowl″ on a high pedestal foot—a shape that may correspond to the

[398]Rice, *The Baptistére de Saint Louis,* 12.

[399]For the bibliography of sources on these two works, see Atıl, *Renaissance of Islam,* 75. Rice, *The Baptistère de Saint Louis,* has the best plates (in black and white) of the St. Louis basin. Both vessels are illustrated in color in Atıl, *Renaissance of Islam*. Rogers, ″Evidence for Mamluk-Mongol Relations,″ analyzes in depth their *khāṣṣakīyah* iconography and relates it to Mongol influence on the Mamluk court.

[400]Rice, *The Baptistére de Saint Louis,* 17. Rice recognizes the portrait of Salār in one of the armed amirs.

Geniza *ṭāsah*.[401] The decoration of the vessel is familiar enough from sgraffito: the dark rim is outlined several times in heavy incisions and a wide, central register carries an inscription: *anā makhfīyah li-ḥaml al-ṭa'ām* ("I am a *makhfīyah*, for serving food"). It is a very fortunate inscription, indeed, for determining banqueting vessel shape and function. However, the term may not have been that familiar to fourteenth-century Egyptians, since Ibn al-Zayn felt it necessary to include this commentary.[402] One thirteenth-century source, al-Baghdādī, defines *makhfīyah* as the food which may have been served in this vessel: a sort of meat stew containing kebabs and strips of red meat cooked in a pot with water, chickpeas, onions, and spices.[403] On the basis of more modern usage, Dozy has identified the term as a Maghribi word for a covered container or tureen.[404]

A similar sort of vessel is inscribed on the other of Ibn al-Zayn's signed works, a large brass bowl inlaid with silver and gold, also in the Louvre.[405] The main register of the "Vasselot bowl" makes explicit reference to a royal banquet: a dignitary sits with beaker in hand inside two medallions and musicians and the *khāṣṣakīyah,* all holding the various objects of their offices, are seated to either side of him. One figure with Mongol features sits cross-legged to the right of the dignitary and holds aloft a wide, shallow vessel on a high pedestal foot. It is almost identical to the *makhfīyah* of the St. Louis basin, except for a pronounced carination and some indication of an out-turned rim. The *naskhī* inscription of its wide, central register displays the artist's signature—*'aml Ibn al-Zayn* ("the work of Ibn al-Zayn"). Atıl refers to this figure as the *sāqī,* because of the small beaker laid at his feet. However, the artist has incorporated several beakers and pouring vessels into the background rinceau; the beaker here is entirely decorative. The placement of this officer to the right of the dignitary and the shape of the inscribed vessels he holds are the same in both of Ibn al-Zayn's pieces. It is entirely possible that the St. Louis basin and the Vasselot bowl belong to the same banqueting set and that the scenes were meant to complement one another. If this is so, then the

---

[401]Atıl (*Renaissance of Islam,* 76) identifies this official as the *jāshankīr* on the basis of the vessel he is carrying. On another Mamluk inlaid brass, Rogers recognizes the *jāshankīr* by what appears to be a brass "lunchbox" in his hands (Rogers, "Evidence for Mamluk-Mongol Relations," 390). The vessel known as the Mamluk lunchbox was a sort of lockable tureen designed to prevent poisoning. See illustration in Ward, *Islamic Metalwork,* 119, Fig. 95. Ironically, in none of these illustrations does the *jāshankīr* carry the official blazon of his office: the table.

[402]Ibn al-Zayn also identifies penboxes *(dawāt)* on the basin in this manner. Rice reminds us that "explanatory inscriptions" like these were also part of the decorative vocabulary of thirteenth-century metalworking (*The Baptistère de Saint Louis,* 20).

[403]Tannahill, *Food in History,* 174.

[405]See illustrations and descriptions in Atıl, *Renaissance of Islam,* 74–75, cat. #20.

Vasselot figure is the *jāshankīr,* and he is holding the taster′s bowl, or *makhfīyah*.

The *makhfīyah* and the *sāqī′s* goblet are specialized banqueting vessels and are related to the ceremonial roles of the *jāshankīr* and the *sāqī*. Ibn al-Zayn takes care to detail certain aspects of form and decoration in order to emphasize the ceremonial importance of these two vessel types. The beaker, on the other hand, is a more familiar and widespread form that figures prominently in banqueting scenes. The truncated cone of its profile and the straight, flaring sides are repeated as a decorative device in the Vasselot bowl and as an icon itself of the royal banquet in Islamic minor art. The frontispiece of the Vienna manuscript of al-Ḥarīrī′s *Maqāmāt* essentially repeats the banqueting scene of the Vasselot bowl by emphasizing the drinking dignitary with his beaker surrounded by household officials and musicians.[406] The cross-legged prince lounging with glass beaker in hand is a visual abbreviation for the ″pleasures of the court″ that fits conveniently into a bowl interior. The beaker motif has a long history in Islamic ceramics, one that begins with Abbasid slip-painted and lusterware and continues into Seljuk, Byzantine, Cypriot, and Mamluk sgraffito.

The goblet held aloft by the *sāqī* of the St. Louis basin differs from ordinary stemmed bowls. The artist has emphasized its vertical, carinated walls, and the interplay of brass and silver inlay within the contours of the goblet is meant to indicate a metal vessel rather than a glass one. Similarly, the metal inlay of Ibn al-Zayn′s *makhfīyah*s represents the original inlay of those vessels. Metalworking was imitated in Islamic ceramics before the Mongol invasions.[407] The products of Mamluk metalworkers became extremely influential in the fourteenth century and were reproduced in many media, including glass and ceramics. The debt fourteenth-century Mamluk sgraffito owes to contemporary Egyptian and the slightly earlier Mosul metalworking tradition has been duly noted by scholars of medieval Egyptian pottery.[408]

The full development of brass-imitative sgraffito within a relatively short period of time (early-mid fourteenth century) may indicate factors at work other than technological development, the scarcity of a raw material, or the adoption of

---

[406]Vienna, Nationalbibliothek AF 9, dated 1335. Rogers′ claim that this is the only surviving illustration of Mamluk ceremonial can now be rejected (Rogers, ″Evidence for Mamluk-Mongol Relations,″ 395; illustrated p. 394, Ill. 6).

[407]For a discussion of the impact the bronze-working industry had on twelfth- and thirteenth-century Iranian ceramics, see Y. Tabbaa, ″Bronze Shapes in Iranian Ceramics of the Twelfth and Thirteenth Centuries.″

[408]Consult the following for observations on decorative composition and general layout: Fouquet, ″Contribution à l′étude de la céramique,″ 130; Marzouk, ″Three Signed Specimens,″ 498; and Atıl, *Renaissance of Islam,* 148. On specific motifs borrowed from beaten and inlaid brass and developments in form see Scanlon, ″Some Mamluk Ceramic Shapes,″ 62.

the art of the ruling elite by the bourgeoisie.[409] Not all forms of inlaid brass were reproduced in ceramics. In fact, the most popular vessels did not capture the imagination of the Egyptian potter. Lamps, straight-sided basins, trays, penboxes, incense burners, and ewers do not seem to have been produced in sgraffito. On the other hand, rounded basins, tray stands, goblets, large footed bowls, and, arguably, candlesticks do have counterparts in Mamluk sgraffito. It is as if particular vessels associated with banquets and processionals were targeted by Cairene potters. It is significant that these were the largest and most visible brass and bronze accessories. The development of ceremonial in the fourteenth century and the restructuring of the Mamluk elite—both related to the policies of al-Nāṣir Muḥammad and his successors—emerge as key factors in the development of Mamluk sgraffito in this period.

The monumental, inscribed sgraffito vessels of fourteenth-century Egypt share many characteristics with the ceremonial drinking vessels described here. Exaggerated dimensions are emphasized in the *makhfīyah*s of St. Louis′ basin and the Vasselot bowl and metalware vessels described in the Geniza documents and contemporary chronicles and administrative manuals. The extended proportions of brass basins, bowls, ewers, and candlesticks are paralleled in fourteenth-century sgraffito bowls. Furthermore, the layout of decoration standardized in Mamluk metalworking is applied to ceramics. The repetition of inscriptional registers interrupted by blazon roundels and the placement and formulae of the artist′s signature is characteristic of Sharaf al-Abawānī′s work, for example. Details such as the ″Y-pattern,″ double register lines, the color combination of yellows and browns (imitative of gold inlay on brass or bronze), and dark outlined rims are also borrowed from metalwork.

Of the two main forms of Mamluk sgraffito, the hemispherical bowl is most easily identifiable as a product of the glass industry.[410] It is impossible to precisely determine, however, what kind of vessel shape from Mamluk metalworking is imitated in the carinated sgraffito forms of the fourteenth century. The carinated shape does not replicate closely enough any form of Egyptian or Mosul metalworking, nor does it reproduce the vessel shapes illustrated in Ibn al-Zayn′s

---

[409]The development of figural, inlaid metalwork in the twelfth and thirteenth centuries can be explained in terms of a ″silver crisis″ (J. W. Allan, ″The Survival of Precious and Base Metal Objects″—genesis of Iran′s beaten brass and bronze industry) and the empowerment of the non-royal, urban elite (O. Grabar, ″The Illustrated *Maqāmāt* of the Thirteenth Century: the Bourgeoisie and the Arts,″ in *The Islamic City,* ed. H. H. Hourani and S. M. Stern [Oxford, 1970], 207–22—focuses on painting). While these arguments are useful for the Seljuk and Ayyubid worlds, they do not adequately document artistic and social developments of fourteenth-century Egypt.

[410]For a review of the history of this form in glassware and ceramics and its relationship with metalworking, see Tabbaa, ″Bronze Shapes,″ and Atıl, *Renaissance of Islam,* 118–44.

basin and bowl. One should not read Ibn al-Zayn′s illustrations too literally, however. The vessel profiles and proportions are approximated and only express the impression the *makhfīyah* and *sāqī*′s cup left on an artist who had visited the Mamluk dining halls.[411] The question, then, remains whether carinated forms of Mamluk sgraffito imitate a known ceremonial vessel (such as the *makhfīyah* or *sāqī*′s goblet), reproduce a metalware form that has disappeared, or developed independently. One could imagine the sort of ″large, golden vessel″ described by Marco Polo in reference to alcoholic beverages served at banquets.

The overwhelming decorative influence of contemporary metalwork on all media cannot be ignored. The decoration of fourteenth-century sgraffito, unlike that of the thirteenth century, clearly derives more from contemporary metalworking than ceramics. Likewise, the exaggerated proportions of many fourteenth-century sgraffito vessels can be compared to a developing monumentality in the beaten brass basins, bowls, candlesticks, and trays set aside for banquets and processions.[412] Some vessels resemble goblets; others are remarkably similar to ceremonial candlesticks set upside-down (see Fig. 5, bottom).[413] The base stem, straight flaring sides, and decorative mode of some carinated sgraffito bowls and brass candlesticks are quite similar, although the dimensions are not comparable. Ceremonial metalwork made enough of an impression on contemporary Cairenes to popularize monumentality, untraditional proportions, and inscriptional and heraldic decoration in common tableware.

The ″classic Mamluk chalice,″ however, is neither a true chalice nor a large ceremonial basin or bowl. The dimensions, profiles, organization of decoration, and proportions place it somewhere between the two. Thus, the original typological problem remains: is the ″classic Mamluk chalice″ a cup or a bowl? If its general shape does not seem to correspond to a particular function, neither is the heraldry incorporated into the vessel′s decoration informative about the vessel′s use. While the *sāqī*′s goblet is the most common blazon in Mamluk sgraffito, it is certainly not the only one. Therefore, one cannot assume that every carinated vessel was meant to represent the *sāqī*′s cup, particularly if the blazon is that of the *silāḥdār* or *dawādār*.[414] On the other hand, the blazon of the *jāshankīr* (a circular table) is

---

[411]The carination of the *sāqī*′s cup on St. Louis′ basin may represent the curvature of a hemispherical wall.

[412]The unwieldy size of the largest sgraffito bowls presents a functional problem. Because Nile clay is porous, vessels tend to be heavily potted. When they reach these proportions they become extremely difficult to lift. The possibility that large sgraffito vessels were meant only for display is worth some consideration.

[413]I am grateful to Dr. Lisa Golombek, Royal Ontario Museum, for this suggestion.

[414]The stemmed bowl does reproduce the *sāqī*′s cup. Glass cups identical to the hemispherical forms of Mamluk sgraffito often have the ringed stem that is illustrated in the *sāqī*′s blazon (Atıl,

rare in sgraffito, but this does not necessarily eliminate the *makhfīyah* as a source of inspiration for sgraffito shapes. There seems to be no correlation between the blazon and vessel shape or use.

A variety of vessel shapes were executed in the sgraffito technique. While the stemmed, hemispherical bowl imitates the *sāqī*'s goblet used at banquets, the "classic Mamluk chalice" recalls a variety of carinated brass vessels used at formal banquets, while not adopting their forms *per se*. The profiles are unique and seem to be transitional between a cup and a bowl, that is between the *sāqī*'s cup and the *makhfīyah* or *ṭāsah*. It is possible that the carinated forms imitated a brass prototype that has left no trace in the archaeological record, such as that described by Marco Polo in regards to the Great Khān's high feasts. There is, however, a continuous development in profile from Ayyubid luster wares[415] to the Alexandrian products, Wide Rim Arabesque, and fourteenth-century high-footed bowls of monumental proportions. While the profiles are consistently ceramic, specific technical developments such as changes in the color scheme, increasingly large proportions, a decorative program emphasizing inscriptions and blazons, and the elongation of stem and carination point to the realm of metalworking. In short, developments in Mamluk sgraffito from the thirteenth to the fourteenth century can be explained by a consistent and gradual maturation of the Ayyubid ceramic bowl profile along with decorative and technical influence from ceremonial metalwork. It is unfortunate the historical sources have so little to say about tableware. The traditional melting-down of brasses and bronzes has denied us access to what was once a rich repertoire of cups and bowls.

The ceremonial importance of the *sāqī* and *jāshankīr,* more than other *khāṣṣakīyah,* has been emphasized because of their association with expensive tablewares and the central position these figures occupied in Mamluk banquets and processions. The *suqāh* have been described as the overseers of Mamluk banquets. They not only prepared the settings and served drinks to all those in attendance but also cut the meat.[416] The *jāshankīrīyah* played an equally important role. Along with the *ustādār al-ṣuḥbah* (majordomo in attendance), they were in charge of organizing the banquets; both officials remained standing for the duration of the meal. The *jāshankīr* was specifically responsible for tasting both food and

---

Renaissance of Islam, 142, cat. #62; compare also cat. #59 and #94). The pronounced carination of the *sāqī*'s cup in St. Louis' basin may be an exaggeration of the vertical bend in the hemispherical wall or may indicate some variety in goblet forms. ROM 909.43.53 (the chalice miniature) clearly has a sharply carinated wall, and the curvature of its wall and rim parallel the *sāqī* blazon that decorates its tondo.

[415]See Marilyn Jenkins, *Islamic Art in the Kuwait National Museum* (London, 1983), cat. #51.

[416]Al-Qalqashandī, *Ṣubḥ al-Aʻshá,* 5:454.

drink as a precaution against poisoning, a rather common method of removing political rivals.[417]

There is evidence that the ceremonial offices of the *sāqī* and *jāshankīr* offered more opportunity for upward mobility for the *khāṣṣakīyah* than any other office. Al-Qalqashandī informs us that the *jāshankīrīyah* ranked among the top amirs.[418] The power wielded by these officers is underlined by multiple references to important *jāshankīrīyah* under al-Nāṣir Muḥammad.[419] Serial promotions to the office of *sāqī* and an amirship of ten are recorded by Ibn Taghrībirdī and shed some light on why the *sāqī* blazon was so common in Mamluk art: there were a lot of *suqāh.*[420] Promotion alone only partially explains how amirs with ceremonial positions acquired power and wealth. The *suqāh* and *jāshankīrīyah* knew all of the *khāṣṣakīyah* and *barrānī* mamluks by fraternizing with them daily at Citadel banquets.[421] Their high visibility facilitated the strengthening of personal alliances and gave them access to important individuals among the civilian elite.[422]

The *jāshankīr* was as familiar a figure in public processions (*mawākib,* singular *mawkib*) as he was at the semi-private banqueting tables of the Citadel. Along with the *ustādārīyah* and the *silāḥdārīyah,* the *jāshankīrīyah* rode at the head of the sultan's party in the ʻĪd processions.[423] Processions were among the few occasions when the Mamluks as a group had contact with the civilian population. There were numerous occasions for parades—the two ʻĪds (ʻĪd al-Fiṭr and ʻĪd al-Aḍḥá), the *maḥmal* procession (to celebrate the transport of the *kiswah* to Mecca), Friday prayer, enthronements, military victories, and festivals associated with the flooding of the Nile, to name only a few.[424] Visually and physically Mamluk processions

[418]Al-Qalqashandī, *Ṣubḥ al-Aʻshá,* 4:21.

[419]See, for instance, the entries on Altunbughā, Tughay, and Tināl in al-Maqrīzī, *Kitāb al-Sulūk,* 2:3:614, 654, and 822. The power of Tughay and Tināl posed a threat to the sultan's authority (Levanoni, *A Turning Point in Mamluk History,* 72).

[420]Ibn Taghrībirdī, *Nujūm al-Zāhirah,* vols. 14 and 15. In the early Bahri period more Mamluks held the offices of *sāqī* and *dawādār* at one time than any other ceremonial position (ten each—Ayalon, "Studies on the Structure of the Mamluk Army," *BSOAS* 15 (1953): 214, citing al-Ẓāhirī, *Zubdah*). Although no numbers are given, Rabbat states that most of the highest-ranking amirs in the middle Bahri period were *suqāh* (Rabbat, *The Citadel of Cairo,* 138).

[421]Rabbat defines the *khāṣṣakīyah* as those mamluks raised in the Southern Enclosure of the Citadel with the sultan's sons and the *barrānī* as the recruits who resided in the barracks "outside" *(barra),* in the Northern Enclosure (see his glossary in Rabbat, *The Citadel of Cairo*).

[422]Lapidus, *Muslim Cities,* devotes some attention to the business and marital relationships cemented between amirs and their sons *(awlād al-nās)* and the powerful families of Cairo.

[423]Al-Qalqashandī, *Ṣubḥ al-Aʻshá,* 4:46.

[424]Stowasser, "Manner and Customs," 19.

integrated civilian Cairo and the royal Citadel through a ceremonial route which began at Bāb al-Nāṣr, followed the Bayn al-Qaṣrayn, and exited Bāb Zuwaylah for the Darb al-Aḥmar, the horse market at the foot of the Citadel, Bāb al-Silsilah (a Citadel gate), and the Īwān al-Kabīr.[425]

The frequency and pomp of these parades increased in the middle Bahri period at a time when other Mamluk ceremonies were being elaborated and codified. A crucial element of these processions, for the purposes of the present study, is the visual display of amiral symbols. It was the responsibility of the sultan's weapons-officers—such as the *silāḥdār* (armor-bearer), *ṭabardār* (ax-bearer), and *jukāndār* (polo master)—to bear his weapons and display them to the public. They marched directly behind the sultan during processions and ahead of the other amirs.[426] The objects in their care—in this case the sword, ax, and polo sticks, respectively—thus became extremely powerful symbols of authority and cultural elitism to the civilian population. The *khāṣṣakīyah* imagery so carefully documented by Whelan is replete with ceremonial officers displaying their objects of office at court.[427] These figures from miniature painting, stone carving, and metalworking belong to a genre of court art that also includes scenes of ceremonial procession, where the *khāṣṣakīyah,* presumably in order of office and rank, carry their respective objects for public view.[428]

In some cases, the objects themselves were replaced by blazons displayed on the amirs' clothing, armor, and horsegear. Therefore, the blazons that occur most frequently in Mamluk sgraffito (the *sāqī*'s cup, *silāḥdār*'s sword, and *jukāndār*'s polo sticks) were visually important components of two of the most important public celebrations staged by the Mamluk elite: formal banquets and processions.[429] Similarly, the *jāmdār*'s blazon, the napkin, is a familiar element of sgraffito

---

[425]Rabbat, *The Citadel of Cairo,* 238 (citing al-Maqrīzī, *Kitāb al-Sulūk*); Behrens-Abouseif, "The Citadel of Cairo," 48 (al-Maqrīzī, *Khiṭaṭ*); Shoshan, *Popular Culture,* 74–75.

[426]Stowasser, "Manner and Customs," 19. For another account of objects of office displayed during processions see al-Qalqashandī, *Ṣubḥ al-Aʻshá,* 4:46.

[427]Whelan, "Representations of the *Khāṣṣakiyyah*." Note especially a miniature from *Kitāb al-Diryāq* in Vienna, the throne niche from Sinjar, and a ewer signed by Aḥmad al-Dhākī al-Mawṣilī now in Cleveland.

[428]To this category belong a candlestick signed by Dāʻūd ibn Salāmah in Paris (Whelan, "Representations of the *Khāṣṣakiyyah,*" 224), St. Louis' basin, and possibly an Artuqid bridge at Ḥiṣn Kayfa (ibid., 222).

[429]The *dawādār*'s penbox is a common heraldic device found on sgraffito that cannot be accounted for in this manner. The bearing of the inkwell was a ceremonial office symbolically associated with the administration and would not, understandably, play a large role in either processions or banquets. It was not an important office under the Bahris (Ayalon, "Studies on the Structure of the Mamluk Army," *BSOAS* 16 (1954): 62).

decoration.[430] The *jāmdārīyah* (wardrobe masters) stood alongside the *silāḥdārīyah* during public processions and *dār al-ʻadl* sessions, visible to the public at all times.[431] This visibility of the *khāṣṣakīyah* in public ceremonial is a key to understanding the process by which ″military art″ was popularized in fourteenth-century Egypt.

There seems to have been a deliberate attempt by many sgraffito artists to reproduce the designs of ceremonial candlesticks used in court and public processions. Monumental brass candlesticks with silver and gold inlay were produced in large quantity for a variety of special occasions. Al-Maqrīzī recounts, for instance, the fantastic spectacle created when al-Nāṣir Muḥammad′s amirs presented festive candles in celebration of his son Anuk′s marriage; another evening they brought 3030 candles in expensive candlesticks to his palace![432] Magnificent candlelit festivities continued into the fifteenth century. To commemorate the completion of his *qubbah,* the governor of Jedda threw a *walīmah ḥaflah* on the banks of the Nile, the affair luminated by rows of candles set up along the river.[433] Processions and parties, inadvertently, familiarized the local population with amiral art and paved the way for mass-production of ″military″ styles for non-Mamluks.

Mamluk ceremonies captured the imagination of civilian Cairo above all because they were among the rare points of contact between native Cairenes and the ruling elite. Not since the Fatimid period had Cairo witnessed such powerfully symbolic performances by the ruling establishment. While the particulars of Mamluk social hierarchy and self-determination represented in these performances were not comprehended by most Cairenes, their visual symbolism was not lost on them. Brass vessels inlaid with precious metals, military blazons, and bands of inscriptions were consciously associated with the elite of Egyptian society.

Civilian Cairo became familiar with these symbols of the ruling elite, in part, through the production and display of amiral commissions in the public bazaars. One of the most important markets in Cairo in the fourteenth century was the *sūq al-kaftīyīn*, or ″bazaar of inlaid work.″ Al-Maqrīzī describes in some detail the kinds of goods produced there and the clientele that frequented its quarter.[434] The most important service the metalworkers provided for the Mamluk households was the outfitting of expensive bridal trousseaus, which included plates, candles, lamps, basins, small pitchers, and incense burners—many of the same vessel types

that were imitated in sgraffito.[435]

That these vessels left an impression on the civilian population is clear from al-Maqrīzī's narrative. He explains that hardly a single household could be found that did not have some inlaid brass or bronze-work and that the kind of work done for Mamluk patrons was in demand by most Cairenes. The market practically disappeared, however, by the early fifteenth century because of lowered demand and, one can presume, reduced resources. Al-Maqrīzī notes that there was much less inlaid brass available in his day than in the fourteenth century.[436] Beginning with the accession of Barqūq, metalwork production was significantly reduced.[437] The disappearance of sgraffito from the markets may be related, in part, to the decline of the metalwork industry in this period.

The shapes, sizes, decoration, and color scheme of Mamluk sgraffito in the fourteenth century are distinctive and remarkably different from underglaze-painted ceramics and glassware. The unique development of sgraffito in this period can be related to the powerful influence of contemporary metalworking, a consequence of an enriched ceremonial life that helped to bolster the cohesion and prestige of the Mamluk elite. While the impact of metalworking was felt in all media, pottery decorated in sgraffito, more than any other art form, can be considered truly imitative.

The expansion of Mamluk ceremonial in the fourteenth century served as a catalyst for sgraffito development in the same period. There is significantly more variety in Egyptian sgraffito in the thirteenth century, when multiple international ceramic styles were adopted and combined. The move towards homogeneity and mass-production in the following century reflects not changes in dining habits, but the popularization of amiral art forms in non-mamluk society. Formerly elite symbols of military power (emblems of office and elaborate titles) became commonplace, and eventually meaningless, with their introduction into the civilian market through ordinary tablewares.

[435]This is perhaps the most convincing evidence that some of the sgraffito vessels could have possibly been commissioned for Mamluk women. Basins and candlesticks were not only used on ceremonial occasions, but they comprised the basic accessories of a comfortable household. In some cases, the word *dār* that appears in dedicatory inscriptions may have been intended for the woman of the house, who was an extension, in a sense, of the Mamluk office-holder.

CONCLUSIONS—CERAMIC DEVELOPMENT AS A BAROMETER OF SOCIAL AND POLITICAL CHANGE

The development of Egyptian sgraffito ware in the fourteenth century is related to the general militarization of Mamluk art that gained momentum under al-Nāṣir Muḥammad. The intensive production, limited distribution, and eventual disappearance of this ware cannot be properly understood without appreciating the ways in which this sultan's third reign was a watershed in Mamluk social and economic history.

Al-Nāṣir Muḥammad impacted the arts through his patronage of the amiral class and his manipulation of symbols of authority. The rise of the *khāṣṣakīyah* is directly related to his desire to define and control the state's elite from their early stages of training in the Citadel barracks. The prestige of the amiral class rose accordingly and, with it, were developed official ceremonies and images to bolster their elite status. The reinforcement of Mamluk class-consciousness was achieved in the early fourteenth century through an elaborate series of banquets and processions. Objects (primarily silver-inlaid brass vessels) played a focal role in the ceremonies. It was through the public display of basins, serving vessels, chalices, and candlesticks that the civilian population of Cairo became familiar with the symbols of Mamluk elitism: amiral blazons and formal inscriptions of dedication.

The popularization of elitist symbols was achieved through the reproduction of ceremonial vessels in pottery. Compared to brass and silver, earthenware vessels were more affordable for the average Cairene buyer. Furthermore, the sgraffito technique could effectively imitate chasing and inlaying. The mass-production of the military style of sgraffito ware, the reduction of the amiral blazon to pure decoration, and the bastardization of official formulae of address in dedicatory inscriptions are some ceramic correlates of the political and social turmoil in the decades following al-Nāṣir Muḥammad's death.

The oft-repeated characteristics of Mamluk art—monumentality, the use of color, expense, and elitism—are true of sgraffito ware. What makes this ceramic group unique is its relationship to the social circumstances of the time. The Phase II military style was phenomenon-bound, a "fad" of fourteenth-century Cairo. Initially produced for a clientele that was active in creating its own class-mythology and in image building, the mass marketing of Mamluk sgraffito by the end of the century heralded the collapse of the Mamluk social order. With the emergence of a new class of patrons, at the expense of the old, this art form lost its *raison d'être* and fell out of fashion.

Ibn Ṭūlūn (d. 955/1548): Life and Works

With this article I wish to take up the suggestion offered by the editor in number 5 of *MSR* (2001) that it would be desirable to publish occasional biographical articles on one of the numerous "polymaths" of the Mamluk period in the journal. While Marlis J. Saleh contributed a portrait of al-Suyūṭī (d. 911/1505) in the above-mentioned issue,[1] my essay will deal with the life and works of the Damascene scholar Ibn Ṭūlūn. In doing so, I do not primarily intend to present a consistent and well-rounded biography, but rather a brief sketch of some possible areas of research. A short overview of the most important stages in the author's life will form the beginning. This account will be somewhat more detailed than the entry in the *Encyclopaedia of Islam*[2] by William M. Brinner. We are very fortunate because Ibn Ṭūlūn himself provided some basic information about his life in his autobiography *Al-Fulk al-Mashḥūn fī Aḥwāl Muḥammad ibn Ṭūlūn*.[3] The following information is therefore mainly based on a rereading of the text; most of the facts were already published in Henri Laoust's biography of our Mamluk alim.[4]

Shams al-Dīn Muḥammad ibn ʿAlī ibn Aḥmad Ibn Ṭūlūn al-Ṣāliḥī al-Dimashqī al-Ḥanafī lived from 880/1475 to 953/1546. He was a scholar and a very prolific writer whom his contemporaries acclaimed as a traditionist, legal scholar, and teacher —less as a historian. Ibn Ṭūlūn naturally was aware of the fact that he was a subject of the Mamluk rulers, particularly since he could trace his paternal roots back to a Mamluk called Khumārwayh ibn Ṭūlūn[5]. However, Muḥammad first and foremost felt a loyalty to his hometown Damascus and its changing rulers. It was there that he was born in the suburb of al-Ṣāliḥīyah in the Ḥikr al-Hajjāj neighborhood in 880/1475.[6] His birthplace thus was located south of the al-ʿUmarīyah Madrasah at Mount Qāsiyūn.[7] He emphasized in his autobiography

that he was born into a family with good connections to the scholarly world of Syria,[8] although this only applied to his paternal relatives, as we will see later on. According to his own information his mother Azzdān came from Anatolia *(rūmīyah)*.[9] Ibn Ṭūlūn's statement that she spoke *lisān al-arwām*[10] leaves open whether she was a Turkish or a Greek woman from Anatolia. Usage in those days allows for both interpretations. The boy was half-orphaned at a very early age, because Azzdān fell victim to one of the numerous plague epidemics.[11] In the following years Muḥammad grew up in the bosom of his father's family.[12]

His father together with his brother Jamāl al-Dīn Yūsuf (d. 937/1530–31), who was *muftī* and qadi at the *dār al-ʿadl* in Damascus at that time,[13] took care of educating young Muḥammad. But his paternal grandfather Shams al-Dīn ibn Ṭūlūn (d. 887/1482–83) apparently also played a significant part in Muḥammad's intellectual training, as did Khwājah Burhān al-Dīn ibn Qindīl, the half-brother of his paternal grandfather, whose life as a merchant ended in Mecca in the year 887/1482–83.[14] Burhān al-Dīn became well known mainly because of a major foundation that he had established in Damascus.[15] His family's ambitions meant that Ibn Ṭūlūn attended elementary school *(maktab)* at the al-Ḥājibīyah Madrasah[16] to learn reading and writing.[17] He studied the Quran at the *maktab* of the al-Kawāfī Mosque at the same time—or after school.[18] The author proudly tells us in his autobiography that he recited from the Quran in public for the first time when he was seven years old, i.e., in 887/1482–83, at a meeting held during the night of the 20th of Ramaḍān.[19]

Ibn Ṭūlūn was fortunate, by the way, to have grown up in times of peace.[20] Law and order generally prevailed in Syria during Qaytbāy′s regency from 872/1468 to 901/1496. Abū al-Baqā' ibn Yaḥyá Ibn al-Ji'ān (d. 902/1496–97) presents quite authentic testimony on the conditions that characterized this epoch.[21] In his capacity as the deputy of Zayn al-Dīn Ibn Muzhir (d. 893/1487–88),[22] who was confidential secretary *(kātib al-sirr)* in those days, he kept a most interesting journal of the sultan′s official visit to Syria and Palestine in 882/1477,[23] describing the living conditions of the people in the countryside and the cities in great detail.[24]

Ibn Ṭūlūn′s intellectual powers were also stimulated in the following years: in 891/1486–87, at age 11, he was awarded a scholarship endowed by the *waqf* of the al-Māridanīyah Madrasah[25] to study jurisprudence *(fiqh)*.[26] He subsequently pursued his studies at the educational institutions of the al-Manjak Mosque[27] and the Masjid al-Jadīd[28] after that.[29] While our protagonist′s uncle Jamāl al-Dīn apparently was his most important teacher at the beginning, other respected scholars in the city, such as Nāṣir al-Dīn ibn Zurayq (d. 891/1486),[30] Sirāj al-Dīn al-Ṣayrafī (d. 917/1511–12),[31] Abū al-Fatḥ al-Mizzī (d. 906/1500–1),[32] and al-Suyūṭī,[33] took

over later on. It was an honor to have been instructed by such an eminent personality as al-Suyūṭī, which is why the historian Najm al-Dīn al-Ghazzī (d. 1061/1651)[34] specifically mentions in his short biography that Ibn Ṭūlūn was awarded a teaching licence *(ijāzah)* by the master.[35]

The syllabus covered the usual subjects of those days: Hanafi law, hadith studies, exegesis of the Quran, grammar, theology, but also medicine and astronomy. In his autobiography Ibn Ṭūlūn provides us with a long list of all the ulama with whom he studied; he also recorded every single book that he worked through in the course of his studies.[36] He was particularly interested in history. Two individuals had a formative influence in this context: Yūsuf ibn ʻAbd al-Hādī (d. 909/1503), a Hanbali known by the name of Ibn al-Mibrad, who wrote several works on the history of Damascus,[37] and ʻAbd al-Qādir Nuʻaymī (d. 927/1521), a Shafiʻi, who left a comprehensive topography of Damascus to posterity.[38]

We have only a smattering of information about Ibn Ṭūlūn's life after the completion of his studies. But his autobiography lets us know that he held various teaching positions and religious administrative jobs: in 902/1496–97 he was posted at the al-Khātūnīyah[39] and in 909/1503–4 at the al-Jawharīyah.[40] He earned some additional money by reciting from the Quran in a number of madrasahs: at the al-ʻIlmīyah and al-ʻIzzīyah in 901/1495–96,[41] at the al-Dulāmīyah in 902/1496–97,[42] at the al-ʻUmarīyah in 909/1503–4,[43] and at the Umayyad Mosque in 912/1506–07.[44] Moreover, he served as the imam of various Sufi congregations in Damascus: at the al-Ḥusāmīyah in 901/1495–96[45] and at the al-Yūnusīyah[46] and al-Suyūfīyah in

[45]Nuʻaymī, *Dāris,* 2:143–44.

[46]Ibid, 189–90.

908/1502–3.[47] He became administrator of a small *zāwiyah* in al-Rabwah[48] in 909/1503–4.[49] After Ibn Ṭūlūn had made his pilgrimage in 920/1514[50] he worked as an assistant professor at the al-Muqaddamīyah[51] and at the Umayyad Mosque[52] on the eve of the Ottoman's Syrian conquest.

The occupation of his hometown by the Ottoman Sultan Selīm (r. 918–26/1512–1520) in 922/1516[53] does not seem to have represented a break for our author. In his writings he only mentioned this event in passing and did not attach much importance to it.[54] Nor does the transition in power seem to have been detrimental to his career: in 924/1518 he was appointed imam and reader of the Quran at the Grand Mosque[55] that had been built in al-Ṣāliḥīyah by the new sultan next to the mausoleum of Ibn ʻArabī (d. 638/1240).[56] In the same year, Ibn Ṭūlūn also served as reader of the Quran at the *turbah* of Shāhīn al-Shujāʻī (d. 813/1411–12)[57] at the foot of Gabriel's Cave *(kahf Jibrīl)*.[58] Ibn Ṭūlūn's career reached a kind of pinnacle in 926/1520: this was the year that he taught at the al-ʻAdhrāwīyah Madrasah,[59] held the office of a supervisor at the al-Yūnusīyah Khānqāh,[60] and worked as a librarian in the library that ʻAlā' al-Dīn al-Bukhārī

[56]Ibid., and Ibn Ṭūlūn, *Iʻlām,* 226–27 = Laoust, *Les gouverneurs de Damas,* 149–50.

[57]Al-Sakhāwī, *Ḍaw',* 3:294; Nuʻaymī, *Dāris,* 1:313–15.

[58]Ibn Ṭūlūn, *Fulk,* 23.

[59]Nuʻaymī, *Dāris,* 1:373–82.

[60]Ibid, 2:189–90.

(d. 841/1437–38),[61] a Hanafi, built in the sepulcher of Sharaf al-Dīn ibn ʻUrwah (d. 620/1223) that is known by the name of ″Mashhad ʻUrwah.″[62]

Ibn Ṭūlūn′s favorable attitude towards the new rulers became quite apparent upon the revolt of the governor of Damascus, Jānbirdī al-Ghazālī (d. 927/1521),[63] shortly after Sultan Selīm′s death on the 8th of Shawwāl 926/21st of September 1520 and the accession to the throne of Sultan Sulaymān (r. 926–74/1520–66):[64] the author of the *Fulk al-Mashḥūn* harshly condemned the actions of the governor, regarding the event as a desertion *(fitnah)* that was potentially dangerous to Syrian society.[65]

We know very little about the next ten years of Ibn Ṭūlūn′s life. Sources dating from 931/1524–25 show that he taught Hanafi law at the al-ʻUmarīyah Madrasah, which I already mentioned above—at first he was an assistant and then from 935/1528–29 on a full professor.[66] In 946/1539–40, when Muḥammad Beg al-Isṭanbūlī, the Grand Qadi of Damascus appointed by the Sublime Porte, suggested that Ibn Ṭūlūn succeed the deceased Shafiʻi Jalāl al-Dīn Muḥammad and take on the office of preacher at the Umayyad Mosque[67] he declined because of his age. Nor did Ibn Ṭūlūn accept the offer made upon the death of Quṭb al-Dīn Muḥammad to become his successor as Hanafi *muftī* of Damascus.[68] To the end of his days Ibn Ṭūlūn held various teaching positions at different educational institutions in Damascus,[69] particularly at the al-Ẓāhirīyah Madrasah.[70] In the end, the committed bachelor died at an age of over 70 years on the 10th of Jumādá II 953/9th of August 1546.[71]

IBN ṬŪLŪN´S WORKS—PAST EDITIONS AND FUTURE TASKS

Ibn Ṭūlūn provides us with a list of his works in his autobiography. He mentions a remarkable total of 750 titles,[72] even though probably less than 100 have been preserved. Carl Brockelmann discovered some 75 works in the relevant catalogues,[73] but he also found some evidence that yet another 100 manuscripts of our author´s texts are to be found in the private library of Aḥmad Taymūr in Cairo.[74] Unfortunately, I was not in a position to verify this information. If it is true, and I am working on the assumption that it is, because some of the published texts evidently were taken from this source, then the collection should prove to be a goldmine with regard to future research on Ibn Ṭūlūn´s intellectual horizon. In his works Ibn Ṭūlūn deals with almost every known subject area, but his papers vary greatly in length: some of his articles are just a few pages long, whereas others take the form of voluminous monographs. The following works by our Damascene alim are presently available in print:[75]

1. *Al-Arbaʿīn fī Faḍl al-Raḥmah wa-al-Rāḥimīn,* ed. Muḥammad Khayr Ramaḍān Yūsuf (Beirut, 1995).
2. *Basṭ Sāmiʿ al-Musāmir fī Akhbār Majnūn Banī ʿĀmir*, (Cairo, 1964).
3. *Ḍarb al-Ḥūtah ʿalá Jāmiʿ al-Ghūṭah,* ed. Muḥammad Asʿad Ṭalas, in *Majallat al-Majmaʿ al-ʿIlmī* 21 (1946): 149–61; 236–47; 338–51.
4. *Faṣṣ al-Khawātim fīmā Qīla fī al-Walāʾim,* ed. Nizār Abāẓah (Damascus, 1983).
5. *Al-Fulk al-Mashḥūn* (Damascus, 1929).
6. *Ḥārāt Dimashq al-Qadīmah,* ed. Ḥabīb Zayyāt, in *Al-Mashriq* 35 (1937): 33–35.
7. *Inbāʾ al-Umarāʾ bi-Abnāʾ al-Wuzarāʾ,* ed. Muhannā Ḥamad al-Muhannā (Beirut, 1998).
8. *Iʿlām al-Sāʾilīn ʿan Kutub Sayyid al-Mursalīn* (Damascus, 1929).
9. *Iʿlām al-Wará bi-man Wulliya Nāʾiban min al-Atrāk bi-Dimashq al-Shām al-Kubrá,* ed. Muḥammad Aḥmad Duhmān (Damascus, 1964).
10. *Al-Lamʿāt al-Barqīyah fī al-Nukat al-Tārīkhīyah,* (1) (Damascus, 1929); (2) ed. Muḥammad Khayr Ramaḍān Yūsuf (Beirut, 1994).
11. *Al-Manhal al-Rāwī fī al-Ṭibb al-Nabawī,* ed. Z. ʿUthmān al-Jaʿīd (Beirut, 1996).

25. *Tuḥfat al-Ṭālibīn fī I'rāb Qawlihi Ta'ālá 'Inna Raḥmata Allāh Qarībun min al-Muḥsinīn,'* ed. Jābir al-Sayyid Mubārak (Cairo, 1989).

An in-depth analysis of writings alone would already give us many new insights into the world view of their author. But finding and studying new texts composed by the scholar would inevitably have to be the first step before actually writing a more detailed account of Ibn Ṭūlūn's life. We are very fortunate, after all, that many manuscripts are autographs and that obtaining them on microfilm or as a copy does not pose a serious problem, at least as far as all of the holdings in German libraries are concerned:

[76]Gerhard Conrad, *Die Quḍāt Dimašq und der Maḏhab al-Auzā'ī: Materialien zur syrischen Rechtsgeschichte* (Beirut, 1994), 11–17, 55–61.

MANUSCRIPTS IN GERMANY[77]

1. ″Dhakhā’ir al-Qaṣr fī Tarājim Nubalā’ al-‘Aṣr ″ (Gotha 1779)
2. ″Ghāyat al-Bayān fī Tarjamat al-Shaykh Arslān″ (Berlin 10106)
3. [An essay on the various meanings of some important words] (Berlin 5105)
4. ″Al-Wāḍiḥah fī Waṣf al-Qarīnah al-Ṣāliḥah″ (Berlin 5595, 2)
5. ″Al-Nafḥah al-Zanbaqīyah fī al-As’ilah al-Dimashqīyah″ (Berlin 297)
6. ″Al-Naṭq al-Munabbi’ ‘an Tarjamat al-Shaykh al-Muḥyawī Ibn al-‘Arabī″ (Berlin 10098)
7. ″Al-Ṭāri’ ‘alá Zallat al-Qāri’″ (Berlin 571)
8. [A *qaṣīdah* on different kinds of martyrdom] (Berlin 7936, 3)
9. ″Ramz al-Sālik li-‘Ilm al-Madārik″ (Berlin 134)

7. ″Taʻlīqāt fī al-Tarājim″ (Zah. 186)
8. ″Tuḥfat al-Kirām bi-Tarjamat Sayyidī Abī Bakr ibn Qiwām (b. 548)″ (Cairo² V, 415)

SOME PROPOSALS TOWARDS A BIOGRAPHY OF IBN ṬŪLŪN

The above-mentioned biographical data on Ibn Ṭūlūn can be regarded as the building blocks that might lay the factual groundwork for additional, more comprehensive studies. A study of our author′s life within the contemporary context, for example, seems to be a worthwhile initial research project. Viewing Ibn Ṭūlūn′s life in such a context would lend a potential biography depth of focus and significance. However, writing a historical biography is not an easy feat these days.[85] The protagonist of such a biography must be conceived of as a subject

enmeshed in a complex web at the center of the entire field of cultural studies.[86] Is there any subject better suited to provide comprehensive information about all of its surroundings and the different aspects that a cultural scientist might select from the pool of historical knowledge than such a personality? In his lifetime, Ibn Ṭūlūn was active in every arena, be it economic, social, political, religious, or cultural. It is the biographer′s responsibility to illustrate these complex links in a vivid and coherent manner. In doing so, the quest for absolute knowledge of the respective individual will necessarily always be an elusive, utopian one. It is particularly in this area of research, and more so than in others, that one needs to respect the gaps and omissions in the reference sources. On no account should one attempt to uncritically restore the elements concealed by silence; reconstructing missing links is always a risky undertaking. When working on the subject it is also important to bear in mind that a biography is no closer to real events than any other topic that the researcher might be dealing with. Often one gets the mistaken impression that there is a contrast between a concrete biography and abstract political history. A biography frequently creates so-called reality effects, which is why one needs to take due care in this context. A historian must always bow to his sources, they dictate the scope and the limitations of his study. That is what distinguishes him from a novelist, although the latter might also try very hard to obtain information about the subject matter he wants to describe. It may appear trivial to point out, but writing a biographical account must invariably be preceded by a highly critical assessment of the sources. Personalities who were not at the forefront of attention fortunately were not idealized to the same extent as saints or exceptional rulers. Jean-Claude Passeron warns of the ″risk of exaggerated interpretation and complete coherence that is inherent in every biographical approach.″[87] A portrayal of a person′s life must always point out that it represents an ″illusion biographique″ (Pierre Bourdieu).[88] After all, a biography cannot be a reconstruction of an authentic life, but only an approximation at best. A biography always runs the risk of combining a well-ordered chronology with a consistent, stable personality, coherent actions, and logical decisions. But according to Giovanni Levi a biography, on the other hand, also represents ″le lieu idéal pour vérifier le caractère interstitiel—et néanmoins important—de la liberté dont disposent les agents, comme pour observer la façon dont fonctionnent concrètement des systèmes

normatifs qui ne sont jamais exempts de contradictions."[89] The oft-proclaimed contrast between individual and society is nothing but an ostensible problem in this context. The individual only exists within a network of multiple social relationships and it is precisely this variety that permits him to unfold his lifestory. Sound knowledge of the respective society is a prerequisite for observing how a specific individual establishes himself in this society and how he organizes his life.

This is the backdrop against which one might ask, for example, how a scholar like Ibn Ṭūlūn experienced the transition of power in Syria in 922/1516 and how he dealt with it. At first glance there seems to be every indication that the event might have represented a turn of an era *(Zeitenwende)*,[90] but the people concerned apparently faced it with seeming equanimity, particularly in Syria. It is therefore essential to consider the author's point of view:[91] whereas Ibn Iyās (d. 930/1523)[92] and Ibn Zunbul (d. after 960/1552)[93] wrote from an Egyptian perspective, the authors of the large number of *Selīmnāmah*s regarded matters from the victorious Ottoman point of view.[94] This, of course, also holds true for the Ottoman historians

[89]Giovanni Levi, "Les usages de la biographie," *Annales, économies, sociétés, civilisations* (1989): 1325–36, esp. 1333–34.

[90]On *Zeitenwenden* see now *Zeitenwenden: Historische Brüche in asiatischen und afrikanischen Gesellschaften*, ed. Sven Sellmer and Horst Brinkhaus (Hamburg, 2002). Within this context, it is interesting to see how Muslim historians have interpreted the fall of Baghdad 656/1258. See Anja Pistor-Hatam, "Ursachenforschung und Sinngebung: Die mongolische Eroberung Bagdads in Ibn Ḫaldūns zyklischem Geschichtsmodell," in *Die Mamluken: Studien zu ihrer Geschichte und Kultur: Zum Gedenken an Ulrich Haarmann (1942–1999)*, ed. Stephan Conermann and Anja Pistor-Hatam (Hamburg, 2003), 313–34.

[91]Still the best introduction is Peter Holt, "Ottoman Egypt (1517–1798): An Account of Arabic Historical Sources," in *Political and Social Change in Modern Egypt*, ed. idem (London, 1968), 3–12. For documentary sources see S. J. Shaw, "Cairo's Archives and the History of Ottoman Egypt," in *Report on Current Research* (Middle East Institute, Washington) (1956): 59–72, and A.-K. Rafeq, "Les registres des tribunaux de Damas comme source pour l'histoire de la Syrie," *Bulletin d'études orientales* 26 (1973): 219–26. Cf. also Doris Behrens-Abouseif, *Egypt's Adjustment to Ottoman Rule: Institutions, Waqf and Architecture in Cairo (16th and 17th Centuries)* (Leiden, 1994), 1–19.

[92]Ibn Iyās, *Badā'i' al-Zuhūr fī Waqā'i' al-Duhūr,* ed. Paul Kahle and Mohammed Mostafa (Wiesbaden, 1961–75).

[93]Ibn Zunbul, *Tārīkh Ghazwat al-Sulṭān Salīm Khān ma'a al-Sulṭān al-Ghawrī*, ed. 'Abd al-Mun'im 'Āmir (Cairo, 1997). See Benjamin Lellouch, "Ibn Zunbul, un égyptien face à l'universalisme ottoman (seizième siècle)," *Studia Islamica* 79 (1994): 143–55.

[94]On this genre, see Shehabeddin Tekindag, "Selimnâmaler," *Tarih Enstitüsü Dergisi* 1 (1970): 197–231, and Ahmet Uğur, *The Reign of Sultan Selim I in the Light of the Selimnâme Literature* (Berlin, 1985).

Muḥyī al-Dīn Meḥmed (d. 957/1550)[95] and Luṭfī Pāshā (d. 970/1562–63).[96] ʻAbd al-Ṣamad al-Diyārbakrī (d. after 945/1538–39)[97] is an interesting contemporary witness from Egypt. In his capacity as the Ottoman qadi he had arrived together with Selīm and continued working for the country′s Ottoman administration. As yet there are no in-depth studies of his *Tarjamat al-Nuzhah al-Sanīyah fī Fikr al-Khulafā' wa-al-Mulūk al-Miṣrīyah*[98] nor of his *Nawādir al-Tawārīkh.*[99]

A comparative study of Ibn Ṭūlūn′s *Mufākahat al-Khillān fī Ḥawādith al-Zamān* and *Iʻlām al-Wará bi-man Wulliya Nā'iban min al-Atrāk bi-Dimashq al-Shām al-Kubrá* with al-Ishbīlī′s (d. after 923/1517) *Al-Durr al-Muṣān fī Sīrat al-Muẓaffar Salīm Khān*[100] seems to be a worthwhile undertaking to learn more about the attitude of Syrian scholars towards the new rulers. After having spent his youth in North Africa, ʻAlī ibn Muḥammad al-Lahmī al-Ishbīlī al-Maghribī al-Dimashqī[101] moved to Damascus. He was a member of the Maliki community, which was extremely small in the Syrian capital at the beginning of the ninth/sixteenth century.[102] Apparently, he did not rise very far in the Maliki hierarchy, but rather had to make do with a number of humble and thus low-paid positions. When it became clear that Mamluk rule was drawing to a close in Syria, al-Ishbīlī obviously wished to accommodate himself to the changing times by writing a panegyric chronicle of the new ruler. He probably wanted to ingratiate himself with the new establishment and—as a result—climb the social ladder. Al-Ishbīlī therefore had to write such a chronicle as fast as possible in order to give it to the new ruler while he still was in the country. Our author′s behavior was in absolute agreement with a concept of Islamic law according to which any new conqueror was preferable to an old, weak, and corrupt regime if he maintained law and order and thus ensured the performance of religious duties.[103] One also believed that every century

[102]One finds a survey of this *madhhab* in al-Nuʻaymī, *Dāris,* 2:3–28.

[103]See Ulrich Haarmann, ″′Lieber hundert Jahre Zwangsherrschaft als ein Tag Leiden im Bürgerkrieg′: Ein gemeinsamer Topos im islamischen und frühneuzeitlichen europäischen Staatsdenken,″ in

brought forth an exceptional personality *(mujaddid al-ʿaṣr)* who would renew the faith that had been corrupted over time, restoring Islam to its pure and original form.[104] Of course, scholars hardly ever agreed as to who actually was the respective renewer. Al-Suyūṭī, for example, considered himself to be the *mujaddid* of the tenth century of the Muslim calendar,[105] whereas the Persian scholar Faḍl Allāh ibn Rūzbihān Khunjī (d. 927/1521) initially thought that the Uzbek ruler Shībānī Khān (d. 916/1510) represented the restorer of an ideal Islamic society.[106] Khunjī was a little fickle-minded, however, because he dropped the Uzbek ruler after Shībānī had been defeated by Shāh Ismāʿīl (d. 930/1524) at Chaldirān in August 920/1514 and, without further ado, declared the Ottoman sultan Selīm the true *mujaddid al-ʿaṣr* in two poems.[107] His opinion was shared by Luṭfī Pāshā, the Ottoman historian mentioned above, who described Selīm as the religious reformer of the tenth century in his chronicle *Tevārīkh-i Āl-i ʿOthmān*.[108] Al-Ishbīlī readily agreed with this pronouncement.[109] In his view the Ottoman ruler had not been motivated by power politics when he conquered Egypt and Syria, but rather had followed divine inspiration.[110] He felt that Selīm possessed a ″blessed soul,″[111] and as the ″keeper of the faith″[112] was not merely the successor of the ″righteous

caliph″[113] but the caliph himself,[114] as he was also the ″imam,″[115] the ″shadow the Almighty casts on his earth″[116] and the ″sovereign of the faithful.″[117] But despite these divine directions al-Ishbīlī is hard put to justify the Ottoman invasion of the Sunni empire of the Mamluks. Finding reasons for the campaigns against the Shi'i Safavids was easy: after all, they were ″godless people and strayers from the flock of believers,″[118] ″Kharijite hordes,″[119] ″innovators,″[120] and ″the devil′s party″[121] in general. According to al-Ishbīlī, the Shāh and his followers had expelled themselves from the Islamic community by their activities. Being heretics, they had to be destroyed in the Holy War according to religious laws and regulations. Selīm′s campaign against Shāh Ismā'īl was, therefore, perfectly justified by the Sunnah and the Quran. But one could hardly criticize the Mamluks in the same manner, which is why al-Ishbīlī accused them of suppression[122] and tyranny[123] as a result of depraved religious conditions in the country.[124] In order to substantiate his arguments, the author resorted to dreams and number-symbolic interpretations of specific historical events in his *Al-Durr al-Muṣān* to demonstrate divine omens of Selīm′s destiny. From the fact that the battle of al-Raydānīyah had been fought on the 29th of Dhū al-Ḥijjah 922 [= 23 January 1517], the last day of the Islamic lunar year, he inferred the following: ″This portends the end of their rule. Because the month had passed and thus the year [9]22.″[125] These allusions are taken up in his dreams: in his first dream two moons rise and meet above Damascus. One tumbles down and the other one shines on the Umayyad Mosque.[126] The Angels Gabriel, Michael, and the four righteous caliphs appear in the following dream. One of them says: ″These [Mamluks] will disappear with the help of Salīm ibn 'Uthmān.″[127] Finally the Prophet Muḥammad appears, explaining that: ″Sulṭān Ibn 'Uthmān is

the ruler of Egypt and Cairo."[128]

Al-Ishbīlī's currying favor with the Ottomans appears to have been the normal behavioral pattern of many Syrian scholars in those days. A new ruler did not mean a new era to them, but simply a shift in the power structure of the whole Sunni community *(ummah)*. One did not owe the Mamluks any particular loyalty, because they represented a foreign elite too.

This may also explain why Ibn Ṭūlūn took little interest in the events in Damascus. A brief discussion of the methods Ibn Ṭūlūn used as a historian may be useful in this context: Richard Hartmann showed[129] that his *Mufākahat al-Khillān fī Ḥawādith al-Zamān* mainly consists of diary entries, unlike Ibn Iyās' chronicle *Badā'i' al-Zuhūr fī Waqā'i' al-Duhūr,* written at the same time and composed of various diary-like records that were regrouped later on. There is no evidence in Ibn Ṭūlūn's work that he edited or revised the diary-like material any further. In several instances he recorded a rumor spread in Damascus on one day and only added that it was false on another day, when this was found to be the case. He possibly intended to make major revisions. In fact he not only refers to other chroniclers in his text from time to time, but at the end of the year he sometimes also adds an entire appendix taken from other contemporary historians.[130] But the first part of the chronicle must be based on other works, because the text begins in 844/1440–41 and Ibn Ṭūlūn was only born in 880/1475–76. So we need to find out which models the historian used, a matter that has not been completely resolved until now. And when does the real diary actually begin? In reference to this problem Hartmann points to a break in continuity in the entry for the 5th of Ṣafar 921/21st of March 1515.

Ibn Ṭūlūn's *Mufākahat al-Khillān fī Ḥawādith al-Zamān* is an extremely important source for the year 922/1516 and the following years because the author, clearly impressed by the unfolding events, kept his diary partly also offering detailed descriptions of the Ottoman camp. His firm neutrality also with respect to the decisive battle is evidenced by the fact that he uses the epithets "hypocrite and Pharisee" to characterize the people who prayed for the victory of the ruling Mamluk sultan together with the qadis before the Battle of Marj Dābiq (15th of Rajab 922/24th of August 1516).[131] One cannot help but suspect that Ibn Ṭūlūn,

[130]Ibid, 96.

[131]Ibid, 101.

driven by opportunistic motives, also revised his observations later on to reflect a more pro-Ottoman stance. Al-Ishbīlī and Ibn Ṭūlūn are not the only ones to demonstrate eloquently that such turnabout loyalties were quite common in ulama circles; the Shafiʿi qadi Walī al-Dīn al-Farfūr (d. 937/1530–31)[132] is another example. After Selīm′s victory he gradually moved over to the Hanafi camp. He thus managed to become chief judge—after the Ottomans had reorganized the tiers of the civil service, replacing the formerly four qadis of the four law schools with one qadi and four deputies for the *madhāhib*. Eventually he had to flee because he was afraid of Governor Jānbirdī, whom he distrusted—and rightly so. For a while, Ibn Ṭūlūn—who of course already had been a Hanafi beforehand—had also aspired to a lucrative sinecure at the mosque at Ibn al-ʿArabī′s tomb, which had been newly constructed by Selīm. Seeing how disparagingly Jānbirdī′s attitude is described in the chronicle one might be a bit suspicious: he is blamed for several murders in a rather thinly veiled manner.[133] On the other hand, the very case of Ibn al-Farfūr seems to prove that Ibn Ṭūlūn′s depiction is probably not far removed from the truth. If any editing was done at all at a later stage, one would have to assume that it merely consisted of emphasizing a specific tenor of the text.

These are just a couple of ideas regarding the point of view from which one might approach a biography of Ibn Ṭūlūn. Placing this scholar in the historical context of his times in such a way that his biography will render an overall picture of the era is a task that needs to be completed in the future.

Autobiographical Writing as a Literary Genre of the Mamluk Period

A more detailed study of Ibn Ṭūlūn′s *Al-Fulk al-Mashḥūn fī Aḥwāl Muḥammad Ibn Ṭūlūn* may also prove to be a worthwhile undertaking. As we know, autobiographical writing already existed in very early times and in every literary culture. When Wilhelm Dilthey′s article entitled *Das Erleben und die Selbstbiographie*[134] was published at the beginning of the twentieth century, it triggered academic research into the manifold literary representations of a person′s own life.[135] Right from the beginning it was very difficult to give a content-based

[135]Extensive bibliographies are given in Jürgen Lehmann, *Bekennen, Erzählen, Berichten, Studien zu Theorie und Geschichte der Autobiographie* (Tübingen, 1988), 251–81, and Niggl, *Die Autobiographie,* 539–68. Short research reports can be found in James Olney, ″Autobiography and the Cultural Moment: A Thematic, Historical, and Bibliographical Introduction,″ in *Autobiography: Essays Theoretical and Critical*, ed. idem (Princeton, 1980), 3–27, and Georg Niggl, ″Einleitung,″ in idem, *Die Autobiographie,* 1–17.

and formal definition of the genre since the borders between autobiography and memoirs, philosophical self-reflections, autobiographical novels, stories written in the first person, or fictitious autobiographies are rather fluid. Jürgen Lehmann nevertheless managed to present a concise working definition in his post-doctoral thesis *Bekennen-Erzählen-Berichten: Studien zu Theorie und Geschichte der Autobiographie* submitted to Göttingen University:

> Autobiography is a type of text in which an author expresses internal and external events experienced in the past as well as activities carried out by himself in a writing situation, summarizing all of this and articulating himself in such a narrative style that he actively puts himself into a specific relation to the environment.[136]

If one studies this type of autobiographical narrative more closely, however, one encounters some problems inherent in this genre. The fact that historical events have actually taken place and that the author consistently refers to reality merely represent external features of demarcation vis-à-vis imaginary stories. The crucial difference between a fictional account and an autobiography is its intention. The author presents the reciprocal influence of the own self and the extrapersonal environment as if it were a consistent and logical development. Subjective experience is thus judged *ex eventu* and placed in a higher time continuum. Autobiographical writers frequently attempt to present the complex, accidental web woven between the self and the external world as if it were the result of a deliberately controlled process. It will always be difficult for someone interpreting autobiographical accounts to deal with this problem. The fact that the author is both the subject and object of his writing poses another problem. He endeavors to order his previous life beyond all determining of historical and social factors. In view of his auctorial intention he cannot avoid stylizing his own past and inventing some elements either consciously or unconsciously. The mere—or possibly the particular—choice and emphasis of facts and experiences by the autobiographical narrator already is of crucial significance in this process of stylization. He arranges the selected facts in a meaningful manner in order to render a condensed account, presenting the reader with a life that is an integrated whole.

A whole set of spiritual, political, and academic works containing autobiographical material also exist in classical Arabic literature.[137] So nowadays

[137]See Franz Rosenthal, ″Die arabische Autobiographie,″ *Studia Arabica* 1 (1937): 1–40; Carl Brockelmann (Brukilman), ″Mā Ṣanf ʻUlamā' al-ʻArab fī Aḥwāl Anfusihim,″ in *Al-Muntaqá min Dirāsāt al-Mustashriqīn,* pt. 1, *Dirāsāt Mukhtalifah,* ed. Ṣalāḥ al-Dīn al-Munajjid (Cairo, 1955);

one can no longer make the same sweeping statement as Georg Misch, author of the monumental *Geschichte der Autobiographie,* did when he said that autobiographies were only ″testimony to the development of self-awareness of man in the Occident.″[138]

Until now, research has not focused on biographical accounts from the Mamluk period. The genre was not really established in the academic tradition of those days. This may be due to the fact that a Mamluk scholar occasionally must have shied away from publishing details about his own life in a vain manner. Abū al-Maḥāsin Ibn Taghrībirdī′s (d. 812/1415) opinion is characteristic of this attitude: although he did dictate his life story to his student Aḥmad ibn Ḥusayn al-Turkumānī al-Ḥanafī, known as al-Marjī,[139] he mentioned expressly that this actually ran counter to the conventions of his profession. According to Ibn Taghrībirdī it was by no means customary for scholars to write their own biographies. It was customary, however, to proceed like the learned Damascene Ibn Ayyūb (d. 1000/1592)[140] did in his biographical reference work *Al-Rawḍ al-ʻĀṭir*.[141] He very skillfully supplemented various suitable passages of his work—e.g., the end of the biographical sketches of his grandfather Shihāb al-Dīn Aḥmad ibn Ayyūb and of his cousin Muḥīb al-Dīn Muḥammad ibn Ayyūb—with information about his personal development.[142] Al-Sakhāwī found an equally elegant solution to the problem. He simply wrote his own biography, including it without any additional comments in his monumental biographical dictionary.[143]

[143]Al-Sakhāwī, *Ḍaw'*, 8:1–32.

Ibn Ṭūlūn's autobiography is a different matter. The historian al-Nuʿaymī urged him to write the story of his life as an independent account. This was done when our author already was quite advanced in years. At least, he observed that his strength was failing and complained that he was left with only a few friends but many foes.[144] Separate autobiographical accounts from the Mamluk period were also prepared by al-Suyūṭī[145] and Ibn Khaldūn (d. 808/1406).[146] Dating the biographies is not easy because the circumstances surrounding the manuscripts of both works are a little complicated: Elizabeth M. Sartain proceeds on the assumption that al-Suyūṭī began writing down his autobiography *Al-Taḥadduth bi-Niʿmat Allāh* in 889/1484 after the dispute about his announced ability to exercise *ijtihād*.[147] Of course, he may have used some notes that he had taken previously. At any rate, he discontinued working on the project sometime in the 890s, never to resume it. Neither does Ibn Khaldūn seem to have written *Al-Taʿrīf bi-Ibn Khaldūn wa-Riḥlatihi Gharban wa-Sharqan,* the highly selective story of his life that was probably the product of his stay in Egypt, in one go after 784/1382, but rather with long breaks in between.[148] Comparing the content of the works of al-Suyūṭī, Ibn Khaldūn, al-Sakhāwī, and Ibn Ṭūlūn already points to some differences and commonalities of the genre:

Al-Suyūṭī ***(Al-Taḥadduth bi-Niʿmat Allāh)***	**Ibn Khaldūn** ***(Al-Taʿrīf bi-Ibn Khaldūn wa-Riḥlatihi Gharban wa-Sharqan)***

Just like the other authors, Ibn Ṭūlūn was fully aware of the genre's traditions. He mentions famous autobiographies known to him on the first few pages of *Al-Fulk al-Mashḥūn fī Aḥwāl Muḥammad ibn Ṭūlūn.*[149] Although these four works tell us very little about the author's personal life, they do represent excellent source material for studying the author's intellectual development and traditional

[149]Ibn Ṭūlūn, *Fulk,* 6.

Islamic education in those days. In addition, the documents contain an almost exemplary portrayal of the background and the careers of legal scholars in the Mamluk period and—in Ibn Ṭūlūn′s case—also the early years of Ottoman rule in Egypt and Syria.

Jürgen Lehmann emphasized that these accounts obviously must be regarded as constructs that were composed in retrospect by individuals looking back on their own lives. This is why a comparison of such a personal interpretation of the narrator′s life with statements made by contemporaries would prove helpful. Obviously, one should give more credence to opinions expressed by independent minds than to those uttered by students. In al-Suyūṭī′s case, for example, his students simply copied their teacher′s autobiography, made some stylistic modifications, and added magnificent eulogies.[150] The spiteful and slanderous comments that al-Sakhāwī made about al-Suyūṭī are much more instructive in this context.[151]

The same applies to Ibn Ṭūlūn. In addition to two brief biographical sketches by Najm al-Dīn al-Ghazzī and Ibn al-ʻImād,[152] a remarkable portrayal by Ibn Ayyūb has been preserved as well.[153] His estimation of Ibn Ṭūlūn′s personality is ambivalent: he calls him the Sībawayhī (d. approx. 180/776) of his times, praising him with the most favorable epithets on the one hand, and voices some rather harsh criticism of his works and scientific methods on the other. He reproaches Ibn Ṭūlūn for making linguistic mistakes, for using dubious traditions, even for untrue reporting. He also criticizes the fact that Ibn Ṭūlūn mixed verse and prose, and that he included both relevant and irrelevant information, making his works extremely tedious for the reader. This rather harsh critique basically can be traced back to Abū al-Fatḥ al-Mālikī (d. 975/1567),[154] a learned Damascene who originally came from Tunis. In his biography of Ibn Ṭūlūn, Ibn Ayyūb gives a lengthy account of the dogged disputes between the two. Abū al-Fatḥ al-Mālikī belonged

---

[150]Sartain, *Biography*, 150–51. ʻAbd al-Qādir al-Shādhilī′s (d. after 945/1538) *Bahjat al-ʻĀbidīn bi-Tarjamat Jalāl al-Dīn* [ed. ʻAbd al-Ilāh Nabhān (Damascus, 1998)] and Shams al-Dīn al-Dāwūdī′s (945/1539) ″Tarjamat al-Suyūṭī″ [Berlin (Tübingen) MS 10134] do not add anything new. On al-Shādhilī, see Sartain, *Biography,* 146–47; *GAL* 2:391 S2:932, and S3:1261; and Ibn al-ʻImād, *Shadharāt,* 8:53. On al-Dāwūdī cf. Sartain, *Biography,* 148–149; *GAL* 2:289, S2:401; al-Ghazzī, *Kawākib,* 2:71; and Ibn al-ʻImād, *Shadharāt*, 8:264.

[151]Al-Sakhāwī, *Ḍaw',* 4:65–70. On the clashes between these scholars, see Sartain, *Biography*, 72–76, and William Popper, ″Sakhāwī′s Criticism of Ibn Taghrībirdī,″ in *Studi orientalistici in onore di Giorgio Levi della Vida* (Rome, 1965), 2:371–89.

[152]Al-Ghazzī, *Kawākib,* 2:52–54; Ibn al-ʻImād, *Shadharāt*, 8:298–99.

[153]Ibn Ayyūb, ″Al-Rawḍ al-ʻĀṭir,″ Berlin MS 9886, fols. 235v–237r.

[154]On Abū al-Fatḥ al-Mālikī, see ibid., fols. 237a–239a [= Güneş, *Das Kitāb ar-rauḍ al-ʻāṭir*, 72–82 (Arabic text)], and Ibn al-ʻImād, *Shadharāt*, 8: 360–81.

to a different circle of scholars than Ibn Ṭūlūn and overwhelmed his opponent with criticism and reproaches. Ibn Ayyūb actually must have had a favorable opinion of Ibn Ṭūlūn, also thinking highly of him as a historian, because he refers not only to al-Sakhāwī, Quṭb al-Dīn al-Hindī (d. 990/1582),[155] al-Nuʿaymī, and Ibn al-Mibrad as role models in his introduction to *Al-Rawḍ al-ʿĀṭir,* but also to Ibn Ṭūlūn.[156] So it is hardly surprising that Ibn Ṭūlūn's *Mufākahat al-Khillān fī Ḥawādith al-Zamān* and *Tamattuʿ bi-al-Iqrān bayna Tarājim al-Shuyūkh wa-al-Aqrān* represent two of the more prominent sources cited by Ibn Ayyūb.[157]

This goes to show that a rather slim volume such as Ibn Ṭūlūn's *Fulk al-Mashḥūn* does indeed merit due consideration. One would have to undertake a detailed comparison of all known autobiographical accounts by Muslim scholars up to the days of Ibn Ṭūlūn to really accord his own autobiographical writings their proper rank and to define the genre of Arabic autobiography even further. Once that is done, it will also be possible to compile the requisite inventory of topoi, stereotypes, commonalities, and differences of these works.

From the vast number of available options I have selected only two avenues of research that one might explore for a better understanding of the life and works of Ibn Ṭūlūn. Of course, one will have to complete various individual studies to piece together an overall picture. But it may also make sense to tackle the project of a monograph before the task of analyzing the material takes on Sisyphean dimensions. If one did so, one would have to portray the typical features without neglecting the individual ones. Writing a biography will thus always resemble the squaring of the circle. The re-narration of a life will obviously always have to be a construct.

represents one of the most extensive and diverse fields of knowledge in the medieval Islamic literary tradition. It covers a broad scope of disciplines ranging from hippology and the art of riding *(ʻilm al-khayl wa-fann al-rukūb)* to military technology *(ʻilm al-ālāt al-ḥarbīyah)*. While these disciplines are interrelated and form a unity in *furūsīyah* literature, each one of them constitutes a vast domain of research, an independent science with its own literature and chain of authorities. The treatises dealing with one specific discipline (hereinafter: thematic *furūsīyah* treatises) constitute the core of *furūsīyah* literature. As for the treatises comprising more than one discipline (hereinafter: general *furūsīyah* treatises), they are mostly works of compilation, based on the thematic *furūsīyah* treatises. In modern scholarship, general *furūsīyah* treatises are usually referred to as "*furūsīyah* manuals," and are often thought to be synonymous with *furūsīyah* literature. In fact, general *furūsīyah* treatises represent only a fraction of the surviving literature, and they can be quite misleading to anyone who is not familiar with thematic *furūsīyah* treatises.

Notwithstanding the undisputed importance of *furūsīyah* literature for the study of Islamic history and culture, this field suffers from a lack of scholarly research and, consequently, from deep misconceptions as well as an array of prejudices. One of the most common of these is the assumption that *furūsīyah* literature emerged under the Ayyubids in the late sixth/twelfth and seventh/thirteenth centuries because of the sweeping challenges posed by the Crusades, and that it developed and reached maturity under the Mamluks.[2]

[2]See Shihab al-Sarraf, "Adab al-Furūsīyah fī al-ʻAṣrayn al-ʻAbbāsī wa-al-Mamlūkī," in *Furūsīyah,* vol. 1, *Funūn al-Furūsīyah fī Tārīkh al-Mashriq wa-al-Maghrib*, ed. Shihab al-Sarraf (Riyadh, 2000), 105, 121; idem, "Furūsiyya Literature of the Mamlūk Period" in *Furusiyya,* vol. 1, *The Horse in the Art of the Near East,* ed. David Alexander (Riyadh, 1996), 131.

Apart from a lack of research, this wrong impression has been caused by the fact that the main corpus of surviving *furūsīyah* manuscripts is, indeed, from the Mamluk period. However, careful examination of such manuscripts shows that original Mamluk treatises constitute only one part of this literature. The other part consists of pre-Mamluk, mainly Abbasid, treatises, copied and reused by the Mamluks as manuals and as basic references. It also shows that the majority of Mamluk *furūsīyah* treatises, which did not always acknowledge their sources, were themselves largely based upon Abbasid *furūsīyah* literature and its sources. Some of the pre-Mamluk treatises were originally anonymous, others were rendered so by Mamluk copyists, and still others were falsely attributed to Mamluk authors. As an additional complication, some Mamluk treatises were imputed to earlier authors. Finally, a considerable number of the extant manuscripts of all periods are either unsigned and/or untitled or copies of one work but under different titles.

These points exemplify the problems peculiar to *furūsīyah* literature. The inability to distinguish pre-Mamluk from Mamluk treatises and to identify pre-Mamluk data within Mamluk treatises, and the failure to sort out its numerous sources (including Classical Greek, Sassanian, and Byzantine), have hindered research into *furūsīyah* literature from its inception. This partly explains why research in this field has not grown much beyond the stage of bibliographical documentation, which, understandably, in its current embryonic state includes many errors. One of these concerns the definition and scope of *furūsīyah* literature, which has been reduced to a fragment of what it should represent in the bibliographical essays.[3] Furthermore, no attempt has ever been made to research the term *furūsīyah,* its origin, and its evolution as a concept and as an institution.

Scanlon ″Introduction,″ in *A Muslim Manual of War, Being Tafrīj al-Kurūb fī Tadbīr al-Ḥurūb*, ed. and trans. George T. Scanlon (Cairo, 1961), 1–21; Iḥsān Hindī, ″Muḥāwalat Ḥaṣr Bibliyūjrāfī lil-Ta'ālīf al-‘Askarīyah wa-al-Ḥarbīyah ‘inda al-‘Arab al-Qudamā',″ in *Abḥāth al-Mu'tamar al-Sanawī al-Thānī lil-Jam‘īyah al-Sūrīyah li-Tārīkh al-‘Ulūm* (Aleppo, 1978), 117–58; ‘Abd al-Raḥmān Zakī, ″Military Literature of the Arabs,″ in *Cahiers d′histoire égyptienne* 7 (1955): 149–60; idem, ″A Preliminary Bibliography of Medieval Arabic Military Literature,″ *Gladius* 4 (1965): 107–12; Kūrkīs ‘Awwād, ″Al-Jaysh wa-al-Ḥarb wa-al-Silāḥ fī al-Athār al-Makhṭūṭah wa-al-Maṭbū‘ah ‘inda al-‘Arab,″ *Al-Majallah al-‘Askarīyah* (Baghdad) 41 no. 1 (1964): 105–22, 43 no. 4 (1966): 113–26, 44 no. 1 (1976): 86–104, 44 no. 2 (1976): 99–117; idem, *Maṣādir al-Turāth al-‘Askarī ‘inda al-‘Arab,* 3 vols. (Baghdad, 1981–82). The last essay is the most exhaustive, but with many errors and inaccuracies. Ritter′s contribution, although not free from errors and limited to treatises in Istanbul libraries, remains the most noteworthy, since he actually saw and examined the treatises.

This article attempts to elucidate these issues: firstly, through investigating the Abbasid background and origins of Mamluk *furūsīyah* and its literature; secondly, by proposing an altogether new research-based classification of Mamluk *furūsīyah* literature, and finally, by providing a systematic and critical survey of the available basic treatises of Mamluk *furūsīyah* literature and its antecedents.

EMERGENCE OF *FURŪSĪYAH* AND ITS LITERATURE UNDER THE ABBASIDS

The term *furūsīyah* emerged as a concept and an institution under the Abbasid caliphate in Iraq during the later half of the second/eighth century.[4] It attained full currency during the third/ninth century, when its conceptual and technical framework became well established and clearly defined. The activities covered by the term *furūsīyah* included horsemanship, training a horseman in the arts of the lance, close combat techniques and weapons handling, archery on foot and horseback, hunting, and polo. It also included both practical and theoretical knowledge of the basics of veterinary science, of the types and characteristics of weaponry, and of the art of war itself. The scope of *furūsīyah* was, logically, further extended to cover training, exercises, and games performed on foot. *Furūsīyah* was, therefore, subdivided into "upper *furūsīyah*" *(al-furūsīyah al-ʿulwīyah),* which denoted activities performed on horseback, and "lower *furūsīyah*" *(al-furūsīyah al-suflīyah),* which denoted those performed on foot, like wielding arms, archery, boxing, and wrestling. The overall *furūsīyah* activities were generated and shared by two complementary and intermingling concepts and institutions of *furūsīyah*: noble *furūsīyah (al-furūsīyah al-nabīlah)* as represented by the Abbasid court and military *furūsīyah (al-furūsīyah al-ḥarbīyah)* centered on the training of mounted warriors.

AL-FURŪSĪYAH AL-NABĪLAH

Noble *furūsīyah* was initially inspired by the traditions and institutions of the

---

[4]There is no evidence on the use of the term *furūsīyah* in the *jāhilīyah* and early Islam. In some *furūsīyah* treatises, however, the caliph ʿUmar Ibn al-Khaṭṭāb is quoted as having said in a letter to the inhabitants of Syria "Instruct your children in swimming, archery, and *furūsīyah*." The earliest *furūsīyah* treatise which cited this passage is "Kitāb al-Furūsīyah wa-al-Bayṭarah," by Ibn Akhī Ḥizām, Dār al-Kutub al-Miṣrīyah MS 5m *funūn ḥarbīyah,* fol. 75r.; see also *Kitāb al-Siyar al-Kabīr* by Muḥammad Ibn al-Ḥasan al-Shaybānī, ed. Ṣalāḥ al-Dīn al-Munajjid (Cairo, 1971–72), 1:113; al-Qarrāb al-Sarakhsī (in his *Kitāb Faḍāʾil al-Ramy fī Sabīl Allāh,* edited and translated into English by Faḍl al-Raḥmān Bāqī in *Islamic Culture* 3 (1960): 195–218) gave two versions of this passage, one of them without the term. In both versions ʿUmar is said to have been paraphrasing a hadith of the Prophet Muḥammad from which the word *furūsīyah* is absent (see A. J. Wensinck, *Concordance et Indices de la Traditions Musulmane* [Leiden, 1936–69], 2 :295, 310). All this casts strong doubt on the authenticity of the wording of the hadith. For more information see al-Sarraf, "Adab al-Furūsīyah," 105.

Sassanian court and by local practices. It consisted of training from childhood the male members of the Abbasid family and the sons of notables in horsemanship and the use of arms, archery, polo, and hunting.[5] The basic rules and conceptual framework of noble *furūsīyah* were expounded in the "books of *ā'īn*" *(kutub al-ā'īn),* such as "Kitāb Ā'īn al-Ramy," "Kitāb Ā'īn al-Ṣawālijah" and "Kitāb Ā'īn al-Ṣayd," which formed part of the greater "Kitāb Ā'īn-nāmah." This work (also called "Kitāb al-Rusūm") was translated from Persian into Arabic by Ibn al-Muqaffaʻ (d. 139/756–57) during the first years of Abbasid rule. The text is lost, but Ibn Qutaybah quoted extracts in his *'Uyūn al-Akhbār* on the *ā'īn* of archery and polo under the heading *Ādāb al-furūsah*.[6] An important fragment on the *ā'īn* of hunting is included in "Al-Qawānīn al-Sulṭānīyah fī al-Ṣayd" by al-Zaynabī[7] (see below). These lost treatises of *ā'īn*s constituted the nucleus of the noble *furūsīyah* literature in the early Abbasid period.

Noble *furūsīyah* was a state institution almost from its inception after the founding of Baghdad during the caliphate of al-Manṣūr (136–58/754–75). Al-Manṣūr was too old to engage in such activities, but he prepared the ground for his heir, al-Mahdī (158–69/775–85), and their successors.[8] Al-Mahdī was the first crown prince to be brought up according to the principles of noble *furūsīyah.* In 151/768, the first polo field *(maydān)* in Islam was built for him adjacent to his palace at al-Ruṣāfah in Baghdad.[9] He was an archer of repute, skilled with both the simple Arab bow and the composite Persian bow,[10] and it was he who turned hunting into a sophisticated caliphal institution. His successors followed his example, and proficiency in the arts of *furūsīyah* virtually became a prerequisite for the caliphate, as affirmed by al-Jāḥiẓ: "None of the descendants of al-ʻAbbās mounted the throne without having fully mastered the arts of *furūsīyah.*"[11]

لم يقم أحد من ولد العباس بالملك إلا وهو جامع لأسباب †
الفروسية

Al-furūsīyah al-nabīlah was not simply a Sassanian product with an Arab or Islamic tinge; it was a unique and original blending of the interaction of mainly Arab and Sassanian cultures within the framework of Islam and the Abbasid context. Byzantine influences came through the first Islamic dynasty, the Umayyads (41–132/661–750), who also had retained many of the old pre-Islamic tribal values. These include the Arab conception of the horseman *(fāris),* embodying bravery *(shajā'ah),* gallantry *(shahāmah),* manliness *(murūwah),* and generosity *(sakhā'),*[12] qualities often lauded by Umayyad and early Abbasid poets. The notion of *fāris* penetrated the very fiber of Abbasid court *furūsīyah*, and the term *furūsīyah* is still used in Arabic as a synonym for these virtues. Indeed, the chivalric aspect of *al-furūsīyah al-nabīlah* was so powerful that it survived when the institution itself died out.

The same virtues constituted the moral foundation of *futūwah* (from *fatá,* lit., ″young man″), which emerged concurrently with *furūsīyah.* The conceptions *fāris* and *fatá* were closely associated, and the terms were used, since the pre-Islamic period, interchangeably.[13] This association was reflected in *furūsīyah* literature, which came to include treatises on aspects of *futūwah,* for example, *futūwat ramy al-bunduq* (the *futūwah* of hunting birds with the pellet bow).[14] Chapters on *ramy al-bunduq* were usually included in Abbasid hunting treatises; entire works devoted to the subject began to appear in the sixth/twelfth century, especially during the caliphate of al-Nāṣir li-Dīn Allāh (575–622/1180–1225), and continued to be written into the Mamluk period (see below).

See also al-Zaynabī, ″Al-Qawānīn al-Sulṭānīyah,″ fol. 45r.

[12]On the the Arab concept of *fāris,* see al-Sarraf, ″Adab al-Furūsīyah,″ 105, and idem, ″Furūsiyya Literature,″ 132, n. 10.

[13]Cf. Muṣṭafá Jawād, ″Introduction,″ in *Kitāb al-Futūwah,* by Ibn al-Mi'mār, ed. Muṣṭafá Jawād et al. (Baghdad, 1958); and al-Sarraf ″Adab al-Furūsīyah,″ 106.

[14]*Ramy al-bunduq,* which flourished in Iraq in the latter half of the second/eighth century, was practiced at the Abbasid court and in high society (as well as among the common people). Its practioners developed a powerful and strongly hierarchical fraternity, or *futūwah,* which the Abbasid caliph al-Nāṣir li-Dīn Allāh (475–622/1180–1225) ″co-opted,″ declaring himself supreme head. The Ayyubids joined it, and *ramy al-bunduq* took strong hold in Egypt and Syria. The Mamluks perpetuated this legacy. The pellet bow *(qaws al-bunduq)* is a hand bow. However, unlike that of the arrow bow, the string of the pellet bow is cut in the middle and fastened from each end to a small piece of leather designed to hold the pellet, *bunduqah,* which was made of glazed hardened clay. The pellet bow is drawn in much the same way as an arrow bow but on loosing, the pellet-bowman should rapidly shift his left hand holding the bow to the left (if he is right-handed, or to the right if he is left-handed) so that the *bunduqah* will not strike the grip or hurt the hand. As an additional precaution, the thumb (of the left hand holding the grip) is protected by an iron sleeve called *bārūq*. Simple hand pellet bows are still used today in Sind and Afghanistan. See Shihab al-Sarraf, ″L′archerie mamluke (648–923/1250–1517),″ Ph.D. diss., Université de Paris Sorbonne, 1989, 1:275–99, 314–12.

AL-FURŪSĪYAH AL-ḤARBĪYAH

Military *furūsīyah* originated in the professional army created by the Abbasids when they first came to power. The presence of the traditional tribal army dwindled rapidly in the latter half of the second/eighth century until it was practically extinguished under the Caliph al-Ma'mūn (198–218/813–42) and officially abolished by his brother and successor al-Mu'taṣim (218–27/833–42). Initially, the hard core of al-Ma'mūn's cavalry was mainly composed of Khurasanis, but during the last years of his reign, Abbasid cavalry was also steadily reinforced by sedentary Transoxanian Turks and then by free and unfree Turkish tribal nomads. Al-Mu'taṣim pursued this recruitment policy on a larger scale, favoring Turkish tribal horsemen with a certain preference for servile Turkish elements. The *ghilmān* institution started taking shape in his reign but only reached maturity during the caliphate of al-Mu'taḍid (279–89/892–902) who founded the elite corps of *al-ghilmān al-ḥujarīyah,*[15] the fore-runner of *mamālīk al-ṭibāq* of the Mamluk sultanate. Henceforth the *ghilmān,* or mamluks as they came to be known, became a cornerstone of military *furūsīyah.*

The Abbasid *ghulām* military institution was the end result of a sophisticated training system, which was constantly and painstakingly elaborated by Abbasid *furūsīyah* masters over a period of one hundred years starting from the second half of the second/eighth century. It represented an ingenious synthesis of various military traditions, namely Arab, Persian, Central Asian, and Byzantine. The ultimate aim was to produce an accomplished and almost unique brand of mounted archers who would be superior to and better coordinated than even the Central Asian

---

[15]*Ghilmān al-ḥujarīyah,* or *ghilmān al-ḥujar,* were the most distinguished *ghilmān* élite in the second half of the third/ninth century and the first quarter of the fourth/tenth century. They were also referred to as *ghilmān al-dār* or *ghilmān dārīyah,* as they were raised, educated, and trained within the palatial compound *(dār al-khilāfah)* where they were permanently housed in special quarters or chambers, the *ḥujar;* hence their name. During their formation period, *al-ḥujarīyah* were not allowed to go beyond this palatial compound unless accompanied by their supervisors and *furūsīyah* masters. Their number reached twenty thousand during the caliphate of al-Muktafī billāh (289–95/902–8), and they were superbly trained and equipped, also being given the highest salaries among *ghilmān* troops. However, they remained a local force and did not take part in expeditions outside Iraq. Their political role grew with time and culminated in the installation of the caliph al-Rāḍī in 322/934 with the participation of another *ghilmān* élite corps *(al-ṣājīyah).* However, this political role brought about their destruction in 325/936–37. See Hilāl al-Ṣābī, *Tuḥfat al-Umarā' fī Tārīkh al-Wuzarā'*, ed. H. F. Amedroz (Beirut, 1904), 12–13; idem, *Rusūm Dār al-Khilāfah,* 2nd ed., ed. Mīkhā'īl 'Awwād (Beirut, 1986), 8; Ibn Miskawayh, *Tajārib al-Umam,* ed. H. F. Amedroz (Cairo, 1332–34/1914–16), 1:258; cf. Shihab al-Sarraf, "Close Combat Weapons in the Early Abbasid Period," in *Companion to Medieval Arms and Armours,* ed. David Nicolle (London, 2002), 149–78.

horse archer nomads while being at the same time highly proficient in handling the lance and weapons of close combat. The horseman was likewise trained to fight on foot in case he was unhorsed or ordered to dismount during battle. In addition, he was required to know the basics of veterinary science and be familiar with the types and characteristics of the weapons currently used by the cavalry, the infantry, and in siege warfare. He must also be acquainted with the stratagems of war and have some knowledge of the art of war in general. After the initial training period, which might last for several years, the skills acquired throughout were continuously perfected and sustained by a multitude of games and exercises. Hunting and polo were considered essential in maintaining such skills.

The Khurasani corps was the foremost corps of the Abbasid army to have practiced this training system and unceasingly contributed to its development.[16] Being the first professional multi-ethnic caliphal army in Islam, the Khurasanis, whose first generation brought the Abbasids to power, had a precursor role in promoting Abbasid military *furūsīyah*. Although by the second half of the third/ninth century, this prestigious corps had lost much of its importance as a military force after the massive recruitment of Turkish and other elements, its prominent members and commanders remained the absolute model for Abbasid/Iraqi military *furūsīyah*.

From their ranks emerged the man who definitively marked Muslim *furūsīyah* and its literature. This was Ibn Akhī Ḥizām al-Khuttalī, the greatest *furūsīyah* master of his time and the central figure in Muslim *furūsīyah* as a whole. His masterly work became the basic source of future treatises and to a large extent determined the content of *furūsīyah* literature. Knowledge of the work and its author is essential for the understanding of Mamluk *furūsīyah* literature.

IBN AKHĪ ḤIZĀM, THE FOUNDER OF *FURŪSĪYAH* LITERATURE

Muḥammad ibn Ya‘qūb ibn Ghālib ibn ‘Alī al-Khuttalī,[17] known as Ibn Akhī Ḥizām, was born in Baghdad and died there sometime in the last quarter of the

---

[16]Al-Jāḥiẓ, "Risālat Manāqib al-Turk," in *Rasā'il,* 1:20–21.

[17]From Khuttal, a region on the right bank of upper Oxus between the rivers Wakhsh and Panj, famous for its horses. Medieval Khuttal is now part of Tajikistan (C. E. Bosworth, "Khuttal," *The Encyclopaedia of Islam,* 2nd ed., 5:75). According to al-Sam‘ānī, *Kitāb al-Ansāb* (Beirut, 1988), 2:322–23, there was also an Iraqi village named al-Khuttal near Daskarah on the great road between Baghdad and Khurasan, but the existence of such a place, and the association of those bearing the *nisbah* of al-Khuttalī with it, have been rejected (see Ibn al-Athīr, *Al-Lubāb fī Tahdhīb al-Ansāb* [Cairo, 1938–49], 1:345; Yāqūt al-Ḥamawī, *Mu‘jam al-Buldān*, ed. Ferdinand Wüstenfeld [Leipzig, 1866–73], 2:402; ‘Abd al-Mu'min al-Baghdādī, *Marāṣid al-Iṭṭilā‘ ‘alá Asmā' al-Amkinah wa-al-Biqā‘* [Cairo, 1954–55], 1:452). Ibn Manglī ("Uns al-Malā bi-Waḥsh al-Falā," Dār al-Kutub al-Miṣrīyah MS 12 *ṣinā‘ah,* fol. 7r.), and later Viré ("Isṭabl," *EI*^{2}, 4:216), accepted al-Sam‘ānī's dubious explanation of the *nisbah*.

third/ninth century. He was the descendent of a prominent family of *Abnā'*[18] who served the Abbasid dynasty for several decades. His uncle Ḥizām ibn Ghālib was a well-known commander of the Khurasani corps and stable master to the caliph al-Mu'taṣim[19] *(ṣāḥib khayl al-khalīfah,* the equivalent of the later *amīr akhūr kabīr).* According to al-Ya'qūbī, care of al-Mu'taṣim's stables was not entrusted to Ḥizām alone, but was shared by his brother Ya'qūb, the father of Ibn Akhī Ḥizām.[20] Ya'qūb himself was an unrivaled authority on horses and their medical treatment in his time, and he became the chief veterinary surgeon to the caliph al-Mutawakkil (232–47/847–61). Nevertheless, because of the celebrity of his brother Ḥizām, he was commonly referred to as Akhū Ḥizām "brother of Ḥizām," whence his son's *shuhrah* "Ibn Akhī Ḥizām."

It is difficult to imagine a more propitious milieu for developing skills in *furūsīyah* arts and for gaining an intimate knowledge of horses. Ibn Akhī Ḥizām logically walked in the steps of his uncle and his father. He became a member of the Khurasani corps and ranked amongst its most prominent commanders.[21] There is also evidence that he became the stable master of the caliph al-Mu'taḍid. Ibn Akhī Ḥizām was an experienced soldier, expert on horses, master of *furūsīyah* arts, and unchallenged authority in lance and close combat techniques and weapons—hence the unmatched importance of his work, which represents the oldest surviving *furūsīyah* manual.

---

[18]The term *Abnā'* (literally "sons" or "descendents") was originally used to denote the descendents of the first Khurasanis who brought the Abbasid caliphal dynasty to power and who were mostly Arab settlers in Khurasan. But as recruitment from Khurasan continued, the term was used for the descendents of any first generation Khurasani recruits regardless of the time of their arrival in Iraq or their ethnic origin. The *Abnā',* whether of Arab or Persian origin and whether they were descendents of early or later Khurasanis, had a great sense of unity and solidarity. Raised and trained according to the rules of Abbasid *furūsīyah,* they constituted a redoubtable military force, serving both as cavalry and infantry. Their devotion to Iraq, Baghdad, and the Abbasid house was almost fanatical. Distinguished *Abnā'* may always have joined the Khurasani corps and to have assumed positions of command, as was the case with Ibn Akhī Ḥizām.

[19]On the notoriety of Ḥizām ibn Ghālib in this post, see al-Jāḥiẓ, "Risālah fī Ṣinā'at al-Quwwād," in *Rasā'il,* 381 and n. 2.

[20]Al-Ya'qūbī, *Kitāb al-Buldān,* ed. M. J. De Goeje (Leiden, 1892), 381. The stables in Samarra were located behind the quarter of Ḥizām:

. . .وفي هذا الشارع قطائع قواد خرسان منها قطيعة هاشم بن بانيجور وقطيعة عجيف بن عنبسة وقطيعة الحسن بن علي المأموني وقطيعة هارون بن نعيم وقطيعة حزام بن غالب وظهر قطيعة حزام الاصطبلات لدواب الخليفة الخاصية والعامية يتولاها حزام ويعقوب أخوه.

[21]His name figures among the army commanders who in the year 251/856 supported the caliph al-Musta'īn (248–52/862–66) against al-Mu'tazz (252–55/866–69) and the Turks in Samarra. He led (jointly with 'Abd Allāh Ibn Naṣr) the vanguard of the caliphal army under the command of al-Ḥusayn ibn Ismā'īl (al-Ṭabarī, *Tārīkh*, 11:120).

His work, written, according to Ibn al-Nadīm, for the caliph al-Mutawakkil,[22] consisted of two complementary treatises intended as manuals for the mounted warrior and for army officers and commanders. The first treatise (hereafter designated as Treatise A, see below, Category I [a]) is a comprehensive work on horses including equitation, hippology, and farriery. The second treatise (hereafter Treatise B, see below, Category II) mainly deals with the principles of riding and horse-mastery, lance and sword techniques, arms, archery, and polo. These two treatises came down to us either separately and bearing different titles, or combined as one work, though in two parts each with its own preface (hereafter Treatise AB) and also bearing different titles. The most recurrent title, however, and probably the nearest to the original, is ″Kitāb al-Furūsīyah wa-al-Bayṭarah.″ The title given by the Mamluk author and *ḥalqah* commander Muḥammad ibn Manglī to the overall work is ″Al-Fawā'id al-Jalīlah fī 'Ulūm al-Furūsīyah wa-al-Rimāyah wa-Amrāḍ al-Khayl wa-Mudāwātihā.″[23]

During the Mamluk period Ibn Akhī Ḥizām′s work became the manual par excellence for *furūsīyah* masters, mamluks, and *ḥalqah* troopers. Indeed, Ibn Manglī warned his fellow *ḥalqah* troopers and mamluks not to consult any other work but that of Ibn Akhī Ḥizām.[24] He insisted elsewhere that he who heeds the teachings of Ibn Akhī Ḥizām while being trained at the hands of a knowledgeable master in the arts of *furūsīyah* shall licitly benefit from his *iqṭā'* and effectively serve the sultan in time of war.[25] Even the opening words that Ibn Akhī Ḥizām used in the preface of his Treatise AB:

أما بعد فإني لم أزل بعد ما وهب اللّه لي من المعرفة بآلات الفروسية ودقة النظر وشدة الفحص عما † وصفه أهل النجدة والبأس من ذوي النيات الخالصة

(which is also the preface of Treatise A) became a cliché in Mamluk *furūsīyah* treatises.[26]

Since Ibn Akhī Ḥizām′s Treatise AB (often referred to as his ″grand book,″ *kitābuhu al-kabīr*) was rather too voluminous to be used as a handy manual, and since it consisted of two distinct and independent manuals representing different disciplines in *furūsīyah* arts and literature, Treatise AB was often split into Treatises

---

[22]Ibn al-Nadīm, *Kitāb al-Fihrist,* ed. Reza Tajaddod (Tehran, 1967), 377.

[23]Ibn Manglī, ″Uns al-Malā,″ Dār al-Kutub al-Miṣrīyah MS 12 *ṣinā'ah,* fol. 7r.

[24]Ibid. ولايجوز للجندي إذا كان يحسن المطالعة أن يعرج على غيره من الكتب وكتابه الكبير جمع علوما شتى.

[25]Ibn Manglī, ″Al-Tadbīrāt al-Sulṭānīyah,″ fols. 38v.
ومن اشتغل بكلامه وتمهر على شيخ عارف بأمور الحرب أكل اقطاعه حلالا ونفع سلطانه وقت الاحتياج لقتال من تعين قتاله شرعا من كافر وباغ.

[26]See for example al-Aqsarā'ī, ″Nihāyat al-Sūl wa-al-Umnīyah fī Ta'līm A'māl al-Furūsīyah,″ fol. 2r.; Baktūt al-Rammāḥ, ″Kitāb fī 'Ilm al-Furūsīyah,″ fol. 5v.

A and B and these were used and copied separately. This accounts for the limited number of the surviving copies of Treatise AB[27] in comparison with the extant copies of Treatises A and B. It also explains why most copies of Treatise A (which had the title page of Treatise AB) bear the signature of Ibn Akhī Ḥizām, while most copies of Treatise B are either unsigned or bear fictitious names. Moreover, the copies of Treatise B are all catalogued under different titles.

This is one reason why Ibn Akhī Ḥizām′s Treatise B, though fundamental for a proper comprehension of Islamic *furūsīyah* literature as a whole and Mamluk in particular (see below), has remained largely unrecognized as a third/ninth century work. Furthermore, like all *furūsīyah* manuals in demand, the overall work of Ibn Akhī Ḥizām suffered at the hands of copyists, booksellers, and compilers; even the name of the author was not spared, especially his *shuhrah* and *nisbah*.[28] These errors have led to a number of recent false identifications of the author and his work[29] thus helping to obscure his immense contribution to *furūsīyah* literature, of

---

[27]There are five manuscripts that contain both Treatises A and B: Bayezit Public Library MS Veliyüddin Efendi 3174, entitled ″Kitāb al-Furūsīyah wa-al-Bayṭarah wa-Maʻrifat al-Khayl wa-Riyāḍatihā wa-Ta'dībihā wa-ʻIlājihā wa-Maʻrifat al-ʻAmal bi-al-Sayf wa-al-Rumḥ wa-Ramy al-Nushshāb,″ dated 740/1339 but transcribed from a manuscript dated 428/1036–37—its colophon reads:

تم كتاب محمد بن يعقوب بن أخي خزّام (كذا)الختلي في الفروسية وكان رائض المعتضد باللّه . . .يحيط علم
الواقف على هذا الكتاب أنه كتب من نسخه تاريخها على ما وجد ٤٢٨ سنة وهي نسخه لا يكاد يقرأ منها شيء إلا
بالجهد فسيدنا يعذر المملوك في ما يجده في هذه النسخه من إشكال؛

Ayasofya Library MSS 2898, entitled ″Kitāb al-Furūsīyah wa-al-Bayṭarah min Qibal al-Ṭibb wa-Umūr al-Salṭanah″ (Treatise B incomplete), and 2899, entitled ″Kitāb al-Khayl wa-al-Furūsīyah″; Dār al-Kutub al-Miṣrīyah MS 5m *funūn ḥarbīyah*, entitled ″Kitāb fī ʻIlm al-Furūsīyah wa-al-Bayṭarah,″ catalogued as anonymous; Staatsbibliothek zu Berlin MS 5555, untitled and catalogued as anonymous.

[28]The *shuhrah* Ibn Akhī Ḥizām was often corrupted to Ibn Abī Ḥizām and Abū Ḥizām; the name was written Ḥaram, Ḥazām, Ḥazzām, Khizzām, and Khazzām. The *nisbah* al-Khuttalī was written al-Khaylī, al-Jilī, al-Ḥilī, and al-Jabalī, which are common corruptions of this *nisbah* (see Ibn Mākūlā, *Al-Ikmāl fī Rafʻ al-Irtiyāb ʻan al-Mu'talif wa-al-Mukhtalif fī al-Asmā' wa-al-Kuná wa-al-Ansāb,* ed. ʻAbd al-Raḥmān al-Yamānī [Hyderabad, 1962–1972], 3:219 ff.). In some copies the personal name Muḥammad is omitted, and only Yaʻqūb Ibn Akhī Ḥizām remains, usually with the *kunyah* Abū Yūsuf, which is common with the name Yaʻqūb, rather than ʻAbd Allāh, which normally accompanies Muḥammad. In one copy of Treatise B the name Muḥammad has been corrupted to Aḥmad. Such errors were so frequent in the Mamluk period that Ibn Manglī, ″Uns al-Malā,″ Bibliothèque Nationale MS 2832/1, fol. 5v., tried to clarify the problem, but he, too, made errors. Ibn Manglī′s work was one of the few sources used by Mercier (*La Parure des cavaliers,* xii–xiii), in efforts to establish Ibn Akhī Ḥizām′s name and to identify his work; on the basis of the variations Mercier suggested that there might have been three authors: Yaʻqūb and his two sons Muḥammad and Aḥmad. François Viré (″Isṭabl,″ 222–26) took Mercier′s hypothesis as established and even added another imaginary person, Akhī Ḥizām, ostensibly Yaʻqūb′s father!

[29]See for example the preceding note.

which he was, undoubtedly, the founder.

FROM THE ABBASIDS TO THE MAMLUKS

Since *furūsīyah* was and remained a state institution, its rise and decline was intimately connected with the sovereignty and independence of the caliphate. Two great periods of Abbasid *furūsīyah* literature can be isolated; the first flourished from the second half of the second/eighth century until the Buwayhid domination (334/945), and the second from the mid-sixth/twelfth century onward until the Mongol invasion in the mid-seventh/thirteenth century. The destruction of Baghdad and the abolition of the caliphate (656/1258) made Cairo and Damascus the uncontested centers of the Islamic world. The Mamluks inherited and built upon Abbasid traditions, including *furūsīyah* literature, enlarging and emphasizing military exercises and training due to their particular military institution and to the Mongol threat.

CLASSIFICATION OF MAMLUK *FURŪSĪYAH* LITERATURE

Careful examination and extensive research into *furūsīyah* literature and its historical background can only lead to the classification proposed below. This stands in direct opposition to the tentative classifications previously proposed by Mercier and Ritter.[30]

Furūsīyah treatises fall into one of two categories. The first, henceforth Category I, includes thematic treatises dealing with a particular subject or branch of *furūsīyah*. These are:

a) treatises on horses and farriery;
b) treatises on archery;
c) treatises on the arts of the lance;
d) treatises on the arts of the mace;

[30]Mercier, *La Parure des cavaliers,* 384–85, artificially divided the treatises into four categories: treatises on the description of horses and the mysterious virtues attributed to them; treatises on wielding arms on horseback; treatises on farriery; and treatises on falconry. Ritter combined Mercier′s first three categories into one and added two more: archery and organization of the army. He discarded falconry. In both attempts the term *furūsīyah* was used in a restrictive way. Scanlon, ″Introduction,″ in *A Muslim Manual of War,* 6–7, adopted Ritter′s classification, but saw this only as military literature, thus limiting the scope of *furūsīyah* treatises to those covering the training of the horse, the training of the rider to wield certain weapons consummately, the concerted action of the cavalryman on the field, the technique and variety of single combat, tournaments, and the basics of veterinary medicine. Thus treatises on archery, hunting, polo, tactics, and organization of the army ,which constitute an integral part of *furūsīyah* literature, were arbitrarily regarded as distinct from it. See also Ananiasz Zajaczkowski*,* ″Introduction,″ in *Ādāb al-Ḥarb wa-al-Shajā'ah* (Warsaw, 1969), 7–13, who, although skeptical about such classifications, and the restrictive use of the term *furūsīyah,* did not propose any alternative.

e) treatises on the art of war;
f) treatises on arms and war engines;
g) treatises on hunting;
h) treatises on polo.

Thematic *furūsīyah* works, with the exception of those on polo, may be subdivided into two types of treatises: comprehensive and specific thematic *furūsīyah* treatises. The former gives an overall treatment of the subject, while the latter deals only with a specific aspect of the subject matter.

The second category, Category II, includes general *furūsīyah* treatises. They deal with some or most of the above-mentioned subjects, either in an abridged form or by including portions from Category I treatises or entire small treatises. This applies mainly to lance play and mace play. It also covers the training of the Mamluk *fāris* and all that concerns lower (foot) *furūsīyah*.

ASSESSMENT AND GRADING OF MAMLUK *FURŪSĪYAH* LITERATURE

The Mamluk *furūsīyah* treatises of either category may be divided into three groups. The first group is made up of treatises that can be described as basic because of their originality or essential contribution. This group, however, constitutes only a small proportion of the total number of works produced in this period. They were usually written by professionals who belonged to the military institution or worked closely with it. Two authors in this group belonged to the *ḥalqah* corps. Not many treatises are signed by pure Mamluks, probably because of an insufficient knowledge of Arabic. Otherwise, this group would have been greatly enriched with original works based on first-hand observation and experience. This group includes only one original Mamluk-Kipchak treatise (see Category I [d] below).

The second group consists of compilation treatises based on the first group and on pre-Mamluk works. The best examples were composed by men of learning (ulama) like Sharaf al-Dīn al-Dimyāṭī (d. 705/1305–6), Badr al-Dīn Ibn Jamā'ah (d. 733/1333), Ibn Qayyim al-Jawzīyah (d. 751/1350), 'Izz al-Dīn Ibn Jamā'ah (d. 819/1416), Walī al-Dīn Aḥmad al-'Irāqī (d. 826/1422), Shams al-Dīn Muḥammad al-Sakhāwī (d. 902/1497), Jalāl al-Dīn 'Abd al-Raḥmān al-Suyūṭī (d. 911/1505), and many others.[31] They quoted clearly and exactly from treatises now lost, and usually acknowledged their sources, which the authors of the treatises in the first group did not necessarily do, and those in the third group almost never did. Moreover, they sometimes defined important technical terms and, finally, their language is of the highest caliber ever used in *furūsīyah* literature, thus aiding in

---

[31]The marked interest and participation of ulama in *furūsīyah* literature started in the sixth/tenth century under the Abbasids, and assumed important proportions in the Mamluk period. See al-Sarraf, "Adab al-Furūsīyah," 109–10.

the verification and correction of copyists′ errors in treatises in the other groups. Many of these authors were quite familiar with the arts of *furūsīyah.* For example*,* Muḥammad al-Aqsarā'ī al-Ḥanafī (d. 749/1348), the author of ″Nihāyat al-Sūl″ (see below), was an experienced lancer and well versed in archery. Many members of the ulama practiced the latter art and even excelled in it.[32] 'Alā' al-Dīn al-Akhmīmī al-Naqīb, chief Shafi'i magistrate under Sultan al-Ghūrī (906–22/1501–16), was considered by his contemporaries a great master of archery and an undisputed expert.[33] For this reason and because he spoke Turkish perfectly, he was very popular among the Turks, a matter that contributed significantly to his selection for the post of *aqḍá al-quḍāh*.[34] There is strong evidence that he was the author of two deliberately unsigned treatises. The first is on archery, entitled ″Ḥall al-Ishkāl fī al-Ramy bi-al-Nibāl″ (see Cat. I [b] below), and belongs to the first group, and the other is a general *furūsīyah* treatise entitled ″Naqāwat al-Muntaqá fī Nāfi'āt al-Liqā',″ an abridged version of a lost treatise by Taqī al-Dīn Yaḥyá ibn al-Kirmānī (d. 833/1430) which belongs to the second (see Cat. II below).

The third group encompasses popular and often apocryphal literature produced to meet the great demand for *furūsīyah* works at the end of the Bahri period and throughout the Circassian period. Much of it consists of truncated and sometimes amalgamated portions of pre-Mamluk and Mamluk treatises from the previous two groups. The copyists and booksellers, who played a great role in propagating these works, either deliberately left them anonymous or attributed them to well-known authors from Category II.

An illustrative example of this group is the luxurious manuscript now in the Bibliothèque Nationale, MS 2824, entitled ″Al-Makhzūn Jāmi' al-Funūn″ and fraudulently attributed to Ibn Akhī Ḥizām. It begins with the preface and the first section on training the rider and horse from his Treatise B, followed by the lance *bunūd* of al-Aḥdab (see below), then a section on incendiary weapons taken from pre-Mamluk and early Bahri sources, ending with a corrupted vernacular version of an anonymous work on the training of the Mamluk *fāris.* Because of its very nature, this group has led scholars astray and should only be studied and exploited after a full understanding of groups one and two. Although random examples will be given below, this article focuses on the first two groups.

---

[32]The reasons are discussed in al-Sarraf, ″L′archerie mamluke,″ 1:51–56.

[33]Al-Sakhāwī, *Al-Ḍaw' al-Lāmi' li-Ahl al-Qarn al-Tāsi'* (Cairo, 1353–55/1934–36), 5:275; Ibn Iyās, *Badā'i' al-Zuhūr fī Waqā'i' al-Duhūr,* ed. Muḥammad Muṣṭafá (Wiesbaden-Cairo, 1961–75), 4:348:

وكان الشيخ علاء الدين له شهرة طائلة عند الاتراك وكان علامة في الرمي بالنشاب عارفا به وكان له اليد الطولى في ذلك.

Cf. al-Sarraf, ″L′archerie mamluke,″ 1:52–53.

MAMLUK *FURŪSĪYAH* TREATISES AND THEIR SOURCES

CATEGORY I: THEMATIC *FURŪSĪYAH* TREATISES

CAT. I (A): TREATISES ON HORSES AND FARRIERY

Abbasid treatises on horses were the objects of two kinds of contributions; the first was made by Arab philologists and the other was made by professionals and *furūsīyah* masters. The main body of Arab philological works on horses was written in Iraq during the period from the latter half of the second/eighth century to the end of the first half of the fourth/tenth century.[35] These works included both comprehensive and specific treatises. Of the former type, commonly titled *Kitāb al-Khayl,* more than twenty treatises were written,[36] all deemed lost except four. These are *Kitāb al-Khayl* by Abū ʻUbaydah Maʻmar ibn al-Muthanná (d. 209/824),[37] *Kitāb al-Khayl* by al-Aṣmaʻī (d. 216/831),[38] ″Kitāb al-Khayl″ by Abū ʻAbd al-Raḥmān Muḥammad al-ʻUṭbī (d. 228/842), and ″Kitāb al-Khayl″ by Aḥmad ibn Abī Ṭāhir Ṭayfūr (d. 280/893). The last two treatises are still in manuscript and the fate of their extant copies, presumably kept in a private collection, is uncertain.[39] In any case, the basic and unmatched contributions in this domain remain the above first two treatises by the celebrated Basran philologists whose competence and rivalry in the knowledge of horses were particularly well-known. However, notwithstanding the importance of al-Aṣmaʻī′s contribution, Abū ʻUbaydah′s *Kitāb al-Khayl* undoubtedly represents the most complete and learned philological work on horses, and was the source par excellence for subsequent treatises whether written by philologists, *furūsīyah* masters like Ibn Akhī Ḥizām, or compilers. Similarly, very few, of an otherwise considerable number, of specific philological and historical works on horses have survived. The most notable of these are *Nasab al-Khayl fī al-Jāhilīyah wa-al-Islām* by Ibn al-Kalbī[40] (d. 204/819); *Asmā' Khayl al-ʻArab wa-Fursānihā* by Ibn al-Aʻrābī[41] (d. 231/846), and *Al-Sarj wa-al-*

Lijām by Ibn Durayd[42] (d. 321/933).

In all, Abbasid philological works on horses were essential for preparing the ground for the emergence of the *furūsīyah* masters′ contributions in this field. These were primarily concerned with subjects that are not dealt with in philological works such as dressage, riding, ailments of horses and their cures, suitable horse equipment in war and peace, etc., while integrating at the same time the essentials of the philologist′s contributions, especially concerning hippology.

Ibn Akhī Ḥizām was the first *furūsīyah* master to make this synthesis in his Treatise A, commonly titled ″Kitāb al-Furūsīyah wa-al-Bayṭarah.″ It is not only the oldest preserved text in Arabic on horses and their medical treatment, but also the earliest contribution, probably in any language, in which hippology, riding, training, and veterinary medicine, together with many other related topics, are integrated in one work. Thus the genre was established and Treatise A became the prototype of subsequent treatises. The work was a seminal contribution because it was based on the deep knowledge and practical experience of the author. In a number of subjects, it even reached the limits of perfection, as can be seen in the method of training the rider and the horse in the ring.[43] In the part devoted to farriery, the main reference besides the author′s own experience was his father Ya'qūb, who is referred to by his *kunyah* Abū Yūsuf. Ibn Akhī Ḥizām also gives some medical prescriptions in order to discredit them; he urges veterinary surgeons to be more prompt in their work and demands that they should be cross-examined before being allowed to practice. In the chapters on colors, markings, and whorls, a certain Indian named Junna was mentioned and quoted, though only for reasons of completeness, as the author did not agree with what Junna wrote[44]. Ibn Akhī Ḥizām also elaborated on the borrowings he made from *Kitāb al-Khayl* by Abū 'Ubaydah.

More than fifteen copies of Ibn Akhī Ḥizām′s Treatise A have been traced so

1928), and reedited by Nūrī Ḥammūdī al-Qaysī and Ḥātim Ṣāliḥ al-Ḍāmin (Beirut, 1987).

[42]Published by William Wright in *Majmū'at Jurzat al-Ḥāṭib wa-Tuḥfat al-Ṭālib* (Leiden, 1859). The text of Wright was republished by Ibrāhīm al-Sāmarrā'ī (in the seventies, but no date is given); a third edition by Munāf Mahdī Aḥmad appeared in 1992 (Cairo). However, this treatise, which is unique in its genre in *furūsīyah* literature, deserves to be studied more appropriately. Two copies are extant, one in the Library of the University of Leiden, MS 53, the other in Dār al-Kutub al-Miṣrīyah, MS 459/5 *lughah Taymūr*.

[43]Translated by Beate Sierwert-Mayer in ″Riding in the Early Abbasid Period,″ in *Furusiyya,* ed. Alexander, 1:110–17. For the Arabic text of this chapter, see idem, ″Rukūb al-Khayl fī Bidāyat al-'Ahd al-'Abbāsī,″ in *Furūsīyah,* ed. al-Sarraf, 1:98–103.

[44]See, Ibn Akhī Ḥizām, ″Kitāb al-Furūsīyah wa-al-Bayṭarah″ (Treatise A), Dār al-Kutub al-Miṣrīyah MS 1610 *ṭibb,* fols. 52v.–53r.

far and I believe the list is still far from being exhaustive.[45] There is also an unsigned late eighth/fourteenth-century Mamluk-Kipchak version of Treatise A (unidentified as such hitherto) entitled "Kitāb Bayṭarat al-Vāziḥ." The translation from Arabic was made at the request of Tolu Beg, who is almost certainly the same as Tolu min 'Alī Shāh, *nā'ib* of Ṣafad, who was killed in 808/1405.[46] At his orders another *furūsīyah* treatise, this time on archery, was also translated into Turkish (see below, Cat. I [b]). Two copies of "Bayṭarat al-Vāziḥ" are preserved.[47]

The earliest authentic Mamluk work on horses is the anonymous "Kitāb Sharḥ al-Maqāmah al-Ṣalāḥīyah fī al-Khayl wa-al-Bayṭarah," which was written towards the end of the seventh/thirteenth century. It is a learned commentary on a comprehensive didactic poem on horses and other related topics in 133 verses, in *-ri,* presented within the framework of a *maqāmah*. There are two extant copies of this treatise bearing different and apocryphal titles.[48]

---

[45]The following manuscripts of Treatise A have been identified: British Library MS Add 23416, entitled "Al-Furūsīyah wa-Shiyāt al-Khayl"; Chester Beatty Library MSS 3889 (seventh/thirteenth century), 416 (645/1256), 3319 (869/1464–65), 3073, and 3220 (twelfth/eighteenth century), all entitled "Al-Furūsīyah wa-Shiyāt al-Khayl"; Dār al-Kutub al-Miṣrīyah MS 1610 *ṭibb,* entitled "Al-Furūsīyah wa-al-Bayṭarah fī 'Alamāt al-Khayl wa-'Ilājihā"; Damascus, Dār al-Kutub al-Ẓāhirīyah MS 71 *'āmm,* entitled "Al-Furūsīyah wa-al-Bayṭarah"; Istanbul, Süleymaniye Library MS 3608, ascribed to al-Ṣāḥib Tāj al-Dīn (d. 707/1307) and published under this apocryphal name by Fuat Sezgin as a facsimile in 2 vols., *Book on Veterinary Medicine: Kitāb al-Bayṭarah by al-Ṣāḥib Tāj al-Dīn Abū 'Abd Allāh Muḥammad Ibn Muḥammad Ibn 'Alī* (Frankfurt, 1984); Fatih Mosque Library MS 3510, entitled "Kitāb al-Khuyūl wa-al-Furūsīyah" (written for the *amīr akhūr* "stable master" of Sultan al-Nāṣir ibn Qalāwūn and the son of *amīr akhūr kabīr* "chief stable master" of the same sultan); Topkapı Sarayı Library MS 1951, entitled "'Awn Ahl al-Jihād min al-Umarā' wa-al-Ajnād" (893/1487): this copy, incomplete and catalogued as anonymous, was published (presumed unique) in Damascus (1996); Budapest University Library MS Arabe O.3, transcribed in Baghdad in 757/1356: this copy is incomplete, untitled, and catalogued as anonymous, and it was published as such (and presumed unique) by Muḥammad al-Tūnjī under the title *Al-Jawād al-'Arabī* (Kuwait, 1413/1993); Baghdad National Library MSS 134 *al-athār*, 1938/1 *al-athār;* Leiden University Library MS 528; Bibliothèque Nationale MSS 2823, untitled and containing only the first and last folios (1063/1653), and 2815, untitled and classified as anonymous. Treatise A was also plagiarized by a number of compilers, for example, British Library MS Or. 813 (620/1223; signed Aḥmad Ibn 'Atīq al-Azdī); and Ayasofya Library MS 3705 (copied for the Rasulid sultan of Yemen al-Muẓaffar Yūsuf al-Sa'īd [647–94/1249–95] by Aḥmad Ibn Muḥammad, known as Ibn Abī Quṭayrah).

[47]Topkapı Sarayı MS Revan Köskü 1695 and Bibliothèque Nationale MS Suppl. Turc 179, fols. 1–99r. See also Janos Eckmann, "The Mamluk-Kipchak Literature" in *Central Asiatic Journal* 8 (1963): 316–17, and Kurtuluş Öztopçu, "Introduction," in *Münyetü'l-ġuzät: 14. yüzyıla âit Memluk-Kipçakçasıyla yazılmış askêri bir risâle,* ed. and trans. Kurtuluş Öztopçu, Sources of Oriental Languages and Literatures, 13: Turkic Sources, 11 (Cambridge, Mass., 1989), 4.

[48]The first one, written for the library of Yalbāy min Qānī Bāy al-Hamzāwī, is preserved in the

The text begins with a short introduction on the blazes, markings, stockings, and shackles of the horse. Then the author rather smoothly shifts to the rhymed prose of the *maqāmah,* setting forth the frame story: Sultan Ṣalāḥ al-Dīn Ibn Yūsuf Ibn Ayyūb (Saladin) ordered that pure-bred Arab horses should be amassed for war. When that was done he summoned his courtiers and questioned them about the origins of the (Arab) horse, its breeds and bloodlines, its conformation, its qualities, the ailments that can strike it, its markings, its colors, and the equipment of its rider. No one answered but one man, an outsider, who stood up and recited the poem.[49] The commentary normally follows after one or two verses. Those from 1 to 116 cover hippology and farriery, from 117 to 122 deal with arms and armor, from 123 to 130 treat saddles and bridles, and finally from 131 to 133 deal with how the horseman should behave on the battlefield. When the commentary of the last three verses is completed, the rhymed prose resumes the argument of the *maqāmah* and reports that the sultan, greatly pleased with the poem, decided to appoint the poet as his stable master and to make him his boon companion. The *maqāmah* concludes in the style and spirit of *Maqāmāt al-Ḥarīrī* as the narrator (appearing in the role of al-Ḥārith ibn Hammām of the *Maqāmah*) discovered that he knew the poet (resembling the famous Abū Zayd al-Sarūjī) and engaged him in a pleasant and lively conversation.

This treatise is one of the hidden jewels of Mamluk *furūsīyah* literature. First of all, it should be noted that didactic poems, while common in such *furūsīyah* disciplines as archery and hunting, were not very frequent in the domain of horses, especially in such a comprehensive way.[50] Consequently, if this didactic

---

library of Istanbul University, MS 4689, and titled ″Kitāb al-Razdaqah fī Maʻrifat al-Khayl wa-Ajnāsihā wa-Amrāḍihā wa-Adwiyatihā.″ The second copy, dated 1180/1766, is kept in the Bibliothèque Nationale, MS Arabe 2817. It is spuriously attributed to Wahb Ibn Munabbih under the title ″Kitāb fī ʻIlm Siyāsat al-Khayl.″ There is also one copy of the ″Maqāmah″ sans commentary in Dār al-Kutub al-Miṣrīyah MS 81 *furūsīyah Taymūr,* entitled ″Al-Maqāmah al-Ṣalāḥīyah fī al-Khayl wa-al-Bayṭarah wa-al-Furūsīyah.″

[49]The poem begins as follows:
الحمد للّه مبدي عالم الصور \ وخالق الخيل عزّاً منه للبشر
والصلوة على المختار من مضر \ وسيد الرسل من بدو ومن حضر

[50]In *furūsīyah* literature, didactic poems, namely in the fields of archery, hunting, and horses, appeared mainly from the sixth/twelfth century onwards, after these disciplines were established, and the major pertinent treatises were written during the first two hundred years of Abbasid rule. Among the few surviving didactic poems on horses from that period is ″Al-Urjūzah al-Manṣūrīyah fī Ṣifāt al-Khayl″ by the Zaydī Imam al-Manṣūr billāh ʻAbd Allāh Ibn Ḥamzah (d. 614/1217). It was commented by his son al-Amīr Shams al-Dīn Abū al-Ḥasan Aḥmad in a treatise entitled ″Kitāb Sharḥ al-Urjūzah al-Manṣūrīyah fī Ṣifāt al-Khayl,″ of which at least two copies survived; one of them is kept in the British Library, MS 814. The ″Urjūzah″ and its commentary are entirely based on early Abbasid philological contributions and works of *adab*.

poem was not the first of its kind, it is undoubtedly the earliest and the unique surviving example. It is also the first and probably the last didactic poem presented within the framework of a *maqāmah*. In *furūsīyah* literature, the *maqāmah* is an exceptional genre and the only one I am aware of is "Al-Maqāmah al-Qawsīyah" (on archery) by Ismā'īl ibn Jamāl al-Dīn al-Isbahānī (sixth/twelfth century), which is in rhymed prose[51].

The real importance of this work, however, lies in the subtlety of the didactic poem, the expert and erudite commentary of the author, and his clear and fine Arabic style. Although he did not name his pre-Mamluk sources, the text clearly shows that the author was perfectly familiar with the relevant Abbasid literature, especially *Kitāb Nasab al-Khayl* by Ibn al-Kalbī (d. 204/819), *Kitāb al-Khayl* by Abū 'Ubaydah and above all "Kitāb al-Furūsīyah wa-al-Bayṭarah" by Ibn Akhī Ḥizām. It is also clear from his commentaries that the author was a pure product of military *furūsīyah,* as he was highly proficient in horsemanship, hippology, veterinary science, and arms and warfare. He gave us a valuable hint about himself and the period during which he wrote the treatise when he casually referred to two of his contemporaries who were alive when this work was written. One of them was Amir Sunqur al-Ashqar (Shams al-Dīn Sunqur al-Ṣāliḥī), *nā'ib al-salṭanah* in Damascus who died in 691/1292. He was personally and intimately known to the author who must have, therefore, belonged to the upper strata of the Mamluk ruling elite or was very close to it. The other personality is Sharaf al-Dīn al-Dimyāṭī, who died in 705/1305–6. Al-Dimyāṭī wrote a work on horses entitled "Faḍl al-Khayl," based exclusively on Abbasid philological and *adab* works and including a compendium of hadiths of the Prophet on the merits of horses,[52] with rather long chains of authority which our anonymous author quotes. As al-Dimyāṭī wrote his treatise in 688/1289, "Kitāb Sharḥ al-Maqāmah al-Ṣalāḥīyah" was, therefore, composed sometime between the latter date and the death of Sunqur al-Ashqar in 691/1292.

The only worthy signed Mamluk treatise on horses belonging to the first group is *Kāshif al-Wayl fī Ma'rifat al-Khayl,* also known as *Kāmil al-Ṣinā'atayn fī al-Bayṭarah wa-al-Zardaqah* and as *al-Nāṣirī,*[53] by Abū Bakr al-Bayṭār ibn Badr

---

[51]See below, note 101.

[52]It has been published by Muḥammad Raghīb al-Ṭabbākh (Aleppo, 1930) from a single copy in Aleppo, al-Maktabah al-Riḍā'īyah MS *furūsīyah* 801, now lost. A new edition was published in Damascus (2001), allegedly based on a copy conserved in 'Ayn Shams University Library (Egypt), no reference number given. The most reliable copy, however, is that in Medina, 'Ārif Ḥikmat Library MS *ḥadīth* 54, dated 688/1289. Another copy, dated 850/1446–47, is in the Bibliothèque Nationale, MS 2816.

[53]Translated into French by Nicolas Perron, under the title *Le nâcérî: la perfection des arts, ou, Traité complet d'hippologie et d'hippiatrique arabes, par Abū Bakr Ibn Bedr,* 2 vols. (Paris,

al-Dīn, known as Ibn al-Mundhir, chief veterinary surgeon to Sultan al-Nāṣir Muḥammad Ibn Qalāwūn during his third sultanate (709–41/1310/41). Although the author drew heavily on Abbasid sources, especially on Ibn Akhī Ḥizām's Treatise A (from which he borrowed much more than he intimated), his professional experience ensured that his book was a genuine contribution. More than fifteen copies have survived, including an autograph version.[54]

The anonymous "Kitāb al-Furūsīyah fī 'Ilm al-Khuyūlīyah" is another valuable, hitherto unknown work that needs to be noted. The author, who assumed the role of a narrator, attributed the treatise to someone called al-'Abbāsī and claimed that the latter copied it from sources pertaining to King Solomon (al-Malik Sulaymān Ibn Dāwūd). The treatise is largely based on Abbasid sources and some of these are lost, hence the importance of this work. The text begins with a long introduction relating the Arabo-Islamic version of the creation of the horse and its breeds, which is the most detailed and complete account on this subject in *furūsīyah* literature. The work is divided then into four parts and each part into several sections. The first part deals with training and horse mastery; the second covers training the obstinate horse; the third treats colors, markings, and characteristics of the horse; and the fourth part is devoted to ailments and cures. Three copies of this interesting treatise are extant.[55]

A good example of a Mamluk compilation treatise on horses (group two) is by 'Umar ibn Raslān ibn Naṣr al-Bulqīnī (d. 805/1402), called "Qaṭr al-Sayl fī Amr al-Khayl." It is an abridgment of al-Dimyāṭī's *Faḍl al Khayl* but with supplementary material on hippology and equitation. At least six copies have been preserved.[56]

CAT. I (B): TREATISES ON ARCHERY

Archery was indubitably the most important and sophisticated discipline among

1852–60). It was edited by 'Abd al-Raḥmān al-Daqqāq, *Kāshif Hamm al-Wayl fī Ma'rifat Amrāḍ al-Khayl: Le découvreur de l'importance des maux relativement à la connaissance des maladies des chevaux, ou, La perfection des deux arts: Traité complet d'hippologie et d'hippiatrie connu sous le nom de al-Nāṣiri* (Beirut, 1991).

[54]Topkapı Sarayı Library MS Ahmet III 1956, dated 722/1322. Nine more copies deserve particular mention: Topkapı Sarayı Library MSS Ahmet III 203, E.H. 1813, and E.H. 1817; Dār al-Kutub al-Miṣrīyah MSS 4 and 5 *furūsīyah Taymūr;* Bibliothèque Nationale MSS 2813 and 2814; Baghdad, Iraqi Museum Library MS 187; and Chester Beatty Library MS 3680.

[55]Bodleian Library MS Huntington 377; Süleymaniye Library MS Şehid 'Alī Paşa 1550; Vienna National Bibliothek MS 1474.

[56]Süleymaniye Library MSS Şehid 'Alī Paşa 1549 and 2138; Iraqi Museum Library MS 17108; Sohag (Suhaj), Egypt MS *adab* 559; ; 'Ārif Ḥikmat Library MS *ḥadīth* 57; Dār al-Kutub al-Miṣrīyah MS 214 *funūn ḥarbīyah.*

furūsīyah arts and the keystone in the training of the Mamluk *fāris*.[57] Likewise, archery treatises represent the richest branch in *furūsīyah* literature and the preserved copies account for almost one third of the total number of extant *furūsīyah* manuscripts of both categories. Furthermore, archery themes and texts constitute an integral part of general *furūsīyah* treatises (Cat. II), and of such thematic *furūsīyah* treatises as those concerning the art of war, arms and war machines, and the chase (respectively Cat. I [e], [f], and [g]). All this makes knowledge of Muslim archery and its literature indispensable for the comprehension of *furūsīyah* arts and literature as a whole.

However, archery literature is a singularly thorny field of research. It was subject more than any other branch of *furūsīyah* literature to manipulations and falsification at the hands of booksellers, copyists, and unknowledgeable compilers. Furthermore, because of its highly technical language, archery literature was particularly exposed to copyists′ errors and omissions. This phenomenon assumed such amplitude in the Mamluk period that even learned and acknowledged authors/archers like al-Akhmīmī showed reluctance to comment certain texts for fear of misinterpretation.[58]

These and other problems and pitfalls characteristic of archery literature, in conjunction with lack of research, may explain the total confusion reigning in modern publications concerning medieval Muslim archery, its evolution, history, historiography, and literature. It took many years of systematic research, during which the main core of archery literature—all still in manuscript form—was examined and collated, to clear up the picture. The following is a résumé of the main axes of Mamluk and pre-Mamluk archery literature. Its understanding, however, is innately connected with the evolution of archery techniques, the correct identification of archery masters, their epoch and their schools, and the types of bows used.

It should be emphasized that Arabo-Islamic archery as depicted in archery treatises was exclusively based on the use of the composite bow. On the other hand, all Arab philological works on bows,[59] classical Arabic poetry, as well as the entire corpus of hadith attributed to the Prophet Muḥammad on the merits of archery,[60] denote only the simple wooden hand bow. This was the traditional Arab bow and the only type of hand bow used by the Arabs in the pre- and proto-Islamic

---

[57]For a detailed exposition of the training of the Mamluk *fāris* in archery, see al-Sarraf, ″L′archerie mamluke,″ 3:750–869.

[59]See al-Sarraf, ″Adab al-Furūsīyah,″ 113.

[60]The major source on this is al-Qarrāb al-Sarakhsī′s *Faḍā'il al-Ramy fī Sabīl Allāh*. See above, note 4.

periods. Nearly all the nomenclature pertinent to the simple Arab bow was adopted for the composite bow, which is referred to in archery treatises as *qaws* (bow) without further distinction. This may induce confusion between the two types of bows, especially when we know that archery treatises usually begin with the relevant traditions *(sunnah)* on archery, followed by the nomenclature and types of the simple bow as established by Abbasid philologists and coupled with the appropriate verses of Arabic poetry. As the composite and simple bows differ fundamentally, any confusion between them will render archery treatises totally incomprehensible and will also deeply compromise our understanding of *furūsīyah* arts and literature. Indeed, the essence of military *furūsīyah* and the whole Mamluk institution was based on horse archery,[61] which was totally subject to the employ of the composite bow. Unless otherwise specified, all occurrences of the term ″bow″ hereafter denote the composite bow.

Practically, all the basic archery texts were written during the first two centuries of Abbasid rule. The authors were confirmed archers and their works were records of their own experience and/or of the techniques of their respective schools of archery *(madhāhib al-ramy).* All these schools of archery emerged during the period in question. The founders, who flourished in Iraq and Khurasan, were the archery masters commonly referred to as *a'immat al-ramy* (imams of archery). Their number is not the same in all treatises but the data concurs that there were no more than ten principal figures and that the most prominent among these were Abū Hāshim al-Bāwardī, Ṭāhir al-Balkhī, Isḥāq al-Raffā', Abū al-Ḥasan al-Kāghadī, and Abū al-Fatḥ Sa'īd Ibn Khafīf al-Samarqandī. The latter, considered the greatest master of his time and the last of the archery imams, was born in Baghdad in the second half of the third/ninth century and gained prominence under the caliphs al-Rāḍī (322–29/934–40) and al-Mustakfī (333–34/944–46).[62] His father Khafīf al-Samarqandī was one of the loyal and close *ghilmān* of the caliph al-Mu'taḍid and the last of his chamberlains. Under this caliph, accredited for being a great archer[63] and the propagator of the technique of *ikhtilās,*[64] Abbasid archery was at

its apogee. As an army commander, al-Samarqandī's *madhhab* in archery was entirely military. He was the younger contemporary of Abū al-Ḥasan al-Kāghadī, who lived in Herat (now in Afghanistan) and devoted his life and fortune to gain excellence in archery. His school, based on target archery, was civilian.

As for al-Bāwardī, al-Balkhī and al-Raffā', they were the three celebrated great masters consecrated in the late Ayyubid and Mamluk periods as the greatest and true masters of archery *(a'immat al-ramy al-kibār)*. The consequences of this consecration largely dictated the orientation and nature of archery literature in the Mamluk period. The school of al-Bāwardī, who probably was still alive in the first half of the second/eighth century, was the first in Islam. It was very close to the old Sassanian school, which was principally based on foot archery. Al-Balkhī lived in the second half of the second/eighth century; his school mainly represented Abbasid Khurasani foot and horse archery. Isḥāq al-Raffā' flourished in Iraq in the first half of the third/ninth century. His school was a genuine Abbasid development and extremely important to our understanding of the evolution of Muslim archery, especially in the Arab region, where it was adopted by the majority of mounted and foot archers during the Abbasid and Mamluk periods. The school of al-Raffā' was often described as the Median School *(madhhab al-wasaṭ)* for having allegedly taken a median position in terms of archery techniques between the schools of al-Bāwardī and al-Balkhī. However, its real importance lies in its contribution to the standardization of archery techniques implied by the systemization of the Abbasid military training program, which inevitably led to the standardization of the war bow and consequently allowed its production in large quantities. This development reached considerable dimensions in Ayyubid Syria when Damascus became the largest center for manufacturing war bows in the Islamic world.[65]

The foremost authority on the schools of al-Bāwardī, al-Balkhī, and al-Raffā', and the key figure in Muslim archery literature as a whole, is Abū Muḥammad 'Abd al-Raḥmān Aḥmad al-Ṭabarī, who was Ibn Akhī Ḥizām's older contemporary. Not much is known about him except that he was a devoted archer who traveled in Khurasan and Iraq seeking perfection in this art, and that he was trained in the technique of each one of the three masters by their respective disciples and then formed his own synthesis of their techniques. He expounded their methods, as well as his own eclectic approach, in a book entitled "Kitāb al-Wāḍiḥ fī al-Ramy." This became the most popular and widely used archery treatise in the Mamluk period, when al-Ṭabarī, referred to as the "founder of the eclectic school" *(ṣāḥib madhhab al-ikhtyār),* was implicitly consecrated as the fourth imam of archery.

---

wa-al-Rukūb," fol. 37r.; al-Ṣughayyir, "Kitāb Ramy al-Nushshāb," fols. 80r., 89r.–90v.

[65]See al-Sarraf, "L'archerie mamluke," 2:498–506.

"Kitāb al-Wāḍiḥ" is an essential treatise not only in understanding and assessing Mamluk archery literature, but also Mamluk archery as a whole. In the Ayyubid period when the massive production of war bows in Damascus was standardized into three types, certain Syrian authors and archers introduced the idea that the practices of the great masters represented three somatic categories, tall (Abū Hāshim al-Bāwardī); medium (Isḥāq al-Raffā'); and short (Ṭāhir al-Balkhī). This categorization, which probably played an important role in legitimizing the consecration of the three masters during that period, was too constricting, as a bow made for a tall man and the techniques for using it were not necessarily unsuitable for a man of medium or short proportions. Al-Ṭabarī's eclectic method provided a practical alternative and was a stabilizing influence and safety valve against rigid classification.[66]

Most of the ten copies of "Kitāb al-Wāḍiḥ" that have reached us[67] bear only the *nisbah* of its author, al-Ṭabarī, preceded by such attributes as *shaykh, ustādh,* and/or *'allāmah.* This created a grievous misconception regarding the identity of the author, who was grossly confused in modern bibliographical essays with Aḥmad ibn 'Abd Allāh Muḥibb al-Dīn al-Ṭabarī (615–94/1218–95), the well-known *shaykh al-ḥaram* of Mecca,[68] whose works and activities are fully documented by Mamluk sources.[69] The persistence of this flagrant error, accepted without further verification by modern scholars from the end of the nineteenth century till now,

[66]Ibid., 2:494–506, 524–33; 3:722–40, 773–74, n. 42.

[67]British Library MSS Or. 9454, 9265/2, fols. 55r.–96r., and 3134; Bayezit Public Library MSS Veliyüddin Efendi 3175, 3177; Nuruosmaniye Mosque Library MS 4098; Topkapı Sarayı MS Revan Köskü 1933/2; Bodleian Library MS 396; Cairo, al-Azhar Library MS 6 *abazah* 7275; Staatsbibliothek zu Berlin MS Ahlwardt 5539.

[68]W. Ahlwardt, *Verzeichniss der arabischen Handschriften de Königlichen bibliothek zu Berlin* (1887–99, nos. 5540 and 5550) was the first to confuse the author of "Al-Wāḍiḥ" with *shaykh al-ḥaram* Muḥibb al-Dīn al-Ṭabarī; he was followed by Ritter, "La Parure," 136, and Brockelmann, *Geschichte der arabischen Literatur* (Leiden, 1937–49), 906. The copies of "Al-Wāḍiḥ" available to Ahlwardt, Ritter, Brockelmann, and even to Ḥājjī Khalīfah (*Kashf al-Ẓunūn 'an Asāmī al-Kutub wa-al-Funūn* [Istanbul, 1941–43], 2:1995) bore only the *nisbah* of the author: al-Ṭabarī. In his *Talkhīṣ Rasā'il al-Rumāh* (Istanbul, 1263), written in Turkish for Sultan Maḥmūd II (1809–39), the Ottoman archer Muṣṭafá Kānī Qahwaçī Bāshī identified the author of "Al-Wāḍiḥ" with the historian Abū Ja'far Muḥammad Ibn Jarīr al-Ṭabarī (d. 310/923). This sort of confusion was probably very old and may go back to the early fourth/tenth century, cf. Yāqūt al-Ḥamawī, *Mu'jam al-Udabā',* ed. D. S. Margoliouth (Cairo, 1923–30), 6:453. The correct and full name of 'Abd al-Raḥmān al-Ṭabarī figures in a number of *furūsīyah* treatises. Cf. al-Sarraf, "L'archerie mamluke," 1:70–76, 166, n. 97.

[69]See for example al-Dhahabī, *Kitāb al-'Ibar fī Khabar Man Ghabar,* ed. Ṣalāḥ al-Dīn al-Munajjid and Fu'ād Sayyid (Kuwait, 1960–66), 5:238; Ibn Taghrībirdī, *Al-Manhal al-Ṣāfī,* 1:342–48; cf. Ibn al-'Imād, *Shadharāt al-Dhahab fī Akhbār Man Dhahab* (Cairo, 1931–32), 5:8.

attests to the deplorable state of research in *furūsīyah* literature and particularly in archery literature, where al-Ṭabarī undoubtedly represents the key element par excellence in our understanding of it.

Furthermore, contrary to what is generally believed, ″Kitāb al-Wāḍiḥ″ was not the only archery treatise written by ʻAbd al-Raḥmān al-Ṭabarī and in terms of thoroughness, it was not the most important one. His definitive work is ″Kitāb al-Shāmil fī al-Ramy,″ which represents the oldest surviving comprehensive archery treatise and probably the first of its kind in archery literature. It mainly deals with military archery and covers, *inter alia,* the types of bows, cords, arrows, thumb-rings, training the novice, shooting at the *birjās,*[70] faults and injuries to which the archer is exposed, bracing the bow, hints for archers in time of war, shooting at and from a fortress, etc. ″Kitāb al-Shāmil,″ of which I have found so far only one copy,[71] became a major source for subsequent *furūsīyah* treatises of both categories starting with Ibn Akhī Ḥizām′s Treatise B. Other works by al-Ṭabarī, still untraceable, include ″Kitāb Nuzhat al-Qulūb,″ ″Kitāb al-Kanz,″ and ″Kitāb Jāmiʻ al-Asrār.″[72]

The work of Rukn al-Dīn Jamshīd al-Khwārazmī was also an important third/ninth century Abbasid source of Mamluk archery literature. The long quotations which certain Mamluk authors give from his treatise made it clear that Jamshīd was a major source for the Mamluks on the great masters and on al-Ṭabarī, in particular, with whom he was a contemporary.[73] This information is confirmed by Jamshīd in a small but important treatise ascribed to him of which one copy only is extant.[74] In this treatise, probably a much abridged version of his main, untraceable treatise, Jamshīd mentions that his work was seen and verified by the great Iraqi archer Abū Bakr Ibn ʻAbd al-ʻAzīz Ibn Julham al-Baghdādī, to whom no archery treatise is attributed. Another Abbasid source for Mamluk archery literature is the work of Muḥammad Ibn Yūsuf al-Akhbārī (third/ninth century) entitled ″Al-Iḍāḥ fī ʻIlm al-Ramy″ which has survived in one copy.[75] Mamluk writers also drew on the now lost works of Abū Bakr al-Warrāq, Abū Mūsá al-Ḥarrānī al-Sarakhsī,

Aḥmad al-Suhrawardī, Abū Ja'far Muḥammad al-Harawī, and 'Alī al-Daqqāq,[76] all of them ranked as great archers.

The advent of the Buwayhids in Iraq and the Fatimids in Egypt contributed to the decline in the region of military archery, and horse archery in particular. Neither the Daylami troops of the former nor the Berbers of the latter used this arm. The recourse of both dynasties, especially the Buwayhids, to Turkish horse-archers did not stop this decline. Only when the Saljuqs swept over the region with their Turkoman horse-archers did archery come back with force. Interest in archery literature was greatly revived, old Abbasid texts were reproduced and new ones were written. This time, the Syrian archers, who were already bearing the brunt of the Crusaders thrust, took the initiative. This also coincided with the efflorescence of bow manufacturing in Damascus and the birth of the famous Damascus war bow under the Burids.[77] Three contributions in the form of didactic poems are representative of this new spirit. The first one, a short and almost riddle-like poem on the fundamentals of archery intended for knowledgeable archers, is ″Al-Qaṣīdah al-Lāmīyah fī al-Ramy″ by Ṣāliḥ al-Shaghūrī who, on behalf of the Damascene archers, took it to Egypt in 553/1158 to challenge the Cairene archers and test their knowledge. It was commented by an Egyptian archer named Abū al-Ḥasan 'Alī ibn 'Abd Allāh ibn Nabīl in a treatise entitled ″Kitāb fī 'Ilm al-Rimāyah bi-al-Nushshāb wa-Uṣulihi wa-Madhāhibih″ of which one copy is preserved.[78] The second contribution is an anonymous and untitled *urjūzah* on the fundamentals of archery and the schools of the three great masters, including important information on the main prototypes of war bows known in the region since the advent of the Abbasids. This fine *urjūzah* was commented at the end of the ninth/fifteenth century by al-Akhmīmī (see ″Ḥall al-Ishkāl″ below).

The third didactic poem was written and commented by Ḥusayn Ibn 'Abd al-Raḥmān al-Yūnīnī[79] (d. 650/1252), who claimed to be the rightful heir of the bygone masters. While this claim may be questionable, al-Yūnīnī was certainly one of the greatest archers of his time. His work, entitled ″Al-Nihāyah fī 'Ilm al-Rimāyah,″ represents the most important archery treatise written in Ayyubid Syria, and is a precious link in our understanding of the evolution of archery techniques and literature. Like all archery treatises written after the period of the great masters, ″Al-Nihāyah″ is essentially based on early Abbasid texts and deals

[76]Al-Sarraf, ″L′archerie mamluke,″ 1:149–51.

[77]Ibid., 2:497–98.

[78]Köprülü Mehmed Paşa Library MS 470.

[79]He was also called al-Yunānī. Both *nisbahs* are correct in denoting Yūnīn or Yunān, a village near Baalabak (Baalbek) in Lebanon. See al-Dhahabī, *Kitāb al-'Ibar,* 5:248, n. 1; al-Baghdādī, *Marāṣid al-Iṭṭilā',* 3:1488.

with the fundamentals of archery as established by the masters. But it contains extremely valuable information on contemporary practices and equipment. Furthermore, it was al-Yūnīnī who first introduced the notion that the schools of the three great masters were influenced by their physical characteristics. This notion, though unsupported, was widely accepted by Mamluk archers and authors, as ″Al-Nihāyah″ became one of the standard sources of Mamluk archery literature. At least nine copies exist, including an imperfect autograph version.[80]

Sometime in the second half of the seventh/thirteenth century or early eighth/fourteenth century, two important archery treatises, greatly appreciated by Mamluk authors and archers, appeared in the Maghrib. This was exceptional and unprecedented as the crossbow, not the hand bow, usually predominated in that region. In fact, it was to challenge this trend and to promote the cause of the composite hand bow and the relevant oriental traditions that these treatises were avowedly and expressly written. The first one is ″Kitāb al-Badā'ī' wa-al-Asrār fī Ḥaqīqat al-Radd wa-al-Intiṣār wa-Ghāmiḍ Mā Ijtama'at 'alayhi al-Rumāh fī al-Amṣār″ by Abū Bakr Muḥammad ibn 'Alī ibn Aṣbagh al-Harawī, who severely criticized his Andalusian compatriots for preferring the crossbow to the hand bow. His treatise gives a penetrating and unique exposé on the merits and superiority of the hand bow to the crossbow and the defects of the latter in the open battlefield. The treatise also includes important information on contemporary practices relevant to archery and warfare in Muslim Spain. Three copies have survived.[81]

The other treatise is by the Moroccan archer Abū Muḥammad Jamāl al-Dīn 'Abd Allāh Ibn Maymūn al-Murrākishī,[82] who wrote ″Al-Ifādah wa-al-Tabṣīr li-Kull Rāmin Mubtadi' aw Māhir Naḥrīr bi-al-Sahm al-Ṭawīl wa-al-Qaṣīr,″ which is absolutely one of the best comprehensive treatises in archery literature and probably the most complete. In fact, ″Al-Ifādah,″ written as a manual for both the beginner and the expert archer, represents a concise and intelligible encyclopedia on archery covering a wide range of subjects that were never previously united in any one single comprehensive archery treatise. Ibn Maymūn drew on al-Ṭabarī′s works,

[82]There is evidence that archery flourished in Morocco before the sixth/twelfth century and that a school, perhaps as important as the two traditional ones in Iraq and Syria, existed there (al-Sarraf, ″L′archerie mamluke,″ 2:82–83).

especially ″Kitāb al-Shāmil,″ and on many other Abbasid treatises, some of which are lost. The ″Ifādah″ was particularly esteemed in the Mamluk period, and Ibn Manglī emphatically advises his fellow troopers to use it as a major reference.[83] An earlier treatise by Ibn Maymūn, entitled ″Kifāyat al-Muqtaṣid al-Baṣīr fī al-Ramy ʻan al-Qaws al-ʻArabīyah bi-al-Sahm al-Ṭawīl wa-al-Qaṣīr,″ was more condensed and also known in the Mamluk period, but is not extant. Four copies of the ″Ifādah″ have been preserved.[84]

The Mamluks did not produce any worthwhile treatises on archery until the end of the Bahri period, contenting themselves with the reproduction of the pre-Mamluk archery literature. For example, the important chapter on archery in al-Aqsarāʼī′s ″Nihāyat al-Sūl,″ written during the third sultanate of Sultan al-Nāṣir Ibn Qalāwūn, is based entirely on pre-Mamluk sources (see below, Cat. II). The author defends this by saying that after the old masters no contributions had been made to this field.[85] Ibn Manglī′s main sources for archery in his various *furūsīyah* treatises, written under the sultan al-Ashraf Shaʻbān (764–78/1363–76), were Ibn Maymūn′s ″Al-Ifādah″ and al-Ṭabarī′s works. Both Ibn Manglī and al-Aqsarāʼī deplored the state of archery under the sultanate,[86] which had started to deteriorate during the third sultanate of al-Nāṣir,[87] and only worsened during the successive reigns of his sons.

A timid revival of archery and *furūsīyah* in general took place under al-Ashraf Shaʻbān, bringing forth several relevant works, including a didactic poem on archery titled ″Ghunyat (or Bughyat) al-Murāmī (or al-Marāmī) wa-Ghāyat al-Marām (or al-Murām) lil-Muʻānī.″ It was written and commented by a Syrian instructor of archery *(ustādh)* called Ṭaybughā al-Baklamīshī al-Yunānī.[88] This

[84]Köprülü Mehmed Paşa Library MSS 1212, 1213 (verified *[qubilat]* 759/1357–58), both of the second half of the fourth century; Chester Beatty Library MS 5144; Princeton University Library MS 793, catalogued as an anonymous sixteenth-century ″Kitāb fī Bayān Faḍl al-Qaws wa-al-Sahm wa-Awṣāfihimā.″ This last copy, presumed until now unique, was in fact translated with many errors into English under the title *Arab Archery* (Princeton 1945) by Nabih Amin Faris and Robert Potter Elmer. They remained unaware of the fact that they had actually translated a basic work on Muslim archery and not, as they believed, an anonymous sixteenth-century work, a mistake which was unfortunately readily adopted by modern scholarship. See al-Sarraf, ″L′archerie mamluke,″ 1:89–90.

[85]Al-Aqsarāʼī, ″Nihāyat al-Sūl″, fol. 37v.

[86]Ibid., fol. 41v., Ibn Manglī, ″Al-Tadbīrāt al-Sulṭānīyah,″ fol. 32r.; cf. al-Sarraf, ″L′archerie mamluke,″ 3:942, n. 3.

[87]On the causes for this decline and that of *furūsīyah* in general and the sultan′s role in it, see al-Sarraf, ″L′archerie mamluke,″ 3:877–82, 922–33.

[88]A version of this work has been translated into English with a commentary by J. D. Latham and

was the first true Mamluk treatise on archery.

Still borrowing heavily from pre-Mamluk sources, such as the works of ʻAbd al-Raḥmān al-Ṭabarī, al-Yūnīnī, and Ibn Maymūn (all unacknowledged), Ṭaybughā's main contribution, unique in archery literature, lies in the few pages he devoted to the technique of shooting from horseback, and the measurements and descriptions he gave of the Mamluk war bow, the Damascene bow.[89] He also provides important information on crossbows and arrow guides. The relative thoroughness of his work, its simplicity, usefulness, and the vacuum it filled made it quite popular in the Circassian period as attested by the attention it was accorded and by the many, although variously titled, copies which have survived.[90]

The main Mamluk contribution to the literature on archery comes from the Circassian period. Especially significant was Nāṣir al-Dīn Muḥammad ibn ʻAlī ibn Qutlubeg ibn al-ʻAlāʼ al-Qāzānī (d. 858/1454), better known as Muḥammad Ibn ʻAlī al-Ṣughayyir. He was also called "al-Muʻallim," being a great authority on archery, and because he was the chief archery instructor of the royal Mamluks in the *ṭibāq* during the reigns of Sultan Mu'ayyad Shaykh (815–24/1412–21) and his successors up to the reign of his friend Sultan Jaqmaq (842–57/1438–53). He was then appointed governor of Damietta (Dimyāṭ).[91] He is the only author of works in this group about whom the sources furnish information. During his long life, many considered him the greatest authority on the theory and practice of archery.[92] This praise is totally justified, for he is certainly the most important

W. F. Paterson under the title *Saracen Archery* (London, 1970); cf. al-Sarraf "L'archerie mamluke," 1:125–29. On the term *ustādh* in Mamluk archery, see al-Sarraf "L'archerie mamluke," 1:49. Ṭaybughā was still active in the first two decades of the ninth/fifteenth century; this can be inferred from al-Ṣughayyir's "Kitāb Ramy al-Nushshāb," composed in 822/1419, where his name is mentioned frequently (fols. 6r.–v., 7v., 9r., 14r., 15v., 18v., 22r., 27v., 28r., 48v., 53v., 54r., 65r., 75r., 76r., 77r., 79v., 91r., 93v., 94r.). It has been suggested (Ritter,"La Parure," 137) that Ṭaybughā could have been Ṭaybughā Ibn ʻAbd Allāh al-Ashrafī, reported by Ibn Ḥajar al-ʻAsqalānī in "Inbāʼ al-Ghumr" (Bodleian Library MS Huntington 123, fol. 129r.) to have died in prison in Aleppo in 797/1395. This unlikely identification has been generally accepted by modern scholars.

[89]Al-Sarraf, "L'archerie mamluke," 1:90–93, 2:506–20, 3:813 ff.

[90]For example; "Ghunyat al-Ṭullāb fī Maʻrifat Ramy al-Nushshāb," "Bughyat al-Murāmī wa-ghāyat al-Gharāmī fī Ramy al-Sihāmī," "Bughyat al-Murāmī wa-Ghāyat al-Marāmī lil-Muʻānī," "Al-Jihād wa-al-Furūsīyah wa-Funūn al Ādāb al-Ḥarbīyah," and "Al-Ramy wa-al-Rukūb." More than twenty copies of Ṭaybughā's work exist. On the fifteen copies known to Latham and Paterson see *Saracen Archery*, 195–96 (titles not indicated); in addition, see Dār al-Kutub al-Miṣrīyah MSS 1m *funūn ḥarbīyah* (catalogued as anonymous) and 3m/2 (fols. 61v.–107v.); Suhaj Library MS 6 *ṣināʻah;* Aleppo, al-Maktabah al-Riḍāʼīyah MS 802 *furūsīyah;* Iraqi Museum Library MS 9405/ʻAzāwī.

[91]For further information, see al-Sarraf, "L'archerie mamluke," 1:44–49, 899ff.

[92]Al-Sakhāwī, *Al-Ḍawʼ al-Lāmiʻ,* 7:203; Ibn Taghrībirdī, Al-Nujūm al-Zāhirah, ed. William Popper (Berkeley, 1909–), vol. 7 pt. 2:577; Ibn Iyās, *Badāʼiʻ al-Zuhūr,* 2:321. Al-Ṣughayyir was more

Mamluk authority in this field and one of the great names in Islamic archery literature in general.[93] While he was still a young disciple of *ustādh* Lu'lu' al-A'azz, al-Ṣughayyir made his first contribution to archery literature. He wrote a short and learned commentary on ″Al-Qaṣīdah al-Lāmīyah″ by Ṣāliḥ al-Shaghūrī (above). At least two copies have survived.[94] Many years later, when he was in his forties and fifties, he composed several specialized books on archery, but only one of these has survived, in two copies bearing different titles, one of them an autograph, ″Kitāb Ramy al-Nushshāb al-Mukhtaṣar al-Muḥarrar,″ dated 822/1419.[95] Although the treatise deals only with the bow and its accessories and the fundamentals of archery, the treatment of these subjects is so extensive and profound that it stands unparalleled in the entire extant archery literature. In fact, this monument, which includes many directions and hints for archery instructors, was not written for beginners—for whom the author promised to write a simplified version—but for experienced and learned archers who could understand and appreciate a critical analysis of some of the teachings of the pre-Mamluk masters. Al-Ṣughayyir cited and discussed an imposing number of Abbasid archery sources, all acknowledged, including the works of 'Abd al-Raḥmān al-Ṭabarī, Abū Bakr al-Warrāq, Jamshīd al-Khwārazmī, Abū Mūsá al-Sarakhsī, Aḥmad al-Suhrawardī, Abū Ja'far al-Harawī, 'Alī al-Daqqāq, and two anonymous and apocryphal treatises attributed to the Sassanid king Bahrām Ghūr. The sole Mamluk work mentioned is Ṭaybughā′s ″Ghunyat al-Marāmī,″ which al-Ṣughayyir quoted many times, though often for the purpose of highlighting the errors of its author, Ṭaybughā, who is even described in one occasion as unworthy of the title *ustādh.*[96] Al-Ṣughayyir′s work has also a remarkable social and historical dimension, which is generally lacking in other archery treatises. It provides, for example, important and unique contemporary information on the practices and functions of archers′ guilds in Cairo and on the

---

than eighty years old when he died.

[93]Cf. al-Sarraf, ″L′archerie mamluke,″ 1:142ff.

[94]Bibliothèque Nationale MS 6640/3, fols. 19r.–25r., entitled ″Kitāb Qaṣīdat al-Lāmīyah al-Mushtamilah 'alá Uṣūl al-Ramy wa-Furū'ihi wa-Ma Yadullu 'alayhi min Ma'rifat Sharā'iṭih,″ dated 799/1397; and Chester Beatty Library MS 3158/3, fols. 79v.–83r., entitled ″Sharḥ Naẓm Ṣāliḥ al-Shaghūrī fī al-Ramy″ (transcribed in the seventeenth century and incorrectly attributed to 'Abd al-Raḥmān al-Ṭabarī). The author did not mention this work in his own ″Kitāb al-Nushshāb,″ where he did list two even more elaborated works, ″Kashf al-Sirr al-Khafī li-Muḥammad Ibn 'Alī al-Ḥanafī″ and ″Al-Masā'il al-Qūṣīyah,″ which he had composed in Qūṣ in Upper Egypt (fols. 17v., 56v., 57r.; al-Sarraf, ″L′archerie mamluke,″ 1:147).

[95]Topkapı Sarayı Library MS Ahmet III 2620.

[96]At least part of this criticism, which is sometimes excessive and not always justified, is due to the strong rivalry that existed between the Egyptian and Syrian archers; cf. al-Sarraf, ″L′archerie mamluke,″ 1:145ff.

preponderant role of Syrian archers in this domain. The margins of this autograph often bear additional notes and comments by the author who at times seems submerged in the overflow of his vast erudition. The second extant copy of al-Ṣughayyir′s work bears the title ″Al-Hidāyah fī ʻIlm al-Rimāyah″[97] and is slightly different from the autograph in the disposition of its contents. This copy is particularly important because it was transcribed in 845/1441 by Muḥammad ibn Muḥammad al-Pahlawān, who was himself an instructor of archery and one of the great archers of his time. Most significantly, al-Pahlawān, who personally knew al-Ṣughayyir and had great respect for him, preserved the margin-notes and comments of the latter and added many more of his own. Consequently, ″Al-Hidāyah″ is not merely a copy of ″Kitāb al-Ramy″ but rather a stand-alone treatise and an invaluable document on Mamluk archery. Because of their specialized nature, al-Ṣughayyir′s works never attained the popularity of Ṭaybughā′s treatise.

Of the long list of lesser works in this group the following treatises deserve special mention: ″Al-Urjūzah al-Ḥalabīyah fī Ramy al-Sihām ʻan al-Qisī al-ʻArabīyah,″ a poem of 400 verses of which one copy is extant, composed by Abū Bakr al-Ramī al-Ḥalabī, known as al-Minqār(d. 890/1485),[98] and al-Akhmīmī′s ″Ḥall al-Ishkāl fī al-Ramy bi-al-Nibāl,″ a late ninth-/fifteenth-century commentary on the anonymous sixth-/twelfth-century *urjūzah,* see above. Three copies are known.[99]

Among the very good compilation treatises of the second group is an autograph dated 855/1451 written for Sultan Jaqmaq by al-Ḥasan Ibn Muḥammad Ibn ʻAysūn al-Ḥanafī al-Sinjārī, ″Hidāyat al-Rāmī ilá al-Aghrāḍ wa-al-Marāmī.″[100] It is a very clear résumé of Muslim archery with some very important information on pre-Mamluk archery. The treatises ″Ghars al-Anshāb fī al-Ramy bi-al-Nushshāb″ by al-Suyūṭī and ″Al-Qawl al-Tāmm fī Faḍl al-Ramy bi-al-Sihām″ by al-Sakhāwī are also worthy of consideration. At least three copies of the former exist;[101] of the

[97]Bodleian Library MS Huntington 548.

[98]Staatsbibliothek zu Berlin MS 5540

[99]Bibliothèque Nationale MS Arabe 6259, dated 913/1507–8 (transcribed from an autograph manuscript); Ayasofya Library MS 3845, dated 895/1489–90; Princeton University Library MS Yahudah ELS 3954/1, fols. 1v.–91r.

[100]Topkapı Sarayı Library MS Ahmet III 2305.

[101]Topkapı Sarayı Library MS Ahmet III 2325; British Library MS Or. 12830; Staatsbibliothek zu Berlin MS 5540. This treatise is the only one that includes passages from ″Awthaq al-Asbāb fī al-Ramy bi-al-Nushshāb″ by ʻIzz al-Dīn Ibn Jamāʻah (al-Suyūṭī,″Ghars,″ fols. 15r.–22r.). A hasty reading of Ritter (″La Parure,″ 143), led ʻAwwād (*Maṣādir al-Turāth,* 107) to conclude that the manuscript in the Topkapı Sarayı library is the work of Ibn Jamāʻah himself. The same manuscript (fols. 22r.–30r.) includes the entire text of ″Al-Maqāmah al-Qawsīyah″ (″Al-Risālah al-qawsīyah,″ according to Ḥājjī Khalīfah, *Kashf al-Ẓunūn,* 1:884) by Ismāʻīl Ibn Jamāl al-Dīn al-Isbahānī

latter we have an autograph dated 875/1470–71.[102] There is only one Mamluk-Kipchak archery treatise, entitled ″Al-Khulāṣah,″ or ″Kitāb fī ʻIlm al-Nushshāb.″ It was composed and translated for Tolu Beg (see above) by an anonymous compiler basically from ″Kitāb al-Wāḍiḥ″ of ʻAbd al-Raḥmān al-Ṭabarī. Two copies are known.[103]

CAT. I (C): THE ARTS OF THE LANCE

The arts of the lance can be divided roughly into four parts: firstly, training the *fāris* in handling the lance, types of lance charges and thrusts, and the techniques of lance combat under different situations. Secondly, the *bunūd* (sing. *band*): each *band* comprises a set combination of movements performed solo by the horse lancer while he is in motion, and as if he is in the mêlée of a battle. The *band* is based on two essential movements: thrusting and parrying, which are executed in four directions, front, rear, left, and right, but with various angles. Thirdly, *al-manāṣib al-ḥarbīyah,* which denotes the technique of fencing with the lance where two horse lancers are engaged in simulated combat. And fourthly, *al-mayādīn* or *al-mawādin* (sing. *maydān,* and by extension the exercise itself): this is the technique of collective simulated combat between two teams of lancers executed according to a traced course.[104]

The main source for the Mamluks on lance training, types of charges, and thrusts was Ibn Akhī Ḥizām′s Treatise B. It was also one of the principal sources on the techniques of lance combat under different situations. Although other sources remain unidentified, two late Abbasid masters are mentioned in this connection, particularly in relation to *al-manāṣib al-ḥarbīyah:* Muḥammad Ibn al-Shayḍamī and Ibrāhīm Ibn Sallām.[105] There are no extant pre-Mamluk sources

---

(sixth/twelfth century). Al-Suyūṭī′s treatise is thus the most trustworthy source on this *maqāmah,* two of the three surviving copies of which are later than his work and probably transcribed from it: Istanbul, Süleymaniye Library MS Ḥamīdiye 1447, fols. 114v.–116r.; Ayasofya Library MS 2983; Dār al-Kutub al-Miṣrīyah MS *adab* 3901.

[102]Princeton University Library MS Yahudah 3551; ʻAwwād, *Maṣādir al-Turāth,* 2:271, gave the wrong reference number. Three more copies are known, one of them Dār al-Kutub al-Miṣrīyah MS 2m *funūn ḥarbīyah.*

[103]Bayezit Library MS Veliyüddin 3176, and Bibliothèque Nationale MS Suppl. Turc 197. See Eckmann, ″The Mamluk-Kipchak Literature,″ 317–19.

[104]In modern research *bunūd* and *al-manāṣib al-ḥarbīyah* are generally described in vague and laconic terms like ″exercises, maneuvers, and movements.″ *Al-mayādīn* are generally described as parades. The only serious effort to define and explain these terms was made by Mercier in *La Parure des cavaliers,* 389–93, but his limited sources and failure to dissociate his approach from European references greatly limited the value of his explanations. The definitions given here have been derived from an overall reading of the pertinent *furūsīyah* treatises.

[105]See for example ″Kitāb al-Makhzūn li-Arbāb al-Funūn,″ fol. 38r.–v.; (pseudo) Najm al-Dīn

for the *bunūd*. The evidence shows that the Mamluks inherited 150 *band* from the Abbasids and that the most eminent pre-Mamluk authority in this domain was the Iraqi lance master Usṭá Bāriq al-Rammāḥ al-Baghdādī,[106] who flourished in the first half of the seventh/thirteenth century. There are no surviving pre-Mamluk sources for the *mayādīn*. The monumental cloverleaf *maydān* discovered in Samarra[107] and Ibn Akhī Ḥizām′s Treatise B[108] make it clear that the origin of this art was also Abbasid. Mamluk treatises drawing on a lost Abbasid source also mention that collective and individual lance combats had been performed before al-Muʻtaṣim and al-Muʻtaḍid and furthermore that the stable master of the latter, Ibn Akhī Ḥizām, used to participate.[109]

No matter how important the Abbasid legacy was, it is in this field that the Mamluks showed genuine creativity and that their contribution to *furūsīyah* is most apparent. The credit for this goes almost entirely to the Syrian lance masters and particularly to the celebrated Syrian lance master Najm al-Dīn al-Aḥdab al-Rammāḥ (636–95/1238 or 39–1296), who made innovations in three of the four categories. His fame rests principally, however, on the 72 *bunūd* that he condensed out of the 150 *band* inherited from the Abbasids.

Al-Aḥdab′s marked influence on Mamluk *furūsīyah* literature persisted throughout the Mamluk period. This is clearly attested by the many extant manuscripts containing his *bunūd* and *manāṣib.* Most of these treatises belong to Category II (general *furūsīyah* treatises) and many of them could be rated as vulgar *furūsīyah* literature (group three). Copyists and anonymous compilers clumsily crafted lengthy treatises to envelop his very thin *bunūd* and *manāṣib.* By crediting al-Aḥdab with the authorship of these treatises, the false impression was created that he had written several.[110] Even the *bunūd* ascribed to him are only

---

al-Aḥdab,″Kitāb al-Furūsīyah,″ fol. 16r.–v.

106See for example, Baktūt al-Rammāḥ, ″Kitāb fī ʻIlm al-Furūsīyah,″ fol. 6r.

107On this *maydān,* see Ahmed Sousa, *Rayy Sāmarrā' fī ʻAhd al-Khilāfah al-ʻAbbāsīyah* (Baghdad, 1948–49), 1:116–22; Ernst Herzfeld, *Geschichte der Stadt Samarra* (Hamburg, 1948), pls. xxiiib, xxiv; Alastair Northedge, ″Sibāq al-Khayl wa-Mayādīnihi fī Sāmarrā',″ in *Furūsīyah,* ed. al-Sarraf, 1:91–97 and editor′s note (u).

108See Ibn Akhī Ḥizām, ″Al-Kamāl fī al-Furūsīyah,″ fols. 21v., 41r.–v.

109See (pseudo) Najm al-Dīn al-Aḥdab, ″Kitāb al-Furūsīyah,″ fol. 16r.

110The titles of the manuscripts attributed to al-Aḥdab (″al-Furūsīyah wa-al-Manāṣib al-Ḥarbīyah″; ″Al-Furūsīyah wa-al-Jihād wa-Ma Aʻadda Allāh lil-Mujāhidīn min al-ʻIbād″; ″Kitāb al-Furūsīyah wa-al-Jihād [fī Sabīl Allāh]″; ″Kitāb al-Bunūd fī Maʻrifat al-Furūsīyah,″ etc.) are all later additions contrived by anonymous compilers or even drawn from the prefaces of manuscripts by modern bibliographers and archivists. Moreover, these titles do not necessarily belong to different treatises, just as manuscripts bearing the same title are not always identical. The following list of manuscripts ascribed to al-Aḥdab is not exhaustive and should be viewed with reserve: Mecca, Maktabat al-Ḥaram al-Makkī al-Sharīf MS 50 *tārīkh;* Bibliothèque Nationale MSS 2825, 2829; Topkapı

dubious versions of those found in his ″Kitāb al-Bunūd,″ which never reached us as an independent treatise. Al-Aqsarā'ī, a Damascene himself and al-Aḥdab′s younger contemporary, as well as a disciple of his disciple (ʻIzz al-Dīn al-Rammāḥ), could not find a definitive copy of ″Kitāb al-Bunūd″; he included four different versions in his own ″Nihāyat al-Sūl.″ He commented that these varying versions were useful,[111] implying that they reflect not copyists′ manipulations but rather different original versions by the author. This comment casts strong doubt on the existence of a main ″Kitāb al-Bunūd″ and suggests two possibilities: (1) that al-Aḥdab wrote different versions during his career as a lance master, or (2) that he never wrote a treatise at all but that at different times his *bunūd* were recorded by his followers**,** on their own initiative, or from dictation by him. The second possibility is more in keeping with the traditions of the period and can be inferred from al-Aqsarā'ī, as well as other writers.[112] The transmission and development of lance *bunūd* by followers of a master can explain the absence of signed treatises by those who are known to have created new *bunūd,* for example, al-Aqṭaʻ, a contemporary of al-Aḥdab, Ādam, and Usṭá Bāriq al-Baghdādī.

Al-Aḥdab′s *mayādīn* did not become as famous as his *bunūd* and *manāṣib*. The most current treatise on *mayādīn* in the Mamluk period was ″Tuḥfat al-Mujāhidīn fī al-ʻAmal bi-al-Mayādīn,″ by Lājīn Ibn ʻAbd Allāh al-Dhahabī al-Ṭarābulṣī al-Rammāḥ (d. 738/1337). More than eleven copies are available.[113] Lājīn and his work should not be confused with his son Muḥammad Ibn Lājīn al-Ḥusāmī al-Ṭarābulṣī al-Rammāḥ and his work, also on *mayādīn,* entitled ″Bughyat al-Qāṣidīn bi-al-ʻAmal fī al-Mayādīn,″ written for Sayf al-Dīn ʻĀshiqtīmūr al-Mārdīnī al-Nāṣirī, governor of Aleppo (d. 791/1389). Two copies are preserved.[114] Muḥammad Ibn Lājīn also related his own version of *bunūd* al-Aḥdab in a small treatise entitled ″Ghāyat al-Maqṣūd fī al-ʻIlm wa-al-ʻAmal bi-al-Bunūd,″ which survived

in one copy under the latter original title[115] and in several copies under different apocryphal titles and often with added material.[116]

CAT. I (D): THE ARTS OF THE MACE

Three basic and distinct types of mace were used in the early Abbasid period.[117] The first, commonly called *dabbūs* (pl. *dabābīs*), consisted of a wooden or iron shaft with a head of iron or other solid material with different shapes. The second was a one-piece iron staff, usually without a separate head or with one which was actually made integrally with the handle, invariably called *ʿamūd* (pl. *ʿamad* or *ʿumud*), and was both longer and considerably heavier than the *dabbūs.* The third, habitually called *kāfirkūb* (pl. *kāfirkūbāt*), was entirely made of wood, and was typical of the Khurasanis′ rank and file horsemen; it became obsolete as a regular cavalry weapon in the region by the end of the third/ninth century.[118] The *ʿamūd,* a costly weapon, was mainly the privilege of the rich military and political Abbasid elite. Most references to its use are associated with caliphs, army commanders, high-ranking officers, and the cream of *ghilmān* troops. The decline and fragmentation of the caliphate and the consequent collapse of its worldwide trade in armaments, iron, and steel, brought to an end the use of the *ʿamūd* as an elite weapon. It survived, however, on a very limited scale as a ceremonial and parade weapon, especially under the Fatimids.[119] The Mamluks of Egypt and Syria knew the *ʿamūd* only by name through Abbasid and Fatimid sources. All the precious though scanty data on the *ʿamūd* which is found in Mamluk *furūsīyah* treatises dates from the third/ninth century and was borrowed from early or later lost Abbasid *furūsīyah* treatises, such as those of Muḥammad Ibn Khālid (see below) and Ṣābir al-Manjanīqī (see below, Cat. II); the *dabbūs* was the only type of mace known in the Mamluk period.

Under the Abbasids, most references to the use of the *dabbūs* from the early third/ninth century onwards were associated with *ghilmān* troops. In fact the emergence of their institution coincided remarkably closely with the appearance of the term *dabbūs* in the documentary sources. By the time this institution reached full maturity under the Caliph al-Muʿtaḍid, the *dabbūs* became a permanent feature of *ghilmān* military equipment. In contrast to later periods when it became a heavier weapon, the third/ninth century Abbasid *dabbūs* was of a light type and, consequently, it played a minor role in close combat. Here it was of less importance

[116]See al-Sarraf, ″Adab al-Furūsīyah,″ 127

[117]For more information on this subject, see al-Sarraf, ″Close Combat Weapons,″ 149–78.

[118]Ibid.

[119]Ibid.

than were the *'amūd* and the *ṭabarzīn* (war-axe). The rapid decline of the latter two weapons during the fourth/tenth century necessitated the emergence of a heavier and oversized type of *dabbūs* called the *latt*. The term was ephemeral, as in the sixth/twelfth century the term *dabbūs* had become the generic term for studded maces, irrespective of their weight and the forms of their heads. By this time, however, the standard type of *dabbūs* was sufficiently heavy and effective to become the primary cavalry close-combat weapon for a Mamluk *fāris* or fully trained cavalryman.[120]

It was probably in the second half of the sixth/twelfth century or the first half of the seventh/thirteenth century that the rules of the art of fighting with a *dabbūs* were regulated in a recognized number of exercises called, like those of the lance, *bunūd*. Thirty five of these *bunūd* were recorded, most probably in Syria, during the Bahri period in an anonymous treatise entitled "Kitāb fī Ma'rifat La'b al-Dabbūs wa-al-Ṣirā' 'alá al-Khayl 'inda Mulāqāt al-Khaṣm fī Awqāt al-Ḥurūb." It is divided into two parts, in the first of which the exercises are described, and in the second, techniques of hand-to-hand combat on horseback. At least four copies have survived.[121]

Two contributions on the arts of the mace were made during the Circassian period. The first is the lost "Al-Usūs fī Ṣinā'at al-Dabbūs," by 'Izz al-Dīn Ibn Jamā'ah.[122] Given Ibn Jamā'ah's erudition, this work must surely have contained more information on fighting with the mace than simply an enumeration of thirty-five *bunūd*.

The second contribution is a Mamluk-Kipchak treatise entitled "Nuzhat al-Nufūs fī La'b al-Dabbūs," composed in Syria by Alṭanbughā al-Ḥusāmī al-Nāṣirī, known as Aṭājuq. It is preserved in an original copy dated 822/1419.[123] The importance of this hitherto unknown Mamluk-Kipchak treatise, wrongly described and classified as an Arabic work, is manifold. Besides being the only extant signed Mamluk treatise on the mace, this work, unlike all the other surviving Mamluk-Kipchak *furūsīyah* treatises, is not a translation from an Arabic text but was originally composed in Mamluk-Kipchak. Furthermore, as the author was an expert in the art of the mace and in close-combat techniques, his work undoubtedly constitutes an original and extremely important contribution to this field and to *furūsīyah* literature as a whole. In his rather long and reasonably well-written Arabic introduction, Alṭanbughā indicated that he was trained at the hand of several

furūsīyah masters in mace play, a domain to which he was particularly devoted, and that, urged by his comrades, he decided to record the best of what he had learned in order that it would serve as a reference for his fellow warriors. He synthesized his masters′ teachings in six major *bunūd* associated with forty types of mace blows. The six *bunūd* comprise the essential maneuvers and techniques covered by the thirty-five *band*s described in the above anonymous work. The treatise also includes valuable hints on relevant close-combat techniques. A lack of pre-Mamluk sources for the *bunūd* of the mace is probably due to the same reasons which explain the lack of sources for the *bunūd* of the lance.

CAT. I (E): THE ART OF WAR

When in 129/746 ʻAbd Allāh Ibn Marwān was ordered by his father, the last Umayyad caliph Marwān II (127–32/744–50), to march against al-Ḍaḥḥāk al-Khārijī,[124] Marwān′s secretary *(kātib),* ʻAbd al-Ḥamīd Ibn Yaḥyá al-Kātib, wrote (on the order of the caliph) ʻAbd Allāh a letter containing practical advice and directions for organizing the army and the conduct of war.[125] This important and original epistle can be considered the forerunner of Muslim and Arab treatises on the art of war.

ʻAbd al-Ḥamīd′s epistle set the pattern for the Abbasid *kuttāb.*[126] ʻAbd al-Jabbār Ibn ʻAdī, *kātib* to the caliph al-Manṣūr, and according to Ibn al-Nadīm one of the ten most eloquent Abbasid *kuttāb,* followed ʻAbd al-Ḥamīd′s example. Ibn ʻAdī′s treatise ″Ādāb al-Ḥurūb wa-Ṣurāt al-ʻAskar″ was written for al-Manṣūr and dealt with the conduct of war and the organization of the army.[127] This lost work was probably the first true Abbasid and Muslim treatise on the art of war.

About seventy years later, al-Khalīl Ibn al-Haytham al-Harthamī al-Shaʻrānī composed his monumental ″Kitāb al-Ḥiyal wa-al-Makāʼid fī al-Ḥurūb″ for al-Maʼmūn. It was a multi-volume encyclopedic work comprising four hundred fifty topics and one thousand seventy-six chapters. Al-Masʻūdī ranked it among the pre-eminent contributions made by Muslim scholars.[128] The description and praise

---

[124]Al-Ṭabarī, *Tārīkh,* 10:76–77; Muḥammad Kurd ʻAlī, *Rasāʼil al-Bulaghāʼ* (Cairo, 1908), 66; cf. al-Sarraf, ″Adab al-Furūsīyah,″ 122.

[125]Published in Kurd ʻAlī, *Rasāʼil al-Bulaghāʼ*, 1st ed. (1908), 66–89, 2nd ed. (Cairo, 1913), 139–172, 3rd ed. (Cairo, 1946), 173–313. It was also published in *Umarāʼ al-Bayān,* ed. Kurd ʻAlī (Cairo, 1937); and in *Jamharat Rasāʼil al-Arab,* ed. Aḥmad Zakī Ṣafwat (Cairo, 1937). A serious edition and study of this important work is still lacking.

[126]Knowledge of the art of war apparently became one of the professional qualifications of a *kātib;* see Ibn al-Nadīm, *Al-Fihrist,* 140.

[127]Ibid., 140, 377.

[128]Al-Masʻūdī , *Murūj al-Dhahab,* 1:13.

Ibn al-Nadīm gives this work, cited by him as *Kitāb al-Ḥiyal,*[129] adds considerable testimony to its importance and esteem. Undoubtedly al-Harthamī, an experienced and learned soldier writing for a refined and knowledgeable warrior caliph surrounded by a veritable pantheon of tacticians and illustrious army commanders, could only produce a masterpiece.[130]

It seems, however, that this work soon became rare and inaccessible after the fifth/eleventh century. Even copies of its abridged version, *Mukhtaṣar Siyāsat al-Ḥurūb,* were apparently quite scarce; only one copy has been preserved.[131] It is also likely that during the Mamluk period copies of this condensed version were mostly unsigned and probably untitled. This could explain the omission of al-Harthamī´s name from the Mamluk treatises that used *Al-Mukhtaṣar* and especially from the treatises of Ibn Manglī, who usually acknowledges his sources.

The anonymous ″Kitāb al-Ḥiyal fī al-Ḥurūb wa-Fatḥ al-Madā'in wa-Ḥifẓ al-Durūb,″ compiled in the late third/ninth century or early fourth/tenth century, was also used by Mamluk authors, especially compilers of texts of the third group. This Abbasid treatise, whose first chapters were taken from Ibn Akhī Ḥizām´s Treatise B, deals with military organization and stratagems of war in general; it also includes a section on the use of incendiary devices which is the oldest available in *furūsīyah* literature. The anonymous compiler claimed that the chapter on stratagems was inspired by an ancient Greek text found hidden between two rocks in Alexandria and based on the wisdom of Alexander. I have so far traced eight copies,[132] most of which were transcribed during the Mamluk period and one of which was apocryphally ascribed to the Mamluk author Ibn Manglī.[133] In the sixth/twelfth and seventh/thirteenth centuries the subject of *al-ḥiyal al-ḥarbīyah* and military organization was usually dealt with in general *furūsīyah* treatises, but works entirely devoted to this question were also written. One of those is *Al-Tadhkirah al-Harawīyah fī al-Ḥiyal al-Ḥarbīyah,* by Taqī al-Dīn Abū al-Ḥasan ʻAlī Ibn Bakr al-Harawī, who wrote it sometime between 588/1192 and the time

---

[129]Ibn al-Nadīm, *Al-Fihrist,* 376–77.

[131]Köprülü Mehmet Paşa Library MS 1294; published without care by ʻAbd al-Ra'ūf ʻAwn (Cairo, 1964). A proper edition of this important work is still lacking. For a critical analysis of ″Mukhtaṣar,″ see al-Sarraf,″Adab al-Furūsīyah,″ 123–25.

[132]British Library MS Add. 14055; Topkapı Sarayı Library MSS Ahmet III 3469/2, 3467/1; Ayasofya Library MSS 3186/2, 2875, 3187, 3086/7; Leiden University Library MSS 92 and 499. A microfilm of Ahmet III 3469/2 is available in Maʻhad al-Makhṭūṭāt, incorrectly catalogued as being by Ibn Manglī and so cited by certain researchers.

[133]It is Ayasofya MS 3086/7 which Brockelmann (*GAL,* S2:167) rather precipitately included within Ibn Manglī´s works, thus generating this misconception.

of his death in 611/1215.[134] At least three out of five known copies were transcribed in the Mamluk period, one of them for the private library of Sultan Qāytbāy,[135] which proves that the Mamluks were familiar with this small but important work.

On the subjects of military tactics and army organization the Mamluk treatises introduced hardly any new concepts, but rather were based indiscriminately on earlier sources, regardless of their contemporary relevance. Ibn Manglī cited the *Tactica* of the Byzantine emperor Leo VI (886–912), itself almost entirely based on the *Strategicon* of the emperor Maurice (582–602); he gave it the title ″Marātib al-Ḥurūb″ and recommended it highly to soldiers.[136] Al-Aqsarā'ī used Sassanian sources, cited the Greek Polybius, and also drew heavily on the *Tactica* of Aelian, written in Greek at the beginning of the second century.

The main pre-Mamluk source remained the abridged version of al-Harthamī's work, though almost never acknowledged. It was quoted by al-Aqsarā'ī, Ibn Manglī, and especially ʻUmar Ibn Ibrāhīm al-Awsī al-Anṣārī, who included almost the entire text verbatim in his *Tafrīj al-Kurūb fī Tadbīr al-Ḥurūb,*[137] written for Sultan al-Nāṣir Faraj ibn Barqūq (801–8/1399–1407). On the whole, notwithstanding strong dependence on pre-Mamluk sources, Ibn Manglī's treatises constitute a worthy contribution.

Muḥammad Ibn Manglī al-Qāhirī (d. 784/1382) held the rank of commander of forty *(muqaddam)*[138] in the *ḥalqah* and was *naqīb al-jaysh* in Alexandria under Shaʻbān, to whom he dedicated his major treatises. It was in those years, when he was in his sixties and seventies, that he wrote most of his works. His treatise on naval warfare, entitled ″Al-Aḥkām al-Mulūkīyah wa-al-Ḍawābiṭ al-Nāmūsīyah,″ containing 122 *bāb*s, is unique in Arabic literature; in it he described naval tactics, types of warships, maritime equipment, and weaponry, especially guns. The text is interspersed with practical advice for the marine fighter. At least one copy has survived.[139]

[134]Edited and translated by Janine Sourdel-Thomine as ″Les Conseils du Shaykh al-Harawī à un prince Ayyubide,″ *Bulletin d'Etudes Orientales* 17 (1961–62): 206–66.

[135]For a description of four of the five copies, including the one transcribed for Qāytbāy, see Sourdel-Thomine,″Introduction,″ in ″Les Conseils,″ 214–16. The fifth copy is in Dār al-Kutub al-Miṣrīyah, MS 2299 *adab*.

[136]Ibn Manglī, ″Al-Tadbīrāt al-Sulṭānīyah,″ fol. 14v.

[137]Edited and translated by George Scanlon as *A Muslim Manual of War, Being Tafrīj al-Kurūb fī Tadbīr al-Ḥurūb* (Cairo, 1961), who failed to recognize that it was based on a third/ninth century work and thus drew incorrect conclusions.

[138]The *muqaddam* commanded forty soldiers of the *ḥalqah* on military expeditions; as soon as an expedition was over he lost his command (see David Ayalon, ″Studies on the Structure of the Mamluk Army (i–iii),″ *Bulletin of the School of Oriental and African Studies* 15 (1953–54): 64.

[139]Dār al-Kutub al-Miṣrīyah MS 23 *furūsīyah Taymūr*. See Albrecht Fuess, ″Rotting Ships and

Two other treatises by Ibn Manglī on warfare have been preserved, ″Al-Adillah al-Rasmīyah fī al-Ta'ābī al-Ḥarbīyah″ and ″Al-Tadbīrāt al-Sulṭānīyah fī Siyāsat al-Ṣinā'ah al-Ḥarbīyah.″[140] Although the title of ″Al-Adillah″ suggests that the battle formations are the main subject of this small but important work, less than a quarter of the text is devoted to this topic. The rest consists of hints and advice to soldiers and *muqaddam*s on war, arms, equipment, naval warfare, siege warfare, and the like. Two copies have survived, one an autograph dated 770/1368–69.[141] Without acknowledging him, Ibn Manglī draws on the treatise of al-Harthamī and cites the mystic Abū al-'Abbās al-Būnī in connection with a certain battle formation taken from the latter′s books on talismans and the secret powers of numbers and letters.[142] Ibn Manglī included several plans of battle formations in which the numbers of soldiers were determined by the mysterious powers of the corresponding letters.[143] He was more explicit in ″Al-Tadbīrāt,″ where he revealed his belief in the subtle powers of letters and numbers and recommended that letters be inscribed on arms and armor. Indeed, he mentioned having written an entire treatise on the matter, the lost ″Aqṣá al-Amad fī al-Radd 'alá Munkir Sirr al-'Adad.″[144] ″Al-Tadbīrāt″ consists of advice and recommendations on arrangements to be undertaken at different governmental and military levels in anticipation of war. It also includes sections on archery, lance techniques, and horses. Ibn Manglī′s basic sources for this work were al-Harthamī′s *Mukhtaṣar,* Ibn Maymūn′s ″Al-Ifādah,″ and Ibn Akhī Ḥizām′s Treatise AB. Of the latter, Ibn Manglī said that Ibn Akhī Ḥizām was the originator of the fundamentals of charging with the lance and highlighted his contribution to the art of *furūsīyah* and its literature.[145] Five extant copies of

″Al-Tadbīrāt″ are known.[146] Ibn Manglī′s works constitute a major source on the equipment of the Mamluk army, in particular the *ḥalqah* corps, at the end of the Bahri period. They are also essential for evaluating Mamluk military thinking.

CAT. I (F): TREATISES ON ARMS AND WAR ENGINES

During the first two centuries of Abbasid rule in Iraq, a great number of comprehensive and specific treatises on arms and armor and military technology were written by philologists, specialists, and *furūsīyah* masters.[147] At this point in our research, no treatise of the comprehensive type is known to have survived apart from *Kitāb al-Silāḥ* by Abū ʻUbayd al-Qāsim Ibn Sallām al-Baghdādī (d. 224/838), a succinct but highly important philological contribution on the nomenclature and types of weaponry used by and known to the Arabs in the pre- and proto-Islamic periods as attested mainly by Arabic poetry.[148] However, considerable data from lost treatises can be found dispersed in other sources. Encyclopedic dictionaries and works of *adab* preserved much of what Abbasid philologists wrote about the subject. Similarly, contemporary and later general and thematic *furūsīyah* treatises contained important borrowings from comprehensive arms and armor treatises written by Abbasid specialists and *furūsīyah* masters. Among the lost works of this category of authors are ″Kitāb al-Silāḥ″ by the Abbasid commander and statesman Abū Dulaf al-Qāsim Ibn ʻĪsá al-Baghdādī al-ʻIjlī (d. 227/830),[149] ″Kitāb ʻIlm al-Ālāt al-Ḥarbīyah″ by Mūsá Ibn Shākir′s sons Muḥammad (d. 259/872–73), Aḥmad, and al-Ḥasan, and ″Kitāb Ajnās al-Silāḥ″ by a certain Abbasid army commander and *furūsīyah* master named Abū ʻAbd Allāh Muḥammad Ibn Khālid who flourished in the second half of the third/ninth century.[150]

As for specific treatises on arms and armor, only two survived from that period; namely the treatise on the types of swords by Abū Yūsuf Yaʻqūb Ibn Isḥāq al-Kindī (d. around the middle of the third/ninth century, perhaps in 252/866), and his treatise on the composition, manufacture, and quenching of steel blades. Both treatises were written for the caliph al-Muʻtaṣim. The first one, entitled ″Ajnās al-Suyūf″ or ″Al-Suyūf wa-Ajnāsuhā,″ is unique in its genre within *furūsīyah* literature. It was a remarkable field study, as each type of blade described was known and examined by al-Kindī himself, who spent years frequenting swordsmiths

[150] Ḥājjī Khalīfah, *Kashf al-Ẓunūn,* 1:145.

and investigating the sword markets of Baghdad, Basra, and Samarra. This perhaps explains why there was no attempt to write something similar again. In fact, al-Kindī's work remains definitely the most important source on swords in the entire medieval period. Ibn Akhī Ḥizām made extensive use of it, and he was probably the first *furūsīyah* author to do so. Nearly all subsequent borrowings from al-Kindī's work by Abbasid and Mamluk *furūsīyah* treatises were taken from Ibn Akhī Ḥizām's Treatise B rather than directly from al-Kindī's treatise, of which three copies are available.[151]

The second treatise, entitled "Risālah fī Jawāhir al-Ḥadīd lil-Suyūf wa-Ghayrihā min al-Asliḥah wa-Siqāyātihā," is no less important. Surely al-Kindī was neither the first nor the last Muslim author to write on the making of steel, but his treatise was the only work which has survived. Moreover, while admitting that none of the thirty-five recipes which he mentioned was his own, al-Kindī assured the caliph that he had critically tested each one of them. Al-Kindī was as brilliant an alchemist and metallurgist as he was a philosopher, and his second treatise therefore presents extremely precious scientific testimony on this subject. The text of this "Risālah," generally presumed lost, is fully preserved in al-Aqsarā'ī's "Nihāyat al-Sūl" as part of lesson three on the arts of the sword (see below, Cat II).

Abbasid treatises on arms and military technology also included contributions on incendiary weapons and on siege engines. Ibn al-Nadīm mentions, respectively, the anonymous "Kitāb al-'Ilm bi-al-Nār wa-al-Nafṭ wa-al-Zarrāqāt fī al-Ḥurūb," and the anonymous "Kitāb al-Dabbābāt wa-al-Manjanīqāt."[152] Later Abbasid *furūsīyah* literature did not include comprehensive or specific treatises on arms and military technology but the subject continued to be treated within general *furūsīyah* treatises. One of these was the lost "'Umdat al-Sālik fī Siyāsat al-Mamālik" (see below) by Ibn Ṣābir al-Manjanīqī[153] (d. 620/1220), who was the chief *(muqaddam)* of the *manjanīqīyīn* (mechanics and engineers of projectile engines) in Baghdad where he was born and died. Given his great and acknowledged expertise in arms and war engines, his monumental work undoubtedly represented one of the most authoritative contributions in this field.

The magnificent treatise written for Ṣalāḥ al-Dīn al-Ayyūbī (d. 589/1193) by Marḍī ibn 'Alī al-Ṭarsūsī, viz. "Tabṣirat Arbāb al-Albāb . . .," should be mentioned.

[151]Leiden University Library MS 287 (being chapter 6 of "Jamharat al-Islām Dhāt al-Nathr wa-al-Naẓm," by al-Shayrāzī); Ayasofya Library MS 4833 (fols. 38–45); Dār al-Kutub al-Miṣrīyah MS 3640, which is a recent copy transcribed in 1359 H. from the Ayasofya copy, published with many errors by 'Abd al-Raḥmān Zakī in *Nashrat Kullīyat al-Ādāb, Jāmi'at al-Qāhirah* 14 no. 2 (1956): 1–36. See al-Sarraf, "Adab al-Furūsīyah," 120.

[152]Ibn al-Nadīm, *Al-Fihrist,* 377.

[153]His *nisbah* derived from *manjanīq*-mangonel, an Arabicized term used not only to denote the catapult or the trebuchet, but also to designate projectile-throwing engines in general.

Although it can be classified among general *furūsīyah* treatises, as it covers three distinct *furūsīyah* themes (weaponry, archery, and the art of war), the ″Tabṣirah″ was meant to be, and basically is, a work on arms and armor, and military technology. A close examination of the treatise, which is still essentially known through the truncated and quite misleading extracts published by Claude Cahen,[154] shows that ″Al-Tabṣirah″ is a compilation, based largely on early Abbasid sources. Contemporary data is mainly limited to siege engines and compound weapons. Al-Ṭarsūsī′s only source in this domain was an Egyptian innovator in military technology named Abū al-Ḥasan al-Abraqī al-Iskandarī, who himself did not write a treatise on the subject. In all, ″Al-Tabṣirah″ remains an extremely valuable source on Islamic arms and particularly on siege engines. The chapter on archery is among the best available on the various schools and techniques of the great Abbasid masters.[155] One of the three extant copies is an autograph, imperfect, written for the private library of Ṣalāḥ al-Dīn.[156] Although the other two copies were transcribed in the Mamluk period, it seems that ″Al-Tabṣirah″ was little known to Mamluk authors.

Under the Mamluks, and despite the thriving and highly developed weapons industry of Aleppo, Damascus, and Cairo, not a single original treatise on arms and armor can be cited. Compilations based on pre-Mamluk sources were also scarce. One of them is *Mustanad al-Ajnād fī Ālāt al-Jihād,* by Badr al-Dīn ibn Jamā'ah, who compiled it from early Abbasid philological contributions, and works of *adab* and hadith. Only one copy, dated 773/1371, has so far been traced.[157] As for the ninth/fifteenth century anonymous *Khizānat al-Silāḥ,* it is not, as presumed, a Mamluk work. It was composed in 840/1436 by an Iraqi *adīb* for the Muzaffarid ruler of Kirmān, Sultan Aḥmad Shāh. It is a petty, anecdotal, and banal work contrived from the books of *adab* and completely insignificant as a

---

[154]Claude Cahen, ″Un traité d′armurerie composé pour Saladin,″ *Bulletin des études orientales* 12 (1947–48): 103–63. He failed to recognize *inter alia* that the folios were misarranged and that, in some of the most important folios, the lines are extended all the way through to the opposite page. A critical edition of ″Al-Tabṣirah″ is forthcoming.

[155]This chapter on archery was translated, rather equivocally, and published by Antoine Boudot-Lamotte as *Contribution à l′étude de l′archerie musulmane* (Damascus, 1968). As Boudot-Lamotte was neither familiar with the technical language of archery literature, nor with the sources of al-Ṭarsūsī, his translation as well as the edition of the Arabic text are extremely misleading.

[156]Bodleian Library MS Huntington 264 (presumed unique); Ayasofya Library MS 2848 (written by different hands; the last portion is dated 709/1309). There is a third ninth-/fifteenth-century copy kept in Katahiya Library, Turkey, which I haven′t seen yet, nor am I certain of its reference number.

[157]Iraq Museum Library MS 34310/3, edited and published by Usāmah Nāṣir al-Naqshbandī (Baghdad, 1983).

source on Islamic arms. Only one copy is extant.[158]

Apart from the information provided by Mamluk archery literature, such as the treatises of Ṭaybughā and Muḥammad al-Ṣughayyir, on bows, crossbows, and other archery equipment, contemporary data on arms and armor are lacking in both thematic and general Mamluk *furūsīyah* treatises, which recycled instead Abbasid data regardless of its relevance to the Mamluk period. Indeed, the most recurrent information on arms and armor found in Mamluk *furūsīyah* literature is derived from the sections of Ibn Akhī Ḥizām's Treatise B on swords, lances, and shields. On the other hand, general Mamluk *furūsīyah* treatises represent the source par excellence on incendiary weapons and firearms. There is also an anonymous work entirely devoted to the subject, entitled "'Iyārāt al-Nafṭ," of which one copy, dated 774/1372, is extant.[159]

Information on incendiary weapons and firearms, including cannons, is also dealt with in a unique work on siege engines, *Al-Anīq fī al-Manājīq,* written by Urunbughā al-Zaradkash for the *atabāk al-'askar* Manglī Bughā al-Shamsī (d. 836/1432). This work, complete with detailed drawings, provides full descriptions of the methods of constructing various siege engines: trebuchets, cannons, pedestal crossbows, wooden towers, ladders, and platforms. The last chapter deals with incendiary devices to be propelled by trebuchets and crossbows. Two copies of this treatise are known to exist.[160]

CAT. I (G): TREATISES ON HUNTING

The art of hunting with birds of prey, *bayzarah,* was the subject of the first Muslim treatises on the hunt, which appeared early in the Abbasid period. The oldest known Muslim contribution on hawking was a collective work containing 150 *bāb*s entitled "Kitāb Manāfi' al-Ṭayr" or "Kitāb al-Ṭuyūr," written on the order of the caliph al-Mahdī, who wanted a treatise on sporting birds synthesizing the knowledge of the Byzantines, Turks, and Arabs.[161] The principle authors of this work, of which at least two copies exist,[162] were al-Ghiṭrīf ibn Qudāmah

---

[158]Dār al-Kutub al-Miṣrīyah MS 2796 *adab,* published by Nabīl 'Abd al-'Azīz (Cairo, 1978).

[159]Tokapi Sarayi Library MS Ahmet III 3469.

[160]Both copies are included in one manuscript, Ayasofya Library MS 3469. A tentative edition was made by Nabīl 'Abd al-'Azīz (Cairo, 1981), and it was reedited by Iḥsān Hindī (Aleppo, 1405/1985).

[161]See "Kitāb Manāfi' al-Ṭayr," Bodleian Library MS Marsh 148, fol. 1v.

[162]Ibid.; and Topkapı Sarayı Library MS Ahmet III 2016 (880/1475), entitled "Ṭibb al-Ṭuyūr"; Dār al-Kutub al-Miṣrīyah MS 2 *furūsīyah Taymūr,* a recent copy (dated 1323/1915) transcribed from a photostat copy (also kept in Dār al-Kutub al-Miṣrīyah inv. no. 748 *ṭibb*) of the Topkapı Sarayı MS.

al-Ghassānī[163] and Adham ibn Muḥriz al-Bāhilī,[164] who were unanimously acknowledged by the sources as being the pioneer authorities in this field. A later Abbasid modified version of this work was apparently ascribed to al-Ghiṭrīf alone[165] and was translated into Latin on the order of Frederick II of Hohenstaufen (1194–1250) and from Latin into French by Daniel of Cremona, who dedicated it to Frederick′s son Enzio (1220–72).[166]

Another early Abbasid authority on falconry and hunting was a native of Basra named Ibrāhīm al-Baṣrī al-Bāzyār, who flourished during the period of Hārūn al-Rashīd and gained his favor. He was credited by al-Asadī as being the author of the first treatise written on hawking. Al-Asadī probably meant that al-Baṣrī was the author of the first original treatise on hawking. He speaks highly of his proficiency in hunting with sporting birds (the hawk, the saker falcon, and the peregrine falcon), dogs, cheetahs, and other trained predators, and in using all sorts of traps and snares, and credits him above all with introducing and propagating the techniques of liming birds *(tadbīq)*.[167]

During the third/ninth century most of the treatises on the hunt were written by high Abbasid dignitaries and notables, such as Abū Dulaf al-Qāsim Ibn ʿĪsá al-ʿIjlī (d. 225/839), ″Kitāb al-Jawāriḥ wa-al-Laʿb bi-hā″ and ″Kitāb al-Buzāh wa-al-Ṣayd″; al-Fatḥ ibn Khāqān (d. 247/861), ″Kitāb al-Ṣayd wa-al-Jāriḥ″; Aḥmad Ibn Abī Ṭāhir Ṭayfūr (d. 280/893), ″Kitāb al-Ṭard″; Aḥmad Ibn al-Ṭayyib al-Sarakhsī (d. 286/899), ″Kitāb al-Jawāriḥ wa-al-Ṣayd Bi-hā″; ʿAbd Allāh Ibn al-Muʿtazz Ibn (the caliph) al-Mutawakkil (d. 296/908),″Kitāb al-Jawāriḥ wa-al-Ṣayd.″ These

---

[163]Who is said to have lived long enough to be the grand falconer of the Umayyad caliphs Hishām ibn ʿAbd al-Malik (105–25/724–43) and al-Walīd ibn Yazīd (125–26/743–44) and to have to filled the same post for the Abbasid caliph Hārūn al-Rashīd;″Manāfiʿ al-Ṭayr″ (Bodleian MS), fol. 1v.

[164]He must not be confused with the poet and army commander who fought in the ranks of Muʿāwiyah at Ṣiffīn (cf. al-Masʿūdī, *Murūj al-Dhahab,* 1:227, 3:294, and 6:134).

[165]Other than taking an active and prominant part in the composition of the above collective work on falconry, there is no evidence that al-Ghiṭrīf made another contribution to this field. He was recently, however, credited with the authorship of yet another treatise on falconry of which several unsigned and variously titled copies survived. Two of these copies are preserved in Topkapı Sarayı Library, MSS Ahmet III 2099 and 2102. The former was published in facsimile by Fuat Sezgin and attributed to al-Ghiṭrīf under the title *Ḍawārī al-Ṭayr* (Frankfurt, 1986).

[166]See Casey A. Wood and F. Marjorie Fyfe, ″Introduction,″ in *The Art of Falconry, Being the De Arte Venandi cum Avibus* (Stanford, 1969), xlix; Baudouin van den Abeele, La fauconnerie dans les lettres françaises du XIIe au XIV siècles (Louvain, 1990), xvi, n. 10; idem, ″La chasse au vol médiévale,″ in *La chasse au vol au fil des temps* (Gien, 1994), 52–53, 55; see also Charles Homer Haskins, *Studies in the History of Mediaeval Science* (Cambridge, Mass., 1927), 318–20.

[167]Al-Asadī al-Baghdādī, ″Al-Jamharah fī ʿUlūm al-Bayzarah,″Escorial MS Ar. 903, fols. 76v.–77.

works, mentioned by Ibn al-Nadīm,[168] are all lost and were even unknown to the sixth/twelfth century Abbasid authors, let alone later Mamluk authors.

In any case, it is doubtful whether any one of the above treatises can match the highly expert work written by the falconer of the caliph al-Mutawakkil (232–47/847–61) and his boon companion, viz. Muḥammad Ibn ʻAbd Allāh Ibn ʻUmar al-Bāzyār, known as ʻIrjah. His treatise, entitled ″Kitāb al-Jawāriḥ″ and often referred to as ″Al-Mutawakkilī,″ was one of the most outstanding and definitive contributions made in this field in Islam and a major source for later treatises. It also had a significant and lasting influence on the art and literature of falconry in Europe, where the author was known under the name of Moamin or Moamyn. ″Kitāb al-Jawāriḥ″ was translated into Latin as *De scientia Venendi per Avers* by Theodor of Antioch at the order of Frederick II, who reviewed it during the Siege of Faenza in 1240–41, and used it as a reference for his own monumental *De Arte Venendi Cum Avibus*.[169] The emperor′s treatise was virtually the first true and major treatise on falconry in the West but it had a very limited diffusion and practically no influence on the subsequent European cynegetic tradition.[170] This was far from being the case concerning the treatises of al-Ghiṭrīf and Muḥammad al-Bāzyār. The latter′s work survived in twenty-four copies in Latin and in several more copies in French,[171] Tuscan, Neapolitan, and Spanish.[172] Paradoxically, the complete Arabic text is still lacking, though important borrowings and large portions can be found in subsequent treatises.[173]

The fourth/tenth century witnessed the appearance of two important treatises on hunting: *Kitāb al-Maṣāyid wa-al-Maṭārid* by Abū al-Fatḥ Maḥmūd Ibn

---

[168]Ibn al-Nadīm, *Al-Fihrist,* 130, 163, 321, 377.

[169]Haskins, *Studies in the History of Mediaeval Science,* 318–19; Wood and Fyfe, ″Introduction,″ in *The Art of Falconry,* xli.

[170]See K. Lindner, ″Tragödie der Monumentalität: Das Werk Friedrichs II von Hohenstaufen in historischer Sicht,″ *Jahrbuch des Deutschen Falkenordens* (1976–77): 75–78.

[171]Like the treatise attributed to al-Ghiṭrīf, ″Kitāb al-Jawāriḥ″ was also translated into French by Daniel of Cremona for Frederick′s son Enzio. An excellent edition of the French version of both al-Ghiṭrīf′s and Muḥammad al-Bāyzār′s treatises was made by Håkan Tjerneld as *Moamin et Ghatrif: traités de fauconnerie et des chiens de chasse* (Stockholm and Paris, 1945).

[172]The Spanish version of Muḥammad al-Bāyzār′s ″Kitāb al-Jawāriḥ″ is the most important and complete, as the translation was made directly from Arabic and not from Latin like the other versions. A very good edition of the Spanish version was made by José Manuel Fradejas Rueda under the title *Libro de los animales que cazan (Kitab al-Yawarih)* (Madrid, 1987).

[173]Such as the anonymous ″Al-Manṣūrī fī al-Bayzarah,″ compiled for the Hafsid sovereign al-Mustanṣir billāh (647–75/1249–77), of which only the fourth chapter (on hunting dogs), taken verbatim from al-Mutawakkilī, reached us in two copies kept in Dār al-Kutub al-Waṭanīyah in Tunis, MSS 15072, 13464. This portion was published by ʻAbd al-Ḥafīẓ Manṣūr in *Al-Mashriq* 62 (1968): 155–222; and it was published as a book (Tunis, 1989).

Muḥammad Ibn al-Ḥusayn Ibn al-Sindī Ibn Shāhik, better known as Kushājim (d. 360/970), and *Kitāb al-Bayzarah* by ʻAbd Allāh al-Ḥasan Ibn al-Ḥusayn al-Bāzyār, falconer of the Fatimid caliph al-ʻAzīz billāh (365–86/975–96).

The *Maṣāyid* of Kushājim is the oldest extant text which attempts to give a comprehensive treatment of venery and falconry. It represents a valuable résumé of contemporary practices and knowledge from the second/eighth and third/ninth centuries. As a poet and *adīb,* Kushājim sprinkled his treatise with related poems and anecdotes which gave his work important literary and social dimensions. This partly accounts for the treatise's popularity, which was not limited to the cynegetic milieu and literature. *Al-Maṣāyid* is the earliest source on hunting birds with the pellet bow *(qaws al-bunduq),* and is also the oldest surviving signed work that draws on Ibn Akhī Ḥizām's Treatise B. At least two copies are extant.[174]

The Fatimid *Kitāb al-Bayzarah* is one of the earliest known works in which the term *bayzarah* occurs, and is used as a title.[175] Furthermore, as the author of the Fatimid treatise dealt with both venery and falconry, the term *bayzarah* is used in a generic sense covering all types of hunting. *Kitāb al-Bayzarah* is the first Egyptian treatise on hunting and probably the only one to have been written during the Fatimid period. It was composed for al-ʻAzīz billāh, who from the early years of his reign was a zealous adherent of the Abbasid *al-furūsīyah al-nabīlah* which was upheld in Egypt by the Ikhshidids and before them by the Tulunids. Not only was he a passionate hunter, but he was also the first Fatimid sovereign to practice archery, play polo, and handle the lance in the eastern Abbasid fashion.[176] He was, however, unique in Fatimid history, as there is no evidence that his example was followed by his successors and the Abbasid *al-furūsīyah al-nabīlah* was not allowed to take root as a court institution under the Fatimids. This was partly due to the strong cultural and physical influence of the Berbers, who regained their pre-eminence after al-ʻAzīz's death. This also explains why apart from the *Kitāb al-Bayzarah* no other Fatimid *furūsīyah* treatise exists.

Al-Ḥasan al-Bāzyār modeled his treatise on the *Maṣāyid* of Kushājim, from which he drew abundantly, without acknowledging his source, and even plagiarized

---

[174]Fatih Mosque Library MS 4090; Bayezit Library MS 2592. A tentative edition was made by Muḥammad Asʻad Ṭalas, based on a defective manuscript of 617/1220 owned by him (Baghdad, 1954).

[175]The word *bayzarah* is rarely if ever used in the literature of the second/eighth and the third/ninth centuries and is also absent from Kushājim's *Kitāb al-Maṣāyid* and Ibn al-Nadīm's *Fihrist*. It is probable that this term emerged in the third/ninth and fourth/tenth centuries to designate the profession of the *bāzyār* or *bayzār,* though the former term is more commonly used for falconer. The term *bazdār,* which is the Persian equivalent of the Arabic *bāzyār,* is occasionally encountered.

[176]Ibn Muyassar, *Al-Muntaqá min Akhbār Miṣr: Passages Selected by al-Maqrīzī,* ed. Ayman Fu'ād Sayyid (Cairo, 1981), 179; cf. al-Sarraf, "L'archerie mamluke," 2:487–90.

some of Kushājim′s poems. The contribution of *Kitāb al-Bayzarah* lies mainly in the relatively small chapter on falconry, where the author gives some original and first hand observations. This treatise, which was rarely cited and apparently quite scarce, was completely unknown to the Mamluks. Two copies dating from the fourth/tenth century have been traced so far, of which one could be the original manuscript written for al-ʻAzīz billāh.[177]

After a long, barren period, Abbasid hunting treatises, like most of the other branches of *furūsīyah* literature, found new life in the last hundred years of the caliphate, when three of the most important Muslim treatises on the hunt were written: al-Zaynabī′s ″Al-Qawānīn,″ al-Asadī′s ″Al-Jamharah,″ and al-Baladī′s ″*Al-Kāfī*.″ The treatise of ʻAbd al-Raḥmān Ibn Muḥammad al-Baladī,[178] *Al-Kāfī fī al-Bayzarah,* is exclusively devoted to falconry, and is among the best and most authentic texts written on the subject. In addition to his proper practical and theoretical knowledge, the author, who was a confirmed falconer and hunter, often related the opinion and experience of his fellow falconers, whom he frequented not only in Iraq but also in Egypt and especially in Syria. His written sources included the joint work of al-Ghiṭrīf and Adham Ibn Miḥriz and Muḥammad al-Bāzyār′s ″Kitāb al-Jawāriḥ,″ which was heavily cited. Until the latter work (when found) and/or the magnificent work of al-Asadī have been edited, *Al-Kāfī* will remain the most important published source on falconry.[179]

″Al-Qawānīn al-Sulṭānīyah fī al-Ṣayd″ was written by Abū al-Naṣr al-Qāsim Ibn ʻAlī al-Zaynabī al-ʻAbbāsī, a member of the highly distinguished Abbasid family of the Zaynabids,[180] particularly prominent in the social, cultural, and political

[177]Chester Beatty MS 3831, a copy de luxe in 154 folios, considered among the oldest surviving Arabic manuscripts (see Kūrkīs ʻAwwād, *Aqdam al-Makhṭūṭāt al-ʻArabīyah fī Maktabāt al-ʻĀlam* [Baghdad, 1982], 97). The other fourth-/tenth-century copy of ″Kitāb al-Bayzarah″ is apparently lost; a photostat copy of it is kept in Dār al-Kutub al-Miṣrīyah, inv. no. 762 *tabīʻīyāt*. A copy of the latter is also kept in Maʻhad al-Makhṭūṭāt, inv. no. 20 *kīmyāʼ wa-tabīʻīyāt*. Muḥammad Kurd ʻAlī published a poor version of ″Kitāb al-Bayzarah,″ based on a defective copy without a colophon owned by an ″orientalist″ (unnamed) (Damascus, 1953). This edition was translated into French by François Viré as *Le traité de l′art de volerie (Kitāb al-Bayzara): Rédigé vers 385/995 par le Grand-Fauconnier du calife fāṭimide al-ʻAzīz bi-llāh* (Leiden, 1967).

[178]From the Iraqi town Balad, situated on the Tigris north of Mosul; the author, however, lived in Baghdad.

[179]Based on the unique manuscript in Tunis, al-Maktabah al-Aḥmadīyah MS 14290, a good edition of *Kitāb al-Kāfī fī al-Bayzarah* (Beirut, 1403/1983) was made by Iḥsān ʻAbbās and ʻAbd al-Ḥafīẓ Manṣūr. It is regrettable, however, that the editors failed to consult the manuscript literature on falconry, contenting themselves instead with the published treatises of Kushājim and al-Bāzyār.

[180]The *nisbah* is derived from Zaynab bint Sulaymān ibn ʻAlī ibn ʻAbd Allāh ibn al-ʻAbbās *(ʻammat al-khulafāʼ);* see Ibn al-Ṭiqṭaqā, *Al-Fakhrī fī al-Ādāb al-Sulṭānīyah wa-al-Duwal al-*

life of Iraq during the second half of the fifth/eleventh century and the first half of the sixth/twelfth century. The author, like his father before him, was the chief judge *(qāḍī al-quḍāh)* in Baghdad, where he died in 563/1167. Autobiographical data indicates that he started writing the treatise for the caliph al-Muqtafī (530–55/1136–60) shortly before his death and finished it in the beginning of the caliphate of al-Mustanjid (555–66/1160–70), to whom the work was ultimately dedicated. It was no accident that this treatise was begun under the patronage of al-Muqtafī, for during the Buwayhid and Saljuq period in Iraq the Abbasid caliphs lost the right of the royal hunt. And for almost a hundred and fifty years this caliphal institution, an ensign of royalty, and above all symbol of sovereignty, was practically non-existent. The death of the Saljuq sultan Mas'ūd in 545/1150 strengthened the position of al-Muqtafī, who is considered to be the first Abbasid caliph to have gained independence in Iraq since the advent of the Buwayhids,[181] and it was during the last five years of his reign that the Abbasid chronicles record that "the caliph went to the hunt" *(wa-kharaja al-khalīfah ilá al-ṣayd)*.[182]

The "Qawānīn" was meant to be a royal or caliphal manual of the hunt. This accounts for the extraordinary range and detail of this work, which included, in addition to venery and a valuable and long chapter on falconry, sections on types of horses, horse equipment, arms, archery, polo, the *futūwah* of hunting with the pellet bow, climatic conditions (in Iraq), astronomical tables and instruments, various methods of finding the direction of the *qiblah,* etc. The treatise also contains original epistles on hunting and a number of *ṭardīyāt* (hunting) poems, as well as new information on the Abbasid caliphs and the royal hunt in the early centuries of the caliphate. Consequently, it is a major reference on the Abbasid *al-furūsīyah al-nabīlah.* Moreover, al-Zaynabī's work is essential for assessing and verifying early Abbasid *furūsīyah* texts, of which he used a large assortment. Only one copy has survived.[183]

Abū al-Rūḥ 'Īsá Ibn 'Alī Ḥassān al-Asadī al-Baghdādī composed his "Al-Jamharah fī 'Ilm (or 'Ulūm) al-Bayzarah" during the first two decades of the second half of the sixth/twelfth century. This treatise is not restricted to falconry but is about hunting in general; consequently the word *bayzarah* is used generically. Al-Asadī was an experienced hunter and also had extensive theoretical knowledge,

and he was able to synthesize all the cynegetic and halieutic material of the Orient in two definitive volumes. The first was dedicated to technique and the second to the treatment and care of all sorts of trained predators and other animals. This majestic and unequalled work towers over the whole literature written on this subject in the Orient and constitutes absolutely the most important and decisive contribution to this field in Islam.[184] Three complete sets are extant.[185]

The basic Mamluk work on hunting was Ibn Manglī's ″Uns al-Malā bi-Waḥsh al-Falā,″ compiled in 773/1371. The originality of this work lies in the first few folios, where the author provided important information on types of saddles and on the techniques of hunting from horseback with the bow, spear, and sword. The rest of the treatise is entirely drawn from earlier sources, all acknowledged, especially al-Asadī's ″Al-Jamharah,″ which in an abridged form constitutes two thirds of ″Uns.″ Ibn Manglī also used Ibn Akhī Ḥizām's entire section on lion hunting with the bow from horseback (from Treatise B). Other sources included Kushājim's *Al-Maṣāyid,* al-Jāḥiẓ's *Kitāb al-Ḥayawān,* and Ibn Waḥshīyah's *Kitāb al-Filāḥah al-Nabaṭīyah.* More than two copies are extant.[186]

CAT. I (H): TREATISES ON POLO

With the advent of the Abbasids and the establishment of military *furūsīyah,* the ″king of games″ was inevitably democratized and lost its alleged exclusivity as ″the game of kings″ since it became an integral part of the training and on-going exercise of the mounted warrior and one of the fundamentals of military *furūsīyah.* Ibn Akhī Ḥizām emphatically exhorts his fellow cavalrymen to constantly play polo, which he believes most beneficial for the practice of *furūsīyah* arts, especially the arts of the sword, lance, and archery. He also deems polo essential for horse mastery and for training the horseman and the horse on individual and collective maneuvers. In sum, Ibn Akhī Ḥizām considers the game a physical and mental

al-Makhṭūṭāt is incorrectly catalogued as a late Mamluk treatise dedicated to the caliph al-Mustanjid of Egypt (859–84/1455–79).

[184]Several extracts have been published by D. C. Phillot and R. F. Azoo in *Journal and Proceedings of the Asiatic Society of Bengal* 3 (1907): 139–43, 173–78, 401–3, 599–600.

[185]Escorial Library MS Ar. 903; Ayasofya Library MS 3813; Calcutta, Asiatic Society of Bengal Library MS 865 M9 (the copy used by Phillot). A copy of the second volume of ″Al-Jamharah″ is in the British Library, MS Add. 23417; another one is in the Iraqi Museum Library, MS 22147.

[186]Dār al-Kutub al-Miṣrīyah MS 12 *ṣināʿah,* transcribed from an autograph, as mentioned in the colophon; Bibliothèque Nationale MS 2832/1, dated 923 H., the colophon also indicates that it was transcribed from an autograph. The treatise was translated and published, apparently from a defective manuscript, by Florian Pharaon as *Traité de vénerie de Sid Mohamed el-Mangali* (Paris, 1880); a more recent translation, with annotations, based only on the manuscript in the Bibliothèque Nationale, was made by François Viré as *De la chasse: Commerce des grands de ce monde avec*

practice for war.[187] In accordance with this perception of the role of polo in military training, general Abbasid *furūsīyah* treatises, starting from Treatise B of Ibn Akhī Ḥizām, commonly included a chapter—which usually represented a veritable self-contained treatise—on polo. This tradition was not observed by Mamluk authors/compilers of general *furūsīyah* treatises.

In fact, during the Mamluk period, although polo was consecrated as a royal institution, as an integral part of military training, and as a popular game among Mamluks and *ḥalqah* troopers, contribution to this field was practically nil. The only Mamluk treatise that can be cited on the topic is ″Ghāyat al-Itqān fī A'māl al-Nushshāb wa-al-Ṣawlajān″ by a certain Alṭamish (eighth/fifteenth century). This treatise, of which one copy is available,[188] merely recycled Abbasid data on the subject. This not only means that the Mamluks accepted without further innovation the rules and ″arts″ of the game which they inherited from the Abbasids, but also that the latter′s contribution in this field was complete and final. Indeed, all the pertinent texts and information in circulation during the Mamluk period were Abbasid.

The earliest text on polo in the Abbasid period was translated from the Persian under the title ″Kitāb Ā'īn al-Ṣawālijah,″ of which a small portion has survived in *'Uyūn al-Akhbār,* by Ibn Qutaybah. This text was perhaps different from the untraceable ″Kitāb Ā'īn al-Ḍarb bi-al-Ṣawālijah″ mentioned by Ibn al-Nadīm.[189] The first original contribution in this field, however, was probably al-Jāḥiẓ′s ″Kitāb al-Ṣawālijah,″ which is deemed lost though reportedly a copy is jealously preserved in the library of al-Zāwiyah al-'Ayyashīyah in Morocco.[190] In any case, it would seem that al-Jāḥiẓ′s work was not very accessible all along, as it was neither quoted nor mentioned in *furūsīyah* literature or works of *adab* other than the bibliographical and biographical dictionaries. Conversely, the most accessible and widespread document on polo during the Abbasid and Mamluk periods was the relevant chapter from Ibn Akhī Ḥizām′s Treatise B, which represents the oldest surviving document on the subject. No less valuable but far less known and accessible is ″Kitāb 'Ilm al-Ḍarb bi-al-Ṣawālijah wa-Mā Yata'allaqu bi-Dhālika

[190]See Muḥammad Mursī al-Khūlī, ed., ″Introduction,″ in *Kitāb al-Burṣān wa-al-'Umyān,* by al-Jāḥiẓ (Cairo, 1981, 2nd ed.), 9.

min Ālāt al-Fursān wa-al-Rammāḥīn,"[191] which constitutes part of an anonymous, untitled, but highly important general Abbasid *furūsīyah* treatise written in the first half of the fourth/tenth century by a warrior and confirmed *furūsīyah* master (see below). The so-far unique though incomplete copy of this monument, which I happily discovered while preparing this study, is included in a *majmū'* on *furūsīyah* compiled for the private library of Sultan al-Mu'ayyad Shaykh entitled "Kitāb fī Ma'rifat al-Khayl wa-al-Jihād wa-fī 'Ilm al-Ḍarb bi-al-Ṣawālijah wa-Mā Yata'allaqu bi-Dhālika min Ālāt al-Fursān." The chapter on polo contains a significant amount of information, especially on the history and rules of the game, not available in Ibn Akhī Ḥizām's relevant chapter, which was the only source cited and quoted by the anonymous author, who praised Ibn Akhī Ḥizām, calling him "*imām al-fursān,*" and acknowledged his authorship and definitive contribution in this particular domain. The anonymous author refers to a more comprehensive general *furūsīyah* treatise that he had written earlier and which included an even more detailed discourse on polo.

GENERAL *FURŪSĪYAH* TREATISES

The treatises which fall into this category are normally devoted to military *furūsīyah* and integrate different *furūsīyah* disciplines and fields of knowledge, both practical and theoretical, necessary for the training and education of the mounted warrior. The treatises vary in range and coverage of *furūsīyah* disciplines, but they invariably include and put emphasis on the arts of the lance, which sometimes constitute the central theme in such works.

The earliest and certainly the most important surviving general *furūsīyah* treatise is Ibn Akhī Ḥizām's Treatise B, which established the genre and served as a model for future treatises. In this treatise Ibn Akhī Ḥizām used, just for the sake of thoroughness, two sources (unacknowledged), namely the treatise of al-Kindī on the types of swords, and "Kitāb al-Shāmil fī al-Ramy" by 'Abd al-Raḥmān al-Ṭabarī. The rest of the treatise is entirely based on his personal experience and knowledge as a *furūsīyah* master. Indeed, the main core of the book lies in the chapters he composed on military equitation and horse mastery, the diverse arts of the lance, and the art of wielding the sword and javelin. His invaluable digression on the types and quality of lances, shields, and swords most suitable for the warrior is unique in *furūsīyah* literature. As for his chapter on archery, although he borrows heavily from al-Ṭabarī, it is very significant as it reflects the state of archery in the Abbasid army in the third/ninth century and the conflict between the Khurasani school of horse and foot archery and the Turkish school of horse archers. He closes his treatise with his famous contribution on polo, followed by

---

[191]Topkapı Sarayı Library MS Ahmet III 2066/8.

his unique discourse on hunting lions with the bow on horseback. All these chapters and data were quoted and recycled by subsequent Abbasid and Mamluk *furūsīyah* treatises to the point that the treatise of Ibn Akhī Ḥizām became not only a basic source of future treatises but an integral part of them.

All six copies that I have discovered so far are catalogued under different titles, and most of them are either unsigned or bear fictitious names;[192] two copies are ascribed to Ṭaybughā al-Baklamīshī (above) and so quoted by modern researchers. Like his Treatise A on horses, Treatise B of Ibn Akhī Ḥizām was also translated into Kipchak, though in an abridged and truncated way, under the title *Munyat al-Ghuzāt*. Only one copy is extant.[193] There are also Ottoman and Persian versions of his work.[194] As previously explained, this work is still largely unrecognized in modern research as a third/ninth century work. The preamble of Treatise B may help in making the text easily identifiable. It begins with the words:

الحمد للّه ذي العظمة، المتعالي بالقدرة عن الصفات، ذي المجد والعز والسلطان، أحمده حمدا يزيد على حمد الحامدين وصلى اللّه على نبينا محمد خاتم النبيين.

However, one should keep in mind that this preamble and the section on military equitation which follows were sometimes used by Mamluk compilers of the third group to give an air of authenticity to their texts.[195]

---

[192]Dār al-Kutub al-Miṣrīyah MS 3m *funūn ḥarbīyah,* entitled ″Al-Jihād wa-al-Furūsīyah wa-Funūn al-Ādāb al-Ḥarbīyah,″ catalogued as having been written by Ṭaybughā al-Baklamīshī and so cited by modern researchers; Fatih Mosque Library MS 3513, entitled ″Kitāb al-Kamāl fī al-Furūsīyah wa-Anwāʿ al-Silāḥ wa-Adab al-ʿAmal bi-Dhālika wa-Ṣifāt al-Suyūf wa-al-Rimāḥ,″ transcribed for the private library of Sultan al-Ghūrī; Köprülü Mehmed Pasha Library MS 1361, entitled ″Kitāb fī al-ʿIlm bi-al-Furūsīyah wa-al-ʿAmal bi-hā,″ transcribed for the private library of Ibrāhīm ibn Sultan Muʾayyad Shaykh; Topkapı Sarayı Library MS Ahmed III 2515/1, entitled ″Kitāb Yashtamilu ʿalá Maʿrifat al-Ramy bi-al-Nushshāb wa-Ālāt al-Ḥarb wa-Anwāʿ Wujūh al-Ramy wa-Kayfīyat Shurūṭihi wa-Aḥwālih″; Istanbul, Nuruosmaniye Library MS 3915, dated 843/1439–40, untitled and incomplete. The colophon was plagiarized from that in Bayezit Public Library MS Veliyüddin Efendi 3174, with corruption of the author′s name to Aḥmad; Alexandria, Maktabat al-Baladīyah MS 1201b, fols. 105r.–120r., entitled ″Al-Jihād wa-al-Furūsīyah wa-Adab al-Funūn al-Ḥarbīyah.″ This copy is ascribed to Ṭaybughā al-Baklamīshī and so quoted by modern scholars.

[193]The only copy is Topkapı Sarayı Library MS Ahmet III 3468 (850/1446), translated and published by Kurtuluş Öztopçu, see note 48 above.

[194]For an Ottoman translation of this work, see Topkapı Sarayı Library MS *khazina* 415; for Persian translations, see C. A. Storey, *Persian literature, a Bibliographical Survey* (Leiden, 1977), vol. 2 pt. 3:396. Cf. Kurtuluş Öztopçu, ″Introduction,″ in *Münyetü' l-ġuzāt,* 4.

[195]For example, British Library MS Or. 20730, fols. 1a–9a; Bibliothèque Nationale, inv. nos. 2826, fols. 55a–58a, entitled ″Al-Makhzūn li-Arbāb al-Funūn,″ and 2824, entitled ″Kitāb al-Makhzūn Jāmiʿ al-Funūn,″ composed for a Mamluk notable, and attributed in the beautiful colophon to Ibn Akhī Ḥizām.

The only other surviving Abbasid general *furūsīyah* treatise that I am aware of so far is the anonymous fourth/tenth century work mentioned in the polo section above. In addition to the chapter on polo, it consists of a long and highly original discourse on the arts of the lance largely based on the author's experience as a veteran soldier and *furūsīyah* master. The author cited and described a considerably more comprehensive work that he wrote earlier and which he referred to as *"kitābī al-kabīr."* It covered the arts of the sword, the arts of the lance, archery, including the description and use of crossbows, arrow guides and the relevant types of darts, the art of wielding the *'amūd* and the *kāfirkūb* (respectively the heavy iron staff and the wooden mace, both typical of the early Abbasid period), the art of wielding the *ṭabarzīn,* war-axe, the game of *ṭibṭāb,* hockey, and the game of polo.

It is quite possible that this work, which could be the untraceable "Kitāb al-Furūsīyah" of al-Ishmīṭī mentioned by Ibn al-Nadīm,[196] was among the lost Abbasid works great numbers of which were used by Mamluk compilers of general *furūsīyah* treatises. Among these works might have been "Kitāb al-Furūsīyah" of the famous Baghdadi alim Ibn al-Jawzī (597/1200),[197] and especially the monumental work of Abū Yūsuf Najm al-Dīn Ya'qūb ibn Ṣābir ibn Barakāt al-Manjanīqī al-Baghdādī (d. 620/1220), "'Umdat al-Sālik fī Siyāsat al-Mamālik." Ibn Khallikān's description of the author's work and its contents indicate that this lost treatise might well have been one of the most outstanding contributions to Muslim *furūsīyah* literature.

Ibn Ṣābir al-Manjanīqī, who was also a talented poet, was so versed in siege engines that he became *muqaddam al-manjanīqīyīn* in his native city, Baghdad. According to Ibn Khallikān, Ibn Ṣābir started his career as a soldier and devoted himself to the study and practice of military arts until he became a celebrated and unrivalled authority in this field. His treatise, as its title indicates, was meant to be a definitive reference book for the Abbasid state on *furūsīyah*. It treated the conduct of war, battle formation, stratagems of war, military engineering, fortification, construction of strongholds, siege warfare, military training and exercises *al-riyāḍah al-maydānīyah* (which include all the "branches" of upper [mounted] and lower [foot] *furūsīyah),* the arts of wielding various arms, the manufacturing of weapons, equitation, and types of horses and their descriptions.[198]

[196]Ibn al-Nadīm, *Al-Fihrist,* 377.

[197]Ḥājjī Khalīfah, *Kashf al-Ẓunūn,*1446; Ismā'īl al-Baghdādī, *Hadīyat al-'Ārifīn* (Istanbul, 1951–55), 1:522.

[198]Ibn Khallikān, *Wafayāt al-A'yān,* 7:36:
كان ابن صابر المنجنيقي جندياً في ابتداء أمره مقدما على المنجنيقيين بمدينة السلام بغداد؛ ولم يزل مغرى بآداب السيف والقلم وصناعة السلاح والرياضة واشتهر بذلك ولم يلحقه أحد من أبناء زمانه في درايته وفهمه لذلك. وصنف فيه كتابا سماه عمدة المسالك في سياسة الممالك ولم يتممه. وهو مليح في معناه يتضمن أحوال الحروب، وتعبيتها،

Al-Manjanīqī died before finishing this massive encyclopedic work, but the fact that contemporary sources were familiar with its title, and above all with its contents, strongly suggests that copies were available in the seventh/thirteenth century.

The main corpus of general Mamluk *furūsīyah* treatises belong to the group designated as popular (third group). Basic treatises (first group), and good compiled ones (second group), are quite few. Of the first group, the following merit attention.

The oldest surviving general Mamluk *furūsīyah* treatise is by Badr al-Dīn Baktūt al-Rammāḥ al-Khazindārī al-Ẓāhirī.[199] He began writing his treatise in 689/1290 while Sultan al-Ashraf Khalīl (689–93/1290–94) was conducting the siege of Acre, in which Baktūt participated as an ordinary trooper in the *ḥalqah*. It is a crude but sincere and highly motivated work. The author has no pretensions to the eloquence or erudition of his colleague of the late eighth/fourteenth century, Ibn Manglī; nor had he the same concerns and motives, for he was writing and responding to a different era, one marked by intense military activity. At this time the *ḥalqah* and its men enjoyed high esteem and *furūsīyah* was at its zenith. This was also the period of al-Aḥdab and ″lance fever.″ Baktūt was particularly proficient in the use of the lance. From the 150 *bunūd* of the Abbasid masters, the seventy-two *bunūd* by al-Aḥdab, and the twenty-four by Ādam, he forged seven essential exercises so as to make it easier for the beginner. He modeled his work on Ibn Akhī Ḥizām′s Treatise AB, imitating even its preamble. The treatise is mainly devoted to lance techniques and the care of horses, but it also contains interesting passages on other subjects, mainly on training the novice in archery and the alternation of different weapons on the battlefield. Apparently Baktūt did not give a title to his work and it has survived under different names.[200] More than seven copies have been traced so far.[201]

The treatise of Muḥammad Ibn ʻĪsá Ibn Ismāʻīl al Aqsarāʼī al-Ḥanafī (749/1348), ″Nihāyat al-Sūl wa-al-Umnīyah fī Taʻlīm Aʻmāl al-Furūsīyah,″ is generally

[199]Charles Rieu (*Supplement of the Catalogue of the Arabic Manuscripts in the British Museum* [London, 1894], 556), suggested that he could be the Baktūt Amīr Shikār al-Khāzindārī mentioned in al-ʻAsqalānī′s *Al-Durar al-Kāminah* as *nāʼib* of Alexandria (711/1311–12); he dug the canal of that city at his own expense. This hypothesis has led some modern scholars to confound the *nāʼib* with another Baktūt, who died in 771/1369, almost a century later than Baktūt al-Rammāḥ.

[200]For example, ″Al-Furūsīyah wa-ʻIlāj al-Khayl″ and ″Kāmil al-Ṣināʻah fī ʻIlm al-Furūsīyah wa-al-Shajāʻah.″ Copyists have also added Baktūt′s name to such treatises as al-Aqsarāʼī′s ″Al-Nihāyah″ and ″Al-Sirr al-Makhzūn wa-Jāmiʻ al-Funūn″ (Ḥājjī Khalīfah, *Kashf al-Ẓunūn,* 2:89–99). The varying titles also have led modern scholars to conclude that Baktūt wrote several works.

[201]Bibliothèque Nationale MS 2830, fols. 1a–72b, catalogued as anonymous; British Library MS

considered the most important Mamluk *furūsīyah* treatise. This is a questionable assumption, since a full analysis of the work and its sources is still lacking.[202] It is not a synthesis but an ingenious original compilation by an alim who combined erudition with practical knowledge in some branches of *furūsīyah*, particularly in the arts of the lance and archery. It is a deliberate attempt at placing the available knowledge and experience into a unified framework, and also a concerted effort to reverse the deterioration of *furūsīyah* in his time. The result was a unique work of incontestable encyclopedic dimension which is curiously reminiscent of Ibn Ṣābir al-Manjanīqī´s ″'Umdat al-Sālik.″ ″Nihāyat al-Sūl″ includes historical data from a variety of cultural backgrounds. Much of this data was not indicative of contemporary practices. Some of the information on tactics, military organization, and battle formations was taken from Greek and Sassanian sources, which were never part of Abbasid or Mamluk military practice, at least not in the raw form presented. The importance of this work does not, however, lie in its supposed representation of Mamluk military reality, but rather in its being the only extant source on a number of subjects, including long quotations from treatises no longer surviving. A preliminary breakdown of the contents and, when possible, the identification of sources will provide a more precise assessment of the treatise.[203]

Lesson 1 (fols. 27b–42b). This chapter on archery is based on a considerable number of pre-Mamluk sources. Al-Akhbārī´s ″Al-Iḍāḥ fī 'Ilm al-Ramy″ is mentioned as ″Al-Iḍāḥ″ without accrediting the author; al-Yūnīnī´s ″Al-Nihāyah fī 'Ilm al-Rimāyah″ is referred to simply as ″Al-Nihāyah″ without mentioning the author´s name; al-Ṭabarī´s ″Kitāb al-Wāḍiḥ″ and Ibn Maymūn´s ″Al-Ifādah wa-al-Tabṣīr″ are both used without acknowledgment. He quotes ″Ardashīr″ (Ibn Bābak) and refers to his treatise as ″Al-Nihāyah.″[204]

Lesson 2 (fols. 42–118a). This chapter on the arts of the lance is the longest, and represents perhaps the most comprehensive development on the techniques of the lance in *furūsīyah* literature. It is divided into sets of *bāb*s, the first five of which are devoted to different versions of the *bunūd* of al-Aḥdab; his *mayādīn* and *manāṣib* are expounded in other *bāb*s. On this subject, al-Aqsarā'ī may be considered the most reliable authority. The only other source which can be identified

---

Or. 3631, fols. 261a–279a; Dār al-Kutub al-Miṣrīyah MS *funūn ḥarbīyah* 4m; Rabat, Maktabat al-Khizānah al-'Āmmah MS 266/a; Istanbul, Evkaf Museum Library MS 2107; Ayasofya Library MS 4826/1; Topkapı Sarayı Library MS Ahmet III 3471/5.

[202]It has been edited in two unpublished Ph.D. theses by Sayed Muḥammad Luṭf al-Ḥaq (London University, 1955) and Nabīl 'Abd al-'Azīz (Cairo University, 1972). Both editors failed to use the two most reliable copies: Chester Beatty Library MS A 21 and British Library MS Add. 18866 (see below).

[203]Taken from the text in the British Library, MS Add. 18866.

[204]A work entitled ″Kitāb Ramy al-Nushshāb,″ attributed to Ardashīr and narrated on the authority

is Ibn Akhī Ḥizām's Treatise B (not acknowledged); his chapters on equitation and lance techniques, quoted verbatim, fill twenty *bāb*s. For the remainder of this chapter, which is considerable, the author drew on unidentified sources.

Lesson 3 (fols. 118a–148b). This chapter on the arts of the sword is entirely based on Abbasid sources. It includes three pages from Ibn Akhī Ḥizām's Treatise B (not acknowledged) and al-Kindī's entire treatise "Risālah fī Jawāhir al-Ḥadīd" (acknowledged). The remainder of the text, which constitutes the greater part of this chapter, includes an extensive discussion of the arts of the sword which is unique in the available *furūsīyah* literature. The source or sources used for this important discussion cannot be ascertained at this stage of research, though it may reasonably be suggested that al-Aqsarā'ī drew here from al-Manjanīqī's work and/or from the "Grand *furūsīyah* book" of the anonymous fourth/tenth century author.

Lesson 4 (fols. 151b–152b). This chapter on shields was taken almost entirely from Ibn Akhī Ḥizām's Treatise B (not acknowledged).

Lesson 5 (fols. 152b–153a). This short chapter on the *'amūd* (a ponderous iron staff), taken from early Abbasid sources, is irrelevant to the Mamluk period, for the weapon was already extinct at the advent of the Mamluks, who knew and used only the *dabbūs* (see above). Al-Aqsarā'ī concluded this chapter by mentioning that a frontier *(thughūr)* warrior told him that the *'amūd* weighs one hundred fifty dirhams and that it is preferable to have one even lighter.[205] The one hundred fifty dirhams is equivalent to about 0.5 kg, which is not even a third of the weight of a light *dabbūs,* while the minimum weight of an *'amūd* as standardized in the early Abbasid period was six kg and the maximum weight was commonly fixed at ten kg, but it could be much more.[206] This clearly indicates that al-Aqsarā'ī not only had never seen a real *'amūd* but that he did not have the slightest notion about its functions.

Lesson 6 (fols. 153a–161b). For cavalry training al-Aqsarā'ī's principal source was again Ibn Akhī Ḥizām's Treatise B (not acknowledged), covering horse equipment, vaulting on horses, and hunting with the bow. There is particular emphasis on the famous method of lion hunting with the bow from horseback.

Lesson 7 (fols. 161b–197b). The methods of using arms in various situations are described. The unity of style and subject matter is evidence that al-Aqsarā'ī was quoting verbatim from a now unidentifiable source. His work is thus the only one available on this aspect of *furūsīyah*.

Lesson 8 (fols. 197b–211b). In this chapter, the author deals with recruiting and organization of the army, including data totally incompatible with the Mamluk

---

of Ṭāhir al-Balkhī, survives in a single copy: Nuruosmaniye Mosque Library MS 4098, fols. 63a–71a.

period, for example, a section on summoning and recruiting troops based on the army register *(dīwān al-jaysh)* developed by the Abbasids. It was considered important to keep accurate descriptions of each soldier and his mount in these registers, hence the emphasis on physiognomy, *'ilm al-firāsah,* which motivated scholars like al-Kindī and al-Jāḥiẓ to take an interest in the subject. The most important contributions in this field were *Kitāb al-Firāsah* by Fakhr al-Dīn al-Rāzī (d. 606/1209),[207] and *Kitāb al-Firāsah* by Muḥammad Ibn Ibrāhīm al-Anṣārī al-Ṣūfī al-Dimashqī (d. 727/1327).[208] Al-Aqsarā'ī drew on both (not acknowledged) and on *Al-Kharāj wa-Ṣinā'at al-Kitābah* (not acknowledged) by Qudāmah ibn Ja'far al-Baghdādī (d. 329/940).[209] The section on ambush was taken from al-Harthamī's abridged treatise (not acknowledged) and also includes material from Aelian's *Tactica*.[210] The remainder of the text is probably from the same Sassanian source that al-Aqsarā'ī used in Lesson 9 (not acknowledged).

Lesson 9 (fols. 211b–235b). This chapter on battle formations is irrelevant to the Mamluk context, for it was based mainly on Aelian's *Tactica*[211] (acknowledged) and a Sassanian source (not acknowledged) that was already available in Arabic in the latter half of the second/eighth century, as some of the battle formations, especially those of crescent shape, were already known to al-Harthamī.

Lesson 10 (fols. 235b–240b). This chapter is devoted to military ruses involving incendiary and smoke devices. It is divided into two parts, the first, on the use of fire, copied from the anonymous Abbasid treatise *Kitāb al-Ḥiyal fī al Ḥurūb* (not acknowledged). The second part is about the use of smoke in battle. The source material for it has not yet been identified.

Lesson 11 (fols. 240b–281a). This rather long chapter is on the spoils of war and various problems of Islamic law concerning attitudes toward the enemy in war and peace. It is acknowledged to have been drawn from *Kitāb al-Siyar al-Ṣaghīr* and *Kitāb al-Siyar al-Kabīr,*[212] both written by the Iraqi jurist Muḥammad Ibn

---

[207]First published by Muḥammad Raghīb al-Ṭabbākh, as *Risālah fī 'Ilm al-Firāsah* (Aleppo, 1929); then edited and translated into French by Yūsuf Murād as *La physiognomonie et le Kitāb al-firāsa de Fakhr al-Dīn al-Rāzī* (Paris, 1939); cf. Tawfiq Fahd, "Firāsa" *EI*[2], 2:937. The work is also called J*umal Aḥkām al-Firāsah.*

[208]Published in Cairo 1882. The work is also known as "Al-Siyāsah fī 'Ilm al-Firāsah" or "Al-Firāsah li-Ajl al-Siyāsah."

[209]Edited and published by Muḥammad Ḥusayn al-Zubaydī (Baghdad, 1981).

[210]See Geoffrey Tantum, "Muslim Warfare: A Study of a Medieval Muslim Treatise on the Art of War," in *Islamic Arms and Armour,* ed. Robert Elgood (London, 1979), 194.

[211]According to Tantum, "Muslim Warfare," 194, "Al-Nihāyah" contains approximately one third of the *Tactica.*

[212]The original text is apparently lost, but a version survived within the commentary of Muḥammad ibn Aḥmad al-Sarakhsī (d. 429/1037), published and edited by Ṣalāḥ al-Dīn al-Munajjid and 'Abd

Ḥasan al-Shaybānī (d. 189/805).

Lesson 12 (fols. 281b–292a, end of treatise). This chapter covers complementary branches of knowledge needed by the warrior like casting auguries, treatment of wounds, and so on. The author's sources are not known, but the fact that he included such a chapter in his treatise attests to his concern for thoroughness.

After careful consideration of the treatise it is apparent that its importance lies in lessons 3 and 7 and parts of lessons 1 and 2. Consequently, it seems an exaggeration to qualify it as "the most important of all sources in Arabic on Muslim military organization, training and theory."[213] At least ten copies of the "Nihāyat al-Sūl" are extant.[214]

Baktūt's and al-Aqsarā'ī's works are the only authentically signed general *furūsīyah* treatises in the first group which can be traced up to now. All the other treatises of this group are unsigned either by accident or design. An example is the untitled and unsigned work with the first and last pages missing, written in the second half of the fourteenth century by a veteran master of *furūsīyah* in the royal barracks, during the sultanate of Sha'bān or of Barqūq. It should be considered one of the most original Mamluk *furūsīyah* texts. Its importance lies mainly in the author's directions and advice to his cadre of fellow *furūsīyah* instructors, whom he urges to be more inventive and to create new exercises for their pupils, especially in lance play. He has furnished information on how to treat and train the sultan's personal mamluks. There is also useful information on past and present *furūsīyah* masters, both Turkish and Arab. The author further expounded on riding and lance techniques. Only one copy has survived.[215]

Another anonymous text, "Al-'Adīm al-Mithl al-Rafī' al-Qadr" is the only one in which the complete training program of the Mamluks is set forth. It covers practically all aspects of upper (mounted) and lower (foot) *furūsīyah,* including techniques of fighting on foot, fighting with the dagger, boxing (the unique source

---

al-'Azīz Aḥmad, as *Kitāb al-Siyar al-Kabīr bi-Sharḥ al-Sarakhsī,* 5 vols. (Cairo, 1971–72). A version of *Kitāb al-Siyar al-Ṣaghīr* was published by Majid Khadduri (Beirut, 1975).

[213] Scanlon, "Introduction," in *A Muslim Manual of War,* 10, quoting Ritter, "La Parure," 132–35.

[214] Chester Beatty Library MS A 21 (dated 767/1366); British Library MSS Add. 18866 (773/1371, probably copied from the Chester Beatty manuscript), Or. 3631, Add. 23487, 23488; Topkapı Sarayı Library MS Ahmet III 2651 (dated 775/1373); Ayasofya Library MSS 4044, 4197; Bibliothèque Nationale MS 2828; University of Cambridge Library MS Q9277; Dār al-Kutub al-Miṣrīyah MS 3m/1. This last copy is incomplete, unsigned, and untitled; it is bound with a version of Ṭaybughā's treatise "Ghunyat al-Marāmī," and the whole manuscript, bearing the fictitious title "Al-Jihād wa-Funūn al-Adab al-Ḥarbīyah," is attributed by modern research to the latter and quoted as such.

[215] British Library MS Or. 9015 (imperfect).

on this subject), and wrestling.[216] This treatise is all the more valuable because most exercises are illustrated in detail. Only one copy, the original, is extant under this title;[217] later versions appeared under different titles. The one that needs to be mentioned, being a persistent source of misunderstanding, is the luxurious, anonymous version entitled ″Al-Makhzūn Jāmiʻ al-Funūn″ kept in the Institute of Oriental Studies in St. Petersburg. It was wrongly attributed to Ibn Akhī Ḥizām or rather, *faute de mieux,* to ″Ibn Abī Khazzām″![218] This attribution is largely influenced by the similarity of title and general aspect with manuscript 2824 of the Bibliothèque Nationale apocryphally signed Ibn Abī Khazzām which we have described above and classified among the treatises of group three.

Among the compiled texts (second group) of general *furūsīyah* treatises two are especially noteworthy, *Kitāb al-Furūsīyah* by Ibn Qayyim al Jawzīyah,[219] which is of some use in explaining and correcting certain names and terms, and ″Naqāwat al-Muntaqá fī Nāfiʻāt al-Liqā,″ by al-Akhmīmī. It was written before his appointment as *qāḍī al-quḍāh* under Sultan al-Ghūrī. It is an abridgment of a lost work entitled ″Al-Muntaqá fī ʻUlūm al-Furūsīyah″ by Taqī al-Dīn Abū Zakarīyah Yaḥyá ibn Muḥammad al-Kirmānī al-Shāfiʼī al-Baghdādī[220] (761–833/1359–1429), who in turn compiled it from the major early *furūsīyah* works, including Ibn Akhī Ḥizām′s Treatise B. It is useful for explaining certain technical terms used by Ibn Akhī Ḥizām in his chapter on the lance. The only surviving copy is an unsigned autograph dated 889/1484.[221]

---

[216] Al-Suyūṭī composed a treatise on wrestling, ″Al-Musāraʼah ilá al-Muṣāraʼah,″ of which perhaps two copies are known: Staatsbibliothek zu Berlin MS 5557/2; Dār al-Kutub al-Miṣrīyah MS 5 *khidiwīyah,* 11845. I have not seen the latter and I am not sure of its existence.

[217] Topkapı Sarayı Library MS Revan 1933 (871/1466–67), incorrectly catalogued as al-Ṭabarī′s ″Kitāb al-Wāḍiḥ″; a microfilm in Maʻhad al-Makhṭūṭāt is also incorrectly catalogued as a *″majmūʻ fī al-rumḥ,″* and a large portion of it has been attributed to ʻAbd al-Raḥmān al-Ṭabarī.

Political Violence and Ideology in Mamluk Society

The Mamluk era in the history of the Middle East is probably best known for two things: its impressive architectural legacy in Egypt and Syria and its political violence. As Lane-Poole wrote a century ago: "Most of these sultans died violent deaths at the hands of rival emirs. . . . The uncertainty of the tenure of power, and the general brevity of their reigns make it more astonishing that the Mamluk sultans found the leisure to promote the many noble works of architecture and engineering which distinguish their rule above any other period of Egyptian history since the Christian era."[1] A century after Lane-Poole, in the most recent history of the Mamluks, Robert Irwin still writes, "The tenure of power at the top was very insecure—at first sight the history of Egypt and Syria is little more than a sequence of sultans, whose often obscure reigns are embellished only by their own assassination, by the specters of strangled viziers and slaughtered emirs."[2]

Yet between Lane-Poole and Irwin something significant changes in the historiography of the era: the understanding of political violence in Mamluk society. Earlier historians like Lane-Poole deplored the violence, but then were faced with the task of explaining how the Mamluk system remained in place for more than two and a half centuries despite it. However, in recent years there has been a reconsideration of political violence in Mamluk Egypt and Syria. Broadly, there are two revisionist approaches.

Winslow Clifford in his dissertation, "State Formation and the Structure of Politics in Mamluk Syro-Egypt, 648–741 A.H./1250–1340 C.E.," attempts to explain Mamluk politics as a "dynamic equilibrium."[3] Accordingly he refers to "structured violence," and "the political theater of structured violence." He argues, "Violence was never the true cement of the early Mamluk state."[4] Further, "Far from embracing a Hobbesian 'war of all against all,' the Mamluks cultivated a manageable system of interaction meant precisely . . . to inhibit violence and resolve conflict by ensuring a reasonably equitable distribution of resources and rotation of power

---

[3]Winslow Clifford, "State Formation and the Structure of Politics in Mamluk Syro-Egypt, 648–741 A.H./1250–1340 C.E.," Ph.D. diss., University of Chicago, 1995, 4.

[4]Ibid., 2.

within the ruling elite."

On the other hand, analysts such as Carl Petry and Robert Irwin see the violence as central. Petry says, "Recent analysts of military slavery in the medieval Muslim world have become convinced that, for good or ill, such feuding was not at all an aberration but in fact had evolved as a basic, indeed fundamental, dimension of militarist politics."[5] And a number of passages in Irwin's book *The Middle East in the Middle Ages: The Early Mamluk Sultanate 1250–1382* consider the meaning of such violence.

Yet despite this change of perspective, there still remains a certain tendency in scholarly writing, even as one acknowledges the level of violence, to treat it as excessive—or at least as *excess* to a less sanguinary topic—*waqf* endowments, cult of saints, the status of women, and so forth. And in any case, the question remains, if the violence was somehow "systemic," how did it function as part of the system—that is, how did it arise and prevail? In short, the seemingly paradoxical question still arises: how did seemingly continuous political violence serve the political system? The following essay considers not only the phenomenon of violence itself, but also its representation in the medieval chronicles, principally those of al-Maqrīzī, Ibn Taghrībirdī and Ibn Iyās. It proposes an ideological role for violence on the basis of those chronicles.

I should begin by saying that in my view the paradox of "stable yet violent" is the perspective illusion of a conventional way of thinking, one that assumes some sort of social equilibrium is the usual state of things. Such a perspective informs much critical thinking no less than everyday thinking (for example, conservative economists who treat such phenomena as recurrent monetary crises, environmental pollution, work place health hazards, terrorism, etc., as mere excesses and aberrations of global capitalism that, with just a bit more tinkering and fine tuning, will be largely eliminated). By way of contrast, the quasi-Hegelian view here is that such "excesses" and "unintended consequences" are fundamental to the system. What is more, such excesses play a critical ideological role in the subject's allegiance to the political order. The premise is that of Slavoj Žižek: "every ideology attaches itself to some kernel of *jouissance* which, however, retains the status of an ambiguous excess."[6] Lacan used the term *jouissance* to mean that form of traumatic attachment, the "pleasure in pain" that Freud described as "beyond the pleasure principle."

Evidence for this premise can easily be drawn from contemporary politics. For example, consider the role of sex scandals in American right-wing political discourse in the past decade. Ostensibly right-wing journalists and prosecutors investigated

---

[5]Carl Petry, "Class Solidarity versus Gender Gain," in *Women in Middle Eastern History*, ed. Nikkie Keddie (New Haven, 1991), 124.

[6]Slavoj Žižek, *The Plague of Fantasies* (New York, 1997), 50.

and discussed the intimate details of the sex life of Bill Clinton not out of a prurient sado-voyeuristic pleasure in the public humiliation of their opponent, but rather because of some other high-minded concern: ″It′s not about sex. It′s about character. It′s about the law. It′s about family values,″ etc. Yet their obsessive attachment to the subject meant that cable news networks constantly broadcast gross details of people′s sex lives—even as the same people who discussed these ″scandals″ also complained about coarse and offensive television programming. In other words, the American right wing is galvanized, united by the very thing they claimed to denounce—a perverse obsession with sex (why was Ken Starr always grinning?).

Since the ideology at stake is medieval Sunni Islam, an example from the medieval chronicle of Ibn Taghrībirdī will provide some evidence for the validity of this premise in another time and culture (*jouissance* is ahistorical; how the ″hard kernel″ of *jouissance* is caught in various ideological fields is historical). In 693/1294 a powerful amir, al-Shujāʻī, was murdered by a rival′s mamluks. Then, in what was common practice, his head was paraded through the streets of Cairo on a lance. Since he had been an oppressive and rapacious official, Ibn Taghrībirdī says:

> People greatly enjoyed his killing, so that when the herald carried his head through the houses of the Coptic secretaries, they beat his face with their slippers as a way of seeking justice, and they pissed coins on the heralds—who earned a lot that way. But I say that this was a reprehensible mistake on the part of the heralds—God damn them *(qātalahum Allāh)*. Even if he had been an oppressor, he was better than the Christian Copts.[7]

In other words, Ibn Taghrībirdī is affronted by the fact that Christians derived enjoyment from something—the abuse of a decapitated head—that ought to have been the exclusive enjoyment of Muslims, a fact explained by his own libidinal attachment, as a Sunni Muslim, to the violence: for Ibn Taghrībirdī, the Christians were stealing the Muslims′ *jouissance.*

This essay then will explore the libidinal economy of Mamluk violence as represented in the chronicles. I shall also say that Mamluk violence is ″excessive″—but in another sense: it is excessive as an instance of Lacanian *jouissance,* what Slavoj Žižek calls ″surplus enjoyment.″ Precisely in so far as this violence fascinates the chroniclers (and us their readers), it reveals the ″surplus

---

[7]Ibn Taghrībirdī, *Al-Nujūm al-Zāhirah fī Mulūk Miṣr wa-al-Qāhirah* (Cairo, 1963), 8:52.

enjoyment that is the necessary support of social relationships of domination."[8] I will try to show how violence—assassination, execution, torture—was the "hard kernel" of *jouissance* that sustained the prevailing ideology. In that ideology, medieval Sunni Islam, the social relation of lord and servant is "fetishized" in the Marxist sense—that is to say, a contingent historical relation is represented as something "already there," preordained by divine order. In the Quran 16:74 God compares master and slave in this way: "God makes a comparison: a slave, property of his master, who cannot do anything, and one whom we have endowed with wealth, who may spend it privately or publicly—are they equal?"

To show how violence forms the ideological bond, we will consider a number of historical narratives from the chronicles of Mamluk historians—mostly from al-Maqrīzī, Ibn Taghrībirdī and Ibn Iyās—all of them versions in one way or another of one of the master narratives of medieval Islamic culture: the fall of the mighty man. That narrative will be critiqued by means of Kojève's "fight for pure prestige;" where in the medieval account, the great man falls on account of Fate or God, defeat in the ‴fight for pure prestige″ is solely at the hands of another man—which means that the fall of one great man is necessarily the rise of another.

Among all the various states and dynasties in medieval Islamic history, Mamluk social order in particular seems to give very clear empirical expression to this fetishized relation of master and slave. Obviously, that it was also extremely violent even by medieval standards was not, I think, mere accident.

To begin to sort out both the agents and the acts of violence, some provisional categories are necessary. A summary account of the beginnings of Mamluk rule will provide most of them. Like many good stories, it begins with a murder.

In 648/1250 a group of Bahri mamluks assassinated the Ayyubid sultan al-Mu'aẓẓam Tūrānshāh. The mamluks were frustrated with Tūrānshāh's rule and concerned about threats he had made against them. Yet it seems that although Tūrānshāh's assassination had been discussed, the event itself was not well planned. After one of the Bahri mamluks bungled an assassination attempt on him in his tent, Tūrānshāh took refuge in a wooden tower near the Nile. Hearing of the botched attempt, the other Bahri mamluks rushed to the scene and set the tower on fire. When Tūrānshāh emerged, they shot him with arrows and chased him into the river where they finished him off with their swords. The upshot was—in the context of medieval Islamic history—an anomaly: the brief reign of a woman, Shajar al-Durr, the widow of Tūrānshāh's father, al-Ṣāliḥ Ayyūb II. After a few weeks, to patch up this weird state of affairs, she married the amir Aybak, who is usually reckoned the first Mamluk sultan. However, Aybak's reign was interrupted after only five days when a group of Bahri mamluks led by Aqṭāy secured the

[8]Žižek, *The Plague of Fantasies*, 51.

purely nominal restoration of an Ayyubid prince, al-Ashraf Mūsá, a boy of six years at the time. Obviously Mūsá never exercised real power; his reign simply sutured a split between Bahri and non-Bahri amirs. And indeed, the ostensibly deposed Aybak continued to wield great power by virtue of being Mūsá's *atabak* or military commander-in-chief, until, in 652/1254, after four years of maneuvering and plotting, Aybak, having secured his power base, lured his Bahri rival Aqtāy to the palace under the pretense of "consultation." Aybak's mamluks cut him down with their swords. Then they cut off his head and threw it down from the wall of the Citadel to his Bahri comrades who were waiting for him outside.[9] Aybak then deposed the child sultan and assumed the title of sultan himself.

Aybak's reign ended in 655/1257 when his wife Shajar al-Durr, hearing he was going to displace her with a Syrian princess, had her servants strangle him while he was taking a bath. A few days later, Shajar al-Durr was herself murdered by servants of her mother-in-law who beat her to death with their wooden clogs *(qibāqīb).* Aybak's son ʿAlī succeeded as sultan, but again merely as a place-holder until the contending forces among the mamluk amirs could sort themselves out and a clear victor could emerge.

Having proceeded only this far, certain empirical patterns and categories emerge to provide a sufficient framework for analysis.

First of all, there were, as Irwin puts it, two sorts of sultans: real sultans and "mock sultans." Real sultans were powerful amirs who seize the throne either by 1) assassinating another real sultan or 2) by deposing a "mock sultan." "Mock sultans" were usually young offspring of real sultans who tried repeatedly to establish hereditary dynasties and repeatedly failed. Their offspring simply "fronted juntas of feuding military men"[10] until one group gained the decisive advantage. The reasons for the failure to establish a hereditary dynasty are clear: the young sultan took the throne surrounded by powerful, older mamluks practiced in the arts of politics—intrigue, extortion, and murder—while the young sultan was not. The chronicler Ibn Taghrībirdī remarked when he was witness to the fall of one such mock sultan, al-Manṣūr ʿUthmān, a Burji sultan whose "reign" lasted less than two months:

> As the saying goes, "The weapon is present, but the understanding is absent." [This is] because they are young and inexperienced,

[9]Al-Maqrīzī, *Al-Sulūk li-Maʿrifat Duwal al-Mulūk* (Cairo, 1956–58), 1:2:390; Ibn Taghrībirdī, *Nujūm,* 7:10–12; Ibn Iyās, *Badāʾiʿ al-Zuhūr fī Waqāʾiʿ al-Duhūr* (Cairo, 1972), 1:1:291.

[10]Irwin, *Middle East,* 27.

> unpracticed in the arts of war, and they know nothing of deceit and double-dealing with their opponents.[11]

Most often mock sultans were not murdered, since they were seen as harmless. The most important exceptions to this pattern were the descendants of Qalāwūn who must be accounted real sultans, yet even they also served time as mock sultans and were deposed one or more times before they matured and established their power so as to rule as real sultans.

The second thing we see in the story of Tūrānshāh, Shajar al-Durr, and Aybak is the variety of violence. The following categories drawn from the preceding summary may serve as rubrics for this essay and will help us sort out the mayhem: assassination (Tūrānshāh, Aybak); execution (Aqtāy); revenge-*lex talionis* (Shajar al-Durr). To these, I would add two more: torture and spectacle. As will be seen shortly, some blurring of these categories is inevitable. Clearly we would usually say that being strangled in a bath is an assassination, while being strangled in front of the sultan is an execution. Yet, the example of al-Nāṣir Faraj will show us the difficulty of this distinction. The larger significance of political violence in Mamluk culture hinges on two matters, its prevalence and its representation in the chronicles. What can we say about the gross realities beyond the representation? We shall work backwards, considering what seems the reality and then consider what we may deduce from the narrative representation of that.

Assassination

One may wonder, how prevalent was assassination? My tally of Mamluk sultans indicates that twenty-two of fifty were murdered. More to the point, if one only counts the twenty-nine ″real″ sultans (discounting the twenty-one ″mock″ sultans who did not really hold power), roughly two-thirds of these were murdered: nineteen of twenty-nine. Again, certain empirical patterns—the how, the when, and where—emerge with respect to assassinations. Often what I term an ″assassination″ is described in the chronicles as an instance of *fatk,* which the *Lisān al-ʻArab* tells us is ″to take the man by surprise and kill him,″ whereas an execution is most often termed *qatl* (″killing″) in the chronicles. But not always.

Not surprisingly, assassinations were usually attempted when the would-be victim was likely to be alone, relaxed, and off guard. As we have seen, Aybak was strangled while taking a bath. In 698/1298 the sultan Lājīn would be assassinated while playing chess. Prayer time was also a favored time; in 747/1347 Gurlū, an amir who had manipulated events under the young Qalwunids Ismāʻīl and Shaʻbān, was similarly murdered while praying; and towards the end of the Mamluk dynasty

[11]Ibn Taghrībirdī, *Nujūm,* 16:49.

in 908/1502 we read of Azdamūr, the *dawādār* of the sultan Qānsūh al-Ghawrī, being shot at with arrows while on his way to pray, his thoughts presumably concentrated on that beyond to which his rival wished to hasten him on his way.[12]

Many of the Mamluks liked to hunt, and hunting provided another opportunity to ambush the victim while he was alone.[13] In 657/1259, shortly after defeating the Mongol army at ʿAyn Jālūt, Quṭuz, who had been one of Tūrānshāh′s assassins, was ambushed and killed while hunting by a group of mamluk amirs, one of whom was the future sultan Baybars. And again in 693/1293 the sultan al-Ashraf Khalīl was assassinated while hunting by a group of disaffected amirs led by Baydarā. In the instance of Quṭuz, one of the amirs struck him first with a blow on the shoulder. Then another pulled him from his horse, and when he was on the ground, the rest shot him full of arrows. In the assassination of Khalīl, the first blows struck are similarly on the hand, and then the shoulder. Al-Maqrīzī describes it in this way: ″The two rushed him with their swords [the amirs Baydarā and Lājīn]. He [Baydarā] struck him on his hand and cut it off *(abāna yadahu),* then a second time and disabled *(hadda)* his shoulder. Then the amir Lājīn got to him and shouted at Baydarā, ″Whoever would be King of Egypt and Syria should strike a blow like this!″ and he struck him on the shoulder a blow which severed it *(ḥallahu).* Thus disabled, he was finished off by the other amirs. This plan of attack is found again and again in the sources no matter what the scene; the initial blow is not meant to kill, but is struck on the right shoulder, and its purpose is clearly to disable the victim and prevent him from fighting back. For example, when the amir al-Shujāʿī, already mentioned above, was jumped by mamluks of his rival Kitbughā, the first blow was struck on his hand. Then a second blow severed his head from his body.[14] In any situation where the victim is armed, the assassinations—taking into account, to be sure, the differences in weaponry—resemble mob-style killings; the goal is first to disable, then to dispatch the victim as quickly as possible—and in such a way that his death is a certainty.

In the pre-Thompson sub-machine gun era, the killing of al-Nāṣir Faraj illustrates the difficulties that could arise, even from a victim who has already been arrested (his is one of the examples that blurs the easy distinction between assassination and execution). Faraj surrendered to the amirs Nawrūz and Shaykh Maḥmūdī when they and the caliph al-Mustaʿīn gave him a written pledge of safety. But once they had apprehended Faraj, the amirs called in some complaisant qadis who ruled that the pledge was ″inoperative.″ They sent a party of five amirs and

---

[12]Al-Maqrīzī, *Sulūk,* 2:3:736–37.

[13]One might expect the irony of ″the hunter being ′bagged′ ″ would have furnished the poets with obvious material, but the chronicles do not include any poetry on that theme.

[14]Ibn Taghrībirdī, *Nujūm,* 8:46.

executioners to Faraj, but seeing them, he realized at once what they meant to do, and he tried to defend himself. Al-Maqrīzī´s account reads thus:

> He [Faraj] defended himself. Two of the men jumped him and, after they had wounded him in several places, they threw him to the ground. At this point one of the two young assassins went at his neck with his dagger, and then he strangled him. By now he was wounded in five places. When he thought he was finished off, he stood up. [But] his heart was still beating, and he strangled him a second time. This time he was more certain he had died, and he left him, but then he moved again. So he went at him a third time and cut his arteries with his dagger.[15]

Whatever distinctions we might make between an assassination and an execution, I must add that this distinction usually has no legal implications. If the chronicles are to be believed, sultans rarely sought a legal ruling before they ordered someone killed. This distinction much more often concerns the relative rank of killer and victim, and bonds of loyalty that the chronicler might have thought ought to have existed between them. Assassination is most often the killing of a superior, whereas execution is the killing of an inferior—sometimes with, sometimes without legal pretence. In other words, the terms more nearly reflect a power relation—master and servant—rather than legal distinctions.

The slaying of the amir Shaykhūn in 758/1357 is another example that shows the absence of legal pretense and the difficulties of nomenclature. Shaykhūn was one of a powerful group of amirs who ran Egypt while a grandson of Qalāwūn, al-Nāṣir Ḥasan, learned the ropes. He was murdered in the presence of the sultan in the Hall of Justice by a mamluk named Qutlūqujā. The mamluk jumped Shaykhūn and struck him three blows with his sword, on his head, his face, and his arm.[16] The sultan gathered his private guards and hurried to safety. The killer claimed he acted solely on account of a private grudge and was executed shortly thereafter, but it was widely believed that the sultan ordered the murder.[17]

EXECUTION

Execution was the usual fate for a Mamluk amir who lost in the game of hardball politics. The means of execution were several. Common means were strangulation,

---

[15]Al-Maqrīzī, *Sulūk,* 4:1:224.

[16]Ibid., 3:1:33.

[17]Irwin, *Middle East,* 142.

hanging, decapitation, bisection *(tawsīṭ),*[18] crucifixion, drowning, and burning. But as Aybak´s killing of Aqtāy shows, the simplest form of execution was to order one´s mamluks to cut the man down with swords. Strangulation with a bow string seems, as Irwin says, to have been regarded as ˝more honorable.˝[19] After the sultan al-Nāṣir Ḥasan consolidated his power, he arrested the amir Sarghitmish and had him strangled in prison in 759/1358. Likewise, hanging also seems to have been reserved for worthy foes; one of Baydarā´s conspirators in the assassination of al-Ashraf Khalīl in 693/1293, the amir Qujqār, was hung in the horse market.[20] But it is not always easy to determine why one means of execution is selected over another. Al-Ẓāhir Barqūq provides an example; Ibn al-Furāt tells us that in 793/1391 Barqūq ordered some prisoners to be taken to the Ridānīyah exhibition grounds, and of them he singles out three to be drowned, seven others to be crucified and then bisected.[21] If one were to single out drowning as ˝more honorable˝ would that be anything more than personal preference?

On the basis of my readings I would say that bisection was the most common form of execution for political opponents. This procedure was described by fourteenth century traveler Leo Africanus:

> The pains inflicted on malefactors are severe and cruel, especially those which are pronounced in the sultan´s court. He who steals is hung. He who commits a homicide through treachery incurs the following punishment: one of the executioner´s aides holds him by his two feet, another holds him by his head. The executioner, armed with a two-handed sword, cuts the body into two parts. The superior part is then placed on a pile of quicklime and can survive for twenty minutes, continuing to talk. It is a frightful thing to see and hear.[22]

---

[18]Ibid., 86. The description of a method called *shaqq* may be an error. This was based on Excursus F in *The Theologus Autodidactus of Ibn Nafis,* ed. Max Meyerhoff and Joseph Schacht (Oxford, 1968), 81–82, which uses a manuscript of al-Nuwayrī´s *Nihāyat al-Arab fī Funūn al-Adab*. However, that portion of al-Nuwayrī´s work has since been published, and the word in the printed text is not *shaqq* but *shanaq* = ˝gibbeting.˝ On the other hand, in Ibn Faḍlān there is definitely mention of a technique in Central Asia like *shaqq,* splitting a malefactor ˝in half from his neck to his thighs.˝ (*Risālat Ibn Faḍlān,* ed. Sāmī al-Dahhān [Damascus, 1959], 134). So it is possible the printed text is in error.

[19]Irwin, *Middle East,* 86.

[20]Al-Maqrīzī, *Sulūk,* 1:3:796.

[21]Ibn al-Furāt, *Tārīkh Ibn al-Furāt,* ed. Constantine Zurayk (Beirut, 1936), 9:1:261, ll. 5–11.

[22]Jean-Leon L´Africain, *Description de l´Afrique* (Paris, 1956), 2:519.

It should be noted that bisection and most of the other modes of execution have no relation whatsoever to any Islamic *ḥadd* penalty. As Irwin notes, bisection seems to have derived from Mongol practice.

Decapitation, as we have already seen, was another common fate for political losers. Sometimes it was the means of execution, but often it was performed on the already dead victim for other reasons that we will explore. In 782/1389 the amir al-Nāṣirī, who had outgrown his usefulness to the sultan Barqūq, was decapitated. In 680/1281 the amir Sayf al-Dīn Kunduk al-Ẓāhirī formed a conspiracy to assassinate the sultan al-Manṣūr Qalāwūn while he was in Palestine, but Qalāwūn discovered the plot (with the help of Frankish intelligence) and had Kunduk arrested. Kunduk and his conspirators pleaded guilty and asked for a royal pardon, but Qalāwūn thought better of this. Kunduk and his conspirators were beheaded and then drowned in Lake Tiberias. This sort of ″overkill″ was far from uncommon, and raises obvious questions about the significance of inflicting further violence on an already dead body. Since it serves no practical purpose—in this case, that purpose having been achieved by the decapitation—it must serve some other end. And as I just noted, it was also often the case that someone was killed by other means and then had his head cut off.

Several aspects of these sorts of executions need to be sorted out. In and of itself the phenomenon of ″overkill″ would seem to be driven by hatred and the desire for revenge. On the other hand, decapitation of someone who was already slain does not always come under the heading of revengeful ″overkill.″ It also served sometimes as a means of publicity/spectacle—or even a more practical purpose. In 694/1393, after the amir Baydarā assassinated al-Ashraf Khalīl, some loyal Ashrafī mamluks killed him and put his head on a lance and had it carried by an executioner through the streets of Cairo. This entire episode will be considered below as spectacle. But decapitation seemed to have also served a specific, practical purpose apart from whether it was the means of execution or not. This is seen in the instance al-Nāṣirī. In his Latin biography of Barqūq, Bertrando de Mignanelli, who was resident in Egypt and Syria and was witness to many events in the reign of Barqūq, wrote, ″His head was brought before the Sultan, because the Sultan wanted to examine it carefully, as there was a squint in his eye, so that he would be in no doubt about his death.″[23] Similarly, we read of the heads of four unfortunates executed in Syria being conveyed to the sultan in Cairo for his examination. In 742/1342 the deposed sultan al-Manṣūr Abū Bakr was executed while imprisoned

[23]Bertrando de Mignannelli, *Ascensus Barcoch,* trans. Walter Fischel, *Arabica* 6 (May 1959): 163. As Fischel notes, it seems that Barqūq′s name (which can mean ″plum″ or ″prune″) may refer to his need to squint and hence the wrinkles that resulted. But al-Azraqī in *Akhbār al-Makkah* says that it was due to their protrusion *(juḥūẓ).* (Ed. Wüstenfeld, 3:186).

in Qūṣ in Upper Egypt, but his head was sent to the amir Qawsūn in Cairo (later in the same year Qawsūn himself, opposed by Syrian amirs, would be arrested and strangled in prison). In such instances as that of al-Manṣūr Abū Bakr and al-Nāṣirī, the decapitated head was equivalent to a death certificate for the individual.

In sum, the forms of execution could serve several different functions in addition to the permanent elimination of a political rival. There were cold executions, especially those carried out in prison such as that of al-Manṣūr Abū Bakr. At the other end of the spectrum were those executions in which feelings of revenge clearly played a part. Those carried out in public will be discussed in the next section; here we will confine the discussion to those carried out in the palace in front of the sultan or some powerful amir. The execution of al-Muẓaffar Baybars II provides an example. Al-Muẓaffar Baybars′ brief reign ended when Qalāwūn′s son al-Nāṣir Muḥammad I was restored for his third reign. Al-Maqrīzī paints a vivid picture of his ignominious end when he is captured by mamluks of his enemy Qarāsunqur: Baybars hurls his *al-kuluftāh* (a sort of embroidered cap) to the ground and says, ″God damn the world. I wish I had died and never seen this day.″ The mamluks of his enemy Qarāsunqur take pity on him; they dismount and put his cap back on his head.[24] When he is brought before the sultan al-Nāṣir Muḥammad I, the latter scolds Baybars II for the way he treated him when he was young: ″When I wanted roast goose you used to say, ′What does he do with goose? He eats twenty times a day!′″[25] The sultan then orders Baybars II to be strangled in his presence with a bow string. But when he is almost dead, the sultan has him revived. He curses and reviles him for a while; then he has him strangled a second time, this time until he dies. According to Ibn Taghrībirdī, the sultan himself would sometimes put the bow string *(watr)* around the victim′s neck.[26]

SPECTACLE

In the chronicles the most common public form of execution was crucifixion on the back of a camel followed by bisection. Perhaps the two most complete accounts of these spectacles describe the punishments meted out to the killers of al-Ashraf Khalīl in 693/1293 by Ashrafī mamluks, and, a century later in 793/1391, the sultan Barqūq′s execution in Damascus of amirs loyal to his nemesis Minṭāsh.

In the instance of Baydarā and his confederates, the accounts of al-Maqrīzī

---

[24]Al-Maqrīzī, *Sulūk,* 1:2:493. The *kuluftāh* was a sort of embroidered cap worn under one′s steel helmet. It seemed to symbolize membership in the military caste. See Ibn Taghrībirdī, *Nujūm,* 16:54. When two amirs are released and pardoned the new sultan allows them to wear this cap again.

[25]Ibn Taghrībirdī, *Nujūm,* 8:274–75.

[26]Ibid., 32.

and Ibn Taghrībirdī describe Baydarā´s death in such a way that he seems to be killed in a fight with Ashrafī mamluks. When the tide turns against them, Baydarā´s men flee, and he is surrounded by Ashrafīs who cut off his hand first (in assassinating Khalīl, Baydarā had cut off his hand and then his arm, and following *lex talionis* the same is done to him before they give him the *coup de grace*). Then they cut off his head and carry it back to Cairo on a lance.[27]

Ibn Iyās´s version differs in having more detail—though it is not necessarily in contradiction with the other two accounts. According to Ibn Iyās, when the Ashrafī mamluks subdue Baydarā they take him to the amir Kitbughā, the leader of the Ashrafī loyalists. Rather as in the case of Yalbughā the Lunatic, as soon as the royal mamluks see him they pounce on him. In Baydarā´s case, however, Kitbughā does not call them off:

> Then they took him to the amir Kitbughā. When the Ashrafī mamluks saw him, they cut him to pieces *(qaṭṭa‘ahu)* with their swords. Then they split open his belly and pulled out his liver, and each one of the mamluks cut off a piece and ate it—due to the severity of their grief for their master al-Ashraf Khalīl. Then the amir Kitbughā cut off his head and put it on a lance. He sent it back to Cairo where it was paraded and finally hung on the door of his house.[28]

This recalls the notorious episode in the battle of Uḥud, when the Muslim warrior Ḥamzah was slain, and Hind bint ‘Utbah cut out his liver and ate part of it, and perhaps raises the question of its factuality—Ibn Iyās may be indulging in fictional embellishment at this point. In any event, all three chroniclers go on to describe the capture, torture, and execution of seven of Baydarā´s confederates in very similar terms. Al-Maqrīzī describes it this way:

> Baybars the Jashankīr took charge of their torture to determine who else was in league with them. Then they took them out on Monday, the eighteenth [of Muḥarram]. Their hands were cut off with an axe on a wood chopping block. Then they were crucified on the back of camels with their hands hanging from their necks. And with Baydarā´s head on a lance leading the way, they were paraded through Cairo.[29]

---

[27]Al-Maqrīzī, *Sulūk,* 1:3:792; Ibn Taghrībirdī, *Nujūm,* 8:19.
[28]Ibn Iyās, *Badā’i‘ al-Zuhūr,* 1:1:375, ll. 8–13.
[29]Al-Maqrīzī, *Sulūk,* 1:3:796.

In the account of Ibn Iyās, the *mashā'ilīyah* or heralds precede the parade calling out, "This is the punishment of someone who kills his master."[30] Al-Maqrīzī also devotes considerable attention to the grief of the families:

> They took them past the doors of their houses, and when they passed the door of 'Alā' al-Dīn Altunbughā, his female slaves came out unveiled, beating their breasts. And with them were his children and his male slaves. They had torn their clothes and their cries went up. His wife was on the roof and she tried to throw herself down upon him, but her servants grabbed hold of her. She was saying, "If only I could die instead of you." She had cut her hair, and she threw it down on him. The people collapsed from their crying—may mercy be upon them. They went on like that for days.[31]

The chronicle of Ibn Ṣaṣrā (fl. 793/1390) describes Barqūq's execution in 793/1391 of a group of twenty mamluks who had been in league with Barqūq's stubborn adversary Minṭāsh. This came after almost seven years of struggle between Barqūq and Minṭāsh, and in the train of a tremendous number of executions of collaborators. Minṭāsh would elude Barqūq for another eight months. Ibn Ṣaṣrā's account reads thus:

> He [Barqūq] immediately ordered them crucified and cut in two at the waist, and they were brought down from the citadel with chains on their necks, barefooted, to the stables of the sultan. They brought twenty camels at once, erected crosses on them, and brought the nails. It had rained during the night of that day, and there was much mud and it was slippery. The sultan went up and sat in the Pavilion to watch them, while the area below the citadel was filled with people, and the families of the crucified stood bewailing them. The mother of Amir Aḥmad ibn Baydamūr and their neighbors, barefooted and with torn clothing, were weeping, and the people wept at their weeping. When the day was half over, they brought the prisoners out of the stables of the sultan, and nailed up all of them for fatal crucifixion. They made a circuit of the city in that mire and slipperiness. They cried out for help, but they were not

[30]Ibn Iyās, *Badā'i' al-Zuhūr,* 1:1:379.
[31]Al-Maqrīzī, *Sulūk,* 1:3:796.

> helped. Their families tore their clothes in grief for them, especially for the amir Aḥmad ibn Baydamūr. He was a native of the city, a good lad, who had caused no one any harm. Everyone liked him, for he was close to the people. The people saw him in this state, crucified, and his mother and neighbors bereft of hope. Shaykh ʻAlā' al-Dīn ibn Aybak eulogized the amir Aḥmad ibn Baydamūr well, telling what happened to him, how the people wept, how the sultan did not accept intercession for him, when he recited a description of his state at that time in a poem:
>
> Leave him on the cross, like a bridegroom without tambours or candles.
> But the eyes of men are on him. For him there was shedding of tears.
> And hearts fell melted with grief and pain within their ribs.
> For alas! He was a star of beauty which has left us without rising!
>
> They brought the prisoners to the bridge of Zalābīyah while the sultan watched from the Pavilion. Then they took them down from the nails and began to cut them in two, one after another. The amir Aḥmad ibn Baydamūr remained to the last. When he saw what had happened to his companions and that only he remained, he breathed a sigh and recited this single verse
>
> I see death lurking between the sword and the executioner's mat
> Watching me wherever I turn.
>
> Then they cut him in two, and the families of those cut in two each took their relatives to bury them. They brought a bier and took amir Aḥmad and Muṣṭafá to their tombs in four pieces.[32]

Ibn Ṣaṣrā's description is almost "cinematic." He describes in some detail the positions and attitudes of the sultan, the families, and the spectators, setting the stage as it were before the condemned are brought forth. He places particular emphasis on the muck and mire through which the crucified make their fatal tour,

---

[32]Ibn Ṣaṣrā, *A Chronicle of Damascus, 1389–1397*, ed. and trans. William M. Brinner (Berkeley, 1963), 139–42 (pp. 103–5 in the Arabic text, *Al-Durrah al-Mudī' ah fī al-Dawlah al-Ẓāhirīyah*).

and one can see in his emphasis the objective representation of a medieval commonplace: the precariousness and instability of life in this world, *al-dunyā,* in contrast to the stability of the next world, *al-ākhirah,* a theme that is central in the ″master narrative,″ the fall of the mighty man. Finally, Ibn Ṣaṣrā ″zooms in,″ focusing on one individual, the amir Aḥmad ibn Baydamūr, whose youth, beauty, and popularity in Damascus (and possibly his innocence) make his fate particularly heart-wrenching. The sultan′s emphatic rejection of clemency is followed by a poem in which, striking a Gothic note, Ibn Baydamūr is ″married″ to death. Ibn Ṣaṣrā′s text, lingering over painful details so as to show us beauty being destroyed, is a perfect example of Lacanian *jouissance,* the excessive pleasure-in-pain that escapes the equilibrium of the pleasure principle—as well as the ″dynamic equilibrium″ of historians and political scientists.

TORTURE

Torture was commonplace. The terms most commonly used to mean torture are *ʿadhāb, ʿuqūbah,* and *muʿāqabah.* The verb *ʿaṣara* is also common, but seems to be used to mean more specific forms of torture involving presses of some sort. Yet, here again, it must be said that the term ″torture″ is our own; the chronicles do not really distinguish between punishment and torture. For example, when al-Maqrīzī speaks of a famine and economic crisis in Iraq in the year 825/1422, he employs the same terms where we would clearly translate *ʿuqūbah* as simply ″punishment″: they were, he says, ″ʿuqūbah min Allāh la-hum bi-mā hum ʿalayhi min al-qabīḥ.″[33] Thus, while the writers may register disgust at particular instances, torture per se—as we usually think of it—is not something condemned by these writers.

In an atmosphere of relentless conniving and plotting, torture was used to uncover the identities of plotters and conspirators. Yet its principle purpose in Mamluk politics was more mundane: it was used to raise revenue. All the most adept fiscal officers specialized in it. It was assumed that powerful officials would have used their office to amass secret hordes by means of bribes, extortion, and so forth, and once they were dismissed they were commonly tortured to reveal their caches of money and jewels and expensive cloths. For the less prominent, other means had to be used to identify those likely to yield secret wealth. In al-Nāṣir Muḥammad′s third reign, al-Yūsufī describes how the *mutawalī* of Cairo, Aydakīn, used to go about in disguise at night and eavesdrop on houses, listening for singing or the sounds of drinking, the assumption being, it seems, that if the residents could afford musicians, they must have money. If such sounds were

[33]Al-Maqrīzī, *Sulūk,* 4:2:611.

heard, Aydakīn would raid the house and extort money from them.[34]

When al-Ashraf Khalīl assumed the throne in 689/1290 he immediately turned on the amir Turantāy. Al-Maqrīzī tells us Turantāy was killed *baʿda ʿuqūbah shadīdah* (after severe torture.) Ibn Taghrībirdī says that Khalīl *basaṭa ʿalayhi al-ʿadhāb ilá an māt* (put him to torture until he died). When the vizier Ibn Salʿūs, a favorite of al-Ashraf Khalīl, was arrested after Khalīl's murder, he was tortured to force him to reveal where he had hidden his wealth. His enemy the amir al-Shujāʿī turned him over to the amir Lu'lu' al-Masʿūdī, the *shādd al-dawāwīn,* who carried out the torture. Al-Maqrīzī wrote, "Fa-ʿāqabahu bi-anwāʿ al-ʿuqūbāt wa-ʿadhdhabahu ashadda ʿadhāb fa-istakhraja minhu mālan kathīran." In Ibn Iyās the episode is described in this way: "He [al-Shujāʿī] began to torture *(yuʿāqibuhu)* Ibn al-Salʿūs every night. He used presses on his joints until he died under the blows."[35]

At times it seems that some symbolism played a role in the specific torture. I have mentioned the significance of the embroidered cap *kuluftāh.* The metal helmet that all mamluks wore over this in battle was also used as an instrument of torture. In 800/1398 Barqūq had the powerful amir Ibn Tablāwī arrested and tortured at the instigation of the amir Yalbughā the Lunatic. The latter placed an iron helmet on Ibn al-Tablāwī's head, and then heated it over a fire.[36] An even more sadistic variation of this is found in the instance of Tāj al-Dīn Aḥmad, a scribe, arrested and tortured in 755/1354 by the amir Shaykhūn. A barber was summoned who shaved Tāj al-Dīn Aḥmad's head and made incisions in his skull. Then beetles were put in these incisions and a brass helmet was placed on Tāj al-Dīn's head. Again the helmet was heated over a fire and the beetles ate their way into his brain.[37]

"KINGSHIP IS CHILDLESS"

The foregoing examples, a small sample taken from a list of prominent men only, suggest the extent and varieties of political violence in Mamluk society. Obviously the chronicles usually make no mention of lesser lights who were tortured or executed. Nor does the preceding sample take into account mass violence: riots by lesser mamluks, or popular protests and uprisings by the commoners. An idea of the extent and variety of these latter sorts of violence can be found in Chapter V of Lapidus's *Muslim Cities in the Later Middle Ages.*[38] But if this brief survey

[38]Ira Lapidus, *Muslim Cities in the Later Middle Ages* (Cambridge, 1967) 143–84.

convinces the reader that Mamluk politics were unusually violent even by medieval standards, why was this so?

Various explanations of Mamluk politics have been proposed. Sometimes it is argued that the conditions of mamluks—as strangers in the society they governed, cut off from their own families—tended to remove many of the restraints that might have otherwise acted as a check on their violence. Only religion might play such a role. But its effect—even though many mamluks were pious men—was, as we know, obviously weak in this area. And in any case, as we know from our own experience, one need not be an accomplished theologian to find religious sanction for horrific violence.

More often, the notion of *khushdāshīyah* is sometimes employed to explain factional strife in Mamluk politics. A mamluk who had been purchased and trained by the same master as another was the latter's *khushdāsh*. This tie, as Irwin says, "has been seen as the cement that bound mamluk factions together."[39] But this explanation must be rejected. For one, as Irwin also notes, the term was used very loosely. For another, contending mamluks often sought support outside the mamluk class. But most importantly, the instances of amirs who were *khushdāsh* to each other contending with one another, assassinating or executing one another, are numerous enough to call into question the explanatory power of the term. To cite only two prominent examples, as Holt notes, "both al-Ẓāhir Baybars and al-Manṣūr Qalāwūn were opposed by rebellious governors of Damascus, each of whom was a *khushdāsh* of the sultan against whom he rebelled."[40] As Irwin argues, the notion that the principle bond of loyalty of a faction to the amir who led it issued from any source except self interest in the most material sense is suspect. "The factions," Irwin writes, "were hardly more than coalitions formed by the greedy and the ambitious; they were in the main innocent of 'any common fund of party principle.'"[41]

But there is another aspect of *khushdāshīyah* that is important: not its supposed camaraderie, but rather that it is part of a master/slave relation. In order to consider the role of this relation in Mamluk political violence, I would return to the beginning of the dynasty and the episode of Shajar al-Durr's reign.

Her brief reign after the assassination of Tūrānshāh is, in the context of the medieval Islamic state, a conspicuous anomaly. It can only be explained by the fact that Tūrānshāh's killers, even if they had more or less resolved that he ought to be eliminated, had not yet figured out what was to come next. The description

---

[39]Irwin, *Middle East,* 88.

[40]P. M. Holt, "The Position and Power of the Mamluk Sultan," *Bulletin of the School of Oriental and African Studies* 38 no. 2 (1975): 248.

[41]Irwin, *Middle East,* 152. See also 89–90, 153–57.

of the assassination in the chronicle shows it unfolding without careful planning, and is consistent with this surmise.[42] What Shajar al-Durr′s reign masks to some extent, and what neither Tūrānshāh′s killers nor those who opposed them seemed to realize at the time, is that the assassination of Tūrānshāh effectively abolished the principle of hereditary succession. As noted above, attempts would be made by certain Mamluk sultans to put their sons on the throne, but these usually failed—and even when they succeeded, it was not because the hereditary principle was generally recognized, but rather because the son, after he was deposed as mock sultan, somehow survived to learn the game of Mamluk politics well enough to build a power base and then usurp the throne himself, a pattern best seen in the multiple reigns of al-Nāṣir Muḥammad ibn Qalāwūn.

Two well-known sayings regarding this remarkable state of affairs crop up in the chronicles. One is the so-called ″Law of the Turks″: ″He who kills the king is the king.″ The second is the saying ″al-mulk ʻaqīm″ (kingship is childless). These statements have occupied the attention of a number of scholars. Ibn Taghrībirdī asserted that the Mamluk rulers introduced the so-called law code of the Mongols (=″Law of the Turks″), the *Yasa,* into their domains, and many historians, David Ayalon most prominently, have taken pains to show the dubiousness of this.[43] More recently, Ulrich Haarmann has concerned himself with possible historical precedents for the specific ″Law of the Turks″ stated above, viz., ″He who kills the king is the king.″[44]

But the contention here is that the meaning of these two well-known statements cited by Ibn Taghrībirdī are examples of ″retrojection.″ They are best understood not with reference to some cultural import from Turkish or Mongol societies in Central Asia, but rather to the violent events which gave birth to the Mamluk dynasty, not in reference to some dim past, but rather to a new and startling present, one in which the abolition of the hereditary principle brings forth a more primal sort of politics in which there is no ideological stake. Political violence among Mamluk politicians is devoid of any ideological/religious significance—as Irwin says, ″The factions were hardly more than coalitions formed by the greedy and the ambitious.″ Remarks made about Aybak, the first Mamluk sultan, support such an interpretation. Ibn Taghrībirdī quotes some mamluks as saying, ″When we want to remove him, we can because of his lack of power and his middling

rank among the amirs."[45] The unnamed mamluks' words make it clear that, for them, monarchy is not charismatic in any way.[46]

The rejection of a principle of hereditary succession effectively meant that there was no recognition of any principle of legitimacy—other than power itself. Violence done to one's rival should not, then, be attributed to the breakdown of authority—it was the source of authority. Nor, for that matter, is the trend in the later stages of the dynasty for rank-and-file mamluks to assert their power against the amirs to be considered as some sort of deterioration of the system.[47] Rather it is the logical extension of power politics throughout the entirety of the military class. For these reasons, we can say that Mamluk politics revealed—whether Mamluk politicians themselves knew it or not—the fetishistic basis of the master-slave relation that served as the social paradigm for not only Mamluk society, but medieval Islamic society in general. As in the Kojèvian "fight for pure prestige," the willingness to risk one's life was precisely the ante required to play the game of Mamluk politics; the death notices of amirs abound with the terms like *shujā'* (brave), *miqdām* (bold), possessing *fitnah* (acumen), and *ḥazm* (determination). Mamluk political violence is "imaginary" in the Lacanian sense of the term; insofar as the hereditary principle is a symbolic feature par excellence—in the Lacanian sense—its abolition brings forth a politics of pure rivalry devoid of ideological content.[48]

How then to square this account of Mamluk politics with the historians such as al-Maqrīzī, Ibn Taghrībirdī, and Ibn Iyās? What remains is to examine the

Philipp and Haarmann (Cambridge, 1998), 17–31.

[48]The importance of the master-slave relation in various places and times in the Islamic Middle Ages is seen in Hodgson, and in Paul Forand's article "The Relation of Slave and Master in Medieval Islam," in *International Journal of Middle East Studies* 1 (1971): 59–66. Walter Andrews, in *Poetry's Voice, Society's Song* (Seattle, 1985), 90, wrote, "As the system of slavery grew to pervade the military and palace services, this peculiar master-slave relation appears to have become the dominant pattern of relationship throughout the central government. Even [free] born Muslims . . . came to define their relation to the *padishah* (monarch) as that of slave to master."

ideological role of this violence in the chronicles, for in the chronicles violence is given an ideological content.

NAKĀL: THE HARD KERNEL OF *JOUISSANCE*

Al-Maqrīzī´s account of a failed assassination plot against the first Burji sultan, al-Ẓāhir Barqūq, combines several of the preceding types of violence: attempted assassination, torture, and execution. An amir named ʻAlī Bāy al-Khazindār planned to assassinate Barqūq on the occasion of one of the rituals of Mamluk rule, the sultan´s annual opening of the Nile canal in Cairo. Al-Maqrīzī writes:

> When he [Sultan Barqūq] opened the canal as was the custom, he was accompanied by the amirs except for the amir ʻAlī Bāy the Khazindār. The latter secluded himself in his house for some days due to an illness that had befallen him—at least apparently—but harboring inside himself his murderous intention *(fatk)* towards the sultan. For he knew that when he descended to open the canal, he would pass by his house with the amirs, and so he plotted the assassination *(ightiyāl)* of the sultan.[49]

ʻAlī Bāy gathered a group of armed mamluks in his house ready to rush Barqūq and kill him as he passed, but the sultan was tipped off. The standards that marked his place in the parade were removed and the door of ʻAlī Bāy´s house bolted from the outside. By the time ʻAlī Bāy and his men got out, the sultan had already safely passed. In the mêlée that ensued ʻAlī Bāy´s mamluks deserted him and he hid in the heating room of a bathhouse, where he was apprehended. ʻAlī Bāy was tortured for two days to force him to reveal his collaborators, and then strangled.

If the political struggles per se were without ideological content, in al-Maqrīzī´s narrative we find rhetorical effects with certain broad ideological implications. The sentence in the translation above that begins ″The latter secluded himself in his house . . . ″ reads in Arabic: ″fa-innahu kāna qad inqaṭaʻa fī dārihi ayyāman li-maraḍ nazala bi-hi fīmā aẓharahu wa-fī bāṭin amrihi annahu qaṣada fatk bi-al-sulṭān.″ In his use of the verb *aẓhara* and the participle *bāṭin* al-Maqrīzī falls back on one of the most venerable rhetorical contrasts in medieval Arabic literature, that between what is exterior and apparent, *ẓāhir,* and what is interior and unseen, *bāṭin.*[50] The two terms are ubiquitous in the literature and are at once both rhetorical

---

[49]Al-Maqrīzī, *Sulūk,* 3:2:903.

[50]Whether the words are actually al-Maqrīzī´s or not is another matter—al-Maqrīzī was known to copy long tracts from other writers without attribution. See the *Encyclopaedia of Islam,* 2nd ed., article ″Al-Maḳrīzī″ by Franz Rosenthal, and ″Notes on the Early *Naẓar al-Khāṣṣ,*″ by Donald

and interpretive devices. In a broad sense they were key terms in a pervasive medieval worldview wherein *bāṭin* designates the unseen but real, while *ẓāhir* refers to mere appearance, which is often misleading.[51] And this is how al-Maqrīzī employs them here. In order to explain ʻAlī Bāy′s treachery, al-Maqrīzī writes:

> The reason for this it seems is that one of his private mamluks, his steward *(shādd sharāb khānātihi),* took an interest in one of the slave girls of the amir Aqbāy al-Turantāy, wanting from her that which a man wants from a woman. But problems arose between them and that got back to Aqbāy. So he seized him [ʻAlī Bāy′s mamluk] and gave him a violent beating. Then ʻAlī Bāy got angry and complained of him [Aqbāy] to the sultan, but the sultan paid no attention to him. . . . So he [ʻAlī Bāy] got angry about that, and it stirred in him a hidden sense of outrage *(al-baghy al-kāmin)*.[52]

This account of ʻAlī Bāy′s plot is preceded in the chronicles by an account of a polo match among the mamluks attended by the sultan exactly one week before it. The polo match was followed by a drunken party that scandalizes the austere sensibility of al-Maqrīzī, who concludes:

> It was a day of extreme infamy and repulsiveness; intoxicants were flaunted, and the mamluks *(al-nās)* publicly committed abominations and sins the likes of which had not been known. Learned people *(ahl al-maʻrifah)* surmised that the end was near, and this was so. From that day forward indecencies were committed in the land of Egypt, while modesty diminished.[53]

Al-Maqrīzī tells us that the sultan afterwards gave ″the commoners *(al-ʻāmmah)* permission to plunder the leftover food and drink.″[54] And he stresses that the sultan wanted to join in the drinking, but was advised to leave and go back to the Citadel. Moreover, the language describing the drunken mamluks′ behavior on this occasion emphasizes the publicity of it, in the strictest sense: ″tajāhara al-nās

---

Little, in *The Mamluks in Egyptian Politics and Society*, 226.

[51]Such a view, of course, finds justification in the Quran 57:3, where God is *al-Bāṭin*—″the Unseen.″

[52]Al-Maqrīzī, *Sulūk,* 3:2:903.

[53]Ibid., 902.

[54]Ibid.

min al-fuḥsh wa-al-maʿāṣī.″[55]

What emerges then in al-Maqrīzī is a moralizing narrative in which the public and visible turpitude of the drunken polo match party begets ʿAlī Bāy′s secret and disastrous assassination plot which also, al-Maqrīzī tells us, came about because of sexual indecencies. If we consider the rhetorical structure contrasting what is internal and unseen and what is external and apparent—his apparent illness but his unseen murderous intent, his secret hatred—the moralizing intent of al-Maqrīzī′s narrative is clear. Also apparent is the libidinal charge the violence carries; al-Maqrīzī′s narrative weaves from public turpitude (the polo match debauch) to private sins (fornication and hatred) and ends in public violence (attempted assassination).

Al-Maqrīzī concludes his account with—what else?—the torture and execution of ʿAlī Bāy: ″On Tuesday evening, the twenty-second [of Dhū al-Qaʿdah] ʿAlī Bāy was severely tortured in front of the sultan. His feet and knees were broken, and his chest was crushed. But he did not implicate anyone else. Then he was taken outside and strangled.″[56]

The rhetorical strategy that attempts to endow violence with a moral content is even more apparent in two other accounts from al-Maqrīzī. The first is the torture and execution of the disgraced vizier Ibn al-Salʿūs in the wake of al-Ashraf Khalīl′s assassination in 693/1293. Ibn al-Salʿūs, a Syrian, made many enemies with his techniques of raising revenues, and when his patron Khalīl was murdered, his days were numbered. The amir al-Shujāʿī arrested him and had him tortured in the Madrasah Ṣāḥibīyah. Al-Maqrīzī says the amir Lu'lu' al-Masʿūdī took charge of his torture:

> Every day he would lead him from the madrasah to the Citadel on a donkey, and the riffraff would accost him along the way with their worn out sandals saying, ″Master! Audit these for us!″ They

---

[55]The accounts of both the drunken polo party and the plot of ʿAlī Bāy in Ibn Taghrībirdī and Ibn Iyās repeat much of al-Maqrīzī′s text verbatim, though each writer adds a few details. After repeating al-Maqrīzī′s statement that the plot of ʿAlī Bāy ruined Barqūq′s relations with the mamluks, Ibn Taghrībirdī adds the now well-known piece of advice that Barqūq′s wife supposedly gave him: that he ought to make his mamluks *ablaq,* of four stripes, that is, composed of four different peoples: Mongols, Circassians, Greeks, and Turks (Ibn Taghrībirdī, *Nujūm,* 12:88). Ibn Iyās mentions al-Maqrīzī as a source, and then amplifies with his own observations. He tells the reader that the steward was one of ʿAlī Bāy′s favorites *(kān ʿazīzan ʿindahu)* and the number of blows he received from Aqbāy. And when ʿAlī Bāy goes to the sultan to complain, Ibn Iyās adds dialogue: ″So he [ʿAlī Bāy] got angry and he said, ′If you won′t take revenge for my mamluk, I will take revenge for him with my own hand′ (Ibn Iyās, *Badāʾiʿ al-Zuhūr,* 1:2:502–8).

[56]Al-Maqrīzī, *Sulūk,* 3:2:907.

> made him listen to every sort of nastiness, and he was subjected to inexpressible humiliations and punishments. This Lu'lu' owed his position to Ibn al-Sal'ūs. . . . Ibn al-Sal'ūs was nice to him and made him the inspector *(shādd)* of the *dīwān*s in Egypt. And he [Lu'lu'] advanced in his service to the point that he was almost like one of his deputies—Ibn al-Sal'ūs simply called him "Lu'lu'." But God decreed that he fall into his [Lu'lu's] hands, and he went to extremes to humiliate him.[57]

After he describes the killing of al-Nāṣir Faraj, a son of Barqūq who—like Rasputin—did not go easily, al-Maqrīzī writes:

> They stole his clothes and dragged his body out. Then they threw it on a pile of garbage rising up [below the Citadel in Damascus]. He was naked with only his underwear covering his private parts and his thighs, and his eyes were open. People passed by him—amirs and mamluks—but God had turned their hearts away from him. The rabble played with his beard and his hands and his feet all day Sunday as an exemplary punishment of him from God. For truly he had thought nothing of the majesty of God, and thus God showed him his omnipotence.[58]

The theme of the fall of the mighty was, of course, one dear to medieval historians for whom it provided confirmation of the "vanity of the worldly pursuits"—and possibly consolation for their own lack of power. Al-Maqrīzī, among the three historians, places special emphasis on it in his introduction to his work. Immediately after his *bismillah,* al-Maqrīzī writes: "Say 'Allāhumma, lord of lordship *(mālik al-mulk),* you give power to whom you will and you take it from whom you will, you make mighty whom you will and you humble whom you will. . . .'"[59] Al-Maqrīzī concludes by saying that God helps his faithful servants conquer kings and take the wealth that they [the kings] have gained merely through power and force, and these people then pass it on to their sons and their sons' sons, but, "When they diverge from the guidance their prophets have brought them, He inflicts upon them calamities and destruction, and He gives power over them to the scum of the rabble *(ra'ā' al-ghawghā')* . . . who, after gaining power, bring

[57]Ibid., 1:3:798.
[58]Ibid., 4:1:224.
[59]Ibid., 1:1:26.

down upon them ruin."[60] His introduction, which begins with *mālik al-mulk,* ends with *ra'ā' al-ghawghā,'* its obverse, and with it we have descended from the loftiest to the basest—the scenes of the drunken polo party and the corpse lying on the garbage heap seem precisely the sorts of scenes anticipated by the phrase *ra'ā' al-ghawghā'*. In fact, in his account of the death of al-Nāṣir Faraj, *ghawghā'* is the very word al-Maqrīzī uses. But another term is more important here.

In the accounts above, al-Maqrīzī twice uses the same word to explain the terrible punishment and torture suffered by the losers—*nakāl,* translated above in the instance of Ibn Sal'ūs rather weakly as "punishments." But in fact it means more than simply "punishment." In *Lisān al-'Arab* Ibn Manẓūr quotes al-Jawharī: "nakkala bi-hi tankīlan idhā ja'alahu nakālan wa-'ibratan li-ghayrihi."[61] Al-Maqrīzī employs the same term to describe the killing of al-Nāṣir Faraj. And we find Ibn Taghrībirdī using it much the same way when he describes the punishment of the two amirs Qutlubughā al-Fakhrī and Ṭashtamur Ḥimmiṣ Akhḍar by the sultan al-Nāṣir Aḥmad in Karak in 742/1342: "The sultan imprisoned Qutlubughā al-Fakhrī and Ṭashtamur Ḥimmiṣ Akhḍar in the citadel of Karak after he made a public spectacle of Fakhrī, who was grossly humiliated by the common people."[62]

The language the two historians use is Quranic. *Nakāl* and variants are found in the Quran in five places. In 2:65–66, God says, "You have learned of those among you who broke the Sabbath. We said to them, 'Be contemptible apes!' We made them an example *(nakālan)* to their contemporaries and to those who came after, and a lesson to the righteous." In 5:38, He says, "as for male and female thieves, cut off their hands as punishment for what they have earned as exemplary punishment from God." And in 79:25, "God smote him with a punishment in the hereafter and in this world."[63] Beyond the insistence of al-Maqrīzī and other writers on the exemplary nature of torture and execution—that they are signs from God—the language used to describe instances of torture and execution in the chronicles cannot help but resonate with the temporal deaths and eternal tortures God inflicts on unbelievers in the Quran. For these reasons, insofar as al-Maqrīzī, Ibn Taghrībirdī, and Ibn Iyās are successful in interpreting the violence this way, a consistent analogy emerges: Just as God inflicts horrible torments on unbelievers

---

[60]Ibid., 1:1:28.

[61]Ibn Manẓūr, *Lisān al-'Arab* (Beirut, n.d.), 11:677.

[62]Ibn Taghrībirdī, *Nujūm,* 10:68, l. 5. "Fa-sajana al-sulṭān Qutlubughā al-Fakhrī wa-Ṭashtamur Ḥimmiṣ Akhḍar bi-Qal'at al-Karak ba'da mā nakkala bi-al-Fakhrī wa-uhīna min al-'āmmah ihānatan zā'idatan."

[63]Yet there is some unintended irony in the way al-Maqrīzī uses the word in the case of Ibn Sal'ūs when he says that "he was subjected to inexpressible punishments" *(fa-yanzilu bi-hi min al-khazy wa-al-nakāl mā lā yu'baru 'anhu),* since *nakāl* means precisely a punishment from which a meaning/lesson (*'ibrah)* can be derived, as we have seen in the notice in the *Lisān al-'Arab.*

who defy him, so too are horrible torments inflicted on those who defy a sultan, an amir more powerful in the political hierarchy. The recurrence of a variety of epithets designating those at the base of this hierarchy of domination in these contexts—*arādhil, ra'ā', ghawghā'*—is not by chance either, as al-Maqrīzī signaled in his introduction. And, indeed, in addition to the term *nakāl* other elements of the vocabulary of punishment, torture, and humiliation in the Quran recur in the chronicles; variants of *'aqab, 'adhāb, hīn*—all used in the Quran—also are common in the chronicles. Whether the writer bewails the punishment meted out to a loser in this instance or lauds it as well deserved in another is to some extent irrelevant—the over-arching pattern is one of an oscillation between fascination and disgust with violence. For, indeed, had Baydarā succeeded, had 'Alī Bāy succeeded, had Minṭāsh succeeded—had any of the other rivals in the political game succeeded—the same moral could have been applied to their victims: the mighty man who falls because he is too much absorbed with matter of *dunyā* to the detriment of *dīn*. In other words, the ″moral″ is in large degree independent of the actual empirical events—that is, of the violence.

The violence then is ″excessive″ in this sense too: that it exceeds the attempt of the historian to inscribe it in some such explanatory myth, and it exceeds it precisely insofar as it reveals the ″truth″ of the social structure of Mamluk society—that the relation of master and slave is ultimately based on nothing but violence and death. *Nakāl,* we should say, should be understood not so much as ″exemplary punishment,″ but rather as ″exemplary violence.″ Insofar as it alternately fascinates and disgusts the chroniclers *nakāl* is the ″hard kernel of *jouissance,*″ the surplus enjoyment that sustains the ideological bond of the chroniclers. The sublime monuments of Mamluk architecture are built not only of sandstone, but also of blood.

Black Camels and Blazing Bolts: The Bolt-Projecting Trebuchet in the Mamluk Army

The Mamluks pioneered the use of gunpowder ordnance, but their principal piece of heavy artillery was ″the crushing, demolishing trebuchet″ (*manjanīq hādim haddād*).[1] In their campaigns of conquest, the Mamluks used substantial batteries of trebuchets, and Mamluk military science produced the only major technical treatise on the construction and operation of this form of artillery. The trebuchet (Arabic *manjanīq*, pl. *majāniq, manājīq, manājanīq,* and *majanīqāt*)[2] was the most powerful form of mechanical artillery ever devised. It consisted of a long tapering beam which pivoted near its butt-end around an axle mounted on top of a framework. At the end of the long arm of the beam, a sling was attached which held the missile. This was designed to open when the beam′s motion and position reached the desired state for discharge.

To launch a projectile, the beam—equipped with pulling-ropes at its short end—was set in a horizontal position. The operator of the machine readied the machine for launch by placing a projectile in the pouch of the sling. The sling had two ropes: one attached firmly to the end of the beam and the other looped over an iron prong extending from the tip of the beam. The alignment of the prong and the length of the sling were crucial to achieving maximum range. Human muscle force was applied to the pulling-ropes by a team of men—or, in some cases, women—while the operator guided the missile through the initial phase of the launch cycle. When the operator released the sling, a sudden surge of power was

[1]Muḥammad ibn Muḥammad Ibn Ṣaṣrá, *A Chronicle of Damascus, 1389–1397, by Muḥammad ibn Muḥammad Ibn Ṣaṣrá: The Unique Bodleian Library Manuscript of al-Durra al-Muḍī′a fī′l-Dawla al-Ẓāhirīya (Laud Or. MS 112)*, ed. and trans. William M. Brinner (Berkeley, 1963), 1:118, 2:85. On the development of gunpowder artillery by the Mamluks, see David Ayalon′s classic study *Gunpowder and Firearms in the Mamluk Kingdom: A Challenge to a Mediaeval Society* (London, 1956). This study of the bolt-projecting trebuchet has been supported by a grant from the National Endowment for the Humanities, an independent federal agency.

[2]On the Arabic term *manjanīq* denoting a trestle-framed trebuchet, see Paul E. Chevedden, ″The Artillery of King James I the Conqueror,″ in *Iberia and the Mediterranean World of the Middle Ages: Essays in Honor of Robert I. Burns, S.J.*, ed. Paul E. Chevedden, Donald J. Kagay, and Paul G. Padilla (Leiden, 1996), 47–94, esp. 59–61. On the Arabic terms *ʻarrādah* and *luʻbah,* denoting a pole-framed trebuchet, see below note 4, and note 57 and text. Other Arabic terms for the trebuchet are discussed throughout the article.

imparted to the beam, as the maximum force exerted by the pulling-crew took full effect. This action propelled the throwing arm skyward and allowed the looped end of the sling to fly free, thus hurling the missile from the sling.

In later versions of the trebuchet a weight was added to the butt-end of the beam. This weight was first used to counterbalance the weight of the long arm of the beam at discharge when the sling was loaded with a heavy stone shot. The horizontal counterbalancing of the two arms of the beam was an ergonomic innovation in artillery design that greatly improved the efficiency of the human-powered trebuchet. The human energy required to hold the beam in place at discharge was greatly reduced, thereby allowing a greater amount of force to be exerted by the pulling crew to accelerate the beam. The great turning point in the evolution of the trebuchet came with the introduction of the counterweight machine that utilized gravity power alone to accelerate the beam. The counterweight trebuchet replaced the pulling crew with a gravitating mass that was either fixed rigidly to the butt-end of the beam (Figs. 7, 8, 9, 11, 12) or was articulated to the beam′s end by means of a hinge in order to allow the counterweight to move freely (Figs. 5, 6, 10).[3]

Trebuchets fall into three broad categories: (1) traction trebuchets, powered by crews pulling on ropes (Figs. 1 and 2); (2) hybrid trebuchets, powered by crews that received a gravity assist (Figs. 3 and 4); and (3) counterweight trebuchets, powered by gravitational energy (Figs. 5–12). The supporting framework for the axle of all three types of trebuchets adhered to two basic designs: (1) a pole framework; and (2) a trestle framework. Pole-framed machines required a fork-mounted beam. Two different mounting systems were used: (1) a fork mount, or pivot yoke, that surmounted the pole frame and held the axle (Figs. 1 and 3); and (2) a forked beam, looking like the letter Y, that attached its fork arms to the ends of the axle affixed atop the pole frame (Fig. 6). Pole-framed machines needed less material to construct than trestle-framed ones and had the great advantage of being able to discharge stone-shot in any direction without requiring the framework to be repositioned. Both mounting systems of the pole-framed trebuchet—pivot yoke and rotating axle—enabled the machine to be aimed instantly in any required direction. Trestle-framed machines pivoted the beam on an axle supported by the two triangular trusses of the framework (Figs. 2, 4–5, 7–12). They could only be aimed at a new target with great difficulty. To point such machines just a few degrees to the right or to the left required a change in position of the entire

---

[3]An engineering analysis of the trebuchet that compares the principles of design and operation of traction-powered trebuchets with that of gravity-powered trebuchets is provided by Zvi Shiller in Paul E. Chevedden, Zvi Shiller, Samuel R. Gilbert, and Donald J. Kagay, ″The Traction Trebuchet: A Triumph of Four Civilizations,″ *Viator* 31 (2000): 433–86.

framework, which necessitated the expenditure of considerable labor. Although trestle-framed trebuchets were cumbersome and expensive, and were difficult to line up on a new target, they had the advantage of being sturdy and reliable.

DEVELOPMENT AND DIFFUSION OF THE TREBUCHET

The invention of the trebuchet was a unique discovery that was diffused from a single center of origin. China developed this powerful form of artillery between the fifth and fourth centuries B.C.E. From China, the two fundamental types of trebuchets—the traction-powered, pole-framed machine (Fig. 1) and trestle-framed machine (Fig. 2)—spread westward.[4] The new ordnance reached the eastern

[4]On the development and diffusion of the Chinese trebuchet, see Herbert Frankle, "Siege and Defense of Towns in Medieval China," in *Chinese Ways in Warfare,* ed. Frank A. Keirman, Jr., and John K. Fairbank (Cambridge, Mass., 1974), 151–201; Joseph Needham, "China's Trebuchets, Manned and Counterweighted," in *On Pre-Modern Technology and Science: Studies in Honor of Lynn White, Jr.,* ed. Bert S. Hall and Delno C. West (Malibu, Calif., 1976), 107–45; Sergei A. Shkoliar, "L'Artillerie de jet a l'époque Sung," in *Etudes Song: In memoriam Étienne Balazs,* series 1, *Histoire et institutions,* pt. 2, ed. Françoise Aubin (Paris, 1971), 119–42; idem, *Kitaiskaia doognestrelnaia artilleriia: Materialy i issledovaniia* (Moscow, 1980); Robin D. S. Yates, "Siege Engines and Late Zhou Military Technology," in *Explorations in the History of Science and Technology in China*, ed. Li Guohao, Zhang Mehgwen, and Cao Tianqin (Shanghai, 1982), 414–19; *Weapons of Ancient China*, ed. Yang Hong (New York, 1992); and Joseph Needham and Robin D. S. Yates, *Science and Civilization in China,* vol. 5, *Chemistry and Chemical Technology,* pt. 6, *Military Technology: Missiles and Sieges* (Cambridge, 1994). The Chinese developed an elaborate nomenclature for the trebuchet to identify many different types of trebuchets, but they divided all of these types into two basic categories according to the configuration of the framework of the machine: (1) the pole-framed machine, called a "Whirlwind" trebuchet *(xuan feng pao)* (Fig. 1); and (2) the trestle-framed machine, called a "Four-footed" trebuchet *(si jiao pao)* (Fig. 2). Thus, a binary nomenclature for the trebuchet was born. As the traction trebuchet was diffused across Eurasia and North Africa, a binary terminology, based on the framework of the machine, was used by all who adopted the new artillery. In Arabic, for example, the pole-framed trebuchet was designated an *ʿarrādah,* and later a *luʿbah* ("Plaything") (see below, note 57 and text); the trestle-framed trebuchet was called a *manjanīq* (see above, note 2). The employment of the *ʿarrādah* and the *manjanīq* by Islamic armies during the period 632 to 945 is examined by Hugh Kennedy in *The Armies of the Caliphs: Military and Society in the Early Islamic State* (London, 2001), 110–13, 133–36, 154, 155, 163, 184, 185, 189. In the Latin West, a variety of terms were used to refer to the trebuchet in both Latin and the European vernaculars, but a clear terminological dichotomy is evident prior to the introduction of gravity-powered artillery, based upon the configuration of the machine's framework. The most commonly used term to denote the pole-framed trebuchet was *manganellus* (mangonel), while the heavier trestle-framed machine was usually identified by the term *petraria* ("rock-thrower"). Scholars who have examined the nomenclature for artillery have erroneously concluded that the diversity of terms may reflect differences in the size of the machine, in the weight of the projectile discharged from it, or even fundamental differences in the kind of artillery employed (e.g., tension, torsion, or traction). In the era of human-powered artillery, the terminology was related to the most obvious design feature of the

Mediterranean during the sixth century C.E. and rapidly displaced the heavy artillery of the classical world. Widespread diffusion of the new artillery throughout the Mediterranean and the Middle East followed. Arabia was familiar with the pole-framed and trestle-framed trebuchet prior to the rise of Islam, and, during the century following the death of Muḥammad in 632, the armies of the Prophet carried the new artillery from the Indus to the Atlantic in a ballooning movement of conquests.[5] These conquests spurred innovations in weaponry that led to the

machine: its framework. Even with the introduction of the hybrid machine, trebuchet terminology underwent no fundamental change, since this terminology was based on the configuration of the framework of the machine, a component that remained unchanged regardless of whether the trebuchet was a traction or hybrid model. This explains why only a few languages—Armenian, Syriac, Latin, French, and Occitan—introduced new terms to identify the hybrid trebuchet. Arabic literary culture generally ignored the hybrid trebuchet, but Arabic oral culture did not. It was dubbed *al-ghaḍbān* (The Furious One), and this term for the hybrid machine entered both Armenian and Turkish (see below, note 60 and text). For a discussion of the terminology of the trebuchet and its meaning, see Chevedden, ″Artillery of King James I,″ 56-76; idem, ″The Hybrid Trebuchet: The Halfway Step to the Counterweight Trebuchet,″ in *On the Social Origins of Medieval Institutions: Essays in Honor of Joseph F. O′Callaghan,* ed. Donald J. Kagay and Theresa M. Vann (Leiden, 1998), 182, 198–212; idem, ″The Invention of the Counterweight Trebuchet: A Study in Cultural Diffusion,″ *Dumbarton Oaks Papers* 54 (2000): 71–116; and Chevedden et al., ″Traction Trebuchet,″ 433–86, esp. 452 (Table 3), 460–61, 474–84.

[5]On the development and diffusion of the trebuchet outside of China, the following studies are of fundamental importance: Guillaume Dufour, *Mémoire sur l′artillerie des anciens et sur celle du Moyen Age* (Paris, 1840), 87–112; Louis-Napoléon Bonaparte, *Études sur le passé et l′avenir de l′artillerie* (Paris, 1848–71), 2:26–61; Eugène-Emmanuel Viollet-le-Duc, *Dictionnaire raisonné de l′architecture du XI^e au XVI^e siècles,* (Paris, 1854–68), 5:218–42; Alwin Schultz, *Das höfische Leben zur Zeit der Minnesinger* (Leipzig, 1889), 2:363–93; Gustav Köhler, *Die Entwickelung des Kriegswesens und der Kriegführung in der Ritterzeit von Mitte des II. Jahrhunderts bis zu den Hussitenkriegen* (Breslau, 1886–89), 3:139–211; Sir Ralph Payne-Gallwey, *The Crossbow, Mediaeval and Modern, Military and Sporting: Its Construction, History and Management, with a Treatise on the Balista and Catapult of the Ancients* (London, 1903); Rudolf Schneider, *Die Artillerie des Mittelalters* (Berlin, 1910); Marco Polo, *The Book of Ser Marco Polo, the Venetian, Concerning the Kingdoms and Marvels of the East,* 3d ed., trans. and ed. Colonel Sir Henry Yule (London, 1926), 2:161–69; Bernhard Rathgen, *Das Geschütz im Mittelalter* (1928; repr., Düsseldorf, 1987), 578–638; Kalevero Huuri, ″Zur Geschichte des mittelalterlichen Geschützwesens aus orientalischen Quellen,″ in *Societas Orientalia Fennica, Studia Orientalia*, 9/3 (Helsinski, 1941); Claude Cahen, ″Un traité d′armurerie pour Saladin,″ *Bulletin d′études orientales* 12 (1947–48): 103–63; José Frederico Finó, ″Machines de jet médiévales,″ *Gladius* 10 (1972): 25–43; idem, *Forteresses de la France médiévale: construction, attaque, défense*, 3d ed. (Paris, 1977), 149–63; Donald R. Hill, ″Trebuchets,″ *Viator* 4 (1973): 99–115; Carroll M. Gillmor, ″The Introduction of the Traction Trebuchet into the Latin West,″ *Viator* 12 (1981): 1–8; D. J. Cathcart King, ″The Trebuchet and other Siege-Engines,″ *Chateau Gaillard* 9–10 (1982): 457–69; Randall Rogers, ″The Problem of Artillery,″ Appendix III of *Latin Siege Warfare in the Twelfth Century* (Oxford, 1992), 254–73; Peter Vemming Hansen, ″Experimental Reconstruction of a Medieval Trébuchet,″

development of the hybrid trebuchet (Figs. 3–4). The Byzantine Empire soon acquired this advanced piece of artillery, and by the second half of the ninth century it was being used in northern Europe.[6]

Another conquest movement, or more exactly an enterprise of reconquest, is likely to have led to the development of the counterweight trebuchet. In his efforts to reconquer Anatolia from the Saljuq Turks, Alexios I Komnenos (1081–1118) constructed large trebuchets, referred to as ἑλεπόλεις (*helepoleis*, "city-takers"), of several types, "but most of them were fashioned according to an unprecedented design of his own devising which amazed everyone."[7] The Byzantine emperor supplied the new artillery to the Latin Crusaders in 1097 to aid in the conquest of Nicaea in western Anatolia. During the twelfth century, the dynamics of conflict and contact quickly diffused the counterweight trebuchet throughout the Mediterranean and the Middle East. New terms arose to identify the machine that had started the gravity-powered revolution in artillery—the trestle-framed counterweight trebuchet. Arabic sources designated it a "big" trebuchet *(manjanīq kabīr)*, a "great" trebuchet *(manjanīq ʻaẓīm)*, or as a "huge" or "frightful" trebuchet *(manjanīq hā'il)*. During the thirteenth century, it was given a new Arabic name, the "Western Islamic" trebuchet *(manjanīq maghribī or manjanīq gharbī)*, perhaps reflecting a design improvement.[8] Syriac sources named the machine a "great"

Acta Archaeologica 63 (1992): 189–208; Paul E. Chevedden, Les Eigenbrod, Vernard Foley, and Werner Soedel, "The Trebuchet: Recent Reconstructions and Computer Simulations Reveal the Operating Principles of the Most Powerful Weapon of its Time," *Scientific American* (July 1995): 66–71; Chevedden, "The Artillery of King James I"; idem, "Hybrid Trebuchet"; George T. Dennis, "Byzantine Heavy Artillery: The *Helepolis*," *Greek, Roman and Byzantine Studies* 39 (1998): 99–115; Paul E. Chevedden, "Fortifications and the Development of Defensive Planning during the Crusader Period," in *The Circle of War in the Middle Ages*, ed. Donald J. Kagay and L. J. Andrew Villalon (Woodbridge, Suffolk, 1999), 33–43; idem, "Invention of the Counterweight Trebuchet"; and Chevedden et al., "Traction Trebuchet."

[6]On the development and diffusion of the hybrid trebuchet, see Chevedden, "Hybrid Trebuchet"; and Chevedden et al., "Traction Trebuchet."

[7]Anna Komnena, *Alexiade: Règne de l'empereur Alexis I Comnène (1081–1118)*, ed. and trans. Bernard Leib, Collection byzantine publiée sous le patronage de l'Association Guillaume Budé (Paris, 1937–45), 11.2.1. The learned monk Euthymios Zygabenos, a close associate of Alexios, ranks the emperor's new artillery with the works of Archimedes, the most famous inventor of ancient Greece. This suggests that an important breakthrough in the design and construction of the trebuchet was achieved at Nicaea. Given the imminent appearance of gravity-powered artillery, this breakthrough is most likely to have been the development of the first counterweight trebuchet (Euthymios Zygabenos, *Panoplia*, in *Patrologiae cursus completus, Series graeca*, ed. J.-P. Migne [Paris, 1857–66], 130:20). On the introduction of the counterweight trebuchet, see Chevedden, "Invention of the Counterweight Trebuchet."

[8]On the *manjanīq maghribī/gharbī*, a trestle-framed, gravity-powered trebuchet with a hinged counterweight, see Najm al-Dīn Ayyūb Aḥdab al-Rammāḥ, *Al-Furūsīyah wa-al-Manāṣib al-*

trebuchet *(manganīqē rawrbē),* and a Greek source called it a "great siege-engine" (μεγάλη μηχανή, *megalē mēkhanē*). In the Latin West, the new artillery was designated by the term "trebuchet," a diminutive form derived from the medieval Latin word *trabuc[h]us*. The term first appeared as *trabuchellus* in 1189, and a decade later *trabuchus* entered the record (Fig. 5).[9] Today the term "trebuchet" is used to refer to the entire class of artillery that draws its energy from a beam pivoted around an axle.

By the end of the twelfth century the diversification of the counterweight trebuchet into different forms had begun. In the Latin West, a pole-framed machine was introduced that had a bifurcated beam with two counterweights suspended from its fork arms. Its pivoting shaft and paired counterweights earned it its name, the *bricola,* or the "Two-Testicle" machine (Fig. 6), from the combination of the prefix *bi-,* "having two," and the Latin *coleus,* meaning testicle (Fr. *bricole,* It. *brìccola,* Oc. *bricola*, Catal. *brigola,* Cast. *brigola,* late L. *bric[c]ola,* Gk. *praikoula* or *prekoula*). In 1242 Emperor Frederick II of Hohenstaufen sent *bricola*s to the Levant, and soon thereafter (post 1250) the Mamluks incorporated this versatile piece of artillery into their siege arsenal, calling it the "Frankish" or "European" trebuchet (*manjanīq ifranjī* or *manjanīq firanjī*). Muslim engineers employed by the Mongols brought the *bricola* to China, where it was designated the "Muslim" trebuchet *(hui-hui pao).* Batteries of *bricola*s (sing. *manjanīq firanjī*) rained

Ḥarbīyah: al-Barūd, al-Nīrān al-Ḥarbīyah, al-Taqṭīr, al-Nīranjāt, ed. Aḥmad Yūsuf al-Ḥasan, Maṣādir wa-Dirāsāt fī Tārīkh al-'Ulūm al-Taṭbīqīyah, vol. 8 (Aleppo, 1998), 118, Fig. 71; Chevedden, "Artillery of King James I," 62–63, Figs. 7–9; idem, "Invention of the Counterweight Trebuchet," 106, Fig. 3; and below, note 32 and text. Since the *manjanīq maghribī* had a hinged counterweight, it is likely that the feature which distinguished it from earlier counterweight trebuchets was the hinged counterweight box or a new method for hanging the counterweight box with a hinge. It should be noted that the earliest extant illustration of a gravity-powered trebuchet, the double-propose machine described and illustrated by al-Ṭarsūsī, had a "hinged" counterweight consisting of a rope sack filled with stones held by three strong cords (Murḍī ibn 'Alī ibn Murḍī al-Ṭarsūsī [d. 589/1193], "Tabṣirat Arbāb al-Albāb fī Kayfīyat al-Najāh fī al-Ḥurūb min al-Aswā' wa-Nashr A'lām al-I'lām fī al-'Udad wa-al-Ālāt al-Mu'īnah 'alá Liqā' al-A'dā'" [Instruction of the masters on the means of deliverance in wars from disasters, and the unfurling of the banners of information: equipment and engines which aid in encounters with enemies], Bodleian MS Hunt. 264, fols. 133v–135r [hereafter cited as "Tabṣirah fī al-Ḥurūb"]); idem, "Tabṣirah fī al-Ḥurūb," Süleymaniye Library MS Ayasofya 2848 mü, fols. 100r–102r; idem, *Mawsū'at al-Asliḥah al-Qadīmah: al-Mawsūm Tabṣirat Arbāb al-Albāb fī Kayfīyat al-Najāh fī al-Ḥurūb min al-Anwā'* [sic] *wa-Nashr A'lām al-A'lām* [sic] *fī al-'Udad wa-al-Ālāt al-Mu'ayyanah* [sic] *'alá Liqā' al-A'dā',* ed. Karin Ṣādir [Beirut, 1998], 168–69, 256–57 [Fig. 12]; Cahen, "Traité," 119, 120, Pl.. 3, Fig. 14; and Chevedden, "Invention of the Counterweight Trebuchet," 87–90, 115–16, Fig. 1).

[9]For a discussion of the nomenclature of the counterweight trebuchet, see Chevedden "Artillery of King James I," 61–63, 68–76; Chevedden, "Invention of the Counterweight Trebuchet"; and Dennis, "Byzantine Heavy Artillery."

destruction on the cities of Fancheng (1272) and Xiangyang (1273), on the Han River in northwest Hubei province, and broke the power of the Song Empire (960–1279). On the high seas, the *bricola* was mounted on the poops of ships and was used to bombard coastal cities and fortresses.[10] Human ingenuity and engineering skill combined to produce yet another type of gravity-powered trebuchet. This new machine extended the capabilities of the trebuchet enormously; it enabled the machine to do what it had never done before: discharge immense bolts.

The Bolt-Projecting Trebuchet

The improved performance of the counterweight trebuchet presented new possibilities for artillery. Two additional contrivances, the counterweight and the elongated sling, enabled artillery to break free of many of the limitations of the traction-powered trebuchet. The high rotational velocity reached by the beam of a counterweight trebuchet and the wider range of rotation that was utilized to accelerate

---

[10]On Frederick II′s dispatch of *bricola*s to the Levant, see Caffaro, *Annali genovesi di Caffaro e de′ suoi continuatori*, ed. Luigi T. Belgrano and Cesare Imperiale di Sant′Angelo, Fonti per la storia d′Italia pubblicate dall′Istituto storico italiano, Scrittori, Secoli XII e XIII, nos. 11–14bis (Rome, 1890–1929), 3:128: ″Et cum inimici mari et terra cum machinis, prederiis (= *petrariis*), bricolis, scalis et aliis hedifficiis eorum infortunio ad locum Levanti pervenissent.″ On the Muslim engineers who brought the *bricola* to China and the role these machines played in forcing the surrenders of Fancheng in 1272 and Xiangyang in 1273, see Rashīd al-Dīn Faḍl Allāh Ṭabīb, *Jāmiʿ al-Tavārīkh,* ed. Bahman Karīmī (Tehran, 1338/1960), 1:651–52; idem, *Jāmiʿ al-Tavārīkh,* trans. John Andrew Boyle, *The Successors of Genghis Khan* (New York, 1971), 290–91; Arthur C. Moule, *Quinsai: With Other Notes on Marco Polo* (Cambridge, 1957), 70–78. Both Rashīd al-Dīn (1247?–1318) and Chinese historian Zheng Sixiao (1206–83) provide details on the heavy artillery used at the sieges of Fancheng and Xiangyang (modern-day Xiangfan). Rashīd al-Dīn identifies the most powerful pieces of artillery as ″European″ trebuchets (sing. *manjanīq firangī*), or *bricola*s (*Jāmiʿ al-Tavārīkh,* 1:651; *Successors of Genghis Khan,* 290), and Zheng, who calls the machines ″Muslim″ trebuchets *(hui-hui pao),* indicates that, ″in the case of the largest ones, the wooden framework stood above a hole in the ground″ (quoted in Needham and Yates, *Science and Civilisation in China*, 5:6:221). Since the *bricola* was the only counterweight piece of artillery that had a framework capable of being mounted in a hole in the ground and was commonly set up in this fashion, there is little doubt that Zheng is referring here to the *bricola*. The stone-shot launched by these machines weighed 150 *jin,* or 94.5 kilograms (208 lb) (Moule, *Quinsai,* 76), and Zheng states that, ″the projectiles were several feet in diameter, and when they fell to the earth they made a hole three of four feet deep. When [the artillerists] wanted to hurl them to a great range, they added weight [to the counterpoise] and set it further back [on the arm]; when they needed only a shorter distance, they set it forward, nearer [the fulcrum]″ (Needham and Yates, *Science and Civilisation in China*, 5:6:221). On the development and diffusion of the *bricola* and the *manjanīq ifranjī/firanjī,* see Chevedden, ″Artillery of King James I,″ 62–63, 68, 71–76, 79, 84, Fig. 11; idem, ″Invention of the Counterweight Trebuchet,″ 102–3, 106–10, Fig. 5; and below, notes 33, 34, 35, and 36, and text. *Elegant Book* (see note 13) includes two illustrations of the *bricola* (″Anīq,″ fols. 20r, 22r; *Anīq*, ed. ʿAbd al-ʿAzīz, 47, 51; *Anīq*, ed. Hindī, 97–98).

the beam made it possible to increase the length of the sling. By using a longer sling that was now driven by a constant or rotating load, the shooting potential of the machine was greatly improved, both in terms of the size of the projectile thrown and the range of the shot. The increased rotational velocity and greater rotational range of the beam also made it possible to substitute the standard trebuchet release mechanism—the sling—for a new release mechanism that enabled it to hurl projectiles never before launched by this type of artillery. With a few structural modifications, a stone-projecting, trestle-framed, counterweight trebuchet could be converted into a bolt-projecting machine and employed to discharge flaming bolts. A large blazing bolt hurled from a trebuchet was particularly suited for setting alight the wooden siege engines of an attacking army or burning the protective screens that shielded fortifications from bombardment.[11]

---

[11]The evolution of the trebuchet from stone-projector to bolt-projector follows in reverse order the development of the ancient catapult. The catapult, which developed from the hand-bow, was originally designed to launch bolts. It was eventually scaled up in size and adapted to hurl stone-shot. On the development of the catapult, see Erwin Schramm, *Die Antiken Geschütze de Saalburg* (1918; repr., Bad Homburg, 1980); E. W. Marsden, *Greek and Roman Artillery: Historical Development* (Oxford, 1969); idem, *Greek and Roman Artillery: Technical Treatises* (Oxford, 1971); Nicolae Gudea and Dietwulf Baatz, ″Teile Spätrömischer Ballisten aus Gornea und Orsova (Rumänien),″ *Saalburg Jahrbuch* 31 (1974): 50–72; Dietwulf Baatz, ″The Hatra Ballista,″ *Sumer* 33 no. 1 (1977): 141–51; idem, ″Das Torsionsgeschütz von Hatra,″ *Antike Welt* 9 no. 4 (1978): 50–57; idem, ″Recent Finds of Ancient Artillery,″ *Britannia* 9 (1978): 1–17, Pls. 1–5; idem, ″Teile Hellenistischer Geschütze aus Griechenland,″ *Archäologischer Anzeiger* (1979): 68–75; idem, ″Ein Katapult der *Legio IV Macedonica* aus Cremona,″ *Römische Mitteilungen* 87 (1980): 283–99; idem, ″Hellenistische Katapulte aus Ephyra (Epirus),″ *Athenische Mitteilungen* 97 (1982): 211–33; idem, ″Katapultteile aus dem Schiffswrack von Mahdia (Tunesien),″ *Archäologischer Anzeiger* (1985): 677–91; idem, ″Eine Katapult-Spannbuchse aus Pityus, Georgien (UDSSR),″ *Saalburg Jahrbuch* 44 (1988): 63–64; idem, ″Die Römische Jagdarmbrust,″ *Archäologisches Korrespondenzblatt* 21 (1991): 283–90; idem, *Bauten und Katapulte des römischen Heeres* (Stuttgart, 1994); Dietwulf Baatz and Michel Feugère, ″Éléments d′une catapulte romaine trouvée à Lyon,″ *Gallia* 39 (1981): 201–9; A. Bolt-projecting trebuchets played an important role in the Mamluk army, particularly in the campaigns of conquest that brought an end to the Crusader states in Syria. This new class of artillery was designated by the term *manjanīq qarābughrā* (the "Black Camel" trebuchet).[12] The most important technical treatise devoted to the trebuchet, Yūsuf ibn Urunbughā al-Zaradkāsh's *An Elegant Book on Trebuchets (Kitāb Anīq fī al-Manājanīq),*[13] written in 867/1462–63, offers a detailed description of the "Black Camel" trebuchet.

IBN URUNBUGHĀ'S BOLT-PROJECTING TREBUCHET

The steps that are required to convert a stone-projecting, trestle-framed, counterweight trebuchet into a bolt-projecting machine are explained by Ibn Urunbughā, the foremost authority on medieval artillery:

> If you want to shoot bolts *(nushshāb)*—some of which are filled with inflammable material *(al-nār)* and sticky gums (*or* resins) *(lizāqāt)* and others are not—from a trebuchet *(manjanīq)* [do as follows]. If you want that [i.e., to shoot bolts], put a hook *(kullāb)*[14] at the center of gravity *('idl)* of the bolt (*al-nushshāb*). The hook should be made

---

Military Equipment Studies 6 (1995): 5–59.

[12]The word *bughrā* is the Arabic form of the Turkish term for a camel stallion, *buğra*. The prefix *qarā-* is the Arabic form of the Turkish word for black *(kara),* which carries figurative meanings, often pejorative, but it can also mean "strong" or "powerful." On these Turkish terms, see Gerard Clauson, *An Etymological Dictionary of Pre-Thirteenth-Century Turkish* (Oxford, 1972), 317–18 *(buğra);* 643–44 *(kara);* J. H. Kramers, "Ḳarā," *The Encyclopaedia of Islam,* 2nd ed., 4:572.

[13]Yūsuf ibn Urunbughā al-Zaradkāsh, "Kitāb Anīq fī al-Manājanīq," Topkapı Sarayı Muzesi Kutuphanesi MS Ahmet III 3469/1. This treatise is the longest and most profusely illustrated work in any language dealing with the trebuchet. Two editions of this text have appeared. The first was edited by Nabīl Muḥammad 'Abd al-'Azīz under the title *Al-Anīq fī al-Manājīq* (Cairo, 1981), and the second was edited by Iḥsān Hindī under the title *Al-Anīq fī al-Manājanīq,* Maṣādir wa-Dirāsāt fī Tārīkh al-Taknūlūjiyā al-'Arabīyah, no. 4 [Aleppo and Kuwait, 1985]). This treatise is hereafter cited as "Anīq," and its two published editions as *Anīq,* ed. 'Abd al-'Azīz, and *Anīq,* ed. Hindī.

[14]The "hook" holds the loose end of the cord that is tied to the end of the throwing arm of the trebuchet. The "hook" is presumably attached to the loose end of the cord by a ring. The bolt is released when the ring at the end of cord frees itself from the "hook" during the launch cycle. This "hook" serves the same purpose as the device identified by Francesco di Giorgio Martini as a "nock" and probably resembled this component (see discussion below, "The Bolt-Projecting Trebuchets of Taccola and Francesco di Giorgio," and Fig. 12). In Arabic, the term "hook" can be applied to a variety of devices. Al-Ṭarsūsī uses the term "hook" *(khuṭṭāf)* to denote the prong, or style, that is fixed to the tip of the throwing arm to hold the loose end of the sling. This device may be bent or straight and looks nothing like a normal hook ("Tabṣirah fī al-Ḥurūb," Bodl., fols. 134v, 136v; "Tabṣirah fī al-Ḥurūb," Süleymaniye, fols. 97r, 100v; *Tabṣirah fī al-Ḥurūb,* ed. Ṣādir, 167, 169; Cahen, "Traité," 119, 120, 141, 142).

of iron. The hook will facilitate the lift-off (*yaḥmil*)[15] of the bolt (*al-sahm*) and effect the discharge (*ḍarb*) [16] [of the projectile]. The front part of the hook should face the head of the bolt (*nasl al-nushshāb*), and its back should face the fletching of the bolt (*rīsh al-sahm*). Then, after [doing] that, remove the pouch (*kaffah*) of the trebuchet and take out its first cord (*sā'id*)[17] [i.e., the cord attached to the loose

---

[15]The verb *ḥamala,* meaning ″to carry,″ ″to pick up″ (something in order to carry it), ″to lift,″ or ″to convey″ (something), is used to describe the launching operation of the bolt-projecting trebuchet. Al-Ṭarsūsī also uses the verb *ḥamala* to describe the launching of projectiles from trebuchets (″Tabṣirah fī al-Ḥurūb,″ Bodl., fol. 130r; ″Tabṣirah fī al-Ḥurūb,″ Süleymaniye, fol. 95r; *Tabṣirah fī al-Ḥurūb,* ed. Ṣādir, 163). The action associated with this verb perfectly describes the first two stages of the launch cycle of a trebuchet. A missile that is launched from a sling is first *carried* by the sling of the trebuchet as the loaded sling slides along the trough of the machine prior to lift off. When the sling leaves the ground at lift-off, the missile is *lifted* from the trough but continues to be *carried* by the sling as it rotates in a circular orbit around the extremity of the long arm of the beam before being released. In the case of the bolt-projecting trebuchet, the ″hook″ holds the loose end of the cord that is fastened to the end of the throwing arm of the trebuchet. Just like the sling, the ″hook″ can be viewed as *carrying* the bolt as it first *carries* the bolt along the trough during the first stage of the launch cycle and then facilitates the *lift-off* of the bolt during the second stage of the launch cycle. The bolt enters the third stage of the launch cycle, the ballistic phase, when the loose end of the cord frees itself from the ″hook.″ In the context of hurling a missile from a trebuchet, the verb *ḥamala* means ″to carry″ (a projectile along the running-path of the trough), ″to facilitate lift-off″ (of a projectile), or simply ″to shoot″ or ″to discharge″ (a projectile), in the sense that a trebuchet can be said *to carry* a projectile a specified distance or in a specified way. The subsequent use of the verb *ramá,* meaning ″to throw″ or ″to hurl,″ to describe the launching of a bolt from the *qarābughrā* seems to indicate that the author seeks to establish a difference between the two initial stages of the launch cycle and the ballistic stage.

[16]According to Hindī, *ḍarb* (″discharge,″ ″shooting″) designates the projectile *(maqdhūf)* of the machine (*Anīq,* ed. Hindī, 45 n. 10). He cites Reinhart Dozy, *Supplément aux dictionnaires arabes* (Leiden, 1881; repr., Leiden, 1967), 2:6, as the source of this information, but Dozy provides no such translation for *ḍarb*.

[17]Hindī believes that the term *sā'id* (pl. *sawā'id*) refers to the rotating beam of the trebuchet (*Anīq,* ed. Hindī, 41 n. 9, 42 n. 2, 43 n. 9, 44 nn. 1 and 5, 45 n. 6). This term, which means ″forearm,″ refers specifically to the two sling cords of a trebuchet. This is made abundantly clear in Ibn Shaddād′s account of the Mongol siege of al-Bīrah (Birecik) in 674/1275. The Mongol battery of trebuchets bombarding the city was commanded by a Muslim artillerist who presumably had been impressed into Mongol service against his will. At the height of the siege, he seized an opportunity to betray his new masters. As the city defenders were attempting to bring counter-battery to bear upon the Mongol artillery, they persistently overshot their mark. Realizing that a simple adjustment to the sling cord would correct for overshooting, the Muslim artillerist shouted in Arabic to the operator of a trebuchet inside al-Bīrah and directed him to shorten the sling cord *(sā'id)* of his trebuchet by a cubit. When he had made this adjustment, the range of his shot was reduced, and he was able to make a direct hit on a Mongol trebuchet. This episode illustrates that medieval artillerists knew full well that slings of different lengths provided variations in trajectory

> end of the sling]. Then, attach the hook to the second cord [i.e., the cord fixed to the end of the throwing arm] and launch it (*tarmī bi-hi*), and it will hit the target you want, if God wills. This account of ours is a compete [description of the] operation of the trebuchet which is known as the "Black Camel" (*qarābughrā*).[18]

Although the text clearly states that the "Black Camel" trebuchet is a bolt-projecting machine, Iḥsān Hindī, who edited *Elegant Book,* asserts that "it is a type of trebuchet specifically designed for hurling stone-shot."[19] *Elegant Book* describes and illustrates three trebuchet incendiary bolts, providing detailed information on the type of projectiles that were discharged from a *qarābughrā*.[20] Three illustrations of the *qarābughrā* appear in *Elegant Book,* but they are difficult to interpret. The machine depicted is not designated a *qarābughrā,* but a *ziyār,* a machine identified in *Elegant Book* as a base-mounted, two-armed torsion catapult.[21] All three

---

and range (ʻIzz al-Dīn Muḥammad Ibn Shaddād, *Tārīkh al-Malik al-Ẓāhir,* ed. Aḥmad Huṭayṭ [Wiesbaden, 1983], 125). The trebuchet was apparently viewed as a metonymic extension of the human arm, since the trebuchet both closely resembles the human arm and operates in much the same way as the human arm. The long bone of the arm, the humerus, closely resembles the throwing arm of the trebuchet. The two thinner bones of the forearm, the radius and ulna, resemble the two sling cords of a trebuchet. The terminal part of the arm, the hand, bears a likeness to the pouch of the sling, since it both holds and releases the projectile. In addition, the mechanical properties of the human arm and the trebuchet have a marked resemblance to one another, because both the trebuchet and the human arm operate as a lever system. The pivoting motion of the trebuchet mimics the human arm in the act of throwing. The beam, resembling the humerus, pivots on its axle and sets in motion the sling, which is swung on its pivot around the extremity of the throwing arm, imitating the action of the elbow and the forearm. The energy flow process of the trebuchet and the human thrower is also similar. Potential energy given to the counterweight is converted into kinetic energy as it passes from the throwing arm to the sling and finally to the projectile. Similarly, energy supplied by muscle in the human thrower comes down the upper arm and acts to bend the arm at the elbow enabling the hand to move upward and downward in the act of throwing. For other parallels that contemporaries drew between human anatomy and the trebuchet, see Chevedden, "Artillery of King James I," 73–74, Pls. 14–15; Chevedden et al., "Traction Trebuchet," 446; and note 10 above and text.

[18]"Anīq," fol. 3v; *Anīq,* ed. ʻAbd al-ʻAzīz, 26; *Anīq,* ed. Hindī, 45.

[19]*Anīq,* ed. Hindī, 46 n. 1. In his discussion of the bolt-projecting trebuchet, Hindī again insists that the *qarābughrā* launches stone-shot, while the *ziyār* launches bolts (*Anīq,* ed. Hindī, 94). Hindī also identifies the *qarābughrā* with the trestle-framed, stone-projecting trebuchet referred to as a "Turkish" trebuchet *(manjanīq turkī)* in *Elegant Book* (*Anīq,* ed. Hindī, 110).

[20]"Anīq," fols. 53v–54r; *Anīq,* ed. ʻAbd al-ʻAzīz, 117–19; *Anīq,* ed. Hindī, 185–87.

[21]"Anīq," fol. 33r; *Anīq,* ed. ʻAbd al-ʻAzīz, 73; *Anīq,* ed. Hindī, 109–10: a crude drawing of a *ziyār,* depicted as a bolt-projecting, two-armed torsion catapult mounted on a cruciform base, is shown together with a pole-framed traction trebuchet and a trestle-framed counterweight trebuchet atop a fortress tower. The projectile of the machine is a large bolt or shaft, identified by the term,

illustrations reveal an engine that is a true Frankenstein monster of medieval artillery. Two disparate species of artillery are combined in a single drawing. A torsion catapult and a bolt-projecting, trestle-framed trebuchet are united into one machine. The numerous drawings of trebuchets and other siege engines in *Elegant Book* indicate a high degree of technical competence, so the composite creations representing a bolt-projector do not appear to be the result of a casual or accidental act. Still less do they appear to be the result of inexperience or ineptitude on the part of the illustrator. Rather, it seems, the illustrator set out to deliberately produce in a single drawing two different types of bolt-projecting artillery used by the Mamluk army: the *ziyār* and the *qarābughrā.* Drawings of machines dating from the classical and medieval periods often incorporated multiple perspectives in the same figure. The draftsman could include, all in one diagram, the plan of a machine, its two side elevations, as well as its front and rear-elevations, making it very difficult for the modern researcher to interpret. Our illustrator has gone a step further and created a bastard machine by fusing two machines into one. This experiment, like Dr. Frankenstein′s, does not appear to have been very successful, although anyone with a sound knowledge of artillery construction would likely have been able to make out the meaning of the drawing.

Two of the illustrations of the bastard bolt-projector show a single, vertically-mounted torsion spring set in the center of one of the trusses of the trestle frame of a trebuchet (Figs. 7–8), while a third illustration shows a single, horizontally-mounted torsion spring positioned halfway up one of the trusses of a trestle-frame (Fig. 9). Although the illustrations are a fusion of incongruous elements, the features that are most characteristic of a *qarābughrā* predominate: a trestle framework, a beam with a counterweight fixed rigidly to its butt-end, a windlass for hauling down the beam, and a trough loaded with a bolt. The famous Sienese engineers Mariano di Iacopo, known as Taccola (1381–ca. 1458), and Francesco di Giorgio Martini (1439–1502) have fortunately provided a number of fairly accurate illustrations of the ″Black Camel″ trebuchet.[22]

---

kazz. This word may be derived from ξυσ–τον *(xus-ton),* the Greek term for ″shaft,″ ″spear-shaft,″ or ″spear.″ On *kazz,* mistranscribed as *karr,* see Abū al-Faraj ʻAbd al-Raḥmān ibn ʻAlī Ibn al-Jawzī, *Al-Muntaẓam fī Tārīkh al-Mulūk wa-al-Umam* (Hyderabad, 1360/1940), 10:169. The machine known as the *Kashk-anjīr* (″Battlement-Piercer″), a bolt-projecting, two-armed torsion catapult mounted on a cruciform base, is related structurally to the *ziyār* (″Anīq,″ fol. 23r, 33v, 35r; *Anīq,* ed. ʻAbd al-ʻAzīz, 53, 74, 77; *Anīq,* ed. Hindī, 103–8). Al-Ṭarsūsī identifies the *ziyār* as a base-mounted bolt-projecting tension catapult. He describes and illustrates a single-bolt *ziyār,* a multiple-bolt *ziyār,* and a compound pulley for spanning a *ziyār* (*Tabṣirah fī al-Ḥurūb,* ed. Ṣādir, 118–23, 245–47, Figs. 1–3; Cahen, ″Traité,″ 108–10, 129–32, 151–52, Pl. 1, Figs. 1–3).

[22]Mariano Taccola, ″De ingeneis″ (ca. 1419–50), Munich, Bayerische Staatsbibliothek Codex CLM 197 II, fol. 68v: trebuchet with hinged counterweight launching a single bolt (reproduced in

THE BOLT-PROJECTING TREBUCHETS OF TACCOLA AND FRANCESCO DI GIORGIO

Taccola′s bolt-projector is a trestle-framed trebuchet with a hinged-counterweight (Fig. 10). The throwing arm terminates in a special four-pronged appendage that holds four ″sling″ ropes for the simultaneous discharge of four bolts. For simplicity′s sake, the illustrator has only drawn one of the bolts. Above the four-pronged appendage of the beam is an insert showing details of a two-tined fork for the throwing arm. A caption underneath the insert reads, ″It [the component shown above] shall be placed on the end of the beam *(mictatur in stilo istius pertice).″* Taccola′s illustration of the bolt-projecting trebuchet is the earliest depiction of the machine and the most accurate. The four-tined throwing arm shown in the illustration may have been a less than optimal design for the bolt-release mechanism, due to the close proximity of the ″sling″ ropes, but the two-tined fork that is depicted appears to be able to actuate the discharge of two bolts with adequate success.

Francesco di Giorgio′s illustration of a bolt-projecting trebuchet carries more than a caption title; it is accompanied by a full-length description of the machine,

MS 34,113, fol. 219v: trebuchet with hinged counterweight and forked appendage at tip of beam; and Anon. Raccolta Artist Engineer, ″Raccolta di città e macchine″ (ca. 1490s), Florence, Biblioteca Nazionale Centrale, Codex Magliabechiana II I 141 part 3, fol. 195v: trebuchet with fixed counterweight and forked attachment at tip of beam launching two bolts (reproduced in Chevedden, ″The Artillery of King James,″ Fig. 10). For information on the manuscripts and drawings of Francesco di Giorgio Martini, see Gustina Scaglia, *Francesco di Giorgio: Checklist and History of Manuscripts and Drawings in Autographs and Copies from ca. 1470 to 1687 and Renewed Copies (1764–1839)* (Bethlehem, Penn., and London, 1992).

which reads as follows:

> If we want to shoot bolts in another way, we first have to make a base frame composed of large and firmly-fastened beams of wood, above which two other beams of wood are nailed in an upright position and set a foot apart from each other. Between them [the uprights] is put a squared beam [counter]balanced like [the beam of] a trebuchet. The beam is twenty-five feet or more in length and has a [counterweight] box on top of its [butt-]end secured by iron straps. At the tip of the beam is a fork with three rings. The two lateral rings [of the fork] have a cord attached to them that is connected to the nock of the bolts, and the middle ring is connected to the serpentine lever [of the catch-and-trigger device], which is pulled up [to free the beam] after the beam has been elevated by a capstan. So, by elevating the [counterweight] box to the height at which gravitational energy [can be effectively employed], and by lifting the curved release, the bolts are discharged with great force because of the recoil of the [counterweight] box as it falls on the cords [stretched between the two uprights] below.[23]

Francesco′s illustration accompanying his description of the bolt-projecting trebuchet (Fig. 11) shows heavy cords wound around the lower portion of the uprights of the machine that act as a buffer for the descending beam. The buffer provides a safeguard against a movement of the beam that would damage the mechanical pull-back system of the throwing arm. This pull-back system is made up of two ropes that run from the top of the counterweight box to a capstan positioned behind the base frame of the machine. Incorporated in the system is a horizontal bar placed above the axle of the beam that redirects the ropes downward to the base frame where a set of rollers sends the ropes in the direction of the

---

[23]Francesco di Giorgio, *Trattati di architettura,* 1:227: ″Se in altro modo i dardi trar vorremo, faccisi in prima un pavimento di grosse e ben commesse travi, sopra delle quali due altri diritti legni fermarai d′altezza piè vinti quattro, in distanzia uno piè dall′una e l′altra. Infra le quali una quadrata trave bilicata a guisa di trabocco, in longhezza piei vinticinque o più, in nella testa da piè una cassa con corregge di ferro collegata, e nella sua sommità uno forcone con tre anelli, e ai due che di fuore sono sia accomandato un pezzo di canape a ciascuno ch′el groppo loro a la bolgionella de′ dardi si riferischi, e all′anello di mezzo al lasso sia accomandato, ch′è dopo l′azar della tirata trave che all′argano tirare bisogna. Elevandosi la cassa dell′altezza della gravedine el lasso lassando i dardi potentemente trae per la repercussione della cadente cassa che ne′ canapi dappiè ribatte.″ I thank Silvia Orvietani Busch of the University of California at Los Angeles for her generous help in the translation of this passage. I alone am responsible for any errors.

capstan. This pull-back system fails to utilize the mechanical advantage that would be gained by the use of a lever. Worse, it requires the insertion of a cross-member that is placed in the direct path of the beam. A buffer must therefore halt the beam before it crashes into this component. This resolves one problem but creates another. With each discharge the beam would forcibly strike the buffer. Repeated blows would shake the machine apart. Design flaws—even catastrophic ones, such as this—are not altogether uncommon in the works of the great Italian Renaissance engineers, such as Taccola, Francesco di Giorgio, and Leonardo da Vinci. However, such flaws are not likely to have been repeated in workshops where heavy artillery was built. Here experienced craftsmen with a sound knowledge of artillery construction exercised control over production, not ″engineer-artists/authors″ whose kaleidoscopic interests occasionally overshot their technical skills.

Another problem with Francesco′s bolt-projecting trebuchet is the short span of the axle, a mere foot, which would have been quite detrimental to the lateral stability of the machine. Counterweight trebuchets were commonly constructed with wide axles to provide better lateral stability for the axle of the machine.[24] An axle measuring only a foot would have made it quite impossible for the counterweight box to pass between the uprights of the machine, despite the fact that Francesco′s illustration indicates that this was feasible. In addition, a gap of only a foot between the uprights does not provide adequate space for the two bolts positioned for launch at the base of the machine (Fig. 11). Another illustration of a bolt-projecting trebuchet, one by an anonymous artist-engineer that is based upon Francesco′s drawing, depicts a wider axle for the machine (Fig. 12). This axle is supported upon a trestle framework that is far more robust than the vertical posts depicted in Francesco′s drawing.

The anonymous artist-engineer has improved some features of Francesco′s machine and drawn others more distinctly. The release mechanism for the bolts in Francesco′s drawing is deficient in its details, making it impossible to determine how the bolts were discharged (Fig. 11). This feature is clearly represented by the anonymous artist-engineer. The device, identified by Francesco as a ″nock,″ is shown to consist of a tube, or sleeve, that is fitted over each of the bolts at the balance point (center of gravity). A notch on the upper side of the ″nock″ holds the loose end of the cords. The fixed end of the cords is attached to the outer prongs of the forked appendage at the end of the throwing arm of the trebuchet (Fig. 12). The bolts are projected during the launch cycle when the loose ends of the cords are freed from the ″nock.″ This device performs the same function as the ″hook″ on the bolts of Ibn Urunbughā′s machine (see above).

---

[24]Chevedden et al., ″Traction Trebuchet,″ 447, 453–54.

The anonymous artist-engineer has provided Francesco′s machine with a more efficient mechanical pull-back system for the throwing arm, one that utilizes leverage. A single rope, threaded through a roller at the base of the machine, runs from the end of the beam to the capstan. The catch-and-trigger device for both machines consists of an S-shaped (serpentine) lever that is pivoted backward. This device is so crudely depicted in Francesco′s original drawing that the lever cannot be pivoted backward (Fig. 11), but the anonymous artist-engineer has delineated it accurately so that it can be turned (Fig. 12).

One component that remains unchanged is the buffer. Since the version of the machine drawn by the anonymous artist-engineer has no cross-member obstructing the path of the beam, the sole purpose of the buffer is to stop the throwing arm before it reaches a fully upright position. Francesco apparently believed that the recoil of the counterweight box against this buffer served in some way to discharge the bolts. In fact, such recoil would shake the machine to pieces. Furthermore, it is not the breaking action of the buffer and the recoil of the beam that effects the discharge of the bolts, but gravitational energy as it flows from the counterweight box to the beam, to the cords, and finally to the bolts. The presence of the buffer seems to indicate that Francesco held the view that the pivoting beam of the trebuchet must be halted before it reached a fully vertical position in order for the bolts to fly free from the two cords attached to the throwing arm. The buffer prevents the full range of the beam′s rotation from being utilized to hurl the bolts, since the buffer halts the beam before it can reach a fully upright position. Taccola′s drawing of the bolt-projecting trebuchet shows no such buffer for the beam (Fig. 10), and Ibn Urunbughā makes no mention of one in his description of the *qarābughrā* (see above).[25] It is unlikely, therefore, that the bolt-projecting trebuchet was furnished with a buffer for the beam, a device that would have hampered the operation of the machine.

Nomenclature of the ″Black Camel″ Trebuchet

The nomenclature of the ″Black Camel″ trebuchet presents a problem. Ibn Urunbughā is almost alone in identifying the bolt-projecting trebuchet by the term ″Black Camel″ *(qarābughrā)*. The only other Arabic work that adopts this designation for the bolt-projecting machine is *Sīrat al-Sulṭān Jalāl al-Dīn Mankubirtī* by Muḥammad ibn Aḥmad al-Nasawī, which was produced in a Persian cultural milieu.[26] All other Arabic historical sources refer to this engine as the ″Black Bull″

---

[25]On the question of whether Francesco′s bolt projecting trebuchet, as well as many of his other ″ingenious devices,″ were ever meant to be actually operated, see Scaglia, *Francesco di Giorgio,* 9–10. For Taccola′s drawing of the bolt-projecting trebuchet, see note 22 above.

[26]Muḥammad ibn Aḥmad al-Nasawī, *Sīrat al-Sulṭān Jalāl al-Dīn Mankubirtī,* ed. Ḥāfiẓ Aḥmad

(qarābughā) trebuchet, a corruption of the original term.[27] *Qarābughrā* is clearly the parent term, since *Elegant Book,* a technical treatise, employs this word, as does the first historical source to refer to the bolt-projecting trebuchet, al-Nasawī's *Sīrat Jalāl al-Dīn*. The romance cognate *caraboha* and its kindred terms *carabouha, carabaga, carabaccani,* and *carabachani* are all derived from *qarābughā* ("Black Bull"),[28] not from *qarābughrā* ("Black Camel").

The Turkish name for the bolt-projecting trebuchet may be linked to an association of the trebuchet with the camel that is also found in Arabic. One of the Arabic synonyms for a trestle-framed trebuchet *(manjanīq)* was *khaṭṭārah,* a word applied originally to a stallion-camel engaged in the action termed *khaṭarān,* the raising of its tail time after time which happens during bouts with rival camels. A connection was made in Arabic between the camel's tail being raised repeatedly and the motion of the throwing arm of a trebuchet as it goes through its launch cycle.[29] Although it seems sensible to establish a link between the camel-trebuchet connection in Arabic and that in Turkish, there is no absolute necessity to postulate such a relationship. The Turkish language appears to have associated the camel with the trebuchet in a semantic context related to the power of the machine, not to its operation. The camel stallion was one of the totem animals of the Turks, and this fact alone may explain why it was coupled with the most powerful form of artillery. The Turkish dynasty of the Ilek-Khans or Qarakhanids, which ruled over the regions of Eastern and Western Turkestan from 992 to 1212, commonly used

27David Ayalon, "Ḥiṣār," *EI²,* 3:473.

28The word *bughā* is the Arabic form of the Turkish term for bull, *buğa* or *buka* (Clauson, *Pre-Thirteenth-Century Turkish,* 312).

29Edward W. Lane, *An Arabic-English Lexicon*, (London, 1863–93), s.v. *khaṭara;* Hill, "Trebuchets," 100; and Kennedy, *Armies of the Caliphs,* 110. When the Umayyad Caliph Yazīd I besieged Mecca in 64/683, he employed a trestle-framed, traction trebuchet called *Umm Farwah* (Mother of Hair) that was described by the poet al-Zubayr ibn Khuzaymah al-Khath'amī as a *khaṭṭārah:* "raising its tail [i.e., beam] like a raging stallion camel *(khaṭṭārah mithla al-fanīq al-muzbid)"* (Abū Ja'far Muḥammad ibn Jarīr al-Ṭabarī, *Tārīkh al-Rusul wa-al-Mulūk [Annales]*, ed. Michael Jan de Goeje et al., 3 series, 15 vols. [Leiden, 1879–1901], 2:426 [the reference is to series and page number, not to volume and page number]; idem, *Tārīkh,* trans. I. K. A. Howard, *The History of al-Ṭabarī [Tārīkh al-rusul wa'l-mulūk],* vol. 19, *The Caliphate of Yazīd b. Mu'āwiyah,* SUNY Series in Near Eastern Studies, Bibliotheca Persica [Albany, 1990], 224). The poet Abū Ya'qūb al-Khuraymī also refers to the trebuchet as a *khaṭṭārah* in his description of defensive artillery at Baghdad during al-Ma'mūn's siege of the city in 197–98/812–13. "In every gated street and on every side," the poet relates, was a *khaṭṭārah* that launched stone-shot the size of a man's head, and the barrage was so intense that the projectiles resembled "flocks of dusky sand grouse taking flight in commotion" (al-Ṭabarī, *Tārīkh,* 3:877; idem, *Tārīkh,* trans. Michael Fishbein, *The History of al-Ṭabarī (Tārīkh al-rusul wa'l-mulūk),* vol. 31, *The War Between Brothers*, SUNY Series in Near Eastern Studies, Bibliotheca Persica [Albany, 1992], 145–46).

a totemistic title formed from the term for a camel stallion, Bughra Khān.[30] The Turkish prefix *qarā-* (literally ″black″) carries the figurative meaning of ″strong″ or ″powerful″ and serves to intensify the meaning of *bughrā,* a term which on its own communicates the idea of power actively and efficiently displayed. Since the trebuchet was an instrument of enormous power, it was given a name in Turkish that symbolized great physical strength and energy.

The Turkish origin of the term *qarābughrā* suggests a Turco-Islamic origin for the bolt-projecting trebuchet. It may have emerged in the sultanate of the Great Saljuqs or in one of the Atabeg or Turkish principalities of western Asia. Alternatively, the Qarakhanids, who made the camel part of their regnal titles, may have invented the machine. As the western realms of the Qarakhanids passed into Saljuq and Khwarazm Shah spheres of influence, these two states may have acquired the bolt-projecting trebuchet and effected its diffusion westward.

THE ″BLACK CAMEL″ TREBUCHET IN MIDDLE EASTERN HISTORICAL SOURCES

Arabic historical chronicles identify the *qarābughrā,* usually under its corrupt form *qarābughā,* as being used in six sieges. In 626/1229, the last Khwarazm-Shah, Jalāl al-Dīn Mengübirti, became the first recorded military leader to employ a *qarābughrā* in his six-month siege of Akhlāṭ.[31] When the Ayyubid Sultan al-Malik al-Ṣāliḥ Najm al-Dīn Ayyūb laid siege to Homs in the winter of 646/1248–49, he employed a battery of artillery consisting of two trestle-framed, counterweight trebuchets—a bolt-projecting *qarābughrā* and a stone-projecting *manjanīq maghribī* (Western Islamic trebuchet)—and twelve ″Devilish″ traction machines *(majānīq al-shayṭānīyah).*[32] In 684/1285, the Mamluk Sultan Qalāwūn besieged the Hospitaller fortress of al-Marqab (Margat) with three *qarābughrā*s, three *bricola*s, identified as ″Frankish″ or ″European″ trebuchets *(majānīq firanjīyah),* and four traction trebuchets *(majānīq shayṭānīyah).*[33] In 688/1289, he attacked the

Nabīlah 'Abd al-Mun'im Dāwūd (Baghdad, 1991), 71; and Ibn al-Furāt, *Tārīkh,* 8:112. See the excellent article by Donald P. Little, which analyzes the Arabic accounts of the siege of Acre in great detail, "The Fall of 'Akkā in 690/1291: The Muslim Version," in *Studies in Islamic History and Civilization in Honour of Professor David Ayalon,* ed. Moshe Sharon (Jerusalem and Leiden, 1986), 159–81. Little's student Andreas D'Sousa has also produced an important study of the siege of Acre comparing Christian and Muslim sources, "The Conquest of 'Akkā (690/1291): A Comparative Analysis of Christian and Muslim Sources," *Muslim World* 80 (July–October 1990): 234–50.

[36]Al-Jazarī, *Ḥawādith al-Zamān,* 1:109; *Beiträge zur Geschichte der Mamlukensultane in den Jahren 690–741 der Higra, nach arabischen Handschriften,* ed. Karl V. Zetterstéen (Leiden, 1919), 16; Ibn al-Dawādārī, *Kanz,* 8:333; Mufaḍḍal Ibn Abī al-Faḍā'il, *Al-Nahj al-Sadīd wa-al-Durr al-Farīd fīmā ba'da Tārīkh Ibn al-'Amīd,* ed. and trans. Edgar Blochet, "Histoire des Sultans Mamlouks," *Patrologia Orientalis* 14, no. 3 (1920): 553; al-Nuwayrī, *Nihāyat al-Arab,* 226; and Ibn al-Furāt, *Tārīkh,* 8:136. All of the accounts of the siege of Qal'at al-Rūm that provide an enumeration of the several types of trebuchets used against this castle suffer from textual corruption. The most authoritative account appears to be that of al-Jazarī, who relates information received from two eyewitnesses to the siege, Amir Shams al-Dīn Abū al-Bayyān, known as Ibn al-Miḥaffadār, Amīr Jandār (armor bearer or guard officer), and his son Amir Sayf al-Dīn. The version of the siege in the anonymous chronicle edited by Zetterstéen is based on al-Jazarī's account, and the later accounts of the siege by Ibn al-Dawādārī and the Christian historian al-Mufaḍḍal Ibn Abī

sources give an enumeration of the different types of artillery used in a siege, so the actual use of *qarābughrā*s was probably far more numerous than the extant sources suggest.

al-Faḍā'il, appear to be unsuccessful attempts to resolve the textual problems of al-Jazarī's original (debased) narrative. Al-Jazarī's enumeration of the different trebuchets at Qal'at al-Rūm omits the number "five" before the second substantive in the list of three types of machines: "nuṣiba 'alayhā min al-majānīq khams majānīq ifranjīyah wa-qarābughā wa-shayṭānīyah khamsata 'ashr manjanīqan." Since the anonymous author, Ibn al-Dawādārī, and al-Mufaḍḍal Ibn Abī al-Faḍā'il all state that five *qarābughrā*s were positioned on the western side of the castle, it is evident that there were five *qarābughrā*s at the siege, and that al-Jazarī's enumeration of artillery should be interpreted as entailing five "Frankish" trebuchets *(khams majānīq ifranjīyah),* or *bricola*s, five bolt-projecting trebuchets *(qarābughā),* and fifteen traction trebuchets *(shayṭānīyah khamsata ashr manjanīqan).* The ungrammatical phrase, *min al-gharbīyah jihat qarābughā,* that appears in al-Jazarī's description of the artillery at Qal'at al-Rūm should be amended to read, *min al-jihah al-gharbīyah khamsat qarābughā* ("on the western side [of the castle] were five *qarābughrā*s"), which follows, exactly or approximately, the phraseology found in the accounts of the anonymous author, Ibn al-Dawādārī, and al-Mufaḍḍal Ibn Abī al-Faḍā'il. The attempts by authors after al-Jazarī to provide an accurate tally of the number of trebuchets used against Qal'at al-Rūm were unsuccessful. Ibn al-Dawādārī and al-Mufaḍḍal Ibn Abī al-Faḍā'il, either confused by al-Jazarī's phraseology or the corrupt nature of his text, set the number at nineteen (Ibn al-Dawādārī, *Kanz,* 8:333; Ibn Abī al-Faḍā'il, *Al-Nahj,* 553). Al-Nuwayrī and Ibn al-Furāt did better and came to a total of twenty trebuchets (al-Nuwayrī, *Nihāyat al-Arab,* 226; Ibn al-Furāt, *Tārīkh,* 8:136), while al-'Aynī came closest to the mark with a tally of twenty-three trebuchets (Badr al-Dīn Maḥmūd ibn Aḥmad al-'Aynī, *'Iqd al-Jumān fī Tārīkh Ahl al-Zamān: 'Aṣr Salāṭīn al-Mamālīk,* vol. 3, *Ḥawādith wa-Tarājim, 689–698 H/1290–1298 M,* ed. Muḥammad Muḥammad Amīn [Cairo, 1989], 113).

The "Black Camel" *(Qarābughrā)* Trebuchet Used Together with Other Pieces of Military Ordnance in Thirteenth-Century Sieges

Date	Siege of	Besieged by	Artillery
626/1229	Akhlāṭ	Jalāl al-Dīn Mengübirti	1 *qarābughrā*
646/1248–49	Homs	al-Ṣāliḥ Ayyūb	1 *qarābughrā* 1 Western Islamic trebuchet *(manjanīq maghribī)* that hurled stone-shot weighing 140 Syrian *raṭl*s (259 kg or 571 lb) 12 "Devilish" traction trebuchets *(majānīq al-shayṭānīyah)*

691/1292	Qal'at al-Rūm	al-Ashraf Khalīl	5 *qarābughrā*s 5 *bricola*s *(majānīq firanjīyah)* 15 "Devilish" traction trebuchets *(majānīq al-shayṭānīyah)*

THE TACTICAL ROLE OF THE "BLACK CAMEL" TREBUCHET

Judging from its employment in the six important sieges mentioned above and its likely use in other sieges, it seems reasonable to assume that the *qarābughrā* played a useful role in most of the major sieges undertaken by the Mamluks in the thirteenth century. Unfortunately, the historical sources provide no hints about the tactical use of this piece of artillery. What purpose did the "Black Camel" trebuchet serve? As a piece of artillery for shooting flaming bolts, it was perfectly suited for destroying the protective screens that shielded fortifications from stone-shot discharged from trebuchets. To protect defensive circuits in the Middle Ages, load-bearing curtains, or screens, were hung down over the walls on beams of wood projecting about a meter from the battlements. These screens were commonly composed of netting overlaid with cushioning material that served to deaden the impact of stones cast by artillery.[37] Since stone-shot of heavy artillery could only take effect on exposed masonry, it was essential for besiegers to destroy the protective screens in order to knock down walls with artillery safely from a distance. With the introduction of the counterweight trebuchet, the breaching capacity of artillery was greatly enhanced. Besiegers found that they could not only use the new ordnance to batter walls safely from a distance, but they could also—with a few minor adjustments, as indicated by Ibn Urunbughā—use this

[37]On the use of protective screens in premodern warfare, see Paul E. Chevedden, "The Citadel of Damascus," Ph.D. diss., University of California, Los Angeles, 1986, 1:194–97; idem, "Artillery of King James I," 79 and Pl. 12; Robert I. Burns and Paul E. Chevedden, *Negotiating Cultures: Bilingual Surrender Treaties in Muslim-Crusader Spain under James the Conqueror*, The Medieval Mediterranean, vol. 22 (Leiden, 1999), 176–77; Needham and Yates, *Science and Civilization in China*, 5:6:398–413; and Lawrence*, Greek Aims in Fortification,* 59, 64, 103–5. Several types of protective screens were employed in China during the Warring States Period (403–222 B.C.E.). These are described in the book *Mozi* (Book of Master Mo), dating from the fourth century B.C.E., and are analyzed in Yates, "Siege Engines and Late Zhou Military Technology," 420–23. Philo of Byzantium, writing around 200 B.C.E., discusses the use of screens on fortifications (Lawrence, *Greek Aims in Fortifications,* 105), as does Vegetius and an anonymous sixth-century Byzantine author (Flavius Vegetius Renatus, *Epitoma rei militaris,* ed. and trans. Leo F. Stelten [New York, 1990], 4.23; *Three Byzantine Military Treatise,* George T. Dennis, ed. and trans. [Washington, D.C., 1985], 43). In the Islamic world, a discussion of protective screens *(satā'ir,* sing. *sitārah)* can be found in Rashīd al-Dīn Faḍl Allāh Ṭabīb, *Histoire des Mongols de la Perse*, trans. Étienne Quatremère, Collection orientale, manuscrits inédits de la Bibliothèque royale (Paris, 1836; repr., Amsterdam, 1968), 286–87; Abū al-Sa'īd al-Harthamī, *Mukhtaṣar fī Siyāsat al-Ḥurūb,* ed. 'Ārif Aḥmad 'Abd al-Ghanī, Silsilat Kutub al-Turāth, vol. 5 (Damascus, 1995), 61 *(sutar);* 'Alī ibn Bakr al-Harawī, *Al-Tadhkirah al-Harawīyah fī al-Ḥiyal al-Ḥarbīyah,* ed. and trans. Janine Sourdel-Thomine, "Les conseils du šayḫ al-Harawi à un prince ayyūbide," *Bulletin d'Études Orientales* 17 (1961–62): 239 (trans.), 243; and al-Ḥasan ibn 'Abd Allāh al-'Abbāsī, *Āthār al-Uwal fī Tartīb al-Duwal,* ed. 'Abd al-Raḥmān 'Umayrah (Beirut, 1989), 368 (on fixed fortifications), 372 (on ships).

artillery to destroy protective screens safely from a distance.[38] The trestle-framed counterweight trebuchet appears to have been adapted for this task. Although crossbows could also be used to shoot flaming bolts, their smaller projectiles were less likely to cause a conflagration that would consume the protective screen due to incendiary-proofing measures taken by defenders. These measures included soaking the protective screens in fire-retardant liquid and pouring water down from the battlements. An immense incendiary bolt launched by a *qarābughrā* facilitated rapid combustion by the release of the stored energy in its pyrotechnic mixture. If trebuchets could lodge a sufficient number of flaming bolts in a protective screen, a serious outbreak of fire would result that was capable of setting a protective screen ablaze. Aside from being well adapted for the task of destroying protective screens, the *qarābughrā* was equally suited for raining fire from heaven upon besieged towns and fortresses, but this does not appear to have been its primary function. Rounded fire-pots released from the sling of a trebuchet were quite capable of setting ablaze the interior parts of cities and castles, but only flaming bolts were capable of cleaving to a protective screen, thereby allowing combustion to spread and fire to consume the defensive shield of a masonry wall.[39] As a destroyer of protective screens, the *qarābughrā* appears to have filled a special niche in the medieval siege arsenal.

This is one possible route by which the idea of the bolt-projecting trebuchet may have been arrived at. On the other hand, this piece of artillery could have been invented to serve a defensive function and been subsequently adapted to perform in an offensive capacity. The defensive value of bolt-projecting artillery, particularly against approach-works, such as filling-mantlets, digging-mantlets, ram-mantlets, and mobile siege-towers, as well as against hostile artillery and densely packed groups of soldiers, is quite obvious. The fiery-bolt launched by a *qarābughrā* had the great advantage of being able to stick to wooden equipment and set it ablaze. Whatever in fact prompted the development of the bolt-projecting

---

[38]On the introduction of the counterweight trebuchet, see Chevedden, "Invention of the Counterweight Trebuchet."

[39]Ibn Urunbughā offers the following instructions for launching fire-pots *(qudūr al-nafṭ)* and other rounded incendiary missiles from a trebuchet: "If you want to shoot a pot *(qidrah)* filled with naphtha *(nafṭ)* and *lizāqāt* [sticky gums or resins], a pot of quicklime *(kils)* and smoke pots *(dakhkhānāt),* or a stone of a trebuchet packed with naphtha *(nafṭ),* first of all, take the oil of the radish *(mā' al-fujl)* or mica *(talq)* dissolved in strong vinegar *(khall al-'atīq)* and wet [some] felt in [this]. [Then], stitch this felt in the pouch *(kaffah)* of the trebuchet and [on] the cords *(sawā'id)* [of the sling] up to their middle. Put the [fire-]pot *(qidrah)* in it [the pouch] and launch it, and it will burn what you want." ("Anīq," fol. 18r; *Anīq,* ed. 'Abd al-'Azīz, 24–25; *Anīq,* ed. Hindī, 44–45).
For additional descriptions, as well as illustrations, of trebuchets hurling fire-pots, see al-Rammāḥ, *Furūsīyah,* 114–18, Figs. 66, 67, 68, 71.

trebuchet, it seems certain that defending, as well as attacking, forces could readily make use of this piece of artillery.

Baybars al-Manṣūrī describes, with great rhetorical flourish, the incendiary projectiles that the Mamluks launched against Acre in 690/1291. The ″Islamic trebuchets″ *(majānīq al-islāmīyah),* he says, shot stones ″resembling stunning thunderbolts″ *(ka-al-ṣawā'iq al-ṣā'iqah)* and hurled bolts ″bearing the likeness of gleaming flashes of lightning″ *(ka-al-bawāriq al-bāriqah).*[40] His description of the stone-shot conveys the image of a flash of lightning viewed as an intensely hot solid body moving rapidly through the air before striking something. Ibn Urunbughā describes stone-shot perforated with holes to contain naphtha *(nafṭ)* that easily fits this image.[41] Baybars may be referring to this type of projectile or to any incendiary device having the shape of rounded stone-shot. His depiction of the bolts as ″gleaming flashes of lightning″ conveys the image of an electrical storm that rains down destruction by means of bolts or darts. There can be little doubt that Baybars is referring here to incendiary missiles hurled by bolt-projecting trebuchets.[42] Although there is no direct evidence that the Mamluk *qarābughrā*s were used to destroy the protective screens at Acre, we can be fairly certain that the defenses of the city were equipped with these devices. The inhabitants of Acre had a full seven months to prepare for the Mamluk siege, and Arabic sources note that they prepared the city extremely well for an assault. Al-'Aynī affirms that when Sultan al-Ashraf Khalīl reached Acre during the first ten day of Rabī' II/4–13 April, ″he found it fortified with all kinds of equipment and siege machines.″[43] Since the outfitting of defenses with protective screens was a normal measure taken by besieged forces in the Middle Ages, we can assume that the defenders furnished the walls and towers of Acre with these screens. Their absence would certainly have merited a comment in the Arabic sources. Baybars al-Manṣūrī, an eyewitness to the siege, states that the inhabitants of Acre were so convinced of their ability to withstand a siege, due to the defensive measures that they had taken to fortify the towers and walls, that ″they did not even close the gates of the city, nor even

---

[40]Baybars al-Manṣūrī, *Zubdat al-Fikrah fī Tārīkh al-Hijrah,* ed. Donald S. Richards, Nasharāt al-Islāmīyah, vol. 42 (Beirut, 1998), 279; Little, ″Fall of 'Akkā,″ 172.

[41]See note 39 above, and ″Anīq,″ fol. 54r–54v; *Anīq,* ed. 'Abd al-'Azīz, 119–21; *Anīq,* ed. Hindī, 188–91, where Ibn Urunbughā describes three types of ″flaming″ stones, i.e., rounded stone-shot drilled with holes to contain naphtha and other inflammable substances.

[42]For an alternate view, see Little, ″Fall of 'Akkā,″ 172, where Baybars al-Manṣūrī′s description of the missiles hurled by trebuchets is credited to rhetorical exaggeration.

[43]Al-'Aynī, *'Iqd al-Jumān,* 57: ″fa-wajadahā qad taḥaṣṣanat bi-sā'ir al-'udad wa-al-ālāt.″ Here, ″equipment″ *('udad,* sing. *'uddah)* would include protective screens, and ″siege machines″ *(ālāt,* sing. *ālah)* would imply artillery as well as other siege engines.

hang down a protective screen *(ḥijāb)* in front of the gates."[44] Baybars's observation is quite revealing. It indicates that the defenders properly prepared their city for a siege, which would certainly have entailed the use of protective screens. It shows the supreme confidence of the inhabitants in the defensive measures that they had taken to protect the city from siege, but, more importantly, it discloses that the confidence, or "indifference" *('adam al-mubālāh bi-al-muḥāṣarah),* that they exhibited had its limits. It only extended to leaving the gates of the city open and not hanging protective screens in front of the gates. Had this confidence been more robust and involved leaving the city walls and towers bereft of protective screens, Baybars would doubtless have commented on this fact.

The specialized function to which the *qarābughrā* was put hardly precludes other uses for the machine. Ibn Urunbughā describes the *qarābughrā* as a modified stone-projecting, trestle-framed counterweight trebuchet. As such, it could easily be restored to its original condition as a stone-projecting piece of artillery. Once it had completed its primary task of reducing the protective screens to ashes, the *qarābughrā* could be refitted with a sling without any difficulty and put into action as a stone-projector. This may explain why Western European accounts of the *qarābughrā* mention it as being employed solely as a stone-projector (see below).

The "Black Camel" Trebuchet in Western European Historical Sources

Western European sources that refer to the *qarābughrā* cite it as being used by the Mamluks in only two sieges: the siege of Tripoli in 688/1289[45] and the siege of Acre in 690/1291.[46] The Mamluk conquest of these two great port cities effectively brought an end to Latin rule in Syria. The machine is designated by its romance

---

[44]Baybars al-Manṣūrī, *Zubdah,* 279; Little, "Fall of 'Akkā," 171–72. The use of the term *ḥijāb,* rather than *sitārah* (sing.) or *satā'ir* (pl.), for a protective screen draped in front a gate seems to indicate that protective screens were differentiated in Arabic on the basis of size. A small screen hung in front of a gate was denoted by the term *ḥijāb,* while a large screen hung in front of a curtain wall or tower was generally referred to by the plural word for screen, *satā'ir*.

cognate *caraboha* or kindred terms (derived from *qarābughrā* through its corrupt form *qarābughā*), but no reference is made to it being used to hurl bolts, flaming or otherwise. According to the accounts of the siege of Acre by Marino Sanudo, John of Ypres, and Florio Bustron, the *caraboha* hurled large stones. The so-called ″Templar of Tyre,″ who authored *Les Gestes des Chiprois*, contends that ″*caraboha*s are small traction-powered Turkish trebuchets that have a rapid rate of discharge.″[47] The anonymous *Chronique d′Amadi,* which is dependent on *Les Gestes,* depicts *carabachani* as light artillery with a rapid sequence of discharge used for clearing the battlements of defenders.[48] The first three authors may have applied the term to an actual bolt-projecting trebuchet *(qarābughrā)* that had been refitted to launch stone-shot. Alternately, the authors may have confused the trestle-framed, bolt-projecting trebuchet *(qarābughrā)* with the gravity-powered, pole-framed trebuchet known as the *bricola.* According to al-Yūnīnī, the Mamluks employed fifteen ″big″ (i.e., counterweighted) *bricola*s *(majānīq al-kibār al-ifranjīyah)* against Acre, which hurled stone-shot weighing one Damascene *qinṭār* or more (185 kg or 408 lb +).[49] The ″Templar of Tyre,″ on the other hand, has probably mistaken the *qarābughrā* trebuchets for the numerous traction trebuchets used by the Muslims at Acre (see below), which had an extremely rapid sequence of discharge.[50] This misidentification of the *qarābughrā* has led Christopher Marshall to conclude that this machine is a hand-held sling used for hurling stones.[51] Other scholars, such as Charles Dufresne Du Cange, Henry Yule, and Eugène Martin-Chabot, have associated the *qarābughrā* with the hybrid trebuchet called a *calabre* in French.[52]

Mamluk Light Artillery at the Siege of Acre

The account of the Mamluk artillery at Acre found in *Les Gestes* appears to be contradictory. We are told that the light artillery, identified by the "Templar of Tyre" as *caraboha*s, "did more harm to our men than the heavy artillery."[53] This statement does not mean to imply that the small caliber machines caused more damage than the large caliber machines. Light artillery would certainly not have inflicted more damage than heavy artillery, but large numbers of small trebuchets deployed in batteries could put down a tremendous barrage against defending forces. By producing a concentrated hail of missiles, light artillery served to neutralize the defenders on the battlements so that heavy artillery could engage in its work of destruction while siege-works and machinery were advanced against fortified positions. Given the slow sequence of discharge of the counterweight trebuchet, its effective use in siege operations required the deployment of sufficient numbers of light traction-powered trebuchets capable of delivering sustained volleys of small shot that would send defenders diving for cover. By putting down a heavy barrage against defending forces, the light artillery enabled heavy artillery to bombard strongpoints with virtual impunity. The anti-personnel use of light artillery also facilitated the approach of siege-engines and assault-works. Since the light artillery was employed specifically to kill or injure human beings, it would have taken from Acre a heavy toll of its defenders, thereby eliciting the seemingly paradoxical remark by the "Templar of Tyre." Both the Latinate and Arabic descriptions of the siege of Acre indicate that Muslim light artillery provided neutralizing shooting that gave support to heavy artillery and mining operations by keeping the defenders at bay.[54]

calabra; Marco Polo, *Book of Ser Marco Polo,* 2:168; William of Tudela and anonymous, *La Chanson de la croisade Albigeoise,* ed. Eugène Martin-Chabot, Les classiques de l'histoire de France au moyen âge, vols. 13, 24–25 (Paris, 1931–61), 3:59. On the *calabre* as a hybrid trebuchet, see Chevedden, "Hybrid Trebuchet," 210–11.

[53]"Gestes des Chiprois," 2:no. 491: "Qarabouhas . . . faizoient plus de maus a la gent que les grans engins."

[54]Amadi's chronicle claims that bombardment from the Mamluk *carabachani* neutralized the defenders on the battlements of the Tower of the King, or the Accursed Tower, thereby allowing the besiegers to undermine it (*Chroniques d'Amadi,* 221). *Les Gestes* provides additional details on the Mamluk mining operations ("Gestes des Chiprois," 2:nos. 491, 493). Al-Yūnīnī indicates that the artillery destroyed the tops of the towers and the walls (al-Yūnīnī, *Dhayl,* 87 [Arabic text], 163 [trans.]), and al-'Aynī describes how the trebuchets tore away the battlements and shook the denuded curtain walls in order to bring about their collapse (al-'Aynī, *'Iqd al-Jumān,* 60). With the battlements sheared off, the defenders along the rampart walk of the curtain walls and the towers were completely exposed to the hail of missiles being directed at them by the besieging Mamluk army. The Mamluks were able to easily undermine the walls of the city

Fifty-two of the Mamluk trebuchets at Acre, according to al-ʿAynī, were traction-powered machines called ″Devilish″ trebuchets *(manjanīq shayṭānī).*[55] Al-Yūnīnī states that three varieties of trebuchets were used in great numbers: ″Devilish″ machines, ″Playthings,″ and *qarābughrā*s.[56] The first two machines are traction powered. The ″Plaything″ (*luʿbah*, pl. *luʿab*), called an *ʿarrādah* in most Arabic sources, was a pole-framed traction machine with a throwing arm mounted upon a pivot-yoke.[57] The name ″Plaything″ comes from the play, or rapid movement, of its throwing arm as it is sent skyward in quick succession during continuous operation. Al-ʿAynī may have included the pole-framed ″Playthings″ in his figure for ″Devilish″ trebuchets, or the ″playful″ artillery could be additional to the number of ″Devilish″ machines. Whatever interpretation is accepted regarding the number of traction trebuchets at Acre, it is clear that they were employed in great numbers and were used to neutralize the defenders on the ramparts.[58]

---

because the barrage of missiles prevented the defenders from mounting any effective resistance. Even sallies in force failed to stop the mining operations. Al-Jazarī, al-Yūnīnī, and al-Nuwayrī comment briefly on the mining operations undertaken by the Mamluk army, but neither Little nor D′Souza make mention of the Arabic accounts of these activities, which were critical to the conquest of Acre (al-Jazarī, *Ḥawādith al-Zamān,* 1:45; al-Yūnīnī, *Dhayl,* 87 [Arabic text], 163 [trans.]; al-Nuwayrī, *Nihāyat al-Arab,* 198; Little, ″Fall of ʿAkkā″; and D′Sousa, ″Conquest of ʿAkkā″). Little credits the successful Mamluk assault on Acre to artillery bombardment that weakened the defenses of the city. He ignores the fact that mining operations created the breaches in the walls that made the assault possible (Little, ″Fall of ʿAkkā,″ 174). The references to mining operations in the Arabic sources confirm and corroborate the Christian accounts of these siege-works.

[55]Al-ʿAynī, *ʿIqd al-Jumān,* 58.

[56]Al-Yūnīnī, *Dhayl,* 86 (Arabic text), 162–63 (trans.): ″ammā al-majānīq shayṭānīyah wa-al-laʿab wa-qarābughā shay' kathīr.″

[57]On the pole-framed traction trebuchet, referred to in Arabic sources as the *luʿbah* and the *ʿarrādah,* see Chevedden, ″ Artillery of King James I,″ 58–59, 61, 68, Figs. 1–4; idem, ″Hybrid Trebuchet,″ 184, 199, 206, 211, Figs. 1, 3, 7, 9; Chevedden et al., ″Traction Trebuchet,″ 460–61, 464 (Fig. 3), 466 (Fig. 5), 470 (Fig. 10), 474 (Fig. 14), 484 (Fig. 24). *Elegant Book* includes a number of illustrations of the pole-framed trebuchet (″Anīq,″ fols. 33r, 43v, 44r; *Anīq,* ed. ʿAbd al-ʿAzīz, 73, 94, 95; *Anīq,* ed. Hindī, 109, 117, 118).

[58]The design of the ″Devilish″ trebuchet is open to debate. *Elegant Book* is the only source that provides illustrations of it, depicting it as a traction version of the pole-framed *bricola* (″Anīq,″ fols. 21v, 31r; *Anīq,* ed. ʿAbd al-ʿAzīz, 50, 69; *Anīq,* ed. Hindī, 100–102). The two editors of *Elegant Book* both identify the machine incorrectly as a ″Sultanic″ or ″Royal″ trebuchet *(manjanīq sulṭānī),* due to the fact it is erroneously identified as such on fol. 21v of the text. The caption title for this machine is accurately inscribed on fol. 31r as *manjanīq shayṭānī,* so there is no question regarding the precise name of this trebuchet, which is the name by which it is known in all of the Arabic historical sources. Since Ibn Urunbughā′s pole-framed traction machine known by the names *ʿarrādah* and ″Plaything″ *(luʿbah)* is quite different from the ″Devilish″ trebuchet, it is clear that he, like al-Yūnīnī, considers it to be a different machine (″Anīq,″ fols. 33r, 44r; *Anīq,* ed. ʿAbd al-ʿAzīz, 73, 95; *Anīq,* ed. Hindī, 109, 118; Chevedden, ″Artillery of James I,″ 61, Fig. 1;

MAMLUK HEAVY ARTILLERY AT THE SIEGE OF ACRE ACCORDING TO *LES GESTES DES CHIPROIS*

Despite his misidentification of the *qarābughrā,* the ″Templar of Tyre″ does provide important and reliable information on the Mamluk artillery at Acre that demonstrates both his competency in Arabic and his ability to acquire accurate information on the Muslim assault. According to him, the heavy artillery launched stone-shot weighing a *qinṭār* (185 kg or 408 lb), which is in agreement with the weight given by al-Yūnīnī for stone-shot discharged by the Muslim *bricola*s. The ″Templar of Tyre″ describes four separate pieces of heavy artillery employed by the Mamluks. The first he calls by its Arabic name ″Haveben,″ giving a rough transliteration of

---

idem, ″Hybrid Trebuchet,″ 184, Fig. 9; and Chevedden et al., ″Traction Trebuchet,″ 461, 484, Fig. 24). It may well have been configured as a traction version of a *bricola,* as illustrated in *Elegant Book*, but it is hard to imagine that the trestle-framed traction trebuchet passed out of use. The ″Templar of Tyre″ speaks of his so-called *carabohas* as small traction-powered ″Turkish″ trebuchets. While these small-caliber machines may be identified with the pole-framed *ʿarrādah* or *luʿbah,* which had an extremely rapid rate of discharge, it is equally plausible that the stone-projectors dubbed ″Turkish″ trebuchets by the ″Templar of Tyre″ were the same machines that are called ″Turkish″ by al-Ṭarsūsī. His ″Turkish″ trebuchet *(manjanīq turkī)* is a trestle-framed traction machine that has a framework consisting of two paired trusses in the shape of the Greek letter *lambda* (*Tabṣirah fī al-Ḥurūb,* ed. Ṣādir, 167, 254, Fig. 10; Cahen, ″Traité,″ 119, 141–42, Pl. 2, Fig. 11; and Chevedden et al., ″Traction Trebuchet,″ 460–61, 481, Fig. 21). Al-Ṭarsūsī recommends the ″Turkish″ trebuchet as the cheapest of all the trebuchets he describes and the one composed of the least amount of parts. This machine was used widely across Eurasia and North Africa and was known as the ″Crouching Tiger″ trebuchet *(hu dun pao)* in Chinese sources and as the *labdarea* (the *lambda*-shaped machine) in Byzantine sources. The Chinese machine had a beam of 7.50 meters in length mounted on a framework that stood approximately 5.19 meters in height. Attached to the butt-end of the beam were forty pulling-ropes that were hauled down by a crew of forty men, while a single loader directed the shot. The machine was capable of throwing a stone projectile weighing 7.56 kilograms a distance of more than 75.0 meters (Chevedden,″ Artillery of King James I,″ 61, 66, 86, Fig. 5; idem, ″Hybrid Trebuchet,″ 199–200; and Chevedden et al., ″Traction Trebuchet,″ 452, 475, Fig. 15). Although the evidence is somewhat tenuous, the ″Devilish″ trebuchet *(manjanīq shayṭānī)* and the ″Plaything″ *(ʿarrādah* or *luʿbah)* do appear to be different types of traction machines. The ″Plaything″ probably never deviated significantly from the Chinese machine of the same design, known as the ″Whirlwind″ trebuchet *(xuan feng pao)* (see Fig. 1, and Chevedden et al., ″Traction Trebuchet,″ 452, 474, Fig. 14), while the ″Devilish″ trebuchet was doubtless a larger machine. The design of the ″Devilish″ machine may have resembled Ibn Urunbughā′s drawing of it as a traction-powered *bricola*, or it may have had a trestle framework. Both the ″Devilish″ trebuchet and the ″Plaything″ worked their devilish ways by playing the enemy with rapid volleys of stone-shot. A discharge of slightly better than four shots per minute could be maintained by traction-powered trebuchets, so a battery of these machines was quite capable of neutralizing defenders on the battlements (Chevedden, ″Artillery of King James I,″ 55; idem, ″Hybrid Trebuchet,″ 209; and Chevedden et al., ″Traction Trebuchet,″ 441, 457).

the Arabic *al-ghaḍbān* (The Furious One). This term was originally applied to a hybrid trebuchet used in the defense of Baghdad in 251/865.[59] The term went on to become a generic name for the hybrid trebuchet and passed into Armenian and Turkish as *baban,* designating this class of artillery.[60] At the siege of Acre in 690/1291 the term was applied once again to an individual trebuchet, in this case, most probably a counterweight trebuchet from among the battery of gravity-powered machines used by the Mamluks. The ″Templar of Tyre″ correctly translates the name of this trebuchet as ″furious″ and indicates that this machine directed its shot against the guard of the Templars. His description of the second trebuchet provides the same data as his description of the first: ″Another trebuchet that was shooting at the guard of the Pisans had the name *Mensour,* which means the Victorious.″ The Arabic title *al-Manṣūr* does indeed mean ″The Victorious One,″ but the name of the trestle-framed counterweight trebuchet *(manjanīq ʻaẓīm)* identified by the ″Templar of Tyre″ takes the form of a *nisbah, al-Manṣūrī,* and refers to a trebuchet of Sultan al-Manṣūr Qalāwūn, or a ″Royal″ trebuchet.[61] The ″Templar of Tyre″ admits that he does not know the name of the third trebuchet, but he does specify that it was a ″big″ machine that directed its shot at the guard of the Hospitallers. For the fourth trebuchet he provides only its location, not its name: ″The fourth trebuchet *(le cart* [sic] *engin)* was shooting at a great tower called the ′Accursed Tower,′ which is along the second [i.e., outer] wall [of the city] and is under the

guard of the king."[62]

MAMLUK HEAVY ARTILLERY AT THE SIEGE OF ACRE ACCORDING TO ARABIC HISTORICAL SOURCES

The "Templar of Tyre" does not give a full accounting of the heavy artillery arrayed against Acre. For that we must turn to the Arabic sources. According to Abū al-Fidā', the number of "big" and "small" trebuchets (*majānīq al-kibār wa-al-ṣighār,* i.e., counterweight and traction machines) deployed against Acre "was the greatest concentration of artillery ever assembled against any locality."[63] The very detailed and authoritative accounts of the siege by Shams al-Dīn al-Jazarī and Badr al-Dīn al-'Aynī put the total number of Muslim trebuchets at seventy-two.[64] Ibn al-Furāt, al-Maqrīzī, and al-Nuwayrī put the number even higher, at ninety-two, but this figure is most probably a scribal error for seventy-two, since the unpointed *sab'* and *tis'* are often confused.[65] Of the seventy-two machines, most were traction-powered,[66] but a significant number were gravity-driven. Two types of gravity-powered engines were used: *bricola*s and *qarābughrā*s. According to al-Yūnīnī, fifteen *bricola*s *(majānīq al-kibār al-ifranjīyah)* were employed, but no specific figures are given in any source for the number of *qarābughrā*s used. If from a total number of seventy-two trebuchets (the figure given by al-Jazarī and al-'Aynī), al-Yūnīnī's fifteen *bricola*s and al-'Aynī's fifty-two "Devilish" traction engines

---

[62]"Gestes des Chiprois," 2:no. 490: "Et a terme de ses .viii. jours; adreserent et aseïrent au point lor engins, que la piere qu'y getoi[en]t pezoit un quintar. L'un de ses engins, quy avoit nom Haveben, quy vient a dire Yrious, si estoit devers la garde dou Temple, et l'autre engin, quy getet contre la garde des Pizans, avoit nom le Mensour, ce est a dire le Victorious; et l'autre grant, que je ne vos le say nomer, getoit contre la garde de l'Ospitau; et le cart engin getoit contre une grant tour quy a nom la tour Maudite, qui est a[s] segons murs et est de la garde dou roy." Andreas D'Souza translates "le cart [sic] engin" ("the fourth trebuchet") as "the cart engine" (D'Sousa, "Conquest of 'Akkā," 242).

[63]Abū al-Fidā', *Mukhtaṣar,* 4:24; idem, *Memoirs,* 16.

[64]Al-Jazarī, *Ḥawādith al-Zamān,* 1:45; al-'Aynī, *'Iqd al-Jumān,* 58. Although al-Jazarī was not present at the siege of Acre, his account of it is based on the report of the Mamluk Amir Sayf al-Dīn ibn al-Miḥaffadār, who witnessed the entire operation. Al-Yūnīnī also drew upon this important source for his account of the siege (Little, "Fall of 'Akkā," 163, 171, 172). Ibn Shākir al-Kutubī follows al-Jazarī and al-'Aynī and sets the total number of trebuchets used against Acre at seventy-two (*'Uyūn al-Tawārīkh,* 71).

[65]Ibn al-Furāt, *Tārīkh,* 8:112; Aḥmad ibn 'Alī al-Maqrīzī, *Kitāb al-Sulūk li-Ma'rifat Duwal al-Mulūk,* (Cairo, 1934–73), 1:3:764; al-Nuwayrī, *Nihāyat al-Arab,* 226.

[66]If the total number of "Devilish" traction trebuchets given by al-'Aynī (fifty-two) does not include the numerous pole-framed traction trebuchets *(lu'ab)* cited by al-Yūnīnī, there would have been far more than seventy-two pieces of artillery deployed by the Mamluks at Acre and a far greater percentage of these machines would have been traction powered.

are subtracted, the remainder will be five. We can assume therefore that the Mamluks employed at least five *qarābughrā*s at Acre.

Mamluk Artillery and Siege Tactics at Acre

Artillery played an important role in the conquest of Acre. Batteries of artillery were erected to effect both destruction and neutralization. Bolt-projecting trebuchets were probably used to launch incendiary missiles to consume the protective screens shielding the walls and towers from bombardment. Other pieces of artillery rained down incendiary projectiles on the interior of the city to cause a serious outbreak of fire. Once the walls were laid bare, heavy artillery began stripping away the battlements and pounding the ramparts, as light artillery and other missile weapons kept the defenders at bay. The neutralizing shooting allowed sapping operations to be conducted with virtual impunity. Sallies in force mounted by the defenders were unable to disperse the attackers or to seriously hamper the progress of the siege. Once the saps had effected substantial breaches in the urban defenses, the city was successfully stormed. Acre, one of the best defended cities of its day, was unable to withstand the powerful and well-organized Mamluk assault, which made use of the most advanced techniques of mechanized siegecraft then known. Key to the Mamluk victory was the extensive use of siege-works and artillery. Of no less importance was the sustained and determined spirit that motivated the besieging forces.[67]

The "Black Camel" Trebuchet and the East-West Artillery Axis

Although the trebuchet can be traced back to ancient China, many civilizations contributed to its development. The story of the trebuchet is not a simple one of linear diffusion in a five-part sequential process: from China to the Sasanian and Byzantine Empires, thence to Arabia, and finally to the Latin West. Divergent paths of innovation and dissemination permeated the Sino-Sasanian-Byzantine-Islamic-Latin axis as advancements in one cultural zone spread to others in a process of continuous interchange across Eurasia and North Africa. Knowledge of the trebuchet took some time to reach other parts of the world, but once Western Asia and the Mediterranean discovered the machine its dissemination and advancement proceeded at an accelerated pace. By the eighth century the civilization of Islam had greatly improved China's human-powered artillery. Muslim conquerors introduced a much larger traction-powered machine that utilized the action of gravity to assist in the discharge of a projectile (the hybrid trebuchet). Byzantium

---

[67]See Little, "Fall of 'Akkā," and D'Souza, "Conquest of 'Akkā," for details on the powerful siege-train brought against Acre by the Mamluks, especially well equipped with ordnance, as well as for information on the spirit motivating the campaign.

and the Latin West quickly adopted this new machine and took the technology even further. From the eleventh century on, the pace of development quickened. Byzantine advances culminated in the invention of the first gravity-powered piece of artillery, the trestle-framed counterweight trebuchet. Progress in projectile technology did not stop there. A process of diversification of gravity-powered artillery soon began. The Latin West introduced a counterweight trebuchet with a pole framework that was capable of discharging missiles in any direction (the *bricola*). The Islamic world readily adopted this machine, as did the Mongols, who used it to subdue the Southern Song and consolidate their hold on all of China. As the *bricola* made its way eastward from Western Europe, the *qarābughrā* proceeded westward from the eastern realms of Islam. The Mamluks made the ″Black Camel″ trebuchet a standard piece of artillery, and their employment of this machine at Acre in 1291 is likely to have inspired Europeans to incorporate it into their siege arsenal. Although precise information is lacking regarding the dissemination of the bolt-projecting trebuchet to Europe, we may presume that it reached the West and found a place in European siege warfare.[68] The attention

---

[68]Roland Bechmann has reconstructed the trestle-framed, counterweight trebuchet *(trebucet)* of Villard de Honnecourt as a bolt-projecting machine (Roland Bechmann, *Villard de Honnecourt: La pensée technique au XIIIe siècle et sa communication* [Paris, 1991], 255–72). If this interpretation stands, the presumption that the bolt-projecting trebuchet was diffused from a common source will be undermined, and the likelihood that it was invented independently and nearly simultaneously in the Latin West and in the eastern realms of Islam will emerge as a distinct possibility. The description and plan of the base frame of Villard′s trebuchet, which survives in his portfolio of architectural drawings dating from ca. 1230–35, has elicited a number of interpretations since the first facsimile edition of Villard′s drawings was published in 1858. The description of the machine ends with a passage pertaining to the release of the ″shaft,″ or ″beam″ *(fleke),* of the trebuchet: ″Et al descocier de le fleke penses. Et si vus en dones gard. Car il le doit estre atenue a cel estancon la devant″ [As for the discharging of the beam, remember and take heed, because it must be connected to the upright post in front]. The term *fleke* proved problematic because another word, *verge,* had been used by Villard to refer to the beam of the machine. Could *fleke* and *verge* signify the same component—the beam—or was *fleke* a different component, and if so, which one? The original editors of Villard′s portfolio, J. B. A. Lassus and Alfred Darcel, assumed that *fleke* referred to the projectile of the machine, which they believed was an arrow. (*Album de Villard de Honnecourt: Architecte du XIIIe siècle, manuscrit publié en facsimile,* ed. Jean-Baptiste-Antoine Lassus and Alfred Darcel [Paris, 1858; repr., Paris 1976]). In an important review of the Lassus-Darcel edition, Prosper Mérimée observed that the trebuchet was a stone-projecting machine and that the term *fleke* could only be understood as the pivoting beam of a trebuchet (Prosper Mérimée, review of *Album de Villard de Honnecourt: Architecte du XIIIe siècle,* ed. Jean-Baptiste-Antoine Lassus and Alfred Darcel, *Le Moniteur Universal* [20 December 1858]). Mérimée′s sensible interpretation is adopted here. In the first English edition of Villard′s portfolio, Robert Willis suggested that *fleke* should be understood as a detaining bolt of a catch-and-trigger device that held the beam in place prior to discharge and effected the release of the beam when it was dislodged by a mallet (*Facsimile of the Sketch Book of Wilars de Honecort with Commentaries and Descriptions by M.*

given to it by the great architect-engineers of the Renaissance attests to its assimilation by Western Europe.

The history of the trebuchet represents a complex process of diffusion and cross-fertilization of new ideas and techniques produced by cultural interaction on a vast scale. Just as the trebuchet is a fusion of different elements, which when working in proper relation produce a successful machine, the history of this weaponry exhibits a fusion of contributions of many cultures and peoples. Although the trebuchet may be characterized as a collective work, it was not the multitude that produced the dramatic breakthroughs in the development of the machine, but individual engineers who were the source of every important innovation.

J. B. A. Lassus and by M. J. Quicherat: Translated and Edited with Many Additional Articles and Notes by the Rev. R. Willis [London, 1859]). Bechmann has reverted back to the idea proposed originally by Lassus and Darcel and has reconstructed Villard´s trebuchet as a Rube Goldberg device for launching arrows. His design rivals any of Rube Goldberg´s machines and is just as preposterous. A mammoth scaffolding towers above the trestle frame of the machine upon which rests a single arrow that is discharged by the impact of the throwing arm as it pivots skyward following release. Bechmann´s machine is made out of whole cloth. He invents key design elements (e.g., the scaffolding) and radically reinterprets other components. The catch-and-trigger device of the machine, for example, which consists of a stanchion *(estancon),* or upright post, to hold a detaining bolt is refashioned as a break lever to restrain the rotation of a drum. Bechmann uses textual and pictorial evidence as a mirror to reflect his own *a priori* assumptions.

GUIDE TO ILLUSTRATIONS

Fig. 1. Two traction-powered trebuchets depicted in the Song dynasty′s military encyclopedia entitled *Wu jing zong yao* (The Essentials of the military classics), chap. 12, p. 50a, edited in 1044 by Zeng Gongliang (in *Ying yin Wen yuan ge Si ku quan shu,* vol. 726 [Taipei, 1983], 420). *Center,* the Chinese pole-framed trebuchet called a ″Whirlwind″ trebuchet″ *(xuan feng pao)* because it could be turned to face any direction. This machine had a beam of 5.40 meters in length mounted on top of a pole-frame that stood approximately 4.30 meters in height. Attached to the butt-end of the beam were forty pulling-ropes that were hauled down by a crew of forty men. The machine was capable of throwing a stone-shot weighing 1.89 kilograms a distance of more than 75.0 meters. In Arabic sources this machine was designated an *ʻarrādah* or a ″Plaything″ *(luʻbah,* pl. *luʻab),* due to the play, or rapid movement, of its throwing arm as it was sent skyward in quick succession during continuous operation. In the Latin West the most commonly used term for this machine was *manganellus* (mangonel). *Left,* the Chinese ″Hand-Trebuchet″ *(shou pao),* operated by a single man. A pole, fixed in the ground, carried a pin at its topmost extremity, which acted as a fulcrum for the arm of the machine. In Byzantine sources this machine was designated a χειρομάγγανα *(cheiromangana).*

Fig. 2. The most powerful trebuchet depicted in the *Wu jing zong yao,* chap. 12, p. 48a (in *Ying yin Wen yuan ge Si ku quan shu,* vol. 726 [Taipei, 1983], 419): a traction-powered, trestle-framed trebuchet, identified as ″The Septuple-Beam″ trebuchet *(qi shao pao).* It had a composite beam made up of seven wooden spars lashed together with rope or bound with metal bands that measured 8.40 meters in length. The beam was mounted on a framework 5.55 meters in height and 6.78 meters wide with trusses that were tilted inward 23 degrees off the vertical. The butt-end of the beam had 125 pulling ropes attached to it that were hauled down by a crew of 250 men. This machine was capable of throwing a stone-shot weighing between 56.70 and 63.0 kilograms a distance of more than 75.0 meters. In Arabic sources the trestle-framed trebuchet was called a *manjanīq,* and in the Latin West it was usually identified by the term *petraria* (″rock-thrower″).

Fig. 3. A pole-framed hybrid trebuchet identified as a *manjanīq ʻarrādah* in Ibn Urunbughā al-Zaradkāsh′s *An Elegant Book on Trebuchets (Kitāb Anīq fī al-Manājanīq),* 867/1462–63. This machine is identified in Chinese sources as the ″Whirlwind″ trebuchet (Fig. 1). A small counterweight is fixed to the butt-end of the main beam of the machine to keep it in balance when the sling is loaded with a projectile. Caption titles *(clockwise):* ″a pole-framed trebuchet″ *(manjanīq*

ʿarrādah); ″beam″ *(al-sahm);* ″pivot yoke [literally, ′housing′] of the trebuchet″ *(bayt al-manjanīq);* ″pulling-rope″ *(al-watar);* ″pole-frame″ *(ʿamūd);* ″small counterbalance″ *(al-aṣghar tathqīlah);* ″axle″ *(khinzīrah);* ″framing-piece [literally, ′bow′] of the trebuchet″ *(qaws al-manjanīq);* ″sling″ *(al-filqān).* After ″Kitāb Anīq fī al-Manājanīq,″ Topkapı Sarayı Muzesi Kutuphanesi MS Ahmet III 3469/1, fol. 44r.

Fig. 4. Detail of a stone fragment with a relief carving on its outer face depicting a siege. This fragment, mounted on a wall in the Church of Saint-Nazaire in Carcassonne, France, dates from the early thirteenth century. Some scholars believe it represents the siege of Toulouse in 1218 in which Simon de Montfort was killed by a stone-shot hurled from a trestle-framed trebuchet operated by women. If so, the stone-carver has saved Simon de Montfort embarrassment by depicting an all-male artillery crew. The relief carving shows a trestle-framed hybrid machine being prepared for discharge. Pulling-ropes are attached to six rings affixed to a weighted-base at the butt-end of the beam. A six-member pulling-crew is set to launch a rounded stone-shot which is being placed in the pouch of the sling by the operator of the machine (positioned, for purely artistic considerations, above the pulling-crew). Five of the crew are placed behind the trestle framework of the machine. Four of the five are ready to pull horizontally with both hands on two lines of rope, while the fifth, in a kneeling position, is about to pull downwards on a single line of rope. The sixth member of the crew is located directly under the butt-end of the beam and is set to pull vertically downwards on two lines of rope. This trebuchet has a curved axle, a feature which it shares with the pole-framed hybrid trebuchet pictured in Ibn Urunbughā al-Zaradkāsh′s *An Elegant Book on Trebuchets* (Fig. 3).

Fig. 5. Reconstruction of a trestle-framed counterweight trebuchet (*trebucet*) of Villard de Honnecourt, France, ca. 1230–35. This reconstruction by the Reverend Robert Willis (1800–75), the first professor of the University of Cambridge to win an international reputation as a mechanical engineer, is based upon Villard′s own account of the machine (description and plan of the base frame), which survives in his portfolio in the Bibliothèque nationale in Paris (MS Fr 19093, fol. 30r; Villard de Honnecourt, *Facsimile of the Sketch-Book of Wilars de Honecourt,* trans. and ed. R. Willis [London, 1859], 197). Lateral and longitudinal bracing is omitted and the capstan in the foreground is left unfinished since the construction of both capstans would be the same. The volume of the counterweight box has been estimated to have been about eighteen cubic meters and was able to carry a mass weighing up to thirty tons. With such a gravitating mass, it has been conjectured that this trebuchet could launch a 100-kilogram projectile more than 400 meters

and a 250-kilogram projectile more than 160 meters. This reconstruction of the machine is to be preferred to that of Eugène Emmanuel Viollet-le-Duc (1814–79), which appears in his *Dictionnaire raisonné de l'architecture du XI^e au XVI^e siècles* ([Paris, 1854–68], 5:227–28), and to that of Roland Bechmann, which appears in his study *Villard de Honnecourt: La pensée technique au XIII^e siécle et sa communication* (Paris, 1991), 255–72. This machine was identified in Arabic historical sources as the "Western Islamic" trebuchet *(manjanīq maghribī* or *manjanīq gharbī).*

Fig. 6. Mariano Taccola, "Liber Tertius de ingeneis ac edifitiis non usitatis" (1433), Biblioteca Nazionale Centrale (Florence) Cod. palat. 766, fol. 41r. The "brichola" *(bricola),* or the "Two-Testicle" machine, from the combination of the prefix *bi-,* "having two," and the Latin *coleus,* meaning testicle. This pole-framed trebuchet with two hinged counterweights was invented in the Latin West by the beginning of the thirteenth century. The Mamluks acquired it post 1250 and called it the "Frankish" or "European" trebuchet *(manjanīq ifranjī* or *manjanīq firanjī).* Muslim engineers employed by the Mongols brought the *bricola* to China, where it was designated the "Muslim" trebuchet *(hui-hui pao)*. At the siege of Acre in 690/1291, the Mamluk *bricola*s hurled stone-shot weighing one Damascene *qinṭār* or more (185 kg or 408 lb +).

Fig. 7. Yūsuf ibn Urunbughā al-Zaradkāsh, "Kitāb Anīq fī al-Manājanīq," Topkapı Sarayı Muzesi Kutuphanesi MS Ahmet III 3469/1, fol. 34r. A bastard bolt-projector: a cross between a torsion catapult and a bolt-projecting, trestle-framed trebuchet. Figure title: "Depiction of its fabrication that you make just as you make the first [trebuchet]." Figure subtitle: "A *ziyār* different from the first." Caption titles in figure identifying parts of a torsion catapult: *jisr fawqānī:* the upper transom [of a catapult connecting the two tension-frames of a two-armed torsion catapult]; *jusūr taḥtānīyah:* the lower transoms [of a catapult fixed to the stock of the machine]; *sha'r rafī':* "fine hair" [making up the vertically-mounted torsion-spring]. Caption titles in figure identifying parts of a trestle-framed trebuchet: *qā'imah:* vertical support post [of the trestle frame] x 6; *jisr al-awwal:* first horizontal crosspiece [of the trestle frame]; *jisr thānī:* second horizontal crosspiece [of the trestle frame]; *jisr thālith:* third horizontal crosspiece [of the trestle frame]; *jisr rābi':* fourth horizontal crosspiece [of the trestle frame]; *dūlāb:* windlass [one handspike-drum of the windlass is depicted next to the tip of the throwing arm]; *mizrīb al-sahm:* the trough of the bolt; *qā'idah:* base frame [of the trebuchet]; *tathqīl al-sahm:* counterweight of the beam.

Fig. 8. Yūsuf ibn Urunbughā al-Zaradkāsh, ″Kitāb Anīq fī al-Manājanīq,″ Topkapı Sarayı Muzesi Kutuphanesi MS Ahmet III 3469/1, fol. 11r. A bastard bolt-projector: a cross between a torsion catapult and a bolt-projecting, trestle-framed trebuchet. The Fire of 884/1479 at the Umayyad Mosque in Damascus and an Account of Its Restoration

Among the series of fires that are reported to have hit the Umayyad Mosque of Damascus during its pre-modern history, the fire of 884/1479 is so far the least known.[1] The well-known sources for this period, such as the contemporary Cairene chronicles of Ibn Iyās and al-Ṣayrafī, do not mention it; nor does al-Sakhāwī refer to the subsequent substantial restoration of the Umayyad Mosque in his long list of Qāytbāy′s construction and renovation works.[2] The Syrian historian Ibn Ṭūlūn (880–953/1476–1546), whose chronicle starts in 884, the same year when the fire broke out, when he was still a child, refers only briefly to the restoration works that followed this fire.[3] In his biographical dictionary of the viceroys of Damascus, however, he does not include any reference to this fire under the entry of Qānṣūh al-Yaḥāwī, the viceroy in charge at that time.[4]

However, a detailed description of the catastrophe and the following restoration works can be found in the chronicle *Ḥawādith al-Zamān wa-Wafayāt al-Shuyūkh wa-al-Aqrān* by the Damascene historian Aḥmad ibn Muḥammad ibn ʻUmar al-

Anṣārī Ibn al-Ḥimṣī (1438–1527), who was an eyewitness to the event.[5]

Ibn al-Ḥimṣī's account of the fire of 884/1479 sheds light on an event that he considered to be of major importance to the city of Damascus but which, unlike the fire at the mosque of Medina one year later, did not engage the interest of the historians in the Mamluk capital.

The Author[6]

According to his own statements, written in the introduction to his chronicle and scattered in the text, Ibn al-Ḥimṣī was born in Damascus in Rajab 841/January1438 into a wealthy family of qadis and scholars.[7] His death is reported in 934/1527, his life thus having straddled the late Mamluk period and the first Ottoman decade of Syrian history.

In the month of Sha'bān 886/1481, while he was chief of the muezzins at the Umayyad Mosque, he was appointed as the deputy of the Shafi'i chief qadi of Damascus, Ibn Farfūr. In 896/1491 he was the qadi of the Syrian pilgrimage caravan. Ibn al-'Imād, who refers to him as Ibn al-Ḥimṣī *al-mu'arrikh,* i.e., the historian, writes that he spent some time in Cairo, where he was deputy of the Shafi'i chief qadi Zakarīyā al-Anṣārī and the *khaṭīb* of the royal mosque of the Citadel of Cairo. Sultan al-Ghawrī (1501–16) appreciated his voice and his performance. Al-Ghazzī quotes him on many occasions among his sources.

Ibn al-Ḥimṣī wrote a great chronicle, so far unknown, to which he often refers in his more concise *Ḥawādith al-Zamān*. The latter was conceived as a *dhayl* or continuation to Ibn Ḥajar al-'Asqalānī's *Inbā'*[8]; like its predecessor, it is at the same time a biographical encyclopedia of contemporary scholars.

Some Important Aspects of Ibn al-Ḥimṣī's Account

Because Ibn al-Ḥimṣī's text is a unique document in Mamluk historiography, a

---

[5]There are two new editions of this manuscript. I am quoting that of 'Umar 'Abd al-Salām Tadmurī (Beirut, 1999). The other one, published in Beirut (2000), is by 'Abd al-'Azīz Fayyāḍ Ḥarfūsh. Laylá 'Abd al-Laṭīf Aḥmad has already drawn attention to the importance of this source in *Dirāsāt fī Tārīkh wa-Mu'arrikhī Miṣr wa-al-Shām ibbāna al-'Aṣr al-'Uthmānī* (Cairo, 1980), 171–89.

[6]Ibn al-'Imād, *Shadharāt al-Dhahab fī Akhbār Man Dhahab* (Cairo, 1351/1932–33), 8:201; Ibn Ṭūlūn, *Mufākahah,* 1:49, 145, 324, 343, 346, 359; Najm al-Dīn al-Ghazzī, *Al-Kawākib al-Sā'irah bi-A'yān al-Mi'ah al-'Āshirah,* ed. Jibrā'īl Jabbūr (Beirut, 1979), 1:5.

[7]This corrects Ibn al-'Imād, who gives two alternative dates for his birth, 851 or 853.

[8]Ibn Ḥajar's best known historical works are *Al-Durar al-Kāminah fī A'yān al-Mi'ah al-Thāminah* (Hyderabad, 1348–50/1929–31, and Cairo, 1966), and *Inbā' al-Ghumr bi-Abnā' al-'Umr* (Beirut, 1967, 1986). For his biography see F. Rosenthal, "Ibn Hadjar al-'Askalānī", *The Encyclopaedia of Islam*, 2nd ed.

translation of all the dispersed passages in the chronicle which deal with the outbreak of the fire and the subsequent restoration has been appended to the following discussion of the text.

Ibn al-Ḥimṣī, whose report consists of several passages integrated into his chronicle among various other events, provides a detailed and lively step-by-step description of the outbreak of the fire and its consequences. In his reconstruction of the scene that led to the outbreak of the fire, his presentation of the sequence of the restoration with all the data concerning the costs and the sponsors′ contributions, and the account of the respective tasks performed by the craftsmen′s teams, Ibn al-Ḥimṣī demonstrates the kind of accuracy that one would expect from a project manager. His account provides valuable information on the architectural history of the Umayyad Mosque and on building crafts in late Mamluk Damascus. Moreover, while he mentions the sequence of actions taken by the Damascene authorities to repair the damage, the author sketches a vivid picture of various episodes around the event, which add to the interest of this extraordinary document.

Ibn al-Ḥimṣī writes as a patriotic Damascene commoner emphasizing the solidarity between the various groups of the city′s population facing the catastrophe and their involvement with the fate of the mosque. He painstakingly records the contributions made by individual volunteers and sponsors to supplement the sultan′s share of the restoration costs.

The description of the collective grief of the Damascene population across its social and religious groups is remarkable. Following the first selfish reactions of those who sought to rescue their belongings while others were looting, a civic sense prevailed, which led people to cooperate in order to limit the damage. Did the religious establishment play a role here? The author himself writes that he helped in removing the furnishings and urged others to do the same.

Ibn al-Ḥimṣī does not provide any information concerning the existence in medieval Damascus of provisions for a fire emergency. He mentions only rescuing, not fire fighting measures. It seems, however, that it was common knowledge that in such cases beams should be removed from the wooden ceiling through which the fire progressed. The private and spontaneous initiative of an amir, who dwelt in an adjacent palace, of removing the beams on his side ultimately brought the fire to a halt. For this reason, the sultan′s master-builder was blamed for not having ordered this measure at an earlier stage. It thus appears that the responsibility for coordinating emergency responses resided in the office of the sultan′s master-builder of Damascus

The account sheds light also on the relationship between Muslims and *dhimmī*s. We are told that the marble craftsmen were Christians and that the non-Muslims grieved equally at the sight of the burning mosque. The episode of a Jewish

merchant who attempted to acquire the lead debris reveals another aspect of the Muslim-*dhimmī* relationship.

It is interesting to note that Ibn al-Ḥimṣī does not mention any *dhimmī,* i.e., Christian or Jew, by name. Similarly, Ibn Ṭūlūn, when he referred in his chronicle to the craftsmen who worked at the restoration of the mosque, explicitly wrote that he would name the Muslims among them, which implies that the non-Muslims were supposed to remain anonymous. There is a purpose in this attitude; some medieval Muslim historians considered it ″blackening the paper with unimportant things″ to write about Christians and Jews.[9]

It is obvious from Ibn al-Ḥimṣī′s account that the Umayyad Mosque of Damascus was a true icon for the city′s population. In his picture of that particular moment, all those who participated in the rescue shared a common identity. This may explain why the author takes care to name the craftsmen, an exceptional occurrence in chronicles of that time. Similarly, the credit he gives to the private sponsors makes clear that the reconstruction of the mosque was made possible by the populace, not just the sultan.

The Effect of the Fire on the Umayyad Mosque

A history of the Umayyad Mosque of Damascus in the post-Umayyad period has not yet been written; this makes it difficult to assess the real effect of this fire on its structure.

As in earlier cases, the fire originated in the surrounding markets and reached the interior of the mosque through an opening. This indicates that the markets and dwellings must have been adjacent to the walls of the mosque. This is further confirmed by the fact that rubble falling from the mosque during the works killed prisoners in a jail located nearby. The northern portico seems to have been damaged only on its western side. It has preserved to this day a restoration inscription dating from the reign of the Mamluk sultan al-Mu'ayyad Shaykh in 1416, referring to its reconstruction by a builder from Alexandria.[10]

Because of the great fire in 1893, which severely damaged the mosque, it is difficult to assess how the mosque looked after the restoration described by Ibn al-Ḥimṣī. The latest detailed description of the Umayyad Mosque so far known prior to the fire of 884 is that of Ibn Faḍl Allāh al-ʻUmarī. In a brief passage about the contemporaneous mosque, he mentions mosaics around the courtyard and in the upper part of the transept. He also refers to the local production of glass mosaics, though of a lesser quality, for the restoration of the Umayyad Mosque, which also provided the tesserae for the decoration of the mosque of Tankiz in the

[10]Sauvaget, *Les Monuments Historiques,* 23–25.

fourteenth century.[11] A stock of these tesserae, which were stored in boxes, was destroyed by the fire of 740/1340.[12] Ibn al-Ḥimṣī does not mention any damage to the mosque′s masonry, nor does he say anything about the mosaic decoration, which had dazzled so many eyewitnesses in the past. In fact, the mosque at that time had already lost many of its mosaics as a result of the series of previous fires and earthquakes. Ibn al-Ḥimṣī′s use of the term *fuṣūṣ* to describe what fell during the fire is ambiguous; the term could refer either to mosaic tesserae or to the glass pieces that are inserted in stucco grille windows (*qamarīyah*s).[13] It is astonishing, however, that the largest part of the surviving mosaics are located in the western portico, which was severely damaged by the fire. This raises the question as to whether the walls at that time were coated with plaster, which would have preserved the mosaics underneath. The coating could have been applied during the restoration that followed the devastating fire resulting from Timur′s invasion. In any case, it is important to note that mosaic decoration no longer characterized the image of the mosque in the mind of the Damascene population at the time when Ibn al-Ḥimṣī was writing.

In the prayer hall the decoration of the qiblah wall, which was just being renovated and was not yet completed, was destroyed alongside grille windows and some of the metal doors. Ibn al-Ḥimṣī himself was involved in the rescue actions, removing furniture and books and directing others to help.

In his report of the restoration works Ibn al-Ḥimṣī describes the aisles of the sanctuary as three individual segments (*jamalīn,* his plural of *jamalūn,* which means gabled aisle) on each side of the transept to the east and the west.[14]

Referring to the transept, he distinguishes between a northern and a southern *nasr,* both of which he praises for their beauty. This description, however, is confusing and difficult to reconcile with the well-known tripartite composition of the transept. Ibn Jubayr′s detailed description of the transept in the twelfth century refers to a large central dome, *qubbat al-raṣāṣ,* with a rounded profile and a wooden double-shell, covered with lead and supported by a canopy of piers. This dome was flanked to the north and south by two smaller ones. Because he misunderstood the meaning of the word *nasr,* he compared the transept with an

eagle spreading its wings.[15] By referring to a northern and a southern *nasr,* however, Ibn al-Ḥimṣī seems to view the transept as being composed of only two parts. He might have viewed the bay in front of the mihrab, which he calls *maqṣūrah,* as distinct from the rest of the transept.

Ibn al-Ḥimṣī mentions that the original ceiling was double-layered and that it was rebuilt with a single upper layer. The northern *nasr,* however, was single-layered prior to the fire.

In the Mamluk period the mosque had four mihrabs.[16] The fourth, on the very western end of the sanctuary, seems to have been added during the years 1326–38, when Tankiz, the governor of Syria, rebuilt the qiblah wall. Each of the four mihrabs served one of the four *madhhab*s of Sunni Islam. During these restoration works Tankiz pulled down the two minarets at the north corners of the mosque and reused their stones for the sanctuary.[17]

According to Ibn Baṭṭūṭah[18] and al-ʻUmarī the *miḥrāb al-ṣaḥābah,* the oldest one, was on the eastern side of the transept, and used by the Maliki community. The one on the western side of the transept was that of the Hanafis, followed by that of the Hanbalis further west. The axial main mihrab was that of the Shafiʻis. The three other mihrabs were the core of three madrasahs, each with its own imam, muezzin, and teacher serving the three other *madhhab*s.

During the restoration works in 1479 the *khuṭbah* was delivered at the Hanafi mihrab on the western side of the transept, then at the *miḥrāb al-ṣaḥābah,* or mihrab of the Prophet's companions, on the eastern side. Once the restoration was completed, Friday prayer returned to the *maqṣūrah,* i.e., at the axial mihrab.

The account of Ibn al-Ḥimṣī draws attention to a hardly noticed feature of the Umayyad Mosque, which is the four oblong rooms located on each side of the sanctuary and the courtyard (see plan). Described as a *mashhad* or shrine, they were named initially for the four rightly-guided caliphs; however, the names changed with time.[19] They were used for diverse purposes, including ceremonial and teaching. It is interesting to note, however, that the *mashhad al-mu'adhdhinīn*

---

[15]Ibn Jubayr uses the word *nasr* for the entire transept *(al-gharīb al-mustaṭīl al-musammá al-nasr).* Ibn Baṭṭūṭah refers to the entire transept area as *qubbat al-nasr* (*Riḥlat Ibn Jubayr* [Beirut, 1959], 266 f.). Creswell already noticed that the word *nasr* did not refer to an eagle, but that it must be the translation of the Greek word *aétos,* which means both eagle and gable, the latter being meant in this context. K. A. C. Creswell and James Allan, *A Short Account of Early Muslim Architecture* (Aldershot 1989), 52 f.

[16]Creswell and Allan believe that the fourth is "quite modern." *Short Account,* 53.

[18]Ibn Baṭṭūṭah, *Riḥlah* (Beirut, 1985) 1:103 ff.

[19]According to Ibn Faḍl Allāh al-ʻUmarī, the southeastern one, named for the caliph Abū Bakr, included a library; the northeastern was named for ʻAlī; the southwestern, named for ʻUmar, was

was used as a treasury, where people could deposit their valuables in safety boxes. These were modernized after the fire, to be fixed in the wall with a uniform shape.

Qāytbāy's minaret at the southwestern corner of the mosque, which has well preserved its original features to the present day, seems to be all that remains from the restoration works that followed the fire of 1479.[20] Its octagonal shaft is decorated with Damascene *ablaq* masonry. Although the octagonal configuration vaguely recalls Cairene minarets, its proportions and the minaret's profile differ too much from the metropolitan style to be attributed to Cairene craftsmen, as has been suggested by Meinecke.[21] In fact, Ibn al-Ḥimṣī himself says nothing about an Egyptian contribution to the construction of the minaret. The tower, which forms the base of Qāytbāy's minaret, is the only one of the four Roman corner towers to have survived to the present day. The original structure, although it was restored in 680/1184 and 803/1400,[22] seems to have retained its initial proportions until 1479. Its size must have been impressive, since Ibn al-Ḥimṣī describes the minaret as having only one quarter the size of its predecessor.

The Patronage

The costs of the restoration were estimated by the viceroy of Damascus at 58,700 dinars. However, the sultan originally allocated only 15,000 and ultimately paid 22,500, including the reconstruction of the minaret! Obviously he did not trust his viceroy's estimate. He, moreover, seems to have been either unable or unwilling to come up with the entire cost of the mosque's repair, sponsoring the restoration of the prayer hall and the reconstruction of the minaret, and leaving the restoration of the western portico to other sponsors. In addition to the physical damage caused to the bazaar and the mosque, the destruction of the markets, which belonged to its *waqf* estate, deprived the mosque, for a while, of its natural source of revenue. Therefore, only the restoration of the *sāghah,* or goldsmiths' market,

---

endowed with a chair of hadith and also included a library. The northwestern one was named for 'Uthmān. This was the place where the viceroy of Syria used to perform his prayer near a window, accompanied by the Shafi'i qadi. This *mashhad* also functioned as a tribunal and as the seat of the four chief qadis when they met to discuss political matters. Each of these *mashhad*s had an imam and a muezzin of its own. Al-'Umarī, *Masālik al-Abṣār,* 196.

Ibn al-Ḥimṣī uses different names: Shaykh Khaṭṭāb instead of 'Alī, 'Urwah ibn al-Zubayr or *mashhad 'Urwah* or *mashhad al-mu'adhdhinīn* instead of *mashhad 'Umar*, *mashhad al-nā'ib* instead of *mashhad 'Uthmān,* and *mashhad al-zanāyi'* instead of *mashhad Abī Bakr*.

[20]The balconies of the minaret were restored after the earthquake of 1173/1759. Mehmet Yaşar Ertaş, "1759 Şam Depremin'de Büyük Hasar Gören Emeviye, Selimiye ve Süleymaniye Camilerinin Onarimi," in *Papers Submitted to the International Symposium on Ottoman Heritage in the Middle East, 28 October 2000, Hatay, Iskenderun* (Ankara, 2001), 1: 241–49, 245.

[22]Al-Khaṭīb, *Rawā'i' al-'Imārah*, 21.

could be covered by *waqf* funds, while the rest had to be sponsored by the merchants and other individuals, including Mamluk dignitaries.

Ibn al-Ḥimṣī is quite precise in defining at each stage of completion what the sultan sponsored and what other donors did. Although a clear distinction between public funds and privy is difficult to make in the Mamluk period, the reference to *māl al-sulṭān* should not be understood as the sultan's private purse, but rather as the public treasury, or *bayt al-māl*.

The reconstruction of the southwestern minaret dragged on for a strikingly long period, lasting from Rabīʻ II 887/1482 to Dhū al-Qaʻdah 893/1488, over six years.[23] Furthermore, the work began more than two years after the outbreak of the fire, once the interior restoration was completed. Ibn al-Ḥimṣī's statement that the minaret was visibly smaller than the original is confirmed by the discrepancy between the size of the minaret's base and that of the Roman tower on which it stands (see figure). The fire of 886/1481 in the Prophet's mosque in Medina, which required funds and craftsmen from Cairo and Damascus, must have contributed to the delay in its restoration.[24] All this indicates that the restoration of the Umayyad Mosque was a substantial burden even for such a great builder as Sultan Qāytbāy. Obviously Damascus did not enjoy a priority status in the sultan's otherwise ambitious building program.[25] Considering that the reign of Qāytbāy produced in Cairo an impressive number of new buildings and restoration projects at a much speedier pace, the duration of two years for the restoration of the roof and the prayer hall of the Umayyad Mosque appears rather long, indicating that the building craft in Damascus was not adequate for important architectural projects.

The Building Crafts

Unlike the restorations of the mosques of Mecca and Medina by Sultan Qāytbāy, the restoration of the Umayyad Mosque in Damascus took place without the contribution of Egyptian craftsmen. The author explicitly denies the participation of the marble workers whom the sultan sent from Cairo, due to the death of their master; the work was executed by local Christians. Ibn al-Ḥimṣī also seems to follow, though not explicitly, the general opinion which put the blame on the sultan's master-builder Ibn al-ʻAṭṭār for the magnitude of the damage. He gives all the credit for the work to the local workshops, whose names and contribution are mentioned individually.

Four teams of builders were involved in the project: Aḥmad al-Zanīk[26] and his

---

[23]An inscription in the minaret indicates the completion date as 893/1487–88.

partners ʻAbd al-Wahhāb and Aḥmad ʻAbbās, who worked together with the apprentices of Ibn al-ʻAṭṭār. The *muʻallim* Muḥammad ibn al-ʻAjlūnīyah repaired the *mashhad* of Abū Bakr. In his short reference to the restoration work at the Umayyad Mosque, Ibn Ṭūlūn writes that a man called al-Zubdānī ibn al-ʻIzqī, who is not mentioned by Ibn al-Ḥimṣī, almost died in jail where he was kept in connection with the fire in the mosque. He does not clarify this connection, however.[27] Ibn Ṭūlūn adds that the fire necessitated a great deal of restoration work. The list of the craftsmen he cites as having been involved in the work differs slightly from that of Ibn al-Ḥimṣī; they are: ʻAbd al-Wahhāb al-Ḥalabī, Ibn al-ʻAjlūnīyah, Muḥammad ibn al-Mu'adhdhin, al-Aʻsar, al-Dafīh ibn al-Tāzī, and his brother ʻAbd al-Wahhāb.

Ibn al-ʻAṭṭār, the sultan′s master-builder, was not personally involved in the work, probably because of the accusations brought against him of not having taken the necessary measures to halt the fire. Another person, Fakhr al-Dīn ibn al-Bayrutī, is mentioned as having been the *muʻallim al-sulṭān* and to have died in Shaʻbān 886/1481;[28] it is not clear whether he shared Ibn al-ʻAṭṭār′s position or was his successor. Ibn al-ʻAṭṭār, however, later regained his position as the *muʻallim al-sulṭān.*[29]

As was usual in the Mamluk period, construction works of such significance took place under the supervision of an amir; in this case it was Yashbak, the viceroy′s chamberlain. The viceroy of Damascus, assisted by the governor of the Citadel and other bureaucrats, were in charge of estimating the restoration costs.

The craftsman who made the grille windows had the *nisbah* ″al-ʻAjamī,″ which in Mamluk texts could mean either Iranian or Turcoman from Iranian lands, or could also refer to someone who had lived or worked in Iran. Ibn al-Ḥimṣī refers to anonymous metalworkers (beaters) from Aleppo who made some of the doors, and he names Awlād al-Zuʻaymah as another team of metalbeaters also in connection with the doors. The craftsman who cast and applied the lead was an Anatolian Turk *(rūmī),* the *Ḥājj* Aḥmad Isḥāq al-Rūmī. As expected, none of these men is mentioned in contemporary biographical encyclopedias.

---

[26]Ibn Ṭūlūn mentions Ibn al-Zafīk, who died in jail in 886/1481, having been beaten to death by order of the sultan in connection with the construction of a *khān* at Wādī al-Tīm. *Mufākahah,* 1:46. My reading of Ibn al-Ḥimṣī′s manuscript is, however, Ibn al-Zanīk, who must be identical with this person. The *fā'* and *nūn* could have been confused.

[27]Ibn Ṭūlūn, *Mufākahah,* 1:6.

[29]Ibid., 107, 318. Meinecke, *Die mamlukische Architektur,* 1:194.

IBN AL-ḤIMṢĪ´S ACCOUNT OF THE FIRE[30]

(fol. 74v f.) On the night of Wednesday 26 to 27 Rajab 884/13 October 1479 a catastrophe of unprecedented extent—even by comparison with Timur´s calamity—occurred when a fire broke out in the Umayyad Mosque, burning it entirely *(min awwalihi ilá ākhirihi),* sparing only the *mashhad al-nā'ib,* also known as *mashhad 'Uthmān,* and the *mashhad al-shaykh Khaṭṭāb,* also known by the name of 'Alī ibn al-Ḥusayn *[sic]* and a section of the northern portico *(riwāq).* The *mashhad al-nā'ib* was spared only because its ceiling was lower than that of the rest of the mosque [see plan].

In the northern *riwāq* only a small area escaped the fire. The western minaret caught fire and collapsed, killing a man.

The fire started in the bazaar, destroying the respective markets of the shoemakers *(akhfāqīyīn),*[31] the amber-dealers *('anbarīyīn),* the sword-makers *(suyūfīyīn),* the silk-weavers *(ḥarīrīyīn),* the small market of the merchants *(tujjār)* and weavers *(ḥayyākīn)* known as the farmers´ market *(sūq al-zurrā'),* and the great old goldsmiths´ market *(al-ṣāghah al-kabīrah al-'atīqah).* In this night people lost fortunes and shops and stores were looted; it was an abominable night, the thought of which makes one shudder *(yuqash'ir al-julūd).*
